Glossary of Terms and Qualifiers

Work Order Number: 10-03-1359

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

Subject:	**Calscience Work Order No.:**	**10-03-1424**
	Client Reference:	**JCI Frigid Coil / HW 1148**

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 3/17/2010 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Calscience Environmental
Laboratories, Inc.
Stephen Nowak
Project Manager

Glossary of Terms and Qualifiers

Work Order Number: 10-03-1424

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

Subject: **Calscience Work Order No.: 10-03-1499**
Client Reference: JCI / HW 1148

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 03/18/2010 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Calscience Environmental
Laboratories, Inc.
Stephen Nowak

Glossary of Terms and Qualifiers

Work Order Number: 10-03-1499

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

ACCREDITED IN ACCORDANCE WITH nelac

March 26, 2010

James Allen
GeoSyntec Consultants
2100 Main Street, Suite 150
Huntington Beach, CA 92648-2460

Subject: **Calscience Work Order No.: 10-03-1639**
Client Reference: JCI Frigid Coil / HW 1148

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 3/19/2010 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Calscience Environmental
Laboratories, Inc.
Stephen Nowak

Glossary of Terms and Qualifiers

Work Order Number: 10-03-1639

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

Subject: **Calscience Work Order No.: 10-03-2403**
Client Reference: JCI Frigid Coil / HW 1148

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 3/31/2010 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Calscience Environmental
Laboratories, Inc.

Glossary of Terms and Qualifiers

Work Order Number: 10-03-2403

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, Microbac advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Robert Clark, the Division Manager at 951.779.0310. You may also contact both Trevor Boyce, President and Robert Morgan, Chief Operating Officer at president@microbac.com.

Subject: **Calscience Work Order No.: 10-04-0043**
Client Reference: JCI Frigid Coil / HW 1148

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 4/1/2010 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Mike Z for

RPD - Relative Percent Difference , CL - Control Limit

Calscience Environmental Laboratories, Inc.

Glossary of Terms and Qualifiers

Work Order Number: 10-04-0043

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

Attachments: image001.png

Hi Steve,

Per discussions with Venessa, please analyze TB-B (trip blank) for VOCs (8260B).

Also, for the 3 samples that were not documented in the COC, please analyze for the suite of analytes as shown on the COC (TPH (g,d,oro), VOCs (8260B), CAM 17 Metals).

Sorry for the inconvenience.

Thanks very much,
Rachel.

I received this from Steve, could you address this?

From: Stephen Nowak [mailto:SNowak@calscience.com]

To: James Allen
Subject: JCI Frigid Coil / HW 1148 CEL 10-04-0043

James-

We have a couple of things to report to you in regards to the samples we picked up today.

1. Sample TB-B - the requested analysis includes TPHg, TPHd, TPHoro, 8260 and metals.

We only rec'd 2 VOAs for this sample - what analysis would you like?

2. We rec'd the following samples that were not listed on the COC.

They are-

SB-27-10

SV-37-5

SB-28-10.

Would you like these samples tested or discarded?

The COC and sample anomaly form is attached for your reference.

Please let me know what you have a minute.

Thanks-

Thanks- <<10-04-0043.PDF>>

Huntington Beach, CA 92648-2460

Subject: **Calscience Work Order No.: 10-04-0043**
Client Reference: JCI Frigid Coil / HW 1148

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 4/1/2010 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Calscience Environmental
Laboratories, Inc.
Stephen Nowak

Glossary of Terms and Qualifiers

Work Order Number: 10-04-0043

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

Subject: RE: JCI Frigid Coil / HW 1148 CEL 10-04-0043
Attachments: image001.png; 10-04-0043.pdf

Hi Steve/Michelle,

Could you please run SVOCs on

SV-37-1
SV-37-5
SV-38-1
SV-38-5

Cheers,

James

From: Stephen Nowak [mailto:SNowak@calscience.com]
Sent: Thursday, April 01, 2010 4:43 PM
To: James Allen
Subject: JCI Frigid Coil / HW 1148 CEL 10-04-0043

James-

We have a couple of things to report to you in regards to the samples we picked up today.

1. Sample TB-B - the requested analysis includes TPHg, TPHd, TPHoro, 8260 and metals.

We only rec'd 2 VOAs for this sample - what analysis would you like?

2. We rec'd the following samples that were not listed on the COC.

They are-

SB-27-10

SV-37-5

SB-28-10.

Would you like these samples tested or discarded?

The COC and sample anomaly form is attached for your reference.

Please let me know what you have a minute.

Thanks-

Calscience Environmental Laboratories, Inc.

Subject: **Calscience Work Order No.: 10-04-0103**
Client Reference: JCI Frigid Coil / HW 1148

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 4/1/2010 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Calscience Environmental

Glossary of Terms and Qualifiers

Work Order Number: 10-04-0103

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

Subject: **Calscience Work Order No.: 10-04-0197**
Client Reference: JCI Frigid Coil / HW 1148

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 4/2/2010 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Calscience Environmental
Laboratories, Inc.
Stephen Nowak
Project Manager

Glossary of Terms and Qualifiers

Work Order Number: 10-04-0197

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

Subject: **Calscience Work Order No.: 10-04-0398**
Client Reference: JCI Frigid Coil / HW 1148

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 4/6/2010 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Calscience Environmental
Laboratories, Inc.
Stephen Nowak

Calscience Environmental Laboratories, Inc.

Glossary of Terms and Qualifiers

Work Order Number: 10-04-0398

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
B	Analyte was present in the associated method blank.
E	Concentration exceeds the calibration range.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

Respectfully Submitted:

Mark Horan - Division Manager

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit
MDL = Method Detection Limit
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, Microbac advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Mark Horan, the Division Manager at 951.779.0310. You may also contact both Trevor Boyce, President and Robert Morgan, Chief Operating Officer at president@microbac.com.

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit
MDL = Method Detection Limit
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, Microbac advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Mark Horan, the Division Manager at 951.779.0310. You may also contact both Trevor Boyce, President and Robert Morgan, Chief Operating Officer at president@microbac.com.

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

CASE NARRATIVE

Authorized Signature Name / Title (print)	Robert R. Clark, PhD, Division Manager
Signature / Date	Robert R. Clark, PhD, Division Manager 04/08/2010 11:08:59
Laboratory Job No. (Certificate of Analysis No.)	1004-00072
Project Name / No.	JCI Frigid Coil HW1148
Dates Sampled (from/to)	04/07/10 To 04/07/10
Dates Received (from/to)	04/07/10 To 04/07/10
Dates Reported (from/to)	04/08/10 To 4/8/2010
Chains of Custody Received	Yes

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, Microbac advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Robert Clark, the Division Manager at 951.779.0310. You may also contact both Trevor Boyce, President and Robert Morgan, Chief Operating Officer at president@microbac.com.

APPENDIX J

BACKGROUND ARSENIC EVALUATION

Appendix J
Background Arsenic Evaluation

INTRODUCTION

A statistical analysis of the Site arsenic data was conducted to determine if arsenic is naturally occurring (i.e., present at "background" concentrations). Cal-EPA (1997) defines background levels of metals as including both pristine conditions (e.g., natural geological composition at locations unaffected by human activity) and ambient conditions (i.e., chemical concentrations in the vicinity of the Site that are unaffected by Site-related activity). Therefore, background levels of metals can be from both natural and anthropogenic sources, since they are characterized in the context of “pristine conditions” and “ambient conditions”.

The background evaluation was conducted following the approach described in the Cal-EPA DTSC documents entitled “*Determination of a Southern California Regional Background Arsenic Concentration in Soil*” (Chernoff, Bosan, and Oudiz, 2008), “*Arsenic Strategies. Determination of Arsenic Remediation, Development of Arsenic Cleanup Goals for Proposed and Existing School Sites*” (Cal-EPA, 2007) and “*Selecting Inorganic Constituents as Potential Chemicals of Concern at Risk Assessments at Hazardous Waste Sites and Permitted Facilities*” (Cal-EPA, 1997).

APPROACH

Following the approach outlined in Cal-EPA guidance, the Site arsenic data was evaluated by multiple methods to determine if arsenic concentrations are similar to background. Data were first evaluated to determine if more than one population can be discriminated (e.g., an ambient population and a Site-impacted population) using methods described in Cal-EPA guidance (1997, 2007). Although arsenic data from the Site may demonstrate the presence of two or more separate populations (e.g., in a probability plot), this in itself does not necessarily indicate there are arsenic impacts above background conditions. Cal-EPA (1997) recommends a “weight-of-evidence” approach where indicators of background are considered. The three indicators or criteria include:

1. the degree to which the Site data distributions are fit by a normal, lognormal, or other distribution[1];
2. a graphical assessment (probability, or quantile-quantile plots, against the normal, lognormal, or other distribution) to identify breaks or nonlinearity indicative of more than a single population; and

[1] Cal-EPA (1997) states that ambient metal concentrations tend to follow a normal or lognormal distribution.

3. the skewness of the data as indicated by the coefficient of variation (CV = standard deviation/average).

Although these three criteria provide related information about distribution shape, each focuses on different aspects of the distribution fit, and consideration of all three criteria (not just one) is recommended by Cal-EPA when evaluating whether or not concentrations are within background.

STATISTICAL EVALUATION

The Site arsenic dataset was statistically analyzed to determine whether one or more populations could be identified and distinguished, and to estimate the maximum concentration of arsenic that could be attributed to the background population. The statistical evaluation included:

- computation and review of summary statistics for arsenic concentrations;
- construction and review of quantile-quantile (Q-Q) plots of arsenic concentrations to determine whether the dataset more closely follows a normal, lognormal, or gamma distribution, to identify whether more than one population is evident, and to estimate the maximum concentration associated with the background population;
- CV comparison; and
- determination of outliers and the 98th percentile of the adjusted arsenic dataset using methods described in Cal-EPA guidance (2007).

Statistical software (ProUCL version 4.1), available from the USEPA (USEPA, 2010), was used to test the arsenic dataset for normal, lognormal, or gamma distributions, to compute the raw statistics, determine outliers, as well as to plot the arsenic concentrations. The summary statistics are presented in Table J-1 for data collected between 0 to 10 feet below ground surface (ft bgs) and for data collected between 0 to 15 ft bgs.

Each of the three criteria mentioned above for the “weight-of-evidence” approach (Cal-EPA 1997) was evaluated as providing or not providing evidence for multiple populations (e.g., ambient vs. non-ambient) as follows. According to the first criterion, distributions that contain multiple populations will generally fail the goodness of fit test for both normality and lognormality. ProUCL software was used to determine the type of distribution for the arsenic dataset, as indicated in the Q-Q plots presented in Figure J-1 for data collected between 0 to 10 ft bgs and in Figure J-2 for data collected between 0 to 15 ft bgs. Additionally, the goodness of fit test was computed using ProUCL and is presented in Attachment J-1. The Q-Q plot, as well as the goodness of fit test, both indicated a good fit for a normal or lognormal distribution, which is considered evidence for the absence of multiple populations or concentrations that were within ambient conditions at the Site.

In addition to determining the types of distribution for each metal (Criteria 1), an ambient versus non-ambient breakpoint was developed by evaluating the Q-Q plots (Criteria 2) to determine if multiple distributions are present (Figures J-1 and J-2). This plot is constructed by plotting the sorted arsenic data against the quantiles of the best-fitting normal, lognormal, or gamma distribution for the data with blue data points being detected values (non-detected values would be represented by red points). In the plot, data points should fall approximately along a diagonal line if the distribution assumption is accurate (small deviations are to be expected and are not significant). Significant breaks or bends in the plots indicate departures from the assumed distribution and suggest multiple populations or outliers.

The arsenic data points presented in the Q-Q plots (Figures J-1 and J-2) appear to generally fall along a diagonal line. A slight deviation is evident with the maximum detected concentration appearing to be a potential outlier; however, it does not appear to be significant. Moreover, there is no source of arsenic at the Site, which suggests the possibility of a background source. If an inflection point, or break in slope on the Q-Q plot had to be selected, the second highest concentration of arsenic detected at the Site (15.4 mg/kg) may be the appropriate value to represent the maximum concentration that could be attributed to the background population.

Criterion 3 mentioned above involves the comparison suggested by the Cal-EPA (1997) of the coefficient of variation (CV) of the data with the values typically displayed by ambient distributions of metals. Cal-EPA (1997) states that metals data drawn from just one population typically display a CV of no more than 1. If the CV was greater than 1, the data were considered to be from multiple populations, whereas a CV less than 1 implies that the underlying distribution had low skewness and the concentrations may be within background. The CV was less than 1 for arsenic (Table J-1), which indicates the low skewness of the dataset and therefore the absence of more than one population.

In addition to the three criteria, an upper-bound outlier was identified using ProUCL, as discussed in the Cal-EPA guidance (2007). ProUCL results identified that the maximum arsenic concentration of 29.1 mg/kg was an outlier (Attachment J-2). This outlier was then removed from the arsenic dataset to generate an adjusted dataset. The adjusted Site-specific arsenic dataset (once the outlier was removed) was statistically re-evaluated and is also presented in Table J-1.

CONCLUSIONS

Based on the results of this evaluation, arsenic concentrations detected at this Site generally appear to be within “background”. Based on the weight-of-evidence approach using the three criteria discussed above, 1) arsenic data followed a lognormal distribution, which Cal-EPA (1997) states is evidence of ambient metal concentrations; 2) arsenic data presented in the Q-Q plot generally appear to fall along a diagonal line suggesting the presence of a single population; and 3) the CV was less than 1 for arsenic which indicates the low skewness of the dataset also suggesting the presence of a single population.

Cal-EPA DTSC commonly has used an arsenic screening value of 12 mg/kg to represent regional background levels for southern California (Chernoff, Bosan, and Oudiz, 2008). Since ProUCL identified the maximum concentration of 29.1 mg/kg to be a potential outlier, an inflection point for the Site dataset could be at 15.4 mg/kg, which appears to be a reasonable background level for this Site. However other lines of evidence (goodness of fitness test, evidence of multiple populations and skewness) indicate that the maximum detected value could be within background.

In summary, based on Cal-EPA's "weight-of-evidence" approach, the statistical analysis demonstrated that Site arsenic data is reasonably expected to be present at "background" concentrations.

Notes:

" -- " not applicable; " mg/kg " milligram per kilogram

(1) Distribution of the data determined using USEPA ProUCL version 4.1 software

(2) Arsenic data was considered to be within "background" since the following criteria were met:

2a) Arsenic data followed a lognormal distribution determined from the Q-Q plots and the Goodness of Fit (GOF) test

2b) Arsenic data in the Q-Q plot generally fell along a diagonal line suggesting the presence of a single population

2c) Coefficient of Variation (CV) < 1, which indicates the low skewness of the dataset suggesting the presence of a single population.

TABLE OF CONTENTS

TABLE OF CONTENTS

1. INTRODUCTION

Hemphill, Green & Associates LLC (HGA) has prepared this soil vapor survey workplan on behalf of our client, LeFiell Manufacturing Company (LeFiell) in compliance with the 2009 Voluntary Cleanup Program (VCP) agreement between LeFiell and the Department of Toxic Substances Control (DTSC).

LeFiell, a global leader in the design and manufacture of precision tubular parts for the aerospace and marine industries, has conducted operations from its current location since the late 1950's. The LeFiell property is comprised of three parcels of land located at 13700, 13750, & 13770 Firestone Boulevard, Santa Fe Spring in Los Angeles County, California (the Site).

A subsurface investigation of a portion of the Site immediately adjacent to Firestone Boulevard was initiated by the California Department of Transportation (Caltrans) in 2007. The investigation was conducted by Ninyo & Moore as part of a regional assessment for land acquisition associated with the Carmenita Road Interchange Improvement Project. During the investigation, chlorinated aliphatic hydrocarbons (CAHs), including tetrachloroethene (PCE) and trichloroethene (TCE), were detected in soil and groundwater. Ninyo & Moore reported their investigation results to Caltrans in a February 28, 2007 report (Ninyo & Moore 2007). As required by the California Health and Safety Code, Caltrans notified DTSC that hazardous substances had been detected in soil and groundwater samples collected at the Site. DTSC informed LeFiell of the Caltrans investigation results on January 28, 2009.

In their notification letter to LeFiell, DTSC requested further investigation of the Site based on the reported presence of chemicals of concern (COCs) in soil and groundwater. DTSC indicated that further investigation was required to determine the nature and extent of the subsurface impacts, and offered LeFiell the option of proceeding with the investigation under DTSC's VCP. LeFiell entered into the VCP in May 2009.

Representatives of DTSC, LeFiell, and HGA met at the Site on April 28, 2009 to discuss the VCP and the additional investigation required by the agency. During the meeting, all parties agreed, in general, upon a scope of work for a subsurface soil vapor investigation to identify potential COC sources at the Site. This workplan outlines the subsurface assessment methods proposed for identifying the potential COC source areas at the Site.

1.1 Assessment Objectives

The objective of the proposed soil vapor survey is to determine potential site-specific source areas (if any) that could have caused or contributed to the COC impacts detected in subsurface samples collected as part of the 2007 site investigation conducted for Caltrans. The investigation will focus on identifying contaminant source(s) by sampling the shallow subsurface soil vapor at depths of 5 and 15 feet below ground surface (bgs) at on-site locations where COCs were used or stored.

1.2 Workplan Outline

This workplan has been organized into the following sections:

Section 1, *Introduction*, presents the reason for the soil vapor survey and the survey objectives.

Section 2, *Site Background*, presents a brief history of the Site, the environmental assessments that have occurred, and describes the Site's geology and hydrology.

Section 3, *Scope of Work*, describes the proposed soil vapor sampling procedures, locations, and analyses.

Section 4, *Proposed Schedule*, presents the anticipated project schedule.

Section 5, *References*, lists the documents cited within the text of this workplan.

Section 6, *Limitations*, describes the proper use of the workplan, its limitation, and contains the signatures of the environmental professionals responsible for the report.

2. SITE BACKGROUND

LeFiell Manufacturing Company (LeFiell) manufactures precision tubular products for commercial airplanes and the defense and aerospace industries. A smaller portion of LeFiell's operation involves the manufacture of sail masts for sailing vessels. LeFiell was founded during the 1930's, but began operations at its current location in the late 1950s.

The LeFiell property is located on three contiguous parcels of land totaling approximately 11 acres at the northwest corner of Marquardt Avenue and Alondra Boulevard in Santa Fe Springs, California (Figure 2.1). The Site is bordered on the northeast by Firestone Boulevard and the Santa Ana (I-5) Freeway and on the southwest by the Southern Pacific Rail Road. The Site includes limited landscaping along the Firestone Boulevard property entrance. Street addresses for the three parcels are 13700, 13750, and 13770 Firestone Boulevard. The parcel at 13770 Firestone Boulevard is currently leased and occupied by Budget Rent a Car. LeFiell's manufacturing and administrative operations occur at 13700 and 13750 Firestone Boulevard.

2.1 Environmental History

2.1.1 2004 HGA Phase I Environmental Site Assessment (ESA)

A Phase I ESA of the Site was performed in 2004 by HGA (HGA 2004). The ESA report included aerial photographs taken between 1928 and 1952 which show the Site and the adjacent properties to be unimproved agricultural land. Building construction and permit records indicate that the building construction began in 1958.

The Phase I ESA also indicated that four underground storage tanks (USTs) and two sumps were removed/closed in the mid-1980s. All were closed under the oversight of the Los Angeles County Department of Public Works, and were identified as:

- One 7,500-gallon gasoline UST
- One 500-gallon waste oil UST
- Two 2,000-gallon gasoline USTs (with associated fuel pump island also removed)
- Two 1,500 gallon wastewater sumps

One tank of undisclosed capacity pre-existed LeFiell's occupancy of the property and was reportedly abandoned in place.

The Phase I ESA also reported the presence of sumps at the site. A die penetrant sump was closed in late 1997. Confirmatory sampling was completed and the contents were analyzed and found to be non-hazardous. Additional active underground sumps, clarifier, and tanks were reported in the Phase I as follows:

- Two collection sumps which transfer wastewater generated by the boat mast wash area to the wastewater treatment area.
- One underground clarifier that serves as a feed to the wastewater treatment evaporation system.
- Heat treatment quench tanks that are below ground level and contain glycol quenchant.

The 2004 Phase I ESA report concluded the followings:

- Standing liquid and stained soils were observed in various areas that suggests the possibility of subsurface contamination from petroleum products (namely heavy lubrication oils). Soil boring and sampling was recommended to verify the extent of possible contamination.
- Long term use of halogenated vapor degreasing solvents was noted in two areas (the old vapor degreaser and the new vacuum system locations). Possible release of these solvents could not be visually detected. It was recommended that soil and soil vapor sampling be conducted to identify possible soil and groundwater impacts.
- Confirmatory soil sampling was not conducted in connection with the underground storage tank removals and thus any release that could have occurred was not verified.
- Existing belowground sumps had not been profiled for hazardous materials. It was recommended that belowground sumps be profiled for hazardous materials to identify any potential source of contamination.

2.1.2 2007 Ninyo & Moore Phase II ESA for Caltrans

The Caltrans Phase II ESA was performed as part of the environmental site investigation (SI) for the Carmenita Road Interchange Improvement Project. Caltrans intends to acquire a portion of the Site along Firestone Boulevard. The SI was performed by Ninyo and Moore in December 2006 and reported in 2007. The SI included the advancement of six soil borings and one soil vapor boring and the collection of soil, soil vapor, and groundwater samples.

The results of the SI identified the presence of VOCs, principally chlorinated aliphatic hydrocarbons (CAHs), in soil, soil vapor, and groundwater. Figure 2.2 and 2.3 graphically present the sample locations and COC concentrations in soil and groundwater, respectively, that were detected during the Caltrans investigation. Figure 2.4 shows the location of the single soil vapor boring and COC concentrations measured in soil vapor (Ninyo & Moore 2007).

The highest concentration of COCs in soil were measured in Boring 952-404 (see Figure 2.2) at a depth of 25 feet bgs. PCE and TCE were detected in that sample at concentrations of 3,600 parts per billion (ppb) and 220 ppb, respectively (Ninyo & Moore 2007). Boring 952-404 is located at the northwest corner of the manufacturing/office building along Firestone Boulevard.

Groundwater was reported in December 2006 to be at approximately 29.5 feet bgs. Maximum concentrations reported for COCs in groundwater included PCE at 11,000 ppb, TCE at 1,600 ppb, and 1, 4-dichlorobenzene (1, 4-DCB) at 14 ppb (Figure 2.3). With the exception of 1,4-DCB, the highest levels of COCs were found in groundwater samples collected between the two manufacturing buildings. The highest level of 1,4-DCB was detected in a groundwater sample collected at the eastern portion of the Site (currently leased by Budget) near the location of a former fuel and waste oil USTs (Ninyo & Moore 2007).

Soil vapor samples were collected at depths of 5 feet and 15 feet bgs at the eastern portion of the Site in the area of the former fuel and waste oil USTs (Figure 2.4). PCE and benzene were detected in the soil vapor sample collected at a depth of 5 feet bgs at concentrations of 590 $\mu g/m^3$ and 660 $\mu g/m^3$, respectively. Lower levels of PCE were also detected in the vapor sample collected at 15 feet bgs (Ninyo & Moore 2007).

2.2 Geology and Hydrogeology

2.2.1 Geology

The Site is located in the northeast portion of the Central Plain of the Los Angeles Basin (the Basin), a deep structural basin in southern California. In turn, the Basin is located in the northwest portion of the Peninsular Ranges Geomorphic Province of California. This province is generally characterized by belts of major northwest-southeast trending mountains and active faults.

The Central Plain in the area of the Site is characterized by complex faulting and anticline and syncline structures. The subsurface includes nonmarine and marine sediments to depths in excess of 2.5 miles.

The Site is located on nearly level ground at an elevation of approximately 70 feet above mean sea level (Figure 2.1). The natural underlying substrate beneath the Site is comprised of recent (Holocene) unconsolidated alluvium probably derived from the nearby San Gabriel River system located approximately 3 miles west of the Site. Soil boring logs from the Caltrans SI describe subsurface soils as primarily silty sand with some clay and sand to approximately 30 feet bgs, the maximum depth of the investigation.

2.2.2 Hydrogeology

Two groundwater basins are located within the Coastal Plain of Los Angeles County: the West Coast Basin and Central Basin. The Basins are composed of Quaternary Geologic age sediments of gravel, sand, silt, and clay, which are less than 2 million years old and were derived from nearby mountains and marine shoreline and shallow sea environments.

The site is located within the Central Basin Pressure Area where confined aquifer systems prevail. Numerous aquifers occur to depths of 2,000 feet bgs in the Central Basin. The main freshwater production is from the recent Holocene alluvium and Pleistocene Lakewood and San Pedro formations. Regional groundwater flow direction within the Central Basin is toward the west-southwest.

A municipal water supply well (Santa Fe Springs Well No. 2, State Well 3S/11W-20R9) is located approximately one-half mile west of the site at Santa Fe Springs Fire Station No. 3 (15517 Carmenita Road). According to the *Semi Annual Progress Report, Alondra Industrial Park* prepared by LFR Inc. (LFR 2008), the well was completed on June 8, 1964, and is screened from 336 to 1,219 ft bgs (total well depth is 1,250 ft). Alternating layers of clay, fine sand, and gravel were reportedly encountered from the ground surface to the total well depth, and a layer of "hard clay (semi-cemented)" was observed from 50 to 70 ft bgs.

During the Caltrans investigation of the LeFiell property, Ninyo & Moore identified a "former production well" located at the edge of Firestone Boulevard near the northeastern corner of the manufacturing building (Figure 2.2). Other than depicting the location on its site figures, the Caltrans report contains no information about the production well. According to Mr. Don Averill, LeFiell's plant manager, the well is not owned by Lefiell. HGA contacted the City of Santa Fe Springs Department of Public Works concerning the well on March 30, 2010 and spoke with Mr. Frank Beech. Mr. Beech indicated that the city does not own any wells at the location indicated by Ninyo & Moore. Calls made to the Los Angeles County Department of Public Works to obtain information concerning the well have not been returned as of the date of this report. Consequently, the ownership and status of the well remain unknown.

The Caltrans report states that the regional depth to groundwater in the Site vicinity ranges from approximately 15 feet bgs to 40 feet bgs and that regional groundwater flow is to the south (Ninyo & Moore 2007). However, data from surrounding properties suggests a northeasterly groundwater flow direction. LFR reported groundwater flow at the Alondra Industrial Park to be toward the north-northeast (LFR 2008). Groundwater from the Frigid Coils property, located approximately 500 feet north of the site, is toward the northeast (HGA 2009).

The depth to first groundwater at the Site reported during the Caltrans SI was approximately 29.5 feet bgs (Ninyo & Moore 2007). The Caltrans study did not determine the direction of groundwater flow at the site.

3. SCOPE OF WORK

As discussed in Section 1, representatives of LeFiell, DTSC, and HGA met in April 2009 to discuss the scope of work for assessing the site with a goal of identifying any potential onsite sources for the for COCs detected during the 2007 Caltrans site investigation. All parties agreed upon the collection and analysis of appropriate soil vapor samples to identify potential contaminant source areas. Soil vapor sampling and analysis is an efficient method for cost-effectively assessing a large area for contaminant source(s).

All site assessment proposed below will be performed under the direct supervision of a California-registered Professional Geologist. The following sections discuss the specific areas to be sampled and the protocols to be followed during the assessment.

3.1 Health and Safety Plan

HGA has prepared a Health and Safety Plan for the Subsurface Assessment activities. The Health and Safety Plan is included in Appendix A of this report.

3.2 Utility Clearance

HGA will contact Underground Service Alert (USA) to mark existing subsurface utilities at the Site. HGA will identify the areas where work is to be conducted with white paint, and if necessary, will meet with the utility clearance personnel to assist in completing the underground utility clearance activities.

3.3 Sampling Rationale

Limited subsurface data is available for the Site. The sampling rationale for the proposed soil vapor survey is to investigate a relatively large surface area for potential contaminant sources in order to determine the scope of future investigations.

Figure 3.1 shows ten proposed locations where soil vapor probes will be installed to assess VOCs and potential contaminant source(s). The locations include manufacturing operations that used or stored COCs (e.g. PCE, TCE), the former fuel and waste oil USTs, the former underground sump/clarifier, and areas where previous subsurface data indicated the presence of COCs in soil and/or soil vapor and groundwater.

The investigation will be performed in two phases. The initial phase will involve placement of ten direct push borings within the potential onsite source areas (Figure 3.1). Two nested probes will be installed in each of the ten borings. Vapor probes will be installed at approximately 5 feet and 15 feet bgs in each boring. This will result in the collection of 20 vapor samples, which will be analyzed for volatile COCs in an on-site mobile laboratory.

The results obtained during this soil vapor survey will be used to identify any onsite contaminant source areas of significance for further assessment. The need for and direction of any future assessments warranted by the results of the proposed soil vapor survey will be determined in concurrence with LeFiell and DTSC. Future assessments of site soil (soil matrix sampling) will include all potential COCs based on relevant site history. In addition to VOCs, potential COCs may include total petroleum hydrocarbons (TPH), metals, and semi-volatile organic compounds (SVOCs) including polycyclic aromatic hydrocarbons (PAHs).

3.4 Site Specific Areas of Investigation

The rationale for selecting the ten soil vapor sampling locations shown in Figure 3.1 is discussed below.

3.4.1 Location 1- Waste Oil and Scrap Metal Storage Area

Scrap metal is temporarily stored in metal bins within a containment area located at the north-northwestern portion of the site (Figure 3.1). The metal is often coated with heavy petroleum-based lubricants. Drummed waste oils are also temporarily stored within the containment area prior to their removal from the site. Both the scrap metal and waste oils are recycled and are typically stored at the site for 60 days or less before being transported to recycling facilities.

3.4.2 Location 2- Indoor Parts Cleaning Area

The indoor parts cleaning area (Figure 3.1) contains a closed loop vacuum degreaser system which uses TCE to clean petroleum-based lubricants from parts after they are formed. The vacuum degreaser is located in the large manufacturing building. A solvent still is used to facilitate solvent recovery. The closed loop system replaced the large, open vapor degreaser (vapor sample location 4), and has operated at the site since late 1999.

3.4.3 Location 3- Spray Paint Booths Area

Paint booths located at the western portion of the property (Figure 3.1) are used for painting masts for sailboats. This historic use of paints in this area is sufficient to warrant sampling of soil vapor at this location.

3.4.4 Location 4- PCE Aboveground Storage Tank and Degreaser Area

A large, open vapor degreaser was previously operated at proposed vapor sample location 4 (Figure 3.1). No subsurface sump is associated with the degreaser. The degreaser used PCE to clean formed metal parts of petroleum-based lubricants. A solvent still was used to capture solvent for reuse in the degreaser. Although still present at the site, the degreaser has not been used since approximately 1999. LeFiell intends to begin dismantling of the degreaser for recycling in the immediate future.

3.4.5 Location 5- Clarifier & Waste Water Treatment Area

Industrial wastewater generated during operations is fed to a pH adjust/evaporation treatment system at proposed vapor sample location 5. The onsite treatment system is property maintained and permitted under the permit-by-rule (PBR) system. Sources of wastewater at the facility include chemical etch line rinse water, spent wash water from boat mast coating, and miscellaneous sources such as water from floor and equipment wash down.

3.4.6 Location 6- Former Gasoline UST Area on the LeFiell Manufacturing Site

As mentioned, gasoline USTs and an associated fuel island were removed from the LeFiell manufacturing property in 1986 at proposed vapor sample location 6 (Figure 3.1). Although these tanks were removed under the oversight of the Los Angeles County Department of Public Works (LADPW), confirmation sampling was not performed at the time the tanks were removed. A December 26, 1985 letter from LADPW states that confirmation sampling was not required (at that time) if tank contents were vehicle fuel, oil, or waste oil (HGA 2004). The lack of confirmation sampling at the time the USTs were removed provides justification for the collection of soil vapor samples in the former gasoline UST area.

3.4.7 Locations 7 & 8- Former Fuel UST Area on the Parcel Leased by Budget

The southeastern portion of the site, currently leased by Budget, previously contained six underground storage tanks (USTs) which were removed in 1992. The USTs included two

10,000-gallon diesel USTs, two 10,000-gallon gasoline USTs, and two 550-gallon waste oil USTs. Benzene and PCE were detected in a soil vapor sample collected from this area during the Caltrans SI. Proposed soil vapor sample locations 7 and 8 are located on opposite sides of the former UST pit (Figure 3.1) and will help delineate the extent of the benzene and PCE soil vapor impact detected during the Caltrans SI.

3.4.8 Location 9- Confirmation and Verification area

Proposed location 9 is located between the Budget property and the LeFiell's manufacturing operations. Location 9 is intended to aid in the delineation and determination of the nature and extent of contamination. There is no specific chemical use history in this area.

3.4.9 Location 10- Vicinity of Caltrans Boring 952-404

As mentioned, the highest concentrations of PCE and TCE detected in soil during the Caltrans SI were found in Boring 952-404 (see Figure 2.2) at a depth of 25 feet bgs. PCE and TCE were measured in that sample at 3,600 ppb and 220 ppb, respectively (Ninyo & Moore 2007). Boring 952-404 is located at the northwest corner of the manufacturing/office building along Firestone Boulevard. Proposed soil vapor sample location 10 (Figure 3.1) will be used to correlate soil matrix concentrations with soil vapor concentrations.

3.5 Sample Collection – Soil and Soil Vapor

3.5.1 Soil Sampling

In order to complete a "survey" of the potential contaminant source areas in a timely and cost effective manner, soil matrix sampling will *not* be included in the scope of work for this investigation. The intent of this survey is to identify potential contaminant source(s) and impacted area(s) via the collection and analysis of soil vapor samples. The results of the vapor sample analysis and evaluation will identify areas where additional investigation, including the collection of soil matrix or other samples, is warranted.

3.5.2 Soil Vapor Sampling

Installation of the soil vapor probes and sampling shall comply with the procedures of the *Advisory –Active Soil Gas Investigations* (DTSC 2003) and the *Interim Final - Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (DTSC 2005). Direct push borings will be advanced in the areas proposed in Figure 3.1. Two vapor sampling probes will be installed (nested) in each of the ten boring locations at depths of approximately 5 feet and 15 feet bgs.

3.5.2.1 Soil Vapor Probe Construction

The soil vapor probes will be constructed as semi-permanent installations to enable recurring vapor sampling. The proposed soil vapor probe construction is shown in Figure 3.2. The procedures to be followed when constructing the permanent gas probes at each location are as follows:

- The probe tip will be emplaced midway within a sand pack with a minimum thickness of 1 foot. The sand pack will be appropriately sized and installed to minimize disruption of airflow to the sampling tip. It is anticipated that the vapor probe will have a stainless steel tip with perforated gas inlets. Teflon tubing attached to the soil gas probe will serve as the conduit through which to extract the soil vapor sample.
- At least one foot of dry granular bentonite will be emplaced on top of each sand pack to prevent the infiltration of hydrated bentonite grout.
- Hydrated bentonite grout will be used to seal the remaining annular space.

In addition:

- Teflon tubing connected to each soil vapor probe will be appropriately labeled to ensure that the proper vapor sample is being collected.
- A downhole probe support will be utilized where needed and will consist of PVC pipe or equivalent.
- Surface completions at each semi-permanent soil vapor boring will consist of a flush mounted utility box with ventilation holes and lock and gas tight fitting on the sampling tubes or an equivalent.

3.5.2.2 Purge Volume Test

The vapor collection system will be purged prior to sample collection to ensure stagnant or ambient air is removed and a representative soil vapor sample is obtained. The purge volume will be estimated by summing the volumes of (1) the sample container, (2) the internal volume of the tubing used to convey the vapor sample from the vapor probe to the sample container, and (3) the annular space around the probe tip.

Three different purge volumes will be sampled (nominally 1, 3, and 7 purge volumes) and analyzed immediately to determine the volume amount containing the highest VOC concentration. This purge volume will be the purge volume used throughout the soil vapor sampling.

3.5.2.3 Leak Test

A leak test will be performed during sample collection. The leak test will be performed as follows:

- A leak check compound (typically difluoroethane, isopropanol, or butane) will be placed at any location where ambient air could enter the sampling system (e.g. surface connections, bentonite surface seals, etc.) prior to vapor sample collection.
- If the leak check compound is detected in the sample, a leak exists, and the vapor sample result is not valid. Field personnel will attempt to locate the leak and correct the problem before the location is resampled.

3.5.2.4 Soil Vapor Sample Collection

To allow for subsurface equilibration following vapor probe installation, soil vapor samples will be collected no sooner than 30 minutes after the probe is installed by direct push boring method, or 48 hours following hollow stem boring operations.

The soil vapor sampling train is shown in Figure 3.2 and consists of the dedicated stainless steel sampling probe and Teflon tubing, a 3-way valve, and a sampling syringe. The use of small, calibrated syringes allows for careful monitoring of purge and sample volumes. Purge and sampling rates will be between 100 to 200 milliliters per minute in accordance with DTSC recommendations. This vapor sampling procedure ensures adequate sample flow is obtained without excessive pumping of air.

After a leak check compound has been appropriately placed, and the probe tip and sample tubing have been purged by the appropriate purge volume as determined in Section 3.5.2.2, the 3-way valve will be opened, and a sample of in-situ soil vapor will be withdrawn into a gas tight syringe.

Once the sample has been collected, the 3-way valve is closed and the syringe is removed from the sampling train and immediately transferred to the onsite mobile laboratory for analysis.

Vapor samples will be analyzed on site for the full suite of VOCs by EPA Method 8260B. As mentioned, if any trace of the leak check compound is detected in the sample, the sample will be invalid, and the location resampled after the probe and sampling system have been checked and any leaks repaired.

QA/QC samples will also be collected during the survey into Summa™ canisters (see Section 3.5.3). Summa canisters will be analyzed at an offsite laboratory VOCs by method TO-15.

3.5.2.5 Decontamination Procedures

Soil vapor sampling points and tubing are dedicated and will not be reused. Sampling syringes and Summa canisters are clean when they arrive at the site and are either new or have been decontaminated by the laboratory prior to use. Sampling syringes at the site will be flushed with clean air after each use or replaced. Summa canisters will not be reused at the site.

3.5.3 Quality Assurance/Quality Control Samples

The data quality objectives (DQO) outlined below are in accordance with the goal of identifying potential sources of COCs and areas warranting further investigation. The laboratory detection limits (DL) are consistent with those found in the DTSC *Advisory-Active Soil Gas Investigations* (DTSC 2003) and the *Interim Final – Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (DTSC 2005). The laboratory DL will be 1 µg/L for VOCs in soil gas. Leak check laboratory DL will be 10 µg/L or less.

To monitor the quality and representativeness of environmental sample results, quality assurance/quality control (QA/QC) samples will also be collected. Both field and laboratory QA/QC samples will be used.

Soil vapor samples will be collected in evacuated gas-tight syringes and analyzed for VOCs by Method 8260B (USEPA 1996) modified for air analysis. The results of the field work will be independently confirmed through the collection of duplicate soil gas samples in 1-liter Summa™ canisters. The collection of duplicates will confirm the laboratory detection limits and identify other potential COCs at the site. DTSC recommends that ten percent of the soil vapor samples collected in the field be confirmed with vapor samples collected using Summa™ canisters and analyzed using method TO-15 (USEPA 1999b). The Summa™ canister duplicates will be collected in areas of both high and low VOC concentrations. Two confirmation samples are anticipated during this investigation.

The analytical laboratory performing each analysis will have its own internal QA/QC procedures. These include method blanks, surrogates, matrix spike and matrix spike duplicates, laboratory duplicates and initial and continuing calibration checks.

3.5.4 Investigation Derived Waste

All investigation derived waste (IDW) will be retained on-site in watertight 55-gallon drums. The IDW may include decontamination fluids and soil cuttings. Drummed waste will be profiled to determine the appropriate disposal of the container contents. The IDW will be appropriately disposed in accordance with regulatory requirements.

3.6 Site Assessment Report

Upon completion of field and laboratory activities, a Soil Vapor Survey Report detailing the activities and results of the vapor survey will be prepared. The report will include a comprehensive summary of all soil vapor data collected at the site as part of this investigation and a conceptual site model (CSM). The CSM will identify contaminant sources as determined during the soil vapor survey, potential fate and transport pathways, and receptor exposure routes. Complete graphical documentation, including site plans depicting vapor sample locations and soil vapor contaminant concentration isopleths, will be provided in the report.

The vapor survey report will also include an evaluation of the completeness of the investigation and HGA's recommendations. The report will be signed by a professional geologist registered by the State of California, and copies will be submitted to the DTSC for review and comment.

4. PROPOSED SCHEDULE

It is anticipated that the field activities proposed herein will commence approximately two weeks after this workplan has been approved by DTSC and the Client has authorized HGA to proceed. DTSC shall be notified at least five business days prior to the commencement of the scheduled field activities. A proposed project schedule is provided in Figure 4.1.

6. LIMITATIONS

6.1 Report Use

This document was prepared for the sole use and benefit of LeFiell Manufacturing Company (Client), and is based in part upon documents, writings and information owned and possessed by the Client. Neither this report, nor any of the information contained herein, shall be used by any person or entity other than the Client.

6.2 Standard of Care

Services performed by Hemphill, Green & Associates LLC will be conducted in a manner consistent with the level and skill ordinarily exercised by members of our profession currently practicing in southern California. No other representations, expressed or implied, and no warranty or guarantee is included or intended in this report.

On behalf of Hemphill, Green & Associates LLC, we appreciate the opportunity to provide the following workplan for the proposed site assessment activities. We trust that the information contained in this report satisfies DTSC's requirements for additional investigation at the subject site.

HEALTH AND SAFETY PLAN
DIRECT PUSH BORINGS/SOIL
SOIL VAPOR SAMPLING
LeFiell Company
13700, 13750, 13770 Firestone Boulevard
Santa Fe Springs, CA 90670

I. INTRODUCTION

This Health and Safety Plan describes the basic safety requirements for drilling and sampling of soil vapor possibly impacted by tetrachloroethene (PCE), trichloroethene (TCE), and benzene at the above referenced site. The provisions herein will apply to the employees of Hemphill, Green & Associates LLC (HGA) and to any subcontractor(s) working for HGA at the site. Subcontractors may elect to modify these provisions, but only to upgrade or increase the safety requirements, and only then, with written approval from HGA's Senior Safety Officer.

The Health and Safety Plan will also address the potential hazards that may be encountered in performing the work and interactions with the emergency response community. In response to the changing conditions on specific sites, HGA will modify the Heath and Safety Plan as warranted.

Purpose and Scope

The Health and Safety Plan is intended to describe the minimum procedural and equipment requirements for the protection of HGA employees, its subcontractors, and the public who may be affected by the work requirements. Operating conditions can be expected to change as the work progresses, requiring some modifications to the plan. An appropriate agenda will be provided by the HGA, Senior Safety Officer.

This Health and Safety Plan is intended to comply with established HGA's policies and procedures and applicable federal, state, and local regulations. Therefore, no changes to the plan will be authorized without prior approval of the Senior Safety Officer. All HGA personnel, site visitors, and subcontractors are subject to this directive.

Senior Safety Officer

The Senior Safety Officer reports to HGA management and is responsible for on-site safety and loss prevention functions. The Senior Safety Officer's responsibilities include:

1. Health surveillance of all HGA employees;

2. Assuring that specific safety procedures in effect are in compliance with appropriate federal, state, and local regulation – (following the most stringent of the standards);

3. Assuring appropriate personnel protective equipment (PPE) is adequate for actual hazards anticipated or encountered onsite;

4. Coordination of emergency response plans with local emergency response authorities and medical facilities;

5. Establishment of site-specific safety procedures for problems that may be encountered on-site.

II. ON-SITE PROJECT SAFETY

The Site Safety Officer and Project Supervisor are responsible for ensuring compliance with the safety procedures established in this Health and Safety Plan. The Project Supervisor may modify work practices to meet safety requirements. The Site Safety Officer has the primary responsibility in determining the appropriate modifications to any safety procedures.

The Site Safety Officer is responsible for the dissemination of the information contained in this plan to the HGA personnel assigned to the project, and to the responsible representative of each subcontractor firm working under HGA on the project.

The on site project and safety officers are as follows:

Project Officer: Rich McKinney, PG
Hemphill, Green & Associates LLC
(951) 658-0114 Office

Safety Officer: Jim Hutchison
Hemphill, Green & Associates LLC
(951) 658-0114 Office
(951) 764-0149 24 Hour

Safety Officer Responsibilities

The Site Safety Officer will also be responsible for ensuring the following items are adequately addressed;

1. Ensuring that field personnel have adequate health and safety training;

2. Providing a site safety briefing for field personnel before beginning field activities;

3. Inspecting personnel protective equipment prior to on-site use;

4. Documenting compliance with this Health and Safety Plan by completing the attached health and safety forms;

5. Reporting any unsafe conditions, practices, equipment, malfunctions, or any other deficiencies;

6. Stopping activities that endangers the heath and safety of field personnel or the surrounding populace;

7. Observing and monitoring field personnel for signs of chemical exposure, heat stress, or other related conditions;

8. Reporting incidences which result in the injury or exposure to toxic or hazardous materials;

9. Updating equipment or procedures used on-site based on new information gathered during fieldwork.

The following is a list of reference contacts and telephone numbers for this project:

<table>
<tr><td>Client: LeFiell Manufacturing Company</td><td>Telephone #: (562) 921-3411</td></tr>
<tr><td colspan="2">Client Contact: Don Averill, Facility Manager</td></tr>
<tr><td colspan="2"></td></tr>
<tr><td colspan="2">Regulatory Agency: Department of Toxic Substance Control</td></tr>
<tr><td>Agency Contact: Armen Minassian, PE</td><td>Telephone #: (818) 717-6585</td></tr>
<tr><td colspan="2"></td></tr>
<tr><td colspan="2">Client Safety Officer: Don Averill</td></tr>
<tr><td colspan="2"></td></tr>
<tr><td colspan="2">Hemphill, Green & Associates Site Safety Officer: Jim Hutchison</td></tr>
</table>

Emergency telephone numbers and directions are as follows:

Fire/Police/Ambulance: 911

Trinitycare Extended Care, (818) 709-5268,
13030 Alondra Blvd., Cerritos, CA

To Trinitycare from the site, proceed South on Firestone Blvd to Alondra, right turn on Alondra, go 1 mile, Trinitycare on the left side, south side of Alondra – see enclosed map.

An exclusion zone will be established approximately 20 feet around the work area. A decontamination and support zone will be established in an upwind direction. Communication between field personnel will consist of hand signals and verbal communication. No persons other than HGA's personnel, or their subcontractors will be allowed in the exclusion zone without prior authorization from the Site Safety Officer, or without proper personal safety equipment. The work areas will be cleaned and the exclusion zone secured at the end of each workday.

Safe Work Practices

Safe work practices, including personnel sanitation measures, will be employed for the duration of the project. Among the specific activities which will be employed are:

1. Set up, assemble, and check out all equipment for the integrity and proper function before entering the work area and prior to starting work activities;

2. Faulty or suspect equipment will not be used;

3. Use only new and intact protective clothing. Change into new overall and gloves once they are removed or if they are torn during use;

4. Do not use hands to wipe sweat away from face. Use clean towel or paper towels;

5. Practice contaminant avoidance at all times;

6. Do not smoke, eat, drink, or apply cosmetics while in the immediate area;

7. Wash hands, face, and arms as soon as possible upon exiting the work area and prior to taking rest breaks, lunch breaks, and leaving the site at the end of the workday.

8. Perform decontamination procedures as required by this health and safety plan;

9. Notify the Site Safety Officer immediately if there is an accident that causes injury or illness.

III. HAZARD IDENTIFICATION

The potential hazards to personnel working at this site have been identified as chemical contamination, physical hazards of working around drilling rigs, and patron vehicle traffic. The maximum concentrations previously reported of the chemicals of concern in soil vapor are: Perchloroethylene (PCE) 590 µg/m^3 , Benzene 660 µg/m^3 and soil maximum concentrations of PCE 3,600 µg/kg, TCE 220 µg/kg. The site is an active manufacturing facility with industrial buildings and administration buildings situated on approximately 11 acres of land. The site is located on Firestone Boulevard adjacent to the intersection of the Fwy No 5 and Alondra Boulevard in Santa Fe Springs, CA, more specifically, 13700, 13750, 13770 Firestone Boulevard.

The sampling rationale for this assessment is to investigate a relatively large onsite surface area for potential contaminant sources in order to determine the scope of future investigations and mitigation actions if necessary.

The sampling locations coincide with manufacturing operations that utilized the chemicals of concern (e.g. PCE, TCE), former petroleum hydrocarbon UST locations, underground sump/clarifier sites, and locations where previous subsurface data indicated the presence of COC in soil and/or soil vapor and groundwater. Groundwater is deeper (~30 feet bgs) than the depth of investigation for this assessment (~15 feet bgs). Groundwater will not be assessed as part of this investigation.

The investigation will be performed in two phases. The initial phase will involve placement of direct push borings, two probes will be installed (nested) in each of boring locations. Vapor probes will be installed at approximately 5 feet and 15 feet bgs in each of boring locations resulting in the collection of vapor samples. One boring will be advanced at each of the suspected source areas illustrated in Figure 4.

All of the boring sites are in the open, asphalt/concrete covered area between buildings. The primary route of exposure is via inhalation. All boring sites, except for one are in the open and well ventilated.

As per the work plan, on site activity is scheduled to last approximately one (1) days.

The potential hazard relative to the potential for exposure is discussed in the following sections.

Chemical Exposure

It is our understanding based upon information obtained from a review of a previous subsurface assessment of soil, soil vapor, and groundwater that VOCs in the form of chlorinated aliphanic hydrocarbons (CAH) (e.g. PCE, TCE) and benzene contamination is present in the soil underlying this site. Of particular concern with respect to health and safety issues are benzene, PCE, TCE, and compounds associated with the breakdown of PCE and TCE.

Of particular concern with respect to health and safety issues is the fact that Benzene and PCE and its breakdown products are readily evaporated from soil and water to air. Therefore, the primary route of exposure is through inhalation.

An exposure analysis of airborne contaminates is presented in table 1. This table is compiled from California Code of Regulations title 8, sec 5155, Table3 AC-1 Permissible Exposure Limits for chemical contaminates as presented to CAL OSHA.

Table 1
Exposure Analysis
Potential Constituents of Concern

Constituent	PEL		Ceiling	STEL	
	Ppm	m_s/m^3		ppm	m_s/m^3
Perchloroethylene (PCE)	25	170	300ppm	100	685
Trichloroethylene (TCE)	25	135	300ppm	100	537
1,1 – Dichloroethylene (1,1 DCE)			—	—	—
1,2 – Dichlonoethylene (CIS – 1,2 DCE)	200	790	—	—	—
Benzene	1	1	—	5	—

Table 1 – Definitions

PEL - Permissible Exposure Limit. The maximum permitted 8-hour time-weighted average concentration of an airborne contaminate.

Ceiling- The maximum concentration of an airborne contaminant to which a person may be exposed at any time.

STEL - Short Term Exposure Limit. A 15-minute time weighted average exposure which is not to be exceeded at any time during a workday even if the 8-hour time-weighted average is below the PEL.

The chemical exposure hazards involved with PCE and breakdown products are as follows:

- Sufficient evidence exists that PCE is carcinogenic;

- Can cause severe irritation to skin including burning and damage to the nervous system, including dizziness, headache, confusion, nausea, sleepiness, difficulty in speaking and walking, unconsciousness, and death;
- High concentrations may be associated with liver and kidney damage.

The chemical exposure hazards involved with benzene is as follows:

- Benzene is a human carcinogen, and can cause various forms of cancer from prolonged exposure.

- Even a small amount of benzene exposure can cause temporary nervous system disorders, immune system depression and anemia. Short term affects include skin, eye, and respiratory tract irritation, headache, stomach irritation, drowsiness and dizziness.

- High levels of exposure can result in a rapid heart rate, excessive bleeding, tremors, vomiting, unconsciousness and death. Benzene can cause harmful effects on bone marrow, and can cause a decrease in red blood cells leading to myelofibrosis and myelodysplastic syndrome.

Equipment Hazards

Personnel should be aware of moving vehicles and pieces of machinery. When working around the drill rig, it is important to maintain visual contact with the rig operator. Under no circumstances are personnel to position themselves beneath or over equipment being lifted by any of the drill rig hoists. There is a possibility of falling objects or debris from overhead equipment. All personnel working in close proximity to the machinery shall wear hardhats at all times.

Personnel must not put their hands near the augers or drilling machinery when it is in operation.

Personnel should not position themselves so as to be continuously exposed to exhaust from engines used to power the drill rig.

Noise

Excessive noise levels may be expected while working on-site. If noise levels exceed 85 dBA all site personnel will have hearing protection equipment available.

IV. TRAINING REQUIREMENTS

All field personnel should have completed training in hazard recognition and basic health and safety concerns as required by the Occupational Health and Safety Administration (OSHA) in 29 CFR 1910.120 (e) and HSC 25200. 1.5 (g)(3)(A-E). In addition, each field person shall be familiar with this health and safety plan and will participate in site activity and safety briefings. Attendance at safety briefings will be documented on site, each day of activity. Direct contact with large quantities of hazardous materials is not anticipated.

Since chemical exposure hazards on site could involve air born vapors, all workers will be trained and prepared to wear respirators as per CCR, Title 8, Section 5144.

V. MEDICAL SURVEILLANCE

Prior to entering the exclusion zone, all persons should have been subjected to a complete physical examination by a licensed medical physician and be deemed physically competent to function in the work environment.

Regular medical examinations should be conducted for all field personnel to meet the requirement of the Code of Federal Regulations Part 29, Section 1910.120 (F) and HSC 25200.1.5 (g) (3) (A-E). Although there will not be any special medical tests or examinations required for personnel involved in this project, all workers will be medically evaluated for the wearing of respirators as per CCR, Title 8, Section 5144. Personnel exposure monitoring will be accomplished by the Site Safety Officer and by other supervisors by periodically observing personnel for obvious signs of physical and mental distress or injury e.g. changes in appearance, behavior, or speech. Although adverse heat or cold conditions are not anticipated due to site location, a heat vs. cold stress monitoring program will be implemented as part of the daily safety briefing. This program will include employee awareness of signs and symptoms of heat and cold stress. Field personnel are required to inform the Site Safety Officer when experiencing symptoms of sickness or injury. Safety briefing and any medical data generated will be recorded and retained as per title 8 CCR 3204(d).

Air Monitoring

The chemical exposure hazards involved while conducting field activities are airborne vapors. These potential hazards will require continuous monitoring of organic vapors. A photoionization detector will be used to monitor volatile organic compounds in the breathing zone during drilling activities. Air monitoring for background levels of air contamination will be conducted prior to the commencement of drilling. Readings will be taken in the breathing zone on a regular basis during site activities. If the organic vapor concentration exceeds 25 ppm in the breathing zone, all site personnel working in the exclusion zone shall don air purifying respirators (APR) equipped with cartridges rated for organic vapors, acid gases, dusts, fumes, and mists. The respirators and cartridges shall be approved by the National Institute of Occupational Safety and Health (NIOSH) and OSHA. If the organic vapor concentrations exceed 300 ppm, drilling will be discontinued and all site personnel will be moved to an area upwind of the exclusion zone until vapors decrease to below 25 ppm.

The photoinization detector shall be calibrated to isobutylene immediately prior to field use.

A segment of flagging tape attached to an elevated part of a structure at the site, to be used as a wind direction indicator. The Site Safety Officer will monitor environmental conditions e.g. temperature, inclement weather, wind direction, etc. throughout the duration of the on-site activities.

Personnel exposure sampling results shall be retained in accordance with title 8 CCR 3204.

Personnel Protective Equipment

Based on the hazard analysis for this project, the following personnel protective equipment will be required for use. Changes to these specified items of personnel protective equipment shall not be made without the approval of the Site Safety Officer.

All field personnel working in the exclusion zone will be required to wear level D protection, consisting of goggles or suitable eye protection, steel toed boots and hardhats. The exclusion zone shall be continually monitored for volatile organic vapor levels. If organic vapor levels in the breathing zone exceed 25 ppm, personnel shall be required to upgrade to level C protection (use of APR). The respirators may be either half or full faced. All persons required to wear respiration protection equipment shall be trained in the proper use, including fit test, maintenance, and inspection of this equipment, before starting work at the site.

Since dermal exposure is a possibility, rubber gloves will be worn when handling samples (soil, soil gas, ground water) and sampling apparatus.

VI. DECONTAMINATION PROCEDURES

Decontamination will take place in the decontamination zone, identified on-site in the support zone. All workers, personnel protective equipment, sampling equipment, and heavy equipment leaving the work area will be decontaminated in the designated area to prevent the spread of contamination.

After leaving the exclusion zone, workers will remove all personnel protective equipment and place it in appropriately marked containers for proper decontamination or disposal. Boots, respirators, and other reusable personnel protective equipment shall be decontaminated using a mild detergent and water. Respirators, excluding cartridges, will be dismantled, and each part decontaminated by washing with mild detergent and clean water. Once clean, respirators shall be allowed to dry in a clean area before reassembling. When not in use, respirators will be kept in a clean, airtight, plastic bag or similar container.

All workers will wash hands, arms, and face after removing personnel protective equipment and prior to leaving the site. Two five-gallon buckets, one filled with a soap mixture, and the other with clean water, will be available for workers to wash with.

Sampling equipment shall be washed in non-phosphate soap and triple rinsed in distilled water. Support vehicles are to remain outside the immediate work area. By this manner, decontamination will not be required. There are no special emergency decontamination procedures anticipated for this project.

VII. SPILL CONTAINMENT

Plastic sheeting will be placed around each boring location to prevent surrounding soil contamination from wet soil (sample/ground water removal). Significant quantities of hazardous material releases are not anticipated. Container quantities of potentially hazardous ground water will be stored on containment pallets.

VIII. EMERGENCY PROCEDURES

In the event of an emergency, the Site Safety Officer will direct the proper action to be taken. It may be necessary for the Site Safety Officer to depend on other on-site personnel for assistance. The Site Safety Officer will call for emergency help if necessary. As soon as is practical, the Site Safety Officer will contact the Project Manager. All field personnel will be briefed on the procedures and their responsibilities. A first aid kit fire extinguisher, and potable water will be located in a support vehicle on-site. Fire extinguishers will be located on all heavy equipment.

Emergency evacuation procedures will be implemented at the direction of the on site Senior Safety Officer.

- Shut down the drill rig and any ancillary equipment that may be operating.
- In case of personnel injury, the safety officer will call 911.
- Administer first aid/CPR as required. First aid kits, potable water and respirators are available on support vehicles.
- If toxic fumes are encountered, as indicated via the PID, don respirators.
- Traffic control will be established prior to beginning each day's activity. Barriers and cones will be established around each drilling site. Traffic flow will be observed and directed by the Senior Safety Officer. Drilling activity will not take place on major streets and will occur only in the parking area between site structures.
- **Trinitycare Extended Care** is the nearest medical facility.

Telephone: (818) 709-5268
13030 Alondra Blvd., Cerritos, CA

Directions from the site: proceed South on Firestone Blvd to Alondra, right turn on Alondra, go 1 mile, Trinitycare on the left side, south side of Alondra – see enclosed map.

- Evacuation routes

For all drilling locations, proceed northeasterly toward Firestone Boulevard, the Site entrance. Remain in the staging area until all persons are accounted for.

- Communications

The Senior Safety Officer will a cell phone available at all times during drilling activity. Communication between site personnel will be maintained via had signals and/or bullhorn.

- Emergency Contacts

Other than medical emergencies regarding site personnel, releases of hazardous materials in quantities exceeding reporting threshold are not anticipated. A record of on site emergencies will be maintained by the Senior Safety Officer.

- Emergency and Personal Protective Equipment

Equipment including hard hats, chemical resistant gloves and aprons, steel toe shoes will be worn as required by the operation. Back-up gear along with spill response equipment (absorbent, spark resistant shovel etc.) will be kept on the support vehicle.

IX. MISCELLANEOUS

Sanitation

Adequate sanitation including washing and toilet facilities are available at all of the site-manufacturing and administrative buildings. All LeFiell employees are aware of the on site subsurface investigation and will make their facilities available as needed.

An adequate supply of potable water is available on the support vehicle.

Illumination

All field activities will be conducted in daylight hours.

Utilities and Overhead Lines

Underground service alert of Southern California will be notified well in advance of boring activities. Potential boring locations will be marked to assist in the location of any underground utility services.

Emergency Eyewash and Shower Equipment

Eye wash and shower equipment is available to site personnel at each manufacturing building and their equipment meets the requirements of ANSI Z358.1-1981.

X. DOCUMENTATION

The implementation of this site health and safety plan will include the documentation of employee participation. This will assure all individuals participating in this project are properly informed on all safety measures to be taken through the duration of this project. In addition, these records will meet regulatory requirements for training, personnel protective equipment, medical surveillance, and other health and safety related information. Documentation of the implementation of this plan will be accomplished using Attachment A and B. Attachment A is an employee acknowledgment form. Attachment B is a site activity and safety briefing form.

SUBJECT: NO FURTHER ACTION (NFA) DETERMINATION FOR SOIL AND GROUNDWATER (FOR COMMERCIAL/INDUSTRIAL LAND USE)

**SITE/CASE: FORMER FRIGID COIL FACILITY
13711 FREEWAY DRIVE, SANTA FE SPRINGS, CALIFORNIA, 90670
(SCP NO. 1225, SITE ID NO. 2040314)**

Dear Mr. Werwie:

California Regional Water Quality Control Board, Los Angeles Region (Regional Board) staff has completed its review of information in our file pertaining the Former Frigid Coil Facility (Site) located at 13711 Freeway Drive in Santa Fe Springs, California.

Soil, soil vapor, and groundwater investigations have been completed at the Site and you have requested a No Further Action (NFA). Our review and the basis of a NFA determination pertains to historical operational information, soil, soil vapor and groundwater data obtained from 2006 to 2010 at the Site, contained in the following documents:

- Phase I Environmental Site Assessment (Phase I). Environmental Resources Management (ERM). June 13, 2006.
- Phase II Environmental Site Assessment (Phase II). ERM. January 2008. (Reported environmental sampling conducted between May 2006 and November 2007 in the areas of potential concern).
- Quarterly Groundwater Monitoring Reports. Geosyntec Consultants (Geosyntec). 2008 and 2009.
- Environmental Assessment. Geosyntec. March 10, 2009. (Reported environmental investigation conducted in January 2009).

- Final Environmental Assessment. Geosyntec. August 5, 2011. (Reported environmental investigation conducted in March 2010 and included all historical analytical data collected at the Site by Geosyntec).

This letter provides Site background information, a summary of the soil and groundwater environmental investigations, and our rationale for a NFA determination for soil and groundwater for the Site.

Background

The Site is a 4.9 acre parcel containing a single 82,000 square foot warehouse. The property has been used for light industrial purposes by two parties: Miami Carey and Celotex prior to 1971, and Frigid Coil from approximately 1971 through July of 2007. As of June 1, 2010, Martinez Trucking is using the property for office, warehousing, distribution and truck parking. The Site is under the property management of The Gilbert Foundation. The owners intend to use the Site for commercial/light industrial purposes only. See attached Covenant and Environmental Restriction on Property (Enclosure 1).

Frigid Coil's operations consisted of the assembly of air handlers and other custom heating, ventilation, and air conditioning (HVAC) units. Ancillary operations included equipment maintenance and hydrostatic testing. Frigid Coil formerly stored Freon (R-22) in an approximately 6,500 gallon above ground storage tank outside on the northern portion of the property. Additionally, wastewater from the outdoor steam cleaning operations was discharged to the storm sewer system prior to 1993 (when a sump was installed in the outdoor yard). Principal materials used at the facility included stainless steel, copper coil, welding gases, and hydraulic oils. No underground storage tanks (USTs) are located at the Site.

Regional and Hydrogeological Setting

The Site is located on the Central Basin of the Los Angeles Coastal Plain. The first major aquifer beneath the Site is the Artesia Aquifer, located at depths ranging from approximately 80 to 150 feet below ground surface (bgs). The Bellflower Aquiclude overlays the Artesia Aquifer and restricts groundwater movement from the overlying sediments. A perched aquifer is present above the Bellflower Aquiclude at depths ranging from 20 to 40 feet bgs. Shallow groundwater wells present at the Site are screened in this perched aquifer. The base of the Bellflower Aquiclude is found at a depth of approximately 80 feet bgs in the Site vicinity. Deeper aquifers include the Gage Aquifer, located at a depth ranging from approximately 160 to 210 feet bgs in the Site vicinity. The next major aquifer present beneath the Site is the Lynwood Aquifer, which is found at depths ranging from 850 to 1,000 feet bgs. The Silverado Aquifer is present beneath the Site at depths ranging from approximately 1,060 to 1,240 feet bgs.

The closest well to the Site is designated as LACDPW Well No. 1051W (3S/11W-20R2). Well No. 1051W is owned by the City of Santa Fe Springs and is located approximately 2,200 feet southwest of the Site. The well is designated as municipal supply well, and is located hydrogeologically up-gradient of the Site. Chemical analyses of groundwater samples collected from wells in the vicinity of the Site indicate elevated concentrations of arsenic, but no detectable organic constituents.

Site Assessment

Several phases of environmental investigations were conducted from 2006 to 2010 by two different consultants, ERM and Geosyntec. In addition, groundwater monitoring has been conducted since 2006. All the phases of assessment generated similar or consistent results. The major findings are described in the following paragraphs.

Total petroleum hydrocarbons (TPH) were detected in shallow soils at the site. However, step-out sampling indicated that presence of TPH was limited in area and depth (within the first 5 feet bgs). Maximum detected concentrations of TPH in soil were 260 milligrams per kilogram (mg/kg) for the gasoline range (TPHg), 770 mg/kg for the diesel range (TPHd), and 1,200 mg/kg for the oil range (TPHo). These detections were limited in areal extent and there was no track to groundwater, in addition the concentration of risk driver compounds such as volatile organic compounds (VOCs) in co-located soil gas and soil samples was negligible.

VOCs were investigated across the Site using soil and soil gas sampling. Selected sampling locations targeted potential sources of contamination and were distributed across the Site both inside and outside the building. VOC concentrations were mostly not detected in soil samples. When detected in soil, VOCs were present at trace level concentrations below screening levels for the protection of human health and groundwater. The levels of VOCs detected in soil did not identify any major source of contamination at the Site. Detected VOCs and their corresponding highest concentration in micrograms per kilogram (μg/kg) shown in parenthesis included: benzene (9.2 μg/kg), toluene (180 μg/kg), ethylbenzene (44 μg/kg), xylenes (160 μg/kg), and tetrachloroethylene (7.3 μg/kg).

VOC concentrations in soil vapor samples were mostly not detected. When detected, VOCs concentrations were equal or lower than 1 microgram per liter (μg/L). Soil gas samples were collected beneath the slab and every five feet to 15 feet bgs (groundwater occurs at 20 feet bgs). No track to groundwater was detected. Detected VOCs and their corresponding highest concentration in μg/L shown in parenthesis included: benzene (0.063 μg/L), toluene (0.18 μg/L), ethylbenzene (0.21 μg/L), xylenes (1 μg/L), tetrachloroethylene (0.95 μg/L), and trichloroethylene (0.09 μg/L).

Only one soil vapor sample detected tetrachloroethylene at a concentration that exceeded its corresponding California Human Health Screening Level (CHHSL) for commercial/industrial

use of 0.6 μg/L. Area weighted average concentrations were calculated for each analyte detected in sub-slab vapor samples. The soil vapor results were compared to commercial CHHSLs. None of the chemicals detected had area weighted average concentrations that exceeded their respective soil vapor CHHSL concentrations. Therefore, residual chemical concentrations at the Site are unlikely to pose an unacceptable human health risk to workers at the Site.

California Administrative Manual (CAM) metals were tested in soil samples. All of the CAM 17 metals analyzed appeared to be representative of background concentrations and, except for arsenic, were detected at concentrations below the USEPA Region 9 regional soil screening levels (RSL) published in June 2011 for commercial/industrial land use.

Arsenic was detected at concentrations exceeding RSLs for commercial/industrial land use. The highest concentration detected was 29 mg/kg. The Department of Toxic Substance Control (DTSC) has reported that background concentrations of arsenic in southern California soils commonly exceed risk based concentrations in school sites. Furthermore, the DTSC has published an upper-bound arsenic concentration of approximately 12 mg/kg for Los Angeles County. A statistical analysis of the data indicated that arsenic concentrations on Site are comparable to the DTSC reported regional levels, appear to be background, and are not associated with any Site-specific release or operation. In addition, the single sample point with the highest concentration appears to be a statistical outlier.

Groundwater beneath the Site is impacted with chlorinated VOCs. Shallow groundwater occurs at a depth of approximately 20 feet bgs and has consistently flowed to the north-northeast since 2006. Chlorinated solvents were rarely detected in soil and soil vapor at the Site. When detected, VOCs occurred in trace concentrations in shallow soil and soil vapor samples and no track to groundwater was observed. Therefore, there is no evidence that the Site is a contributor to the groundwater contamination.

Currently, the DTSC is overseeing assessment of an up-gradient facility, the LeFiell Manufacturing Company (LeFiell), located to the south/southwest across the Freeway 5 from the Site. High concentrations of chlorinated VOCs in soil and groundwater have been detected at the LeFiell site. The DTSC has directed LeFiell to conduct additional groundwater delineation across the Freeway 5 to the northwest of LeFiell towards the former Frigid Coil site. (Enclosure 2).

Summary and Conclusion

Based on the review of information contained in our file, Regional Board staff recommends a soil and groundwater NFA determination for the Site based on the following reasons:

- Since 2006, intensive soil, soil gas and groundwater investigations have been conducted at the Site.

- TPH was the main chemical of concern detected, but the releases appeared to be limited in concentration and extent.
- VOCs, risk drivers at industrial sites, were mostly non-detected or detected at trace concentrations in soil and soil gas and do not pose a risk to human health or to groundwater.
- Arsenic concentrations in soil appear to be background and not the result of a release at the Site.
- Groundwater contamination beneath the Site was not caused by the Site operations but from an up-gradient source. The DTSC is currently investigating the potential source of groundwater contamination directly up-gradient from the site.

Recent legislation, AB 2436, prohibits the Regional Board from issuing a closure letter or making a determination that a "No Further Action" is required if a property is not suitable for unrestricted use, unless a land use restriction is recorded. We determined that a Covenant and Environmental Restriction on Property (Covenant) is necessary for the Site for the protection of public health or safety due to the background concentration of arsenic and residual concentration of TPH in soil. The Covenant was filed and recorded in Official Records, Recorder's Office, Los Angeles County on December 28, 2011. (Enclosure 1).

Therefore, with the provision that the information provided to Regional Board was accurate and representative of Site conditions, Regional Board staff has determined that the residual contamination in the soil beneath the Site does not pose a significant threat to the environment and human health. However, if new contamination is discovered, you are required to provide verbal notification to this Regional Board immediately and submit a follow-up written report within 72 hours. In addition, appropriate health and safety measures must be fully implemented. Any contaminated soils that may be removed from the Site shall be removed only to a legal point of disposal. Please notify this Regional Board of any change in operations, regarding the storage and handling of chemicals, or the processing and disposal of wastes. If this property is sold to another party, we must be informed by the new owners of any change in facility operations, such as storage and handling of chemicals, or the processing or disposal of wastes.

You may be requested access for groundwater monitoring for the investigation currently being conducted up-gradient at the LeFiell site overseen by the DTSC . The Regional Board encourages you to cooperate with the investigation. When it is appropriate to destroy the wells on site, please do so in accordance with the California Department of Water Resources, Bulletin 74-81 and Bulletin 74-90, California Well Standards and submit a well destruction report to this Regional Board.

Please note that Regional Board staff oversight charges for work associated with NFA letter will be billed on the fourth quarter of fiscal year 2011-2012 invoice, in the same manner as previously billed.

The jurisdiction requirements of other agencies, such as the United States Environmental Protection Agency, are not affected by the Regional Board's issuance of this NFA letter for the Site. Such agencies may choose to make their own determination concerning the Site.

If you have any questions regarding this matter, please contact Dr. Angelica Castaneda, project manager, at (213) 576-6737 (acastaneda@waterboards.ca.gov) or Ms. Thizar Tintut-Williams, Unit Chief, at (213) 576-6723 (twilliams@waterboards.ca.gov).

Sincerely,

Samuel Unger

TITLE OFFICER

COVENANT AND ENVIRONMENTAL RESTRICTION ON PROPERTY

FORMER FRIGID COIL FACILITY
13711 FREEWAY DRIVE
SANTA FE SPRINGS, CALIFORNIA 90670
ASSESSOR'S PARCEL NUMBER: 8069-015-055
LARWQCB SITE CLEANUP PROGRAM CASE NO. 1225

This Covenant and Environmental Restriction on Property ("Covenant") is made as of the 21st day of DECEMBER, 2011 by GILBERT-BLANK LLC ("Covenantor"), a California limited liability company, who is the Owner of record of that certain property situated at 13711 Freeway Drive, in the City of Santa Fe Springs, County of Los Angeles, State of California, which is more particularly described in Exhibits A and B attached hereto and incorporated herein by this reference (hereinafter referred to as the "Property"), for the benefit of the California Regional Water Quality Control Board, Los Angeles Region ("Board"), with reference to the following facts:

A. Nature of Covenant. This Covenant is an environmental covenant provided for by Civil Code section 1471 and required by the Board pursuant to Water Code section 13307.1 because hazardous materials, as defined in section 25260 of the Health and Safety Code, are present on the land and in the groundwater under the Property.

B. Presence of Hazardous Materials on and under the Property. A series of field investigations were undertaken by the former tenant of the Property, Johnson Controls, Inc., between 2006 and 2010. These investigations concluded that only minor concentrations of residual hazardous materials located at the Property were related to past site operations. The primary hazardous material of concern is arsenic, an inorganic chemical, which is naturally occurring at the Property.

Detections of constituents in soil samples from the Property did not exceed United States Environmental Protection Agency (USEPA) Region IX Residential Regional Screening Levels

This document filed for recording by Chicago Title Insurance and trust as an accommodation only. It has not been examined as to its execution or as its effect upon the title.

18579

(June 2011) with the exception of arsenic. Arsenic was observed at levels that are consistent with background levels of arsenic established by the California Department of Toxic Substances Control (DTSC). In soil vapor, only benzene and perchlorethylene were detected at levels above industrial/commercial California Human Health Screening Levels (CHHSLs), and only beneath the existing building located on the Property. However, the area-weighted average concentrations for these constituents did not exceed industrial/commercial CHHSLs.

Total petroleum hydrocarbons (TPH) in the gasoline range (TPHg), diesel range (TPHd), and oil range (TPHo) were detected in shallow soil at the Property. Detected concentrations of TPH in shallow soil did not warrant active remediation because they were below the regulatory screening levels under a commercial/industrial land use and did not impact the groundwater beneath the Property.

Groundwater monitoring at the Property indicated that there are two near-surface groundwater zones, one occurring at approximately 47 to 49 feet above mean sea level with a gradient trending north-northeast (shallow zone), and a second, deeper zone occurring at approximately 24 feet above mean sea level, with a gradient trending northwest. The only inorganic constituent detected in the groundwater above drinking water standards was arsenic. Organic constituents detected in groundwater above drinking water standards included mainly chlorinated volatile organic compounds such as trichloroethylene, perchloroethylene and their breakdown products. Benzene was detected in concentrations that exceeded the California, but not the Federal, drinking water standard. Based on a variety of factors, including groundwater gradient data and the lack of significant detections of the constituents observed in groundwater in soil or soil vapor, the Board determined that the constituents detected in groundwater were not the result of on-site operations and had their origin in off-site releases.

Because the area-weighted average concentrations of constituents detected in the soil and soil vapor do not exceed industrial/commercial CHHSLs, and because they are not the source of the constituents detected in the groundwater, the Board did not require any remedial action at the Property other than the recordation of this Covenant.

C. Land Uses and Population Potentially Affected. The Property is used for industrial, roadway and commercial purposes and is adjacent to industrial, roadway and commercial land uses.

D. Disclosure and Sampling. Disclosure of the presence of hazardous materials on and under the Property has been made to the Board and extensive sampling of the Property has been conducted. Different phases of assessments yielded consistent results indicating that negligible contamination originated from past site operations.

E. Use of Property. Covenantor desires and intends that in order to benefit the Board, and to protect present and future public health and safety, the Property shall be used in accordance with the provisions of this Covenant so as to avoid potential harm to persons or property that might result from any residual hazardous materials at the Property.

ARTICLE I
GENERAL PROVISIONS

1.1 Provisions to Run with the Land. This Covenant sets forth protective provisions, covenants, conditions and restrictions (collectively referred to as "Restrictions") upon and subject to which the Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. These Restrictions are reasonably necessary to protect present and future human health and safety or the environment as a result of the presence on the land of hazardous materials. Each and all of the Restrictions shall run with the land and pass with each and every portion of the Property, and shall apply to, inure to the benefit of, and bind the respective successors, assigns, and lessees thereof for the benefit of the Board and all Owners and Occupants. Each and all of the Restrictions: (a) are imposed upon the entire Property, unless expressly stated as applicable to a specific portion of the Property; (b) run with the land pursuant to section 1471 of the Civil Code; and (c) are enforceable by the Board.

1.2 Concurrence of Owners and Lessees Presumed. All purchasers, lessees, and possessors of all or any portion of the Property shall become Owners or Occupants as defined herein and shall be deemed by their purchase, leasing, or possession of the Property to be bound by the Restrictions and to agree for and among themselves, their heirs, successors, and assignees, and the agents, employees, and lessees of such owners, heirs, successors, and assignees, that the Restrictions herein established must be adhered to for the benefit of the Board and all Owners and Occupants, and that the interest of all Owners and Occupants of the Property shall be subject to the Restrictions.

1.3 Incorporation into Deeds and Leases. Covenantor desires and covenants that the Restrictions shall be incorporated in and attached to each and all deeds and leases of all or any portion of the Property. Recordation of this Covenant shall be deemed binding on all successors, assigns, and lessees, regardless of whether a copy of this Covenant has been attached to or incorporated into any given deed or lease.

1.4 Purpose. It is the purpose of this instrument to convey to the Board real property rights, which will run with the land, to address past environmental contamination and naturally occurring hazardous materials at the Property to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

ARTICLE II
DEFINITIONS

2.1 Board. "Board" shall mean the California Regional Water Quality Control Board, Los Angeles Region and shall include its successor agencies, if any.

2.2 Improvements. "Improvements" shall mean all buildings, structures, roads, driveways, gradings, re-gradings, and paved areas, constructed or placed upon any portion of the Property.

2.3 Occupant or Occupants. "Occupant" or "Occupants" shall mean Owners and those

persons entitled by ownership, leasehold, or other legal relationship to the right to use and/or occupy all or any portion of the Property.

2.4 Owner or Owners. "Owner" or "Owners" shall mean the Covenantor and Covenantor's successors in interest who hold title to all or any portion of the Property.

ARTICLE III
DEVELOPMENT, USE AND CONVEYANCE OF THE PROPERTY

3.1 Restrictions on Development and Use. Covenantor promises to restrict the use of the Property as follows:

a. Development and use of the Property shall be restricted to industrial, roadway, commercial, and/or office space;

b. No residence for human habitation shall be permitted on the Property;

c. No hospitals shall be permitted on the Property;

d. No public or private schools for persons under 21 years of age shall be permitted on the Property;

e. No care or community centers for children or senior citizens, or other uses that would involve the regular congregation of children or senior citizens, shall be authorized on the Property;

f. Any excavation conducted on the Property shall be performed pursuant to an appropriate and fully implemented Health and Safety Plan. Any soils containing hazardous materials brought to the surface by grading, excavation, trenching, or backfilling shall be managed by the Owner, Owner's agent, Occupant or Occupant's agent in accordance with all applicable provisions of local, state and federal law;

g. No Owner or Occupant shall drill, bore, otherwise construct, or use a well for the purpose of extracting water for any use, including but not limited to, domestic, potable, or industrial uses, unless expressly permitted in writing by the Board: nor shall the Owner or Occupant permit or engage any third party to do such acts;

h. The Owner and Occupant shall notify the Board of each of the following: (1) the type, cause, location and date of any disturbance to existing impervious surfaces and (2) the type and date of repair of such disturbance. Notifications to the Board shall be made by registered mail within ten (10) working days of both the date of discovery of such disturbance and the date of completion of repairs;

i. The Covenantor agrees that the Board, and any persons acting pursuant to Board orders, shall have reasonable access to the Property for the purposes of inspection, surveillance,

maintenance, or monitoring as provided in Division 7 of the Water Code; and

j. No Owner or Occupant shall act in any manner that threatens or is likely to aggravate or contribute to the existing residual hazardous materials present at the Property.

3.2 Enforcement. Failure of an Owner or Occupant to comply with any of the Restrictions set forth in Paragraph 3.1 shall be grounds for the Board, by the authority of this Covenant, to require that the Owner or Occupant modify or remove, or cause to be modified or removed, any Improvements constructed in violation of that Paragraph. Violation of this Covenant shall also be grounds for the Board to file civil actions against the Owner or Occupant as provided by law. Nothing in this Covenant shall limit the Board's authority under Division 7 (commencing with section 13000) of the Water Code or other applicable laws.

3.3 Notice in Agreements. After the date of recordation hereof, all Owners and Occupants shall execute a written instrument which shall accompany all purchase agreements or leases relating to all or any portion of the Property. Any such instrument shall contain the following statement:

> The land described herein is subject to a Covenant and Environmental Restriction dated as of DECMBER 21, 2011, and recorded on ______________, 20___, in the Official Records of Los Angeles County, California, as Document No. __________. This Covenant and Environmental Restriction imposes certain covenants, conditions, and restrictions on usage of the property described herein due to the presence of residual hazardous materials in soils and in the groundwater under the property described herein. This statement is not a declaration that a hazard exists.

ARTICLE IV
VARIANCE AND TERMINATION

4.1 Variance. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a written variance from the provisions of this Covenant.

4.2 Termination. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a termination of the Restrictions as they apply to all or any portion of the Property.

4.3 Term. Unless terminated in accordance with Paragraph 4.2 above, by law or otherwise, this Covenant shall continue in effect in perpetuity.

ARTICLE V
MISCELLANEOUS

5.1 No Dedication Intended. Nothing set forth herein shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property or any portion thereof to the general

public.

5.2 Notices. Whenever any person gives or serves any notice, demand, or other communication with respect to this Covenant, each such notice, demand, or other communication shall be in writing and shall be deemed effective (a) when delivered, if personally delivered to the person being served or an official of a government agency being served, or (b) three (3) business days after deposit in the mail if mailed by United States mail, postage paid certified, return receipt requested, addressed:

If To: "Covenantor":

GILBERT-BLANK LLC
2730 Wilshire Blvd., Suite 301
Santa Monica, California 90403-4749

If To: "Board":

Regional Water Quality Control Board
Los Angeles Region
Attention: Executive Officer
320 W. 4th Street, Suite 200
Los Angeles, California 90013

5.3 Partial Invalidity. If any portion of the Restrictions or terms set forth herein is determined by a court having jurisdiction to be invalid for any reason, the remaining portion shall remain in full force and effect as if such portion had not been included herein.

5.4 Recordation. This instrument shall be executed by the Covenantor and by the Executive Officer of the Board. This instrument shall be recorded by the Covenantor in the County of Los Angeles within ten (10) days of the date of execution.

5.5 References. All references to Code sections include successor provisions.

5.6 Construction. Any general rule of construction to the contrary notwithstanding, this instrument shall be liberally construed in favor of the Covenant to preserve and implement the purpose of this instrument and the policies and purposes of the Water Code. If any provision of this instrument is found to be ambiguous, an interpretation consistent with the purpose of this instrument that would render the provision valid shall be favored over any interpretation that would render it invalid.

IN WITNESS WHEREOF, the parties execute this Covenant as of the date set forth above.

EXHIBIT A

LEGAL DESCRIPTION OF PROPERTY

Lot 15 of Tract No. 23559, in the City of Santa Fe Springs, County of Los Angeles, State of California, as per map recorded in Book 752 pages 19 to 21 inclusive of Maps, in the office of the County Recorder of said county.

Except from that portion of said Lot 15, included within the Northeast Quarter of the Southwest Quarter of Section 21, Township 3 South, Range 11 West, in the Rancho Los Coyotes, in the City of Santa Fe Springs, County of Los Angeles, State of California, as shown upon a map recorded in Book 41819 Page 141, et. seq. of Official Records, in the office of the County Recorder of said county, an undivided 4 per cent of all oil and gas now or at any time hereafter lying in or under said land, as conveyed to E. B. Newton, by deed recorded September 27, 1938 in Book 15956 Page 360, Official Records of said county.

Subject: DTSC Review of Subsurface Site Assessment Report, Prepared for LeFiell Manufacturing, Dated: September, 2011
Attachments: LeFiell Manufacturing_DTSC Reviewof Subsurface Site Assessment Report_110811.pdf

Dear Mr. Hutchison,

Attached are DTSC review comments regarding the subject Report.

Please address the subject comments and provide a Remedial Investigation and Feasibility Study Work Plan to DTSC by December 15, 2011.

Best Regards,

Armen Minassian

MEMORANDUM

TO : Armen Minassian
Project Manager
Brownfields and Environmental Restoration Program

FROM : John A. Naginis, CEG John Naginis
Senior Engineering Geologist
Chatsworth Geological Services Unit

CONCUR : Craig Christmann, PG
Senior Engineering Geologist
Chatsworth Geological Services Unit

DATE : November 1, 2011

SUBJECT: Geologic Services Unit (GSU) review of: Subsurface Site Assessment Report, LeFiell Manufacturing Company, 13700 Firestone Boulevard, Santa Fe Springs, CA 90670, California, Dated: September 2011

PCA 12020 Site Code 301483-11 Log No.: 20009493 Zip Code: 90670

As requested, GSU staff have reviewed the above referenced Interim Subsurface Site Assessment Report (Report), prepared by Hemphill, Green & Associates for LeFiell Manufacturing Company. Previous investigations have indicated that groundwater and soil vapor at the site are contaminated with volatile organic compounds (VOCs), however the contamination had not been fully characterized. The current site assessment was performed to provide additional delineation of VOCs in soil, soil gas and groundwater. The work was performed in general accordance with a Site Investigation Workplan that was approved by DTSC in October, 2010.

GSU staff has reviewed the Report for completeness and conformance with DTSC guidance. GSU staff did not provide a detailed review of the Human Health Risk assessment. This memo includes general comments regarding site conditions and delineation of contamination, as well as specific comments that address specific sections of the report.

Questions regarding this memo should be directed to John Naginis at (818) 717-6626 or JNaginis@DTSC.ca.gov.

General Comments

1 – Delineation of Groundwater Contamination

The lateral extent of groundwater has been delineated along the northwest and southeast ends of the property. However the lateral extent has not been delineated towards the northeast and towards the southwest. Based on groundwater elevation data from on-site wells, the groundwater flow direction is towards the northeast and east. Consequently, the down gradient extent of groundwater contamination has not been delineated. Interstate 5 is adjacent to the northeast side of the property, so it appears that groundwater contamination may extend beneath the freeway. To delineate the lateral extent of groundwater contamination, sampling points and/or groundwater monitoring wells will be required on the east side of Interstate 5. The delineation of groundwater contamination is also required southwest of well MW-4. It appears that groundwater contamination may extend off-site in this area.

The vertical extent of contamination has not been delineated. All of the wells on-site have well screens installed at the top of the water table. Based on the high contaminant concentrations detected in the wells, and the density of the contaminants, the vertical extent of groundwater contamination requires delineation.

2. – Evaluation of Groundwater Flow

Based on the location and construction of the seven groundwater monitoring wells installed on-site, the direction of groundwater flow is fairly well defined. As mentioned in the previous comment the vertical extent of contamination needs to be delineated. In addition, the vertical component of groundwater flow has not been evaluated. Vertical groundwater gradients need to be delineated to evaluate whether vertical groundwater flow could be causing contaminants to migrate into deeper portions of the aquifer.

3 – Remedial Investigation and Feasibility Study

Section 3.5 of the report recommends conducting a remedial investigation and feasibility study to identify technically and economically feasible methods for remediating the soil vapor and groundwater contamination. GSU staff concurs with this recommendation. As noted above, additional investigation should include delineating the vertical extent of contamination and evaluating vertical groundwater gradients.

Specific Comments

4 – Section 3.4.2.3 Leak Test

A leak check compound was used to verify that ambient air was not infiltrating the soil vapor sampling train. However, the report does not state what chemical was used as the leak check compound. This section should be revised to state the chemical used as the leak check compound.

5 – Section 3.5 – Summary of Investigation Findings & Recommendations

Tetrachloroethene (PCE) was detected in groundwater monitoring wells MW-3 and MW-6 at relatively low concentrations. The report refers to these wells as up-gradient property boundary wells, and concludes that the PCE detections suggest an off-site source of contamination. While these two wells are up-gradient of most wells on-site, they are cross gradient to, and have a slightly lower groundwater elevation than well MW-4, the well with the highest PCE concentrations. Consequently, it is very probable, that the PCE in wells MW-3 and MW-6 are the edges of the contaminant plume rather than the result of off-site contamination.

6 – Figures 3.4 through 3.13

These figures show VOC concentrations in soil gas along with isoconcentration gradients. Each figure shows these data for a specific compound at a specific depth. Based on investigation data, there appears to be at least two sources that released VOCs to the subsurface. A former vapor degreaser near soil vapor point SV-4 and a former parts cleaner near soil vapor point SV-1. Based on this conceptual model, the soil vapor isoconcentration contours were interpreted as two separate plumes restricted to these two areas. However, there are no data indicating that two discrete plumes are present and that the VOCs are not present continuously between the two areas.

For example, on Figure 3.4 1,000 µg/L and 500 µg/l isoconcentration lines are drawn between vapor points SV-2 and SV-11, indicating that there is an area of low PCE concentrations between these two points. However, there are no data points between these two soil vapor points. PCE was detected at a concentration of 1,700 µg/L at SV-2 and, 8,200 µg/L at SV-11. Unless data exists to show there is a decrease in concentrations between the two points, a better interpretation is to assume that the contamination extends between the two points. The isoconcentration lines on these figures should be reinterpreted using the assumption that when contamination is detected at two adjacent points, the contamination extends between the two points. This reinterpretation should be done on Figures 3.4 through 3.13.

The isoconcentration line intervals need to be consistent on the figures. For example, on Figure 3.4 the isoconcentration intervals near sampling point SV-1 are1,500 µg/L, 1,000 µg/L, and 500 µg/L, while the isoconcentration lines around SV-4 do not include the 1,500 µg/L isoconcentration line. Figures 3.4 through 3.13 all need to be double checked for consistent use of isoconcentration lines and corrected if necessary.

7 – Figure 3.15 through 3.17

Isoconcentration lines in groundwater were interpreted in a manner similar to the interpretation of soil vapor isoconcentration lines. Two separate plumes are identified, one centered on well MW-2, and the other centered on MW-4, without any data between the two points indicating a reduction in contaminant concentrations. The groundwater isoconcentration lines on Figures 3.15 through 3.17 need to be

reinterpreted using the assumption that when contamination is detected at two adjacent points, the contamination extends between the two points.

DATE: November 1, 2011

SUBJECT: Review of a Subsurface Site Assessment Report for the LeFiell Manufacturing Company, 13700 Firestone Boulevard, Santa Fe Springs, California.

PCA: 12020 Site Code: 301483-11

Background

This is an 11 acre property located at the northwest corner of Marquardt Avenue and Alondra Boulevard in Santa Fe Springs, California. It is bordered by Firestone Boulevard and the I-5 freeway on the northwest, and by the Southern Pacific Rail Road on the southeast. The site is currently occupied by Budget Rent A Car (@13770) and by LeFiell's manufacturing and administrative operations (@13700 and 13750). It is slated for immediate redevelopment, where a strip of the property adjacent to the Firestone Boulevard will be taken over by Caltrans to expand the I-5 freeway. Portions of Buildings B and D will be demolished, and Buildings L and M will be added on to the property. The entire site will be paved with the exception of landscaping areas along the perimeter of the property.

The LeFiell Manufacturing Company has been operating at the site since the 1950s. It is involved in the design and production of precision tubular parts for commercial airplanes and the defense and aerospace industries. Former activities at the site that have contributed to contamination include the operation of sumps, clarifiers, underground storage tanks (USTs) storing gasoline or waste oil, and the use of degreasing solvents. A 2007 assessment of the site found tetrachloroethylene (PCE) and trichloroethylene (TCE) at concentrations up to 11,000 ug/L and 1,600 ug/L in groundwater. A 2010 soil vapor survey found PCE at concentrations upto 15,000 ug/L and 18,000 ug/L @ 5 ft and

15 ft bgs. Currently, the facility operates a closed-loop vacuum degreaser located in the manufacturing building.

Previous investigations at the site found that the subsurface (soil gas and groundwater) is contaminated with high concentrations of volatile organic compounds (VOCs). In the current report, potential health effects of these VOCs to current and future receptors at the site (via the vapor intrusion pathway) are evaluated. Since the site will remain an industrial/commercial facility, the two types of receptors that were evaluated were a commercial/industrial worker and a construction worker.

Document Reviewed

The Human and Ecological Risk Office (HERO) reviewed the report titled "Subsurface Site Assessment Report", dated September 2011. The report was prepared for LeFiell Manufacturing Company, by Hemphill, Green & Associates LLC. The documents were received by HERO on October 5, 2011.

Scope of Review

HERO reviewed these documents with emphasis on those aspects that affect the risk to human health. HERO's review addressed issues concerning the methodology and conclusions of the report. Any future changes or additions to the document should be clearly identified.

General Comments

In general, HERO concurs with the conclusions of the health risk assessment, i.e., that VOCs may pose unacceptable risks/hazards to current and future workers at the site via the vapor intrusion pathway. Based on these findings, subsurface mitigation of VOCs was recommended. HERO notes that since the estimated cancer risks and non-cancer hazards were far greater than 10^{-4} and 1, respectively, indoor air and paired subsurface sampling should be conducted in buildings that are currently occupied by workers (General Comment # 1). Workers involved in redevelopment activities who may come in contact with VOCs in the subsurface should follow appropriate health and safety procedures (General Comment # 2). Interim measures such as sub-slab venting and depressurization should be implemented to mitigate vapor intrusion into current and future buildings onsite (General Comment # 3).

1) **Indoor Air and subsurface sampling:** HERO recommends concurrent indoor air and subsurface (sub-slab and/or soil gas) sampling in existing buildings, in order to estimate health risks to current onsite workers. Indoor air and subsurface sampling locations should be selected following guidance provided in DTSC's

October 2011, *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance)*. The report concluded that cancer risks to onsite workers are in the 10^{-1} range, using maximum soil gas concentrations. If indoor air concentrations are unacceptable, buildings might have to be evacuated until the subsurface is successfully remediated.

For future reference, HERO recommends that the report clearly identify buildings onsite that are currently occupied, along with soil vapor probes located nearest to those buildings. VOC data corresponding to each of the occupied buildings (i.e., the sampling location closest to those buildings) should then be used to evaluate risks/hazards to workers in those specific buildings. If the results of the subsurface sampling indicate that cumulative cancer risks exceed 10^{-5} and non-cancer hazards are above 1, indoor air sampling should be implemented. The report states that risks/hazards to current commercial/industrial workers coming in contact via the vapor intrusion pathway were overestimated since the maximum detected concentrations were used (page 4-17).

2) **Construction worker:** Please follow appropriate health and safety procedures to protect workers involved in redevelopment of the site, since risks/hazards for the construction worker were estimated to be above acceptable levels.

3) **Site redevelopment:** HERO recommends following guidance provided in DTSC's *Vapor Intrusion Mitigation Advisory* to minimize volatilization of contaminants from the subsurface into indoor air spaces of existing and future buildings. Methods for mitigating vapor intrusion into existing/future buildings include installation of sub-slab ventilation and depressurization systems. The above-mentioned procedures can be used as an interim response action until VOC concentrations in soil, soil gas and groundwater are within acceptable levels.

Specific Comments:

1) **Table 3.4:** For future reference, the detection limits of contaminants being analyzed should not exceed risk-based screening levels, in order to ensure the risks/hazards from exposures to these chemicals are not being under-estimated. The detection limits for benzene and vinyl chloride exceed risk-based screening values (CHHSLs or RSLs) in some of the sampling locations. It may be necessary to use TO-15 methodology to achieve these detection limits.

2) **Table 4.4:** For future reference, please evaluate TCE risks/hazards using the most recent toxicity data released by the USEPA's Integrated Risk Information System (IRIS).

Recommendations and Conclusions

HERO strongly recommends indoor air and paired sub-surface (sub-slab and/or soil gas) sampling at existing buildings onsite to ensure that workers are not being exposed to unacceptable risks/hazards. Workers involved in site redevelopment should use appropriate health and safety measures to minimize exposures to VOCs in the subsurface. Interim measures, such as sub-slab venting and depressurization may need to be implemented in current and future buildings onsite.

HERO notes that the decisions made in this document are site specific and should not be construed as a policy decision applicable to other sites. If you have additional questions please feel free to contact me at (714) 484-5448 or SRoysemm@dtsc.ca.gov.

Table of Contents

FIGURES & APPENDICES

Fulcrum Resources (FR) Environmental conducted an Indoor Air Investigation at **13711 Freeway Drive, Santa Fe Springs, California 90670** (subject property) on May 24, 2021 per the request of Pacific Premier Bank – 21-000553-01-07E (Client). A Site Location Map illustrating the location of the subject property is provided as Figure 1.

1.0 Background

FR reviewed a Phase I Environmental Site Assessment (ESA) Report for the subject property, prepared by Partner Engineering and Science, Inc., dated April 9, 2021. The following is a summary of findings from the previous Phase I ESA Report:

Summary of Property Description

The subject property consists of one 4.81-acre rectangular parcel of land improved with one commercial warehouse building of approximately 82,092 square feet. As described in the Phase I ESA Report prepared by Partner, the subject property is currently occupied by Martinez Trucking Inc. for commercial use. On-site operations consist of general office administration, storage/distribution of steel products, and small-scale auto repair tasks. The subject property consists of one single-story building situated on the east side of the property. The building consists of office and warehouse space with two office mezzanines located on the south and west sides of the structure. The south mezzanine is currently used solely for storage, and the west mezzanine is not currently utilized. In addition to the current structure, the subject property is also improved with concrete-paved and asphalt-paved lots and minimal associated landscaping.

Summary of Historical Property Use

According to the Phase I ESA Report prepared by Partner, the subject property parcel was historically used for agricultural purposes. It is possible that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used and stored onsite. The subject property was either paved over or covered by building structures that minimize direct contact to any potential remaining concentrations in the soil. Additionally, during previous site development activities, near surface soils (where residual agricultural chemical concentrations would have most likely been present, if at all) were likely mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on these reasons, Partner concludes that the possible former use of agricultural chemicals is not expected to represent a significant environmental concern at this time.

According to GeoTracker and historical review, the subject property was occupied by Frigid Coil, an assembler of air handler and HVAC equipment, from as early as 1971 to as late as 2007. Prior to that, the subject property was occupied by Philip Carey Company (also known as Miami Carey and Celotex), a manufacturer of various asbestos-containing and insultation products such as cement roofing, wool, and ceramic materials. Frigid Coil occupied the entirety of the current building and utilized the current office space as a parts warehouse. In addition, a former three-stage clarifier was located on the east side of the building; the clarifier was pumped out and filled with concrete in 2007 by Safety Kleen. Partner notes that no floor drains were observed during this assessment.

Frigid Coil reported a release of arsenic, diesel, gasoline, and heating oil/fuel oil at the subject property with impacts to soil and groundwater on May 30, 2006. Based on GeoTracker online documents, subsurface sampling events associated with soil, soil vapor, and groundwater were conducted on the subject property between 2006 and 2010. As of 2010, levels of tetrachloroethylene (PCE) and trichloroethene (TCE) were detected in groundwater samples collected on the subject property at levels above the current maximum contaminant level (MCL). In addition, PCE was detected in soil vapor samples collected on the subject property at levels above the current California Human Health Screening Level (67 µg/mg3, or 0.067 µg/L). Due to the on-site soil, soil vapor, and groundwater contamination, a land use covenant, or DEED, was placed on the subject property by the RWQCB on December 28th, 2011. According to the DEED, land following uses are prohibited on the subject property: residential, day care center, elder care center, public or private school for persons under 21, and hospital. In addition, “no groundwater extraction at any depth without approval” or “excavation of contamination soils without agency review and approval” is warranted on the subject property. Based on this information, regulatory closure for this release was issued on January 27, 2012 by the RWQCB. According to the NFA letter, releases of TPH have appeared “to be limited in concentration and extent”, and a nearby site, identified as Lefiell Manufacturing Co. at 13700 Firestone Boulevard, was considered to be a likely source of the contamination at the subject property.

<u>Recognized Environmental Conditions (RECs)</u>

The following RECs were identified in connection with the subject property:

- Partner identified a controlled recognized environmental condition (CREC) during the course of this assessment. According to the State Water Quality Control Board’s (SWQCB’s) online database (GeoTracker) and historical review, the subject property was occupied by Frigid Coil, an assembler of air handler and heating, ventilation, and air conditioning (HVAC) equipment, from as early as 1971 to as late as 2007. Prior to that, the subject property was occupied by Philip Carey Company (also known as Miami Carey and Celotex), a manufacturer of various asbestos-containing and insultation products such as cement roofing, wool, and ceramic materials. Frigid Coil occupied the entirety of the current building, and utilized the current office space as a parts warehouse. In addition, a former three-stage clarifier was located on the east side of the building; the clarifier was pumped out and filled with concrete in 2007 by Safety Kleen. Partner notes that no floor drains were observed during this assessment.

  Frigid Coil reported a release of arsenic, diesel, gasoline, and heating oil/fuel oil at the subject property with impacts to soil and groundwater on May 30, 2006. Based on GeoTracker online documents, subsurface sampling events associated with soil, soil vapor, and groundwater were conducted on the subject property between 2006 and 2010. As of 2010, levels of tetrachloroethylene (PCE) and trichloroethene (TCE) were detected in groundwater samples collected on the subject property at levels above the current maximum contaminant level (MCL). In addition, PCE was detected in soil vapor samples collected on the subject property at levels above the current California Human Health Screening Level (67 µg/mg3, or 0.067 µg/L).

  Due to the on-site soil, soil vapor, and groundwater contamination, a land use covenant, or DEED, was placed on the subject property by the Los Angeles Regional Water Quality Control Board (RWQCB) on December 28th, 2011. According to the DEED, land following uses are prohibited on the subject property: residential, day care center, elder care center, public or private school for persons under 21, and hospital. In addition, “no groundwater extraction at any depth without approval” or “excavation of contamination soils without agency review and approval” is warranted on the subject property.

Based on this information, regulatory closure for this release was issued on January 27, 2012 by the RWQCB. According to the No Further Action (NFA) letter, releases of TPH have appeared "to be limited in concentration and extent", and a nearby site, identified as Lefiell Manufacturing Co. at 13700 Firestone Boulevard, was considered to be a likely source of the contamination at the subject property. It was also the opinion of the RWQCB that VOCs in soil and soil gas did "not pose a risk to human health or to groundwater" during the time of the report. Furthermore, the Groundwater Monitoring Well Destruction report for the 11 on-site monitoring wells was issued to the RWQCB in May 2012. Based on the 2009 and 2010 analytical results, regulatory closure, and in place land use covenant, the historical use of the subject property coupled with the soil, soil vapor, and groundwater contamination is considered to be a CREC. Partner notes that concentrations exceed current screening levels and indoor air sampling would be necessary to determine if there is a concern to tenant health/safety.

Conclusion

Based on the above, FR performed an indoor air investigation at the subject property.

2.0 Environmental Setting

2.1 Regional Physiographic Setting

The United States Geological Survey (USGS) Whittier, California Quadrangle 7.5-minute series topographic map, dated 2012 was reviewed for this report. According to the contour lines on the topographic map, the subject property is located at approximately 71 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the east. The subject property vicinity is depicted on Figure 1.

2.2 Geology/Soil Conditions

According to the previous Phase I ESA, the subject property is situated within the Santa Fe Springs Plain of the Whittier Area near the La Habra Piedmont Slope and Coyote Hills. The site vicinity is underlain by Quaternary Recent Series alluvium, consisting primarily of streambed-deposited gravel, sand, silt, and clay; and the Lakewood and San Pedro formations. A discontinuous, semi-perched aquifer is reported in the site vicinity. Underlying the recent alluvium are non-marine deposits, sands and gravels with interbedded clay of marine origin (Lakewood and San Pedro Formations, respectively). Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Urban land-Hueneme and San Emigdio complex. Urban land consists of soils that have been altered or obscured by urban works and structures. The Hueneme series consists of deep, somewhat poorly drained, moderately highly to highly permeable soils that formed from discontinuous human-transported material over mixed alluvium derived from granite and/or sedimentary rock. Slopes range from zero to two percent. The San Emigdio series consists of deep, well drained, moderately highly to highly permeable soils that formed from discontinuous human-transported material over mixed alluvium derived from granite and/or sedimentary rock. Slopes range from zero to two percent.

2.3 Hydrogeology

According to the previous Phase I ESA, the nearest surface water in the vicinity of the subject property is the La Mirada Creek located approximately 0.28-mile to the east of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment. According to available information, a public water system operated by the Santa Fe Springs Water Utility Authority (SFSWUA) serves the subject property vicinity. According to the SFSWUA 2019 Annual Water Quality Report, the sources of public water for the City of Santa Fe Springs are from two sources: groundwater and surface water (from both the Colorado River and the State Water Project). The City of Santa Fe Springs pumps groundwater from their local well and disinfects this water with chlorine before distribution. According to the Phase II Environmental Site Assessment prepared by ERM for the subject property in January 2008, the depth to groundwater beneath the subject property is ranges between 20 and 40 feet below ground surface (bgs), and the direction of groundwater flow is to the northeast.

3.0 Methodology

The following areas of concern are included in this assessment:

Area of Concern	Contaminants of Concern	Samples	Analysis	EPA Method
Indoor Air	Volatile Organic Compounds (VOCs)	Six (6) indoor air samples (IA-1 through IA-6); and three (3) outdoor (ambient background) air samples (AA-1 through AA-3)	VOCs	TO15-SIM

On May 24, 2021, FR mobilized to the subject property to perform the indoor air investigation. Sampling was conducted in accordance with DTSC guidance. A photo log of field activities and the Building Survey Form are included in Appendix A.

All of the samples were submitted to Pace Analytical (Pace), of Mt. Juliet, Tennessee, a State of California certified laboratory, using standard Chain of Custody Protocols.

The indoor air sampling methodology is summarized as follows: FR field staff notified the property owner of the schedule for sampling, and ensured that the air circulation system was operating for at least 24 to 48 hours prior to the start of sampling. Indoor air conditions were consistent with operating conditions on a normal business day at the time of sampling. Wind speed, direction and temperatures were noted in the morning and afternoon. FR conducted a survey and screening of the building using the DTSC Building Survey form, provided in Appendix A.

All air samples were collected on an 8-hour time-weighted average (TWA) basis using flow controllers. Laboratory-supplied Summa canisters were placed at the above-described sampling locations. Each of the Summa canisters were fitted with flow controllers such that the air samples were collected at a slow rate over a period of 8 hours. Three (3) concurrently sampled outdoor air samples were collected over an 8-Hour Period.

Upon completion of the 8-hour sampling period, each canister was labeled, packaged, and delivered under chain of custody protocol to Pace. Air samples were analyzed for the 23 compound target list (VOCs) by EPA Test Method TO-15 using low level selective ion mode (SIM) method to provide detection limits at or below established HERO 3 Guidelines.

4.0 Field Observations

Field observations are documented in the Building Survey Form in Appendix A. The following household products were noted in the inventory: Mobil diesel tank truck (approximately 1,200 gallons), diesel exhaust fluid (2 x totes), Chevron motor oil SAE 40W (8 x 5-gallon buckets). The weather was noted as sunny at 78˚F.

5.0 Analytical Results

California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) is the primary authority in California for environmental assessment of contaminated sites in the state. In addition, San Francisco Bay Regional Water Quality Control Board (SFBRWQCB or Waterboard) has published interim *guidance* for soil, groundwater, air, and soil vapor intrusion screening levels (ESLs). Various DTSC and Waterboard screening levels are referenced in the tables of this report to evaluate the laboratory results as they apply to the various exposure scenarios (such as residential, industrial/commercial, and/or construction worker property use/exposure).

Analytical results compared to the applicable screening levels are described below, and in summary Table 1 at the end of this report. The full laboratory analytical report is included in Appendix B of this report for reference.

5.1 Indoor Air Results

A total of six (6) indoor air samples and three (3) outdoor air samples were collected from sample locations IA-1 through IA-6; and AA-1 through AA-3 and analyzed for VOCs via EPA Method TO15-SIM. The sample locations are depicted on Figure 2. The following VOCs were detected in one or more samples analyzed: benzene, carbon tetrachloride, chloromethane, 1,4-Dichlorobenzene, 1,2-Dichloroethane, ethylbenzene, tetrachloroethene, and trichloroethene. All other VOCs were below detection limits for the samples analyzed.

All indoor air and outdoor ambient air sample results are below their respective DTSC screening levels for industrial/commercial properties with the exception of benzene, summarized as follows:

> Benzene was detected in all six (6) indoor air samples and in all three (3) outdoor air samples at concentrations ranging from (0.613 to 1.26 µg/m^3), above the DTSC screening level for industrial/commercial properties (0.42 µg/m^3).

6.0 Evaluation

As presented in Table 1, elevated concentrations of benzene were encountered in all of the samples analyzed at levels above its screening level. No other VOCs were detected in the air samples at concentrations above their respective screening levels.

Exceedances of environmental screening levels do not require reporting to regulatory agencies. Rather, the conservative levels are used as tools to evaluate environmental risks. The concentrations of benzene encountered in all of the indoor air samples were only slightly above the concentrations of benzene detected in all of the outdoor (ambient) background air samples (which also exceeded screening levels). By subtracting the highest ambient air sample result (0.754 $\mu g/m^3$ [sample AA-2]) from the highest indoor air result (1.26 $\mu g/m^3$ [sample IA-1]) the resulting benzene concentration is 0.506 which is insignificantly above the benzene indoor air screening level of 0.42 $\mu g/m^3$. Additionally, results can fluctuate with humidity, wind, temperature, and seasons.

Based on the results, it is FRs professional opinion that a significant human health risk related to indoor air quality at the subject property does not appear to exist at this time. However, based on the slightly elevated reported concentrations of benzene encountered in all of the indoor air samples, FR conservatively recommends improving indoor air quality at the site through the use of actions to increase the building ventilation and airflow (i.e.: ensure ventilation systems operate properly, rebalance or adjust HVAC systems to increase total airflow to occupied spaces).

7.0 Conclusions and Recommendations

FR conducted an Indoor Air Investigation at **13711 Freeway Drive, Santa Fe Springs, CA 90670** (subject property) per the request of Pacific Premier Bank 21-000553-01-07E. The purpose of this investigation was to assess indoor air conditions based on the risk of soil vapor intrusion.

Based on the results from the Indoor Air Investigation relative to current California DTSC regulations, the documented conditions described in this report do not represent a reportable condition, and a significant human health risk related to indoor air quality at the subject property does not appear to exist at this time. However, based on the slightly elevated reported concentrations of benzene encountered in all of the indoor air samples, FR conservatively recommends improving indoor air quality at the site through the use of actions to increase the building ventilation and airflow (i.e.: ensure ventilation systems operate properly, rebalance or adjust HVAC systems to increase total airflow to occupied spaces)

Limitations

This Indoor Air Investigation report was prepared for the site at **13711 Freeway Drive, Santa Fe Springs, CA 90670** (subject property) per the request of Pacific Premier Bank 21-000553-01-07E. Fulcrum Resources Environmental has applied appropriate scientific judgment and used suitable measures consistent with accepted industry standards of practice for site assessments. Fulcrum Resources Environmental makes no expressed or implied warranty, in fact or by law, of the fitness of the site, for any particular purpose, with the material or "services" furnished by Fulcrum Resources to the client.

It should be recognized that potential indoor or subsurface contamination from unknown sources could vary laterally and with depth below a given site. The analysis and interpretations in this report have been developed based on the review of existing information pertaining to the subject property, and a limited number of indoor air sample analysis from discrete locations.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
	The remainder of this page intentionally left blank, there are no qualifiers applied to this SDG.

APPENDIX C

PROFESSIONAL QUALIFICATIONS/
INSURANCE

Don Kellar, M.S., REP, PG
National Client Manager/Hydrogeologist
Los Angeles Office
don@frenviro.com
(310) 876 4128

Don Kellar is National Client Manager Manager and Hydrogeologist within Fulcrum Resources Environmental

Don specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- RFI sample program management
- Alternative Energy
- Asbestos inspections associated with demolition, restoration and renovation
- Remediation and Monitoring Tactics
- Health and Safety- Environmental Construction/drilling
- CEQA/NEPA
- Agency Oversight Assistance

Key Experience/Key Projects -

World Oil Groundwater Monitoring and Sampling

- Performed field work, project management, budgeting, client management, and completion of report for over 200 sites nationwide. Mr. Kellar managed a total of 18 sites under World Oil Corporation, and an additional 10 sites under Exxon/Mobil. Mr. Kellar also had the privilege of conducting this work nationwide throughout California, Arizona, Colorado, Maine, Rhode Island, Connecticut, New York, Massachusetts, Nevada, and Michigan.

Phase I and II Environmental Site Assessments

- Performed over 2,000 environmental site assessments nationwide since 2001 that include but not limited to gas stations, dry cleaners, heavy manufacturing sites, multi-tract residential apartments and housing. Mr. Kellar also has extensive involvement with Non-CERCLA sampling per specific client protocol that include asbestos sampling, lead-based paint sampling, radon testing, and lead in water sampling.

  Mr. Kellar managed Bank of America's REO portfolio between 2008 and 2010 throughout the western United States. These assessments included a former landfill turned golf course, a former silver mine, numerous farming and agricultural parcels, brownfield redevelopments; recycling facilities; medical facilities; small and large shopping plazas; and developed or partially developed residential communities.

  Experienced as a client and project manager for over 30 Shell Oil Sites with duties ranging from surface and subsurface investigations; pilot studies; assistance with onsite engineer for Phase III remediation; and agency correspondence. Under the mentorship of numerous PGs, CHGs, and PEs, Mr. Kellar has become very experienced in the troubleshooting remediation options for prospective clients.

Health and Safety

- As former Health and Safety Officer for Geologic Services Corporation's West Coast Office, Mr. Kellar gained experience in identification, handling, disposal of different hazardous wastes, and the development of emergency response plans for gas stations and industrial sites.

Education

Bachelors of Science in Physical Geography, University of Michigan, 2002 Minor Music
Scholar Award 2001

Masters of Science in Hydrogeology, California State University Los Angeles, 2005

Professional Papers

Identification of Water Sources during Wet and Dry Months within Medea Creek Through Ion and Isotope Analysis. Research Paper for California State University-Los Angeles, October 2009

Certifications

- California Registered Environmental Assessor #30026
- 40-hour OSHA HAZWOPER with Refresher
- United States Green Building Council Member-Los Angeles
- National Registry of Environmental Professionals #624658052
- California Licensed Professional Geologist-#9192
- Florida Licensed Professional Geologist-#2858

Languages-English, Moderate Speaker of Spanish and Chinese

Ling (Caroline) Cao, M.S.
Principal Consultant/West Coast Operation's Manager
Los Angeles Office
ling@frenviro.com
(626) 429 1480

Ms. Cao is the Principal Consultant and West Coast Operation's Manager within Fulcrum Resources Environmental

Ms. Cao specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- Biology and Ecology
- Property Condition Assessments
- Asbestos and Lead-based Paint inspections associated with demolition, restoration and renovation
- Lead-in-water and Radon Testing
- Consulting with Chinese Community
- Health and Safety- Environmental Construction/drilling
- CEQA/NEPA

Key Experience/Key Projects -

Palos Verde and El Sobrante Landfills
Corona Granite and Silicone Quarry

- Performed field work, project management, budgeting, client management, and completion of Phase I Reports. Ms. Cao was able to identify multiple environmental issues and provide client with direction and assistance with respective agencies.

Phase I and II Environmental Site Assessments

- Performed over 1,000 environmental site assessments nationwide since 2003 that include but not limited to former Talley Corporation in Thousand Oaks, SCGA Golf Course in Murrieta, the 536-acre Dos Lagos master-planned and mix-used development in Corona, and silica mines. Ms. Cao also performed due diligence on various gas stations, dry cleaners, chemical plants, heavy manufacturing sites, multi-tract residential apartments and housing. Ms. Cao also has extensive involvement with Non-CERCLA sampling per specific client protocol that include asbestos sampling, lead-based paint sampling, radon testing, and lead in water sampling.

  Mr. Cao has extensive experience with portfolio HUD projects under Fannie Mae and Freddie Mac Guidelines.

Business Development/Customer Service

- Ms. Cao has earned a stellar reputation with providing numerous clients with the excellent customer service on over 1,000 nationwide transactions. Ms. Cao's technical experience combined with customer service has played a vital role in the growth to date of Fulcrum Resources Environmental.

Ms. Cao is majority owner of Fulcrum Resource Environmental and is currently heading the company towards Government 8A status.

Education

Bachelors of Science in Biology, California State University Los Angeles, 2004
Deans List 2004 and 2005

Master of Science in Biology, California State University Los Angeles, 2011

Certification

- Registered Environmental Property Assessor #937750
- 40-hour OSHA HAZWOPER Training Certificate
- Certified Mold Specialist Certification #12-7-548 by American Mold Institute
- Lead Certified Renovator Certificate #R-I-18351-12-02642 by National Center for Healthy Housing
- Certified Asbestos Abatement Contractor Supervisor
- Certified Asbestos Building Inspector
- Certified Asbestos Management Planner
- Certified Asbestos Abatement Project Designer

Languages

- English and Chinese

John Winkler, PG
Senior Geologist/Regional Manager
Thousand Oaks, California Office
Los Angeles, Ventura, Kern, Santa Barbara, and San Luis Obispo Counties
john@frenviro.com
(805) 338 8008

Mr. John Winkler is a Senior Geologist within Fulcrum Resources Environmental

John specializes in helping clients with the following:

- Phase I and II environmental site assessment
- Site remediation
- Technical site review
- Well installation – Monitoring/extraction/production/injection
- Groundwater monitoring and compliance activities
- Health and Safety
- Environmental Construction/drilling – Direct push/hollow-stem auger/mud rotary/air rotary/reverse circulation/CPT
- Hazardous Materials Management
- Waste profiling/treatment/disposal

Key Experience/Key Projects -

Restaurant Property, Malibu, CA

- Mr. Winkler provided environmental consulting for the seller of a property that was developed as a restaurant, but historically was occupied by a gasoline service station. The gas station was closed in the 1960's, prior to purchase by the property owner, and USTs were discovered and removed in 2004. Site assessments indicated petroleum hydrocarbon impact to soil and groundwater. Furthermore, seepage pits for wastewater complicated contaminant transport in the subsurface. Mr. Winkler assisted the property owner to identify the former UST owner/operator, who then agreed to assume Responsible Party status. Subsequently the property owner was able to complete the sale of the property.

Commercial Retail Center, Montebello, CA

- Mr. Winkler provided environmental consulting for a property owner seeking a refinance loan of a 7.56-acre multi-tenant retail shopping center. A Phase I ESA was conducted and an existing dry cleaner unit was determined to have operated for over 25 years, indicating a risk of a release of dry cleaning solvent. A Phase II assessment was conducted at areas of Haz Mat use. Results indicated low levels of PCE in soil and soil vapor below the unit, with no threat to groundwater, but a risk for vapor intrusion. To mitigate the risk, Mr. Winkler managed the following: 1) improvement of secondary containment; 2) improvement of engineered air flow; and, 3) installation of a vapor barrier. Based on the mitigation of the risk of vapor intrusion, the lender approved the loan.

.

Commercial Property, Pomona, CA

- Mr. Winkler provided environmental consulting for a property that was placed in receivership, partly to provide time to assess the environmental risks. A Phase I ESA was conducted and research indicated the site was developed in 1961, and USTs were installed on the property and subsequently removed, but closure was not documented. Additionally, data gaps on past site use existed. Site assessments indicated no significant impact from the fuel USTs; however, elevated concentrations of PCE in soil were detected. A nearby property had a catastrophic train derailment that released PCE to the subsurface and the elevated levels on the subject property were determined to have an off-site source. The UST case was successfully closed with the oversight agency.

Fields of Competence
- Environmental site assessments
- Environmental remediation
- Hazardous Materials Management

Education
- Bachelors of Science in Geology, University of New York at Cortland
- Certificate in Hazardous Materials Management, University of California, Santa Barbara

Certification
- California Professional Geologist No. 7456
- 40-hour OSHA HAZWOPER
- California Certified Volunteer Fire Fighter, 1998

Hao Zhang, M.S., PE, QSD
Regional Project Manager/Engineer
San Francisco Office
hao@frenviro.com
(626) 840-7843

Hao Zhang is a Regional Project Manager and Engineer within Fulcrum Resources Environmental.

Hao specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- RFI sample program management
- Hazardous Waste Tank System CUPA PE Certification
- Remediation and Monitoring Tactics
- Soil Vapor Extraction
- In-situ Chemical Remediation
- Remediation Action Plans Implementation
- Vapor Intrusion Mitigation
- Contaminated Site Closure
- Oil Well Abandonment
- Soil Management Plan Implementation
- Health and Safety - Environmental Remediation/Construction/drilling

Key Experience/Key Projects:

Phase I and II Environmental Site Assessments

- Performed over 200 environmental site assessments nationwide since 2014, including but not limited to gas stations, dry cleaners, heavy manufacturing sites, and multi-tract residential apartments and housing.

- Performed soil, soil vapor, and groundwater sampling and investigations.

- Supervised and conducted well installations, trenching, well gauging, groundwater monitoring, and MIP investigations.

Site Characterization and Remedial Activities

- Performed site investigation and remediation activities to address chlorinated solvents (PCE, TCE), petroleum hydrocarbons, benzene, ethylbenzene, MTBE, and chromium contamination in soil and groundwater;

- Prepared Corrective Action Plans (CAPs)/Remediation Action Plans (RAPs), pilot test and treatability study work plans, Soil Management Plans (SMPs), remediation status reports, and groundwater monitoring reports to meet environmental permitting requirements;

- Performed soil excavation, Soil Vapor Extraction (SVE), in-situ chemical injections, and soil flushing remediation strategies to achieve site clean-up goals and No Further Action letter for multiple contaminated sites.

- Performed vapor intrusion investigation and vapor mitigation system installation in construction of new buildings.

Health and Safety

As former Health and Safety Officer for Tetra Tech's Southern California Office, Ms. Zhang gained experience in identification, handling, and disposal of different hazardous wastes, and the development of emergency response plans for brownfield redevelopment and remediation sites.

Education

Bachelors of Science in Environmental Science, Nankai University, China 2007-2011

Master of Science in Environmental Science and Engineering, California Institute of Technology, U.S. 2011-2013

Certification

- California Licensed Professional Engineer (PE) #C85825
- California Qualified SWPPP Developer (QSD)
- 40-hour OSHA HAZWOPER Training
- 30-hour OSHA Construction Training

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

Industrial Property
13711 Freeway Drive
Santa Fe Springs, California 90670

Report Date: April 9, 2021
Partner Project No. 21-313592.1
Client Reference No. 21-000553-01-02E

Prepared for:

Pacific Premier Bank
17901 Von Karman Avenue, Suite 1200
Irvine, California 92614

April 9, 2021

Ms. Linda Sims
Pacific Premier Bank
17901 Von Karman Avenue, Suite 1200
Irvine, California 92614

Subject: Phase I Environmental Site Assessment
Industrial Property
13711 Freeway Drive
Santa Fe Springs, California 90670
Partner Project No. 21-313592.1
Client Reference No. 21-000553-01-02E

Dear Ms. Sims:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (714) 397-3103.

Sincerely,

Gavin Jones
Relationship Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Pacific Premier Bank for the property located at 13711 Freeway Drive in Santa Fe Springs, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Pacific Premier Bank with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the northwest corner of the intersection of Freeway Drive and Spring Avenue within a mixed industrial, commercial, and residential area of Los Angeles County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	13711 Freeway Drive, Santa Fe Springs, California
Property Use:	Commercial
Land Acreage (Ac):	4.81 Ac
Number of Buildings:	One
Number of Floors:	One with two office mezzanines
Gross Building Area (SF):	82,092 SF
Date of Construction:	1966
Assessor's Parcel Number (APN):	8069-015-058
Type of Construction:	Concrete Slab-on-Grade Foundation/Concrete Tilt-Up
Current Tenants:	Martinez Trucking Inc.
Site Assessment Performed By:	Brooke Hasty of Partner
Site Assessment Conducted On:	April 7, 2021

The subject property is currently occupied by Martinez Trucking Inc. for commercial use. On-site operations consist of general office administration, storage/distribution of steel products, and small-scale auto repair tasks. The subject property consists of one single-story building situated on the east side of the property. The building consists of office and warehouse space with two office mezzanines located on the south and west sides of the structure. The south mezzanine is currently used solely for storage, and the west mezzanine is not currently utilized. In addition to the current structure, the subject property is also improved with concrete-paved and asphalt-paved lots and minimal associated landscaping.

According to available historical sources, the subject property was formerly developed with agricultural land between 1928 and 1963, developed with a residential structure between at least 1947 and 1963, and developed with the current structure in 1966. Tenants on the subject property have included Miami Carey and Celotex (prior to 1971); Frigid Coil (1971-2007); and First Imperial Trading Co. (2008); Halloween Club (2008-2009); Martinez Trucking Inc. (2010-present).

The immediately surrounding properties consist of Ross Bindery to the north; the Santa Ana Freeway to the south; a vacant industrial building, Target Specialty Products, and GSP North America to the east across railroad tracks; and Mothers Nutritional Center to the west across Spring Avenue.

According to the Phase II Environmental Site Assessment prepared by ERM for the subject property in January 2008, the depth to groundwater beneath the subject property ranges between approximately 20 and 40 feet below ground surface (bgs), and the direction of groundwater flow is to the northeast.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- According to the State Water Quality Control Board's (SWQCB's) online database (GeoTracker) and historical review, the subject property was occupied by Frigid Coil, an assembler of air handler and heating, ventilation, and air conditioning (HVAC) equipment, from as early as 1971 to as late as 2007. Prior to that, the subject property was occupied by Philip Carey Company (also known as Miami Carey and Celotex), a manufacturer of various asbestos-containing and insultation products such as cement roofing, wool, and ceramic materials. Frigid Coil occupied the entirety of the current building, and utilized the current office space as a parts warehouse. In addition, a former three-stage clarifier was located on the east side of the building; the clarifier was pumped out and filled with concrete in 2007 by Safety Kleen. Partner notes that no floor drains were observed during this assessment.

  Frigid Coil reported a release of arsenic, diesel, gasoline, and heating oil/fuel oil at the subject property with impacts to soil and groundwater on May 30, 2006. Based on GeoTracker online documents, subsurface sampling events associated with soil, soil vapor, and groundwater were conducted on the subject property between 2006 and 2010. As of 2010, levels of tetrachloroethylene (PCE) and trichloroethene (TCE) were detected in groundwater samples collected on the subject property at levels above the current maximum contaminant level (MCL). In addition, PCE was detected in soil vapor samples collected on the subject property at levels above the current California Human Health Screening Level (67 µg/mg3, or 0.067 µg/L).

Due to the on-site soil, soil vapor, and groundwater contamination, a land use covenant, or DEED, was placed on the subject property by the Los Angeles Regional Water Quality Control Board (RWQCB) on December 28th, 2011. According to the DEED, land following uses are prohibited on the subject property: residential, day care center, elder care center, public or private school for persons under 21, and hospital. In addition, "no groundwater extraction at any depth without approval" or "excavation of contamination soils without agency review and approval" is warranted on the subject property.

Based on this information, regulatory closure for this release was issued on January 27, 2012 by the RWQCB. According to the No Further Action (NFA) letter, releases of TPH have appeared "to be limited in concentration and extent", and a nearby site, identified as Lefiell Manufacturing Co at 13700 Firestone Boulevard, was considered to be a likely source of the contamination at the subject property. It was also the opinion of the RWQCB that VOCs in soil and soil gas did "not pose a risk to human health or to groundwater" during the time of the report. Furthermore, the Groundwater Monitoring Well Destruction report for the 11 on-site monitoring wells was issued to the RWQCB in May 2012. Based on the 2009 and 2010 analytical results, regulatory closure, and in-place land use covenant, the historical use of the subject property coupled with the soil, soil vapor, and groundwater contamination is considered to be a CREC. Partner notes that concentrations exceed current screening levels and indoor air sampling would be necessary to determine if there is a concern to tenant health/safety.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Partner did not identify any environmental issues during the course of this assessment.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 13711 Freeway Drive in Santa Fe Springs, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- All future uses of the property comply with the current land covenant in place.

TABLE OF CONTENTS

Figures

Appendices

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 13711 Freeway Drive in Santa Fe Springs, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Pacific Premier Bank engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Pacific Premier Bank. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of the AAI User Questionnaire from the Report User. This information was not provided at the time of the assessment.
- Partner submitted a Freedom of Information Act (FOIA) request to the Santa Fe Springs Fire Department (SFSFD)for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property. As of this writing, copies of records are still pending. Based on information obtained from other historical sources and a previous report, this limitation is not expected to alter the overall findings of this assessment.
- Partner's view of the ground during the site assessment was partially obstructed due to parked cars and excessive storage. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 13711 Freeway Drive is located on the northwest corner of the intersection of Freeway Drive and Spring Avenue. According to the Los Angeles County Assessor (LACA) and site contact, the subject property is legally described as "*TR=23559 EX OF STS LOT 15*", and ownership has been vested in Brenda and Ivan Martinez since 2016.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by Martinez Trucking Inc. for commercial use. On-site operations consist of general office administration, storage/distribution of steel products, and small-scale auto repair tasks. The subject property consists of one single-story building situated on the east side of the property. The building consists of office and warehouse space with two office mezzanines located on the south and west sides of the structure. The south mezzanine is currently used solely for storage, and the west mezzanine is not currently utilized. In addition to the current structure, the subject property is also improved with concrete-paved and asphalt-paved lots and minimal associated landscaping.

The subject property is designated for industrial development by the City of Santa Fe Springs.

The subject property was identified as a identified as a Cleanup Program Sites – Spills, Leaks, Investigations, and Cleanups (CPS-SLIC), DEED Restriction Listing (DEED), Street Number List (Los Angeles Co. HMS), Facility and Manifest Data (HAZNET), Hazardous Waste Tracking System (HWTS), Resource Conservation and Recovery Act (RCRA) – Small Quantity Generator (SQG), RCRA Non-Generator / No Longer Regulate (NonGen / NLR), California Environmental Reporting System (CERS) CERS Haz Waste, Waste Discharge System (WDS), California Integrated Water Quality Control System (CIWQS), Facility Index System (FINDS), and Enforcement Compliance History Online (ECHO) site in the regulatory database report, as further discussed in Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed industrial, commercial, and residential area of Los Angeles County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
North:	Ross Bindery (15310 Spring Avenue)
South:	Santa Ana Freeway
East:	Vacant industrial building (13767 Freeway Drive), Target Specialty Products (15415 Marquardt Avenue), and GSP North America (15315 Marquardt Avenue) across railroad tracks
West:	Mothers Nutritional Center (13635 Freeway Drive) across Freeway Drive

Multiple adjacent properties were identified in the regulatory database report and are discussed in detail in Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Whittier, California* Quadrangle 7.5-minute series topographic map, dated 2012 was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 71 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the east. Improvements with the exception of roadways are not depicted on the 2012 map.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

The nearest surface water in the vicinity of the subject property is the La Mirada Creek located approximately 0.28-mile to the east of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Santa Fe Springs Water Utility Authority (SFSWUA) serves the subject property vicinity. According to the SFSWUA 2019 Annual Water Quality Report, the sources of public water for the City of Santa Fe Springs are from two sources: groundwater and surface water (from both the Colorado River and the State Water Project). The City of Santa Fe Springs pumps groundwater from their local well and disinfects this water with chlorine before distribution.

According to the Phase II Environmental Site Assessment prepared by ERM for the subject property in January 2008, the depth to groundwater beneath the subject property is ranges between 20 and 40 feet below ground surface (bgs), and the direction of groundwater flow is to the northeast.

2.4.3 Geology/Soils

The subject property is situated within the Santa Fe Springs Plain of the Whittier Area near the La Habra Piedmont Slope and Coyote Hills. The site vicinity is underlain by Quaternary Recent Series alluvium, consisting primarily of streambed-deposited gravel, sand, silt, and clay; and the Lakewood and San Pedro formations. A discontinuous, semi-perched aquifer is reported in the site vicinity. Underlying the recent alluvium are non-marine deposits, sands and gravels with interbedded clay of marine origin (Lakewood and San Pedro Formations, respectively).

Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Urban land-Hueneme and San Emigdio complex. Urban land consists of soils that have been altered or obscured by urban works and structures. The Hueneme series consists of deep, somewhat poorly drained, moderately highly to highly permeable soils that formed from discontinuous human-transported material over mixed alluvium derived from granite and/or sedimentary rock. Slopes range from zero to two percent. The San Emigdio series consists of deep, well drained, moderately highly to highly permeable soils that formed from discontinuous human-transported material over mixed alluvium derived from granite and/or sedimentary rock. Slopes range from zero to two percent.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06037C1843F, dated September 26, 2008, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

A copy of the reviewed flood map is not included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1928-1963	Aerial Photographs, Previous Report, Topographic Maps	Agricultural land, Residential
1966-2007	Aerial Photographs, Building Records, City Directories, Interviews,	Current structure, Industrial
2008-Present	Aerial Photographs, Building Records, City Directories, Interviews, On-site Observations, Previous Report, Assessor Records	Current structure, Commercial

Tenants on the subject property have included Miami Carey and Celotex (prior to 1971); Frigid Coil (1971-2007); and First Imperial Trading Co. (2008); Halloween Club (2008-2009); Martinez Trucking Inc. (2010-present).

The subject property parcel was historically used for agricultural purposes. There is a potential that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used and stored onsite. The subject property is either paved over or covered by building structures that minimize direct contact to any potential remaining concentrations in the soil. Additionally, during previous site development activities, near surface soils (where residual agricultural chemical concentrations would have most likely been present, if at all) were likely mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on these reasons, Partner concludes that the possible former use of agricultural chemicals is not expected to represent a significant environmental concern at this time.

According to GeoTracker and historical review, the subject property was occupied by Frigid Coil, an assembler of air handler and HVAC equipment, from as early as 1971 to as late as 2007. Prior to that, the subject property was occupied by Philip Carey Company (also known as Miami Carey and Celotex), a manufacturer of various asbestos-containing and insultation products such as cement roofing, wool, and ceramic materials. Frigid Coil occupied the entirety of the current building, and utilized the current office space as a parts warehouse. In addition, a former three-stage clarifier was located on the east side of the building; the clarifier was pumped out and filled with concrete in 2007 by Safety Kleen. Partner notes that no floor drains were observed during this assessment.

Frigid Coil reported a release of arsenic, diesel, gasoline, and heating oil/fuel oil at the subject property with impacts to soil and groundwater on May 30, 2006. Based on GeoTracker online documents, subsurface sampling events associated with soil, soil vapor, and groundwater were conducted on the subject property between 2006 and 2010. As of 2010, levels of tetrachloroethylene (PCE) and trichloroethene (TCE) were detected in groundwater samples collected on the subject property at levels above the current maximum contaminant level (MCL). In addition, PCE was detected in soil vapor samples collected on the subject property at levels above the current California Human Health Screening Level (67 µg/mg^3, or 0.067 µg/L). Due to the on-site soil, soil vapor, and groundwater contamination, a land use covenant, or DEED, was placed on the subject property by the RWQCB on December 28th, 2011. According to the DEED, land following uses are prohibited on the subject property: residential, day care center, elder care center, public or private school for persons under 21, and hospital. In addition, "no groundwater extraction at any depth without approval" or "excavation of contamination soils without agency review and approval" is warranted on the subject property. Based on this information, regulatory closure for this release was issued on January 27, 2012 by the RWQCB. According to the NFA letter, releases of TPH have appeared "to be limited in concentration and extent", and a nearby site, identified as Lefiell Manufacturing Co at 13700 Firestone Boulevard, was considered to be a likely source of the contamination at the subject property. Please reference Section 4.2 for additional information.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR) on March 22, 2021. The following was observed on the subject property and adjacent properties during the aerial photograph review:

Date: ***1928***	***Scale:*** ***1"=500'***
Subject Property:	Appears to be agricultural land
North:	Appears to be agricultural land
South:	Appears to be agricultural land
East:	Appears to be agricultural land
West:	Appears to be agricultural land

Date: ***1938***	***Scale:*** ***1"=500'***
Subject Property:	No significant changes visible
North:	No significant changes visible
South:	Appears to be developed with an improved roadway followed by agricultural land
East:	No significant changes visible
West:	No significant changes visible

Date: ***1947, 1952, 1954, 1963***	***Scale:*** ***1"=500'***
Subject Property:	Appears to be agricultural land coupled with graded land and a residential structure
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	Appears to be developed with residential and auxiliary structures coupled with agricultural land

Date: ***1972, 1977***	***Scale:*** ***1"=500'***
Subject Property:	Appears to be developed with the current structure
North:	Appears to be graded land
South:	Appears to be developed with the current freeway
East:	Appears to be developed with the two current larger structures coupled with graded land

Date:	*1972, 1977*	*Scale:*	*1"=500'*
West:	Appears to be developed with the current structure across Freeway Drive		

Date:	*1983*	*Scale:*	*1"=500'*
Subject Property:	No significant changes visible		
North:	Appears to be developed with the current structure		
South:	No significant changes visible		
East:	Appears to be developed with the current structures		
West:	No significant changes visible		

Date:	*1989, 1994, 2002, 2005, 2009, 2012, 2016*	*Scale:*	*1"=500'*
Subject Property:	No significant changes visible		
North:	No significant changes visible		
South:	No significant changes visible		
East:	No significant changes visible		
West:	No significant changes visible		

Copies of reviewed aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner requested Sanborn Fire insurance maps from EDR. On March 22, 2021 EDR responded that Sanborn map coverage was not available for the subject property.

A copy of the Certified Sanborn Map Report is included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR on March 24, 2021 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 13711 Freeway Drive (Subject Property)	
Year(s)	**Occupant Listed**
1971	Philip Carey Co A Div o Panacon Corp
1980	Frigid Coil Frick Inc
1981	Frigid Coil Frick Inc
1986	Frigid Coil Frick Inc
1990	Frigid Coil Frick Inc
1994	Frigid Coil Frick Inc
1999	Frigid Coil Frick Inc
2000	Frigid Coil Frick Inc, Gilbert Blank
2004	York International Refrigeration
2006	Frigid Coil
2009	Halloween Club
2014	Martinez Trucking Inc

According to the city directory review, the subject property was formerly occupied by manufacturing businesses from as early as 1971 to as late as 2006. Please reference Section 4.2 for additional information pertaining to the historical use of the subject property.

City Directory Search for Adjacent Properties	
Year(s)	**Occupant Listed**
1964	Xerox Corp (13635 Freeway)
1986	Continental Manufacturing Co (15310 Spring)
1990	Sta-Rite Industries (15415 Marquardt)
1994	SFS Industries Inc (13767 Freeway); Santa Fe Extruders Inc (15315 Marquardt) ; (15310 Spring)
1995	Continental Manufacturing Co (15310 Spring); Continental Manufacturing Co (15310 Spring)
1999	Choc Thrift Store Corporation (13635 Freeway); Target Specialty Products (15415 Marquardt); Continental Manufacturing Company Cleaning Equipment (15310 Spring)
1999	Burke Industries (13767 Freeway)
2000	Choc Thrift Stores (13635 Freeway); Burke Industries (13767 Freeway); Pinckne Y V, Santa Fe Extruders (15315 Marquardt); Target Specialty Products (15415 Marquardt); XXXX (15310 Spring)
2003	Target Specialty Products (15415 Marquardt)
2004	Children's Hospital of Orange (13635 Freeway); Kirkhill PA (13767 Freeway); Occupant Unknown (15315, 15415 Marquardt); Ross Bindery Inc, Binding Laperfect (15310 Spring)
2006	Choc Thrift Stores (13635 Freeway); Kirkhill Taco (13767 Freeway); Polyethylene, Mtrls & Products, Extruders (13515 Marquardt) ; Target Specialty Products (15415 Marquardt); Ross Bindery Inc (15310 Spring)
2009	Mothers Nutritional Center; Kirkhill TA, SFS Industries Ltd (13767 Freeway); Santa Fe Extruders Inc (15315 Marquardt); Target Specialty Products, Western Exterminator Co (15415 Marquardt)
2014	Frankie Rose Cosmetics, El Tapatio Markets (13635 Freeway); Flatiron Construction Corp (13767 Freeway); Target Specialty Products (15415 Marquardt)

* XXXX= A phone number is present but is not registered to a tenant or is disconnected.

According to the city directory review, the adjacent properties have been occupied by manufacturing businesses since as early as 1986. Pleased reference Section 4.2 for additional information pertaining to the adjacent properties.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from EDR on March 22, 2021. The following was observed on the subject property and adjacent properties during the topographic map review:

Date:	***1896, 1899, 1902, 1923, 1925***
Subject Property:	Depicted as vacant land
North:	Depicted as vacant land
South:	Depicted as vacant land
East:	Depicted as vacant land
West:	Depicted as vacant land

Date:	***1942, 1943, 1945, 1947***
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	Depicted as vacant land across an improved roadway
East:	No significant changes depicted
West:	No significant changes depicted

Date:	***1949, 1950, 1951***
Subject Property:	Depicted as developed with a relatively small structure (presumably residential) on the southwestern portion of the property
North:	No significant changes depicted
South:	No significant changes depicted across Firestone Boulevard
East:	No significant changes depicted
West:	Depicted as developed with several relatively small structures (presumably residential)

Date:	***1964, 1965***
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	Depicted as developed with the current freeway
East:	No significant changes depicted
West:	Depicted as developed with the current structure across Spring Avenue

Date:	***1972, 1981***
Subject Property:	Depicted as developed with the current structure
North:	No significant changes depicted
South:	No significant changes depicted
East:	Depicted as developed with the two current larger structures
West:	No significant changes depicted

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	Los Angeles County Health Hazardous Materials Division (LACoFDHHMD)
Point of Contact:	https://www.fire.lacounty.gov/hhmd-2/
Agency Address:	1320 North Eastern Avenue, Los Angeles, California 90063
Agency Phone Number:	(323) 890-4045
Date of Contact:	March 24, 2021
Method of Communication:	Online Portal, Email
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the LACoFDHHMD.

4.1.2 Fire Department

Regulatory Agency Data	
Name of Agency:	Santa Fe Springs Fire Department (SFSFD)
Point of Contact:	Annette Arnesen
Agency Address:	11300 Greenstone Avenue
Agency Phone Number:	(562) 944-9713
Date of Contact:	May 14 and 21, 2020
Method of Communication:	Online Portal, Email
Summary of Communication:	As of the date of this report, copies of records are pending. Please refer to Section 5.0 for information pertaining to SFSFD records reviewed for the subject property in 2015.

4.1.3 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	Southern California Air Quality Management District (AQMD)
Point of Contact:	www3.aqmd.gov/webappl/fim/prog/search.aspx
Agency Address:	21865 Copley Drive, Diamond Bar, California 91765
Agency Phone Number:	(909) 396-2000
Date of Contact:	March 24, 2021
Method of Communication:	Facility Information Detail (F.I.N.D.) Online Database
Summary of Communication:	No Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) or the presence of AULs, dry cleaning machines, or USTs were on file for the subject property with the AQMD. Frigid Coil Frick Inc at 13711 Freeway Drive is listed in the F.I.N.D. online database as an active facility under Facility Number 50535 and SIC Code 3585 (Refrigeration and Heating Equipment). No equipment, PTO, or violations are provided in connection with this listing.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	Los Angeles Regional Water Quality Control Board (RWQCB)
Point of Contact:	geotracker.waterboards.ca.gov/
Agency Address:	320 West 4th Street, #200, Los Angeles, California 90013
Agency Phone Number:	(213) 576-6600
Date of Contact:	March 24, 2021
Method of Communication:	GeoTracker Online Database, Email
Summary of Communication:	According to records reviewed, the subject property reported an arsenic, diesel, gasoline, and heating oil/fuel oil release with impacts to soil, soil vapor, and groundwater on May 30, 2006. This release was issued regulatory closure on January 27, 2012. In addition, a land use covenant, or DEED, was placed on the subject property by the RWQCB on December 28th, 2011. According to the DEED, land following uses are prohibited on the subject property: residential, day care center, elder care center, public or private school for persons under 21, and hospital. In addition, "no groundwater extraction at any depth without approval" or "excavation of contamination soils without agency review and approval" is warranted on the subject property. Please reference Section 4.2 for additional information pertaining to this release case.

4.1.5 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Point of Contact:	• https://www.envirostor.dtsc.ca.gov/public/ • https://hwts.dtsc.ca.gov/report_list.cfm
Agency Address:	9211 Oakdale Avenue, Chatsworth, California 91311
Agency Phone Number:	(818) 717-6500
Date of Contact:	March 2, 2021
Method of Communication:	Hazardous Waste Tracking System (HWTS) and EnviroStor Online Databases
Summary of Communication:	According to records reviewed, the subject property was listed four times in the HWTS online database, as discussed below:

- Frigid Coil at 13711 Freeway Drive is listed as an inactive Permanent State Generator between November 1984 and June 1998 under EPA ID Number CAX000126060. No hazardous waste categories are provided in connection with this listing.
- Frigid Coil at 13711 Freeway Drive is listed as an inactive Permanent State Generator in November 1989 under EPA ID Number CAL000009077. No hazardous waste categories are provided in connection with this listing.
- Frigid Coil at 13711 Freeway Drive is listed as an inactive Permanent State Generator between August 1991 and June 2008 under EPA ID Number CAD983605650. This former tenant reportedly

disposed of various quantities of several different hazardous waste categories between 1993 and 2007.

- Martinez Trucking Inc at 13711 Freeway Drive is listed as an active Permanent State Generator as of July 2010 under CAL000354865. This current tenant has reportedly disposed of minimal quantities of unspecified oil-containing waste and other organic solids in 2011, 2012, 2017, and 2019.

Please reference Section 4.2 for additional information pertaining to these listings.

4.1.6 Building Department

Regulatory Agency Data	
Name of Agency:	Santa Fe Springs Building Department (SFSBD)
Point of Contact:	Mr. Fernando Munoz
Agency Address:	11710 East Telegraph Road, Santa Fe Springs, California
Agency Phone Number:	(562) 868-0511
Date of Contact:	March 24, 2021
Method of Communication:	Email, Telephone
Summary of Communication:	Records were available for review, as further discussed in the following table.

Building Records Reviewed for 13711 Freeway Drive (Subject Property)

Year(s)	Owner/Applicant	Description
1966	Arthur Gilbert & Assoc.	New 82,000-SF manufacturing/warehouse building
1966	Majestic Realty	New sign
1966	John Alexander	New sign
1966	Philip Carey Manufacturing	Install conveyor system and waterwash spray booth
1969	Miami-Carey	Install air pollution control equipment
1984	Frigid Oil	Install bridge crane and structure
1993	Gilbert-Blank	New rain shelter
1993	Arthur Gilbert GFC	Concrete pad and plumbing for freon tank
1993	Frigid Oil	Re-roof
1995	Frigid Oil	Storage cover, cut door in tilt-up wall
2004	R & A Gilbert Found.	Seismic upgrading

Please reference Section 4.2 for additional information pertaining to the historical use and soil, soil vapor, and groundwater investigation on the subject property.

4.1.7 Planning Department

Regulatory Agency Data	
Name of Agency:	Santa Fe Springs Planning Department (SFSPD)
Point of Contact:	https://www.santafesprings.org/civicax/filebank/blobdload.aspx?blobid=2237
Agency Address:	11710 East Telegraph Road, Santa Fe Springs, California
Agency Phone Number:	(562) 868-0511
Date of Contact:	March 24, 2021
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned M-2 and FOZ for Heavy Manufacturing and Freeway Overlay development by the City of Santa Fe Springs.

4.1.8 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Department of Conservation (DOC) Geologic Energy Management Division (CalGEM), formerly Division of Oil, Gas and Geothermal Resources (DOGGR)
Point of Contact:	https://maps.conservation.ca.gov/doggr/wellfinder/#openModal
Agency Address:	801 K Street, Sacramento, California 95814
Agency Phone Number:	(916) 445-9686
Date of Contact:	March 24, 2021
Method of Communication:	Well Finder Online Database
Summary of Communication:	According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.9 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Los Angeles County Assessor (LACA)
Point of Contact:	http://maps.assessor.lacounty.gov/mapping/viewer.asp
Agency Address:	500 West Temple Street Room 225, Los Angeles 90012
Agency Phone Number:	(888) 807-2111
Date of Contact:	March 24, 2021
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by Assessor Parcel Number (APN) 8069-015-058 and is currently owned by Brenda and Ivan Martinez since 2016. The current building was constructed in 1966 and totals approximately 82,092 square feet on a 4.81-acre lot.

4.1.10 Sanitation District

Regulatory Agency Data	
Name of Agency:	Los Angeles County Sanitation District (LACSD)
Point of Contact:	Ms. Rose Romo

Regulatory Agency Data	
Agency Address:	1955 Workman Mill Road, Whittier, California 90601
Agency Phone Number:	(562) 699-5422
Date of Contact:	March 25, 2021
Method of Communication:	Email
Summary of Communication:	According to records reviewed, industrial wastewater was produced at the subject property in connection with aluminum parts washing and a wash pad in connection with the former tenant, Frigid Coil. Frigid Coil began operations in 1975 and was no longer at the subject property as of August 2007. A clarifier was located on the east side of the building as of August 15, 1975. LACSD records also indicate that the subject property was utilized as a Halloween costume distribution center during an inspection in November 2008. Please reference Section 3.0 and 4.2 for additional information pertaining to the historical use of the subject property.

Copies of pertinent documents from the above-referenced agencies, if available, are included in Appendix B.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Sites of Concern**

4.2.2 Subject Property Listings

The subject property is identified as a Cleanup Program Sites – Spills, Leaks, Investigations, and Cleanups (CPS-SLIC), DEED Restriction Listing (DEED), Street Number List (Los Angeles Co. HMS), Facility and Manifest Data (HAZNET), Hazardous Waste Tracking System (HWTS), Resource Conservation and Recovery Act (RCRA) – Small Quantity Generator (SQG), RCRA Non-Generator / No Longer Regulate (NonGen / NLR), California Environmental Reporting System (CERS) CERS Haz Waste, Waste Discharge System (WDS), California Integrated Water Quality Control System (CIWQS), Facility Index System (FINDS), and Enforcement Compliance History Online (ECHO) site in the regulatory database report, as discussed below:

- The subject property, identified as Frigid Coil at 13711 Freeway Drive, is listed in connection with the generation and disposal of various hazardous waste categories. According to the regulatory database report, this site was listed in the RCRA database as a SQG in 1991 under EPA ID Number CAD983605650 and NAICS Code 333415 (Air-Conditioning and Warm Air Heating Equipment and Commercial and Industrial Refrigeration Equipment Manufacturing). In addition, this former tenant reportedly disposed of 1.49 tons of off-speciated, aged or surplus organics in 1993; 0.23

ton of liquids with halogenated organic compounds greater than or equal to 1,000 mg/L in 1997; 0.23 ton of unspecified aqueous solution with a pH between 2 and 12.5, 0.42 ton of waste oil and mixed oil, 0.40 ton of other organic solids, and 1.10 ton of liquids with halogenated organic compounds greater than or equal to 1,000 mg/L in 1998; 0.87 ton of aqueous solution with a pH between 2 and 12.5 with organic residues less than 10 percent, 0.12 ton of off-speciated, aged or surplus organics, 0.01 ton of other organic solids, and 0.02 ton of liquids with a pH below or equal to 2 in 1999; 0.15 ton of waste oil and mixed oil and 0.85 ton of other organic solids in 2000; 0.25 ton of unspecified solvent mixture and 9.17 tons of oil/water separation sludge in 2003; 9.80 tons of oil/water separation sludge, 0.20 ton of waste oil and mixed oil, and 0.44 ton of other organic solid in 2004; 0.33 ton of other organic solids in 2005; 0.21 ton of waste oil and mixed oil, 8.76 tons of oil/water separation sludge, and 0.19 ton of other organic solids in 2006; and 2.55 ton of alkaline solution with a pH greater or equal to 12.5 with metals, 1.85 tons of waste oil and mixed oil, 8.34 tons of oil/water separation sludge, 1.07 tons of off-speciated, aged or surplus organics, 0.58 ton of other organic solids, and 0.09 ton of laboratory waste chemicals in 2007 under EPA ID Number CAD983605650. Frigid Coil is also listed in the DTSC HWTS online database as a Permanent State Generator from November 1984 to June 1998 under EPA ID Number CAX000126060 and in November 1989 under EPA ID Number CAL000009077; no hazardous waste categories are provided in connection with these listings. In addition, Partner notes that Frigid Oil obtained a hazardous material permit under LACFD jurisdiction and Facility ID Number 004024-I04170; however, no records for the subject property are currently on file with the LACFD for review. Frigid Col/York International also obtained an Industrial Storm Water Permit on May 27, 1993. According to the CIWQS Facility-At-A-Glance online database, one violation was issued in connection with this permit on August 24, 2001. This permit was terminated on April 23, 2008.

According to GeoTracker and historical review, the subject property was occupied by Frigid Coil, an assembler of air handler and HVAC equipment, from as early as 1971 to as late as 2007. Prior to that, the subject property was occupied by Philip Carey Company (also known as Miami Carey and Celotex), a manufacturer of various asbestos-containing and insultation products such as cement roofing, wool, and ceramic materials. Frigid Coil occupied the entirety of the current building, and utilized the current office space as a parts warehouse. The southern portion of the warehouse was occupied as the Copper Coil and Brazing Area; the eastern portion of the warehouse was utilized as the maintenance area with a dip tank; the western portion of the warehouse contained the Bending Area and Former Parts Washer Location; the northern portion of the warehouse was utilized as the Sheet Metal Shop Area and Aluminum FIN Press Area; and the central portion of the warehouse was known as the Final Assembly Area. A former three-stage clarifier was located on the east side of the building; the clarifier was pumped out and filled with concrete in 2007 by Safety Kleen. Partner notes that no floor drains were observed during this assessment.

Frigid Coil reported a release of arsenic, diesel, gasoline, and heating oil/fuel oil at the subject property with impacts to soil and groundwater on May 30, 2006. Based on GeoTracker online documents, four groundwater monitoring wells (MW-1 through MW-4) were installed in 2006 and two additional monitoring wells (MW-5 and MW-6) were installed in 2007. The monitoring well locations were as follows: northeast corner of the property (MW-1); west of the building and northwest of the former Bending Area (MW-2); west of the former office area (MW-3); southeast corner of the property (MW-4); southeast portion of the property along the western boundary of the property (MW-5); and southwest of MW-3 along the southern boundary of the property (MW-6). Four groundwater samples were collected from the four wells in November 2006 and six samples were collected from all six wells in September 2007. The samples were analyzed for TPH, VOCs, and metals; TPH as gasoline (TPH-g) was detected at a maximum concentration of 650 μg/L, TCE at a maximum concentration of 1,400 μg/L, and arsenic at a maximum concentration of 0.25 mg/L. In addition, the depth to groundwater was inferred to range between 20 and 40 feet bgs with flow to the northeast.

A Phase II Environmental Site Assessment was prepared for the subject property by Environmental Resources Management, Inc. (ERM) in January 2008. A total of 24 soil vapor samples were collected from 12 locations throughout the site and analyzed for volatile organic compounds (VOCs). No constituents were detected in any of the soil vapor samples apart from 1.6 μg/L of total xylene in one probe. In addition, a total of 45 soil samples were collected from 21 advanced soil borings to a maximum of 15 feet. Only 33 selected samples obtained from 0.5 and 5 feet bgs were analyzed. TPH was detected in these selected soil samples at a maximum level of 1,000 mg/kg and arsenic at a maximum of 9 mg/kg. Based on the findings, ERM requested that the RWQCB "grant a non-responsibility party status and/or no further action (NFA) determination for the site" with the claim that detected contamination was from an offsite source; however, the RWQCB indicated that a NFA determination was not warranted at that time due to unreliable and inadequate data coupled with the lack of soil matrix VOC testing.

According to the final groundwater monitoring report, the 2nd Quarter 2009 Groundwater Monitoring Report dated July 9, 2009, all six groundwater monitoring wells were sampled on June 24, 2009. Groundwater elevations ranged from 26.74 to 50.36 feet bgs and was inferred to flow to the northeast. Arsenic levels increased from the previous monitoring event (March 2009) and was detected at levels greater than the federal and California specific maximum contaminant levels (MCLs) in both March and June 2009; these levels were presumably due to typical concentrations of arsenic in California soils. TPH values decreased from March 2009 and diesel range organics were not detected in any of the samples. Gasoline range organics were detected in MW-3 and MW-4 at concentrations as high as 610 μg/L, and TCE was detected at levels as high as 800 μg/L. VOCs were detected in levels greater than federal or state MCLs, including cis-1,2-dichloroethene (cis-1,2-DCE) and TCE in MW-1; cis-1,2-DCE, TCE, and trans-1,2-dichloroethene (t-1,2-DCE) in MW3-; cis-1,2-DCE, TCE, t-1,2-DCE, 1,1-dichloroethene (1,1-DCE), and 1,1-dichloroethane (1,1-DCA) in MW-4; and cis-1,2-DCE, TCE, and t-1,2-DCE in MW-6. Proposed work for the following monitoring event included groundwater sampling during the 3rd quarter of 2009. Quarterly groundwater monitoring reports were reportedly conducted through the 4th quarter of 2009; however, copies of the 3rd and 4th quarter 2009 monitoring reports have not been located as of the date of this report.

A "Supplementary Site Assessment Workplan," dated February 2010, was submitted to the RWQCB and the site was inspected by RWQCB staff on March 4, 2010. The workplan was approved and the planned fieldwork and associated results and conclusions were due on August 15, 2010. A Final Environmental Assessment Report was submitted by Geosyntec Consultants, Inc. (Geosyntec) to the RWQCB on behalf of Johnson Controls Inc. (JCI) on August 5, 2011 based on a proposed site assessment work from March 29, 2010. According to this "Supplementary Site Assessment Workplan," a total of 14 soil vapor samples were collected from seven locations soil sampling in 2009. In addition, nine sub-slab soil vapor samples were collected and analyzed in 2009. Soil and soil vapor sampling was then conducted in March and April 2010 based on the 2009 findings. In 2010, a total of 14 soil vapor samples were collected from seven locations and an additional 14 soil vapor samples were collected from 10 locations at depths up to 15 feet bgs. Soil samples were collected at depths of 1, 5, and 15 feet bgs throughout the subject property, including the former clarifier location, and were analyzed for VOCs, TPH-g, TPH as diesel (TPH-d) and TPH-motor oil.

Furthermore, 14 soil vapor samples were collected from 10 locations "beyond the building footprint" from probes installed at 5 and 15 foot depths and analyzed for VOCs. Six sub-slab soil vapor samples were also collected. In addition, a total of seven additional groundwater monitoring wells were installed in March 2010, including four shallow zone wells (MW-4RS), MW-7S, MW-8S, and MW-9S) and three deep zone wells MW-4D, MW-6D, and MW-7D. The existing and new monitoring wells were sampled in March and April 2010 and sampled for VOCs.

According to the 2010 analytical results, arsenic was the only analyte detected at concentrations above the EPA Region 9 Residential and Industrial Regional Screening Levels (RSL) (EPA, 2011). Partner notes that PCE was detected at levels as ranging from 0.0011 to 0.0073 mg/kg; the current DTSC Residential and Industrial Screening Levels (SL) (June 2020) for PCE are 0.59 mg/kg and 2.7 mg/kg. In addition, TPH were detected mostly in shallow soils throughout the subject property. TPH was detected in shallow soils at levels as high as 230 mg/kg (TPH-e), 10 mg/kg (TPH-g), and 1,200 (TPH-motor oil). Furthermore, PCE and TCE were detected in soil vapor samples at levels as high as 0.14 µg/L (PCE) and 0.09 µg/L (TCE); PCE was detected in subslab soil vapor samples at levels as high as 0.95 µg/L. Partner notes that these PCE levels exceed the current California Human Health Screening Level (67 $\mu g/mg^3$, or 0.067 µg/L).

PCE was detected in only two groundwater samples (MW-4 and MW-6); only one sample from MW-4 contained levels of PCE above the state and federal MCL (5 µg/L) at 7.1 µg/L. TCE was detected in seven of a total of 11 analyzed samples; six of those samples contained TCE levels above the MCL (5 µg/L) at levels as high as 430 µg/L. Based on subsurface investigations initiated in 2006, groundwater contamination on the subject property has been concluded to be due to an off-site source. Furthermore, arsenic in on-site soils is considered "to be background and not the result of a release" at the subject property.

Due to the on-site soil, soil vapor, and groundwater contamination, a land use covenant, or DEED, was placed on the subject property by the RWQCB on December 28th, 2011. According to the

DEED, land following uses are prohibited on the subject property: residential, day care center, elder care center, public or private school for persons under 21, and hospital. In addition, “no groundwater extraction at any depth without approval” or “excavation of contamination soils without agency review and approval” is warranted on the subject property.

Based on this information, regulatory closure for this release was issued on January 27, 2012 by the RWQCB. According to the NFA letter, releases of TPH have appeared “to be limited in concentration and extent”, and a nearby site, identified as Lefiell Manufacturing Co at 13700 Firestone Boulevard, was considered to be a likely source of the contamination at the subject property. It was also the opinion of the RWQCB that VOCs in soil and soil gas did “not pose a risk to human health or to groundwater” during the time of the report. Furthermore, the Groundwater Monitoring Well Destruction report for the 11 on-site monitoring wells was issued to the RWQCB in May 2012. Based on the 2009 and 2010 analytical results, regulatory closure, and in-place land use covenant, the historical use of the subject property coupled with the soil, soil vapor, and groundwater contamination is considered to be a *controlled recognized environmental condition* (CREC); however Partner notes that concentrations exceed current screening levels and indoor air sampling would be necessary to determine if there is a concern to tenant health/safety.

- The subject property, identified as Martinez Trucking Inc at 13711 Freeway Drive, is listed in connection with the generation and disposal of hazardous waste. According to the regulatory database, this current tenant was listed in the RCRA database as a Non-Generator in 2010 under EPA ID Number CAL000354865. Martinez Trucking is also identified as a CERS Hazardous Waste Generator and Chemical Storage Facility under CERS ID Number 10487401. Compliance Evaluation Inspections under Santa Fe Springs Fire Department (SFSFD) jurisdiction have taken place on the subject property since as early as 2014. Only two violations were reported by the SFSFD in 2017 pertaining to “failure to manage empty containers greater than 5 gallons” and the failure to update a business plan. The subject property returned to compliance with the SFSFD on October 27, 2017. In addition, Martinez Trucking is identified as an Active Permanent State Generator under EPA ID Number CAL000354865 and reportedly disposed of 0.23 ton of unspecified oil-containing waste and 0.40 ton of other organic solids in 2011, 0.20 ton of other organic solids in 2012, 0.10 ton of other organic solids in 2017, and 0.10 ton of other organic solids in 2019. Based on the regulatory oversight, lack of RCRA violations, reported compliance under SFSFD jurisdiction, overall minimal quantities, on-site observations, and absence of a reported release, the regulatory database listings pertaining to this current tenant are not expected to represent a significant environmental concern.

4.2.3 Adjacent Property Listings

The adjacent property to the north is identified as a RCRA NonGen / NLR, CERS, CERS Haz Waste, HAZNET, HWTS, CIWQS, and National Pollutant Discharge Elimination System (NPDES) site in the regulatory database report, as discussed below:

- The property, identified as Ross Bindery Inc at 15310 Spring Avenue, is located adjacent to the north of the subject property. This site was listed in the RCRA database as a Non-Generator in 2019 under EPA ID Number CAL000445506. This site is also identified as a CERS Hazardous Waste Generator under CERS ID Number 10661137 and is listed in connection with the disposal of 0.19 ton of paint sludge and 1.43 tons of waste oil and mixed oil in 2001 under EPA ID Number CAD008252405; CERS violations were reported in 2016 and 2019. In addition, this site currently obtains an active Industrial Storm Water Permit under WDID 4 19NEC001287 as of October 2015. Based on the lack of RCRA violations, reported return to compliance under SFSFD jurisdiction as of 2019, and absence of a reported release in connection with this site, these listings are not expected to represent a significant environmental concern.

The adjacent property to the east is identified as an EnviroStor, Voluntary Cleanup Program (VCP), RCRA NonGen / NLR, RCRA-SQG, EMI (Emissions Inventory System), and CERS site in the regulatory database report, as discussed below:

- The property, identified as Former Burke Industries, Kirkhill TASFS Division, Flatiron West, Inc., and Caltrans at 13767 Freeway Drive, is located adjacent to the east of the subject property. This site was listed in the RCRA database as a SQG of ignitable waste, corrosive waste, and spent nonhalogenated solvents in 2002 under EPA ID Number CAR000002899 and as a Non-Generator in 2012 and 2020 under EPA ID Numbers CAL000372017 and CAC003067460. In addition, this site is listed in connection with regulated air emissions, likely in connection with the use of a spray paint booth. This site was listed as a VCP site in 2013 in connection with a release of benzene and TCE with potential impacts to soil, soil vapor, and groundwater. Soil, soil vapor, and groundwater samples were collected throughout the property in March 2012. According to the analytical results, it was determined that soil remediation was not warranted and groundwater VOC contamination was due to an up-gradient source. Based on this determination, the DTSC issued a No Further Action for this release case on February 3, 2015. Partner notes that soil vapor samples collected near the subject property along the western boundary of this adjacent site contained levels of PCE and TCE above the current CHHSLs at 15 feet bgs; however, based on the likelihood of an up-gradient source coupled with the inferred direction of groundwater flow (northeast), this adjacent property is not expected to represent a significant environmental concern.

The additional adjacent property to the east is identified as a RCRA NonGen / NLR, CERS, CERS Haz Waste, HAZNET, HWTS, Pesticide Regulation Licenses Listing (PEST LIC), FINDS, and ECHO site in the regulatory database report, as discussed below:

- The property, identified as Target Specialty Products – Facility #1, and Rentokil North America dba Target Specialty Products at 15415 Marquardt Avenue, is located adjacent to the east of the subject property. This site was listed in the RCRA database as a Non-Generator in 2013 under EPA ID Number CAL000388481 and NAICS Code 44422 (Nursery, Garden Center, and Farm Supply Stores). This site is also identified as a CERS Hazardous Waste Generator, Chemical Storage Facility, and Hazardous Chemical Management site under CERS ID Number 10419502 listed in connection with the disposal of minimal quantities of off-speciation, aged or surplus inorganics/organics, other organic solids, other inorganic solid waste, and liquids with a pH less than or equal to 2 between 2015 and 2019. Several CERS violations have been reported for this property between 2015 and 2018; however, the site has reportedly returned to compliance. This site currently obtains a pesticide license which expires in December 2021. Based on the lack of reported RCRA violations, reported return to compliance under the local fire department, and absence of a reported release in connection with this tenant, these listings are not expected to represent a significant environmental concern.

- The property, also identified as Sta Rite Industries at 15415 Marquart Avenue, was listed in the RCRA database as a SQG in 1996 under EPA ID Number CAD001782671 and is listed in connection with the disposal of various hazardous waste categories, such as halogenated solvents, contamination soil from site clean-up, etc. between 1986 and 1993. Partner notes that reported releases in connection with contaminated soil for this site were not located on the EnviroStor or GeoTracker databases. Based on the lack of reported RCRA violations, lack of DTSC and RWQCB release cases in connection with this site, and reported removal of contaminated soil, these listings are not expected to represent a significant environmental concern.

The adjacent property to the west is identified as a RCRA NonGen / NLR, CERS, CERS Haz Waste, CIWQS, and NPDES site in the regulatory database report, as discussed below:

- The property, identified as Mother's Nutritional Center at 13635 Freeway Drive, is located adjacent to the west of the subject property across Freeway Drive. This site was listed in the RCRA database as a Non-Generator in 2012 under EPA ID Number CAL00375184 and NAICS Code 811111 (General Automotive Repair). This site is also identified as a CERS Hazardous Waste Generator and Chemical Storage Facility under CERS ID Number 10647703. Several CERS violations have been reported for this property in 2015; however, the site has reportedly returned to compliance. In addition, this site obtained an Industrial Storm Water Permit on January 14, 2016; no violations are listed in connection with this permit. Based on the lack of reported RCRA and NPDES violations, reported return compliance under the local fire department, and absence of a reported release in connection with this site, these listings are not expected to represent a significant environmental concern.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

The property to the south, southeast, and southwest is identified as an EnviroStor, VCP, Hazardous Waste & Substances Site List (Cortese), Hist Cortese, Leaking Underground Storage Tank (LUST), Potentially Responsible Party (PRP), RCRA – Large Quantity Generator (LQG), RCRA-SQG, Historical UST Registered Database (Hist UST), Aboveground Storage Tank (AST), CERS, CERS Tanks, CERS Haz Waste, Los Angeles Co. HMS, EMI, WDS, NPDES, CIWQS, and FINDS site in the regulatory database report, as discussed below:

- The property, identified as Ryder Truck Rental, LeiFiell Manufacturing Company, and Le Fiell Manufacturing Co at 13700, 13750, and 13770 Firestone Boulevard is located approximately 260 feet to the south, southeast, and southwest of the subject property across the Santa Ana Freeway. This site reported a gasoline release with impacts to soil only on May 12, 1990. This case received regulatory closure by the City of Santa Fe Springs on September 28, 1992. Based on the regulatory closure coupled with reported impacts to soil only, this former release case is not expected to represent a significant environmental concern.

This site is an active VCP site as of January 12, 2010 under EnviroStor ID Number 60001240. LeFiell Manufacturing Company (LeFiell), a tubular parts manufacturer for aerospace and military industries, has operated at this location since the late 1950's. An adjacent subsurface investigation in 2007 indicated that soil and groundwater beneath this site was likely impacted and further investigation was warranted by the DTSC; as such, LeFiell joined the VCP in May 2009. Subsequent subsurface investigations have identified the following primary constituents of concern (COCs) in soil, soil vapor, and groundwater: PCE, TCE, 1,1,1-TCA, 1,1-DCE, 1,1-DCA, and cis-1,2-DCE. A final Removal Action Workplan (RAW) was finalized and approved by the DTSC in June 2020 for implementation. This RAW proposed the cleanup of VOCs in soil with a soil vapor extraction system and a long-term program to monitor VOCs in groundwater. According to the Fourth Quarter 2020 report, the most recent groundwater and soil vapor sampling event was conducted in December 2020, the groundwater plume is situated throughout the central portion of the property and is situated hydrologically up-gradient. PCE and TCE levels were detected in groundwater at levels as high as 41,000 µg/L (PCE) and 8,000 µg/L (TCE). This property has been identified as an up-gradient source for the soil, soil vapor, and groundwater contamination at the subject property. Please reference Section 4.2.1 above for additional information.

The property to the northwest is identified as a Solid Waste Information System (SWF/LF) site in the regulatory database report, as discussed below:

- The property, identified as Thomas Wetzel is located over 2,000 feet to the northwest of the subject property and hydrologically cross-gradient. This property is identified as a landfill site under SWIS Number 19-AA-5006 and the status is reported as "closed." No additional information is provided. Based on the current status, relative distance, and inferred direction of groundwater flow (northeast), this listing is not expected to represent a significant environmental concern.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.5 Orphan Listings

The property to the south, southeast, and southwest is identified as a PRP, LUST, and Los Angeles Co. HMS site in the regulatory database report, as previously discussed in 4.2.4.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Pacific Premier Bank (User of this report).

User Responsibilities				
Item	**Provided By User**	**Not Provided By User**	**Discussed Below**	**Does Not Apply**
AAI User Questionnaire			**X**	
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**	
Actual Knowledge			**X**	
Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports			**X**	
Other		**X**		

5.1 Interviews

5.1.1 Interview with Owner

Mrs. Brenda Martinez, subject property owner, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

According to Ms. Martinez, the subject property was developed in 1966 for industrial use. Prior tenants included a Halloween Club and an air conditioning equipment manufacturing business. Ms. Martinez further stated that there are no USTs, clarifiers, oil/water separators, groundwater monitoring wells, or hazardous substance use/storage/generation on the subject property to the best of her knowledge. The subject property is equipped with a waste oil AST, which is serviced by Benny's Oil Recycling every three months. According to Ms. Martinez, only small-scale auto repair tasks are conducted on the subject property.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a lender, it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

Ms. Martinez, subject property owner, acted as the key site manager. Refer to Section 5.1.1 for information obtained from Ms. Martinez.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

Phase I Environmental Site Assessment, Fulcrum Resources Environmental (September 24, 2015)

Fulcrum Resources Environmental (Fulcrum) prepared this report on behalf of California Statewide CDC. The assessment was performed in accordance with ASTM Standard E1527-13. The assessment consisted of a site reconnaissance, interviews with knowledgeable personnel, review of historical information, and a review of federal, state and local regulatory databases. Pertinent information contained in this report is summarized below:

- At the time of the 2015 assessment, the subject property was occupied by Martinez Trucking Inc.
- According to the Fulcrum report, the subject property was agricultural land prior to the development of the current structure in 1966. Prior tenants include Miami Carey and Celotex (prior to 1971); Frigid Coil (1971-2007); and First Imperial Trading Co. (2008). Martinez Trucking Inc. had occupied the subject property since as early as 2010.
- According to SFSFD records reviewed by Fulcrum during the 2015 assessment, a three-stage clarifier to the east of the structure was pumped out and filled will concrete by Safety Kleen in 2007. Hazardous Waste Generator manifests for Martinez Trucking & Logistics and Frigid Coil from 2010 were reviewed as well as an Inspection Report dated 2010. According to the Inspection Report, two unpermitted diesel ASTs were operating without a permit; these tanks were removed in 2010.
- Fulcrum identified two ASTs, including one 500-gallon waste oil tank and one 240-gallon new motor oil AST, along the east wall of the subject property. No current or former USTs were identified on the subject property.

- Anti-freeze, transmission fluid, gear oil, new oil, and waste oil were observed in 55-gallon drums and cans ranging from ½ gallon to 5 gallons. Several empty and partially full 55-gallon drums were unlabeled and observed in the yard. These drums presumably contained new and used oil. Oil staining was observed on the concrete pavement within the vicinity of the observed hazardous materials and was identified as a *de minimis* condition.
- Fulcrum reviewed a previous Phase I Environmental Site Assessment report for the subject property prepared by ERM and dated June 13, 2006 and a Phase II Environmental Site Assessment report for the subject property prepared by ERM dated June 23, 2006. According to this previous ESA, the subject property was occupied by Frigid Coil during the 2006 assessment. Onsite operations consisted of the assembly of HVAC units and air handlers. Frigid Coil had reportedly operated onsite since as early as 1971 and the building was constructed in 1966. Due to heavily stained throughout the interior of the facility, and a Phase II subsurface investigation was recommended. The Phase II involved shallow soil and soil vapor sampling and included the installation of groundwater monitoring wells.
- Fulcrum reviewed the subsequent investigations and reports prepared for the subject property between 2007 and 2011, which are summarized in Section 4.2.

Fulcrum identified no RECs and recommended no further investigation.

Copies of pertinent pages reviewed are included in Appendix B of this report.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Brooke Hasty
Site Assessment Conducted On:	April 7, 2021

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for 13711 Freeway Drive (Subject Property)			
Name	**Title/Role**	**Contact Number**	**Site Walk* Yes/No**
Mrs. Brenda Martinez	Property Owner, Tenant	(909) 997-1744	Yes

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

No potential environmental concerns were identified during the on-site reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located west on the subject property. An independent solid waste disposal contractor, Republic Services, removes solid waste from the subject property. According to property personnel, only household trash is collected in the on-site solid waste dumpsters. Solid waste generated at the subject property also includes oily rags, as discussed in Section 6.2. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Santa Fe Springs services the subject property vicinity. No wastewater treatment facilities or septic systems were observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located throughout the subject property and in the public right of way. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by Southern California Edison and Southern California Gas Company, respectively.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Partner observed various empty 55-gallon drums, two 30-gallon grease drums, two 275-gallon DEF totes (only partially filled), one 55-gallon motor oil drum, and several 5-gallon motor oil cans throughout the eastern portion of the warehouse. In addition, one 55-gallon oily rag drum and one 1,000-gallon (estimated) used oil AST are situated on the north side of the building. Secondary containment is provided for the AST. Furthermore, two empty 250-gallon ASTs were noted inside the warehouse. No evidence of the use of reportable quantities of hazardous substances was observed on the subject property. These materials were found to be properly labeled and stored at the time of the assessment. Partner observed staining throughout the interior and exterior concrete floors of the subject property; however, based on the surficial nature of the staining, the staining is considered to be a *de minimis* condition. Based on the small-scale auto repair operations, overall minimal quantities, and the absence of observed subsurface features, the storage and use of these materials does not appear to pose a significant threat to the environmental integrity of the subject property at this time.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

The subject property is equipped with one used oil AST, as discussed above in Section 6.2.1. No evidence of current or former USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

Partner observed staining throughout the interior and exterior concrete floors of the subject property; however, based on the surficial nature of the staining, the staining is considered to be a *de minimis* condition.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "*Non-PCB;*" 2) 50 ppm-500 ppm – "*PCB-Contaminated;*" and, 3) Greater than 500 ppm – "*PCB-Containing.*" The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after July 2, 1979.

The subject property is equipped with several loading dock levelers. Based on the overall good condition of the equipment, the loading dock levelers are not expected to represent a significant environmental concern.

Additionally, no other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, hydraulic elevators, balers, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property building was constructed in 1966. A limited, visual evaluation of accessible areas for the presence of suspect ACMs at the subject property was conducted. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACMs:

Suspect ACMs

Suspect ACM	Location	Friable Yes/No	Physical Condition
Drywall Systems	Throughout Building Interior	No	Good
Floor Tiles	Throughout Building Interior	No	Good
Floor Tile Mastic	Throughout Building Interior	No	Good
Ceiling Tiles	Throughout Building Interior	Yes	Good

Based on this building's date of construction, prior to disturbance, Partner recommends a comprehensive asbestos survey of the property be completed to determine the presence, condition, friability and likely future condition of suspect or confirmed ACM. All suspect materials must be handled as ACM according to local, state and federal regulations until the results of sampling and analysis indicate the material is a non-ACM. According to the US EPA, ACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition.

The limited visual survey consisted of noting observable materials (materials which were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the subject property. Additional sampling, assessment, and evaluation will be warranted for any other use.

Partner was not provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

According to the US EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as

"Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Based on the age of the subject property building (pre-1978), there is a potential that LBP is present. Interior and exterior painted surfaces were observed in good condition and therefore not expected to represent a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated.

Actual material samples would need to be collected in order to determine if LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the SFSWUA serves the subject property vicinity. According to SFSWUA 2019 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property building for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises.

6.4.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

The adjacent property to the east at 15315 Marquardt Avenue is currently occupied by GSP North America, a manufacturer of axles and hubs. Please reference Section 4.2 for information pertaining to the adjacent properties.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- According to the State Water Quality Control Board's (SWQCB's) online database (GeoTracker) and historical review, the subject property was occupied by Frigid Coil, an assembler of air handler and heating, ventilation, and air conditioning (HVAC) equipment, from as early as 1971 to as late as 2007. Prior to that, the subject property was occupied by Philip Carey Company (also known as Miami Carey and Celotex), a manufacturer of various asbestos-containing and insultation products such as cement roofing, wool, and ceramic materials. Frigid Coil occupied the entirety of the current building, and utilized the current office space as a parts warehouse. In addition, a former three-stage clarifier was located on the east side of the building; the clarifier was pumped out and filled with concrete in 2007 by Safety Kleen. Partner notes that no floor drains were observed during this assessment.

  Frigid Coil reported a release of arsenic, diesel, gasoline, and heating oil/fuel oil at the subject property with impacts to soil and groundwater on May 30, 2006. Based on GeoTracker online documents, subsurface sampling events associated with soil, soil vapor, and groundwater were conducted on the subject property between 2006 and 2010. As of 2010, levels of tetrachloroethylene (PCE) and trichloroethene (TCE) were detected in groundwater samples collected on the subject property at levels above the current maximum contaminant level (MCL). In addition, PCE was detected in soil vapor samples collected on the subject property at levels above the current California Human Health Screening Level (67 μg/mg3, or 0.067 μg/L).

  Due to the on-site soil, soil vapor, and groundwater contamination, a land use covenant, or DEED, was placed on the subject property by the Los Angeles Regional Water Quality Control Board (RWQCB) on December 28th, 2011. According to the DEED, land following uses are prohibited on the subject property: residential, day care center, elder care center, public or private school for persons under 21, and hospital. In addition, "no groundwater extraction at any depth without approval" or "excavation of contamination soils without agency review and approval" is warranted on the subject property.

Based on this information, regulatory closure for this release was issued on January 27, 2012 by the RWQCB. According to the No Further Action (NFA) letter, releases of TPH have appeared "to be limited in concentration and extent", and a nearby site, identified as Lefiell Manufacturing Co at 13700 Firestone Boulevard, was considered to be a likely source of the contamination at the subject property. It was also the opinion of the RWQCB that VOCs in soil and soil gas did "not pose a risk to human health or to groundwater" during the time of the report. Furthermore, the Groundwater Monitoring Well Destruction report for the 11 on-site monitoring wells was issued to the RWQCB in May 2012. Based on the 2009 and 2010 analytical results, regulatory closure, and in-place land use covenant, the historical use of the subject property coupled with the soil, soil vapor, and groundwater contamination is considered to be a CREC. Partner notes that concentrations exceed current screening levels and indoor air sampling would be necessary to determine if there is a concern to tenant health/safety.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Partner did not identify any environmental issues during the course of this assessment.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 13711 Freeway Drive in Santa Fe Springs, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- All future uses of the property comply with the current land covenant in place.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 13711 Freeway Drive in Santa Fe Springs, Los Angeles County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Report Date
September 24, 2015

Fulcrum Resources Environmental (Fulcrum) has performed a Phase I Environmental Site Assessment of the property located at 13711 Freeway Drive, Santa Fe Springs, California in general conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed in this report.

Fulcrum declares that, to the best of our professional knowledge and belief, the undersigned meet the definition of *Environmental Professionals* as defined in §312.10 of this part [40 CFR Part 312], and have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. Fulcrum has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

RELIANCE LETTER

September 24, 2015

To: California Statewide CDC ("CDC")
426 D Street
Davis, California 95616

and

U.S. Small Business Administration ("SBA")

Re: Project Address ("Property"): 13711 Freeway Drive
Santa Fe Springs, California 90670
Environmental Investigation Report Number(s): 201509-1915

Dear Lender and SBA:

Don Kellar ("Environmental Professional") meets the definition of an Environmental Professional as defined by 40 C.F.R. § 312.10(b) and has performed the following "Environmental Investigation(s)" (check all that apply):

__A Transaction Screen of the Property dated ______, 20____, conducted in accordance with ASTM International's most recent standard (currently ASTM E1528-14);

_X_ A Phase I (or an Updated Phase I) Environmental Site Assessment of the Property dated September 24, 2015, conducted in accordance with ASTM International's most recent standard (currently ASTM E1527-13). In addition, the Environmental Professional has addressed the performance of the "additional inquiries" set forth at 40 C.F.R. § 312.22;

_A Phase II Environmental Site Assessment of the Property dated ____, ______, conducted in accordance with generally-accepted industry standards of practice and consisting of a scope of work that would be considered reasonable and sufficient to identify the presence, nature and extent of a Release as it impacts the Property.

Reliance by SBA and Lender. Environmental Professional (and Environmental Professional's firm, where applicable) understand(s) that the Property may serve as collateral for an SBA guaranteed loan, a condition for which is an Environmental Investigation of the Property by an Environmental Professional. Environmental Professional (and Environmental Professional's firm, where applicable) authorize(s) Lender and SBA to use and rely upon the Environmental Investigation. Further, Environmental Professional (and Environmental Professional's firm, where applicable) authorize(s) Lender and SBA to release a copy of the Environmental Investigation to the borrower for information purposes only. This letter is not an update or modification to the Environmental Investigation. Environmental Professional (and Environmental Professional's firm, where applicable) makes no representation or warranty, express or implied, that the condition of the Property on the date of this letter is the same or similar to the condition of the Property described in the Environmental Investigation.

Insurance Coverage. Environmental Professional (and Environmental Professional's firm, where applicable) certifies that he or she or the firm is covered by errors and omissions liability insurance with a

Fulcrum Resources Environmental
2610 Gardi Street, Duarte, CA 91010
Tel 310.876.4128 & 626.429.1480 Fax 800.385.7126

minimum coverage of $1,000,000 per claim (or occurrence) and that evidence of this insurance is attached. As to the Lender and SBA, Environmental Professional (and Environmental Professional's firm, where applicable) specifically waive(s) any dollar amount limitations on liability up to $1,000,000.

Waiver of Right to Indemnification. Environmental Professional and Environmental Professional's firm waive any right to indemnification from the Lender and SBA.

Impartiality. Environmental Professional certifies that (1) to the best of his or her knowledge, Environmental Professional is independent of and not a representative, nor an employee or affiliate of seller, borrower, operating company, or any person in which seller has an ownership interest; and (2) the Environmental Professional has not been unduly influenced by any person with regard to the preparation of the Environmental Investigation or the contents thereof.

Acknowledgment. The undersigned acknowledge(s) and agree(s) that intentionally falsifying or concealing any material fact with regard to the subject matter of this letter or the Environmental Investigations may, in addition to other penalties, result in prosecution under applicable laws including 18 U.S.C. § 1001.

C. Cl

Executive Summary

Fulcrum Resources Environmental (FR) has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and U.S. Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at **13711 Freeway Drive, Santa Fe Springs, California 90670** (subject property) per the request of California Statewide CDC (client). The work was authorized by written contract dated September 9, 2015.

Summary of Property Description

The subject property, 13711 Freeway Drive, Santa Fe Springs, California, is located to the east of the Spring Avenue and Freeway Drive intersection, and approximately 120 feet to the northeast of the Santa Ana (5) Freeway, within a highly developed industrial area of Santa Fe Springs, California. According to the Los Angeles County Tax Assessor's Office, the subject property Assessor Parcel Number (APN) is 8069-015-055. The subject property consists of an irregular-shaped lot that is approximately 213,200 square feet in size. The subject property is improved with a two-story industrial building (subject building) that was constructed in 1966. The size of the subject building is approximately 82,092 square feet. The subject building is a concrete tilt-up industrial office/warehouse building with flat composite roofing. The two-story office portion is located on the south end of the subject building. The warehouse portion occupies the remaining portion of the subject building. The warehouse portion is improved with numerous ground-level and dock-high roll-up doors that are located on the north, west and south side of the subject building. An abandoned rail spur runs immediately to the east of the subject building. The subject property is occupied by Martinez Trucking, Inc., a general freight trucking company that has occupied the subject property since 2010/2011. Martinez Trucking, Inc. uses the subject building spaces for warehousing and distribution of steel tubes and coils. Limited truck maintenance is conducted on the northeast and north side of the subject building. The north end of the subject property is used for exterior storage of cargo products. The west portion of the subject property is improved with a large fenced industrial yard that is utilized for storage of cargo and truck parking. Additional parking spaces are provided on the southwest end of the subject property.

Summary of Property History

Based on reviewed historical documents, the subject property was agricultural land between 1928 and 1963. The subject property was improved with the current concrete tilt-up structure in 1966. Frigid Coil operated at the subject property from 1971 until 2007. Prior to 1971 the building was occupied by Miami Carey and Celotex (insulation manufacturing). Frigid Coil's operations consisted of the assembly of air handlers and other custom heating, ventilation, and air conditioning (HVAC) units. Principal materials in use at the facility consisted of stainless steel, copper coil, welding gases, and hydraulic oils. The property was occupied by First Imperial Trading Co. in 2008. Martinez Trucking Inc. has occupied the subject property since 2010.

Summary of Regulatory Database Concerns

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). The subject property was listed on the SLIC, RCRA-SQG, HAZNET, DEED, FINDS, Los Angeles County HMS, and WDS databases. The listings are discussed in Sections 6.1 and 6.2. In addition, reviewed records by FR on files with the regulatory agencies are discussed in Section 6.4.

The southeast adjoining property was identified on files with the regulatory agencies and is discussed further below and in Section 6.1.

Vapor Encroachment Condition (VEC) **-** A total of three sites were identified in the Radius Map Report and historical research within the "Area of Concern" that were considered to pose a potential VEC at the subject property based on the Tier 1 Evaluation. Tier 1 sites are:

- **Subject Property** - The subject property was the subject of multiple environmental investigations conducted between 2006 and 2012. Total Petroleum Hydrocarbons (TPH) were detected in shallow soils at the site. However, step-out sampling indicated that presence of TPH was limited in area and depth (within the first 5 feet below ground surface (bgs). Maximum detected concentrations are discussed in Section 4.9. These detections were limited in areal extent and there was no track to groundwater, in addition the concentration of risk driver compounds such as volatile organic compounds (VOCs) in co-located soil gas and soil samples was negligible. VOCs were investigated across the subject property using soil and soil gas sampling. Selected sampling locations targeted potential sources of contamination and were distributed across the subject property both inside and outside the building. VOC concentrations were mostly not detected in soil samples. When detected in soil, VOCs were present at trace level concentrations below screening levels for the protection of human health and groundwater. The levels of VOCs detected in soil did not indicate any major source of contamination at the subject property. Detected VOCs and their corresponding highest concentrations are discussed in Section 4.9. VOC concentrations in soil vapor samples were mostly not detected. When detected, VOCs concentrations were equal or lower than 1 microgram per liter (μg/L). Soil gas samples were collected beneath the slab and every five feet to 15 feet bgs (groundwater occurs at 20 feet bgs). Detected VOCs and their corresponding highest concentration are discussed in Section 4.9. Only one soil vapor sample detected tetrachloroethylene at a concentration that exceeded its corresponding California Human Health Screening Level (CHHSL) for commercial/industrial use of 0.6 μg/L. Area weighted average concentrations were calculated for each analyte detected in sub-slab vapor samples. The soil vapor results were compared to commercial CHHSLs. None of the chemicals detected has area weighted average concentrations that exceeded their respective soil vapor CHHSL concentrations. On January 27, the Regional Water Quality Control Board (RWQCB), Los Angeles Region, issued an NFA Determination for soil and groundwater (for commercial /industrial use) for the subject property. Based on the forgoing, a VEC can be ruled out at the subject property.

- **Former Burke Industries (13767 Freeway Drive)** - The southeast adjoining property was listed on the VCP and Envirostor databases with a 'No Further Action' status, as of February 2015. Based on available information, on February 21, 2014, the DTSC issued a letter requiring further action for the Former Burke Industries property based on its review of the Preliminary Endangerment Assessment Equivalent (PEAE) documents. Further action consisted of filing a Land Use Covenant (LUC) with the Los Angeles County Assessor to restrict uses of the property to commercial/industrial land use. The PEAE concluded that minor releases of hazardous substances had occurred on the Site but did not require clean up, and that those releases did not contribute significantly to regional groundwater contamination. The PEAE recommended no further action for the site. From 1966 to 1984, the property was used as a motorcycle warehouse and showroom. From 1984 to 2003 various companies operated on the site manufacturing boats, hoses, gaskets and various silicon and rubber products. Investigations of the areas of concern (AOC) included collection of soil, soil gas and groundwater samples that were analyzed for VOCs, TPH and metals. Detected concentrations of VOCs in soil and soil gas in the AOC were consistent with the chemical use history on the property. VOC and metals detections in groundwater appear have originated from an up-gradient source as they are not consistent with detections in soil and soil gas and with chemical use history. The detected concentrations of VOCs in soil gas were compared to California Human Health Screening Levels and were found to be within acceptable levels for commercial/industrial land use of the property. In the November 21, 2014 letter, DTSC concurred with the PEAE conclusions and recommendations that previous releases on the site did not contribute significantly to regional groundwater contamination and that residual chemical concentrations on the site do not present an unacceptable risk to human health under a commercial/industrial land use scenario. Based on the PEAE results, DTSC conducted an in-house human-health screening evaluation for an unrestricted land use scenario and determined that no further action for the site is necessary and the site is suitable for unrestricted land use. As with any real property, if previously unidentified contamination is discovered at the site, additional assessment, investigation, and/or clean may be required. Based on the foregoing, and upon previous subsurface investigations conducted at the subject property, including soil gas surveys, a VEC can be ruled out from this site. This site is discussed further in Section 6.1.

- **LeFiell Manufacturing Company (13700 Firestone Boulevard)** – the property located approximately 980 feet to the southeast of the subject property, in an up-gradient location, is listed on the various databases, including Envirostor. Currently, the DTSC is overseeing assessment of an up-gradient facility (LeFiell Manufacturing Company), located to the south/southwest across the Freeway 5 from the subject property. High concentrations of chlorinated VOCs in soil and groundwater have been detected at the property. The DTSC has directed the

LeFiell site to conduct additional groundwater delineation across the Freeway 5 to the northwest of LeFiell towards the former Frigid Coil site. Based upon previous subsurface investigations conducted at the subject property, including soil gas surveys, a VEC can be ruled out from this site. This site is discussed further in Section 6.1.

Data Gaps

No significant data gaps were identified.

Findings

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify recognized environmental conditions (RECs). The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the subject property or into the ground, ground water, or surface water of the subject property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

- This assessment has revealed no evidence of RECs in connection with the property.

A Historical Recognized Environmental Condition (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by regulatory authority, without subjecting the property to any required controls (e.g. property use restrictions, AULs, institutional controls, or engineering controls).

- As previously discussed, the subject property was the subject of multiple environmental investigations conducted between 2006 and 2012, and received a No Further Action Determination for soil and groundwater. The Final Environmental Assessment (Geosyntec, 2011) summarized groundwater, soil, soil vapor sampling and sub-slab soil vapor investigations, and concluded that vadose zone soil concentrations for VOCs are below screening levels, and VOC concentrations in groundwater are attributable to an upgradient offsite source. Based on these findings, in its January 27, 2012 letter, the RWQCB, Los Angeles Region, issued an NFA Determination for soil and groundwater (for commercial

/industrial use). Therefore, the former manufacturing operation and use of hazardous materials constitutes a HREC.

A Controlled Recognized Environmental Condition (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (property use restrictions, AULs, institutional controls, or engineering controls).

- Recent legislation, AB 2436, prohibits the Regional Board from issuing a closure letter or making a determination that a 'No Further Action' is required if a property is not suitable for unrestricted use, unless a land use restriction is recorded. The Regional Board determined that a Covenant and Environmental Restriction on Property (Covenant) is necessary for the subject property for the protection of public health or safety due to the background concentration of arsenic and residual concentration of Total Petroleum Hydrocarbons in soil. The Covenant was filed and recorded in Official Records, Recorder's Office, Los Angeles County on December 28, 2011. The information above constitutes a CREC.

Conclusions and Recommendations

FR has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at **13711 Freeway Drive, Santa Fe Springs, California 90670**. This assessment has revealed no evidence of recognized environmental conditions (RECs) and/or environmental issues in connection with the subject property. FR recommends no further investigations for the subject property at this time.

Table of Contents

FIGURES & APPENDICES

1.0 Introduction

FR has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at 13711 Freeway Drive, Santa Fe Springs, California 90670 (subject property) per the request of California Statewide CDC. The work was authorized by written contract dated September 9, 2015.

1.1 Purpose

The purpose of a Phase I Environmental Site Assessment is to identify potential issues that may impact the subject property. The purpose of this practice is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. 9601) and petroleum products. The investigation was conducted in accordance with the *Client's* Environmental Site Assessment scope of work for the use and benefit of the *Client* and the U.S. Small Business Administration (U.S. SBA) if financing is to be authorized by U.S. SBA. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes "all appropriate inquiry into the previous ownership and uses of the subject property consistent with good commercial or customary practice" as defined at 42 U.S.C. 9601(35)(B).

Controlled substances are not included within the scope of this standard. Persons conducting an environmental site assessment as part of an EPA Brownfields Assessment and Characterization Grant awarded under CERCLA 42 U.S.C. 9604(k)(2)(B) must include controlled substances as defined in the Controlled Substances Act (21 U.S.C. 802) within the scope of the assessment investigations to the extent directed in the terms and conditions of the specific grant or cooperative agreement. Additionally, an evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in this practice.

The purpose of this report is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. This report is also not intended to serve as a compliance assessment of the subject property.

The ASTM E1527-13 practice DOES NOT address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provision of the LLPs. Per the ASTM Standard, Users are cautioned that federal, state, and local laws may impose environmental assessment obligations that are beyond the scope of this practice. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the subject property that are not addressed in the ASTM practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

1.2 Scope of Work

This report has been prepared per the conditions presented in the agreed contract signed by the client. In accordance with ASTM guidelines, FR's scope of work included:

1. Requested user or one deemed most historically familiar with subject property to complete FR's environmental questionnaire.

2. Conducted visual reconnaissance of the subject property and adjoining properties, including site interviews with past or present owners, occupants, tenants, and/or operators if applicable.

3. Requested and researched historical documentation including but not limited to aerial photographs, city directories, topographic maps, interviews, public agency records, and fire insurance maps. Chain-of-title and environmental liens were reviewed if requested or provided by the client/user.

4. Reviewed federal, state, and local regulatory agency database information for the subject property and neighboring properties to identify potential concerns that could adversely affect the environmental condition of the subject property.

5. Prepared a technical Phase I Environmental Assessment report to document the findings regarding the current environmental condition of the subject property. If warranted, the report contains recommendations for further action. In addition to ASTM scope items, the following ASTM non-scope items were discussed and included in the report based upon a limited review: asbestos containing materials, radon, lead-based paint, lead in drinking water, potential wetlands, air emissions, and mold/water intrusion.

ASTM E1527-13 does not encompass analytical testing to evaluate Asbestos Containing Materials (ACM), radon, lead-based paint (LBP), drinking water quality, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, biological agents, mold, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Such additional information regarding non-ASTM E1527-13 issues may be provided merely for the *User's* convenience, and cannot be used to bind this report as a whole to the compliance and conformance with ASTM guidelines. No disassembly of systems or building components or physical or invasive testing is to be performed unless Contract Engagement specifically calls for such testing as an additional scope of work. FR Environmental has performed this *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13. This *Report* may not include all environmental conditions, which can materially impact the Subject Property other than those defined as RECs, HRECs, and CRECs in ASTM E1527-13.

1.3 Significant Assumptions

The following assumptions are made by FR Environmental in this report. FR relied on information derived from secondary sources. FR Environmental has made no independent investigation as to the accuracy and completeness of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews and has assumed that such information is accurate and complete. FR Environmental assumes information provided by or obtained from governmental agencies including information obtained from government websites is accurate and complete.

Groundwater flow direction and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. FR Environmental assumes the subject property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

FR Environmental assumes that the Client, Client representatives, Client Legal Counsel, designated representatives of the Client, property contact, property owner, property owner representatives, and property brokers, used good faith in answering questions and in obtaining information for the subject property as defined in 10.8 of the ASTM E1527-13 practice. This would also include obtaining those helpful documents from previous owners, operators, tenants, brokers, financial institutions etc. FR Environmental also assumes the Client will designate appropriate and knowledgeable people for performance of the Phase I Environmental Assessment.

1.4 Limitations

It is important to note that property conditions, as well as federal, state, and local/tribal regulations can change over time. Therefore, the conclusions and information presented in this report apply strictly to regulations and property conditions existing at the time the report was completed. FR Environmental assumes that information provided by local agencies is true. FR Environmental cannot guarantee or warranty that information provided second-hand is accurate to its fullest extent. FR Environmental is not responsible for conditions found at or beneath the subject property or adjacent properties.

Accordingly, portions of this report may be invalidated wholly or partially by the changes beyond our control.

The findings, conclusions, and recommendations presented herein are based solely on the scope of work previously described and information gathered. Incomplete or outstanding information identified throughout the body of this report including data gaps is considered a limitation to the assessment. Limitations to the assessment also include weather conditions, vegetation cover, parked cars, trucks, dumpsters, and anything limiting visual observation of or physical access to the subject property and neighboring properties. Vapor intrusion is not included in this scope of services and is considered an ASTM Non-scope consideration. FR was not contracted to disassemble or perform testing of machinery onsite. This report and scope is not an environmental compliance audit.

Certain policies can differ from lenders or users. For CERCLA landowner liability protection, Phase I ESA reports are valid for 180 days, per ASTM E1527-13.

1.5 Qualification Statement of Professional

Our investigation was performed using the degree of care and skill ordinarily exercised, under similar circumstances, by or under direct oversight of an environmental professional as defined by the ASTM. FR Environmental's environmental professional who prepared this assessment possesses the specific qualifications based upon education, training and experience to assess a property of the nature, history, and setting of the subject property. Neither FR Environmental, nor any staff member assigned to this investigation has any interest or contemplated interest, financial or otherwise, in the subject or surrounding properties, or in any entity which owns, leases, or occupies the subject or surrounding properties or which may be responsible for environmental issues identified during the course of this investigation, and has no personal bias with respect to the parties involved. FR Environmental has developed and performed the "*All Appropriate Inquiries*" in accordance with the standards and practices as defined in 40 CFR Part 312.

2.0 Site Description

2.1 Location and legal description

The subject property, 13711 Freeway Drive, Santa Fe Springs, California, is located to the east of the Spring Avenue and Freeway Drive intersection, and approximately 120 feet to the northeast of the Santa Ana (5) Freeway, within a highly developed industrial area of Santa Fe Springs, California. According to the Los Angeles County Tax Assessor's Office, the subject property Assessor Parcel Number (APN) is 8069-015-055. The subject property consists of an irregular-shaped lot that is approximately 213,200 square feet in size.

2.2 General characteristic

The subject property is improved with a two-story industrial building (subject building) that was constructed in 1966. The size of the subject building is approximately 82,092 square feet. The subject building is a concrete tilt-up industrial office/warehouse building with flat composite roofing. The two-story office portion is located on the south end of the subject building. The warehouse portion occupies the remaining portion of the subject building. The warehouse portion is improved with numerous ground-level and dock-high roll-up doors that are located on the north, west and south side of the subject building. An abandoned rail spur runs immediately to the east of the subject building. The north end of the subject property is used for exterior storage of cargo. The west portion of the subject property is improved with a large fenced industrial yard that is utilized for storage of cargo and truck parking. Additional parking spaces are provided on the southwest end of the subject property.

2.3 Current property use

The subject property is occupied by Martinez Trucking, Inc., a general freight trucking company that has occupied the subject property since 2010/2011. Martinez Trucking, Inc. uses the subject building spaces for warehousing and distribution of steel tubes and coils. Limited truck maintenance is conducted on the northeast and north side of the subject building.

2.4 Current adjoining properties description

The subject property is located in a highly developed industrial area within the city of Santa Fe Springs, California. The following land use in the immediate vicinity of the property was observed:

Direction	Property Name	Property Address	Business Operation
North:	Industrial facility	15310 Spring Avenue	Ross Bindery
Northwest:	Public Right of Way Spring Avenue, followed by industrial facility	13635 Freeway Drive	El Tapatio Markets
East:	Abandoned rail spur, followed by industrial facility	15415 Marquardt Avenue	Target Specialty Products
Southeast:	Abandoned rail spur, followed by industrial facility	13767 Freeway Drive	Flatiron Construction Corp.
South/Southwest:	Santa Ana (5) Freeway	N/A	Freeway

The southeast adjoining property was identified on files with the regulatory agencies and is discussed in Sections 6.1 and 6.3.

2.5 Municipal Services and Utilities

The following companies and municipality currently provide utility services to the subject property:

Utility	Provider
Electricity	Southern California Edison
Natural Gas	Southern California Gas Company
Potable Water	City of Santa Fe Springs
Sanitary Sewerage	City of Santa Fe Springs
Solid Waste Removal	Serv Well Disposal

2.6 Physical Settings

2.6.1 Topography

The United States Geological Survey (USGS), [Whittier, California] 7.5 Minute Topographic Quadrangle map of the subject property and surrounding vicinity is reviewed. The elevation of the property is located at approximately 70 feet above mean sea level (MSL). The property's regional drainage is moderately hilly and declined to the southeast.

A copy of the USGS 7.5 Minute Topographic Quadrangle Map of Whittier, California, is included in the appendices of the report.

2.6.2 Geology/Soil Conditions

The subject property is located within the Central Block of the Los Angeles Basin, a coastal alluvial basin that extends from Beverly Hills southeast to central Orange County. The central block is bounded on the northeast by the Whittier fault, Elysian and Repetto Hills, and on the southwest by the Newport-Inglewood Fault Zone. The primary geologic feature of the central block is the Downey Plain, a northwest trending syncline approximately 0 to 14 miles wide. Miocene, Pliocene, and Pleistocene deposits in the central block are more than 22,000 feet thick.

According to the Geocheck Summary portion of the environmental database report prepared by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, the sediments beneath the subject property have been identified as part of the Quaternary Series of the Quaternary System of the Cenozoic Era. According to the United States Department of Agriculture (USDA) Soil Conservation Service (SCS), the subject property is underlain by the Urban Land soil component. Although the Urban Land classification is not defined, native surficial soils in the area are reported to consist of loam, clay, silt loam, loamy sand, sandy loam, fine sand, clay loam, gravelly- sandy loam, coarse sand, gravelly-sand, and sand. Urban Land surficial soils are predominantly artificial fills common in highly developed urban areas.

2.6.3 Hydrogeology

According to the *previous reports*, subject property is located within the forebay area of the Los Angeles Central Basin. Reportedly, the main surface water features in the basin are the Los Angeles and San Gabriel Rivers, which cross the basin and discharge into the Pacific Ocean. Groundwater at the subject property has been reported at a depth of between 20 and 40 feet below ground surface with flow directions to the north northeast.

Note that groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 Property Reconnaissance

3.1 Property Condition Observations

FR was provided full property access on September 21, 2015. There was not a limited property access condition. The weather conditions were cloudy with a temperature of 82 degrees Fahrenheit. No weather conditions limited property observations.

FR inspected interior and exterior portions of the subject property. The two-story office portion is located on the south end of the subject building. The warehouse portion occupies the remaining portion of the subject building. An abandoned rail spur was observed immediately on the east side of the subject building. The subject property is occupied by Martinez Trucking, Inc., a general freight trucking company that uses the subject building spaces for warehouse and distribution of steel tubes and coils. Limited truck maintenance is conducted on the northeast and north side of the subject building. A parts room and hazardous materials storage area was observed on the northeast side of the warehouse. Hazardous materials observed to be stored at this location included anti-freeze, transmission fluid, gear oil, new oil and waste oil. The hazardous materials were stored in 55-gallon steel drums, and 5, 1 and ½-gallon cans. In addition, waste oil is generated in a 500-gallon aboveground storage tank, and new motor oil was observed to be stored in a 240-gallon aboveground storage tank. Oil staining was observed on concrete pavement in proximity of the hazardous materials. The north end of the subject property is used for exterior storage of cargo products. FR observed cylinders with compressed gases (Oxygen and LPG) to be stored on the north exterior portion of the subject property. The west portion of the subject property is improved with a large fenced industrial yard that is utilized for storage of cargo and truck parking. Several full and empty 55-gallon drums that appeared to be containing fresh or waste oil were observed to be stored in the yard. Additional parking spaces are provided on the southwest end of the subject property.

3.2 ASTM Reconnaissance Findings

Recognized Environmental Conditions (RECs) - In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify recognized environmental conditions. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the subject property or into the ground, ground water, or surface water of the subject property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

FR conducted a visual review and observation of the subject property and adjoining properties per ASTM Scope Considerations listed below.

Item	Identified
Generating or handling of petroleum products or hazardous substances	Hazardous materials observed to be stored at this location included anti-freeze, transmission fluid, gear oil, new oil and waste oil. The hazardous materials were stored in 55-gallon steel drums, and 5, 1 and ½-gallon cans.
Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)	Two aboveground storage tanks were observed on the premises. Waste oil is generated in the 500-gallon aboveground storage tank. New motor oil is stored in the 240-gallon aboveground storage tank. The tanks are located along the east wall.
Fueling systems	None identified.
Unidentified hazardous substances or petroleum products not in connection with property use	None identified.
Unidentified substance containers	Several empty or partially full 55-gallon drums were observed in the yard. The drums were unlabeled. They appeared to be containing fresh and waste oil.
Machinery or equipment likely containing PCBs	None identified.
Significant surface staining on interior or exterior portion of property	Oil staining was observed on concrete pavement in proximity of the hazardous materials. The oil staining is considered *de minimis*.
Pungent or noxious odors	None identified.
Stockpiled soil with visual contamination	None identified.
Questionable fill material (Unknown origin)	None identified.
Lagoons, septic systems, Sumps, Pits, clarifiers, and Floor Drains	The subject property was formerly improved with a three-stage clarifier that was located on the east exterior portion of the subject property. The clarifier was pumped-out and filled with concrete in 2007 by Safety Kleen.
Stressed vegetation	None identified.
Regulated or unregulated waste water discharge	None identified.
Pools of liquid	None identified.
Herbicide or pesticide use	None identified.

Surficial disturbances	None identified.
Drycleaning operation	None identified.
Other hazardous substances used on the property	None identified.

The subject property has been utilized as distribution warehouse. No waste manifests were available at the time of the property visit. However, according to Ms. Brenda Martinez, the current subject property occupant, hazardous waste is picked up by Beny's Oil Service every two weeks. FR observed oil staining on concrete pavement in proximity of the hazardous materials storage area and on exterior pavement. The subject property has no point source features of environmental concern such as sumps, clarifier, well, UST, or any type of injection wells to be a conduit to subsurface impact. Therefore, the staining is considered a *de minimis* condition.

No RECs (Recognized Environmental Conditions) were observed during the site reconnaissance.

3.3 ASTM Non-Scope Considerations

Unless authorized per the user's request, FR did not engage in conducting sampling or an assessment beyond a visual review of the ASTM Non-Scope Considerations. FR conducted a visual review of the following ASTM Non-Scope Considerations included in this assessment:

ASTM Non-Scope Item	Identified
Asbestos-Containing-Materials (ACMs)	Based on the construction date (1966), asbestos-containing building materials could be present. In addition, an abandoned rail spur runs along the east side of the subject building. However, the rail spur is not accessible as it is separated from the subject property by a fence, and the area is not in use. Therefore, the spur does not represent a current environmental concern.
Lead-based paint (LBP)	Based on the construction date (1966), lead-based paints are could be present.
Radon	A review of the EPA's Map of Radon Zones indicates that Los Angeles County falls within Zone 2, a zone of moderate radon potential. Counties located within Zone 2 have a predicted average indoor radon screening level of between 2 and 4 picocuries per liter (pCi/L), generally below EPA's radon action level of 4 pCi/L for residential structures. A radon survey was not included in the current scope of services.
PCB-oil in hydraulic equipment, ballasts, switcher, transformers, etc.	Several loading dock levelers and one transformer were observed in the subject building. The transformer was a dry type transformer, which does not contain liquid that could potentially

	be PCB-containing. No other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, hydraulic elevators, balers, etc.) was observed on the subject property during FR's reconnaissance. A PCB survey was not included in the current scope of services.
Lead in Drinking Water	A lead in drinking water survey was not included in the current scope of services.
Flood Zone	Based on a review of a flood zone map contained in the EDR Radius Map Report, the subject property is not located within a 100-year or 500-year flood zone.
Mold and Indoor Air Quality Issues	No obvious indications of water damage or mold growth were observed during FR's visual inspection.

4.0 Historical Use Summary

Per ASTM E1527-13, "8.3.2 Uses of the Property—All obvious uses of the property shall be identified from the present, back to the property's first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources in 8.3.4.1 through 8.3.4.8 as are necessary and both reasonably ascertainable and likely to be useful (as described under Data Failure in 8.3.2.3). Such confirmation may come from one or more of the standard historical sources specified in 8.3.4.1 through 8.3.4.8, or it may come from other historical sources (such as someone with personal knowledge of the property; see 8.3.4.9). However, checking other historical sources (see 8.3.4.9) is not required. For purposes of 8.3.2, the term "developed use" includes agricultural uses and placement of fill dirt. The report shall describe all identified uses, justify the earliest date identified (for example, records showed no development of the property prior to the specific date), and explain the reason for any gaps in the history of use (for example, data failure).

Per ASTM E1527-13, "8.3.2.3 Data Failure—the historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data Failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Data failure is not uncommon in trying to identify the use of the property at five-year intervals back to first use or 1940 (whichever is earlier). Notwithstanding a data failure, standard historical sources may be excluded if: (1) the source is not reasonably ascertainable, or (2) if past experience indicates that the source is not likely to be sufficiently useful, accurate, or complete in terms of satisfying the objectives. Other historical sources specified in 8.3.4.9 may be used to satisfy the objectives, but are not required to comply with this practice. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for their exclusion. If the data failure represents a significant data gap, the report shall comment on the impact of the data gap on the ability of the environmental professional to identify recognized environmental conditions.

FR researched all available sources of historical information to satisfy historical sources as outlined in ASTM Standard E1527-13. A list of historical resources searched is as follows:

Historical Summary Table

Historical Source	Reference	Dates Obtained
Aerial Photographs	EDR	1928-2012
Sanborn Map Company Fire Insurance Maps	EDR	No coverage
Property Tax File	Los Angeles County Assessor's Office	2014
Recorded Land Title Records	Not reviewed	N/A
USGS 7.5 Minute Topographic Maps	EDR	1896-1981
Local Street Directories (city directories)	EDR	2006-2013
Building Department Records	City of Santa Fe Springs Building & Safety Department	1965-2004
Zoning/Land Use Records	City of Santa Fe Springs Development Department	2015
Previous Reports	ERM, Inc. Ninyo & Moore Geosyntec Consultants, Inc.	2006-2007 2007 2008-2011
Other Historical Sources	Not reviewed	N/A

4.1 Historical Aerial Photographs Review

FR reviewed historical aerial photographs supplied by EDR and dated 1928-2012. A summary of historical aerial photographs researched is listed below.

Dates	Description
1928, 1938	The subject property and adjoining properties are agricultural land. No structures are noted on the subject property or the adjoining properties.

Dates	Description

1947, 1952, 1954, 1963	The subject property appears to be used for agricultural purposes. A small structure is visible on the southwest side of the subject property. The north and east adjoining properties appear to be agricultural land. The south/southwest adjoining property is improved with a freeway. The west adjoining property appears to be developed with an industrial structure.

Dates	Description
1972	The subject property appears to be improved with its current respective structure and layout. The adjoining properties are generally in the same configuration as at present, except for the north adjoining property that appears to be vacant land.

Dates	Description
1977, 1983, 1989, 1994, 2002, 2005, 2009, 2010, and 2012	The subject property appears to be improved with its current respective structure and layout. The adjoining properties are generally in the same configuration as at present.

Based on the former agricultural land use between 1928 until at least 1963, there is a potential that agricultural chemicals, such as pesticides, herbicides, and fertilizers, were applied to the subject property. However, no bulk mixing areas or crop dusting fields were observed in the historical aerial photographs. While agricultural chemicals can accumulate in near surface soils, they are not likely to remain on-site at levels that would cause significant harm to human health or the environment based on the following: the subject property has been redeveloped for a commercial use, which would have involved grading (soil mixing), and the site is covered with impervious surfaces (buildings and pavement), which limits human exposure to near surface soils. Therefore, it is our opinion that any residual concentrations of agricultural chemicals in soil (if any) would not pose a significant risk.

4.2 Historical Sanborn Map Coverage Review

Sanborn Map Company maps were created for insurance underwriters from 1867 to 1970, and often contain information regarding the uses of individual structures, and the locations of fuel and/or chemical storage tanks that may have been on a particular property. FR subcontracted with EDR to provide copies of Sanborn Map Company maps.

No Sanborn coverage is available for the subject property and immediate vicinity.

4.3 Property Tax File

Based on a review of the Los Angeles County Tax Assessor's parcel information system, the subject property is assigned APN is 8069-015-058. The parcel boundaries are legally described as "TR=23559 EX OF STS LOT 15". One structure, reportedly constructed in 1966 is noted on the property. The property is classified as "commercial/industrial" in nature.

4.4 Recorded Land Title Records

Title records were not provided to FR for review.

4.5 USGS 7.5 Minute Topographic Maps

FR reviewed historical USGS 7.5 Minute Topographic Maps supplied by EDR. A summary of historical USGS 7.5 Minute Topographic Maps researched is listed below.

Property Topographic Quadrangles: (Whittier, Downey, Artesia, Los Angeles and Vicinity, California)

Dates	Description
1896, 1901, 1902 1925, 1945, and 1947	The subject property is depicted as an undeveloped part of Santa Fe Springs. Railroad tracks are depicted to the north of the subject property.

Dates	Description
1951, 1953	The subject property and adjoining properties are depicted as undeveloped. A freeway runs along the southwest border of the subject property.

Dates	Description
1965	The subject property and the north and east adjoining properties are depicted as vacant land. The west adjoining property is depicted as improved with an industrial warehouse. A freeway runs along the southwest border of the subject property.

Dates	Description
1972, 1981	The subject property appears to be improved with its current respective structure and layout. The adjoining properties are generally in the same configuration as at present, except for the north adjoining property that appears to be vacant land.

4.6 Historical City Directory Listings

FR reviewed historical city directory listings provided by EDR for the years 2006 to 2013 for the subject property.

A summary of historical city directory records researched is listed below.

13711 Freeway Drive – SUBJECT PROPERTY

Date Range	Description
1981, 1986, 1990, 2000, 2006	Frigid Coil
2008	First Imperial Trading Co.
2013	Martinez Trucking Inc.

15310 Spring Avenue – NORTH ADJOINING

Date Range	Description
1986, 1995	Continental Manufacturing Co.
2003, 2006, 2013	Ross Bindery Inc.

15415 Marquardt Avenue – EAST ADJOINING

Date Range	Description
1975, 1981, 1985, 1986, 1990	STA Rite Industries
2000, 2003, 2006, 2008, 2013	Target Specialty Products

13767 Freeway Drive – SOUTHEAST ADJOINING

Date Range	Description
2000, 2003	Burke Industries
2006	Kirkhill Taco
2013	Flat Iron Construction Corp.

13635 Freeway Drive – NORTHWEST ADJOINING

Date Range	Description

1964	XEROX Corp.
1990, 2000, 2006	CH.O.C. Thrift Stores
2008	Mother's Nutritional Center
2013	El Tapatio Markets

SOUTH ADJOINING PROPERTY

The south adjoining property is improved with the Santa Ana (5) Freeway.

4.7 Building Department Records

FR visited the City of Santa Fe Springs Building and Safety Department on September 21, 2015, and researched historical building records for the subject property address. According to the desk manager, the following records were available regarding the construction or other related permits at the subject property.

A summary of historical building department records researched is listed below.

Years	Owner/Applicant	Description
1965	Arthur Gilbert & Associates	New manufacturing & warehouse
1966	Miami-Carey	Plumbing (including clarifier)
1966	Phillip Carey Manufacturing	Installation of conveyor system and water mash spray booth
1966	Majestic Realty	New sign
1969	Miami-Carey	Installation of air pollution control equipment
1985	Frigid Coil	Installation of bridge crane & structure
1993	Arthur Gilbert	Bulk storage system installation (Freon tank)
1993	Frigid Coil	Reroof
1993	Gilbert Bank	Alter rain shelter
2004	Gilbert Found	Seismic upgrading of concrete tilt-up

4.8 Zoning/Land Use Records

FR visited the City of Santa Fe Springs Department of City Planning's website and researched additional zoning/land use records for the subject property addresses. According to the official zoning map of the city of Santa Fe Springs, the subject property is zoned as M-2-FOZ, which applies to a *Heavy Manufacturing-Freeway Overlay Zone.*

4.9 Previous Reports

FR was provided with the following previous reports, prepared for the subject property:

- ERM, Inc. Phase I Environmental Site Assessment Report. 13 June, 2006.
- ERM, Inc. Phase II Environmental Site Assessment Report. 23 June, 2006.

ERM, Inc. initially investigated the subject property in 2006. The subject property was occupied by Frigid Coil. Frigid Coil's operations consisted of the assembly of air handlers and other custom heating, ventilation, and air conditioning (HVAC) units. Principal materials in use at the facility consist of stainless steel, copper coil, welding gases, and hydraulic oils. ERM stated that Frigid Coil operated at the subject property since 1971. Prior to 1971 the building was occupied by Miami Carey and Celotex (insulation manufacturing). The building was reportedly constructed in 1966. Prior to 1966, the subject property was agricultural land. Heavily stained concrete was observed throughout the interior of the facility and the Phase II investigation was recommended. The Phase II report provided a summary and results of ERM's subsurface shallow soil and shallow soil-gas investigation including installation of several groundwater monitoring wells. The purpose of the site investigation was to assess the potential for subsurface impacts that may have been caused by historical releases at the subject property. A series of investigations and groundwater monitoring reports followed the initial assessments. The following reports were additionally prepared for the subject property between 2007 and 2011:

- ERM, Inc. Supplemental Phase II Environmental Site Assessment Report. January, 2007.
- Ninyo & Moore. Parcel Acquisition Site Investigation I-5 Carmenita Road Interchange Improvement Project. Parcel Acquisition Site Investigations, Frigid Coil. February 28, 2007.
- Johnson Controls Correspondence to the Gilbert Foundation. May 15, 2007.
- ERM, Inc. Phase II Environmental Site Assessment – Frigid Coil Facility. January, 2008.
- Geosyntec Consultants, Inc. Environmental Assessment Workplan – Frigid Coil Facility. September 30, 2008.
- Geosyntec Consultants, Inc. 3rd Quarter 2008 Groundwater Monitoring Report – Frigid Coil Facility. December 5, 2008.
- Geosyntec Consultants, Inc. 4th Quarter 2008 Groundwater Monitoring Report – Frigid Coil Facility. February 20, 2009.
- Geosyntec Consultants, Inc. Environment Assessment Report – Frigid Coil Facility. March 10, 2009.
- Geosyntec Consultants, Inc. 1st Quarter 2009 Groundwater Monitoring Report – Frigid Coil Facility. April 15, 2009.
- Geosyntec Consultants, Inc. 2nd Quarter 2009 Groundwater Monitoring Report – Frigid Coil Facility. July 9, 2009.
- Geosyntec Consultants, Inc. 3rd Quarter 2009 Groundwater Monitoring Report – Frigid Coil Facility. October 12, 2009.

- Geosyntec Consultants, Inc. 4th Quarter 2009 Groundwater Monitoring Report – Frigid Coil Facility. October 12, 2010.
- Geosyntec Consultants, Inc. Final Environmental Assessment Report – Frigid Coil Facility. August 5, 2011.

Based on reviewed previous reports, all phases of assessment generated similar or consistent results. The major findings, summarized in the No Further Action letter, issued to the subject property in January, 2012; are as follows:

- Total Petroleum Hydrocarbons (TPH) were detected in shallow soils at the site. However, step-out sampling indicated that presence of TPH was limited in area and depth (within the first 5 feet below ground surface (bgs)). Maximum detected concentrations of TPH in soil were 260 milligrams per kilogram (mg/kg) for the gasoline range (TPHg), 770 mg/kg for the diesel range (TPHd), and 1,200 mg/kg for the oil range (TPHo). These detections were limited in areal extent and there was no track to groundwater, in addition the concentration of risk driver compounds such as volatile organic compounds (VOCs) in co-located soil gas and soil samples was negligible.
- VOCs were investigated across the subject property using soil and soil gas sampling. Selected sampling locations targeted potential sources of contamination and were distributed across the subject property both inside and outside the building. VOC concentrations were mostly not detected in soil samples. When detected in soil, VOCs were present at trace level concentrations below screening levels for the protection of human health and groundwater. The levels of VOCs detected in soil did not identify any major source of contamination at the subject property. Detected VOCs and their corresponding highest concentrations in micrograms per kilogram (µg/kg) shown in parenthesis included: benzene (9.2 µg/kg), toluene (180 µg/kg), ethylbenzene (44 µg/kg), xylenes (160 µg/kg), and tetrachloroethylene (7.3 µg/kg).
- VOC concentrations in soil vapor samples were mostly not detected. When detected, VOCs concentrations were equal or lower than 1 microgram per liter (µg/L). Soil gas samples were collected beneath the slab and every five feet to 15 feet bgs (groundwater occurs at 20 feet bgs). No track groundwater was detected. Detected VOCs and their corresponding highest concentration in µg/L shown in parenthesis included: benzene (0.063 µg/L), toluene (0.18 µg/L), ethylbenzene (0.21 µg/L), xylenes (1 µg/L), tetrachloroethylene (0.95 µg/L), and trichloroethylene (0.09 µg/L).
- Only one soil vapor sample detected tetrachloroethylene at a concentration that exceeded its corresponding California Human Health Screening Level (CHHSL) for commercial/industrial use of 0.6 µg/L. Area weighted average concentrations were calculated for each analyte detected in sub-slab vapor samples. The soil vapor results were compared to commercial CHHSLs. None of the chemicals detected has area weighted average concentrations that exceeded their respective soil vapor CHHSL concentrations. Therefore, residual chemical concentrations at the subject property are unlikely to pose an unacceptable human health risk to workers at the subject property.

- California Administrative Manual (CAM) metals were tested in soil samples. All of the CAM 17 metals analyzed appeared to be representative of background concentrations and, except for arsenic were detected at concentrations below the USEPA Region 9 regional soil screening levels (RSL) published in June 2011 for commercial /industrial land use.
- Arsenic was detected at concentrations exceeding RSLs for commercial/industrial land use. The highest concentration detected was 29 mg/kg. The Department of Toxic Substance Control (DTSC) has reported that background concentrations of arsenic in southern California soils commonly exceed risk based concentrations in school sited. Furthermore, the DTSC has published an upper-bound arsenic concentration of approximately 12 mg/kg for Los Angeles County. A statistical analysis of the data indicated that arsenic concentrations on the subject property are comparable to the DTSC reported regional levels, appeared to be background, and are not associated with any subject property-specific release or operation. In addition, the single sample point with the highest concentration appears to be a statistical outlier.
- Groundwater beneath the subject property is impacted with chlorinated VOCs. Shallow groundwater occurs at a depth of approximately 20 feet bgs and has consistently flowed to the north-northeast since 2006. Chlorinated solvents were rarely detected in soil and soil vapor at the subject property. When detected, VOCs occurred in trace concentrations in shallow soil and soil vapor samples and no track to groundwater was observed. Therefore, there is no evidence that the subject property is a contributor to the groundwater contamination.
- Currently, the DTSC is overseeing assessment of an up-gradient facility (LeFiell Manufacturing Company), located to the south/southwest across the Freeway 5 from the subject property. High concentrations of chlorinated VOCs in soil and groundwater have been detected at the adjoining property. The DTSC has directed the LeFiell site to conduct additional groundwater delineation across the Freeway 5 to the northwest of LeFiell towards the former Frigid Coil site.

<u>Case Closure</u>
Based on the information above, California Regional Water Quality Control Board determined that soil, soil vapor, and groundwater investigations have been completed, and issued the No Further Action Letter to the subject property on January 27, 2012.

4.10 Other Historical Records

No additional historical records were obtainable for the subject property.

4.11 Historical Summary

Based on reviewed historical documents, the subject property was agricultural land between 1928 and 1963. The subject property was improved with the current concrete tilt-up structure in 1966. Frigid Coil operated at the subject property from 1971 until 2007. Prior to 1971 the building was occupied by Miami Carey and Celotex (insulation manufacturing). Frigid Coil's operations consisted of the assembly of air handlers and other custom heating, ventilation, and air conditioning (HVAC) units. Principal materials in use at the facility consisted of stainless steel, copper coil, welding gases, and hydraulic oils. The property was occupied by First Imperial Trading Co. in 2008. Martinez Trucking Inc. has occupied the subject property since 2010.

The adjoining properties were agricultural land between 1920s and 1950s. Although the northwest adjoining property appeared to have been developed with an industrial structure as early as the 1940s, no records of historical concern were identified on files with the regulatory agencies. The adjoining properties to the north, east and southeast were developed with industrial uses in the 1960s/1980s. The southeast adjoining property was identified on files with the regulatory agencies and is discussed in Section 6.1.

5.0 Interviews/User Information

5.1 Interviews

Interviews were conducted and attempted with the following personnel listed below.

Personnel Interviewed	Brief Summary
User	Not interviewed
Property Owner	Not interviewed
Previous Owner	Not interviewed
Tenant	Brenda Martinez
Manager	Not interviewed
Buyer	Not interviewed
Adjoining Property Owner	Not interviewed
Broker	Not interviewed
Government Officials	Not interviewed

Interview with Tenant

Ms. Brenda Martinez stated that Martinez Trucking, Inc. has occupied the subject property for a couple years. Ms. Martinez stated that hazardous waste is picked up by Beny's Oil Service every two weeks. Ms. Martinez was not aware of any environmental features of concern, or issues associated with the subject property.

5.2 User Information

5.2.1 Environmental liens and/or Activity and Use Limitations (AULs)

Recent legislation, AB 2436, prohibits the Regional Board from issuing a closure letter or making a determination that a 'No Further Action' is required if a property is not suitable for unrestricted use, unless a land use restriction is recorded. The Regional Board determined that a Covenant and Environmental Restriction on Property (Covenant) is necessary for the subject property for the protection of public health or safety due to the background concentration of arsenic and residual concentration of TPH in soil. The Covenant was filed and recorded in Official Records, Recorder's Office, Los Angeles County on December 28, 2011.

5.2.2 Specialized Knowledge

No knowledge of recognized environmental conditions or historical recognized environmental concerns was provided by the user.

5.2.3 Valuation Reduction for Environmental Issues

No information was provided by the user that indicated the subject property was being sold or valued lower due to outstanding environmental issues.

5.2.4 Commonly Known or *Reasonably Ascertainable* Information

The user has not provided or is unaware of any commonly known or reasonably ascertainable information for the subject property.

5.2.5 Other User Provided Information

No other user provided information was obtainable or provided.

6.0 Government Database Section

6.1 Environmental Database Summary

As part of the Phase I Environmental Assessment, FR utilized Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, as an information source for regulatory agency environmental database records. The environmental database report was dated September 11, 2015.

An attempt to locate listed Orphan Sites (facilities that could not be mapped or geocoded due to inadequate address information) within an area or radii of concern to the subject property was attempted by FR. These attempts consisted of a street review, a drive-by view of orphan site, and/or evaluating site type given information provided by government agencies.

A copy of the radius report is included in the appendices.

Summary of Listings

<u>National Priorities List (NPL) Facilities:</u>

The NPL, also known as the Superfund List, is an EPA listing of the nation's worst uncontrolled or abandoned hazardous waste facilities. Designation as a Superfund Site is primarily based on a score that the facility receives from the EPA's Hazard Ranking System. These facilities are targeted for possible long-term remedial action. Such prioritized sites with significant risk to human health and the environment receive remedial funding under the Comprehensive Environmental Response Conservation and Liability Act (CERCLA). The NPL is compiled by EPA pursuant to CERCLA, 42 U.S.C.§9605(a)(8)(B). (*http://www.epa.gov/superfund/sites/npl/index.htm*).

No NPL sites were identified within the specified radius from the subject property.

<u>Federal Delisted NPL List</u>

Federal Delisted NPL List consists of sites that no longer require further response actions as determined by the EPA.

No Federal Delisted NPL List sites were identified within the specified radius from the subject property.

CERCLIS and CERCLIS/NFRAP List

CERCLIS and CERCLIS/NFRAP List consists of sites that the EPA has investigated or is presently investigating for release or threatened release of hazardous substances, which may be subject to review in accordance with the terms and conditions of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, also known as Superfund). Sites listed on the "No Further Remedial Action Planned" (NFRAP) database are sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require federal Superfund or NPL consideration.

No CERCLIS List site was identified within the specified radius from the subject property.

Three CERCLIS/NFRAP List sites were identified within the specified radius from the subject property.

Due to relative distance from the subject property, regulatory oversight, hydraulic gradient, and/or respective status, none of these facilities are considered to be a significant environmental concern to the subject property.

RCRA CORRACTS List

RCRA CORRACTS List is an EPA-maintained database of Resource Conservation and Recovery Act (RCRA) facilities undergoing "corrective action". A "corrective action order" is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred, even if it predates RCRA.

Two RCRA CORRACTS List sites were identified within the specified radius from the subject property.

Due to relative distance from the subject property, regulatory oversight, hydraulic gradient, media impacted, and/or respective status, neither of these facilities is considered to be a significant environmental concern to the subject property.

RCRA TSDF List

RCRA TSDF List are sites that generate, transport, store, treat, and/or dispose of hazardous waste and are required to register their hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The list includes small- and large-quantity operators and handler violations.

No RCRA TSDF List sites were identified within the specified radius from the subject property.

RCRA Generators List (Small Quantity and Large Quantity)

RCRA hazardous waste generators are identified as Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). RCRA LQGs are identified as those facilities, which generate at least 1,000 kilograms (2,200 pounds) of non-acutely hazardous waste (or 1 kilogram of acutely hazardous waste) in any calendar month. RCRA SQGs are identified as those facilities that generate less than 1,000 kilograms of non-acutely hazardous waste in any calendar month.

The subject property was listed on the RCRA-SQG database under the name Frigid Oil in 1991. No violations were reported for the subject property occupant.

The southeast adjoining property at 13767 Freeway Drive was listed on the RCRA-SQG database under the name Santa Fe Equipment in 1986. No violations were reported for the site.

Several RCRA Generator sites were listed on the RCRA-SQG database to be located across the Santa Ana (5) Freeway and to the southwest of the subject property. No violations were reported for the sites.

Due to relative distance from the subject property, regulatory oversight, hydraulic gradient, and/or respective status, none of these facilities are considered to be a significant environmental concern to the subject property.

US Engineering Controls

This is a listing of sites with engineering controls in place to control onsite contamination. Engineering controls may include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

No US Engineering Control sites were identified within the prescribed radius of concern (subject or adjoining properties).

US Institutional Controls

This is a listing of sites with institutional controls in place to control onsite contamination. Institutional controls may include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

No US Institutional Control sites were identified within the prescribed radius of concern (subject or adjoining properties).

Emergency Response Notification System (ERNS)

ERNS is a national database used to collect information on reported releases of petroleum products or hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, the U.S. Coast Guard, the National Response Center and the U.S. Department of Transportation. The program is a cooperative effort of the EPA, the Department of Transportation Research and Special Program Administration's National Transportation System Center, and the National Response Center. There are five primary Federal statutes that require release reporting: CERCLA Section 103; the Superfund Amendments and Reauthorization Act (SARA) Title III Section 304; the Clean Water Act of 1972 (CWA) Section 311(b) (3); and the Hazardous Material Transportation Act of 1974 (HMTA) Section 1808 (b).

No ERNS site was identified within the specified radius from the subject property.

State/Tribal NPL (Response)

Response sites identify confirmed release sites where the California Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

No State/Tribal NPL sites were identified within the specified radius from the subject property.

State/Tribal CERCLIS (Envirostor and Historical Cal-Sites)

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) Envirostor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL); State Response (RESPONSE), including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. Envirostor provides similar information to the information that was available in Cal-Sites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Twenty four (24) State/Tribal CERCLIS sites were identified within the specified radius from the subject property.

- The southeast adjoining property at 13767 Freeway Drive was listed on the database with a 'No Further Action' status, as of February, 2015. Based on available information, on February 21, 2014, the DTSC issued a letter requiring further action for the Former Burke Industries property based on its review of the Preliminary Endangerment Assessment Equivalent (PEAE) documents. Further action consisted of filing a Land Use Covenant (LUC) with the Los Angeles County Assessor to restrict uses of the property to commercial/industrial land use. The PEAE concluded that minor releases of hazardous substances had occurred on the Site but did not require clean up, and that those releases did not contribute significantly to regional groundwater contamination. The PEAE recommended no further action for the site. From 1966 to 1984, the property was used as a motorcycle warehouse and showroom. From 1984 to 2003 various companies operated on the site manufacturing boats, hoses, gaskets and various silicon and rubber products. Investigations of the areas of concern (AOC) included collection of soil, soil gas and groundwater samples that were analyzed for VOCs, TPH and metals. Detected concentrations of VOCs in soil and soil gas in the AOC were consistent with the chemical use history on the property. VOC and metals detections in groundwater appear have originated from an up-gradient source as they are not consistent with detections in soil and soil gas and with chemical use history. The detected concentrations of VOCs in soil gas were compared to California Human Health Screening Levels and were found to be within acceptable levels for commercial/industrial land use of the property. In the November 21, 2014 letter, DTSC concurred with the PEAE conclusions and recommendations that previous releases on the site did not contribute significantly to regional groundwater contamination and that residual chemical concentrations on the site do not present an unacceptable risk to human health under a commercial/industrial land use scenario. Based on the PEAE results, DTSC conducted an in-house human-health screening evaluation for an unrestricted land use scenario and determined that no further action for the site is necessary and the site is suitable for unrestricted land use. As with any real property, if previously unidentified contamination is discovered at the Site, additional assessment, investigation, and/or clean may be required. Due to regulatory oversight and/or respective status, the southeast adjoining property does not represent a significant environmental concern to the subject property at this time.

- A property located at 13700 Firestone Boulevard and across the Santa Ana (5) Freeway that runs along the southwest border of the subject property was listed on the database under the name LeFiell Manufacturing. Based on available information, LeFiell has been manufacturing tubular parts for the aerospace and marine industries since the late 1950s. A subsurface investigation for a portion of the site immediately adjacent to Firestone Boulevard was initiated by the California Department of Transportation (Caltrans) in 2006. During the investigation, chlorinated aliphatic hydrocarbons (CAHs), including tetrachloroethene (PCE) and trichloroethene (TCE), were detected in soil, soil vapor and groundwater. DTSC indicated that further investigation was required to determine the nature and extent of the subsurface impacts LeFiell entered into the voluntary clean-up program in May 2009 (DTSC, 2010). Currently, the DTSC is overseeing assessment of this up-gradient facility. High concentrations of chlorinated VOCs in soil and groundwater have been detected at the property. The DTSC has directed the LeFiell site to conduct additional groundwater delineation across the Freeway 5 to the northwest of LeFiell towards the former Frigid Coil site that occupied the subject property. Therefore, due to regulatory oversight and/or respective status, no further action is recommended for the subject property.

Due to regulatory oversight, current status, identification of responsible parties and/or hydraulic gradient, none of the remaining listed sites appear to represent a significant environmental concern to the subject property at this time.

SWF/LF

State/Tribal Solid Waste Landfills (SWLF) typically contains an inventory of solid waste disposal facilities or landfills in a particular State. Depending on the State, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

One SWF/LF List sites were identified within the specified radius from the subject property. However, based on the site's respective distance, the listed site does not appear to represent a significant environmental concern to the subject property at this time.

LUST and SLIC

Leaking Underground Storage Tanks (LUST) sites are a database of sites with confirmed or unconfirmed leaking underground storage tanks.

Twenty seven (27) LUST sites were identified within the specified radius from the subject property. Based on the LUST List sites' respective distance, current status, respective downgradient location, and/or identification of responsible party, none of them is anticipated to be of immediate concern at this time.

The Spills, Leaks, Investigations, and Cleanups (SLIC) database is maintained by the California Regional California Water Quality Control Board (RWQCB) to track sites where releases have been reported. SLIC sites include miscellaneous releases, not necessarily related to underground storage tanks. Often there is overlap between sites appearing on LUST and SLIC databases.

The subject property was listed on the database under the name Frigid Coil. The case is discussed and summarized in Section 4.9.

Five SLIC sites were identified within the specified radius from the subject property. Due to relative distance from the subject property, regulatory oversight, hydraulic gradient, media impacted, and/or respective status, these sites are not considered to be a significant environmental concern to the subject property.

UST (also AST, HIST UST, SWEEPS UST, and CA FID UST list)

State/Tribal Underground Storage Tanks (UST): This is a list of state registered underground storage tanks for the site area. Sites appearing on the UST list have not necessarily released hazardous substances into the environment nor do they necessarily pose environmental threat to surrounding properties. Since Federal and State UST regulations require periodic monitoring for UST leakage and immediate reporting of evidence of UST leakage, only those sites appearing on the Leaking Underground Storage Tanks (LUST) list are considered to have significant potential of environmental impact for the purposes of this Phase I.

The subject property or adjoining properties were not listed on the UST database.

SWEEPS UST: Statewide Environmental Evaluation and Planning System: This is an inactive underground storage tank database. It identifies underground storage tanks and was maintained by a contractor for the State Water Resources Control Board in the early 1980s. The listing is no longer updated or maintained.

Twelve SWEEPS UST sites were identified within the specified radius from the subject property. The adjoining properties were not listed on the database. Based on the listed sites' respective distance, current status, respective downgradient location, and/or identification of responsible party, none of the sites are anticipated to be of immediate concern at this time.

HIST UST: Historical Underground Storage Tank Registered Database: This is a listing of underground storage tanks that have been registered, but have been removed or are no longer in service. Data on the HIST UST list was supplied by the State Water Resources Control Board.

Ten HIST UST sites were identified within the specified radius from the subject property. The adjoining properties were not listed on the database. Based on the listed sites' respective distance, current status, respective downgradient location, and/or identification of responsible party, none of the sites are anticipated to be of immediate concern at this time.

CA Facility Inventory Database (CA FID): This is a list of active and inactive underground storage tank sites. The database is maintained by the California Water Resources Control Board.

Four CA FID UST sites were identified within the specified radius from the subject property. The adjoining properties were not listed on the database. Based on the listed sites' respective distance, current status, respective downgradient location, and/or identification of responsible party, none of the sites are anticipated to be of immediate concern at this time.

State VCP

The State Voluntary Cleanup Program list addresses the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Seven State VCP sites were identified within the specified radius from the subject property. The southeast adjoining property at 13767 Freeway Drive was listed on the database under the name Former Burke Industries. The property's case is discussed above.

The property at 13700 Firestone Boulevard is located approximately 980 feet to the southeast of the subject property. The property was listed under the name LeFiell Manufacturing Company and is discussed above.

Due to relative distance from the subject property, regulatory oversight, hydraulic gradient, media impacted, and/or respective status, none of the remaining sites are considered to be a significant environmental concern to the subject property.

State/Tribal Institutional Control and Engineering Control

The State/Tribal Institutional Control and Engineering Control list consists of deed-restricted sites with environmental remediation associated with engineering or institutional controls.

No State/Tribal Institutional Control and Engineering Control sites were identified within the prescribed radius of concern (subject or adjoining properties).

Local Ascertainable Records in Database

The subject property was not listed in any of the local ascertainable records.

Orphan Listings

Orphan listing consists of sites that are provided in the regulatory database; however, due to poor or inadequate address information were not mapped.

The subject property or other sites in immediate vicinity were not listed in orphan summary. Therefore, the listed sites are not expected to represent a significant environmental concern.

6.2 Proprietary Database Listings

The subject property was listed on the SLIC, RCRA-SQG, HAZNET, DEED, FINDS, Los Angeles County HMS, and WDS databases.

The SLIC, DEED and RCRA-SQG database listings are discussed in Sections 4.9 and 6.1.

HAZNET database listing: the subject property was listed on the database under the name Frigid Oil between 1993 and 2007. The following types of waste were generated and disposed by the subject property occupant: various amounts of off-specification, aged or surplus organics, liquids with halogenated compounds, other organic solids, waste oil and mixed oil, unspecified aqueous solution, aqueous solution with total organic residues less than 10 percent, liquids with pH <= 2, unspecified solvent mixture, oil/water separation sludge, laboratory waste chemicals, and/or and alkaline solution with metals. The subject property was also listed on the database under the name Martinez Trucking Inc. in 2011 and 2012. Based on available records, the current subject property occupant disposed of 0.4 tons of other organic solids and 0.2293 tons of unspecified oil-containing waste in 2011; and 0.2 tons of unknown waste in 2012.

Los Angeles County HMS: the subject property is listed on the database with a case-closed status. The former case is discussed in Section 4.9.

WDS: the subject property was listed on the database with an active status. Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements is included on the database.

6.3 Vapor Encroachment Condition

ASTM E2600-10 Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions was used as guidance for conducting a VES for the subject property. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern (COC*)* that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the subject property. Current or past uses such as gas stations (using petroleum hydrocarbons), dry cleaning establishments (using chlorinated volatile organic compounds), former manufactured gas plant sites (using volatile and semi-volatile organic compounds), and former industrial sites such as those that had vapor degreasing or other parts-cleaning operations (using chlorinated volatile organic compounds) are of particular concern. COC vapors are capable of migrating great distances omni-directionally along subsurface conduits such as utility lines, pipelines, sewer and storm water lines, and building fountains, which may represent a potential VEC in connection with the subject property. There are two levels of screening for VECs:

Tier 1 Vapor Encroachment Screen

Tier 1 screening is an investigation of known or suspected contaminated properties within a given radius, government records, investigation, historical research, etc. The research radius varies based on the COC at the contaminated site due to chemicals having different migration properties. For sites with petroleum hydrocarbon COC, the search distance is 528 feet (1/10 mile). For contaminated sites with non-petroleum hydrocarbon (other volatile compounds) COC, the search radius is 1,760 feet (1/3 mile) from the contaminated site to the boundary of the subject property.

Tier 2 Vapor Encroachment Screen

Tier 2 focuses on the contaminated plumes from any contaminated sites in AOC and their proximity to the subject property. If Tier 1 indicates a VEC exists, is likely to exist, or cannot be ruled out, the client and the environmental professional must decide if further investigation, such as proceeding to Tier 2, is warranted. Tier 2 screening under E 2600-10 consists of either a noninvasive or an invasive investigation, depending upon the availability of contaminated plume data associated with the contaminated site creating the VEC identified in Tier 1.

A total of three sites were identified in the Radius Map Report and historical research within the "Area of Concern" that were considered to pose a potential VEC at the subject property based on the Tier 1 Evaluation. Tier 1 sites are:

- **Subject Property** - The subject property was the subject of multiple environmental investigations conducted between 2006 and 2012. Total Petroleum Hydrocarbons (TPH) were detected in shallow soils at the site. However, step-out sampling indicated that presence of TPH was limited in area and depth (within the first 5 feet below ground surface (bgs). Maximum detected concentrations are discussed in Section 4.9. These detections were limited in areal extent and there was no track to groundwater, in addition the concentration of risk driver compounds such as volatile organic compounds (VOCs) in co-located soil gas and soil samples was negligible. VOCs were investigated across the subject property using soil and soil gas sampling. Selected sampling locations targeted potential sources of contamination and were distributed across the subject property both inside and outside the building. VOC concentrations were mostly not detected in soil samples. When detected in soil, VOCs were present at trace level concentrations below screening levels for the protection of human health and groundwater. The levels of VOCs detected in soil did not indicate any major source of contamination at the subject property. Detected VOCs and their corresponding highest concentrations are discussed in Section 4.9. VOC concentrations in soil vapor samples were mostly not detected. When detected, VOCs concentrations were equal or lower than 1 microgram per liter (µg/L). Soil gas samples were collected beneath the slab and every five feet to 15 feet bgs (groundwater occurs at 20 feet bgs). Detected VOCs and their corresponding highest concentration are discussed in Section 4.9. Only one soil vapor sample detected tetrachloroethylene at a concentration that exceeded its corresponding California Human Health Screening Level (CHHSL) for commercial/industrial use of 0.6 µg/L. Area weighted average concentrations were calculated for each analyte detected in sub-slab vapor samples. The soil vapor results were compared to commercial CHHSLs. None of the chemicals detected has area weighted average concentrations that exceeded their respective soil vapor CHHSL concentrations. On January 27, the Regional Water Quality Control Board (RWQCB), Los Angeles Region, issued an NFA Determination for soil and groundwater (for commercial /industrial use) for the subject property. Based on the forgoing, a VEC can be ruled out at the subject property.

- **Former Burke Industries (13767 Freeway Drive)** - The southeast adjoining property was listed on the VCP and Envirostor databases with a 'No Further Action' status, as of February 2015. Based on available information, on February 21, 2014, the DTSC issued a letter requiring further action for the Former Burke Industries property based on its review of the Preliminary Endangerment Assessment Equivalent (PEAE) documents. Further action consisted of filing a Land Use Covenant (LUC) with the Los Angeles County Assessor to restrict uses of the property to commercial/industrial land use. The PEAE concluded that minor releases of hazardous substances had occurred on the Site but did not require clean up, and that those releases did not contribute significantly to regional groundwater contamination. The PEAE recommended no further action for the site. From 1966 to 1984, the property was used as a motorcycle warehouse and showroom. From 1984 to 2003 various companies operated on the site manufacturing boats, hoses, gaskets and various silicon and rubber products. Investigations of the areas of concern (AOC) included collection of soil, soil gas and groundwater samples that were analyzed for VOCs, TPH and metals. Detected concentrations of VOCs in soil and soil gas in the AOC were consistent with the chemical use history on the property. VOC and metals detections in groundwater appear have originated from an up-gradient source as they are not consistent with detections in soil and soil gas and with chemical use history. The detected concentrations of VOCs in soil gas were compared to California Human Health Screening Levels and were found to be within acceptable levels for commercial/industrial land use of the property. In the November 21, 2014 letter, DTSC concurred with the PEAE conclusions and recommendations that previous releases on the site did not contribute significantly to regional groundwater contamination and that residual chemical concentrations on the site do not present an unacceptable risk to human health under a commercial/industrial land use scenario. Based on the PEAE results, DTSC conducted an in-house human-health screening evaluation for an unrestricted land use scenario and determined that no further action for the site is necessary and the site is suitable for unrestricted land use. As with any real property, if previously unidentified contamination is discovered at the site, additional assessment, investigation, and/or clean may be required. Based on the foregoing, and upon previous subsurface investigations conducted at the subject property, including soil gas surveys, a VEC can be ruled out from this site. This site is discussed further in Section 6.1.

- **LeFiell Manufacturing Company (13700 Firestone Boulevard)** – the property located approximately 980 feet to the southeast of the subject property, in an up-gradient location, is listed on the various databases, including Envirostor. Currently, the DTSC is overseeing assessment of an up-gradient facility (LeFiell Manufacturing Company), located to the south/southwest across the Freeway 5 from the subject property. High concentrations of chlorinated VOCs in soil and groundwater have been detected at the property. The DTSC has directed the LeFiell site to conduct additional groundwater delineation across the Freeway 5 to the northwest of LeFiell towards the former Frigid Coil site. Based upon previous subsurface investigations conducted at the subject property, including soil gas surveys, a VEC can be ruled out from this site. This site is discussed further in Section 6.1.

6.4 Agency Records

The following state and local agencies were contacted in reference to the subject property:

- Department of Toxic Substances Control/ Envirostor

FR researched the Department of Toxic Substances Control (DTSC) online database on September 23, 2015 for the subject property. These records may contain evidence indicating current and/or historical hazardous materials usage, storage or releases. No records regarding a release or the presence of activity and use limitations on the subject property were on file with the DTSC.

- Los Angeles Regional Water Quality Control Board

FR researched the Regional Water Quality Control Board (RWQCB) online database on September 23, 2015 for information regarding any releases to the subsurface, which may have impacted or threatened a body of water.

The subject property was listed on the database under the name Frigid Coil. The case is discussed in Section 4.9.

- Santa Fe Springs Fire Rescue (SFSFR)

FR visited the City of Santa Fe Springs Fire Rescue Department on September 23, 2015, and researched records for the subject property. A summary of records of file with the SFSFR is listed below.

Years	Property Occupant	Description
1970	Philip Carey Corporation	Permit to store LPG tank
2007	N/A	Termination of Fire Department CUPA permit – business relocation; Safety Kleen conducted a clean-up of three stage clarifier, on the east exterior portion of the subject property. The clarifier was

Years	Property Occupant	Description
		pumped out by Safety Kleen. The electrical equipment was removed back to the power source. The remaining cavity was filled with concrete, leveled, and finished to the existing grade and flow line.
2010	Martinez Trucking & Logistics, Frigid Coil	Hazardous Waste Generator manifests
2010	Martinez Trucking & Logistics	Hazardous Materials Business Plan
2010	Martinez Trucking & Logistics	Inspection Report – unpermitted two aboveground storage tanks (diesel) and generating of hazardous materials without permit
2010	Martinez Trucking & Logistics	Removal of aboveground diesel storage tanks
2012	Johnson Controls, Inc.	No Further Action Letter for former operation (see Section 4.9)
2012	Johnson Controls, Inc.	Letter of Covenant and Environmental Restriction on Property (see Section 5.2.1)
2014	Martinez Trucking & Logistics	Inspection Report- no violations

- South Coast Air Quality Management District (SCAMD)

FR researched the South Coast Air Quality Management District (SCAQMD) online database on September 23, 2015, for information regarding any Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) records for the subject property related to air emission equipment, which may include dry cleaning machines and USTs.

The subject property former occupant Frigid Oil Frick Inc. was listed on the database with an active status. However, no PTOs, NOVs or NTCs or the presence of activity and use limitations were on file with the SCAQMD for the former subject property address.

- The California Division of Oil, Gas and Geothermal Resources (DOGGR)

FR researched the DOGGR online database on September 23, 2015. The DOGGR maps contain information regarding oil and gas development. According to the DOGGR Well Finder system, there are no oil or gas wells on the subject property.

7.0 Conclusion and Recommendations

FR has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at **13711 Freeway Drive, Santa Fe Springs, California 90670**. This assessment has revealed no evidence of recognized environmental conditions (RECs) and/or environmental issues in connection with the subject property. FR recommends no further investigations for the subject property at this time.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Fulcrum Resources Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

To Whom It May Concern:

Subject: 13711 Freeway Drive, Santa Fe Springs, California 90670

The subject property, located at 13711 Freeway Drive, is zoned M-2-FOZ, Heavy Manufacturing-Freeway Overlay Zone. Pursuant to Section 155.377(F) (3) of the City's Municipal Code, "commercial sales and service incidental to a principal permitted use" is allowed as an Accessory use.

A 20,500 sq ft area of the 82,000 sq ft building is proposed for incidental commercial sales. This "Accessory use" would be allowed if the required off-street parking can be provided. Please be advised the parking calculation for commercial use is one parking space for each 250 square foot of building area. The parking calculation for industrial is one parking space for each 500 square feet of gross floor area up to 20,000 square feet; thereafter, one space for each 750 square feet of gross floor area over 20,000 square feet, plus one parking space for each vehicle used in connection with the use. Incidental office area exceeding 15% of the gross building area require one parking space for each 300 square feet of floor area.

If you have any questions or need further clarification, please call (562) 868-0511, extension 7362 or e-mail [illegible]

Sincerely,

Wayne M. Morrell

Notes:

No changes in operation since last CUPA inspection. Waste oil tank (1,000 gallons) located outside and along north wall of the building was covered with a tarp to prevent rainwater from entering the secondary containment. There is no labeling on the tarp so Mr. Martinez will have tarp removed. He may also stencil the wall to identify the tank as a "Waste Oil" tank. Hazardous waste is primarily removed under a consolidated manifest; however, non-RCRA solids (i.e. rags and absorbent) are removed under a uniform manifest. A fueling contractor fills trucks on-site.

Noted that the 5-yr testing label on the 2 of the 3 sprinkler risers were out of date; however, Mr. Martinez produced a document showing the riser certification for all three was completed recently. Contact will ensure risers are properly labeled.

Last fire prevention inspection conducted September, 2012 by Christa King.

COPY

X **No hazardous waste violation(s) observed on date of inspection**

☐ **Notice to Comply: The violation(s) must be corrected by** ________

☐ **Return attached "Certificate of Compliance"**

Attention: The item(s) checked is (are) in violation. All violations must be corrected. A re-inspection may occur at any time to verify compliance. Non-compliance could result in re-inspection fees, permit revocation, and/or administrative/civil/criminal penalties. Any time granted for correction of the violation(s) does not pre[illegible] any enforcement action by this Department or other agencies. The giving of this notice and recent inspection of your facility is not a representation by the City of Santa Fe Springs that no other violations exist on your premises.

CERTIFICATION OF COMPLIANCE

Page ___ of ___

BUSINESS Martinez Trucking	SITE ADDRESS 13711 Freeway Drive
INSPECTOR Hall	DATE OF INSPECTION 9/27/10

This form must be completed and returned to the issuing inspector within 30 days of your facility's inspection unless otherwise noted. Send this form and any supporting documentation to the address listed above. Failure to return this certification may result in a re-inspection of your facility and may require re-inspection fees pursuant to City of Santa Fe Springs Municipal Code Section 97.104.

The violation(s) cited have been corrected by the following actions:

- EPA number obtained 07/19/2010, copy enclosed.
- Diesel tanks are being removed, request made to General Petroleum, no diesel being dispensed
- Application has been sent for GIASW permit
- ~~Permit for oil waste requested~~ Working with fire prevention to obtain permits

Diesel tanks expected to be removed from premises by 11/6/2010

Tank has been removed.
Tank 10/2011

- I certify that the violations cited on the Notice of Violation & Inspection Report have been corrected.
- I have personally examined any attached documentation submitted as proof of compliance and I believe the information to be true and accurate.
- I am aware that there are significant penalties for submitting false information and/or for non-compliance and declare that the foregoing certification is true and correct.

Notes:

Fire Department new business inspection. Company warehouse and distributes steel tubes and coils. Statement of Intended Use (SIU) claims no hazardous material or hazardous waste on-site other than LPG for forklifts. The SIU also claims no material stored outdoors and no vehicle maintenance conducted on-site. During the inspection Mr. Martinez stated that their will be outdoor storage and some vehicle maintenance conducted on-site. Also observed previously undisclosed hazardous materials stored on-site including waste oil, antifreeze, welding gases, part-cleaning solvent, and diesel fuel. Vehicle maintenance is conducted in the back of the warehouse building.

VIOLATIONS NOTED:

1. Two aboveground diesel tanks (approximately 5,000 and 500 gallons) have been installed without approved plans from the Fire Department as required in Section 3401.4 of the California Fire Code (CFC). Plans must also be approved by the City Planning and Building Department.

2. Motor vehicle dispensing operations are not allowed without obtaining a permit from the Fire Department per CFC, Section 2201.2. Dispensing operations are prohibited until a permit is obtained.

☐ **No hazardous waste violation(s) observed on date of inspection**

☒ **Notice to Comply: The violation(s) must be corrected by** 10/28/10 *   * Discontinue dispensing Diesel Fuel immediately

☒ **Return attached "Certificate of Compliance"**

Attention: The item(s) checked is (are) in violation. All violations must be corrected. A re-inspection may occur at any time to verify compliance. Non-compliance could result in re-inspection fees, permit revocation, and/or administrative/civil/criminal penalties. Any time granted for correction of the violation(s) does not preclude any enforcement action by this Department or other agencies. The giving of this notice and recent inspection of your facility is not a representation by the City of Santa Fe Springs that no other violations exist on your premises.

INSPECTION REPORT & NOTICE OF VIOLATION

Business name Martinez Trucking & Logistics, Inc

Address 13711 Freeway Drive

Santa Fe Springs, CA 90670

The following items, if applicable, have been inspected. This document constitutes a Summary of Violations and Notice to Comply if the violation (V) column is checked. Reference: Titles 19, 22, and 23 of the California Code of Regulations (CCR), Chapters 6.5, 6.67, 6.95 of the Health and Safety Code (HSC), The California Fire Code and Chapter 97 of the City Code.

Notes:

3. An operational permit is required for the 1,000 gallon waste oil tank, even if it will be temporarily out of service (more than 90 days) per CFC, Section 105.6.16. If the waste oil tank is going to be removed, provide information on the removal date and destination.

4. A hazardous materials business plan is required. The chemical inventory must include compressed gases (welding gases and LPG if more than 199 cubic feet stored), anti-freeze, diesel, parts-cleaner solvent, new oil and used oil if they will remain on-site. This is required per California Health & Safety Code (HSC), Section 25503.5.

5. A General Industrial Activities Storm Water (GIASW) permit is required from your facility per City Code, Chapter 52. The GIASW must be obtained from the State Water Resources Control Board.

6. Waste oil was removed from the 1,000 gallon tank on Sept. 21, 2010; however, there is no active EPA Identification number for this site in violation of California Code of Regulations (CCR), section 66262.12(a). If hazardous waste will continue to be generated on-site, Martinez Trucking will need to obtain a hazardous waste generator permit from the Fire Department (City Code, 97.400) and obtain an EPA ID number from the State.

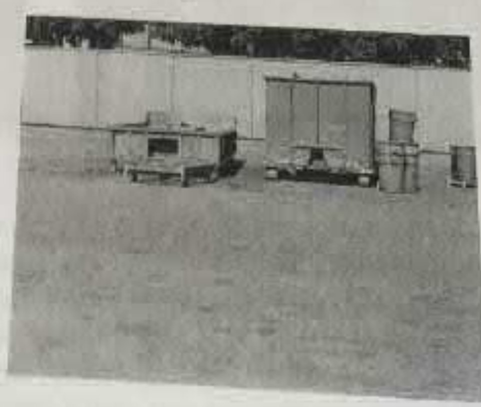
Reference: Termination of Fire Department CUPA permit, facility ID #600012.

Per our conversation, this letter is in regards to the termination and final disposition of the following programs located at York International – Frigid Coil, 13711 Freeway Drive, Santa Fe Springs, CA 90670…

- Hazardous Materials Business Plan
- Hazardous Waste Generator
- Industrial Waste Permit
- Rain Water Diversion System

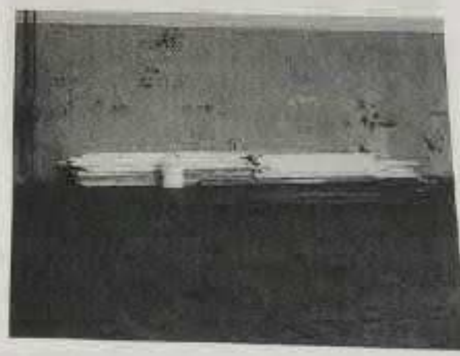
During this past month of July and as part of our plans to relocated the product lines to Dixon, IL, an extensive clean up was performed throughout the manufacturing facility as well as the office space, parking lot, green belt, and railroad slip. Raw materials, parts inventory, equipment, and machinery were moved to other Johnson Controls, Inc. manufacturing locations throughout the United States and Mexico. The plant was successfully turned over to the landlord on Tuesday, July 31st, 2007, *The Gilbert Foundation*, Shel Katzer (310) 449-4500.

A large array of supplier provided roll-offs were used to sort material into trash, wood, steel, concrete, aluminum, copper, steel, and stainless steel. They were removed from our site and returned to their respective recycling centers for disposition.



Hazardous Materials Business Plan: Our supplier, *Chem Arrow*, located 13643 Line Oak Lane, Irwindale, CA 91706, Al Spalding Jr. (626) 358-2255, arrived on July 24th, 2007, and removed the remaining bulk totes for pressure washer soap, and fin press oil, shipper #136646, (see attachments).

The abandoned fluorescent lighting system was removed from the ceiling, and the straight tube lamps were packaged into nine recycle kits and sent to *Mercury Disposal System*, (800) 514-3896 via FEDEX, *MDS* serial numbers 156447, 158108, 158854, 158873, 159405, 165531, 165537, 165538, 165693 (see example attachment).



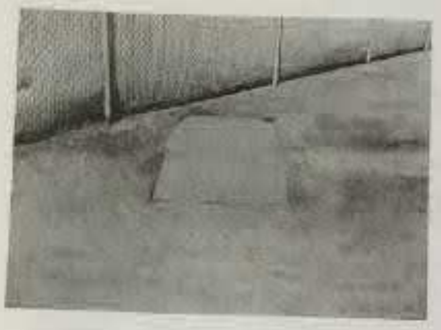
Hazardous Waste Generator: On the day of your visit, you observed our efforts to accumulate all of the remaining hazardous waste in one location. Our supplier, *Safety-Kleen*, located 10625 Hickson Street, unit #A, El Monte, CA 91731, Gloria Briceno (626) 625-23923, had already sorted the waste by category. They took samples and developed the correct paperwork for their return trip. The waste was packaged, sealed, removed, and legally disposed of by Safety-Kleen, (see example attachments).

In preparing the floor for the sweeper and scrubber, several equipment pits had to be cleaned and filled with cement. Equipment mounting studs were cut off and ground flush with the floor.

In addition, we rented an industrial grade sweeper and high-end scrubber. This equipment was used in the parking lot, the yard, and the shop floor. The interior manufacturing space was swept twice and the use of a magnet was employed. Then we used the scrubber three separate times to remove as much foreign material as possible. The finished floors turned out very well. We also made arrangements to have the floor scrubber waste collected into 55-gallon drums, sealed, and hauled away by Safety-Kleen on the last day of our cleanup, (see example attachments).

Industrial Waste Permit: Safety-Kleen pumped clean the three-stage clarifier out back of the plant along side the railroad slip, (see sample attachments). We had the railroad slip cleared of all growth and trash to fully expose the clarifier as well as reduce the risk of brush fire.

Rain Water Diversion System: The clarifier was pumped out by Safety-Kleen. The electrical equipment was removed back to the power source. The remaining cavity was filled with concrete, leveled, and finished to the existing grade and flow line.



The liquefied petroleum gas (propane) tank located in the yard, off in the distance below, is covered by permit issued by the Sate of California, serial #L008545-86, N.B. #130157. Arrangements have been made between our supplier, Ferrellgas Company / Jennifer (909) 823-0675 and the landlord, to have their tank removed by the end of the day, Friday, August 10th, 2007.

Please note my old contact information has been changed to my new location.

SANTA FE SPRINGS WATER UTILITY AUTHORITY

Annual Water Quality Report 2019

CONSUMER CONFIDENCE REPORT

This report is a snapshot of the tap water quality that we provided last year. Included are details about where your water comes from, how it is tested, what is in it, and how it compares with state and federal limits. We strive to keep you informed about the quality of your water, and to provide a reliable and economical supply that meets all regulatory requirements.

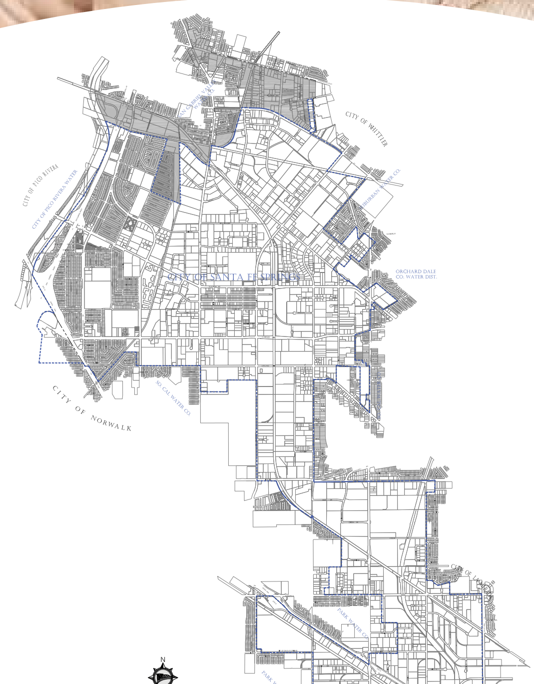
Where Does My Tap Water Come From?

Santa Fe Springs Water Authority (SFSWA) tap water comes from 2 sources: groundwater and surface water.

Last year, SFSWA obtained treated and disinfected groundwater through the City of Whittier from four (4) active deep wells located in the Whittier Narrows area, which is blended with treated groundwater from the Central Basin Water Quality Protection Program facility located in the Central Basin.

We also receive Metropolitan Water District of Southern California's (MWD) filtered and disinfected surface water, which is a blend of water from both the Colorado River and the State Water Project in Northern California.

These water sources supply our service area shown on the adjacent map. The quality of our treated groundwater and MWD's treated surface water supplies is presented in this report.



CITY OF SANTA FE SPRINGS WATER SERVICE AREA

PWS ID# 1910245

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 to December 31, 2019 and may include earlier monitoring data.

Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse City of Santa Fe Springs a (562) 868-0511 para asistirlo en español.

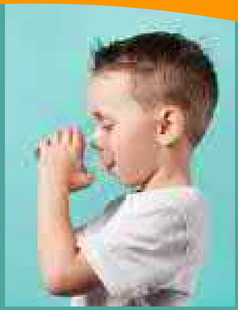
这份报告含有关于您的饮用水的重要讯息。请用以下地址和电话联系 City of Santa Fe Springs 以获得中文的帮助 11710 East Telegraph Road, Santa Fe Springs, (562) 868-0511

How is My Drinking Water Tested?

Your drinking water is tested by State Water Resources Control Board, Division of Drinking Water (DDW) certified water system operators and laboratories to ensure its safety. SFSWA drinking water from wells, treatment facilities, and distribution system pipes is routinely tested for bacterial, radiological and chemical constituents. The chart in this report shows the average and range of concentrations of the constituents tested in your drinking water during year 2019 or from the most recent tests. DDW allows some constituents to be tested less than once per year because the concentrations of these constituents do not change frequently. Some of our data, although representative, are more than one year old. The chart lists all the constituents detected in your drinking water regulated by federal and state drinking water standards. Unregulated constituents of concern which are detected and which require monitoring are also included. We are proud to report that during 2019, the drinking water provided by SFSWA to your home met or surpassed all federal and state drinking water standards. We remain dedicated to providing you with a reliable supply of high quality drinking water.

Should I Take Additional Precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. The USEPA/Centers for Disease Control guidelines on appropriate means to lessen the risk of infection of Cryptosporidium and other microbial contaminants are available from the USEPA's Safe Drinking Water Hotline (1-800-426-4791).



Coliform Bacteria

This report reflects changes in drinking water regulatory requirements during 2016. All water systems are required to comply with the state Total Coliform Rule. Effective April 1, 2016, all water systems are also required to comply with the federal Revised Total Coliform Rule. The new federal rule maintains the purpose to protect public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of microbials (i.e., total coliform and E. coli bacteria). The USEPA anticipates greater public health protection as the new rule requires water systems that are vulnerable to microbial contamination to identify and fix problems. Water systems that exceed a specified frequency of total coliform occurrences are required to conduct an assessment to determine if any sanitary defects exist. If found, these must be corrected by the water system.

Lead in Tap Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. SFSWA is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the USEPA Safe Drinking Water Hotline or at: https://www.epa.gov/lead.

Source Water Assessment

Every five years, MWD is required by DDW to examine possible sources of drinking water contamination in its State Water Project and Colorado River source waters. The most recent watershed sanitary surveys of MWD's source water supplies from the Colorado River was updated in 2015 and the State Water Project was updated in 2016. Water from the Colorado River is considered to be most vulnerable to contamination from recreation, urban/stormwater runoff, increasing urbanization in the watershed, and wastewater. Water supplies from Northern California's State Water Project are most vulnerable to contamination from urban/stormwater runoff, wildlife, agriculture, recreation, and wastewater. USEPA also requires MWD to complete one Source Water Assessment (SWA) that utilizes information collected in the watershed sanitary surveys. MWD completed its SWA in December 2002. The SWA is used to evaluate the vulnerability of water sources to contamination and helps determine whether more protective measures are needed. A copy of the most recent summary of either Watershed Sanitary Survey or the SWA can be obtained by calling MWD at (800) CALL-MWD.

An assessment of the drinking water sources for the City of Whittier was completed in December 2002. The assessment concluded that the City of Whittier's sources are considered vulnerable to the following activities or facilities associated with contaminants detected in the water supply: research laboratory, known volatile organic chemical contamination plumes, and parking lots/mall. In addition, the sources are considered most vulnerable to the following activities or facilities not associated with contaminants detected in the water supply: research laboratories and parks. A copy of the complete assessment is available at the City of Whittier Water Division at 13230 East Penn Street, Whittier, California 90602. You may request a summary of the assessment to be sent to you by contacting the City of Whittier Customer Service Department at (562) 567-9530.

How Can I Participate in Decisions On Water Issues That Affect Me?

The public is welcome to attend City Council meetings on the second and fourth Thursday of each month at 6 p.m. at City Hall, 11710 East Telegraph Road, Santa Fe Springs.

How Do I Contact My Water Agency If I Have Any Questions About Water Quality?

If you have specific questions about your tap water quality, please contact Noe Negrete, (562) 868-0511.

Este informe contiene información muy importante sobre su agua potable. Para mas información ó traducción, favor de contactar a Noe Negrete, al (562) 868-0511.

此份有關你的食水報告,內有重要資料和訊息,請找他人為你翻譯及解釋清楚。

CITY OF SANTA FE SPRINGS WATER AUTHORITY 2019 ANNUAL WATER QUALITY REPORT

How Do I Read the Water Quality Table?

The first column of the water quality table lists substances detected in your water. The next columns list the average concentration and range of concentrations found in your drinking water. Following are columns that list the MCL and PHG or MCLG, as appropriate. The last column describes the likely sources of these substances in drinking water.

To review the quality of your drinking water, compare the highest concentration and the MCL. Check for substances greater than the MCL. Exceedance of a primary MCL does not usually constitute an immediate health threat. Rather, it requires testing the source water more frequently for a short duration. If test results show that the water continues to exceed the MCL, the water must be treated to remove the substance, or the source must be removed from service.

Results are from the most recent testing performed in accordance with State and Federal drinking water regulations

PRIMARY STANDARDS MONITORED AT THE SOURCE - MANDATED FOR PUBLIC HEALTH							
CONSTITUENTS AND UNITS	SFSWA GROUNDWATER		MWD SURFACE WATER		MCL	PHG OR (MCLG)	SOURCES IN DRINKING WATER
	AVERAGE	RANGE	AVERAGE	RANGE			
ORGANIC CHEMICALS Tested in 2019							
Tetrachloroethylene (µg/l)	<0.5	ND - 3.1	ND	ND	5	0.06	Degreasing sites and other industries
Toluene (µg/l)	ND	ND	0.6	0.6	150	150	Petroleum and chemical refineries
Trichloroethylene (µg/l)	<0.5	ND - 0.56	ND	ND	5	1.7	Degreasing sites and other industries
INORGANIC CHEMICALS Tested in 2019							
Aluminum (mg/l)	ND	ND	0.12	ND - 0.11	1	0.6	Residue from water treatment processes
Bromate (mg/l)	NR	NR	1.9	ND - 8.1	10	0.1	Byproduct of drinking water disinfection
Fluoride (mg/l) Naturally-occuring	0.22	0.17 - 0.28	NR	NR	2	1	Erosion of natural deposits
Fluoride (mg/l) Treatment-related	NR	NR	0.7	0.6 - 0.9	2	1	Water additive for dental health
Nitrate (mg/l as N)	2.7	1.6 - 3.7	0.5	0.5	10	10	Runoff and Leaching from fertilizer/ septic tanks/sewage
RADIOLOGICALS Tested in 2017 to 2019							
Gross Alpha (pCi/l)	<3	ND - 11.4	ND	ND	15	(0)	Erosion of natural deposits
Uranium (pCi/l)	1.7	1.2 - 2.3	ND	ND	20	0.43	Erosion of natural deposits

PRIMARY STANDARDS MONITORED IN THE DISTRIBUTION SYSTEM - MANDATED FOR PUBLIC HEALTH					
DISINFECTION BY-PRODUCTS (a)	AVERAGE	RANGE	MCL	MCLG	SOURCES IN DRINKING WATER
Trihalomethanes (µg/l) Tested quarterly	32	17 - 59	80	-	Byproduct of drinking water disinfection
Haloacetic Acids (µg/l) Tested quarterly	8.3	2.1 - 17	60	-	Byproduct of drinking water disinfection
Total Chlorine Residual (mg/l) Tested weekly	1.4	0.17 - 2.3	4.0 (b)	4.0 (c)	Disinfectant added for treatment
MICROBIOLOGICAL					
Total Coliform Tested weekly	1.9%	-	5.0%	(0)	Naturally Present in the Environment
AT-THE-TAP LEAD AND COPPER Tested in 2019	90th PERCENTILE	# OF SITES ABOVE THE ACTION LEVEL	ACTION LEVEL	PHG	SOURCES IN DRINKING WATER
Copper (mg/l)	0.36 (d)	0 out of 30 sites	1.3	0.3	Internal corrosion of household plumbing
Lead (µg/l)	ND (d)	1 out of 30 sites	15	0.2	Internal corrosion of household plumbing

SECONDARY STANDARDS MONITORED AT THE SOURCE - FOR AESTHETIC PURPOSES							
INORGANIC CHEMICALS AND UNITS	SFSWA GROUNDWATER		MWD SURFACE WATER		MCL	PHG	SOURCES IN DRINKING WATER
Tested in 2018 and 2019	AVERAGE	RANGE	AVERAGE	RANGE			
Aluminum (µg/l) (e)	ND	ND	120	ND - 110	200	600	Surface water treatment process residue
Chloride (mg/l)	100	91 - 120	50	46 - 55	500	-	Runoff/leaching from natural deposits
Color (color units)	ND	ND	<1	ND - 1	15	-	Naturally-occurring organic materials
Conductivity (umhos/cm)	930	850 - 990	470	440 - 500	1,600	-	Substances that form ions when in water
Iron (µg/l)	ND	ND	240	240	300	-	Runoff/leaching from natural deposits
Manganese (µg/l)	<20	ND - 23	ND	ND	50	-	Runoff/leaching from natural deposits
Odor (threshold odor number)	1.2	1 - 2	1	1	3	-	Naturally-occurring organic materials
Sulfate (mg/l)	120	100 - 140	73	65 - 81	500	-	Runoff/leaching from natural deposits
Total Dissolved Solids (mg/l)	510	470 - 570	270	240 - 290	1,000	-	Runoff/leaching from natural deposits

SECONDARY STANDARDS MONITORED IN THE DISTRIBUTION SYSTEM - FOR AESTHETIC PURPOSES					
GENERAL PHYSICAL CONSTITUENTS	AVERAGE	RANGE	MCL	PHG	SOURCES IN DRINKING WATER
Color (color units)	ND	ND	15	-	Naturally-occurring organic materials
Odor (threshold odor number)	1	1 - 3	3	-	Naturally-occurring organic materials
Turbidity (NTU) Tested monthly	<0.1	ND - 0.6	5	-	Runoff/leaching from natural deposits

Why Do I See So Much Coverage in the News About the Quality Of Tap Water and Bottled Water?

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791). You can also get more information on tap water by logging on to these helpful web sites: https://www.epa.gov/ground-water-and-drinking-water (USEPA web site) or http://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/publicwatersystems.shtml (DDW web site).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, including viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming;
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses;
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gasoline stations, urban stormwater runoff, agricultural application, and septic systems;
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

What Are Water Quality Standards?

In order to ensure that tap water is safe to drink, the USEPA and the DDW prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that must provide the same protection for public health.

The chart in this report shows the following types of water quality standards:

UNREGULATED CHEMICALS REQUIRING MONITORING AT THE ENTRY POINTS TO THE DISTRIBUTION SYSTEM						
CONSTITUENTS AND UNITS	SFSWA GROUNDWATER		MWD SURFACE WATER		SMCL	PHG OR (MCLG)
Tested in 2019	AVERAGE	RANGE	AVERAGE	RANGE		
Manganese (µg/l) (f)	0.89	0.67 - 1.1	3.5	2.6 - 4.9	50	-

UNREGULATED CHEMICALS REQUIRING MONITORING IN THE DISTRIBUTION SYSTEM				
CONSTITUENTS AND UNITS Tested in 2019	AVERAGE	RANGE	NL	PHG OR (MCLG)
Haloacetic acids (HAA5) (µg/l)	9	5.1 - 26	-	-
Haloacetic acids (HAA6Br) (µg/l)	9	4.9 - 26	-	-
Haloacetic acids (HAA9) (µg/l)	16	9.1 - 46	-	-

ADDITIONAL UNREGULATED CHEMICALS OF INTEREST							
CONSTITUENTS AND UNITS	SFSWA GROUNDWATER		MWD SURFACE WATER		MCL	PHG	SOURCES IN DRINKING WATER
Tested in 2018 and 2019	AVERAGE	RANGE	AVERAGE	RANGE			
Alkalinity (mg/l as CaCO3)	170	150 - 180	68	67 - 70	-	-	Runoff/leaching from natural deposits
Calcium (mg/l)	84	75 - 91	25	23 - 27	-	-	Runoff/leaching from natural deposits
Magnesium (mg/l)	16	13 - 17	12	11 - 12	-	-	Runoff/leaching from natural deposits
Perfluorobutanesulfonic Acid (ng/l)	4.4	ND - 9.3	ND	ND			Various industrial processes
Perfluoroheptanoic Acid (ng/l)	0.9	ND - 3.7	ND	ND			Various industrial processes
Perfluorohexane Sulfonic Acid (ng/l)	1.5	ND - 4.3	ND	ND			Various industrial processes
Perfluorohexanoic Acid (ng/l)	2.2	ND - 8.9	2.6	2.5 - 2.6			Various industrial processes
Perfluorononanoic Acid (ng/l)	0.88	ND - 2.4	ND	ND			Various industrial processes
Perfluorooctanesulfonic Acid (ng/l)	22	13 - 29	ND	ND	NL = 6.5		Various industrial processes
Perfluorooctanoic Acid (ng/l)	7.4	ND - 13	ND	ND	NL = 5.1		Various industrial processes
pH (standard unit)	7.7	7.3 - 7.9	8.5	8.5	-	-	Runoff/leaching from natural deposits
Sodium (mg/l)	74	64 - 87	50	46 - 54	-	-	Runoff/leaching from natural deposits
Total Hardness (mg/l as CaCO3)	270	250 - 290	110	100 - 120	-	-	Runoff/leaching from natural deposits

METROPOLITAN WATER DISTRICT SURFACE WATER FILTRATION TREATMENT (WEYMOUTH PLANT)				
Turbidity Combined Filter Effluent Treatment Technique (TT) tested continuously	TT	Turbidity Measurements	TT Violation?	Typical Source
1) Highest single turbidity measurement	0.3 NTU	0.04	No	Runoff
2) Percentage of samples less than 0.3 NTU	95%	100%	No	Runoff

Turbidity is a measure of the cloudiness of the water, an indication of particulate matter, some of which might include harmful microorganisms. Low turbidity in Metropolitan's treated water is a good indicator of effective filtration. Filtration is called a "treatment technique." A treatment technique is a required process intended to reduce the level of contaminants in drinking water that are difficult and sometimes impossible to measure directly.

MONITORING REQUIREMENTS NOT MET

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During 2019, we did not complete all monitoring for lead and copper within the June 1 to September 30, 2019 monitoring period and therefore, cannot be sure of the quality of your drinking water during that time. We did not collect three of the required 30 lead and copper samples during the June to September 2019 monitoring period; three of the required lead and copper samples were collected in October 2019. The collected samples show we are meeting drinking water standards. We are required to collect the next round of lead and copper tap samples during the months of June, July, August, or September in 2020.

FOOTNOTES

(a) Running annual average used to calculate MCL compliance
(b) Maximum Residual Disinfectant Level (MRDL)
(c) Maximum Residual Disinfectant Level Goal (MRDLG)
(d) 90th percentile from the most recent sampling. During 2019, three schools submitted a request to be sampled for lead.
(e) Aluminum has primary and secondary standards
(f) Manganese was included as the unregulated chemicals requiring monitoring.

µg/l = microgram per liter or parts-per-billion
mg/l = milligram per liter or parts-per-million
ng/l = nanogram per liter or parts-per-trillion
pCi/L = picoCuries per liter
NTU = nephelometric turbidity units
µmho/cm = micromhos per centimeter
ND = not detected
MCL = Maximum Contaminant Level
(MCLG) = Federal MCL Goal
PHG = California Public Health Goal
NR = not required to be tested
TT = treatment technique
NL = Notification Level
< = average is less than the detection limit for reporting

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): California Public Health Goal; The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

- **Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
- **Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial pathogens.
- **Primary Drinking Water Standard:** MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.
- **Regulatory Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.
- **Notification Level (NL):** An advisory level which, if exceeded, requires the drinking water system to notify the governing body of the local agency in which users of the drinking water reside (i.e. City Council, County Board of Supervisors).

What is a Water Quality Goal?

In addition to mandatory water quality standards, USEPA and DDW have set voluntary water quality goals for some contaminants. Water quality goals are often set at such low levels that they are not achievable in practice and are not directly measurable. Nevertheless, these goals provide useful guideposts and direction for water management practices. The chart in this report includes three types of water quality goals:

- **Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.
- **Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- **Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Attention: Mr. Somy Mukherjee

NO FURTHER ACTION DETERMINATION, FORMER BURKE INDUSTRIES, 13767 FREEWAY DRIVE, SANTA FE SPRINGS (SITE CODE: 301618)

Dear Mr. Mukherjee:

On February 21, 2014, the Department of Toxic Substances Control (DTSC) issued a letter requiring further action for the Former Burke Industries property (Site) based on its review of the Preliminary Endangerment Assessment Equivalent (PEAE) documents. Further action consisted of filing a Land Use Covenant (LUC) with the Los Angeles County Assessor to restrict uses of the property to commercial/industrial land use.

The PEAE documents included the Environmental Assessment Report (Aquilogic, Inc., December 2013), Phase II Environmental Site Assessment (Dames & Moore, December 1997) (ESA), Initial Site Assessment (Ninyo & Moore, June 2006), Phase II ESA (Workley Parsons Komex, 2008), Final ESA, (Geosyntec, August 2011), Subsurface ESA (Hemphilll, Green & Associates, September 2011), No Further Action Determination for Soil and Groundwater (Regional Water Quality Control Board, January 2012) and Sampling Results, Map and Tables (Mission Geoscience, March 2012).

The PEAE concluded that minor releases of hazardous substances had occurred on the Site but did not require clean up, and that those releases did not contribute significantly to regional groundwater contamination. The PEAE recommended no further action for the Site.

The 4.3 acre Former Burke Industries property is located at 13767 Freeway Drive in Santa Fe Springs and identified by Los Angeles County Assessor's Office Parcel Number 8069-015-045. From 1966 to 1984, the property was used as a motorcycle warehouse and showroom. From 1984 to 2003 various companies operated on the Site manufacturing boats, hoses, gaskets and various silicon and rubber products. The manufacturing building on the property contained a paint spray booth, two clarifiers, two sumps, and three manufacturing area floor drains. Two hazardous material and waste storage areas were located along the western and northern exterior portions of the building.

Investigations of the areas of concern (AOC) included collection of soil, soil gas and groundwater samples that were analyzed for volatile organic compounds (VOC), total petroleum hydrocarbons (TPH) and metals. Detected concentrations of VOCs in soil and soil gas in the

AOC were consistent with the chemical use history on the property. VOC and metals detections in groundwater appear have originated from an up gradient source as they are not consistent with detections in soil and soil gas and with chemical use history. Groundwater was generally detected at 20 and 21.4 feet below ground surface and flows to the northeast. The detected concentrations of VOCs in soil gas were compared to California Human Health Screening Levels and were found to be within acceptable levels for commercial/industrial land use of the property.

In the November 21, 2014 letter, DTSC concurred with the PEAE conclusions and recommendations that previous releases on the Site did not contribute significantly to regional groundwater contamination and that residual chemical concentrations on the Site do not present an unacceptable risk to human health under a commercial/industrial land use scenario. In addition, DTSC communicated to your environmental consultant, Matt Nusenow of Aquilogic, Inc., that the Site would likely pass under an unrestricted land use scenario and requested preparation of a Human Health Risk Assessment (HHRA) to support this conclusion. DTSC was informed by Mr. Nusenow that he was not authorized to prepare the HHRA and that SCIF Freeway Drive, LLC. (SCIF) preferred to restrict use of the property for commercial/industrial use by filing a Land Use Covenant (LUC). DTSC provided a draft version of the LUC to SCIF's attorney counsel in August 2014.

SCIF recently reconsidered this decision and requested a no further action determination without any land use restrictions. Based on the PEAE results, DTSC conducted an in-house human-health screening evaluation for an unrestricted land use scenario and determined that no further action for the Site is necessary and the Site is suitable for unrestricted land use. As with any real property, if previously unidentified contamination is discovered at the Site, additional assessment, investigation, and/or clean may be required.

If you have any questions, please contact Jose Diaz (818) 717-6614 or email jose.diaz@dtsc.ca.gov.

Sincerely,

Javier Hinojosa

STATE OF CALIFORNIA
ENVIRONMENTAL PROTECTION AGENCY
DEPARTMENT OF TOXIC SUBSTANCES CONTROL

In the Matter of: Former Burke Industries 13767 Freeway Drive Santa Fe Springs, California 90670 Proponent: SCIF Freeway Drive, LLC 1800 Avenue of the Stars, Suite 105 Los Angeles, California 90067 Attn: Mr. Somy Mukherjee	Docket No. HSA VCA-12/13-091 Voluntary Cleanup Agreement Health and Safety Code Section 25355.5(a)(1)(C)

The California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) enters into this Voluntary Cleanup Agreement (Agreement) with SCIF Freeway Drive, LLC (Proponent), and agrees as follows:

1. Site. This Agreement applies to the property located at 13767 Freeway Drive, Santa Fe Springs, County of Los Angeles, State of California (Site). The property is identified by Assessor's Parcel Number 8069-002-025.

The Site is approximately 4.265 acres and is zoned for commercial/industrial land use. This portion is part of the Caltrans I-5 expansion project. A Site diagram and a Site location map are attached as Exhibits A and B.

2. Jurisdiction. This Agreement is entered into by DTSC and Proponent pursuant to Health and Safety Code section 25355.5(a)(1)(C) which authorizes DTSC to enter into an enforceable agreement to oversee the investigation and/or remediation of a release or threatened release of any hazardous substance at or from the Site.

3. Purpose. The purpose of this Agreement is for DTSC to review and comment on Preliminary Endangerment Assessment Equivalent (PEAE) documents for the Site. If appropriate, DTSC will issue a "No Further Action" letter for the Site. The purpose of this Agreement is also for DTSC to obtain reimbursement from Proponent for DTSC's oversight costs incurred pursuant to this Agreement.

4. Ownership. The site is currently owned by SCIF Freeway Drive, LLC.

5. Substances Found at the Site. Low levels of hazardous substances, as defined under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) section 9601(14) and/or under Health and Safety Code section 25316 have

been found at the Site. Previous reports indicate that volatile organic compounds are present at the Site below commercial/industrial land use screening levels.

6. Scope of Work and DTSC Oversight. DTSC shall review and provide Proponent with written comments on all Proponents' deliverables as described in Exhibit C (Scope of Work) and other documents applicable to the scope of the project. Proponent agrees to perform all the work required by this Agreement. Proponent shall perform the work in accordance with applicable local, state and federal statutes, regulations, ordinances, rules and guidance documents, in particular, Health and Safety Code section 25300 et seq., as amended.

7. Additional Activities. DTSC and Proponent may amend this Agreement to include additional activities in accordance with Paragraph 17 of this Agreement. If DTSC expects to incur additional oversight costs for these additional activities, it will provide an estimate of the additional oversight costs to Proponent.

8. Endangerment During Implementation.

8.1. Proponent shall notify DTSC's Project Manager immediately upon learning of any condition that may pose an immediate threat to public health or safety or the environment. Within seven days of the onset of such a condition, Proponent shall furnish a report to DTSC, signed by Proponent's Project Manager, setting forth the conditions and events that occurred and the measures taken in response thereto.

8.2. In the event DTSC determines that any activity pursued in compliance with this Agreement may pose an imminent or substantial endangerment to the health or safety of people on the Site or in the surrounding area or to the environment, DTSC may order Proponent to conduct additional activities in accordance with Paragraph 7 of this Agreement or to stop further implementation of this Agreement for such period of time as may be needed to abate the endangerment. DTSC may request that Proponent implement interim measures to address any immediate threat or imminent or substantial endangerment.

9. Access. Proponent shall provide, and/or obtain access to the Site and take all reasonable efforts to obtain access to offsite areas to which access is necessary to implement the Agreement. Such access shall be provided to DTSC's employees, contractors, and consultants at all reasonable times. Nothing in this paragraph is intended or shall be construed to limit in any way the right of entry or inspection that DTSC or any other agency may otherwise have by operation of law.

10. Sampling, Data and Document Availability. When requested by DTSC, Proponent shall make available for DTSC's inspection, and shall provide copies of, all data and information concerning contamination at or from the Site, including technical records and contractual documents, sampling and monitoring information and photographs and maps, whether or not such data and information was developed pursuant to this Agreement. For all final reports, Proponent shall submit one hard

(paper) copy and one electronic copy with all applicable signatures and certification stamps as a text-readable Portable Document Formatted (pdf) file Adobe Acrobat or Microsoft Word formatted file.

11. Record Preservation. Proponent shall retain, during the implementation of this Agreement and for a minimum of six years after its termination, all data, reports, and other documents that relate to the performance of this Agreement. If DTSC requests that some or all of these documents be preserved for a longer period of time, Proponent shall either comply with the request, deliver the documents to DTSC, or permit DTSC to copy the documents at Proponent's expense prior to destruction.

12. Notification of Field Activities. Proponent shall inform DTSC at least seven days in advance of all field activities pursuant to this Agreement and shall allow DTSC and its authorized representatives to take duplicates of any samples collected by Proponent pursuant to this Agreement.

13. Project Managers. Within 14 days of the effective date of this Agreement, DTSC and Proponent shall each designate a Project Manager and shall notify each other in writing of the Project Manager selected. Each Project Manager shall be responsible for overseeing the implementation of this Agreement and for designating a person to act in his/her absence. All communications between DTSC and Proponent, and all notices, documents and correspondence concerning the activities performed pursuant to this Agreement shall be directed through the Project Managers. Each party may change its Project Manager with at least seven days prior written notice.

14. Proponent's Consultant and Contractor. All work performed pursuant to this Agreement shall be under the direction and supervision of a professional engineer or professional geologist, licensed in California, with expertise in hazardous substances site cleanup. Proponent's Project Manager, contractor or consultant shall have the technical expertise sufficient to fulfill his or her responsibilities. After Proponent completes its' competitive bidding process in selecting a consultant/contractor, Proponent shall notify DTSC's Project Manager in writing of the name, title, and qualifications of the professional engineer or professional geologist and of any contractors or consultants and their personnel to be used in carrying out the work under this Agreement in conformance with applicable state law, including but not limited to, Business and Professions Code sections 6735 and 7835.

15. DTSC Review and Approval. All work performed pursuant to this Agreement is subject to DTSC's review and approval. If DTSC determines that any report, plan, schedule or other document submitted for approval pursuant to this Agreement fails to comply with this Agreement or fails to protect public health or safety or the environment, DTSC may (a) return comments to Proponent with recommended changes and a date by which the Proponent must submit to DTSC a revised document incorporating or addressing the recommended changes; or (b) modify the document in consultation with Proponent and approve the document as modified. All DTSC approvals and decisions made regarding submittals and notifications will be communicated to Proponent in

writing by DTSC's Unit Chief or his/her designee. No informal advice, guidance, suggestions or comments by DTSC regarding reports, plans, specifications, schedules or any other writings by the Proponent shall be construed to relieve Proponent of the obligation to obtain such written approvals.

16. Payment.

16.1. Proponent agrees to pay 1) all costs incurred by DTSC in association with preparation of this Agreement, and for oversight activities, including review of documents, conducted prior to the effective date of this Agreement, and (2) all costs incurred by DTSC in providing oversight pursuant to this Agreement, including review of the documents described in Exhibit C and associated documents, and oversight of field activities. Costs incurred include interest on unpaid amounts that are billed and outstanding more than 60 days from the date of the invoice. DTSC will bill Proponent quarterly. Proponent agrees to make payment within 60 days of receipt of DTSC's billing. Such billings will reflect any amounts that have been advanced to DTSC by Proponent.

16.2. In anticipation of oversight activities to be conducted, Proponent shall make an advance payment of $ 1,000.00 to DTSC no later than 10 days after this Agreement is fully executed. It is expressly understood and agreed that DTSC's receipt of the entire advance payment as provided in this paragraph is a condition precedent to DTSC's obligation to provide oversight, review of or comment on documents. If the advance payment exceeds DTSC's final costs, DTSC will refund the difference within 120 days after the performance of this Agreement is completed or after this Agreement is terminated pursuant to Paragraph 18 of this Agreement.

16.3. All payments made by Proponent pursuant to this Agreement shall be by check payable to the "Department of Toxic Substances Control", and bearing on its face the project code for the Site (Site # 301618) and the docket number of this Agreement. Upon request by Proponent, DTSC may accept payments made by credit cards. Payments by check shall be sent to:

Department of Toxic Substances Control
Accounting Office
1001 I Street, 21st Floor
P.O. Box 806
Sacramento, California 95812-0806

A photocopy of the check shall be sent concurrently to DTSC's Project Manager.

16.4. DTSC shall retain all cost records associated with the work performed under this Agreement as may be required by state law. DTSC will make all documents that support DTSC's cost determination available for inspection upon request in accordance with the Public Records Act, Government Code section 6250 et seq.

17. Amendments. This Agreement may be amended in writing by mutual agreement of DTSC and Proponent. Such amendment shall be effective the third business day following the day the last party signing the amendment sends its notification of signing to the other party. The parties may agree to a different effective date.

18. Termination for Convenience.

18.1. Except as otherwise provided in this paragraph, each party to this Agreement reserves the right to unilaterally terminate this Agreement for any reason. Termination may be accomplished by giving a 30-day advance written notice of the election to terminate this Agreement to the other party. In the event that this Agreement is terminated under Paragraph 18.1, Proponent shall be responsible for DTSC costs through the effective date of termination and DTSC shall be responsible for refunding any amount of the advance payment exceeding DTSC costs through the effective date of termination.

18.2. If operation and maintenance activities are required for the final remedy, neither party to this Agreement may terminate the Agreement under Paragraph 18.1 upon DTSC's approval of an Operation and Maintenance Plan as proposed by Proponent.

19. Incorporation of Exhibits, Plans and Reports. All exhibits are incorporated into this Agreement by reference. All plans, schedules and reports that require DTSC's approval and are submitted by Proponent pursuant to this Agreement are incorporated in this Agreement upon DTSC's approval.

20. Reservation of Rights. DTSC reserves all of its statutory and regulatory powers, authorities, rights, and remedies under applicable laws to protect public health or the environment, including the right to recover its costs incurred therefor. Proponent reserves all of its statutory and regulatory rights, defenses and remedies available to Proponent under applicable laws.

21. Non-Admission of Liability. By entering into this Agreement, Proponent does not admit to any finding of fact or conclusion of law set forth in this Agreement or any fault or liability under applicable laws.

22. Proponent Liabilities. Nothing in this Agreement shall constitute or be considered a covenant not to sue, release or satisfaction from liability by DTSC for any condition or claim arising as a result of Proponent's past, current, or future operations or ownership of the Site.

23. Government Liabilities. The State of California or DTSC shall not be liable for any injuries or damages to persons or property resulting from acts or omissions by Proponent or by related parties in carrying out activities pursuant to this Agreement, nor shall the State of California or DTSC be held as a party to any contract entered into by

Proponent or its agents in carrying out the activities pursuant to this Agreement.

24. Third Party Actions. In the event that Proponent is a party to any suit or claim for damages or contribution relating to the Site and this Agreement to which DTSC is not a party, Proponent shall notify DTSC in writing within 10 days after service of the complaint in the third-party action. Proponent shall pay all costs incurred by DTSC relating to such third-party actions concerning the Site and this Agreement where DTSC is not a party, including but not limited to responding to subpoenas.

25. California Law. This Agreement shall be governed, performed and interpreted under the laws of the State of California.

26. Severability. If any portion of this Agreement is ultimately determined not to be enforceable, that portion will be severed from the Agreement and the severability shall not affect the enforceability of the remaining provisions of the Agreement.

27. Parties Bound. This Agreement applies to and is binding, jointly and severally, upon Proponent and its officers, directors, agents, receivers, trustees, employees, contractors, consultants, successors, and assignees, including but not limited to individuals, partners, and subsidiary and parent corporations, and upon DTSC and any successor agency that may have responsibility for and jurisdiction over the subject matter of this Agreement.

28.. Effective Date. The effective date of this Agreement is the date of signature by DTSC's authorized representative after this Agreement is first signed by Proponent's authorized representative. Except as otherwise specified, "days" means calendar days.

29.. Representative Authority. Each undersigned representative of the party to this Agreement certifies that she or he is fully authorized to enter into the terms and conditions of this Agreement and to execute and legally bind the party to this Agreement.

30. Counterparts. This Agreement may be executed and delivered in any number of counterparts, each of which when executed and delivered shall be deemed to be an original, but such counterparts shall together constitute one and the same document.

1.0 INTRODUCTION

The California Department of Transportation (CalTrans) plans to improve the Interstate 5 (I-5) Carmenita Road interchange in Santa Fe Springs, California. This work requires a portion of the Former Burke Industries Facility (Property), located at 13767 Freeway Drive (APN: 8069-002-025), be acquired for the project. As part of the acquisition process, Worley Parsons Komex (CalTrans contractor) conducted a Phase II Investigation in 2008 to evaluate the potential impact of suspected contaminants on the planned construction activities.

The Property is currently listed as a Sub-Area under the Department of Toxic Substances Control (DTSC) Caltrans I-5 Freeway Widening Project (60001001). The most recent activity listed on Envirostor by the DTSC for the Property is a Preliminary Endangerment Assessment (i.e., the 2008 Worley Parsons Komex Phase II Report). However, investigations have been recently conducted at the Property and at adjacent industrial facilities. These investigations provide additional data on the source, magnitude, and extent of the contaminants in soil and groundwater.

Aquilogic, Inc. (**aquilogic**) has been retained by legal counsel for SCIF Freeway Drive, LLC – Former Burke Industries Facility to prepare this Environmental Assessment Report (Report). In preparation of this Report, the following tasks were performed:

1. Review available information on the historic Property ownership/operations, chemical use, and permits;
2. Review available environmental data collected at the Property;
3. Review available environmental data collected at those properties down-gradient and adjacent to the Property;
4. Summarize available information and data for the above;
5. Evaluate the nature, magnitude, and extent of contamination;
6. Assess the potential threat to both human health and groundwater resources; and
7. Assess the need for further investigation and remediation.

Ultimately, the result of this analysis is to provide the DTSC with the necessary information to determine if No Further Action (NFA) is appropriate at the Property.

Appendix A contains a copy of each document referenced in this Report and is arranged in chronological order.

2.0 PROPERTY SETTING

2.1 Property Description

The former Burke Industries manufacturing/office building (80,722 square feet) is on a 4.3 acre parcel (Dames and Moore 1997) in Los Angeles County, California (Figure 1). CalTrans has taken the property through eminent domain for the I-5 Carmenita Road interchange project. The Property is located approximately 2,100 east of Carmenita Road and north of I-5. The land use in the vicinity of the Property is primarily industrial. Properties in the area are dominated by warehouses, businesses, fast-food restaurants, railroad tracks, and other manufacturing/industrial facilities.

2.2 Regional Physiographic Setting

According to the United States Geological Survey (USGS) topographic map, Whittier, California Quadrangle (1981), the Property is at an elevation of approximately 78 feet above mean sea level (AMSL).

This part of Los Angeles County is underlain by the Los Angeles County Coastal Plain and is bounded by; the Santa Monica Mountains to the north; the low lying Elysian, Repetto, Merced, and Puente Hills to the northeast; a political boundary coinciding with the boundary between Los Angeles County and Orange County to the southeast; and, the Pacific Ocean to the southwest. The Property is situated on a sub-feature of the Los Angeles Coastal Plain called the Santa Fe Springs Plain which is a slightly rolling topographic feature and represents a continuation of the Coyote Hills uplift to the southeast.

2.3 Regional Geology and Hydrology

The Los Angeles Coastal Plain surficial geology generally consists of alluvial materials deposited by the Los Angeles, San Gabriel, and Santa Ana Rivers during the late Pleistocene. The Property is underlain by over 100 feet of late Pleistocene alluvium, specifically part of the Lakewood Formation. The Lakewood Formation consists of interbedded, unconsolidated, clays, silts, silty sands, and sands representative of stream-type alluvial and floodplain deposits (Worley Parsons Komex 2008).

The Property is located on the Central Basin of the Los Angeles Coastal Plain. The first major aquifer beneath the Property is the Artesia Aquifer, located at depths ranging from approximately 80 to 150 feet below ground surface (bgs). The Bellflower Aquiclude overlays the Artesia Aquifer and restricts groundwater percolation from the overlying sediments. A perched aquifer is present above the Bellflower Aquiclude at depths ranging from 20 to 40 feet bgs (CRWQB-LA 2012). Shallow groundwater samples at the Property were collected from this perched aquifer.

The base of the Bellflower Aquiclude is found at a depth of approximately 80 feet bgs in the Property vicinity. Deeper aquifers include the Gage Aquifer, located at a depth ranging from approximately 160 to 210 feet bgs. The next major aquifer present beneath the Property is the Lynwood Aquifer, which is found at depths ranging from 850 to 1,000 feet bgs. The Silverado Aquifer is present beneath the Property at depths ranging from approximately 1,060 to 1,240 feet bgs (CRWQB-LA 2012).

The closest well to the Property is designated as Los Angeles County Department of Public Works (LACDPW) Well No. 1051W (3S/11W-20R2). Well No. 1051W is owned by the City of Santa Fe Springs and is located approximately 2,200 feet to the southwest. The well is designated as a municipal supply well, and is located hydrogeologically up-gradient of the Property. Chemical analyses of groundwater samples collected from wells in the vicinity of the Property indicate elevated concentrations of arsenic, but no detectable organic constituents (CRWQB-LA 2012).

Groundwater levels vary beneath the Property. Based on review of available information on leaky underground storage tank (UST) sites obtained from the State Water Resources Control Board GeoTracker website, the depth to shallow groundwater in the Property vicinity ranges from approximately 15 to 30 feet bgs. The groundwater flow direction in the perched aquifer in the vicinity of the Property is primarily to the northeast. Regional groundwater flow in deeper aquifers is generally to the southwest (Worley Parsons Komex, 2008).

3.0 PROPERTY HISTORY

3.1 Operational and Chemical Use History

The manufacturing building at the Property contained a paint spray booth, two clarifiers, two sumps, and three manufacturing area floor drains. Hazardous material and waste storage areas were located on the western and northern exterior portions of the building (Dames and Moore 1997). The following is a summary of occupational and chemical use/permit history at the Property:

Date/Period	Activity
1966 to 1984	The Property was used by Suzuki for a motorcycle warehouse and showroom. There were no records of large scale use of industrial chemicals but an inactive clarifier permit for Suzuki noted the discharge of wash water containing detergents, silt, and an unspecified solvent (Dames and Moore 1997).
1984 to 1985	The Property was used for boat sales and possible manufacturing (Dames and Moore 1997).
1987	Silicone Fabrication Specialists manufactured silicone hoses and gaskets. They did not discharge wastewater, but maintained an Industrial Waste Discharge Permit (Dames and Moore 1997).
1995	Burke Industries acquires assets of Silicon Fabrication Specialists and continues operations. In addition to silicon products, Burke also produced rubber products. Burke Industries obtained an Industrial Waste Discharge Permit for cooling water. Burke Industries listed the use of 1,1,1-trichloroethane (1,1,1-TCA), trichloroethene (TCE), methyl ethyl ketone (MEK), alcohols, toluene, and xylene (Dames and Moore 1997).
2000	Kirkhill acquired the facility and continued the production of silicon and rubber products. Waste products during their tenure at the Property included oil waste and F001 solvents (Ninyo & Moore 2006).
2003	Kirkhill ceased operations and decommissioned their operations. Hazardous materials removed included: xylenes, toluene, acetone, and isopropyl alcohol (Ninyo & Moore 2006).
2004	An Initial Site Assessment of the Property vicinity and its adjoining properties was performed. Interviews and review of historic records and regulatory databases were conducted in an effort to identify evidence of previously recognized environmental conditions. It was reported that no hazardous material incidents had taken place on the Property. In addition,

Date/Period	Activity
	the Property was not identified in the Environmental First Search database or during the regulatory records review as having any regulated quantities of hazardous materials, USTs, or any spills or releases to the environment (Worley Parsons Komex 2008).
2009 to 2010	Refrigerator Manufacturers, Inc. manufactured showcased commercial refrigerators. Their Hazardous Materials Business Plan listed the use of urethane adhesive, methylene chloride, and hexane.

3.2 Environmental Investigation Chronology

The following is a chronology of environmental investigation activities that have been conducted at the Property:

Date/Period	Activity
July 1996	Clayton Environmental (Clayton) collected a sludge sample from the outside clarifier in the southwest corner of the Property for analysis. The water extracted from the sludge sample contained approximately 5 micrograms per liter (µg/L) 1,1-dichloroethane (1,1-DCA), 14 µg/L toluene, and 140 µg/L TCE. Clayton recommended that the clarifier be cleaned out and inspected for possible leakages (Dames and Moore, 1997).
November 1996	The clarifier was cleaned out and inspected. There were no visible cracks in the concrete (Dames and Moore, 1997).
October 9, 1997	Dames and Moore conducted a soil gas study using Transglobal Environmental Geochemistry Mobile Laboratory. Samples were collected at the floor drains, sumps, clarifiers, paint spray booth, chemical storage, and hazardous waste storage. Samples were analyzed for Total Volatile Petroleum Hydrocarbons (TVPH) reported in parts per million by volume (ppmv) by United States Environmental Protection Agency (USEPA) Method 8015, volatile aromatic hydrocarbons by USEPA Method 8020, and halogenated volatile organic compounds (VOCs) by USEPA Method 8010 (Dames and Moore, 1997). Sample locations and analytical results are given on Figure 2. No contaminants were found in sample SV-1 (the sump east of the interior clarifier) and in samples SV-8 and SV-12 (which were both in the hazardous waste storage area). The sample locations with reported detections of chlorinated VOCs were: • SV-3 wastewater sump (loading dock): 16 µg/L 1,1,1-TCA, • SV-5 exterior clarifier: 46 µg/L 1,1,1-TCA,

Date/Period	Activity
	• SV-10 west production floor drain: 3.8 µg/L 1,1,1-TCA, and • SV-14 paint booth: 4.5 µg/L 1,1-Dichloroethene (1,1-DCE) and 41 µg/L 1,1,1-TCA.
October 30, 1997	Based on the soil vapor data from above, three direct-push soil borings (P-1) and one hand auger boring (HA-1) were completed (Figure 3). Two soil samples were collected from each boring. Groundwater samples were collected from the top of the saturated zone approximately 20 feet bgs in P-1 and P-3. Boring P-1 was located north of the clarifier and was assumed to be up-gradient of the clarifier; P-2 was located northwest of the clarifier; and P-3 was located southwest of the clarifier and was assumed to be down-gradient. The boring HA-1 was located 3 feet just west of the paint booth. Soil and groundwater were analyzed for petroleum hydrocarbons (USEPA Method 8015) and VOCs by USEPA Method 8260 (Dames and Moore, 1997). Sample locations and analytical results are provided on Figure 3. None of the samples contained detectable concentrations of petroleum hydrocarbons. The following samples contained VOCs (i.e., only detected compounds for soil and groundwater): Soil Data • P-1 Soil (17 feet bgs): 18 micrograms per kilogram (µg/kg) 1,1,1-TCA • P-2 Soil (9 feet bgs): 29 µg/kg 1,1,1-TCA • P-2 Soil (17 feet bgs): 42 µg/kg 1,1,1-TCA • P-3 Soil (18 feet bgs): 13 µg/kg 1,1,1-TCA Groundwater Data • P-1 Groundwater: 59 µg/L 1,1,1-TCA and 28 µg/L 1,1-DCE • P-3 Groundwater: 61 µg/L 1,1,1-TCA, 29 µg/L 1,1-DCE, and 11 µg/L 1,1-DCA (1,1-DCE exceeded its Maximum Contaminant Level (MCL) of 6 µg/L and 1,1-DCA exceeded its MCL of 5 µg/L)
August 20, 2008	The Worley Parsons Komex Phase II Environmental Site Investigation Report assessed the soil, soil vapor, and groundwater conditions along the vacant landscaped frontage portion of the Property; adjacent to Freeway Drive as part of the CalTrans I-5 Carmenita Road Project. Three direct push soil borings (966-701, 966-702, and 966-703) were installed and sampled. Sample locations and the soil and groundwater analytical data (samples with detections only) are presented on Figure 4. Soil vapor samples were taken at 5.5 and 14.5 feet bgs in each borehole and

Date/Period	Activity
	analyzed on-site for VOCs (USEPA Method 8260B). Benzene was detected at 0.1 µg/L in borehole 966-701. Soil samples were collected from 5, 15, and 25 feet bgs and analyzed for Total Petroleum Hydrocarbons (TPH) by USEPA Method 8015M, Semi-Volatile Organic Compounds (SVOCs) by USEPA Method 8270C, Title 22 Metals by USEPA Method 6010B and hexavalent chromium by USEPA Method 7199A. No TPH or SVOCs were detected in the soil samples. The VOCs detected included benzene (1 to 15 µg/kg) and toluene (5.5 to 12 µg/kg. Soil samples contained the following range of trace metals: • Arsenic: 2.8 to 11 milligrams per kilogram (mg/kg) • Barium: 66 to 200 mg/kg • Cobalt: 6.8 to 11 mg/kg • Copper: 13 to 31 mg/kg • Lead: 2.6 to 4.8 mg/kg • Nickel: 8.9 to 17 mg/kg • Silver: 1.3 to 2.1 mg/kg • Chromium: 12 to 23 mg/kg • Vanadium: 22 to 40 mg/kg • Zinc: 29 to 50 mg/kg Groundwater samples were taken from borehole 966-701 at 21.4 feet bgs, borehole 966-702 at 21 feet bgs, and borehole 966-703 at 20 feet bgs. The groundwater samples were analyzed for the same compounds as the soil samples using the same analytical methods. The following VOCs were detected in groundwater: • 1.4 µg/L to 30 µg/L cis-1,2-Dichloroethene (cis-1,2-DCE), • 2.6 µg/L 1,1-DCA, • 5.6 µg/L 1,1-DCE, and • 2.9 µg/L TCE. Only cis-1,2-DCE exceeded the MCL of 6 µg/L in two samples.
March 1 to 5, 2012	Mission Geoscience, Inc. (2012) collected soil vapor, soil, and groundwater samples inside and outside the building across the Property. Soil vapor samples were analyzed for VOCs while selected soil samples were analyzed for Title 22 Metals. Groundwater samples were analyzed for VOCs (USEPA Method 8260B + oxygenates) and TPH (USEPA Method 8015M). Selected

Date/Period	Activity
	groundwater samples were analyzed for Title 22 Metals. Soil vapor samples were collected at 5 and 15 feet bgs. The analytical results for detected compounds (with California Human Health Screening Levels [CHHSLs]) are provided in Tables 1 and 2. The process area layout and data are presented on Figure 5A and 5B, respectively. The highest vapor concentrations of chlorinated VOCs and benzene, toluene, ethylbenzene, and total xylenes (BTEX) detected under the building were: • I-1 (15 feet bgs): 0.143 µg/L toluene, 0.042 µg/L ethylbenzene, and 0.186 µg/L xylenes; • I-3 (15 feet bgs): 0.085 µg/L tetrachloroethene (PCE) and 0.135 µg/L TCE; • I-4 (15 feet bgs): 0.044 µg/L benzene; • I-6 (5 feet bgs): 0.102 µg/L 1,1,1-TCA; and • I-9 (15 feet bgs): 0.103 µg/L cis-1,2-DCE. The analytical results for detected trace metals in the soil samples are provided in Table 3. The concentrations of trace metal concentrations had the following ranges: • Arsenic: 5.5 to 8.2 mg/kg • Barium: 44 to 250 mg/kg • Cobalt: 10 to 12 mg/kg • Copper: 26 to 44 mg/kg • Lead: 6.1 to 9.0 mg/kg • Mercury: 0.042 to 0.110 mg/kg • Nickel: 17 to 25 mg/kg • Chromium: 18 to 25 mg/kg • Vanadium: 17 to75 mg/kg • Zinc: 23 to 100 mg/kg The analytical results for detected VOCs and petroleum hydrocarbons in groundwater are provided in Figure 6. Two VOCs had concentrations that exceeded their MCLs. Benzene concentrations ranged from 0.54 µg/L to 1.2 µg/L (MCL of 1 µg/L) and cis-1,2-DCE concentrations ranged from 1.1 µg/L to 66 µg/ (MCL of 6 µg/L). The concentrations of trace metals in the groundwater are provided in Table 4.

4.0 HYDROGEOLOGIC SETTING

4.1 Property Hydrogeology

Based on the borings completed by Worley Parsons Komex (2008), the lithology beneath the Property can be generally described as a 5 foot interval of silt, underlain by light brown sand, interbedded with silty sand/sandy silt to a depth of approximately 29 feet bgs. Groundwater was encountered between 20 and 21.4 feet bgs in silty sand to silty clay material.

4.2 Hydrogeology of Adjacent Sites

There are two industrial facilities directly adjacent to the Property (Figure 7) that have conducted extensive hydrogeologic studies. The Frigid Coil Facility, located at 13711 Freeway Drive, Santa Fe Springs, shares the western property line with Burke Industries (Geotracker ID: SL0603788087). Directly across the I-5 and south/southwest of the Frigid Coil Facility and the Property, is the LeFiell Manufacturing Company located at 13700 Firestone Boulevard, Santa Fe Springs (Envirostor ID: 60001240).

4.2.1 LeFiell Manufacturing Company

The depth to first groundwater at the Property, reported during the Caltrans Site Investigation in 2006, was approximately 29.5 feet bgs. The Caltrans study did not determine the direction of groundwater flow at the Property. During the current site investigation, the average depth to groundwater was found to be 17.5 feet bgs and flow was determined to be to the northeast and east (Hemphill, Green & Associates (HGA) 2011). The groundwater flow direction reported by HGA for the Lefiell Manufacturing Facility is illustrated on Figure 7.

4.2.2 Frigid Coil Facility

Two groundwater zones have been identified at the Frigid Coil Facility. The upper groundwater zone is a coarse grained unit 10 to 15 feet thick with the top of the aquifer occurring at 23 to 30 feet bgs. A laterally continuous 15 to 20 foot thick fine grained unit separates the upper and lower groundwater zones. The thickness of the lower coarse grained water bearing zone has not been determined. The potentiometric surface of the upper groundwater zone has a flow direction to the north-northeast with a gradient ranging from 0.0044 to 0.01 feet/foot (Geosyntec 2011). The groundwater flow direction reported by Geosyntec for the Frigid Coil Facility is illustrated on Figure 7.

4.2.3 Groundwater Flow Direction

Based on the hydrogeology of LeFiell Manufacturing and Frigid Coil, along with the Property stratigraphy, it is expected that the direction of groundwater flow across the Property is generally to the northeast as illustrated on Figure 7.

5.0 DISCUSSION

5.1 Soil and Soil Vapor Contamination

5.1.1 VOCs

A limited number of soil samples were collected in 2008 by Worley Parsons Komex along the property boundary near Freeway Drive (Figure 4) and in 1997 by Dames and Moore adjacent to the exterior clarifier in the southwestern corner of the Property (Figure 3). The VOCs detected were primarily 1,1,1-TCA, benzene, and toluene. The 5 foot soil vapor samples collected in 2012 by Mission Geoscience (Figure 5B) were dominated by the occurrence of BTEX and two detections of 1,1,1-TCA. The VOCs detected in both the soil and soil vapor samples are consistent with the chemical use history of the Property.

None of the VOC concentrations at the exterior soil vapor sampling locations exceeded their 2010 CHHSL values for Industrial and Commercial Land-Use (Table 2). The soil vapor VOC concentrations for benzene and naphthalene, taken in the interior of the Former Burke Industries building, exceeded the CHHSL levels used to evaluate vapor intrusion exposure from beneath the building slab. However, the area-weighted average concentrations (Figure 8) are below their respective adjusted indoor air CHHSLs (Table 1).

VOC concentrations detected in groundwater were used to assess whether the Property has contributed to groundwater impacts. Using Henry's Law, the maximum potential concentration in groundwater was calculated from the maximum observed soil vapor concentrations (Table 5). For each contaminant, the observed maximum concentration in groundwater exceeded the concentration calculated by applying Henry's Law to the maximum concentration in soil vapor, generally by at least one order of magnitude. <u>Thus, based on observed groundwater concentrations, the soil vapor concentrations observed beneath the Property are significantly lower than what would be expected if a release at the Property was the source of the impacted groundwater</u>.

5.1.2 Metals

The combined soil trace metal data collected by Worley Parsons Komex in 2008 and Mission Geosciences in 2012 show that only arsenic (i.e., at 11 mg/kg) exceeded both the Industrial and Residential CHHSL values; while total chromium only exceeded the Residential CHHSL value.

According to Worley Parsons Komex (2008) *"concentrations detected in soils at the Property were compared to the CHHSLs with the exception of arsenic since naturally occurring arsenic is often present in soils at concentrations that exceed both the residential and industrial CHHSLs (0.07 and 0.24 mg/kg, respectively). The DTSC has issued a final report of background concentrations for naturally occurring arsenic in soils at Los Angeles Unified School District*

(LAUSD) sites (DTSC 2005). Based on the data analyzed, the calculated 95% upper confidence limit of the 99th percentile in the LAUSD is 6.0 mg/kg. The DTSC states that the background arsenic data presented in the report should not be interpreted as a cleanup or remedial goal for schools sites. Nor should the data be used for non-school sites. However, the data presented in the DTSC report is useful for comparison purposes." Given the 6.0 mg/kg background level, approximately 64% of the soil arsenic results (i.e., both Worley Parson-Komex and Mission Geosciences samples) were below 6.0 mg/kg.

Furthermore, the Frigid Coil Facility completed a background analysis of arsenic concentrations (60 samples). Appendix J of the Geosyntec (2011) Final Environmental Site Assessment for the Frigid Coil Facility reports an arsenic background concentration of 15.4 mg/kg. The arsenic levels at the Property are well below the Frigid Coil Facility arsenic background concentrations.

5.1.3 Vadose Zone Summary

Based on soil and soil vapor data collected during the 2008 and 2012 sampling events, there are no indications of significant sources of organic or inorganic contaminants in the vadose zone. Additionally, the concentrations detected in soil and soil vapor do not appear to represent an unacceptable risk to human receptors or groundwater.

5.2 Groundwater Contamination

5.2.1 On-site VOCs

The Dames and Moore Phase II Investigation, conducted in 1997, evaluated potential chemical releases in all of the areas suspected of chemical use, storage and discharge (Figure 2). The soil vapor data showed the wide spread occurrence of acetone, 1,1,1-TCA, and petroleum hydrocarbons in shallow soils (i.e., all samples collected 5 feet or less, except SV-4 and SV-5 taken at 10 feet bgs due to the depth of the clarifiers). Soil samples taken in the vicinity of the outside clarifier (SV-5) all detected 1,1,1-TCA. Thus, the detection of 1,1,1-TCA and 1,1-DCA in the groundwater samples adjacent to the exterior clarifier (southwestern area of the Property) was consistent with the chemical use history and soil contamination. The one detection of 1,1-DCE was expected given the detection of 1,1-DCE in the spray paint booth area.

All of the groundwater samples collected by Worley Parsons Komex (2008) along the up-gradient southwestern boundary of the Property had detected cis-1,2-DCE (966-702 and -703 reported concentrations that exceeded the MCL), which is not consistent with the soil contamination. The groundwater sample near the exterior clarifier (i.e., 066-703) also contained 1,1-DCE, 1,1-DCA, and TCE (all detected below the MCL); which is consistent with the chemical use history.

The most recent groundwater samples collected in 2012 by Mission Geoscience detected 1,1-DCE, trans-1,2-dichloroethene (trans-1,2-DCE), toluene, and TCE at concentrations below the MCL. Benzene was detected in three of the 10 groundwater sample with the sample taken at E-3 containing 1.2 µg/L, which exceeds the 1.0 µg/L MCL. Nine of the 10 groundwater samples contained concentrations of cis-1,2-DCE with five samples that exceeded the 6.0 µg/L MCL.

With the exception of SV-14-5 (4.5 µg/L 1,1-DCE), historically, no soil vapor concentrations of PCE, TCE, or 1,1-DCE have been detected in shallow soil samples at the Property. These VOCs have only been detected in soil vapor samples taken at 15 feet bgs and near the groundwater. As discussed above, the soil vapor concentrations of the VOCs detected on the Property are not high enough to account for the VOC concentrations in groundwater (Table 5). <u>This data strongly suggest that the groundwater contamination on the Property is from an up-gradient source</u>.

5.2.2 Up-gradient Off-site Sources of VOCs

As previously discussed in Section 4.2, the LeFiell Manufacturing Company, which began operations in 1955, is located up-gradient of both the Frigid Coil Facility and the Property (Figure 7). The monitoring well data from the April 2011 groundwater sampling at LeFiell reported maximum concentrations of 1,1-DCE at 2,800 µg/L, cis-1,2-DCE at 2,800 µg/L, PCE at 94,000 µg/L, and TCE at 2,500 µg/L. On review of the LeFiell Subsurface Site Assessment Report (HGA 2011), the DTSC concluded that monitoring of the groundwater contamination "*will be required on the east side of Interstate 5*" (2011).

Based on the groundwater flow direction at Frigid Coil Facility, VOCs from the Frigid Coil Facility have migrated onto the Property (Figures 7). Geosyntec reported maximum concentrations of benzene at 1.9 µg/L, 1,1-DCE at 22 µg/L, cis-1,2-DCE at 2,100 µg/L, PCE at 7.1 µg/L, and TCE at 430 µg/L from the April 2010 groundwater sampling at the Frigid Coil Facility. The Los Angeles Regional Water Quality Control Board (RWQCB) (2012) concluded that ***"groundwater contamination beneath the Frigid Coil Facility was not caused by Site operations but from an up-gradient source."***

The historical contamination of the Property by up-gradient sources can be demonstrated by comparing the VOC concentrations (i.e., PCE, TCE, and cis-1,2-DCE) at LeFiell Manufacturing Company, the Frigid Coil Facility, and the Property. This comparison is illustrated on Figure 7.

5.2.3 Metals

The groundwater analysis for metals completed by Worley Parsons Komex in 2008 identified traces of aluminum, barium, and molybdenum. The detected concentrations for aluminum and barium were below their respective MCLs. There currently is no MCL for molybdenum.

The groundwater analysis for metals completed by Mission Geoscience in 2012 identified concentrations of arsenic, barium, chromium, copper, lead, mercury, and nickel that significantly exceeded their respective MCLs in virtually every sample. Because the occurrence of these specific trace metals in groundwater mirror their occurrence in soil, it suggests that turbid, unfiltered groundwater samples were acid preserved and then analyzed (i.e., soil minerals were dissolved in the acid and trace metals released into solution). This conclusion is also supported by the following:

- The chemical use and manufacturing process history did not identify or suggest that metal solutions or acids were used at the Property; and
- The Worley Parsons Komex trace metal data in groundwater that was collected in 2008 gave no indication of extensive trace metal contamination.

Given the extremely low solubility product of barium sulfate (1.08×10^{-10} at 25 degrees Celsius), the solubility of barium sulfate in water is approximately 1.15 milligrams per liter (mg/L). The groundwater at the Frigid Coil Facility was reported to contain 450 mg/L sulfate (Geosyntec 2011); therefore, barium could not be detected at 43 mg/L as reported by Mission Geosciences (2012) and the trace metal data collected by Mission Geosciences should not be considered reliable.

5.2.4 Groundwater Summary

Based on the up-gradient VOC source location at LeFiell Manufacturing Company (HGA 2011) and the magnitude and extent of the VOCs, the RWQCB determined that the groundwater VOC contamination at the Frigid Coil Facility (Geosyntec, 2011) originated from LeFiell Manufacturing Company site (RWQCB 2012). Therefore the Frigid Coil Facility received NFA relative to soil and groundwater remediation (RWQCB 2012). Of note, **the VOC concentrations in groundwater that remain at the Frigid Coil Facility are significantly greater than the VOC concentrations detected under the Property**.

Based on the chemical use history of the Property and Worley Parsons Komex (2008) Phase II Investigation, the concentration of trace metals detected in groundwater does not represent an unacceptable risk to human receptors or groundwater.

6.0 CONCLUSIONS AND RECOMMENDATIONS

The conclusions and recommendations of this Report are not only based on the background, chemical use history, and the results of environmental investigations for the Property, but also on the site investigations conducted at adjacent facilities (i.e., LeFiell Manufacturing and Frigid Coil) and regulatory review by both the RWQCB and DTSC.

6.1 Conclusions

- **Soil arsenic concentrations are within background levels**;
- Residual soil VOC concentrations are unlikely to pose an unacceptable health risk or a threat to groundwater;
- Soil remediation is not necessary;
- Groundwater VOC contamination beneath the Property is from an up-gradient source;
- **The VOC concentrations in the groundwater beneath the Property are significantly less than the VOC concentrations in the groundwater at the Frigid Coil Facility, which received an NFA from the RWQCB**;
- Groundwater monitoring wells installed east of the I-5 by LeFiell Manufacturing, to delineate the extent of their groundwater contamination (i.e., as directed by the DTSC), could also be used to monitor groundwater down-gradient of the Property; and
- On-site groundwater remediation is not necessary.

6.2 Recommendations

Based on the results of the environmental site assessments, the Property is not the source of observed groundwater contamination, and NFA is recommended for the Property.

7.0 CLOSING AND LIMITATIONS

This Environmental Assessment Report has been prepared for the exclusive use of Murphy & Evertz as it pertains to the investigation of the Former Burke Industries Facility, 13767 Freeway Drive, Santa Fe Springs, California. Our services have been performed using that degree of care and skill ordinarily exercised under similar circumstances by reputable, qualified environmental consultants practicing in this or similar locations. No other warranty, either expressed or implied, is made as to the professional advice included in this Report. These services were performed consistent with our agreement with our client.

Opinions and recommendations contained in this Report apply to conditions existing when services were performed and are intended only for the client, purposes, locations, time frames, and project parameters indicated. We do not warrant the accuracy of information supplied by others or the use of segregated portions of this Report.

The purpose of a geologic, hydrogeologic, and/or contaminant investigation is to reasonably characterize existing subsurface conditions at the Site. In performing such an investigation, it is understood that no investigation is thorough enough to describe all subsurface conditions of interest at a given site. If conditions have not been identified during the investigation, such a finding should not, therefore, be construed as a guarantee of the absence of such conditions at the Site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

In regard to geologic, hydrogeologic, and/or contaminant conditions, our professional opinions are based in part on interpretation of data from discrete sampling locations. It should be noted that actual conditions at locations not sampled may differ from those interpreted from sampled locations.
