Bromofluorobenzene	98		%REC	EPA 8260B			70-130	01/26/09	11:23	RNL

Respectfully Submitted:

Mark Horan - Division Manager

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit
MDL = Method Detection Limit
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, Microbac advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Mark Horan, the Division Manager at 951.779.0310. You may also contact both Trevor Boyce, President and Robert Morgan, Chief Operating Officer at president@microbac.com.

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit
MDL = Method Detection Limit
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, Microbac advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Mark Horan, the Division Manager at 951.779.0310. You may also contact both Trevor Boyce, President and Robert Morgan, Chief Operating Officer at president@microbac.com.

CASE NARRATIVE

Authorized Signature Name / Title (print)	Robert R. Clark, PhD, Division Manager
Signature / Date	Robert R. Clark, PhD, Division Manager 04/08/2010 11:08:16
Laboratory Job No. (Certificate of Analysis No.)	1004-00057
Project Name / No.	JCI Frigid Coil HW1148
Dates Sampled (from/to)	04/06/10 To 04/06/10
Dates Received (from/to)	04/06/10 To 04/06/10
Dates Reported (from/to)	04/08/10 To 4/8/2010
Chains of Custody Received	Yes

Comments:

Subcontracting

Organic Analyses

No analyses sub-contracted

Respectfully Submitted:

Robert R. Clark, PhD - Division Manager

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

Respectfully Submitted:

Robert R. Clark, PhD - Division Manager

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, Microbac advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Robert Clark, the Division Manager at 951.779.0310. You may also contact both Trevor Boyce, President and Robert Morgan, Chief Operating Officer at president@microbac.com.

APPENDIX J

BACKGROUND ARSENIC EVALUATION

Appendix J
Background Arsenic Evaluation

INTRODUCTION

A statistical analysis of the Site arsenic data was conducted to determine if arsenic is naturally occurring (i.e., present at "background" concentrations). Cal-EPA (1997) defines background levels of metals as including both pristine conditions (e.g., natural geological composition at locations unaffected by human activity) and ambient conditions (i.e., chemical concentrations in the vicinity of the Site that are unaffected by Site-related activity). Therefore, background levels of metals can be from both natural and anthropogenic sources, since they are characterized in the context of “pristine conditions” and “ambient conditions”.

The background evaluation was conducted following the approach described in the Cal-EPA DTSC documents entitled “*Determination of a Southern California Regional Background Arsenic Concentration in Soil*” (Chernoff, Bosan, and Oudiz, 2008), “*Arsenic Strategies. Determination of Arsenic Remediation, Development of Arsenic Cleanup Goals for Proposed and Existing School Sites*” (Cal-EPA, 2007) and “*Selecting Inorganic Constituents as Potential Chemicals of Concern at Risk Assessments at Hazardous Waste Sites and Permitted Facilities*” (Cal-EPA, 1997).

APPROACH

Following the approach outlined in Cal-EPA guidance, the Site arsenic data was evaluated by multiple methods to determine if arsenic concentrations are similar to background. Data were first evaluated to determine if more than one population can be discriminated (e.g., an ambient population and a Site-impacted population) using methods described in Cal-EPA guidance (1997, 2007). Although arsenic data from the Site may demonstrate the presence of two or more separate populations (e.g., in a probability plot), this in itself does not necessarily indicate there are arsenic impacts above background conditions. Cal-EPA (1997) recommends a “weight-of-evidence” approach where indicators of background are considered. The three indicators or criteria include:

1. the degree to which the Site data distributions are fit by a normal, lognormal, or other distribution[1];
2. a graphical assessment (probability, or quantile-quantile plots, against the normal, lognormal, or other distribution) to identify breaks or nonlinearity indicative of more than a single population; and

[1] Cal-EPA (1997) states that ambient metal concentrations tend to follow a normal or lognormal distribution.

3. the skewness of the data as indicated by the coefficient of variation (CV = standard deviation/average).

Although these three criteria provide related information about distribution shape, each focuses on different aspects of the distribution fit, and consideration of all three criteria (not just one) is recommended by Cal-EPA when evaluating whether or not concentrations are within background.

STATISTICAL EVALUATION

The Site arsenic dataset was statistically analyzed to determine whether one or more populations could be identified and distinguished, and to estimate the maximum concentration of arsenic that could be attributed to the background population. The statistical evaluation included:

- computation and review of summary statistics for arsenic concentrations;
- construction and review of quantile-quantile (Q-Q) plots of arsenic concentrations to determine whether the dataset more closely follows a normal, lognormal, or gamma distribution, to identify whether more than one population is evident, and to estimate the maximum concentration associated with the background population;
- CV comparison; and
- determination of outliers and the 98th percentile of the adjusted arsenic dataset using methods described in Cal-EPA guidance (2007).

Statistical software (ProUCL version 4.1), available from the USEPA (USEPA, 2010), was used to test the arsenic dataset for normal, lognormal, or gamma distributions, to compute the raw statistics, determine outliers, as well as to plot the arsenic concentrations. The summary statistics are presented in Table J-1 for data collected between 0 to 10 feet below ground surface (ft bgs) and for data collected between 0 to 15 ft bgs.

Each of the three criteria mentioned above for the “weight-of-evidence” approach (Cal-EPA 1997) was evaluated as providing or not providing evidence for multiple populations (e.g., ambient vs. non-ambient) as follows. According to the first criterion, distributions that contain multiple populations will generally fail the goodness of fit test for both normality and lognormality. ProUCL software was used to determine the type of distribution for the arsenic dataset, as indicated in the Q-Q plots presented in Figure J-1 for data collected between 0 to 10 ft bgs and in Figure J-2 for data collected between 0 to 15 ft bgs. Additionally, the goodness of fit test was computed using ProUCL and is presented in Attachment J-1. The Q-Q plot, as well as the goodness of fit test, both indicated a good fit for a normal or lognormal distribution, which is considered evidence for the absence of multiple populations or concentrations that were within ambient conditions at the Site.

In addition to determining the types of distribution for each metal (Criteria 1), an ambient versus non-ambient breakpoint was developed by evaluating the Q-Q plots (Criteria 2) to determine if multiple distributions are present (Figures J-1 and J-2). This plot is constructed by plotting the sorted arsenic data against the quantiles of the best-fitting normal, lognormal, or gamma distribution for the data with blue data points being detected values (non-detected values would be represented by red points). In the plot, data points should fall approximately along a diagonal line if the distribution assumption is accurate (small deviations are to be expected and are not significant). Significant breaks or bends in the plots indicate departures from the assumed distribution and suggest multiple populations or outliers.

The arsenic data points presented in the Q-Q plots (Figures J-1 and J-2) appear to generally fall along a diagonal line. A slight deviation is evident with the maximum detected concentration appearing to be a potential outlier; however, it does not appear to be significant. Moreover, there is no source of arsenic at the Site, which suggests the possibility of a background source. If an inflection point, or break in slope on the Q-Q plot had to be selected, the second highest concentration of arsenic detected at the Site (15.4 mg/kg) may be the appropriate value to represent the maximum concentration that could be attributed to the background population.

Criterion 3 mentioned above involves the comparison suggested by the Cal-EPA (1997) of the coefficient of variation (CV) of the data with the values typically displayed by ambient distributions of metals. Cal-EPA (1997) states that metals data drawn from just one population typically display a CV of no more than 1. If the CV was greater than 1, the data were considered to be from multiple populations, whereas a CV less than 1 implies that the underlying distribution had low skewness and the concentrations may be within background. The CV was less than 1 for arsenic (Table J-1), which indicates the low skewness of the dataset and therefore the absence of more than one population.

In addition to the three criteria, an upper-bound outlier was identified using ProUCL, as discussed in the Cal-EPA guidance (2007). ProUCL results identified that the maximum arsenic concentration of 29.1 mg/kg was an outlier (Attachment J-2). This outlier was then removed from the arsenic dataset to generate an adjusted dataset. The adjusted Site-specific arsenic dataset (once the outlier was removed) was statistically re-evaluated and is also presented in Table J-1.

CONCLUSIONS

Based on the results of this evaluation, arsenic concentrations detected at this Site generally appear to be within “background”. Based on the weight-of-evidence approach using the three criteria discussed above, 1) arsenic data followed a lognormal distribution, which Cal-EPA (1997) states is evidence of ambient metal concentrations; 2) arsenic data presented in the Q-Q plot generally appear to fall along a diagonal line suggesting the presence of a single population; and 3) the CV was less than 1 for arsenic which indicates the low skewness of the dataset also suggesting the presence of a single population.

Cal-EPA DTSC commonly has used an arsenic screening value of 12 mg/kg to represent regional background levels for southern California (Chernoff, Bosan, and Oudiz, 2008). Since ProUCL identified the maximum concentration of 29.1 mg/kg to be a potential outlier, an inflection point for the Site dataset could be at 15.4 mg/kg, which appears to be a reasonable background level for this Site. However other lines of evidence (goodness of fitness test, evidence of multiple populations and skewness) indicate that the maximum detected value could be within background.

In summary, based on Cal-EPA's "weight-of-evidence" approach, the statistical analysis demonstrated that Site arsenic data is reasonably expected to be present at "background" concentrations.

Background Evaluation of Arsenic in Soil

Sample Depth	Arsenic Data	Summary Statistics										Arsenic within Background? (2)
		# Detect	# NDs	% Detects	Minimum of Detects (mg/kg)	Maximum of Detects (mg/kg)	Average of Detects (mg/kg)	Standard Deviation	Skewness	CV	Distribution (1)	
0 to 10 feet bgs	all	66	1	99	1.28	29.1	6.6	4.1	2.7	0.62	lognormal	Yes
	minus outlier	65	1	98	1.28	15.4	6.3	3.0	0.5	0.48	lognormal	Yes
0 to 15 feet bgs	all	73	1	99	1.28	29.1	6.5	3.9	2.8	0.61	lognormal	Yes
	minus outlier	72	1	99	1.28	15.4	6.1	2.9	0.6	0.47	lognormal	Yes

Notes:

" -- " not applicable; " mg/kg " milligram per kilogram

(1) Distribution of the data determined using USEPA ProUCL version 4.1 software

(2) Arsenic data was considered to be within "background" since the following criteria were met:

2a) Arsenic data followed a lognormal distribution determined from the Q-Q plots and the Goodness of Fit (GOF) test

2b) Arsenic data in the Q-Q plot generally fell along a diagonal line suggesting the presence of a single population

2c) Coefficient of Variation (CV) < 1, which indicates the low skewness of the dataset suggesting the presence of a single population.

Appendix A - Health and Safety Plan

1. INTRODUCTION

Hemphill, Green & Associates LLC (HGA) has prepared this soil vapor survey workplan on behalf of our client, LeFiell Manufacturing Company (LeFiell) in compliance with the 2009 Voluntary Cleanup Program (VCP) agreement between LeFiell and the Department of Toxic Substances Control (DTSC).

LeFiell, a global leader in the design and manufacture of precision tubular parts for the aerospace and marine industries, has conducted operations from its current location since the late 1950's. The LeFiell property is comprised of three parcels of land located at 13700, 13750, & 13770 Firestone Boulevard, Santa Fe Spring in Los Angeles County, California (the Site).

A subsurface investigation of a portion of the Site immediately adjacent to Firestone Boulevard was initiated by the California Department of Transportation (Caltrans) in 2007. The investigation was conducted by Ninyo & Moore as part of a regional assessment for land acquisition associated with the Carmenita Road Interchange Improvement Project. During the investigation, chlorinated aliphatic hydrocarbons (CAHs), including tetrachloroethene (PCE) and trichloroethene (TCE), were detected in soil and groundwater. Ninyo & Moore reported their investigation results to Caltrans in a February 28, 2007 report (Ninyo & Moore 2007). As required by the California Health and Safety Code, Caltrans notified DTSC that hazardous substances had been detected in soil and groundwater samples collected at the Site. DTSC informed LeFiell of the Caltrans investigation results on January 28, 2009.

In their notification letter to LeFiell, DTSC requested further investigation of the Site based on the reported presence of chemicals of concern (COCs) in soil and groundwater. DTSC indicated that further investigation was required to determine the nature and extent of the subsurface impacts, and offered LeFiell the option of proceeding with the investigation under DTSC's VCP. LeFiell entered into the VCP in May 2009.

Representatives of DTSC, LeFiell, and HGA met at the Site on April 28, 2009 to discuss the VCP and the additional investigation required by the agency. During the meeting, all parties agreed, in general, upon a scope of work for a subsurface soil vapor investigation to identify potential COC sources at the Site. This workplan outlines the subsurface assessment methods proposed for identifying the potential COC source areas at the Site.

1.1 Assessment Objectives

The objective of the proposed soil vapor survey is to determine potential site-specific source areas (if any) that could have caused or contributed to the COC impacts detected in subsurface samples collected as part of the 2007 site investigation conducted for Caltrans. The investigation will focus on identifying contaminant source(s) by sampling the shallow subsurface soil vapor at depths of 5 and 15 feet below ground surface (bgs) at on-site locations where COCs were used or stored.

1.2 Workplan Outline

This workplan has been organized into the following sections:

Section 1, *Introduction*, presents the reason for the soil vapor survey and the survey objectives.

Section 2, *Site Background*, presents a brief history of the Site, the environmental assessments that have occurred, and describes the Site's geology and hydrology.

Section 3, *Scope of Work*, describes the proposed soil vapor sampling procedures, locations, and analyses.

Section 4, *Proposed Schedule*, presents the anticipated project schedule.

Section 5, *References*, lists the documents cited within the text of this workplan.

Section 6, *Limitations*, describes the proper use of the workplan, its limitation, and contains the signatures of the environmental professionals responsible for the report.

2. SITE BACKGROUND

LeFiell Manufacturing Company (LeFiell) manufactures precision tubular products for commercial airplanes and the defense and aerospace industries. A smaller portion of LeFiell's operation involves the manufacture of sail masts for sailing vessels. LeFiell was founded during the 1930's, but began operations at its current location in the late 1950s.

The LeFiell property is located on three contiguous parcels of land totaling approximately 11 acres at the northwest corner of Marquardt Avenue and Alondra Boulevard in Santa Fe Springs, California (Figure 2.1). The Site is bordered on the northeast by Firestone Boulevard and the Santa Ana (I-5) Freeway and on the southwest by the Southern Pacific Rail Road. The Site includes limited landscaping along the Firestone Boulevard property entrance. Street addresses for the three parcels are 13700, 13750, and 13770 Firestone Boulevard. The parcel at 13770 Firestone Boulevard is currently leased and occupied by Budget Rent a Car. LeFiell's manufacturing and administrative operations occur at 13700 and 13750 Firestone Boulevard.

2.1 Environmental History

2.1.1 2004 HGA Phase I Environmental Site Assessment (ESA)

A Phase I ESA of the Site was performed in 2004 by HGA (HGA 2004). The ESA report included aerial photographs taken between 1928 and 1952 which show the Site and the adjacent properties to be unimproved agricultural land. Building construction and permit records indicate that the building construction began in 1958.

The Phase I ESA also indicated that four underground storage tanks (USTs) and two sumps were removed/closed in the mid-1980s. All were closed under the oversight of the Los Angeles County Department of Public Works, and were identified as:

- One 7,500-gallon gasoline UST
- One 500-gallon waste oil UST
- Two 2,000-gallon gasoline USTs (with associated fuel pump island also removed)
- Two 1,500 gallon wastewater sumps

One tank of undisclosed capacity pre-existed LeFiell's occupancy of the property and was reportedly abandoned in place.

The Phase I ESA also reported the presence of sumps at the site. A die penetrant sump was closed in late 1997. Confirmatory sampling was completed and the contents were analyzed and found to be non-hazardous. Additional active underground sumps, clarifier, and tanks were reported in the Phase I as follows:

- Two collection sumps which transfer wastewater generated by the boat mast wash area to the wastewater treatment area.
- One underground clarifier that serves as a feed to the wastewater treatment evaporation system.
- Heat treatment quench tanks that are below ground level and contain glycol quenchant.

The 2004 Phase I ESA report concluded the followings:

- Standing liquid and stained soils were observed in various areas that suggests the possibility of subsurface contamination from petroleum products (namely heavy lubrication oils). Soil boring and sampling was recommended to verify the extent of possible contamination.
- Long term use of halogenated vapor degreasing solvents was noted in two areas (the old vapor degreaser and the new vacuum system locations). Possible release of these solvents could not be visually detected. It was recommended that soil and soil vapor sampling be conducted to identify possible soil and groundwater impacts.
- Confirmatory soil sampling was not conducted in connection with the underground storage tank removals and thus any release that could have occurred was not verified.
- Existing belowground sumps had not been profiled for hazardous materials. It was recommended that belowground sumps be profiled for hazardous materials to identify any potential source of contamination.

2.1.2 2007 Ninyo & Moore Phase II ESA for Caltrans

The Caltrans Phase II ESA was performed as part of the environmental site investigation (SI) for the Carmenita Road Interchange Improvement Project. Caltrans intends to acquire a portion of the Site along Firestone Boulevard. The SI was performed by Ninyo and Moore in December 2006 and reported in 2007. The SI included the advancement of six soil borings and one soil vapor boring and the collection of soil, soil vapor, and groundwater samples.

The results of the SI identified the presence of VOCs, principally chlorinated aliphatic hydrocarbons (CAHs), in soil, soil vapor, and groundwater. Figure 2.2 and 2.3 graphically present the sample locations and COC concentrations in soil and groundwater, respectively, that were detected during the Caltrans investigation. Figure 2.4 shows the location of the single soil vapor boring and COC concentrations measured in soil vapor (Ninyo & Moore 2007).

The highest concentration of COCs in soil were measured in Boring 952-404 (see Figure 2.2) at a depth of 25 feet bgs. PCE and TCE were detected in that sample at concentrations of 3,600 parts per billion (ppb) and 220 ppb, respectively (Ninyo & Moore 2007). Boring 952-404 is located at the northwest corner of the manufacturing/office building along Firestone Boulevard.

Groundwater was reported in December 2006 to be at approximately 29.5 feet bgs. Maximum concentrations reported for COCs in groundwater included PCE at 11,000 ppb, TCE at 1,600 ppb, and 1, 4-dichlorobenzene (1, 4-DCB) at 14 ppb (Figure 2.3). With the exception of 1,4-DCB, the highest levels of COCs were found in groundwater samples collected between the two manufacturing buildings. The highest level of 1,4-DCB was detected in a groundwater sample collected at the eastern portion of the Site (currently leased by Budget) near the location of a former fuel and waste oil USTs (Ninyo & Moore 2007).

Soil vapor samples were collected at depths of 5 feet and 15 feet bgs at the eastern portion of the Site in the area of the former fuel and waste oil USTs (Figure 2.4). PCE and benzene were detected in the soil vapor sample collected at a depth of 5 feet bgs at concentrations of 590 $\mu g/m^3$ and 660 $\mu g/m^3$, respectively. Lower levels of PCE were also detected in the vapor sample collected at 15 feet bgs (Ninyo & Moore 2007).

2.2 Geology and Hydrogeology

2.2.1 Geology

The Site is located in the northeast portion of the Central Plain of the Los Angeles Basin (the Basin), a deep structural basin in southern California. In turn, the Basin is located in the northwest portion of the Peninsular Ranges Geomorphic Province of California. This province is generally characterized by belts of major northwest-southeast trending mountains and active faults.

The Central Plain in the area of the Site is characterized by complex faulting and anticline and syncline structures. The subsurface includes nonmarine and marine sediments to depths in excess of 2.5 miles.

The Site is located on nearly level ground at an elevation of approximately 70 feet above mean sea level (Figure 2.1). The natural underlying substrate beneath the Site is comprised of recent (Holocene) unconsolidated alluvium probably derived from the nearby San Gabriel River system located approximately 3 miles west of the Site. Soil boring logs from the Caltrans SI describe subsurface soils as primarily silty sand with some clay and sand to approximately 30 feet bgs, the maximum depth of the investigation.

2.2.2 Hydrogeology

Two groundwater basins are located within the Coastal Plain of Los Angeles County: the West Coast Basin and Central Basin. The Basins are composed of Quaternary Geologic age sediments of gravel, sand, silt, and clay, which are less than 2 million years old and were derived from nearby mountains and marine shoreline and shallow sea environments.

The site is located within the Central Basin Pressure Area where confined aquifer systems prevail. Numerous aquifers occur to depths of 2,000 feet bgs in the Central Basin. The main freshwater production is from the recent Holocene alluvium and Pleistocene Lakewood and San Pedro formations. Regional groundwater flow direction within the Central Basin is toward the west-southwest.

A municipal water supply well (Santa Fe Springs Well No. 2, State Well 3S/11W-20R9) is located approximately one-half mile west of the site at Santa Fe Springs Fire Station No. 3 (15517 Carmenita Road). According to the *Semi Annual Progress Report, Alondra Industrial Park* prepared by LFR Inc. (LFR 2008), the well was completed on June 8, 1964, and is screened from 336 to 1,219 ft bgs (total well depth is 1,250 ft). Alternating layers of clay, fine sand, and gravel were reportedly encountered from the ground surface to the total well depth, and a layer of "hard clay (semi-cemented)" was observed from 50 to 70 ft bgs.

During the Caltrans investigation of the LeFiell property, Ninyo & Moore identified a "former production well" located at the edge of Firestone Boulevard near the northeastern corner of the manufacturing building (Figure 2.2). Other than depicting the location on its site figures, the Caltrans report contains no information about the production well. According to Mr. Don Averill, LeFiell's plant manager, the well is not owned by Lefiell. HGA contacted the City of Santa Fe Springs Department of Public Works concerning the well on March 30, 2010 and spoke with Mr. Frank Beech. Mr. Beech indicated that the city does not own any wells at the location indicated by Ninyo & Moore. Calls made to the Los Angeles County Department of Public Works to obtain information concerning the well have not been returned as of the date of this report. Consequently, the ownership and status of the well remain unknown.

The Caltrans report states that the regional depth to groundwater in the Site vicinity ranges from approximately 15 feet bgs to 40 feet bgs and that regional groundwater flow is to the south (Ninyo & Moore 2007). However, data from surrounding properties suggests a northeasterly groundwater flow direction. LFR reported groundwater flow at the Alondra Industrial Park to be toward the north-northeast (LFR 2008). Groundwater from the Frigid Coils property, located approximately 500 feet north of the site, is toward the northeast (HGA 2009).

The depth to first groundwater at the Site reported during the Caltrans SI was approximately 29.5 feet bgs (Ninyo & Moore 2007). The Caltrans study did not determine the direction of groundwater flow at the site.

3. SCOPE OF WORK

As discussed in Section 1, representatives of LeFiell, DTSC, and HGA met in April 2009 to discuss the scope of work for assessing the site with a goal of identifying any potential onsite sources for the for COCs detected during the 2007 Caltrans site investigation. All parties agreed upon the collection and analysis of appropriate soil vapor samples to identify potential contaminant source areas. Soil vapor sampling and analysis is an efficient method for cost-effectively assessing a large area for contaminant source(s).

All site assessment proposed below will be performed under the direct supervision of a California-registered Professional Geologist. The following sections discuss the specific areas to be sampled and the protocols to be followed during the assessment.

3.1 Health and Safety Plan

HGA has prepared a Health and Safety Plan for the Subsurface Assessment activities. The Health and Safety Plan is included in Appendix A of this report.

3.2 Utility Clearance

HGA will contact Underground Service Alert (USA) to mark existing subsurface utilities at the Site. HGA will identify the areas where work is to be conducted with white paint, and if necessary, will meet with the utility clearance personnel to assist in completing the underground utility clearance activities.

3.3 Sampling Rationale

Limited subsurface data is available for the Site. The sampling rationale for the proposed soil vapor survey is to investigate a relatively large surface area for potential contaminant sources in order to determine the scope of future investigations.

Figure 3.1 shows ten proposed locations where soil vapor probes will be installed to assess VOCs and potential contaminant source(s). The locations include manufacturing operations that used or stored COCs (e.g. PCE, TCE), the former fuel and waste oil USTs, the former underground sump/clarifier, and areas where previous subsurface data indicated the presence of COCs in soil and/or soil vapor and groundwater.

The investigation will be performed in two phases. The initial phase will involve placement of ten direct push borings within the potential onsite source areas (Figure 3.1). Two nested probes will be installed in each of the ten borings. Vapor probes will be installed at approximately 5 feet and 15 feet bgs in each boring. This will result in the collection of 20 vapor samples, which will be analyzed for volatile COCs in an on-site mobile laboratory.

The results obtained during this soil vapor survey will be used to identify any onsite contaminant source areas of significance for further assessment. The need for and direction of any future assessments warranted by the results of the proposed soil vapor survey will be determined in concurrence with LeFiell and DTSC. Future assessments of site soil (soil matrix sampling) will include all potential COCs based on relevant site history. In addition to VOCs, potential COCs may include total petroleum hydrocarbons (TPH), metals, and semi-volatile organic compounds (SVOCs) including polycyclic aromatic hydrocarbons (PAHs).

3.4 Site Specific Areas of Investigation

The rationale for selecting the ten soil vapor sampling locations shown in Figure 3.1 is discussed below.

3.4.1 Location 1- Waste Oil and Scrap Metal Storage Area

Scrap metal is temporarily stored in metal bins within a containment area located at the north-northwestern portion of the site (Figure 3.1). The metal is often coated with heavy petroleum-based lubricants. Drummed waste oils are also temporarily stored within the containment area prior to their removal from the site. Both the scrap metal and waste oils are recycled and are typically stored at the site for 60 days or less before being transported to recycling facilities.

3.4.2 Location 2- Indoor Parts Cleaning Area

The indoor parts cleaning area (Figure 3.1) contains a closed loop vacuum degreaser system which uses TCE to clean petroleum-based lubricants from parts after they are formed. The vacuum degreaser is located in the large manufacturing building. A solvent still is used to facilitate solvent recovery. The closed loop system replaced the large, open vapor degreaser (vapor sample location 4), and has operated at the site since late 1999.

3.4.3 Location 3- Spray Paint Booths Area

Paint booths located at the western portion of the property (Figure 3.1) are used for painting masts for sailboats. This historic use of paints in this area is sufficient to warrant sampling of soil vapor at this location.

3.4.4 Location 4- PCE Aboveground Storage Tank and Degreaser Area

A large, open vapor degreaser was previously operated at proposed vapor sample location 4 (Figure 3.1). No subsurface sump is associated with the degreaser. The degreaser used PCE to clean formed metal parts of petroleum-based lubricants. A solvent still was used to capture solvent for reuse in the degreaser. Although still present at the site, the degreaser has not been used since approximately 1999. LeFiell intends to begin dismantling of the degreaser for recycling in the immediate future.

3.4.5 Location 5- Clarifier & Waste Water Treatment Area

Industrial wastewater generated during operations is fed to a pH adjust/evaporation treatment system at proposed vapor sample location 5. The onsite treatment system is property maintained and permitted under the permit-by-rule (PBR) system. Sources of wastewater at the facility include chemical etch line rinse water, spent wash water from boat mast coating, and miscellaneous sources such as water from floor and equipment wash down.

3.4.6 Location 6- Former Gasoline UST Area on the LeFiell Manufacturing Site

As mentioned, gasoline USTs and an associated fuel island were removed from the LeFiell manufacturing property in 1986 at proposed vapor sample location 6 (Figure 3.1). Although these tanks were removed under the oversight of the Los Angeles County Department of Public Works (LADPW), confirmation sampling was not performed at the time the tanks were removed. A December 26, 1985 letter from LADPW states that confirmation sampling was not required (at that time) if tank contents were vehicle fuel, oil, or waste oil (HGA 2004). The lack of confirmation sampling at the time the USTs were removed provides justification for the collection of soil vapor samples in the former gasoline UST area.

3.4.7 Locations 7 & 8- Former Fuel UST Area on the Parcel Leased by Budget

The southeastern portion of the site, currently leased by Budget, previously contained six underground storage tanks (USTs) which were removed in 1992. The USTs included two

10,000-gallon diesel USTs, two 10,000-gallon gasoline USTs, and two 550-gallon waste oil USTs. Benzene and PCE were detected in a soil vapor sample collected from this area during the Caltrans SI. Proposed soil vapor sample locations 7 and 8 are located on opposite sides of the former UST pit (Figure 3.1) and will help delineate the extent of the benzene and PCE soil vapor impact detected during the Caltrans SI.

3.4.8 Location 9- Confirmation and Verification area

Proposed location 9 is located between the Budget property and the LeFiell's manufacturing operations. Location 9 is intended to aid in the delineation and determination of the nature and extent of contamination. There is no specific chemical use history in this area.

3.4.9 Location 10- Vicinity of Caltrans Boring 952-404

As mentioned, the highest concentrations of PCE and TCE detected in soil during the Caltrans SI were found in Boring 952-404 (see Figure 2.2) at a depth of 25 feet bgs. PCE and TCE were measured in that sample at 3,600 ppb and 220 ppb, respectively (Ninyo & Moore 2007). Boring 952-404 is located at the northwest corner of the manufacturing/office building along Firestone Boulevard. Proposed soil vapor sample location 10 (Figure 3.1) will be used to correlate soil matrix concentrations with soil vapor concentrations.

3.5 Sample Collection – Soil and Soil Vapor

3.5.1 Soil Sampling

In order to complete a "survey" of the potential contaminant source areas in a timely and cost effective manner, soil matrix sampling will *not* be included in the scope of work for this investigation. The intent of this survey is to identify potential contaminant source(s) and impacted area(s) via the collection and analysis of soil vapor samples. The results of the vapor sample analysis and evaluation will identify areas where additional investigation, including the collection of soil matrix or other samples, is warranted.

3.5.2 Soil Vapor Sampling

Installation of the soil vapor probes and sampling shall comply with the procedures of the *Advisory –Active Soil Gas Investigations* (DTSC 2003) and the *Interim Final - Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (DTSC 2005). Direct push borings will be advanced in the areas proposed in Figure 3.1. Two vapor sampling probes will be installed (nested) in each of the ten boring locations at depths of approximately 5 feet and 15 feet bgs.

3.5.2.1 Soil Vapor Probe Construction

The soil vapor probes will be constructed as semi-permanent installations to enable recurring vapor sampling. The proposed soil vapor probe construction is shown in Figure 3.2. The procedures to be followed when constructing the permanent gas probes at each location are as follows:

- The probe tip will be emplaced midway within a sand pack with a minimum thickness of 1 foot. The sand pack will be appropriately sized and installed to minimize disruption of airflow to the sampling tip. It is anticipated that the vapor probe will have a stainless steel tip with perforated gas inlets. Teflon tubing attached to the soil gas probe will serve as the conduit through which to extract the soil vapor sample.
- At least one foot of dry granular bentonite will be emplaced on top of each sand pack to prevent the infiltration of hydrated bentonite grout.
- Hydrated bentonite grout will be used to seal the remaining annular space.

In addition:

- Teflon tubing connected to each soil vapor probe will be appropriately labeled to ensure that the proper vapor sample is being collected.
- A downhole probe support will be utilized where needed and will consist of PVC pipe or equivalent.
- Surface completions at each semi-permanent soil vapor boring will consist of a flush mounted utility box with ventilation holes and lock and gas tight fitting on the sampling tubes or an equivalent.

3.5.2.2 Purge Volume Test

The vapor collection system will be purged prior to sample collection to ensure stagnant or ambient air is removed and a representative soil vapor sample is obtained. The purge volume will be estimated by summing the volumes of (1) the sample container, (2) the internal volume of the tubing used to convey the vapor sample from the vapor probe to the sample container, and (3) the annular space around the probe tip.

Three different purge volumes will be sampled (nominally 1, 3, and 7 purge volumes) and analyzed immediately to determine the volume amount containing the highest VOC concentration. This purge volume will be the purge volume used throughout the soil vapor sampling.

3.5.2.3 Leak Test

A leak test will be performed during sample collection. The leak test will be performed as follows:

- A leak check compound (typically difluoroethane, isopropanol, or butane) will be placed at any location where ambient air could enter the sampling system (e.g. surface connections, bentonite surface seals, etc.) prior to vapor sample collection.
- If the leak check compound is detected in the sample, a leak exists, and the vapor sample result is not valid. Field personnel will attempt to locate the leak and correct the problem before the location is resampled.

3.5.2.4 Soil Vapor Sample Collection

To allow for subsurface equilibration following vapor probe installation, soil vapor samples will be collected no sooner than 30 minutes after the probe is installed by direct push boring method, or 48 hours following hollow stem boring operations.

The soil vapor sampling train is shown in Figure 3.2 and consists of the dedicated stainless steel sampling probe and Teflon tubing, a 3-way valve, and a sampling syringe. The use of small, calibrated syringes allows for careful monitoring of purge and sample volumes. Purge and sampling rates will be between 100 to 200 milliliters per minute in accordance with DTSC recommendations. This vapor sampling procedure ensures adequate sample flow is obtained without excessive pumping of air.

After a leak check compound has been appropriately placed, and the probe tip and sample tubing have been purged by the appropriate purge volume as determined in Section 3.5.2.2, the 3-way valve will be opened, and a sample of in-situ soil vapor will be withdrawn into a gas tight syringe.

Once the sample has been collected, the 3-way valve is closed and the syringe is removed from the sampling train and immediately transferred to the onsite mobile laboratory for analysis.

Vapor samples will be analyzed on site for the full suite of VOCs by EPA Method 8260B. As mentioned, if any trace of the leak check compound is detected in the sample, the sample will be invalid, and the location resampled after the probe and sampling system have been checked and any leaks repaired.

QA/QC samples will also be collected during the survey into Summa™ canisters (see Section 3.5.3). Summa canisters will be analyzed at an offsite laboratory VOCs by method TO-15.

3.5.2.5 Decontamination Procedures

Soil vapor sampling points and tubing are dedicated and will not be reused. Sampling syringes and Summa canisters are clean when they arrive at the site and are either new or have been decontaminated by the laboratory prior to use. Sampling syringes at the site will be flushed with clean air after each use or replaced. Summa canisters will not be reused at the site.

3.5.3 Quality Assurance/Quality Control Samples

The data quality objectives (DQO) outlined below are in accordance with the goal of identifying potential sources of COCs and areas warranting further investigation. The laboratory detection limits (DL) are consistent with those found in the DTSC *Advisory-Active Soil Gas Investigations* (DTSC 2003) and the *Interim Final – Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (DTSC 2005). The laboratory DL will be 1 µg/L for VOCs in soil gas. Leak check laboratory DL will be 10 µg/L or less.

To monitor the quality and representativeness of environmental sample results, quality assurance/quality control (QA/QC) samples will also be collected. Both field and laboratory QA/QC samples will be used.

Soil vapor samples will be collected in evacuated gas-tight syringes and analyzed for VOCs by Method 8260B (USEPA 1996) modified for air analysis. The results of the field work will be independently confirmed through the collection of duplicate soil gas samples in 1-liter Summa™ canisters. The collection of duplicates will confirm the laboratory detection limits and identify other potential COCs at the site. DTSC recommends that ten percent of the soil vapor samples collected in the field be confirmed with vapor samples collected using Summa™ canisters and analyzed using method TO-15 (USEPA 1999b). The Summa™ canister duplicates will be collected in areas of both high and low VOC concentrations. Two confirmation samples are anticipated during this investigation.

The analytical laboratory performing each analysis will have its own internal QA/QC procedures. These include method blanks, surrogates, matrix spike and matrix spike duplicates, laboratory duplicates and initial and continuing calibration checks.

3.5.4 Investigation Derived Waste

All investigation derived waste (IDW) will be retained on-site in watertight 55-gallon drums. The IDW may include decontamination fluids and soil cuttings. Drummed waste will be profiled to determine the appropriate disposal of the container contents. The IDW will be appropriately disposed in accordance with regulatory requirements.

3.6 Site Assessment Report

Upon completion of field and laboratory activities, a Soil Vapor Survey Report detailing the activities and results of the vapor survey will be prepared. The report will include a comprehensive summary of all soil vapor data collected at the site as part of this investigation and a conceptual site model (CSM). The CSM will identify contaminant sources as determined during the soil vapor survey, potential fate and transport pathways, and receptor exposure routes. Complete graphical documentation, including site plans depicting vapor sample locations and soil vapor contaminant concentration isopleths, will be provided in the report.

The vapor survey report will also include an evaluation of the completeness of the investigation and HGA's recommendations. The report will be signed by a professional geologist registered by the State of California, and copies will be submitted to the DTSC for review and comment.

4. PROPOSED SCHEDULE

It is anticipated that the field activities proposed herein will commence approximately two weeks after this workplan has been approved by DTSC and the Client has authorized HGA to proceed. DTSC shall be notified at least five business days prior to the commencement of the scheduled field activities. A proposed project schedule is provided in Figure 4.1.

6. LIMITATIONS

6.1 Report Use

This document was prepared for the sole use and benefit of LeFiell Manufacturing Company (Client), and is based in part upon documents, writings and information owned and possessed by the Client. Neither this report, nor any of the information contained herein, shall be used by any person or entity other than the Client.

6.2 Standard of Care

Services performed by Hemphill, Green & Associates LLC will be conducted in a manner consistent with the level and skill ordinarily exercised by members of our profession currently practicing in southern California. No other representations, expressed or implied, and no warranty or guarantee is included or intended in this report.

On behalf of Hemphill, Green & Associates LLC, we appreciate the opportunity to provide the following workplan for the proposed site assessment activities. We trust that the information contained in this report satisfies DTSC's requirements for additional investigation at the subject site.

I. INTRODUCTION

This Health and Safety Plan describes the basic safety requirements for drilling and sampling of soil vapor possibly impacted by tetrachloroethene (PCE), trichloroethene (TCE), and benzene at the above referenced site. The provisions herein will apply to the employees of Hemphill, Green & Associates LLC (HGA) and to any subcontractor(s) working for HGA at the site. Subcontractors may elect to modify these provisions, but only to upgrade or increase the safety requirements, and only then, with written approval from HGA's Senior Safety Officer.

The Health and Safety Plan will also address the potential hazards that may be encountered in performing the work and interactions with the emergency response community. In response to the changing conditions on specific sites, HGA will modify the Heath and Safety Plan as warranted.

Purpose and Scope

The Health and Safety Plan is intended to describe the minimum procedural and equipment requirements for the protection of HGA employees, its subcontractors, and the public who may be affected by the work requirements. Operating conditions can be expected to change as the work progresses, requiring some modifications to the plan. An appropriate agenda will be provided by the HGA, Senior Safety Officer.

This Health and Safety Plan is intended to comply with established HGA's policies and procedures and applicable federal, state, and local regulations. Therefore, no changes to the plan will be authorized without prior approval of the Senior Safety Officer. All HGA personnel, site visitors, and subcontractors are subject to this directive.

Senior Safety Officer

The Senior Safety Officer reports to HGA management and is responsible for on-site safety and loss prevention functions. The Senior Safety Officer's responsibilities include:

1. Health surveillance of all HGA employees;

2. Assuring that specific safety procedures in effect are in compliance with appropriate federal, state, and local regulation – (following the most stringent of the standards);

3. Assuring appropriate personnel protective equipment (PPE) is adequate for actual hazards anticipated or encountered onsite;

4. Coordination of emergency response plans with local emergency response authorities and medical facilities;

5. Establishment of site-specific safety procedures for problems that may be encountered on-site.

II. ON-SITE PROJECT SAFETY

The Site Safety Officer and Project Supervisor are responsible for ensuring compliance with the safety procedures established in this Health and Safety Plan. The Project Supervisor may modify work practices to meet safety requirements. The Site Safety Officer has the primary responsibility in determining the appropriate modifications to any safety procedures.

The Site Safety Officer is responsible for the dissemination of the information contained in this plan to the HGA personnel assigned to the project, and to the responsible representative of each subcontractor firm working under HGA on the project.

The on site project and safety officers are as follows:

Project Officer: Rich McKinney, PG
Hemphill, Green & Associates LLC
(951) 658-0114 Office

Safety Officer: Jim Hutchison
Hemphill, Green & Associates LLC
(951) 658-0114 Office
(951) 764-0149 24 Hour

Safety Officer Responsibilities

The Site Safety Officer will also be responsible for ensuring the following items are adequately addressed;

1. Ensuring that field personnel have adequate health and safety training;

2. Providing a site safety briefing for field personnel before beginning field activities;

3. Inspecting personnel protective equipment prior to on-site use;

4. Documenting compliance with this Health and Safety Plan by completing the attached health and safety forms;

5. Reporting any unsafe conditions, practices, equipment, malfunctions, or any other deficiencies;

6. Stopping activities that endangers the heath and safety of field personnel or the surrounding populace;

7. Observing and monitoring field personnel for signs of chemical exposure, heat stress, or other related conditions;

8. Reporting incidences which result in the injury or exposure to toxic or hazardous materials;

9. Updating equipment or procedures used on-site based on new information gathered during fieldwork.

The following is a list of reference contacts and telephone numbers for this project:

Client: LeFiell Manufacturing Company	Telephone #: (562) 921-3411
Client Contact: Don Averill, Facility Manager	
Regulatory Agency: Department of Toxic Substance Control	
Agency Contact: Armen Minassian, PE	Telephone #: (818) 717-6585
Client Safety Officer: Don Averill	
Hemphill, Green & Associates Site Safety Officer: Jim Hutchison	

Emergency telephone numbers and directions are as follows:

Fire/Police/Ambulance: 911

Trinitycare Extended Care, (818) 709-5268,
13030 Alondra Blvd., Cerritos, CA

To Trinitycare from the site, proceed South on Firestone Blvd to Alondra, right turn on Alondra, go 1 mile, Trinitycare on the left side, south side of Alondra – see enclosed map.

An exclusion zone will be established approximately 20 feet around the work area. A decontamination and support zone will be established in an upwind direction. Communication between field personnel will consist of hand signals and verbal communication. No persons other than HGA's personnel, or their subcontractors will be allowed in the exclusion zone without prior authorization from the Site Safety Officer, or without proper personal safety equipment. The work areas will be cleaned and the exclusion zone secured at the end of each workday.

Safe Work Practices

Safe work practices, including personnel sanitation measures, will be employed for the duration of the project. Among the specific activities which will be employed are:

1. Set up, assemble, and check out all equipment for the integrity and proper function before entering the work area and prior to starting work activities;

2. Faulty or suspect equipment will not be used;

3. Use only new and intact protective clothing. Change into new overall and gloves once they are removed or if they are torn during use;

4. Do not use hands to wipe sweat away from face. Use clean towel or paper towels;

5. Practice contaminant avoidance at all times;

6. Do not smoke, eat, drink, or apply cosmetics while in the immediate area;

7. Wash hands, face, and arms as soon as possible upon exiting the work area and prior to taking rest breaks, lunch breaks, and leaving the site at the end of the workday.

8. Perform decontamination procedures as required by this health and safety plan;

9. Notify the Site Safety Officer immediately if there is an accident that causes injury or illness.

III. HAZARD IDENTIFICATION

The potential hazards to personnel working at this site have been identified as chemical contamination, physical hazards of working around drilling rigs, and patron vehicle traffic. The maximum concentrations previously reported of the chemicals of concern in soil vapor are: Perchloroethylene (PCE) 590 µg/m^3 , Benzene 660 µg/m^3 and soil maximum concentrations of PCE 3,600 µg/kg, TCE 220 µg/kg. The site is an active manufacturing facility with industrial buildings and administration buildings situated on approximately 11 acres of land. The site is located on Firestone Boulevard adjacent to the intersection of the Fwy No 5 and Alondra Boulevard in Santa Fe Springs, CA, more specifically, 13700, 13750, 13770 Firestone Boulevard.

The sampling rationale for this assessment is to investigate a relatively large onsite surface area for potential contaminant sources in order to determine the scope of future investigations and mitigation actions if necessary.

The sampling locations coincide with manufacturing operations that utilized the chemicals of concern (e.g. PCE, TCE), former petroleum hydrocarbon UST locations, underground sump/clarifier sites, and locations where previous subsurface data indicated the presence of COC in soil and/or soil vapor and groundwater. Groundwater is deeper (~30 feet bgs) than the depth of investigation for this assessment (~15 feet bgs). Groundwater will not be assessed as part of this investigation.

The investigation will be performed in two phases. The initial phase will involve placement of direct push borings, two probes will be installed (nested) in each of boring locations. Vapor probes will be installed at approximately 5 feet and 15 feet bgs in each of boring locations resulting in the collection of vapor samples. One boring will be advanced at each of the suspected source areas illustrated in Figure 4.

All of the boring sites are in the open, asphalt/concrete covered area between buildings. The primary route of exposure is via inhalation. All boring sites, except for one are in the open and well ventilated.

As per the work plan, on site activity is scheduled to last approximately one (1) days.

The potential hazard relative to the potential for exposure is discussed in the following sections.

Chemical Exposure

It is our understanding based upon information obtained from a review of a previous subsurface assessment of soil, soil vapor, and groundwater that VOCs in the form of chlorinated aliphanic hydrocarbons (CAH) (e.g. PCE, TCE) and benzene contamination is present in the soil underlying this site. Of particular concern with respect to health and safety issues are benzene, PCE, TCE, and compounds associated with the breakdown of PCE and TCE.

Of particular concern with respect to health and safety issues is the fact that Benzene and PCE and its breakdown products are readily evaporated from soil and water to air. Therefore, the primary route of exposure is through inhalation.

An exposure analysis of airborne contaminates is presented in table 1. This table is compiled from California Code of Regulations title 8, sec 5155, Table3 AC-1 Permissible Exposure Limits for chemical contaminates as presented to CAL OSHA.

Table 1
Exposure Analysis
Potential Constituents of Concern

Constituent	PEL		Ceiling	STEL	
	Ppm	m_s/m^3		ppm	m_s/m^3
Perchloroethylene (PCE)	25	170	300ppm	100	685
Trichloroethylene (TCE)	25	135	300ppm	100	537
1,1 – Dichloroethylene (1,1 DCE)			—	—	—
1,2 – Dichlonoethylene (CIS – 1,2 DCE)	200	790	—	—	—
Benzene	1	1	—	5	—

Table 1 – Definitions

PEL - Permissible Exposure Limit. The maximum permitted 8-hour time-weighted average concentration of an airborne contaminate.

Ceiling- The maximum concentration of an airborne contaminant to which a person may be exposed at any time.

STEL - Short Term Exposure Limit. A 15-minute time weighted average exposure which is not to be exceeded at any time during a workday even if the 8-hour time-weighted average is below the PEL.

The chemical exposure hazards involved with PCE and breakdown products are as follows:

- Sufficient evidence exists that PCE is carcinogenic;
- Can cause severe irritation to skin including burning and damage to the nervous system, including dizziness, headache, confusion, nausea, sleepiness, difficulty in speaking and walking, unconsciousness, and death;
- High concentrations may be associated with liver and kidney damage.

The chemical exposure hazards involved with benzene is as follows:

- Benzene is a human carcinogen, and can cause various forms of cancer from prolonged exposure.
- Even a small amount of benzene exposure can cause temporary nervous system disorders, immune system depression and anemia. Short term affects include skin, eye, and respiratory tract irritation, headache, stomach irritation, drowsiness and dizziness.

- High levels of exposure can result in a rapid heart rate, excessive bleeding, tremors, vomiting, unconsciousness and death. Benzene can cause harmful effects on bone marrow, and can cause a decrease in red blood cells leading to myelofibrosis and myelodysplastic syndrome.

Equipment Hazards

Personnel should be aware of moving vehicles and pieces of machinery. When working around the drill rig, it is important to maintain visual contact with the rig operator. Under no circumstances are personnel to position themselves beneath or over equipment being lifted by any of the drill rig hoists. There is a possibility of falling objects or debris from overhead equipment. All personnel working in close proximity to the machinery shall wear hardhats at all times.

Personnel must not put their hands near the augers or drilling machinery when it is in operation.

Personnel should not position themselves so as to be continuously exposed to exhaust from engines used to power the drill rig.

Noise

Excessive noise levels may be expected while working on-site. If noise levels exceed 85 dBA all site personnel will have hearing protection equipment available.

IV. TRAINING REQUIREMENTS

All field personnel should have completed training in hazard recognition and basic health and safety concerns as required by the Occupational Health and Safety Administration (OSHA) in 29 CFR 1910.120 (e) and HSC 25200. 1.5 (g)(3)(A-E). In addition, each field person shall be familiar with this health and safety plan and will participate in site activity and safety briefings. Attendance at safety briefings will be documented on site, each day of activity. Direct contact with large quantities of hazardous materials is not anticipated.

Since chemical exposure hazards on site could involve air born vapors, all workers will be trained and prepared to wear respirators as per CCR, Title 8, Section 5144.

V. MEDICAL SURVEILLANCE

Prior to entering the exclusion zone, all persons should have been subjected to a complete physical examination by a licensed medical physician and be deemed physically competent to function in the work environment.

Regular medical examinations should be conducted for all field personnel to meet the requirement of the Code of Federal Regulations Part 29, Section 1910.120 (F) and HSC 25200.1.5 (g) (3) (A-E). Although there will not be any special medical tests or examinations required for personnel involved in this project, all workers will be medically evaluated for the wearing of respirators as per CCR, Title 8, Section 5144. Personnel exposure monitoring will be accomplished by the Site Safety Officer and by other supervisors by periodically observing personnel for obvious signs of physical and mental distress or injury e.g. changes in appearance, behavior, or speech. Although adverse heat or cold conditions are not anticipated due to site location, a heat vs. cold stress monitoring program will be implemented as part of the daily safety briefing. This program will include employee awareness of signs and symptoms of heat and cold stress. Field personnel are required to inform the Site Safety Officer when experiencing symptoms of sickness or injury. Safety briefing and any medical data generated will be recorded and retained as per title 8 CCR 3204(d).

Air Monitoring

The chemical exposure hazards involved while conducting field activities are airborne vapors. These potential hazards will require continuous monitoring of organic vapors. A photoionization detector will be used to monitor volatile organic compounds in the breathing zone during drilling activities. Air monitoring for background levels of air contamination will be conducted prior to the commencement of drilling. Readings will be taken in the breathing zone on a regular basis during site activities. If the organic vapor concentration exceeds 25 ppm in the breathing zone, all site personnel working in the exclusion zone shall don air purifying respirators (APR) equipped with cartridges rated for organic vapors, acid gases, dusts, fumes, and mists. The respirators and cartridges shall be approved by the National Institute of Occupational Safety and Health (NIOSH) and OSHA. If the organic vapor concentrations exceed 300 ppm, drilling will be discontinued and all site personnel will be moved to an area upwind of the exclusion zone until vapors decrease to below 25 ppm.

The photoinization detector shall be calibrated to isobutylene immediately prior to field use.

A segment of flagging tape attached to an elevated part of a structure at the site, to be used as a wind direction indicator. The Site Safety Officer will monitor environmental conditions e.g. temperature, inclement weather, wind direction, etc. throughout the duration of the on-site activities.

Personnel exposure sampling results shall be retained in accordance with title 8 CCR 3204.

Personnel Protective Equipment

Based on the hazard analysis for this project, the following personnel protective equipment will be required for use. Changes to these specified items of personnel protective equipment shall not be made without the approval of the Site Safety Officer.

All field personnel working in the exclusion zone will be required to wear level D protection, consisting of goggles or suitable eye protection, steel toed boots and hardhats. The exclusion zone shall be continually monitored for volatile organic vapor levels. If organic vapor levels in the breathing zone exceed 25 ppm, personnel shall be required to upgrade to level C protection (use of APR). The respirators may be either half or full faced. All persons required to wear respiration protection equipment shall be trained in the proper use, including fit test, maintenance, and inspection of this equipment, before starting work at the site.

Since dermal exposure is a possibility, rubber gloves will be worn when handling samples (soil, soil gas, ground water) and sampling apparatus.

VI. DECONTAMINATION PROCEDURES

Decontamination will take place in the decontamination zone, identified on-site in the support zone. All workers, personnel protective equipment, sampling equipment, and heavy equipment leaving the work area will be decontaminated in the designated area to prevent the spread of contamination.

After leaving the exclusion zone, workers will remove all personnel protective equipment and place it in appropriately marked containers for proper decontamination or disposal. Boots, respirators, and other reusable personnel protective equipment shall be decontaminated using a mild detergent and water. Respirators, excluding cartridges, will be dismantled, and each part decontaminated by washing with mild detergent and clean water. Once clean, respirators shall be allowed to dry in a clean area before reassembling. When not in use, respirators will be kept in a clean, airtight, plastic bag or similar container.

All workers will wash hands, arms, and face after removing personnel protective equipment and prior to leaving the site. Two five-gallon buckets, one filled with a soap mixture, and the other with clean water, will be available for workers to wash with.

Sampling equipment shall be washed in non-phosphate soap and triple rinsed in distilled water. Support vehicles are to remain outside the immediate work area. By this manner, decontamination will not be required. There are no special emergency decontamination procedures anticipated for this project.

VII. SPILL CONTAINMENT

Plastic sheeting will be placed around each boring location to prevent surrounding soil contamination from wet soil (sample/ground water removal). Significant quantities of hazardous material releases are not anticipated. Container quantities of potentially hazardous ground water will be stored on containment pallets.

VIII. EMERGENCY PROCEDURES

In the event of an emergency, the Site Safety Officer will direct the proper action to be taken. It may be necessary for the Site Safety Officer to depend on other on-site personnel for assistance. The Site Safety Officer will call for emergency help if necessary. As soon as is practical, the Site Safety Officer will contact the Project Manager. All field personnel will be briefed on the procedures and their responsibilities. A first aid kit fire extinguisher, and potable water will be located in a support vehicle on-site. Fire extinguishers will be located on all heavy equipment.

Emergency evacuation procedures will be implemented at the direction of the on site Senior Safety Officer.

- Shut down the drill rig and any ancillary equipment that may be operating.
- In case of personnel injury, the safety officer will call 911.
- Administer first aid/CPR as required. First aid kits, potable water and respirators are available on support vehicles.
- If toxic fumes are encountered, as indicated via the PID, don respirators.
- Traffic control will be established prior to beginning each day's activity. Barriers and cones will be established around each drilling site. Traffic flow will be observed and directed by the Senior Safety Officer. Drilling activity will not take place on major streets and will occur only in the parking area between site structures.
- **Trinitycare Extended Care** is the nearest medical facility.

Telephone: (818) 709-5268
13030 Alondra Blvd., Cerritos, CA

Directions from the site: proceed South on Firestone Blvd to Alondra, right turn on Alondra, go 1 mile, Trinitycare on the left side, south side of Alondra – see enclosed map.

- Evacuation routes

For all drilling locations, proceed northeasterly toward Firestone Boulevard, the Site entrance. Remain in the staging area until all persons are accounted for.

- Communications

  The Senior Safety Officer will a cell phone available at all times during drilling activity. Communication between site personnel will be maintained via had signals and/or bullhorn.

- Emergency Contacts

  Other than medical emergencies regarding site personnel, releases of hazardous materials in quantities exceeding reporting threshold are not anticipated. A record of on site emergencies will be maintained by the Senior Safety Officer.

- Emergency and Personal Protective Equipment

  Equipment including hard hats, chemical resistant gloves and aprons, steel toe shoes will be worn as required by the operation. Back-up gear along with spill response equipment (absorbent, spark resistant shovel etc.) will be kept on the support vehicle.

IX. MISCELLANEOUS

Sanitation

Adequate sanitation including washing and toilet facilities are available at all of the site-manufacturing and administrative buildings. All LeFiell employees are aware of the on site subsurface investigation and will make their facilities available as needed.

An adequate supply of potable water is available on the support vehicle.

Illumination

All field activities will be conducted in daylight hours.

Utilities and Overhead Lines

Underground service alert of Southern California will be notified well in advance of boring activities. Potential boring locations will be marked to assist in the location of any underground utility services.

Emergency Eyewash and Shower Equipment

Eye wash and shower equipment is available to site personnel at each manufacturing building and their equipment meets the requirements of ANSI Z358.1-1981.

X. DOCUMENTATION

The implementation of this site health and safety plan will include the documentation of employee participation. This will assure all individuals participating in this project are properly informed on all safety measures to be taken through the duration of this project. In addition, these records will meet regulatory requirements for training, personnel protective equipment, medical surveillance, and other health and safety related information. Documentation of the implementation of this plan will be accomplished using Attachment A and B. Attachment A is an employee acknowledgment form. Attachment B is a site activity and safety briefing form.

2^{ND} QUARTER 2009 GROUNDWATER MONITORING REPORT

FRIGID COIL FACILITY

SANTA FE SPRINGS, CA

LARWQCB# 1225

Prepared by

Geosyntec consultants

engineers | scientists | innovators

2100 Main Street, Suite 150
Huntington Beach, California 92648
Telephone: (714) 969-0800
Fax (714) 969-0820
www.geosyntec.com

Project Number: HW1148-09

July 9, 2009

1. FACILITY BACKGROUND

Facility Name:	Frigid Coil Facility, Johnson Controls, Inc. ("Johnson Controls")
Facility Address:	13711 Freeway Drive, Santa Fe Springs, CA ("Site")
Project Manager:	Ned Witte, Gonzalez Saggio & Harlan (Attorney for Johnson Controls)
Consultant/Contact Person:	James Allen, Geosyntec Consultants
Primary Agency/Agency Contact:	Angelica Castaneda, LARWQCB

2. WORK PERFORMED

On June 24, 2009, Geosyntec Consultants monitored and sampled six groundwater monitoring wells. Wells were gauged and purged using low-flow purging techniques in accordance with the United States Environmental Protection Agency (EPA) established procedures.[1] Field parameters were monitored during well purging. Field parameters included temperature, pH, dissolved oxygen, conductivity and turbidity. Field parameters were permitted to stabilize prior to sampling.

Samples were collected by Geosyntec Consultants and analyzed by Calscience Analytical Laboratories, Inc. (a State certified laboratory located in Fountain Valley, CA) by EPA Methods 6010 (Arsenic), 8015M (Total Petroleum Hydrocarbons (TPH)), 8260B (Volatile Organic Compounds (VOCs)), and 8270C-MOD (1,4-Dioxane). Samples were transported to the analytical laboratory under chain of custody documentation, and arrived at the laboratory at a temperature of less than 4 degrees centigrade. All samples were analyzed within required holding times.

[1] Puls, Robert W. and Barcelona, Michael J., 1996. EPA Ground Water Issue Low-Flow (Minimal Drawdown) Groundwater-Water Sampling Procedures, EPA/540/S-95/504.

3. RESULTS

The results of groundwater monitoring and sampling are presented in the attached tables and figures:

Table 1	Groundwater Elevation Summary – Q2 2009
Table 2	Groundwater Field Parameters Summary – Q2 2009
Table 3	Arsenic Analytical Detections – Q2 2009
Table 4	TPH Analytical Detections – Q2 2009
Table 5	VOCs and 1,4-Dioxane Analytical Detections – Q2 2009
Figure 1	Groundwater Monitoring Well Location and Potentiometric Surface Map

The purge forms and Calscience analytical reports for the June 2009 sampling event (including the chain-of-custody form) are included in Attachments A and B, respectively. Key findings include:

- Groundwater elevation ranged from 26.74 feet above mean sea level (ft-msl) in MW-4 to 50.36 ft bgs in MW-5. The groundwater gradient was calculated to be between 0.005 and 0.016 to the northeast; there was a general decreasing trend in groundwater elevation since the previous sampling event;

- Arsenic concentrations generally increased from the previous monitoring event, and was detected in all six wells at concentrations greater than federal and California specific maximum contaminant levels (MCLs) in March 2009. These elevated concentrations are likely related to high background arsenic concentrations typical of California soils. The concentrations are shown in Table 3;

- Concentrations of TPH are shown in Table 4. MCLs have not been established for total petroleum hydrocarbons. Diesel range organics were not detected in any of the wells. Gasoline range organics were detected in wells MW-3 and MW-4 at concentrations up to 610 ug/L; TPH values decreased from the previous sampling event;

- VOC concentrations are shown in Table 5. VOCs detected at concentrations greater than their federal or state MCL include the following:

  - MW-1 – cis-1,2-dichloroethene (cis-1,2-DCE), trichloroethene (TCE)
  - MW-3 – cis-1,2-DCE, TCE, trans-1,2-dichloroethene (t-1,2-DCE)
  - MW-4 – cis-1,2-DCE, TCE, t-1,2-DCE, 1,1-dichloroethene (1,1-DCE), 1,1-dichloroethane (1,1-DCA)
  - MW-6 – cis-1,2-DCE, TCE, t-1,2-DCE

- Well MW-6 continues to show high turbidity readings.

- Laboratory analytical data for all wells continued to meet relevant QA/QC requirements;

- Bolts on Well MW-3 are damaged and need to be replaced.

4. WORK PROPOSED FOR NEXT MONITORING PERIOD

- Perform additional groundwater monitoring and sampling event in 3rd quarter 2009 to represent 3rd quarter 2009 conditions. This event will include replacing bolts on Well MW-3, groundwater elevation gauging, field parameter monitoring and sampling.

DAILY FIELD REPORT

PROJECT: Johnson Controls Frigid Coil

LOCATION: 13711 Freeway Drive PROJECT NO.: HW1148 TASK NO.:

DESCRIPTION: gW Sampling DATE: 24 day 6 month 2009 year

CONTRACTOR(S): Blaine Tech

WEATHER, TEMPERATURE: mid 60's, breezy

0815 depart office
0900 arrive on site, Chris of Blaine Tech and Venessa on site, conduct health and safety tailgate
0915 decontaminating pump, 3 individuals with clipboards start observing our procedures then move to take photos and measurements of site
1022 men in suits walking around during sampling depart site, Blaine Tech decontaminating equipment, bolts on MW3 are "messed up" according to Blaine Tech, may need to be repaired
1035 begin purgin MW-6
1115 setting up at MW-1, Water from MW-6 was very turbid, silt and sediment was building up in tubing, begin decon of pump
1210 Completed sampling MW-1, moving to MW-2, Will collect duplicate from this well, decontaminating pump and sounder
1310 decon of pump to sample at MW-5
1420 decon of pump in order to sample MW-4
1507 Complete Sampling at MW-4, cleaning up and decon before offloading water into 1 drum
1540 all depart site
1615 depart Calscience (dropped off samples
1645 arrive back on site (office)

Attachment B: Calscience Analytical Reports

Calscience Environmental Laboratories, Inc.

July 01, 2009

James Allen
GeoSyntec Consultants
2100 Main Street, Suite 150
Huntington Beach, CA 92648-2460

Subject: **Calscience Work Order No.: 09-06-2100**
Client Reference: Johnson Controls / HW 1148

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 6/24/2009 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Calscience Environmental
Laboratories, Inc.
Stephen Nowak
Project Manager

Glossary of Terms and Qualifiers

Work Order Number: 09-06-2100

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture.

Subject: Groundwater Monitoring Well Destruction
Former Frigid Coil Facility
13711 Freeway Drive
Santa Fe Springs, California

Dear Ms. Castaneda:

This Letter Report summarizes well destruction activities conducted at the former Johnson Control Inc. (JCI) Frigid Coil Facility (Site) located at 13711 Freeway Drive, Santa Fe Springs, California (Figure 1). This document has been prepared by Venessa Smith and reviewed by Robert Kovacs, C.Hg. and Andrew Barnes, P.G. in accordance with Geosyntec Consultants, Inc. (Geosyntec) review policies.

BACKGROUND

The Site has been the subject of multiple environmental investigations conducted between 2006 and 2012, and has recently received a No Further Action Determination for soil and groundwater. The Final Environmental Assessment (Geosyntec, 2011) summarized groundwater, soil, soil vapor sampling and sub-slab soil vapor investigations, and concluded that vadose zone soil concentrations for VOCs are below screening levels, and VOC concentrations in groundwater are attributable to an upgradient offsite source. Based on these finding, a request for No Further Action (NFA) was submitted by JCI, and in its January 27, 2012 letter, the Regional Water Quality Control Board (RWQCB), Los Angeles Region, issued an NFA Determination for soil and groundwater (for commercial /industrial use).

SCOPE OF WORK

Based on the NFA Determination and in agreement with the current land owner, JCI contracted with Geosyntec to destroy 11 groundwater monitoring wells that remained on the Site after the environmental investigations. Wells MW-1 and MW-2 were four inch diameter wells and the remaining nine wells were two inches in diameter. Well pairs MW-4RS and MW-4D and MW-7S and MW-7D were nested construction (two wells within the same bore hole). The following section describes the well destruction activities that were conducted in accordance with the California Well Standards, Bulletin 74-90 (California Department of Water Resources, 1991).

Prior to conducting invasive work, Geosyntec obtained well destruction permits from the Los Angeles County Department of Public Health (LACDPH) (Attachment A), and updated the Site Health and Safety Plan (HASP).

Each well (shown on Figure 2) was sounded prior to destruction to measure the total well depth. Each measurement was compared to existing well construction details (Table 1) as a cross check of the as-built dimensions, and to verify the identity of each well to be destroyed. Each well was pressure grouted with neat cement grout from the bottom up utilizing a tremie pipe. Following initial grout placement, the wells were pressurized with a grout pump to approximately 40 pounds per square inch (psi) to force grout into filter pack and formation outside of well casing. The volume of each borehole was compared to the actual volume of grout injected (Attachment B). The calculated well volumes and actual well volumes are summarized in Table 1. Following pressure grouting, the upper five feet of casing was over drilled with 10-inch augers and the resulting void was backfilled with neat cement. The surface of the boreholes was patched with cement and completed to match the surrounding surface.

Waste generated during well destruction activities (i.e. soil cuttings and grout) is being temporarily stored onsite in one 55-gallon DOT approved drum pending profiling. Following waste profiling the drum will be appropriately disposed offsite by Belshire Environmental Services, Inc.

DISCUSSION

The RWQCB issued a NFA determination for soil and groundwater for the Site in a letter dated January 27, 2012 (Attachment C). The NFA was based on historical operational information, soil, soil vapor, and groundwater data obtained from 2006 to 2010, and current commercial/industrial land use.

Eleven groundwater monitoring wells formerly located at the Site were destroyed by pressure grouting methods in accordance with the recommendations of the California Well Standards Bulletin 74-90 (California Department of Water Resources, 1991). The grout volumes injected in each well exceeded the calculated well volumes, confirming the successful destruction of each well.

If you have any questions about the Workplan, please contact the undersigned at (714)969-0800. Thank you.

Sincerely yours,

Venessa Smith
Staff Geologist

Robert Kovacs, P.G., C.Hg., C.E.G.
Senior Geologist

SUBJECT: NO FURTHER ACTION (NFA) DETERMINATION FOR SOIL AND GROUNDWATER (FOR COMMERCIAL/INDUSTRIAL LAND USE)

**SITE/CASE: FORMER FRIGID COIL FACILITY
13711 FREEWAY DRIVE, SANTA FE SPRINGS, CALIFORNIA, 90670
(SCP NO. 1225, SITE ID NO. 2040314)**

Dear Mr. Werwie:

California Regional Water Quality Control Board, Los Angeles Region (Regional Board) staff has completed its review of information in our file pertaining the Former Frigid Coil Facility (Site) located at 13711 Freeway Drive in Santa Fe Springs, California.

Soil, soil vapor, and groundwater investigations have been completed at the Site and you have requested a No Further Action (NFA). Our review and the basis of a NFA determination pertains to historical operational information, soil, soil vapor and groundwater data obtained from 2006 to 2010 at the Site, contained in the following documents:

- Phase I Environmental Site Assessment (Phase I). Environmental Resources Management (ERM). June 13, 2006.

- Phase II Environmental Site Assessment (Phase II). ERM. January 2008. (Reported environmental sampling conducted between May 2006 and November 2007 in the areas of potential concern).

- Quarterly Groundwater Monitoring Reports. Geosyntec Consultants (Geosyntec). 2008 and 2009.

- Environmental Assessment. Geosyntec. March 10, 2009. (Reported environmental investigation conducted in January 2009).

- Final Environmental Assessment. Geosyntec. August 5, 2011. (Reported environmental investigation conducted in March 2010 and included all historical analytical data collected at the Site by Geosyntec).

This letter provides Site background information, a summary of the soil and groundwater environmental investigations, and our rationale for a NFA determination for soil and groundwater for the Site.

Background

The Site is a 4.9 acre parcel containing a single 82,000 square foot warehouse. The property has been used for light industrial purposes by two parties: Miami Carey and Celotex prior to 1971, and Frigid Coil from approximately 1971 through July of 2007. As of June 1, 2010, Martinez Trucking is using the property for office, warehousing, distribution and truck parking. The Site is under the property management of The Gilbert Foundation. The owners intend to use the Site for commercial/light industrial purposes only. See attached Covenant and Environmental Restriction on Property (Enclosure 1).

Frigid Coil's operations consisted of the assembly of air handlers and other custom heating, ventilation, and air conditioning (HVAC) units. Ancillary operations included equipment maintenance and hydrostatic testing. Frigid Coil formerly stored Freon (R-22) in an approximately 6,500 gallon above ground storage tank outside on the northern portion of the property. Additionally, wastewater from the outdoor steam cleaning operations was discharged to the storm sewer system prior to 1993 (when a sump was installed in the outdoor yard). Principal materials used at the facility included stainless steel, copper coil, welding gases, and hydraulic oils. No underground storage tanks (USTs) are located at the Site.

Regional and Hydrogeological Setting

The Site is located on the Central Basin of the Los Angeles Coastal Plain. The first major aquifer beneath the Site is the Artesia Aquifer, located at depths ranging from approximately 80 to 150 feet below ground surface (bgs). The Bellflower Aquiclude overlays the Artesia Aquifer and restricts groundwater movement from the overlying sediments. A perched aquifer is present above the Bellflower Aquiclude at depths ranging from 20 to 40 feet bgs. Shallow groundwater wells present at the Site are screened in this perched aquifer. The base of the Bellflower Aquiclude is found at a depth of approximately 80 feet bgs in the Site vicinity. Deeper aquifers include the Gage Aquifer, located at a depth ranging from approximately 160 to 210 feet bgs in the Site vicinity. The next major aquifer present beneath the Site is the Lynwood Aquifer, which is found at depths ranging from 850 to 1,000 feet bgs. The Silverado Aquifer is present beneath the Site at depths ranging from approximately 1,060 to 1,240 feet bgs.

The closest well to the Site is designated as LACDPW Well No. 1051W (3S/11W-20R2). Well No. 1051W is owned by the City of Santa Fe Springs and is located approximately 2,200 feet southwest of the Site. The well is designated as municipal supply well, and is located hydrogeologically up-gradient of the Site. Chemical analyses of groundwater samples collected from wells in the vicinity of the Site indicate elevated concentrations of arsenic, but no detectable organic constituents.

Site Assessment

Several phases of environmental investigations were conducted from 2006 to 2010 by two different consultants, ERM and Geosyntec. In addition, groundwater monitoring has been conducted since 2006. All the phases of assessment generated similar or consistent results. The major findings are described in the following paragraphs.

Total petroleum hydrocarbons (TPH) were detected in shallow soils at the site. However, step-out sampling indicated that presence of TPH was limited in area and depth (within the first 5 feet bgs). Maximum detected concentrations of TPH in soil were 260 milligrams per kilogram (mg/kg) for the gasoline range (TPHg), 770 mg/kg for the diesel range (TPHd), and 1,200 mg/kg for the oil range (TPHo). These detections were limited in areal extent and there was no track to groundwater, in addition the concentration of risk driver compounds such as volatile organic compounds (VOCs) in co-located soil gas and soil samples was negligible.

VOCs were investigated across the Site using soil and soil gas sampling. Selected sampling locations targeted potential sources of contamination and were distributed across the Site both inside and outside the building. VOC concentrations were mostly not detected in soil samples. When detected in soil, VOCs were present at trace level concentrations below screening levels for the protection of human health and groundwater. The levels of VOCs detected in soil did not identify any major source of contamination at the Site. Detected VOCs and their corresponding highest concentration in micrograms per kilogram (μg/kg) shown in parenthesis included: benzene (9.2 μg/kg), toluene (180 μg/kg), ethylbenzene (44 μg/kg), xylenes (160 μg/kg), and tetrachloroethylene (7.3 μg/kg).

VOC concentrations in soil vapor samples were mostly not detected. When detected, VOCs concentrations were equal or lower than 1 microgram per liter (μg/L). Soil gas samples were collected beneath the slab and every five feet to 15 feet bgs (groundwater occurs at 20 feet bgs). No track to groundwater was detected. Detected VOCs and their corresponding highest concentration in μg/L shown in parenthesis included: benzene (0.063 μg/L), toluene (0.18 μg/L), ethylbenzene (0.21 μg/L), xylenes (1 μg/L), tetrachloroethylene (0.95 μg/L), and trichloroethylene (0.09 μg/L).

Only one soil vapor sample detected tetrachloroethylene at a concentration that exceeded its corresponding California Human Health Screening Level (CHHSL) for commercial/industrial

use of 0.6 µg/L. Area weighted average concentrations were calculated for each analyte detected in sub-slab vapor samples. The soil vapor results were compared to commercial CHHSLs. None of the chemicals detected had area weighted average concentrations that exceeded their respective soil vapor CHHSL concentrations. Therefore, residual chemical concentrations at the Site are unlikely to pose an unacceptable human health risk to workers at the Site.

California Administrative Manual (CAM) metals were tested in soil samples. All of the CAM 17 metals analyzed appeared to be representative of background concentrations and, except for arsenic, were detected at concentrations below the USEPA Region 9 regional soil screening levels (RSL) published in June 2011 for commercial/industrial land use.

Arsenic was detected at concentrations exceeding RSLs for commercial/industrial land use. The highest concentration detected was 29 mg/kg. The Department of Toxic Substance Control (DTSC) has reported that background concentrations of arsenic in southern California soils commonly exceed risk based concentrations in school sites. Furthermore, the DTSC has published an upper-bound arsenic concentration of approximately 12 mg/kg for Los Angeles County. A statistical analysis of the data indicated that arsenic concentrations on Site are comparable to the DTSC reported regional levels, appear to be background, and are not associated with any Site-specific release or operation. In addition, the single sample point with the highest concentration appears to be a statistical outlier.

Groundwater beneath the Site is impacted with chlorinated VOCs. Shallow groundwater occurs at a depth of approximately 20 feet bgs and has consistently flowed to the north-northeast since 2006. Chlorinated solvents were rarely detected in soil and soil vapor at the Site. When detected, VOCs occurred in trace concentrations in shallow soil and soil vapor samples and no track to groundwater was observed. Therefore, there is no evidence that the Site is a contributor to the groundwater contamination.

Currently, the DTSC is overseeing assessment of an up-gradient facility, the LeFiell Manufacturing Company (LeFiell), located to the south/southwest across the Freeway 5 from the Site. High concentrations of chlorinated VOCs in soil and groundwater have been detected at the LeFiell site. The DTSC has directed LeFiell to conduct additional groundwater delineation across the Freeway 5 to the northwest of LeFiell towards the former Frigid Coil site. (Enclosure 2).

Summary and Conclusion

Based on the review of information contained in our file, Regional Board staff recommends a soil and groundwater NFA determination for the Site based on the following reasons:

- Since 2006, intensive soil, soil gas and groundwater investigations have been conducted at the Site.

- TPH was the main chemical of concern detected, but the releases appeared to be limited in concentration and extent.
- VOCs, risk drivers at industrial sites, were mostly non-detected or detected at trace concentrations in soil and soil gas and do not pose a risk to human health or to groundwater.
- Arsenic concentrations in soil appear to be background and not the result of a release at the Site.
- Groundwater contamination beneath the Site was not caused by the Site operations but from an up-gradient source. The DTSC is currently investigating the potential source of groundwater contamination directly up-gradient from the site.

Recent legislation, AB 2436, prohibits the Regional Board from issuing a closure letter or making a determination that a "No Further Action" is required if a property is not suitable for unrestricted use, unless a land use restriction is recorded. We determined that a Covenant and Environmental Restriction on Property (Covenant) is necessary for the Site for the protection of public health or safety due to the background concentration of arsenic and residual concentration of TPH in soil. The Covenant was filed and recorded in Official Records, Recorder's Office, Los Angeles County on December 28, 2011. (Enclosure 1).

Therefore, with the provision that the information provided to Regional Board was accurate and representative of Site conditions, Regional Board staff has determined that the residual contamination in the soil beneath the Site does not pose a significant threat to the environment and human health. However, if new contamination is discovered, you are required to provide verbal notification to this Regional Board immediately and submit a follow-up written report within 72 hours. In addition, appropriate health and safety measures must be fully implemented. Any contaminated soils that may be removed from the Site shall be removed only to a legal point of disposal. Please notify this Regional Board of any change in operations, regarding the storage and handling of chemicals, or the processing and disposal of wastes. If this property is sold to another party, we must be informed by the new owners of any change in facility operations, such as storage and handling of chemicals, or the processing or disposal of wastes.

You may be requested access for groundwater monitoring for the investigation currently being conducted up-gradient at the LePiell site overseen by the DTSC . The Regional Board encourages you to cooperate with the investigation. When it is appropriate to destroy the wells on site, please do so in accordance with the California Department of Water Resources, Bulletin 74-81 and Bulletin 74-90, California Well Standards and submit a well destruction report to this Regional Board.

Please note that Regional Board staff oversight charges for work associated with NFA letter will be billed on the fourth quarter of fiscal year 2011-2012 invoice, in the same manner as previously billed.

The jurisdiction requirements of other agencies, such as the United States Environmental Protection Agency, are not affected by the Regional Board's issuance of this NFA letter for the Site. Such agencies may choose to make their own determination concerning the Site.

If you have any questions regarding this matter, please contact Dr. Angelica Castaneda, project manager, at (213) 576-6737 (acastaneda@waterboards.ca.gov) or Ms. Thizar Tintut-Williams, Unit Chief, at (213) 576-6723 (twilliams@waterboards.ca.gov).

Sincerely,

Samuel Unger

COVENANT AND ENVIRONMENTAL RESTRICTION
ON PROPERTY

FORMER FRIGID COIL FACILITY
13711 FREEWAY DRIVE
SANTA FE SPRINGS, CALIFORNIA 90670
ASSESSOR'S PARCEL NUMBER: 8069-015-055
LARWQCB SITE CLEANUP PROGRAM CASE NO. 1225

This Covenant and Environmental Restriction on Property ("Covenant") is made as of the 21st day of DECEMBER, 2011 by GILBERT-BLANK LLC ("Covenantor"), a California limited liability company, who is the Owner of record of that certain property situated at 13711 Freeway Drive, in the City of Santa Fe Springs, County of Los Angeles, State of California, which is more particularly described in Exhibits A and B attached hereto and incorporated herein by this reference (hereinafter referred to as the "Property"), for the benefit of the California Regional Water Quality Control Board, Los Angeles Region ("Board"), with reference to the following facts:

A. Nature of Covenant. This Covenant is an environmental covenant provided for by Civil Code section 1471 and required by the Board pursuant to Water Code section 13307.1 because hazardous materials, as defined in section 25260 of the Health and Safety Code, are present on the land and in the groundwater under the Property.

B. Presence of Hazardous Materials on and under the Property. A series of field investigations were undertaken by the former tenant of the Property, Johnson Controls, Inc., between 2006 and 2010. These investigations concluded that only minor concentrations of residual hazardous materials located at the Property were related to past site operations. The primary hazardous material of concern is arsenic, an inorganic chemical, which is naturally occurring at the Property.

Detections of constituents in soil samples from the Property did not exceed United States Environmental Protection Agency (USEPA) Region IX Residential Regional Screening Levels

This document filed for recording by Chicago Title Insurance and trust as an accommodation only. It has not been examined as to its execution or as its effect upon the title.

18579

(June 2011) with the exception of arsenic. Arsenic was observed at levels that are consistent with background levels of arsenic established by the California Department of Toxic Substances Control (DTSC). In soil vapor, only benzene and perchlorethylene were detected at levels above industrial/commercial California Human Health Screening Levels (CHHSLs), and only beneath the existing building located on the Property. However, the area-weighted average concentrations for these constituents did not exceed industrial/commercial CHHSLs.

Total petroleum hydrocarbons (TPH) in the gasoline range (TPHg), diesel range (TPHd), and oil range (TPHo) were detected in shallow soil at the Property. Detected concentrations of TPH in shallow soil did not warrant active remediation because they were below the regulatory screening levels under a commercial/industrial land use and did not impact the groundwater beneath the Property.

Groundwater monitoring at the Property indicated that there are two near-surface groundwater zones, one occurring at approximately 47 to 49 feet above mean sea level with a gradient trending north-northeast (shallow zone), and a second, deeper zone occurring at approximately 24 feet above mean sea level, with a gradient trending northwest. The only inorganic constituent detected in the groundwater above drinking water standards was arsenic. Organic constituents detected in groundwater above drinking water standards included mainly chlorinated volatile organic compounds such as trichloroethylene, perchloroethylene and their breakdown products. Benzene was detected in concentrations that exceeded the California, but not the Federal, drinking water standard. Based on a variety of factors, including groundwater gradient data and the lack of significant detections of the constituents observed in groundwater in soil or soil vapor, the Board determined that the constituents detected in groundwater were not the result of on-site operations and had their origin in off-site releases.

Because the area-weighted average concentrations of constituents detected in the soil and soil vapor do not exceed industrial/commercial CHHSLs, and because they are not the source of the constituents detected in the groundwater, the Board did not require any remedial action at the Property other than the recordation of this Covenant.

C. Land Uses and Population Potentially Affected. The Property is used for industrial, roadway and commercial purposes and is adjacent to industrial, roadway and commercial land uses.

D. Disclosure and Sampling. Disclosure of the presence of hazardous materials on and under the Property has been made to the Board and extensive sampling of the Property has been conducted. Different phases of assessments yielded consistent results indicating that negligible contamination originated from past site operations.

E. Use of Property. Covenantor desires and intends that in order to benefit the Board, and to protect present and future public health and safety, the Property shall be used in accordance with the provisions of this Covenant so as to avoid potential harm to persons or property that might result from any residual hazardous materials at the Property.

ARTICLE I
GENERAL PROVISIONS

1.1 Provisions to Run with the Land. This Covenant sets forth protective provisions, covenants, conditions and restrictions (collectively referred to as "Restrictions") upon and subject to which the Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. These Restrictions are reasonably necessary to protect present and future human health and safety or the environment as a result of the presence on the land of hazardous materials. Each and all of the Restrictions shall run with the land and pass with each and every portion of the Property, and shall apply to, inure to the benefit of, and bind the respective successors, assigns, and lessees thereof for the benefit of the Board and all Owners and Occupants. Each and all of the Restrictions: (a) are imposed upon the entire Property, unless expressly stated as applicable to a specific portion of the Property; (b) run with the land pursuant to section 1471 of the Civil Code; and (c) are enforceable by the Board.

1.2 Concurrence of Owners and Lessees Presumed. All purchasers, lessees, and possessors of all or any portion of the Property shall become Owners or Occupants as defined herein and shall be deemed by their purchase, leasing, or possession of the Property to be bound by the Restrictions and to agree for and among themselves, their heirs, successors, and assignees, and the agents, employees, and lessees of such owners, heirs, successors, and assignees, that the Restrictions herein established must be adhered to for the benefit of the Board and all Owners and Occupants, and that the interest of all Owners and Occupants of the Property shall be subject to the Restrictions.

1.3 Incorporation into Deeds and Leases. Covenantor desires and covenants that the Restrictions shall be incorporated in and attached to each and all deeds and leases of all or any portion of the Property. Recordation of this Covenant shall be deemed binding on all successors, assigns, and lessees, regardless of whether a copy of this Covenant has been attached to or incorporated into any given deed or lease.

1.4 Purpose. It is the purpose of this instrument to convey to the Board real property rights, which will run with the land, to address past environmental contamination and naturally occurring hazardous materials at the Property to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

ARTICLE II
DEFINITIONS

2.1 Board. "Board" shall mean the California Regional Water Quality Control Board, Los Angeles Region and shall include its successor agencies, if any.

2.2 Improvements. "Improvements" shall mean all buildings, structures, roads, driveways, gradings, re-gradings, and paved areas, constructed or placed upon any portion of the Property.

2.3 Occupant or Occupants. "Occupant" or "Occupants" shall mean Owners and those

persons entitled by ownership, leasehold, or other legal relationship to the right to use and/or occupy all or any portion of the Property.

2.4 Owner or Owners. "Owner" or "Owners" shall mean the Covenantor and Covenantor's successors in interest who hold title to all or any portion of the Property.

ARTICLE III
DEVELOPMENT, USE AND CONVEYANCE OF THE PROPERTY

3.1 Restrictions on Development and Use. Covenantor promises to restrict the use of the Property as follows:

a. Development and use of the Property shall be restricted to industrial, roadway, commercial, and/or office space;

b. No residence for human habitation shall be permitted on the Property;

c. No hospitals shall be permitted on the Property;

d. No public or private schools for persons under 21 years of age shall be permitted on the Property;

e. No care or community centers for children or senior citizens, or other uses that would involve the regular congregation of children or senior citizens, shall be authorized on the Property;

f. Any excavation conducted on the Property shall be performed pursuant to an appropriate and fully implemented Health and Safety Plan. Any soils containing hazardous materials brought to the surface by grading, excavation, trenching, or backfilling shall be managed by the Owner, Owner's agent, Occupant or Occupant's agent in accordance with all applicable provisions of local, state and federal law;

g. No Owner or Occupant shall drill, bore, otherwise construct, or use a well for the purpose of extracting water for any use, including but not limited to, domestic, potable, or industrial uses, unless expressly permitted in writing by the Board; nor shall the Owner or Occupant permit or engage any third party to do such acts;

h. The Owner and Occupant shall notify the Board of each of the following: (1) the type, cause, location and date of any disturbance to existing impervious surfaces and (2) the type and date of repair of such disturbance. Notifications to the Board shall be made by registered mail within ten (10) working days of both the date of discovery of such disturbance and the date of completion of repairs;

i. The Covenantor agrees that the Board, and any persons acting pursuant to Board orders, shall have reasonable access to the Property for the purposes of inspection, surveillance,

maintenance, or monitoring as provided in Division 7 of the Water Code; and

j. No Owner or Occupant shall act in any manner that threatens or is likely to aggravate or contribute to the existing residual hazardous materials present at the Property.

3.2 Enforcement. Failure of an Owner or Occupant to comply with any of the Restrictions set forth in Paragraph 3.1 shall be grounds for the Board, by the authority of this Covenant, to require that the Owner or Occupant modify or remove, or cause to be modified or removed, any Improvements constructed in violation of that Paragraph. Violation of this Covenant shall also be grounds for the Board to file civil actions against the Owner or Occupant as provided by law. Nothing in this Covenant shall limit the Board's authority under Division 7 (commencing with section 13000) of the Water Code or other applicable laws.

3.3 Notice in Agreements. After the date of recordation hereof, all Owners and Occupants shall execute a written instrument which shall accompany all purchase agreements or leases relating to all or any portion of the Property. Any such instrument shall contain the following statement:

> The land described herein is subject to a Covenant and Environmental Restriction dated as of December 21, 2011, and recorded on ______________, 20___, in the Official Records of Los Angeles County, California, as Document No. __________. This Covenant and Environmental Restriction imposes certain covenants, conditions, and restrictions on usage of the property described herein due to the presence of residual hazardous materials in soils and in the groundwater under the property described herein. This statement is not a declaration that a hazard exists.

ARTICLE IV
VARIANCE AND TERMINATION

4.1 Variance. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a written variance from the provisions of this Covenant.

4.2 Termination. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a termination of the Restrictions as they apply to all or any portion of the Property.

4.3 Term. Unless terminated in accordance with Paragraph 4.2 above, by law or otherwise, this Covenant shall continue in effect in perpetuity.

ARTICLE V
MISCELLANEOUS

5.1 No Dedication Intended. Nothing set forth herein shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property or any portion thereof to the general

public.

5.2 Notices. Whenever any person gives or serves any notice, demand, or other communication with respect to this Covenant, each such notice, demand, or other communication shall be in writing and shall be deemed effective (a) when delivered, if personally delivered to the person being served or an official of a government agency being served, or (b) three (3) business days after deposit in the mail if mailed by United States mail, postage paid certified, return receipt requested, addressed:

If To: "Covenantor":

GILBERT-BLANK LLC
2730 Wilshire Blvd., Suite 301
Santa Monica, California 90403-4749

If To: "Board":

Regional Water Quality Control Board
Los Angeles Region
Attention: Executive Officer
320 W. 4th Street, Suite 200
Los Angeles, California 90013

5.3 Partial Invalidity. If any portion of the Restrictions or terms set forth herein is determined by a court having jurisdiction to be invalid for any reason, the remaining portion shall remain in full force and effect as if such portion had not been included herein.

5.4 Recordation. This instrument shall be executed by the Covenantor and by the Executive Officer of the Board. This instrument shall be recorded by the Covenantor in the County of Los Angeles within ten (10) days of the date of execution.

5.5 References. All references to Code sections include successor provisions.

5.6 Construction. Any general rule of construction to the contrary notwithstanding, this instrument shall be liberally construed in favor of the Covenant to preserve and implement the purpose of this instrument and the policies and purposes of the Water Code. If any provision of this instrument is found to be ambiguous, an interpretation consistent with the purpose of this instrument that would render the provision valid shall be favored over any interpretation that would render it invalid.

IN WITNESS WHEREOF, the parties execute this Covenant as of the date set forth above.

MEMORANDUM

TO : Armen Minassian
Project Manager
Brownfields and Environmental Restoration Program

FROM : John A. Naginis, CEG
Senior Engineering Geologist
Chatsworth Geological Services Unit

CONCUR : Craig Christmann, PG
Senior Engineering Geologist
Chatsworth Geological Services Unit

DATE : November 1, 2011

SUBJECT: Geologic Services Unit (GSU) review of: Subsurface Site Assessment Report, LeFiell Manufacturing Company, 13700 Firestone Boulevard, Santa Fe Springs, CA 90670, California, Dated: September 2011

PCA 12020 Site Code 301483-11 Log No.: 20009493 Zip Code: 90670

As requested, GSU staff have reviewed the above referenced Interim Subsurface Site Assessment Report (Report), prepared by Hemphill, Green & Associates for LeFiell Manufacturing Company. Previous investigations have indicated that groundwater and soil vapor at the site are contaminated with volatile organic compounds (VOCs), however the contamination had not been fully characterized. The current site assessment was performed to provide additional delineation of VOCs in soil, soil gas and groundwater. The work was performed in general accordance with a Site Investigation Workplan that was approved by DTSC in October, 2010.

GSU staff has reviewed the Report for completeness and conformance with DTSC guidance. GSU staff did not provide a detailed review of the Human Health Risk assessment. This memo includes general comments regarding site conditions and delineation of contamination, as well as specific comments that address specific sections of the report.

Questions regarding this memo should be directed to John Naginis at (818) 717-6626 or JNaginis@DTSC.ca.gov.

General Comments

1 – Delineation of Groundwater Contamination

The lateral extent of groundwater has been delineated along the northwest and southeast ends of the property. However the lateral extent has not been delineated towards the northeast and towards the southwest. Based on groundwater elevation data from on-site wells, the groundwater flow direction is towards the northeast and east. Consequently, the down gradient extent of groundwater contamination has not been delineated. Interstate 5 is adjacent to the northeast side of the property, so it appears that groundwater contamination may extend beneath the freeway. To delineate the lateral extent of groundwater contamination, sampling points and/or groundwater monitoring wells will be required on the east side of Interstate 5. The delineation of groundwater contamination is also required southwest of well MW-4. It appears that groundwater contamination may extend off-site in this area.

The vertical extent of contamination has not been delineated. All of the wells on-site have well screens installed at the top of the water table. Based on the high contaminant concentrations detected in the wells, and the density of the contaminants, the vertical extent of groundwater contamination requires delineation.

2. – Evaluation of Groundwater Flow

Based on the location and construction of the seven groundwater monitoring wells installed on-site, the direction of groundwater flow is fairly well defined. As mentioned in the previous comment the vertical extent of contamination needs to be delineated. In addition, the vertical component of groundwater flow has not been evaluated. Vertical groundwater gradients need to be delineated to evaluate whether vertical groundwater flow could be causing contaminants to migrate into deeper portions of the aquifer.

3 – Remedial Investigation and Feasibility Study

Section 3.5 of the report recommends conducting a remedial investigation and feasibility study to identify technically and economically feasible methods for remediating the soil vapor and groundwater contamination. GSU staff concurs with this recommendation. As noted above, additional investigation should include delineating the vertical extent of contamination and evaluating vertical groundwater gradients.

Specific Comments

4 – Section 3.4.2.3 Leak Test

A leak check compound was used to verify that ambient air was not infiltrating the soil vapor sampling train. However, the report does not state what chemical was used as the leak check compound. This section should be revised to state the chemical used as the leak check compound.

5 – Section 3.5 – Summary of Investigation Findings & Recommendations

Tetrachloroethene (PCE) was detected in groundwater monitoring wells MW-3 and MW-6 at relatively low concentrations. The report refers to these wells as up-gradient property boundary wells, and concludes that the PCE detections suggest an off-site source of contamination. While these two wells are up-gradient of most wells on-site, they are cross gradient to, and have a slightly lower groundwater elevation than well MW-4, the well with the highest PCE concentrations. Consequently, it is very probable, that the PCE in wells MW-3 and MW-6 are the edges of the contaminant plume rather than the result of off-site contamination.

6 – Figures 3.4 through 3.13

These figures show VOC concentrations in soil gas along with isoconcentration gradients. Each figure shows these data for a specific compound at a specific depth. Based on investigation data, there appears to be at least two sources that released VOCs to the subsurface. A former vapor degreaser near soil vapor point SV-4 and a former parts cleaner near soil vapor point SV-1. Based on this conceptual model, the soil vapor isoconcentration contours were interpreted as two separate plumes restricted to these two areas. However, there are no data indicating that two discrete plumes are present and that the VOCs are not present continuously between the two areas.

For example, on Figure 3.4 1,000 µg/L and 500 µg/l isoconcentration lines are drawn between vapor points SV-2 and SV-11, indicating that there is an area of low PCE concentrations between these two points. However, there are no data points between these two soil vapor points. PCE was detected at a concentration of 1,700 µg/L at SV-2 and, 8,200 µg/L at SV-11. Unless data exists to show there is a decrease in concentrations between the two points, a better interpretation is to assume that the contamination extends between the two points. The isoconcentration lines on these figures should be reinterpreted using the assumption that when contamination is detected at two adjacent points, the contamination extends between the two points. This reinterpretation should be done on Figures 3.4 through 3.13.

The isoconcentration line intervals need to be consistent on the figures. For example, on Figure 3.4 the isoconcentration intervals near sampling point SV-1 are1,500 µg/L, 1,000 µg/L, and 500 µg/L, while the isoconcentration lines around SV-4 do not include the 1,500 µg/L isoconcentration line. Figures 3.4 through 3.13 all need to be double checked for consistent use of isoconcentration lines and corrected if necessary.

7 – Figure 3.15 through 3.17

Isoconcentration lines in groundwater were interpreted in a manner similar to the interpretation of soil vapor isoconcentration lines. Two separate plumes are identified, one centered on well MW-2, and the other centered on MW-4, without any data between the two points indicating a reduction in contaminant concentrations. The groundwater isoconcentration lines on Figures 3.15 through 3.17 need to be

reinterpreted using the assumption that when contamination is detected at two adjacent points, the contamination extends between the two points.

DATE: November 1, 2011

SUBJECT: Review of a Subsurface Site Assessment Report for the LeFiell Manufacturing Company, 13700 Firestone Boulevard, Santa Fe Springs, California.

PCA: 12020 Site Code: 301483-11

Background

This is an 11 acre property located at the northwest corner of Marquardt Avenue and Alondra Boulevard in Santa Fe Springs, California. It is bordered by Firestone Boulevard and the I-5 freeway on the northwest, and by the Southern Pacific Rail Road on the southeast. The site is currently occupied by Budget Rent A Car (@13770) and by LeFiell's manufacturing and administrative operations (@13700 and 13750). It is slated for immediate redevelopment, where a strip of the property adjacent to the Firestone Boulevard will be taken over by Caltrans to expand the I-5 freeway. Portions of Buildings B and D will be demolished, and Buildings L and M will be added on to the property. The entire site will be paved with the exception of landscaping areas along the perimeter of the property.

The LeFiell Manufacturing Company has been operating at the site since the 1950s. It is involved in the design and production of precision tubular parts for commercial airplanes and the defense and aerospace industries. Former activities at the site that have contributed to contamination include the operation of sumps, clarifiers, underground storage tanks (USTs) storing gasoline or waste oil, and the use of degreasing solvents. A 2007 assessment of the site found tetrachloroethylene (PCE) and trichloroethylene (TCE) at concentrations up to 11,000 ug/L and 1,600 ug/L in groundwater. A 2010 soil vapor survey found PCE at concentrations upto 15,000 ug/L and 18,000 ug/L @ 5 ft and

15 ft bgs. Currently, the facility operates a closed-loop vacuum degreaser located in the manufacturing building.

Previous investigations at the site found that the subsurface (soil gas and groundwater) is contaminated with high concentrations of volatile organic compounds (VOCs). In the current report, potential health effects of these VOCs to current and future receptors at the site (via the vapor intrusion pathway) are evaluated. Since the site will remain an industrial/commercial facility, the two types of receptors that were evaluated were a commercial/industrial worker and a construction worker.

Document Reviewed

The Human and Ecological Risk Office (HERO) reviewed the report titled "Subsurface Site Assessment Report", dated September 2011. The report was prepared for LeFiell Manufacturing Company, by Hemphill, Green & Associates LLC. The documents were received by HERO on October 5, 2011.

Scope of Review

HERO reviewed these documents with emphasis on those aspects that affect the risk to human health. HERO's review addressed issues concerning the methodology and conclusions of the report. Any future changes or additions to the document should be clearly identified.

General Comments

In general, HERO concurs with the conclusions of the health risk assessment, i.e., that VOCs may pose unacceptable risks/hazards to current and future workers at the site via the vapor intrusion pathway. Based on these findings, subsurface mitigation of VOCs was recommended. HERO notes that since the estimated cancer risks and non-cancer hazards were far greater than 10^{-4} and 1, respectively, indoor air and paired subsurface sampling should be conducted in buildings that are currently occupied by workers (General Comment # 1). Workers involved in redevelopment activities who may come in contact with VOCs in the subsurface should follow appropriate health and safety procedures (General Comment # 2). Interim measures such as sub-slab venting and depressurization should be implemented to mitigate vapor intrusion into current and future buildings onsite (General Comment # 3).

1) **Indoor Air and subsurface sampling:** HERO recommends concurrent indoor air and subsurface (sub-slab and/or soil gas) sampling in existing buildings, in order to estimate health risks to current onsite workers. Indoor air and subsurface sampling locations should be selected following guidance provided in DTSC's

October 2011, *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance)*. The report concluded that cancer risks to onsite workers are in the 10^{-1} range, using maximum soil gas concentrations. If indoor air concentrations are unacceptable, buildings might have to be evacuated until the subsurface is successfully remediated.

For future reference, HERO recommends that the report clearly identify buildings onsite that are currently occupied, along with soil vapor probes located nearest to those buildings. VOC data corresponding to each of the occupied buildings (i.e., the sampling location closest to those buildings) should then be used to evaluate risks/hazards to workers in those specific buildings. If the results of the subsurface sampling indicate that cumulative cancer risks exceed 10^{-5} and non-cancer hazards are above 1, indoor air sampling should be implemented. The report states that risks/hazards to current commercial/industrial workers coming in contact via the vapor intrusion pathway were overestimated since the maximum detected concentrations were used (page 4-17).

2) **Construction worker:** Please follow appropriate health and safety procedures to protect workers involved in redevelopment of the site, since risks/hazards for the construction worker were estimated to be above acceptable levels.

3) **Site redevelopment:** HERO recommends following guidance provided in DTSC's *Vapor Intrusion Mitigation Advisory* to minimize volatilization of contaminants from the subsurface into indoor air spaces of existing and future buildings. Methods for mitigating vapor intrusion into existing/future buildings include installation of sub-slab ventilation and depressurization systems. The above-mentioned procedures can be used as an interim response action until VOC concentrations in soil, soil gas and groundwater are within acceptable levels.

Specific Comments:

1) **Table 3.4:** For future reference, the detection limits of contaminants being analyzed should not exceed risk-based screening levels, in order to ensure the risks/hazards from exposures to these chemicals are not being under-estimated. The detection limits for benzene and vinyl chloride exceed risk-based screening values (CHHSLs or RSLs) in some of the sampling locations. It may be necessary to use TO-15 methodology to achieve these detection limits.

2) **Table 4.4:** For future reference, please evaluate TCE risks/hazards using the most recent toxicity data released by the USEPA's Integrated Risk Information System (IRIS).

Recommendations and Conclusions

HERO strongly recommends indoor air and paired sub-surface (sub-slab and/or soil gas) sampling at existing buildings onsite to ensure that workers are not being exposed to unacceptable risks/hazards. Workers involved in site redevelopment should use appropriate health and safety measures to minimize exposures to VOCs in the subsurface. Interim measures, such as sub-slab venting and depressurization may need to be implemented in current and future buildings onsite.

HERO notes that the decisions made in this document are site specific and should not be construed as a policy decision applicable to other sites. If you have additional questions please feel free to contact me at (714) 484-5448 or SRoysemm@dtsc.ca.gov.

Delivering sustainable solutions in a more competitive world

ERM

TABLE OF CONTENTS

LIST OF TABLES

LIST OF FIGURES

EXECUTIVE SUMMARY

ERM, Inc. (ERM) completed a Phase II Environmental Site Assessment (ESA) at the Frigid Coil Facility located at 13711 Freeway Drive, Santa Fe Springs, California (the "Site"). The Phase II ESA was performed as part of a due diligence effort associated with the purchase and re-sale of the Site by Johnson Controls, Inc. (JCI) during 2006 and 2007. This report presents the results of the investigation activities, including detection of regulated compounds in the groundwater that have migrated onto the Site from an unknown off-site source. Therefore, due to the off-site source of the groundwater impacts, ERM, on behalf of JCI, is requesting a "non-responsibility party status and/or a no further action required" determination from the Los Angeles Regional Water Quality Board for this Site.

The objective of the investigation was to assess whether subsurface contamination is associated with past manufacturing operations at the property. The investigative activities occurred between May 2006 and November 2007 and included a soil vapor survey and soil and groundwater sampling.

The property has been utilized for light industrial purposes by only two parties: the Philip Carey Company, from approximately 1971 through 1980, and Frigid Coil, from approximately 1980 until 2006. The current owner utilizes the facility for retail sales and distribution.

Initial investigation data collected via soil sampling indicated that petroleum hydrocarbon impacts were present at concentrations below applicable cleanup standards, and were limited to the upper 1-foot of soil. Also, soil vapor sampling and field screening indicated that Site soils were not impacted with volatile organic compounds (VOCs).

Four groundwater monitoring wells were installed and sampled as part of the Phase II ESA activities. The results of the sampling indicated that the shallow groundwater was impacted with VOCs. However, water levels

obtained during the sampling event indicated there was a potential that VOC-impacted groundwater had migrated onto the Site from off-Site source(s).

The Phase I ESA, initial Phase II investigation activities, and subsequent inquiries to the Geotracker database and local regulatory agencies indicated that there are several properties located upgradient and adjacent to the Site that have documented environmental impacts. The Site is located in industrial area and is surrounded by manufacturing and automotive maintenance-related operations. There is a high probability that chlorinated solvents were used in processes at these properties.

Subsequently, ERM installed two additional groundwater monitoring wells along the upgradient perimeter of the property, to determine whether VOCs occur in groundwater that is migrating onto the Site. Following installation of the additional wells, groundwater samples were collected from all six existing monitoring wells at the Site, and analyzed for VOCs.

Several VOCs were detected in monitoring wells along the upgradient side of the Site, including 1,1-Dichloroethene (DCE), cis-1,2-DCE, trans-1,2-DCE, trichloroethylene (TCE), and vinyl chloride at concentrations exceeding their respective State of California Maximum Contaminant Levels (MCLs). Based on the monitoring well locations and distribution of VOC detections, it appears that off-Site source(s) of VOCs are impacting the groundwater quality beneath the Site.

1.0 INTRODUCTION

ERM, Inc. (ERM) was retained by Johnson Controls, Inc. (JCI) to complete a Phase II Environmental Site Assessment (ESA) at the Frigid Coil Facility located at 13711 Freeway Drive, Santa Fe Springs, California (the "Site"). The Phase II ESA was performed as part of a due diligence effort associated with the purchase and re-sale of the Site by JCI during 2006 and 2007. ERM has prepared this Phase II site investigation report to document the soil vapor, soil, and groundwater sampling conducted at the Site. A Site Location Map is shown on Figure 1.

This report has been prepared and submitted to the Regional Water Quality Control Board, Los Angeles Region (RWQCB) to document the findings related to groundwater quality at the Site and present a case that off-Site contamination has impacted the Site. JCI believes that chlorinated solvents detected in the groundwater beneath the Site are from potential off-site sources. Therefore, due to the off-site source of the groundwater impacts, ERM, on behalf of JCI, is requesting a "no further action" determination from the RWQCB for this Site.

The objective of the investigation was to assess whether subsurface contamination is associated with past manufacturing operations on the property. The investigative activities occurred between May 2006 and November 2007.

The scope of activities summarized in this report includes:

- Soil sampling;
- Soil vapor sampling;
- Installation of six groundwater monitoring wells along the perimeter the Site; and
- Collection of groundwater samples from all six on-Site monitoring wells (MW-1 through MW-6).

The objective of these activities was to assess the potential for subsurface contamination that may have been caused by on-Site or off-Site sources.

1.1 REPORT ORGANIZATION

This report is organized into the following sections:

- Section 2.0 presents relevant background information, including topography and hydrogeology;
- Section 3.0 summarizes initial Phase II site investigation activities conducted to date at the Site;
- Section 4.0 describes the most recent Phase II site investigation activities, including monitoring well installation and sampling activities performed in August 2007;
- Section 5.0 presents ERM's conclusions and recommendations based on the data; and
- Section 6.0 lists documents referenced in this report.

2.0 BACKGROUND

The Site is located along Freeway Drive between Spring Street and Marquardt Avenue, adjacent to the Santa Ana Freeway (I-5). The Site is approximately 4.9 acres in size and is developed with an approximately 82,000 square foot building (ERM, 2006). The building, which was reportedly constructed in 1966, is a two-story, concrete tilt-up with slab-on-grade foundation. Office areas include carpeting, floor tiles, vinyl baseboards and mastic, gypsum wall boards, and acoustic ceiling tiles.

The Site has been owned by the Rosalinde and Arthur Gilbert Foundation since 1965. The original tenants, the Philip Carey Manufacturing Company subleased to the Sundstrand Corporation in 1973, which owned Frigid Coil at that time. The facility was occupied by Frigid Coil until their lease expired on 31 July 2007.

In May 2006, ERM conducted a Phase I ESA to identify potential environmental liability issues at the Site and to provide technical assistance to JCI in relation to FIN 47 accounting rules. The Phase I indicated that manufacturing operations have occurred on the property since 1966 and some petroleum compounds and solvents were used during those operations.

The Environmental Data Resources, Inc. (EDR) report included in the Phase I ESA also identified several properties that are believed to have a potential impact to the Site (i.e. potential off-Site sources of environmental impacts). These properties are summarized in Table 1.

The RWQCB's Geotracker database indicates that there are numerous active and closed soil and ground water contamination cases in the vicinity of the Site. Also, there are several businesses located within 1/8 mile of the Site that may have processes that would have used chlorinated solvents in the past.

Many older inactive or closed sites that are shown in Geotracker do not have reports or laboratory data. Figure 2 is a print-out from Geotracker for an area of several square miles around the Site. The red squares are petroleum sites and the green squares are non-petroleum sites. The database did not include any reports for the non-petroleum sites within one mile of the Site. Also, none of the petroleum sites had information on chlorinated solvents.

One of the nearby petroleum sites is the Ryder Truck Rental property, located directly to the south of the Site, across I-5. While reports for this site did not mention chlorinated solvents, there is a potential that they were used for parts washing and degreasing in a shop/maintenance area. The ground water flow direction at the Ryder Truck Rental site appears to be north-northeast or towards the Site.

Due to the lack of data for potential chlorinated solvent sites on Geotracker, ERM contacted the local regulatory agencies for additional information. ERM also sent written inquiries and followed up with telephone calls to the local regulatory agencies regarding several nearby industrial facilities that were not listed on the EDR or Geotracker databases as having environmental cases. These facilities include:

1. Alloy Tool Steel at 13525 Freeway Drive;
2. Precision Tool Box at 13563 Freeway Drive;
3. Carmenita Ford Truck Sales at 13433 – 13445 Freeway Drive; and
4. Excelsior Automotive at 13531 Excelsior Drive.

All of the above properties are to the northwest of the Site. The local regulatory agencies could not produce document files for review for any of the requested properties.

2.1 SITE HYDROGEOLOGY

The unconsolidated sediments encountered during installation of the monitoring wells consisted primarily of silts, sands, and silty sands, with occasional localized interbedded silty clay and clay. The lithologies encountered are typical of the LA Basin and show lateral variability across the Site. The upper 20 feet below ground surface (bgs) generally consist of silts, and some silty sands, with gravel and sand near the surface. Except for the MW-4 location, the 20 to 30 feet bgs interval consists of sands and silty sands and the 30 to 40 feet bgs interval consists of either silts or sands. Interbedded silty clay and clay intervals ranged between 6 to 18 inches in thickness and were generally encountered between 24 and 29 feet bgs.

Groundwater was encountered between 21 and 40 feet bgs at the Site. Variability in the depth to water is common in these sediments and may be caused by localized variation in lithology. The water levels observed in monitoring wells MW-1, MW-2, MW-5 and MW-6 are generally consistent across the Site and indicate a southwest to northeast flow direction. The groundwater elevations in MW-3 and MW-4 are inconsistent with the trend established by the other four wells.

3.0 INITIAL PHASE II ESA ACTIVITIES

Initial Phase II site investigation activities included:

- Advancing soil borings and collecting soil samples from multiple depths;
- Installing temporary soil vapor probes and collecting soil vapor samples; and
- Installing four groundwater monitoring wells around the facility.

3.1 INITIAL INVESTIGATION

A Phase II site investigation was initiated in May 2006 as a result of the Phase I ESA. The purpose of the investigation was to assess the potential for subsurface contamination that may have been caused by past manufacturing operations at the Site. During this investigation, 12 soil borings were advanced and 24 temporary soil-vapor sampling probes (2 at each soil boring location) were installed. The locations of the soil borings and soil vapor probes are summarized on Table 2 and shown on Figure 3. Undisturbed soil samples were collected from 0.5, 5, and 10 feet bgs from each boring. Samples from the 0.5 foot depth were analyzed for diesel and motor oil range organics using U.S. Environmental Protection Agency (USEPA) Method 8015M, and for California Assessment Manual (CAM) 17 Metals using USEPA Method 6010B. Soil samples collected from 5 ft bgs were analyzed for diesel and motor oil range organics using USEPA Method 8015M. Due to the lack of the field indications of potential impact to the deeper subsurface soil, combined with non-detection results for VOCs exhibited in the soil vapor survey, the soil samples collected from 10 ft bgs interval were not analyzed. The soil vapor samples were analyzed for VOCs using USEPA Method 8260B.

In October and November 2006, ERM conducted additional site investigation to evaluate groundwater quality beneath the Site, and to assess the lateral extent of total petroleum hydrocarbon (TPH) impact in the near-surface soils identified during May 2006 (see Section 3.2).

ERM installed four groundwater monitoring wells (MW-1 through MW-4) around the perimeter of the building. The wells were constructed of 4-inch diameter polyvinyl chloride (PVC) casing and screen. Screened intervals ranged from 20 to 25 feet in length. ERM collected groundwater samples from each well for analysis of metals, TPH and VOCs.

Nine shallow "step-out" soil samples (SB-1A through SB-1C, SB-2A through SB-2C, and SB-9A through SB-9C) were collected at 0.5 feet bgs from the locations shown on Figure 4. Step-out borings and sampling depths are summarized on Table 3.

3.2 INITIAL INVESTIGATION RESULTS

Analytical results for soil samples collected in May 2006 are summarized on Table 4. The concentrations of metals, diesel range organics, and motor oil range organics in all soil samples were below USEPA Region 9 Preliminary Remediation Goals (PRGs) for industrial soil. All of the detections of TPH indicated that the petroleum-impacted soil present at the Site resided within the upper 0.5 feet of soil.

The results of samples collected from the step-out soil borings are summarized on Table 5. The following maximum concentrations were detected in the shallow soil samples collected from borings SB-1A through SB-1C, SB-2A through SB-2C, and SB-9A through SB-9C:

- Gasoline range organics (GRO) were detected at a maximum concentration of 260 milligrams per kilogram (mg/kg);
- Diesel range organics (DRO) were detected at a maximum concentration of 670 mg/kg; and
- Motor oil range organics (ORO) were detected at a maximum concentration of 120 mg/kg.

Extractable Fuel Hydrocarbon (EFH) for both DRO and ORO ranges were detected at a maximum concentration of 790 mg/kg and 920 mg/kg for DRO and ORO, respectively.

Soil vapor analytical results were non-detect for all samples (Table 6). Based on these results, the shallow soil vapor survey results indicated a minimal likelihood of VOC impacts to the subsurface soil.

Groundwater analytical results are summarized on Table 7. The following maximum concentrations were detected in the groundwater samples collected from groundwater monitoring wells MW-1 through MW-4:

- Total volatile petroleum hydrocarbons as gasoline (TVPH-g) was detected at a maximum concentration of 0.650 micrograms per liter (μg/L) in well MW-3;
- 1,1- DCE was detected at a maximum concentration of 12 μg/L in well MW-2;
- Trans-1,2-DCE was detected at a maximum concentration of 31 μg/L in well MW-3;
- Cis-1,2-DCE was detected at a maximum concentration of 470 μg/L in well MW-3;
- TCE was detected at a maximum concentration of 1,400 μg/L in well MW-3; and
- Arsenic was detected at a concentration of 0.25 mg/l in MW-1, exceeding the MCL of 0.05 mg/l. This concentration is an order-of-magnitude higher than arsenic concentrations detected in MW-2, -3, and -4; however, there were no anomalously high detections of arsenic in soil samples. Arsenic concentrations in soil ranged from 2.8 to 9 mg/kg.

Based on these results, supplemental investigation activities were conducted during August 2007.

4.0 AUGUST 2007 PHASE II ESA ACTIVITIES

Supplemental investigation activities conducted by ERM in August 2007 included:

- Installation of two additional groundwater monitoring wells along the upgradient perimeter of the Site; and
- Collection of groundwater samples from all six on-Site wells (MW-1 through MW-6).

Figure 5 shows the locations of all monitoring wells and well construction details are provided in Table 8. The rationale for each location, including sample depths and analytical methods, is described in the following section.

4.1 AUGUST 2007 INVESTIGATION

On 30 and 31 August 2007, California-licensed Gregg Drilling and Testing, Inc. (GDT) performed hand auguring and hollow stem auguring and sampling under oversight by ERM. An ERM field geologist observed recovered soil samples and recorded observations on field borehole logs, copies of which are included in Appendix A. Soils were described according to the American Society for Testing and Materials Standard D2487, and classified by Unified Soil Classification System soil type. Soil samples were screened in the field for the presence of VOCs using a photoionization detector (PID). Headspace method PID readings were recorded on the borehole logs.

The groundwater monitoring wells were constructed using 2-inch-diameter PVC casing. Screened intervals in wells MW-5 and MW-6 consisted of 15 feet of 0.02-inch machine-slotted PVC attached via a threaded flush joint to PVC riser pipe. The annulus of each well casing was filled with Monterey-type No. 3 sand from total depth to approximately 2 feet above the top of the screened interval. A 2-foot-thick granular bentonite seal was placed on top of the sand, and the remainder of the annulus was filled with cement-bentonite grout. Well construction details are summarized in Table 8, and boring logs are provided in Appendix A.

Groundwater monitoring wells were completed at grade. Traffic-rated well boxes were set in concrete over the top of each well casing. California-licensed surveyor Dulin and Boynton surveyed the Site on September 25, 2007. Survey data is provided in Appendix A.

The groundwater monitoring wells were developed on 10 September 2007 using a truck-mounted, well-development rig equipped with a bailer and vented surge block. GDT performed the well development activities under ERM supervision. Well development occurred by alternately bailing and swabbing the well to settle the sand pack and remove fine-grained materials. Swabbing consisted of raising and lowering a surge block inside the well below the water table. The wells were then purged of water by a truck-mounted bailer. Electrical conductivity, pH, temperature, and turbidity were monitored during development. Well development information was recorded on well development forms included in Appendix A.

Groundwater monitoring well MW-5 was installed on the property adjacent to Spring Street to assess potential impacts from off-Site sources located to the west of the Site. Well MW-6 was installed on the property adjacent to Freeway Drive to assess potential impacts from off-Site sources located to the south of the Site.

On 10 September 2007, ERM collected groundwater samples from all six on-Site wells. Groundwater samples collected from each well were placed on ice and hand delivered to Calscience Environmental Laboratories, Inc., located in Garden Grove, California, under chain-of-custody procedures. The groundwater samples were analyzed for VOCs in accordance with USEPA Method 8260B.

4.2 AUGUST 2007 RESULTS

The August 2007 groundwater sample analytical results are summarized on Table 7. A copy of the laboratory data report is included in Appendix B.

Of the VOCs analyzed at each well location, the following compounds were detected above California MCLs:

- 1,1-DCE was detected in well MW-4 at a concentration of 6.6 μg/L;
- Cis-1,2-DCE was detected in wells MW-3, MW-4, and MW-6 at concentrations of 240 μg/L, 340 μg/L, and 130 μg/L, respectively;
- Trans-1,2-DCE was detected in wells MW-3, MW-4, and MW-6 at concentrations of 24 μg/L, 14 μg/L, and 11 μg/L, respectively;
- TCE was detected in wells MW-3, MW-4, and MW-6 at concentrations of 710 μg/L, 260 μg/L, and 530 μg/L, respectively; and
- Vinyl chloride concentrations were detected in Wells MW-3 and MW-6 at concentrations of 1.4 μg/L and 0.78 μg/L, respectively.

All concentrations detected above MCLs were located in wells along the southern (upgradient) portion of the Site (MW-3, MW-4, and MW-6). There were no VOC detections above MCLs in downgradient wells MW-1 and MW-2. The cis-1,2-DCE concentration in MW-1 (3 ug/l) is two to three orders-of-magnitude less than the cis-1,2-DCE concentrations in the upgradient wells.

5.0 CONCLUSIONS AND RECOMMENDATIONS

The findings of the Phase II site investigation result in the following conclusions:

- Soil sampling data indicate that the upper 1-foot of soil in three areas of the Site is impacted with TPH; however, all detected concentrations are below applicable standards.
- Soil vapor sampling data and field screening indicate that indicates that organic compounds are not present in Site soils.
- Groundwater flow direction at the Site is from southwest to northeast.
- The arsenic MCL is exceeded in one area of the Site (characterized by MW-1). This appears to be a suspect and/or an anomalous result because arsenic was not detected in Site soils.
- VOC concentrations exceeding California MCLs were detected in wells MW-3, MW-4, and MW-6, all of which border the upgradient, southern portion of the property.
- Data from the most recent sampling event indicates that there were no VOC detections above MCLs in the two downgradient wells at the Site.
- Based on the direction of groundwater flow and the distribution of VOC concentrations, it is likely that off-Site sources to the south or west have impacted groundwater beneath the Site.

Several adjacent properties with the potential to impact the Site are listed in Section 2.0, including six that are listed in the leaking underground storage tank database. The south side of I-5 is a heavily industrialized area occupied by several manufacturing facilities. The potential for chlorinated solvent migration in groundwater is high in this area.

ERM recommends that the RWQCB grant a non-responsibility party status and/or a no further action required determination for this Site based on the site investigation results generated to date and on the conclusions noted above.

137711 Freeway Drive

Santa Fe Springs, California

Parameter		Analytical Results - Soil (mg/kg)								
		SB-1A (0.5')	SB-1B (0.5')	SB-1C (0.5')	SB-2A (0.5')	SB-2B (0.5')	SB-2C (0.5')	SB-9A (0.5')	SB-9B (0.5')	SB-9C (0.5')
TPH	RWQCB Maximum SSL for TPH above Drinking Water Aquifers (20-150 feet) (mg/kg)									
GRO C4-C12	500	ND	ND	ND	ND	ND	ND	ND	ND	260
DRO C10-C32	1,000-10,000	ND	6.2	ND	8.6	ND	7.5	41	ND	670
ORO C23-C28		13	46	16	50	19	39	49	6.3	120
EFH C10-C32		14	52	19	59	23	46	90	9.6	790
EFH C8-C28		7.7	23	10	30	13	26	70	6.0	920

Abbreviations:

DRO = Diesel range organics
EFH = Extactable fuel hydrocarbons
GRO = Gasoline range organics
mg/kg = Milligrams per kilogram
ND = Not detected above applicable analytical laboratory reporting limits.
ORO = Motor oil range organics
RWQCB = Regional Water Quality Control Board
SB = Soil boring
SSL = Soil screening levels
TPH = Total petroleum hydrocarbons

Notes:

Bold = Results in excess of MCL.
< = Not present at or above listed method reporting limit.

Abbreviations

µg/l =Micrograms per liter
dup = Duplicate sample
MCL = California Maximum Contaminant Level
mg/l =Milligrams per liter
NA = Not analyzed/ Not available
TCE = Trichloroethene
TEPH-DRO = Total extractable petroleum hydrocarbons in diesel range
TEPH-ORO = Total extractable petroleum hydrocarbons in motor oil range
TPH = Total petroleum hydrocarbons
TVPH-g = Total volatile petroleum hydrocarbons in gasoline range
USEPA = United States Environmental Protection Agency

Table 8 ***Monitoring Well Construction Details***
Frigid Coil
13711 Freeway Drive
Santa Fe Springs, California

Well ID	Date Installed	Total Well Depth (ft bgs)	Well Screen Interval (ft bgs)	Well Casing Diameter (Inches)	TOC Elevation (feet MSL)	DTW (ft bgs) [b]	Groundwater Elevation (ft MSL)
MW-1	10/18/2006	40	15-40	4	71.16	23.48	47.68
MW-2	10/17/2006	40	15-40	4	70.96	22.55	48.41
MW-3	10/17/2006	55	35-55	4	70.40	25.59	44.81
MW-4	10/16/2006	49 [a]	35-49	4	69.39	40.60	28.79
MW-5	8/30/2007	36	21-36	2	71.35	21.40	49.95
MW-6	8/31/2007	35.5	20-35	2	70.36	21.06	49.30

Notes:

[a] = Original total depth of well MW-4 was 55 feet bgs. During well development, it appeared that the bottom cap of the well casing was knocked off, which allowed annular space fill material to enter the well casing. A plug was installed in the bottom of the well casing, and the effective total well depth became approximately 49 ft bgs.

Wells MW-1 through MW-4 originally surveyed on 22 November 2006, Wells MW-5 and MW-6 surveyed on 25 September 2007 by Dulin and Boynton.

[b] Depth to groundwater measured on 9/19/07.

Abbreviations:

DTW = Depth to water
ft bgs = feet below ground surface
ft MSL = Feet above mean sea level
TOC = Top of casing

Laboratory Reports

LIMITATIONS AND WARRANTIES

This letter report titled "Soil Gas Survey Report – 13711 Freeway Drive – Santa Fe Springs, California" has been prepared for the exclusive use of ERM and assigned interested parties. The report has been prepared in accordance with generally accepted environmental assessment practices. No other warranty, expressed or implied, is made. The information provided in this report is based on measurements performed in specific areas during a specific limited period of time.

Soil gas sample analyses were conducted using a gas chromatograph/mass spectrometer (GC/MS). Soil gas survey data should be used in conjunction with other site-specific data.

ND = Not detected at or above the reporting limit.

Appendix A

FACTORS AFFECTING THE GAS-PHASE DISTRIBUTION OF VOCs IN THE SUBSURFACE

Soil and groundwater contamination by volatile organic compounds (VOCs) can often be detected by analyzing trace gases in soil just below ground surface. This technique is possible because many VOCs will volatilize and move by molecular diffusion away from source areas toward regions of lower concentrations. A gas phase concentration gradient from the source to adjacent areas is established.

The following factors affect the transport and gas phase distribution of VOCs in the subsurface.

1. The liquid-gas partitioning coefficient of the compounds of interest (the "volatility" of the compound).

2. The vapor diffusivity, which is a measure of how quickly an individual compound "spreads out" within a volume of gas.

3. Retardation of the individual compounds as they migrate in the soil gas. Retardation may be due to degradation, adsorption on the soil matrix, tortuosity of the soil profile, or entrapment in unconnected pores.

4. The presence of impeding layers, wetting fronts of freshwater, or perched water tables, between the regional water table and ground surface.

5. The presence of soil moisture around man-made structures such as clarifiers and sumps may suppress volatilization and diffusion of VOCs resulting in false negative or low soil gas concentrations.

6. The presence of contaminants from localized spills or in the ambient air.

7. Movement of soil gas in response to barometric pressure changes.

8. The preferential migration of gas through zones of greater permeability (e.g. natural lithologic variation or back-fill of underground utilities).

9. Soil temperature.

At most sites, many of these factors are unknown or poorly understood. Because of this uncertainty, soil gas sampling should be used in conjunction with other site-specific data.

Project No. EST2521

Mr. David Essex
Project Manager
ERM
3 Hutton Centre Drive, Suite 600
Santa Ana, California 92707

Subject: Soil Gas Survey Report
13711 Freeway Drive
Santa Fe Springs, California

Dear Mr. Essex:

Environmental Support Technologies, Inc. (EST) is pleased to submit the results of the soil gas survey conducted at 13711 Freeway Drive in Santa Fe Springs, California. On May 30 and 31, 2006, EST installed and sampled soil gas sampling probes at depths of 6- and 15-feet below grade. The samples were analyzed on-site for volatile organic compounds (VOCs) by EPA Method 8260B using a gas chromatograph/mass spectrometer (GC/MS). The soil gas survey was conducted in general accordance with the Department of Toxic Substances Control (DTSC) / Los Angeles Regional Water Quality Control Board's (LARWQCB) "Advisory – Active Soil Gas Investigations" dated January 28, 2003.

A summary of laboratory analytical results for soil gas samples is provided in Table 1. Factors that may affect the distribution of VOCs in the subsurface are presented in Appendix A. Laboratory analytical reports for VOCs are provided in Appendix B. EST's standard methods and procedures for soil gas surveying are provided in Appendix C.

EST appreciates the opportunity to assist ERM on this project. Should you have any questions or require additional information, please contact me at (949) 679-9500.

Sincerely,

Environmental Support Technologies, Inc.

Kevin B. Aardahl

2006

STANDARD METHODS AND PROCEDURES FOR SOIL GAS SURVEYS

This section describes EST's methods and procedures for conducting soil gas surveys. Procedures may be modified based on evaluation of specific project needs. EST will perform soil gas surveys in general accordance with the Department of Toxic Substances Control (DTSC) / Los Angeles Regional Water Quality Control Board's (LARWQCB) "Advisory – Active Soil Gas Investigations" dated January 28, 2003.

INSTALLATION AND SAMPLING OF SEMI-DEDICATED SOIL GAS SAMPLING PROBES

Soil gas sampling probes will be installed using either a percussion hammer or hydraulic ram. Once a probe is installed to the desired depth, the 1.5-inch diameter hollow probe drive-rods are withdrawn, leaving a steel probe point and Nylaflow™ sampling tube in the subsurface. Clean, graded (No. 3), kiln dried, Lonestar Monterey sand will be poured around the perforated section of Nylaflow™ sample tubing to allow for diffusion of soil vapors. Approximately 6-inches of granular bentonite will be added above the sand pack and hydrated. The remaining annulus will be filled with cement mortar/bentonite grout to slightly below grade. Construction details of a typical soil gas sampling probe are shown in Figure 1.

Soil gas samples will be collected from the driven probes using the soil gas sampling system as shown in Figure 2. The soil gas sampling system is constructed of stainless steel, glass, Nylaflow™, and Teflon™ components. Instrumentation associated with the sampling system includes a calibrated flow meter and a vacuum gauge. Vacuum integrity of the sampling system will be tested prior to, and after the soil gas survey using leak-down testing methods. Site-specific probe purging and sample volume calibrations will be initially performed to evaluate the appropriate volume of gas to be purged from each probe prior to sample collection. This will be done by performing time-series sampling of at least one probe at each site to evaluate trends in soil gas concentrations as a function of purge volume. After probe purging, soil gas samples will be withdrawn from the moving sample stream using a syringe fitted with a disposable needle and Mininert™ gas-tight valve. Immediately following collection, the samples will be loaded into the purge and trap system for analysis.

When soil gas sampling is completed, the Nylaflow™ tubing can either be removed or can remain in-place for subsequent sampling. If the abandonment method requires tube removal, the sample tubing will be removed and the remaining void will be filled with fluid bentonite slurry until slightly below grade. The remaining depression will be filled with concrete patch material and finished flush with grade. If it is desired to leave the tubing in-place, the Nylaflow™ sample tubing will be plugged with a sheet metal screw, folded over, and pushed down-hole until slightly below grade. The remaining depression will be filled with concrete mortar and finished flush with grade. The probe point and sample tubing will remain as a long-term soil gas monitoring point, unless otherwise specified by the client prior to entering the field.

SAMPLE ANALYSIS OF VOLATILE ORGANIC COMPOUNDS

Soil gas samples will be analyzed in the field using a gas chromatograph/mass spectrometer GC/MS for volatile organic compounds (VOCs). Reporting limits for the target compounds will be 1.0 microgram per liter (µg/L) of gas except when compound concentration exceeds the initial calibration range. If this occurs, the sample will be diluted using smaller volume, which will result in raised reporting limits for the analysis.

A series of quality assurance/quality control (QA/QC) analyses will be performed prior to, during, and following the analysis of the soil gas samples.. A summary of these QA/QC analyses is shown in Table 1 and each are described below.

LEAK TEST

Leak testing will be conducted at every soil gas probe using 2-propanol as a leak check compound. A rag dampened with 2-propanol will be placed around the probe at the surface while purging to detect any possible leak in the probe construction or the sampling system. The reporting limit for isopropyl alcohol will be 10 µg/L.

SURROGATE COMPOUNDS

Three (3) surrogate compounds will be added to all analyzed samples. Surrogate compound concentrations will be within the calibration range. The percent recovery of the surrogate compounds will be calculated and reported with soil gas sample results. The acceptance goal for surrogate recovery is ±25 percent difference from the true concentration of the surrogate compounds. Surrogate compounds added to each sample analysis run will include dibromofluoromethane, toluene-d8, and 4-bromofluorobenzene, each at a concentration of 25 µg/L.

INITIAL MULTI-POINT EQUIPMENT CALIBRATION

The GC/MS used for soil gas analysis will be calibrated using high-purity solvent-based standards obtained from certified vendors. Standards are typically prepared in high-purity methanol solvent. Calibration will be performed using solvent-based standards at varying concentration levels. If necessary, stock solvent-based standards will be diluted to an appropriate concentration. Diluted standards will be prepared by introducing a known volume of stock solvent-based standard into a known volume of high-purity solvent.

Initial GC/MS calibration will be performed for volatile organic compounds (VOCs). The GC/MS will be calibrated using multiple standard analysis runs to establish a multi-point calibration curve. The lowest standard will not be higher than five times the method reporting limit. The percent relative standard deviation (%RSD) of the response factor (RF) for each target compound must not exceed 20 percent except for trichlorofluoromethane (Freon®-11), dichlorodifluoromethane (Freon®-12), trichlorotrifluoroethane (Freon®-113), chloroethane (CE), and vinyl chloride (VC) which must not exceed 30% RSD. Initial calibration will also meet the Calibration Check Compounds (CCC)/System Performance Check Compounds (SPCC) requirements for EPA Method 8260B. Identification and quantitation of compounds in the field will be conducted under the same analytical conditions as for the initial calibration.

TABLE 1

SUMMARY OF
QUALITY ASSURANCE/QUALITY CONTROL ANALYSES
FOR SOIL GAS SURVEYS

File: SGSQAQC1

LABORATORY QUALITY ASSURANCE / QUALITY CONTROL SAMPLES		
DESCRIPTION	FREQUENCY	ACCURACY / PRECISION GOAL
INITIAL MULTI-POINT CALIBRATION (25 Target Compounds)	At the beginning of the soil gas survey, unless the RPDs of the initial laboratory check sample or daily ICV samples samples exceed their goals.	20, 30 %RSD (1)
INITIAL LABORATORY CONTROL SAMPLE (LCS) (25 Target Compounds)	At the beginning of the survey, following the initial multi-point calibration.	±15, ±25 %D (2)
INITIAL CALIBRATION VERIFICATION (ICV) (14 Target Compounds)	At the beginning of each day (unless an initial multi-point calibration was performed).	±15, ±25 %D (3)
LAST GC TEST RUN	At the end of the day if all samples from that day of analysis show non-detect (ND) results.	At least 50 % recovery (4)
BACKGROUND SAMPLE (5)	Minimum one per day.	<RL of target compounds and 75 to 125 percent recovery of surrogate compounds
SYRINGE BLANK (5)	Minimum one per day.	<RL of target compounds and 75 to 125 percent recovery of surrogate compounds
DUPLICATE SAMPLES	Minimum one per day.	RPD ≤ 50 for all detected analytes

%RSD = Percent Relative Standard Deviation calculated based on the initial multi-point calibration.

%D = Percent Difference between the response factor obtained from the LCS, the daily ICV, and the average response factor initially calculated based on the multi-point calibration.

RL = Reporting Limit

RPD = Relative Percent Difference

(1) The %RSD goal for the initial multi-point calibration will be 20 percent for all compounds except for Dichlorodiflouromethane (Freon®-12, Vinyl Chloride (VC), Chloroethane (CE), Trichlorofluoromethane (Freon®-11), and 1,1,2-Trichloro-trifluoroethane (Freon®-113) for which the % RSD goal is 30 percent.

(2) The %D goal for the initial laboratory control standard will be ±15 percent for all compounds except for Freon®-12, Vinyl Chloride, Chloroethane, Freon®-11, and Freon®-113 for which the %D goal is ±25 percent.

(3) The %D goal for the daily ICV will be ±15 percent for all compounds except for Freon®-12, Vinyl Chloride, Chloroethane, Freon®-11, and Freon®-113 for which the %D goal is ±25 percent.

(4) A LCS at the detection limit concentration is analyzed. The recovery for each compound must be at least 50 percent.

(5) A syringe/background sample will be analyzed using ambient air. If volatile organic compounds (VOCs) are not detected, the ambient air sample will represent the background sample and syringe blank. If VOCs are detected in the ambient air sample, a syringe blank will be analyzed using ultra-high-purity helium or nitrogen gas.

LABORATORY CONTROL SAMPLE

A laboratory control sample (LCS) from a source or a lot number other than the initial calibration standard will be analyzed to verify the true concentration of the initial calibration standard. The LCS will include the DTSC / LARWQCB target compounds and the RF for each compound must be within ±15 percent difference from the average response factor (ARF) of the initial calibration except for Freon®-11, Freon®-12, Freon®-113, CE, and VC, which must be within ±25 percent difference from the ARF of the initial calibration.

INITIAL CALIBRATION VERIFICATION

A daily Initial Calibration Verification (ICV) will consist of a mid-point concentration of the initial calibration using the calibration standard solution. The daily ICV will include the 14 target compounds as specified in the previously referenced DTSC / LARWQCB requirements. The RF of each compound (except for Freon®-11, -12, and -113, CE, and VC) must be within ±15 percent difference from the ARF of the initial calibration. The RF for Freon®-11, -12, and -113, CE, and VC must be within ±25 percent difference from the ARF of the initial calibration. ICV will also meet the Calibration Check Compounds (CCC)/System Performance Check Compounds (SPCC) requirements for EPA Method 8260B. Daily ICV will be performed prior to the first sample analysis of the day. Daily ICV also will be performed for compounds detected at a particular location to assure accurate quantitation.

END OF DAY GC TEST RUN

A LCS will be analyzed at the reporting limit concentration should the soil gas samples show no detections of volatile organic compounds. The recovery for each compound must be at least 50 percent of the true concentration of that LCS. If these criteria are not met, an additional LCS will be analyzed to satisfy these criteria.

BLANK SAMPLES

The syringes used for soil gas sample collection will be filled with ambient air or high-purity carrier-grade gas from a compressed gas cylinder. The ambient air or high-purity gas will be analyzed daily before running samples. The blank injection will serve to detect contamination of the syringe to be used for sampling and verify the effectiveness of equipment decontamination procedures.

DUPLICATE SAMPLES

Duplicate samples will be collected at a minimum of one (1) per day. Duplicate samples will be collected from areas of concern. A duplicate sample will be collected in a separate sample container at the same location and depth immediately after the original sample.

DECONTAMINATION PROCEDURES

Soil gas sampling syringes and applicable fittings will be decontaminated by placing the equipment in the gas chromatograph oven and heating at a temperature ranging from 100 to 120 degrees centigrade (°C) for a minimum of 30 minutes. The syringes will be allowed to cool to ambient temperature before use on the next sampling location.

DATA QUALIFIERS AND DEFINITIONS

M1 The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).

M2 The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).

M-HA Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).

M-NR No results were reported for the MS/MSD. The sample used for the MS/MSD required dilution due to the sample matrix. Because of this, the spike compounds were diluted below the detection limit.

Z3 The sample required a dilution due to the nature of the sample matrix. Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

ZX Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.

ND Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.

RPD Relative Percent Difference

ADDITIONAL COMMENTS

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

NELAP #01108CA California ELAP#1197 CSDLAC #10256

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.
This entire report was reviewed and approved for release.

DATA QUALIFIERS AND DEFINITIONS

C Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.

M1 The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).

P The sample, as received, was not preserved in accordance to the referenced analytical method.

P1 Sample received and analyzed without chemical preservation.

pH pH = 3

QP Hydrocarbon result partly due to individual peak(s) in quantitation range.

ND Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.

RPD Relative Percent Difference

ADDITIONAL COMMENTS

For GRO (C4-C12):

GRO (C4-C12) is quantitated against a gasoline standard. Quantitation begins immediately following the methanol peak.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

LABORATORY REPORT

Prepared For: ERM-West-Santa Ana
3 Hutton Centre, Suite 600
Santa Ana, CA 92707
Attention: David Essex

Project: JCI
55292.01

Sampled: 10/16/06
Received: 10/16/06
Issued: 11/03/06 16:32

NELAP #01108CA California ELAP#1197 CSDLAC #10256

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weigh basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.

This entire report was reviewed and approved for release.

ERM-West-Santa Ana 3 Hutton Centre, Suite 600 Santa Ana, CA 92707 Attention: David Essex	Project ID: JCI 55292.01 Report Number: IPJ1580	Sampled: 10/16/06 Received: 10/16/06

DATA QUALIFIERS AND DEFINITIONS

M-HA Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).

Z3 The sample required a dilution due to the nature of the sample matrix. Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

ND Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.

RPD Relative Percent Difference

ADDITIONAL COMMENTS

For GRO (C4-C12):

GRO (C4-C12) is quantitated against a gasoline standard. Quantitation begins immediately following the methanol peak.

For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

Santa Ana, CA 92707
(714) 430-1476
(714) 436-2940 (fax)

To:	David Essex
From:	Irene Lavigne
Date:	15 November 2006
Subject:	Data Review of JCI Soil and Groundwater Samples Collected October-November 2006
Project Number:	0055292.01
Data Package:	Test America Data Packages IPJ1580, and IPK0248.

The quality of the data was assessed and any necessary qualifiers were applied following the *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review,* October 1999 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review,* October 2004.

HOLDING TIME AND PRESERVATION EVALUATION

The samples were prepared and analyzed within the method prescribed time period from the date of collection. The sample shipments were received at the laboratory within the method prescribed temperature and preservation requirements with limited exceptions. Three samples, MW-1, MW-3, and MW-4, were not preserved in the field, as noted by the laboratory, but were analyzed within the holding time requirements for unpreserved samples and, as such, did not require qualification on the basis of preservation requirements.

BLANK EVALUATION

The method blank sample results were nondetected for each of the target analytes. None of the data were qualified on the basis of blank results.

BLANK SPIKE EVALUATION

The laboratory control sample (LCS)/laboratory control sample duplicate (LCSD) recoveries were within the laboratory's limits of acceptance. No sample data were qualified as a result of the LCS recoveries.

MATRIX SPIKE EVALUATION

The matrix spike (MS)/matrix spike duplicate (MSD) recoveries were within the laboratory's limits of acceptance with limited exceptions. However, no sample data required qualification. Samples were not qualified if any of the following criteria were met: if one MS was in control limits and one was not; if both MS/MSD results were out of control limits, but the associated LCS/LCSD for the affected compound was within limits; or, if the sample used for the MS/MSD analysis was not a client sample. The MS/MSD outliers are presented in Table 1.

SURROGATE SPIKE EVALUATION

The surrogate recoveries were within acceptable limits with one exception. The surrogate percent recovery for one sample submitted for gasoline range organics (GRO) analysis was diluted by a factor of 10 times or more, resulting in the surrogate being diluted out of the sample, as noted by the laboratory. The percent recovery was outside of the laboratory's limits of acceptance; however, no qualifications to the data were made as a result of the dilution. Surrogate recovery outliers are shown in Table 2.

FIELD DUPLICATE EVALUATION

One sample was submitted in duplicate. ERM calculated the relative percent difference (RPD) between detected results. The USEPA has not established control criteria for field duplicate samples; therefore, sample data are not qualified on the basis of field duplicate imprecision. The calculated RPDs are presented in Table 3.

TPH EVALUATION

The laboratory noted that results for three samples submitted for GRO analysis were partly due to individual peaks in the quantitation range. ERM qualified the affected samples as tentatively identified and estimated (NJ) as shown in Table 4.

OVERALL ASSESSMENT

No data required rejection. All of the data, including qualified data, can be used for decision-making purposes; however, the limitations indicated by the applied qualifiers should be considered when using the data. The quality of the data generated during this investigation is acceptable for the preparation of technically defensible documents.

Table 1
Spike Recoveries Outside of Acceptable Limits
Soil and Groundwater Samples
JCI
Santa Fe Springs, California

Lab Package	Spike Sample ID	Associated Sample	Compound	Recovery (%)	Limit (%)	RPD	RPD Limit	Sample Result	ERM Qualifier
MS/MSD									
IPJ1580	batch MS/MSD	NA	GRO	5344/475	55-145	34	35	NA	--
IPK0248	batch MS/MSD	NA	Dichlorodifluoromethane	175/192	25-155	9	30	NA	--

Key:
RPD = Relative percent difference
batch MS/MSD = Not a client sample
GRO = Gasoline range organics

Subject: **Calscience Work Order No.: 07-08-2196**
Client Reference: JCI

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 8/31/2007 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Virendra R Patel

Glossary of Terms and Qualifiers

Work Order Number: 07-08-2196

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

CALIFORNIA WATER CODE SECTION 13267 ORDER – REQUIREMENT FOR SITE ASSESSMENT AT FRIGID COIL FACILITY AT 13711 FREEWAY DRIVE, SANTA FE SPRINGS, CALIFORNIA, 90670 (SCP NO. 1225, SITE ID NO. 2040314)

Dear Mr. Werwie:

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board) is the public agency responsible for the protection of ground and surface water quality for all beneficial uses within Los Angeles and Ventura Counties.

On January 10, 2008 the Regional Board received a report entitled *Phase II Environmental Site Assessment, Frigid Coil, 13711 Freeway Drive, Santa Fe Springs, California* prepared by Environmental Resources Management, Inc. (ERM) on behalf of Johnson Controls, Inc. (JCI), the owner of the Frigid Coil facility (Site). The report was prepared as part of a due diligence effort for a real estate transaction by JCI. A final recommendation presented in the report requests that the Regional Board "grant a non-responsibility party status and/or no further action determination for the site" claiming that contamination detected in onsite groundwater monitoring wells is coming from an unknown offsite source. The Regional Board staff has reviewed the subject report and this letter contains our findings, comments, and requirements.

BACKGROUND

The subject Site is an 82,000 square foot, 2 story structure, on a 4.9 acre parcel located at 13711 Freeway Drive, Santa Fe Springs, California. Frigid Coil has reportedly occupied the Site since 1966 and conducted light manufacturing operations to produce commercial refrigeration equipment. In May 2006, JCI conducted a Phase I Environmental Site Assessment (ESA) that identified locations of manufacturing and chemical storage inside and outside of the building and documented the use of petroleum compounds and solvents at the Site. In January 2008, JCI completed a follow-up Phase II ESA (subject report) that included the following findings:

- **Soil Vapor** – Twenty four (24) soil vapor samples were analyzed from twelve (12) indoor and outdoor locations at depths of 6- and 15- feet below the ground surface (ft bgs). The samples were analyzed for volatile organic compounds (VOCs) by EPA Method 8260B by an onsite mobile lab and the results indicated one probe had a total xylene concentration of 1.6 micrograms per liter (µg/L) but nothing else was detected.

- **Soil matrix** – Forty five (45) soil samples were obtained from twenty one (21) borings that were drilled to a maximum depth of 15 ft bgs. The borings were drilled at locations defined by blending, aluminum press, tool crib, parts warehouse, copper coil soldering and brazing, final assembly, and storm water collection. Analytical testing was only conducted on selected soil samples from 0.5 and 5.0 ft bgs [thirty three (33) total samples] for total petroleum hydrocarbons (TPH -EPA Method 8015M) and metals (EPA Method 6010B). The maximum concentrations were: TPH [extractible fuel hydrocarbons - 1,000 milligrams per kilogram (mg/kg)]; arsenic (9 mg/kg).

- **Groundwater** – Wells MW-1, MW-2, MW-3, and MW-4 were installed in 2006 and wells MW-5 and MW-6 were installed in 2007. Ten (10) groundwater samples have been obtained during 2 monitoring events. On November 2, 2006 four samples were collected (from 4 wells) and on September 10, 2007 six samples were collected (from 6 wells). All of the samples were analyzed for TPH, VOCs, and metals. The maximum reported concentrations were: TPHg (gasoline) [650 micrograms per liter (µg/L)], TCE (1,400 µg/L), arsenic [0.25 milligrams per liter (mg/l)].

HYDROGEOLOGY

The Site lies within the Downey Plain area of the Central Groundwater Basin of the Los Angeles Coastal Plain. The upper most groundwater occurs within recent alluvium and underlying permeable zones of the Bellflower Aquiclude which extends to an approximate depth 80 ft bgs. The Artesia and Exposition Aquifers which are beneath the Bellflower Aquiclude and extend to an approximate depth of 150 ft bgs. The majority of extracted drinking water in the Central Basin comes from the Lynwood, Silverado, and Sunnyside Aquifers which are deeper than 600 ft bgs in the Site vicinity.

During the 2007 monitoring event, the depth to water was 20- 25 ft bgs in MW-1, MW-2, MW-3, MW-5 and MW-6 and 40 ft bgs in MW-4. The groundwater flow direction was toward the northeast. Soil samples were visually classified at 5-foot intervals during installation of the monitoring wells (to a maximum depth of 56 ft bgs). Silt with minor discontinuous lenses of silty sand and sand were generally logged in the upper 25 feet of the Site, clay was logged between 25 and 30 ft bgs, and silt with lenses of sand and clay was logged from 30 to 56 ft bgs.

GENERAL REQUIREMENTS FOR SITE CLOSURE

The Regional Board reviews many factors when considering whether a site is ready for closure and eligible for a No Further Action (NFA) determination. The following points summarize, but are not limited to, factors for a site closure/NFA determination:

- **Phase I** – A proper Phase I Investigation that includes, but not limited to: a site history that includes previous land use and all past businesses/site operations; a complete inventory of the type(s) and amount of hazardous material(s) used at the Site that will identify the potential contaminants of concern (COCs); an identification of Site areas and equipment where hazardous materials were used, handled, and/or stored (potential COC source areas).

- **Site Assessment** – A comprehensive site assessment that involves sampling for COCs in all potentially impacted media (soil, soil vapor, groundwater, etc.) at every potential source area using industry standard investigation techniques, analytical methods, and appropriate detection limits. The Site Assessment is complete when the **horizontal and vertical extent** of COCs originating from the Site has been delineated in all media, at both onsite and offsite locations.

- **Site Conceptual Model (SCM)** – The SCM is a text or graphic representation of subsurface geologic and hydrogeologic conditions using Site Assessment data from all media. It is typically updated as new information is acquired and provides a basis to estimate contaminant distribution and identify potential receptors, exposure pathways, and data gaps.

- **Risk Evaluation** – Depending on the Site conditions, Site use, and nature of release, an evaluation of the risk to human health, and/or water quality, and/or ecology is necessary to obtain closure.

- **Corrective Action** – Under Regional Board oversight, the RP must identify and implement the most appropriate remedial action with established cleanup goals and a monitoring schedule. Interim remedial measures may be required in certain situations. A confirmation sampling program is required to verify that the contaminant source(s) have been removed or reduced in accordance with the cleanup goals approved by the Regional Board. A contingency plan must be proposed in the event established cleanup goals are not achieved within a reasonable time frame. The corrective action is complete when the environmental impact is removed or reduced to an insignificant level, as determined by the oversight agency.

- **Closure** – NFA letters for complete closure, partial closure, or conditional closure (soil only, soil and groundwater, etc.) are provided by the Regional Board after the RP has completed the applicable aforementioned tasks. Covenants and environmental restrictions are required at some sites.

COMMENTS AND REQUIREMENTS

Light manufacturing operations have been conducted at the Site since at least 1973 and the analytical results from limited sampling indicate that soil and groundwater are impacted with COCs (TPH, TCE, and arsenic). The Regional Board staff has determined that the Site assessment is incomplete because the entire Site history is not known and all of the potential source areas have not been investigated. Therefore your request for a no further action determination is **not warranted**, at this time, and you are subject to the following requirements:

1. **Phase I – The Regional** Board **file does not contain a Phase I report. If** such report exists, and it contains the necessary data (cited above), please forward a copy to the Regional Board. However, if a Phase I report needs to be prepared or and existing Phase I report needs to be updated, submit the report to the Regional Board by **July 10, 2008.**

2. **Soil Vapor** – The soil vapor survey data is not reliable because no vacuum was achieved during the purge volume testing and sampling. Additionally, the probe construction did not follow recommended guidelines. Develop a work plan for a revised, site wide, soil vapor survey and submit it to the Regional Board by **July 10, 2008.** The Regional Board is also concerned about the potential threat to human health from the intrusion of VOCs into indoor air. Therefore, the work plan must address the evaluation of potential health risk to occupants at the Site.

3. **Soil Matrix** – Hazardous materials, containing VOCs, were previously used at the Site but all potential source areas were not investigated and no soil matrix VOC testing was conducted. The Regional Board requires that soil matrix samples be obtained and analyzed for all COCs and

VOCs. Develop a work plan for an additional soil investigation and submit it to the Regional Board by **July 10, 2008.**

4. **Groundwater** – The existing database (soil and groundwater) is inadequate to conclude that VOCs detected in onsite wells originated from offsite sources. Additional wells and monitoring data collected on a more frequent basis over a longer term are needed to establish the prevailing groundwater flow direction and quality. Additional data is also needed to explain why the depth to water in MW-4 is significantly different from the depths measured in MW-1, MW-2, MW-3, MW-5, and MW-6. Develop a work plan for an additional groundwater investigation and submit it to the Regional Board by **July 10, 2008.**

5. **Groundwater Monitoring** – Initiate a quarterly groundwater monitoring program for wells MW-1, MW-2, MW-3, MW-4, MW-5 and MW-6 and submit quarterly reports to the Regional Board according to the following schedule, with the first report due on **July 15, 2008.**

Monitoring Period	Report Due Date
January – March	April 15
April – June	July 15
July – September	October 15
October – December	January 15

The groundwater samples must be analyzed for: THP using EPA 8015M (TPHg, TPHd, TPHoro), VOCs using EPA Method 8260B, 1,4-dioxane using EPA Method 8270C-MOD (detection limit 2 µg/L), metals using US EPA Method 6010B, and hexavalent chromium using EPA Method 218.6 (detection limit 1 µg/L).

The quarterly groundwater monitoring reports shall include at a minimum:

- A summary table of historical groundwater depths, groundwater elevations, and major VOCs concentrations
- A map with isopleths showing groundwater elevation and groundwater flow direction
- Dissolved phase iso-concentration contour maps for TPH and TCE
- Hydrographs showing historical trends of groundwater elevation and concentrations of major VOCs

Pursuant to State Water Resources Control Board Resolution No. 92-49, under Section 13304 of the California Water Code; all fieldwork related to well installation must be conducted by, or under the direct responsible supervision of a registered geologist or licensed civil engineer. All technical documents submitted to the Regional Board must also be reviewed and signed and/or stamped by a California registered geologist, a California registered certified specialty geologist, or a California registered civil engineer with at least five years of hydrogeologic experience.

The California Business and Professions Code Sections 6735, 7835, 7835.1 require that engineering and geologic evaluations and judgments be performed by or under the direction of a California registered geologist or registered civil engineer. A statement is required in the report that the registered professional in responsible charge actually supervised or personally conducted all the work associated with the project.

Pursuant to CWC §13267, the responsible party must submit the required technical reports by the indicated due dates. Furthermore, pursuant to 13268 (b)(1) of the CWC, failure to submit the required reports may result in the imposition of civil liability penalties by the Regional Board of up to $1,000 per day for each day the report is not received after the indicated due date (for each report). These civil liabilities may be assessed by the Regional Board for failure to comply, beginning with the date that the violations first occurred and without further warning.

If you have any questions, please contact Mr. Adnan Siddiqui at (213) 576-6812 or Mr. Daniel R. Gillette at (213) 576-6751.

Sincerely,

Tracy J. Egoscue
Executive Officer

COVENANT AND ENVIRONMENTAL RESTRICTION
ON PROPERTY

FORMER FRIGID COIL FACILITY
13711 FREEWAY DRIVE
SANTA FE SPRINGS, CALIFORNIA 90670
ASSESSOR'S PARCEL NUMBER: 8069-015-055
LARWQCB SITE CLEANUP PROGRAM CASE NO. 1225

This Covenant and Environmental Restriction on Property ("Covenant") is made as of the 21st day of December, 2011 by GILBERT-BLANK LLC ("Covenantor"), a California limited liability company, who is the Owner of record of that certain property situated at 13711 Freeway Drive, in the City of Santa Fe Springs, County of Los Angeles, State of California, which is more particularly described in Exhibits A and B attached hereto and incorporated herein by this reference (hereinafter referred to as the "Property"), for the benefit of the California Regional Water Quality Control Board, Los Angeles Region ("Board"), with reference to the following facts:

A. Nature of Covenant. This Covenant is an environmental covenant provided for by Civil Code section 1471 and required by the Board pursuant to Water Code section 13307.1 because hazardous materials, as defined in section 25260 of the Health and Safety Code, are present on the land and in the groundwater under the Property.

B. Presence of Hazardous Materials on and under the Property. A series of field investigations were undertaken by the former tenant of the Property, Johnson Controls, Inc., between 2006 and 2010. These investigations concluded that only minor concentrations of residual hazardous materials located at the Property were related to past site operations. The primary hazardous material of concern is arsenic, an inorganic chemical, which is naturally occurring at the Property.

Detections of constituents in soil samples from the Property did not exceed United States Environmental Protection Agency (USEPA) Region IX Residential Regional Screening Levels

This document filed for recording by Chicago Title Insurance and trust as an accommodation only. It has not been examined as to its execution or as its effect upon the title.

18579

(June 2011) with the exception of arsenic. Arsenic was observed at levels that are consistent with background levels of arsenic established by the California Department of Toxic Substances Control (DTSC). In soil vapor, only benzene and perchlorethylene were detected at levels above industrial/commercial California Human Health Screening Levels (CHHSLs), and only beneath the existing building located on the Property. However, the area-weighted average concentrations for these constituents did not exceed industrial/commercial CHHSLs.

Total petroleum hydrocarbons (TPH) in the gasoline range (TPHg), diesel range (TPHd), and oil range (TPHo) were detected in shallow soil at the Property. Detected concentrations of TPH in shallow soil did not warrant active remediation because they were below the regulatory screening levels under a commercial/industrial land use and did not impact the groundwater beneath the Property.

Groundwater monitoring at the Property indicated that there are two near-surface groundwater zones, one occurring at approximately 47 to 49 feet above mean sea level with a gradient trending north-northeast (shallow zone), and a second, deeper zone occurring at approximately 24 feet above mean sea level, with a gradient trending northwest. The only inorganic constituent detected in the groundwater above drinking water standards was arsenic. Organic constituents detected in groundwater above drinking water standards included mainly chlorinated volatile organic compounds such as trichloroethylene, perchloroethylene and their breakdown products. Benzene was detected in concentrations that exceeded the California, but not the Federal, drinking water standard. Based on a variety of factors, including groundwater gradient data and the lack of significant detections of the constituents observed in groundwater in soil or soil vapor, the Board determined that the constituents detected in groundwater were not the result of on-site operations and had their origin in off-site releases.

Because the area-weighted average concentrations of constituents detected in the soil and soil vapor do not exceed industrial/commercial CHHSLs, and because they are not the source of the constituents detected in the groundwater, the Board did not require any remedial action at the Property other than the recordation of this Covenant.

C. Land Uses and Population Potentially Affected. The Property is used for industrial, roadway and commercial purposes and is adjacent to industrial, roadway and commercial land uses.

D. Disclosure and Sampling. Disclosure of the presence of hazardous materials on and under the Property has been made to the Board and extensive sampling of the Property has been conducted. Different phases of assessments yielded consistent results indicating that negligible contamination originated from past site operations.

E. Use of Property. Covenantor desires and intends that in order to benefit the Board, and to protect present and future public health and safety, the Property shall be used in accordance with the provisions of this Covenant so as to avoid potential harm to persons or property that might result from any residual hazardous materials at the Property.

ARTICLE I
GENERAL PROVISIONS

1.1 Provisions to Run with the Land. This Covenant sets forth protective provisions, covenants, conditions and restrictions (collectively referred to as "Restrictions") upon and subject to which the Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. These Restrictions are reasonably necessary to protect present and future human health and safety or the environment as a result of the presence on the land of hazardous materials. Each and all of the Restrictions shall run with the land and pass with each and every portion of the Property, and shall apply to, inure to the benefit of, and bind the respective successors, assigns, and lessees thereof for the benefit of the Board and all Owners and Occupants. Each and all of the Restrictions: (a) are imposed upon the entire Property, unless expressly stated as applicable to a specific portion of the Property; (b) run with the land pursuant to section 1471 of the Civil Code; and (c) are enforceable by the Board.

1.2 Concurrence of Owners and Lessees Presumed. All purchasers, lessees, and possessors of all or any portion of the Property shall become Owners or Occupants as defined herein and shall be deemed by their purchase, leasing, or possession of the Property to be bound by the Restrictions and to agree for and among themselves, their heirs, successors, and assignees, and the agents, employees, and lessees of such owners, heirs, successors, and assignees, that the Restrictions herein established must be adhered to for the benefit of the Board and all Owners and Occupants, and that the interest of all Owners and Occupants of the Property shall be subject to the Restrictions.

1.3 Incorporation into Deeds and Leases. Covenantor desires and covenants that the Restrictions shall be incorporated in and attached to each and all deeds and leases of all or any portion of the Property. Recordation of this Covenant shall be deemed binding on all successors, assigns, and lessees, regardless of whether a copy of this Covenant has been attached to or incorporated into any given deed or lease.

1.4 Purpose. It is the purpose of this instrument to convey to the Board real property rights, which will run with the land, to address past environmental contamination and naturally occurring hazardous materials at the Property to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

ARTICLE II
DEFINITIONS

2.1 Board. "Board" shall mean the California Regional Water Quality Control Board, Los Angeles Region and shall include its successor agencies, if any.

2.2 Improvements. "Improvements" shall mean all buildings, structures, roads, driveways, gradings, re-gradings, and paved areas, constructed or placed upon any portion of the Property.

2.3 Occupant or Occupants. "Occupant" or "Occupants" shall mean Owners and those

persons entitled by ownership, leasehold, or other legal relationship to the right to use and/or occupy all or any portion of the Property.

2.4 Owner or Owners. "Owner" or "Owners" shall mean the Covenantor and Covenantor's successors in interest who hold title to all or any portion of the Property.

ARTICLE III
DEVELOPMENT, USE AND CONVEYANCE OF THE PROPERTY

3.1 Restrictions on Development and Use. Covenantor promises to restrict the use of the Property as follows:

a. Development and use of the Property shall be restricted to industrial, roadway, commercial, and/or office space;

b. No residence for human habitation shall be permitted on the Property;

c. No hospitals shall be permitted on the Property;

d. No public or private schools for persons under 21 years of age shall be permitted on the Property;

e. No care or community centers for children or senior citizens, or other uses that would involve the regular congregation of children or senior citizens, shall be authorized on the Property;

f. Any excavation conducted on the Property shall be performed pursuant to an appropriate and fully implemented Health and Safety Plan. Any soils containing hazardous materials brought to the surface by grading, excavation, trenching, or backfilling shall be managed by the Owner, Owner's agent, Occupant or Occupant's agent in accordance with all applicable provisions of local, state and federal law;

g. No Owner or Occupant shall drill, bore, otherwise construct, or use a well for the purpose of extracting water for any use, including but not limited to, domestic, potable, or industrial uses, unless expressly permitted in writing by the Board; nor shall the Owner or Occupant permit or engage any third party to do such acts:

h. The Owner and Occupant shall notify the Board of each of the following: (1) the type, cause, location and date of any disturbance to existing impervious surfaces and (2) the type and date of repair of such disturbance. Notifications to the Board shall be made by registered mail within ten (10) working days of both the date of discovery of such disturbance and the date of completion of repairs;

i. The Covenantor agrees that the Board, and any persons acting pursuant to Board orders, shall have reasonable access to the Property for the purposes of inspection, surveillance,

maintenance, or monitoring as provided in Division 7 of the Water Code; and

j. No Owner or Occupant shall act in any manner that threatens or is likely to aggravate or contribute to the existing residual hazardous materials present at the Property.

3.2 Enforcement. Failure of an Owner or Occupant to comply with any of the Restrictions set forth in Paragraph 3.1 shall be grounds for the Board, by the authority of this Covenant, to require that the Owner or Occupant modify or remove, or cause to be modified or removed, any Improvements constructed in violation of that Paragraph. Violation of this Covenant shall also be grounds for the Board to file civil actions against the Owner or Occupant as provided by law. Nothing in this Covenant shall limit the Board's authority under Division 7 (commencing with section 13000) of the Water Code or other applicable laws.

3.3 Notice in Agreements. After the date of recordation hereof, all Owners and Occupants shall execute a written instrument which shall accompany all purchase agreements or leases relating to all or any portion of the Property. Any such instrument shall contain the following statement:

> The land described herein is subject to a Covenant and Environmental Restriction dated as of [illegible] 21, 2011, and recorded on __________, 20___, in the Official Records of Los Angeles County, California, as Document No. __________. This Covenant and Environmental Restriction imposes certain covenants, conditions, and restrictions on usage of the property described herein due to the presence of residual hazardous materials in soils and in the groundwater under the property described herein. This statement is not a declaration that a hazard exists.

ARTICLE IV
VARIANCE AND TERMINATION

4.1 Variance. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a written variance from the provisions of this Covenant.

4.2 Termination. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a termination of the Restrictions as they apply to all or any portion of the Property.

4.3 Term. Unless terminated in accordance with Paragraph 4.2 above, by law or otherwise, this Covenant shall continue in effect in perpetuity.

ARTICLE V
MISCELLANEOUS

5.1 No Dedication Intended. Nothing set forth herein shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property or any portion thereof to the general

public.

5.2 Notices. Whenever any person gives or serves any notice, demand, or other communication with respect to this Covenant, each such notice, demand, or other communication shall be in writing and shall be deemed effective (a) when delivered, if personally delivered to the person being served or an official of a government agency being served, or (b) three (3) business days after deposit in the mail if mailed by United States mail, postage paid certified, return receipt requested, addressed:

If To: "Covenantor":

GILBERT-BLANK LLC
2730 Wilshire Blvd., Suite 301
Santa Monica, California 90403-4749

If To: "Board":

Regional Water Quality Control Board
Los Angeles Region
Attention: Executive Officer
320 W. 4th Street, Suite 200
Los Angeles, California 90013

5.3 Partial Invalidity. If any portion of the Restrictions or terms set forth herein is determined by a court having jurisdiction to be invalid for any reason, the remaining portion shall remain in full force and effect as if such portion had not been included herein.

5.4 Recordation. This instrument shall be executed by the Covenantor and by the Executive Officer of the Board. This instrument shall be recorded by the Covenantor in the County of Los Angeles within ten (10) days of the date of execution.

5.5 References. All references to Code sections include successor provisions.

5.6 Construction. Any general rule of construction to the contrary notwithstanding, this instrument shall be liberally construed in favor of the Covenant to preserve and implement the purpose of this instrument and the policies and purposes of the Water Code. If any provision of this instrument is found to be ambiguous, an interpretation consistent with the purpose of this instrument that would render the provision valid shall be favored over any interpretation that would render it invalid.

IN WITNESS WHEREOF, the parties execute this Covenant as of the date set forth above.

4. TYPE OF INDUSTRY: Industrial Refrigeration Equipment Manufacturing	**5. EPA CATEGORY (IF APPLICABLE):** N/A
6. WASTEWATER PRODUCING OPERATIONS: Parts washing	**7. ESTIMATED WASTEWATER FLOW RATE (Gallons per day):** 400
8. TYPE OF PRETREATMENT PROVIDED: 3 stage 750 gallon interceptor	**9. INTERIM DESIGNATED SAMPLE LOCATION:** Final stage of interceptor

10. CHIEF EXECUTIVE OFFICER:
Name: Max Young Position: CEO

As a representative of the Industrial User, I affirm that the information furnished is true and accurate to the best of my knowledge:
Name: THOMAS R FLOOD Position: QA SUPERVISOR Phone: (562) 921-9310
Signature: [signature] Date: 10-24-00

IN CONSIDERATION OF THE GRANTING OF THIS TEMPORARY PERMIT, THE DISCHARGER AGREES:

1. To apply by 11-24-2000 for an Industrial Wastewater Discharge Permit according to the guidelines presented in the "Information and Instructions for Obtaining and Industrial Wastewater Discharge Permit."
2. To cooperate at all times with Sanitation Districts' representatives in the inspection, sampling and study of the company's industrial wastewater facilities and discharges.
3. To immediately notify the Sanitation Districts at (562) 699-7411, ext. 2907, during normal business hours, and at (562) 437-6520 or 437-1881 after 4:00 pm or on weekends in the event of any accident, negligence, or other occurrence that causes the discharge of material whose nature or quality could constitute a hazard to the public health, environment, Districts' personnel, or the sewerage system.
4. To comply with effluent limits and other requirements listed on the back of this form, with appropriate EPA pretreatment standards, and, if unable to meet these limits or requirements, to stop all wastewater discharge to the public sewers.
5. To maintain all pretreatment and monitoring equipment necessary to assure compliance with effluent limits and reporting requirements.
6. To abide and accept all the provisions contained in the Sanitation Districts' *Wastewater Ordinance*.

NOTES: -Failure to comply with any of the conditions of this permit will result in the initiation of enforcement actions against your company and possible termination of sewer service.

-This temporary permit is not to be used to obtain building construction permits from the local agency, and will expire upon approval of the discharger's Industrial Wastewater Discharge Permit.

-This temporary permit does not address local agency discharge requirements, if any, nor does it provide for the allocation of capacity in local collection systems.

OF LOS ANGELES COUNTY
James F. Stahl - Chief Engineer and General Manager
1955 Workman Mill Road - P.O. Box 4998 - Whittier, CA 90607-4998

RAINWATER DIVERSION SYSTEM MAINTENANCE RECORD

Company Name: YORK REFRIGERATION SYSTEMS - FRIGID COIL Telephone: (562) 421-4310
Discharge Address: 13711 FREEWAY DR., SANTA FE SPRINGS, CA 90670
Mailing Address: SAME Zip Code:
Contact Person: TOM FERRY Industrial Wastewater Discharge Permit No: 4345

I DESCRIPTION (check the appropriate boxes)

1. **How is the rainwater diversion system activated?**
   - [x] Automatically (by a rainwater switch or weight device)
   - [ ] Manually (by an operator)
   - [ ] Rainwater is *not* discharged to the sewer (*ignore all other sections and return form to the Districts*)

2. **When rainfall is detected, how is rainwater prevented from reaching the sewer?**
   - [x] A pump shuts down causing rainwater to overflow to the storm drain
   - [ ] A valve closes causing rainwater to overflow to the storm drain
   - [ ] A pump is turned on which pumps rainwater to the storm drain
   - [ ] A valve opens a connection to the storm drain
   - [ ] A pump is turned on which pumps rainwater to an impoundment structure
   - [ ] A valve is activated which diverts rainwater to an impoundment structure.
   - [ ] There is no diversion device. Contaminated rainwater which accumulates in certain areas is manually pumped to the sewer once it stops raining (Please complete Section II-2 only and ignore Sections III-IV.
   - [ ] Other (explain)

II INFORMATION

1. **Location of rainwater diversion device (valve, pump, etc.):** SOUTH/WEST CORNER OF YARD
2. **Area exposed to the rainwater that drains to the sewer:** 64,325 Sq. Ft.

III CHECK LIST (check the appropriate boxes)

1. **Is the detector dish (rainwater collector) located in a representative area exposed to rain fall?**
   - [x] Yes
   - [ ] No
2. **Is the detector free of obstruction (i.e. leaves, rocks, etc.)?**
   - [x] Yes
   - [ ] No
2. **Can the rain switch be tested from a height lower than six feet above ground level (with a "Y-type" or with a remote fill-and-drain type system?**
   - [x] Yes
   - [ ] No
4. **Is there a convenient water supply available for testing the detector?**
   - [x] Yes
   - [ ] No
5. **Is flow to the sewer discontinued when test water is poured into the detector?**
   - [x] Yes
   - [ ] No

IV MAINTENANCE

If the answer to any of the above questions is "*no*" then corrective actions must be taken by the company to ensure that the rainwater system functions properly. In the space below, list the items which needed servicing or replacement and the date that repairs were completed.

REPAIRS PERFORMED: ______________________ **DATE:** ____________

<u>Notice of Results of Sanitation Districts' Industrial Waste Monitoring</u>

Attached please find the results of recent Sanitation Districts' wastewater sampling at your company's discharge sewer corresponding to the permit shown on the analysis sheet.

This sampling was made pursuant to Section 414 of the Sanitation Districts' *Wastewater Ordinance* as part of a random verification monitoring program conducted at significant dischargers of industrial wastes. The District' sample results are being provided to you to make you aware of any changes at your facility which may result in higher than anticipated industrial waste discharges to the sewerage system. It is your responsibility to investigate any differences in the wastewater sample results provided by the Districts and the results of your self-monitoring. For companies that file long form surcharge statements, these Districts-obtained sample results should be combined with your wastewater self-monitoring results on the annual wastewater treatment surcharge statement.

As stated in the Districts' *Connection Fee Ordinance*, after December 15, 1981 a 25 percent increase in wastewater discharge (quantity and/or quality) above your company's previous wastewater discharges during the 1976-77 through 1981-82 fiscal years may require that your company purchase additional sewer discharge rights. For wastewater capacity increases that occur during the 2004-05 fiscal year, this connection fee charge ranges from $1,178 to $1,705 for wastewater capacity increases equivalent to that of a typical single-family home (260 gallons per day).

These Districts-obtained sample results will be used, along with your wastewater self-monitoring results, in determining your capacity usage of the sewerage system and the validity of data submitted in your annual surcharge statement. Transmittal of these data to you at this time does not relieve your company of the responsibility to obtain all of the self-monitoring samples required in your Industrial Wastewater Discharge Permit.

If you have any questions about this program for furnishing industrial wastewater discharge information, please call Wendy Borden-Haug at extension 2920.

Very truly yours,

James F. Stahl

BASELINE MONITORING REPORT 1/

For EPA Electroplating and Metal Finishing Point Source Category Regulations

(Please print or type)

I. COMPANY INFORMATION

Name: FRIGID COIL/FRICK, INC. Tel: (213) 921-4310

Situs Address 13711 Freeway Dr., Santa Fe Springs, CA 90670

Zip ______

Mailing Address (if different): ______

Zip ______

Sanitation Districts' Industrial Waste Discharge Permit Number 1/ 4345

Industrial Waste Contact Person: William D. Cole, Jr.

Title: Manufacturing Coordinator

Person in Charge of Local Operations: William D. Cole, Jr.

Title: Manufacturing Coordinator

Owner of Company: Robert N. Pokelwaldt, President

II. CATEGORY DETERMINATION

A. Unit Operations

Please check any of the following unit operations which are performed at your facility:

1. /__/ Electroplating
2. /__/ Electroless Plating
3. /__/ Anodizing

Note: 1/ One Baseline Monitoring Report (BMR) must be completed for every industrial waste discharge point to the sewer from your facility. To obtain additional copies of this BMR form you may copy it or call Eddie Esfandi at (213) 699-7411, extension 278.

4. /__/ Coating (phosphatizing, chromating and coloring)

5. /__/ Chemical etching and milling

6. /__/ Printed circuit board manufacturing

7. / X / None of the above

B. Companies Exempt from EPA Electroplating and Metal Finishing Regulations

If you checked item number 7 in II A above, your facility is not covered by the EPA regulations for either the electroplating or metal finishing category. Your claim to such an exemption will be verified through on-site Sanitation Districts' inspections of your facility.

If you believe that your facility is not covered by the above regulations, please indicate which EPA industrial regulatory cateogry should be applied to your facility, if any:

____

Please state the Federal Standard Industrial Classification Number(s) (SIC) used for your facility: 4345 __________ __________

As your checking of item number 7 in II A above denotes you are exempt, you do not need to fully complete this Baseline Monitoring Report (BMR). Please go on to Section VIII of this form; check the exempt box and sign the accompanying statement. Please then proceed to Section X of this form, complete the certification statement and return this form to the Sanitation Districts.

C. Companies Not Exempt

If you did not check item number 7 in II A above, please continue. Please check the appropriate item(s) below:

Type of facility in the electroplating and metal finishing industry. This facility is a(n):

1. /__/ Independent Printed Circuit Board Manufacturer [Manufacturers printed circuit boards primarily for sale to other companies]

2. /__/ Job Shop [Owns less than 50% (area basis) of the materials undergoing metal finishing]

3. /__/ Captive Shop [Owns over 50% (area basis) of the materials undergoing metal finishing]

4. /__/ Integrated Facility [Combines regulated electroplating and metal finishing waste streams with significant amounts (over 10%) of process waste streams not covered by the electroplating or metal finishing regulations]

5. /__/ Nonintegrated Facility (Significant wastewater discharges only from operations covered by the electroplating or metal finishing regulations)

D. Companies Subject Only to the Electroplating Regulations

If you checked only items 1 and/or 2 in II C above (Independent Printed Circuit Board Manufacturer or Job Shop), your facility is not subject to the EPA's Metal Finishing Category regulations (40 CFR 433). However, your facility is subject to the EPA categorical regulations for the Electroplating Category (40 CFR 413). Please indicate whether or not you have previously submitted a BMR to the Sanitation Districts as required by the EPA Electroplating Category Regulations.

Yes	No	If Yes, please give date of submittal
/__/	/__/	______________

If your facility is covered by the Electroplating Category regulations and your company has not as yet submitted a BMR, you must fully complete this BMR and return it to the Sanitation Districts as soon as possible.

III. TOTAL TOXIC ORGANIC INFORMATION

If you checked item(s) 1 and/or 2 in II C above (Printed Circuit Board Manufacturer and/or Job Shop), your facility is subject to the revised Electroplating regulations for control of Total Toxic Organics (TTO). If you checked item(s) 3, 4 or 5 in II C above (Captive Shop, Intergrated Facility or Nonintegrated Facility), your facility is subject to the Metal Finishing Regulations for control of TTO. Please see Appendix A for a list of toxic organic chemical compounds included in TTO. Please check the appropriate box(es) below:

/__/ No toxic organic compounds as listed in Appendix A are used or stored at this facility.

/__/ A solvent management plan, as required by the EPA regulations, will be submitted for Districts' approval.

/__/ Monitoring for TTO will be performed and information on TTO compounds in the company wastewater will be submitted to the Sanitation Districts.

Please list all organic chemical compounds regularly used or stored at your facility: ____

____

____

____

If your company is subject to only the Electroplating (and not the Metal Finishing) regulations and has previously submitted a BMR to the Sanitation Districts with the information hereafter requested in this form, and no significant changes in this information are necessary, the following portion of this BMR need not be completed. Please go to Section VIII of this BMR, check the appropriate box and sign the accompanying statement. Then go to Section X, complete the certification statement and return this form to the Sanitation Districts.

IV. ENVIRONMENTAL CONTROL PERMITS

Please complete the following portions of this report if you checked item(s) 3, 4 or 5 in II C above (facilities covered by the Metal Finishing Category regulations), or if your company has not as yet filed your required BMR under the Electroplating Category regulations.

Please indicate other environmental control permits held by or for your facility (DO NOT include permits regulating air quality control)

____

____

____

____

Does your facility have an air pollution control device which produces a discharge to the sewer? Yes /___/ No /___/

Cooling water or other wastewater dilution flows:				
Total Industrial Wastewater Flows: (total of regulated and nonregulated wastewater flows)				

NOTES:

1/ A BMR must be completed for every industrial waste discharge point to the sewer.

2/ Wastewater flows from operations covered by EPA industrial categorical regulations.

3/ Please indicate by letter in this column whether wastewater flow value is: Estimated (E), Measured (M), Intermittent (I) or Continuous (C).

4/ Please identify the EPA regulatory category under which such wastewater is controlled.

5/ Wastewater flows from operations not covered by EPA industrial categorical regulations.

Annual water intake: in millions of gallons ___________ per year.

Source of water: Purchase from water purveyor /__/

Company well /__/

VII. CONCENTRATION OF POLLUTANTS IN WASTEWATER

A. Sampling and Analysis Information

The daily maximum and average concentrations must be furnished for all regulated pollutants in all wastewater streams described in Section VI above. The wastewater must be sampled and analyzed and other information furnished as described in Appendix B. Copies of the wastewater analysis results must be attached to this BMR when it is submitted to the Sanitation Districts.

The method of wastewater sample collection used was:

/__/ Flow-proportioned composite sample

/__/ Time-proportioned composite sample

/__/ Grab sample--for which pollutants? ________ ________ ________

B. Other Wastewater Sampling and Analysis Information

Sampling dates and times: ____

____

Wastewater sampling location(s): ______________________________________

____

Name and address of company obtaining wastewater samples:

____

VIII. STATEMENT OF COMPLIANCE

This statement is to be made by a qualified environmental professional or (for the exempt category) by a responsible company official.

I hereby certify that the EPA categorical pretreatment standards which apply to this company are being met on a consistent basis.

Yes /__/ No /__/ Exempt / X /

Additional pretreatment or operational and maintenance measures which are recommended to bring the company into compliance with the EPA categorical regulations are as follows:

(1)____________________

(2)____________________

(3)____________________

(4)____________________

(5)____________________

Date: 1/6/84 Print Name: William D. Cole, Jr.

Sign Name: William D Cole Jr

Qualification as an Environmental Professional: ____________________

Company Name: FRIGID COIL/FRICK, INC.

Company Address: 13711 Freeway Dr., Santa Fe Springs, CA 90670

IX. COMPLIANCE SCHEDULE

If your company is presently in compliance with the EPA categorical pretreatment standards, or your company is exempt, disregard this item and continue on to itme number X.

If presently not in compliance with the EPA categorical pretreatment standards, please complete the following compliance schedule:

Increment of Progress	Commencement Date	Completion Date
A. Engineering investigation		
Consultant selection, if needed		
Review of present condition		
Treatment process selection		
Conceptual design		
Final design		
B. Permitting process		
City/County Engineer		

Increment of Progress	Commencement Date	Completion Date
C. Construction		
Equipment selection		
Installation		
D. Start up and trouble shooting		
E. Date of final completion and compliance		

No progress increment shall exceed nine months and no completion date shall be later than the compliance date for the EPA pretreatment standards. Subdivide any increment if it exceeds nine months. The Districts may be able to review your conceptual design before the preparation of detail plans if the pretreatment is reasonably complex. However, the engineering investigations leading to the conceptual design need to be as complete as possible, and the Districts cannot provide design assistance. The inability of the Districts to review the designs in a timely manner does not excuse noncompliance with the EPA regulations.

X. CERTIFICATION

I certify, under the penalty of perjury, that I have personally examined, and am familiar with, all of the information in this Baseline Monitoring Report, including all attachments. Based upon my inquiry of those persons immediately responsible for obtaining the information contained in this Report, I believe that the information is true, accurate and complete.

FRIGID COIL

Gentlemen:

Status Report on Compliance with the EPA's Electroplating and Metal Finishing Regulations (40 CFR Parts 413 and 433)

EPA regulations requiring pretreatment of wastewater by companies in the Electroplating and Metal Finishing Categories (E & MF) were published in the Federal Register on July 15, 1983. These U.S. Environmental Protection Agency (EPA) regulations provide more stringent requirements than the previously published Electroplating regulations of September 7, 1979. The Sanitation Districts are required by other EPA regulations to enforce the E & MF regulations at affected companies.

Although the Districts' industrial waste permit files indicate that your company is subject to these E & MF regulations, some industrial companies may be exempt. These regulations cover industrial plants which perform one or more of the following six operations:

1. Electroplating
2. Electroless plating
3. Anodizing
4. Coating (phosphatizing, chromating and coloring)
5. Chemical etching or milling
6. Printed circuit board manufacturing

If your company performs any of the above operations, it is covered by the E & MF regulations. Conversely, the E & MF regulations do not apply unless one of the above unit operations is performed at your company. A summary of the pretreatment requirements for companies covered by the E & MF regulations is enclosed for your information. Compliance deadline dates are provided in this summary for various segments of the E & MF industry. The enclosed Table I is a list of all unit operations covered by the 40 CFR 433 regulations.

If any of the operations 1 through 6 above is performed in your facility, please complete the enclosed Baseline Monitoring Report (BMR). If none of the operations 1 through 6 above are performed in your facility, please comlete only the portions of this BMR which define your company as exempt from the E & MF regulations. A BMR for every industrial waste discharge point to the sewer from your facility must be submitted to the Sanitation Districts as soon as possible, but not later than February 25, 1984.

If this report is not received by the Districts within the allotted time period, your company may be subject to enforcement actions. Districts' Industrial Waste Inspectors will follow-up on companies not submitting a report or submitting an inadequately completed report.

Thank you for your cooperation. If you require additional BMR forms or any assistance or information, please call Eddie Esfandi of the Sanitation Districts' Industrial Waste Section at extension 278.

Very truly yours,

Walter E. Garrison

INSPECTION REPORT

Report Date Range: **1/1/1950** **to** **3/25/2021**

Facility Name: **First Imperial Trading Co.**

Facility ID: 9244045

Situs Address: **13711 FREEWAY Drive**
Santa Fe Springs, CA 90670

TG: C4 737 **Dist No.:** 18

Sample Location: **NEW**

Date of Inspection: **11/4/2008** 12:00 pm to 1:00 pm Duration: Hr Inspection Type: General Task Type: General Inspection

Sample Location: **NEW** Task ID: 1134997 Inspection ID: 218067

Inspector(s): **Georgia Blaszczak** **Contact(s):** Al Mubarak Manager

Additional Comments:

Inspection Summary

Comments: Facility is a warehouse and distribution center for Halloween costumes and props. Owners also operate the "Halloween Store" across the 5 freeway from this location.vThere is no IW from this location. This site was formally the location of the permitted company, Frgis Coil. There is a clarifier on the south side of the building, but, it is within locked area and notvaccessible to inspect. Contact claims the owners are the only ones with a key. Referred access problem to Raul Diaz, City of SFS since this could be a violation of fire code. "FITCO" does not need a permit.

Subject: Industrial Wastewater Discharge Permit No. 4345
Frigid Coil Division
Sundstrand Heat Transfer Inc.
13711 Freeway Drive
Santa Fe Springs, California 90670

Dear Mr. Garcia:

* Enclosed are four (4) approved sets of plans, and copies of the approved Industrial Wastewater Discharge Permit for the subject company. Please review these for compliance with your requirements, and retain the copies you require for your files. A copy of this letter is forwarded to the applicant to notify him of the Sanitation Districts' permit requirements, which are in force from the current date. If any additional permit requirements are issued to the applicant by your agency, copies should be forwarded to the Sanitation Districts for our records. The approved plans consist of:

Plant Layout Sheet

Approval of the plans and permit is contingent upon continuing compliance with applicable Sanitation Districts' Ordinance requirements, upon any corrections shown in red on the drawings, and upon the items indicated on the attached requirement list.

If you have any questions concerning these requirements, please call the Sanitation Districts' Industrial Waste Section at extension 263.

Very truly yours,

John D. Parkhurst
Chief Engineer and
General Manager

INDUSTRIAL WASTEWATER DISCHARGE PERMIT

REQUIREMENTS LIST

COMPANY NAME Frigid Coil

INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO. 4345

DATE OF PERMIT ISSUANCE July 7, 1976

The above named company is required to comply with all indicated items on this list as a condition of the permit approval. Satisfactory evidence of compliance with these conditions should be supplied to the Sanitation Districts where requested. Satisfactory evidence will consist of a minimum of written notification signed by a responsible company official, and in some cases may involve the submission of additional drawings and data.

1. The permittee is required to continue the regular clarifier maintenance and cleaning at intervals frequent enough to prevent a build-up of grit, oil, or grease which may enter the sewer.---------------- [X]

2. The permittee is advised that discharge of highly flammable wastes to the sewerage system is prohibited.-- [X]

3. Waste haulers reports must be obtained and kept on file for a period of at least 180 days for any liquid wastes leaving the plant other than in the sewer system. These reports must be made available to representatives of the Sanitation Districts upon request.-- [X]

4. The applicant's Surcharge Statement for fiscal years 1972-73, 1973-74, & 1974-75 were delinquent August 15, 1973, August 15, 1974, and September 15, 1975 respectively and should be filed as soon as possible. Necessary forms and instructions for filing surcharge statements will be mailed under separate cover.---------------------------- [X]

INDUSTRIAL WASTE STATEMENT

A. TYPE OF INDUSTRY: Manufacture of refrigeration and air-conditioning components, such as evaporators and condensors.

B. NUMBER OF EMPLOYEES: 85 ; WORK SHIFTS PER DAY: One (1); NUMBER OF DAYS PER WEEK: 5.

C. RAW MATERIALS BROUGHT AND USED ON PREMISES: copper, mild steel and aluminum are main materials used.

D. HAZARDOUS MATERIALS STORED ON PREMISES: acetylene, oxygen, propane, degreasing fluid and paint products, of which none are disposed of by way of sewer.

E. WASTE PRODUCING OPERATIONS: Coil test tank and coil cleaning area which uses an amount of alkaline liquid which is non-phosphorus and is biodegradable and used to clean Mobil Met-27 cutting oil and kerosene from aluminum material; the waste from this operation is then pumped to a clarifier.

F. CONSTITUENTS OF WASTE WATER DISCHARGE: See attached analysis.

G. AVERAGE AND PEAK RATE OF WASTE WATER DISCHARGE: Peak - 50 G.P.M., Average - 400 Gals. per day.

H. TOTAL DAILY WASTE WATER DISCHARGE: 1700 Gals. per day.

I. PROPOSED METHOD OF TREATMENT AND DISPOSAL: Industrial waste is pumped into three stage clarifier before entering sewer, oil accumulation in clarifier is pumped out and disposed of by Randy's Pumping Service of El Monte, Calif.

J. TEMPERATURE OF WASTE OF POINT OF DISCHARGE TO BUILDING SEWER SYSTEM: Approximately 65°F.

J. S. Brooks
Production Superintendant
Frigid Coil Div. of Sundstrand

13711 Freeway Drive
Santa Fe Springs, California 90670
Attention: Mr. Jay Brooks, Production Superintendant

SAMPLE: Industrial Wastewater Discharge, 8 Hour Composite Sample

INVESTIGATION:

Chemical Analysis for Sanitation District of Los Angeles County Requirements, SIC #3585

RESULTS

On August 8, 1975 an automatic sampler was installed at the clarifier sump outlet located at the industrial wastewater discharge area. Samples were obtained at ½ hour intervals and then composited in proportion to flow.

IDENTIFICATION CODE	TEST PARAMETER	QUANTITY VALUES
A	*Flow (Total)	400

INSPECTION REQUEST PER SUSAN JOYCE OF SURCHARGE TO CK SOURCES OF WW. COMPANY APPEARS WILL HAVE CONNECTION FEE. UNFORTUNEATLY MR. FERRY WAS NOT IN TO DISCUSS. COMPANY WAS CONDUCTING A BULLET" CLEANING OF ONE OF THE AREFRIGERATION COILS. A STEEL BULLET SI PLACED IN ONE OF THE COILS AND THEN H20 WITH HIGH PRESSURE IS FORCED THROUGH THE TUBE WHICH CLEAS OUT AND METAL CHIPS. THIS PROCEDURE IS PERFORMED OUTSIDE AND WATER GOES TO THE>SEWER. THIS WATER COULD POSSIBLY BE RECYCLED TO CUT BACK THE USAGE IF THE PRODUCT WOULD ALLOW. IT WOULD APPEAR THIS IS A SUBSTANTIAL AMOUNT OF THEIR WW. HOSES LEFT ON MAY ALSO BE RESPONSIBLE FOR INCREASE FLOWS. WW IN CLARIFIER WAS GREYSIH WITH A PAPER PH OF 9. CONTACT CLAIMS ROUTINLEY PUMPED. WILL CK BACK WHEN MR. FERRY RETURNS. "

F/U ON PRMT ISSUES & R/W DIVERSION. R/W DIVERSION SYSTEM REPAIRED & OPERATIONAL. DISCUSSED SIZE OF EXPOSED AREA WHICH IS >30,000 SQ FT. RUN-OFF ENTERS SWALE THAT LEADS INTO R/W SUMP. ALSO NOTED DOWNSPOUT FROM ROOF DRAINS ONTO PARKING LOT. COMPANY MAY NEED TO REGRADE OR DIVERT TO LIMIT EXPOSURE. ASSISTED CONTACT WITH PERMIT APPLICATION. BASED ON H20 BILLS AND DEDUCTIONS TAKEN FLOW IS APPROX 8400 GPD. THIS AMOUNT INCLUDES R/W > EXPOSURE WHICH CAN BE ELIMINATED IF REROUTE RUN-OFF. THERE IS A QUESTION WHETHER THE TEST TANK H20 WATER IS REUSED OR HAS OVERFLOW TO SEWER. ALSO A GOOD AMOUNT OF IRRIGATION. CONTACT TO INVESTIGATE H20 USAGE. 8400 GPD SEEMS HIGH, BUT, CANNOT PRESENTLY ACCOUNT FOR THE WATER. P/U DIQ.COMPANY ACTUALLY CHANGED OWNERSHIP SOMETIME IN 1988. COMPANY WOULD HAVE REQUIRED REVISION DUE TO A FLOW INCREASE - 400GPD TO 8400GPD. MANIFEST OK.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

EPA Id: CAN000909538

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EPA ID:: CAD076240407

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 18 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 25 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board’s Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there is 1 CA SWF/LF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Global Id: T0603705495

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 8 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board’s Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there is 1 CA UST site within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

CA VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC’s costs.

A review of the CA VCP list, as provided by EDR, and dated 10/26/2020 has revealed that there are 7 CA VCP sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 11 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 26 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Address:	13711 FREEWAY DRIVE
City,State,Zip:	SANTA FE SPRINGS, CA 90670
Region:	STATE
Facility Status:	**Completed - Case Closed**
Status Date:	01/27/2012
Global Id:	SL0603788087
Lead Agency:	LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number:	Not reported
Latitude:	33.8910799668873
Longitude:	-118.039598464966
Case Type:	Cleanup Program Site
Case Worker:	ACJ
Local Agency:	Not reported
RB Case Number:	1225
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Arsenic, Diesel, Gasoline, Heating Oil / Fuel Oil
Site History:	The property has been used for light industrial purposes by two parties: Philip Carey Company from approximately 1971 thru 1980; and Frigid Coil from approximately 1980 thru July of 2007. The recognized environmental conditions identified in the Phase I Site Investigation included: Frigid Coils operations consist of the assembly of air handlers and other custom heating, ventilation, and air conditioning

FRIGID COIL (Continued) **S108991991**

(HVAC) units. Principal materials in use at the facility consist of stainless steel, copper coil, welding gases, and hydraulic oils. The Frigid Coil facility consists of approximately 82,000 square feet of building space on an approximately 4.9-acre property. The eastern portion of the building was used as a shop for maintenance activities and the western portion of the building was used as office space. Frigid Coil has operated at the 13711 Freeway Drive location since 1971. The building was reportedly constructed in 1966. Prior to 1966, the subject property was agricultural land.

Site Name:	Martinez Trucking, Inc.
Violation Date:	09-20-2017
Citation:	22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description:	Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or remanufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or remanufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of this section; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than

MARTINEZ TRUCKING, INC. (Continued) **S113159225**

five gallons in capacity which is managed pursuant to subsection (e) of this section shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Returned to compliance on 10/25/2017. Owner/Operator failed to properly manage empty containers with a capacity of 5 gallons or greater that previously held a hazardous material or waste. Label all empty containers that are 5 gallons or greater, which previously held a hazardous material or waste, as "Empty" and the date emptied.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Agency Type:	Private
SIC Code:	3585
SIC Code 2:	Not reported
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	10-16-2018
Citation:	HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description:	"Failure to meet one or more of the following requirements: Install or

RYDER 0205 (Continued) **S103629209**

	maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes:	Returned to compliance on 11/29/2018. Spill buckets did not hold 5 gallons. The capacity of the smallest spill bucket was calculated at last years' underground tank inspection and was calculated to be 5.3 gallons. It appears this measurement was in error as the spill bucket could not hold five gallons. The capacity measurement may have been taken from the widest diameter near the top of the spill bucket but the bottom portion of the spill bucket is much more narrow. All three spill buckets could not hold a five gallon capacity. Submit a permit application to modify the underground tank system or replace spill buckets so the spill bucket capacity holds five gallons.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	08-20-2018
Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description:	Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes:	Returned to compliance on 11/06/2018. As demonstrated by the number and type of hazardous waste violations observed at the time of inspection, personnel are not adequately trained to perform their duties in a way that ensures the facility’s compliance with hazardous waste laws and regulations, and/or employee training records have not been kept or do not contain all required information. Conduct training with applicable personnel and document it according to the requirements of 22 CCR 15 66265.16(d). Submit a copy of the documentation to the CUPA.

Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description:	Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes:	Returned to compliance on 11/06/2018. As demonstrated by the number and type of hazardous waste violations observed at the time of inspection, personnel are not adequately trained to perform their duties in a way that ensures the facility’s compliance with hazardous waste laws and regulations, and/or employee training records have not been kept or do not contain all required information. Conduct training with applicable personnel and document it according to the requirements of 22 CCR 15 66265.16(d). Submit a copy of the documentation to the CUPA.

Citation:	HSC 6.5 25189.5(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a)
Violation Description:	Failure to properly dispose of hazardous waste at an authorized location.
Violation Notes:	Returned to compliance on 07/24/2014.
Violation Division:	Santa Fe Springs Fire-Rescue
Violation Program:	HW
Violation Source:	CERS

Site ID:	396386
Site Name:	LEFIELL MFG CO
Violation Date:	06-22-2016
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 08/23/2016. Elevated to Class II.
Violation Division:	Santa Fe Springs Fire-Rescue
Violation Program:	HWLQG
Violation Source:	CERS

Site ID:	396386
Site Name:	LEFIELL MFG CO
Violation Date:	06-26-2014
Citation:	22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52
Violation Description:	Failure to include all of the following in the Contingency Plan: 1) A description of actions the facility personnel shall take response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility; 2) A description of arrangements agreed to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services; 3) All names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator and this list shall be kept up to date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they will assume responsibility as alternates; 4) A list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is

LIE FIELL MANUFACTURING CO. (Continued) **S100938823**

required. This list shall be kept up to date. In addition, the plan shall include the location and a physical description of each item on the list, and a brief outline of its capabilities; 5) An evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan is to describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires); 6) The current telephone number of the California Emergency Management Agency; and 7) If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the requirements of this chapter.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name:	TRI-STAR DYEING & FINISHING
Address:	15125 MARQUARDT AVE
City,State,Zip:	SANTA FE SPRINGS, CA 90670
Site ID:	404321
CERS ID:	10504678
CERS Description:	Chemical Storage Facilities

Violations:

Site ID:	404321
Site Name:	TRI-STAR DYEING & FINISHING
Violation Date:	06-14-2017
Citation:	HSC 6.5 25123.3(h)(1)(c) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)(c)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal of acute/extremely hazardous waste after the first 1-kilogram threshold amount was accumulated within a 90 day period.
Violation Notes:	Returned to compliance on 07/29/2017. CERS violation 3030009 does not contain the language about if the generator does not generate more than 100 kilograms of hazardous waste they have 90 days to manage the waste once 100 kg is reached. The CERS violation library only mentions 1 kg extremely hazardous waste so I selected violation #29 because it matches the code section is 22 CCR 66262.34 (b)(1). It appears that CERS and DHD are missing the other half of the language for this violation. Submit copy of document showing legal management of possible waste oil.

Site ID:	404321
Site Name:	TRI-STAR DYEING & FINISHING
Violation Date:	05-12-2020
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler’s operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 06/30/2020. Failure to update Hazardous Materials Business Plan per HSC 25508.1. There are 21 300-gallon totes of liquid sodium hypochlorite outside, 10 53.6-kilogram drums of solid sodium hydrosulfite inside, and several pallets of soda ash both inside and outside, that are not disclosed in the Hazardous Materials Business Plan in the California Environmental Reporting System (CERS). Tri-Star Dyeing & Finishing shall update and electronically submit their Hazardous Materials Business Plan into CERS when there is a 100 percent or more increase in the quantity of a previously disclosed hazardous material, or when a previously undisclosed hazardous material at or above reportable quantities is handled on site, within 30 days of the occurrence of these events.

Violation Date:	05-12-2020
Citation:	22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description:	Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22

TRI-STAR DYEING & FINISHING (Continued) **S113467684**

CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Returned to compliance on 06/11/2020. Failure to properly manage empty containers. Several empty metal drums that were used for storing sodium hydrosulfite, and empty 300-gallon totes were found outside in the north portion of the property, without labels to indicate when they were emptied. Tri-Star Dyeing & Finishing shall label all empty containers greater than 5 gallons in capacity with the date they have been emptied, and properly manage them within one year of being emptied.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS:
Name: VEGA IRON WORKS, INC.
Address: 15644 CLANTON CIR
City,State,Zip: SANTA FE SPRINGS, CA 90670
Site ID: 370420
CERS ID: 10672294
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 370420
Site Name: Vega Iron Works, Inc.
Violation Date: 03-09-2016
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 06/10/2016. Company complied late because of CERS problem. CERS Option #2 carries over the past tenanents violations. They did not want that record carried over so we went with Option 3 and created a new account. Still waiting on fix from CERS for this problem.
Violation Division: Santa Fe Springs Fire-Rescue
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-12-2019
Violations Found: No
