PHASE II ENVIRONMENTAL SITE ASSESSMENT
INDUSTRIAL PROPERTY
13767 Freeway Drive
Santa Fe Springs, California

for: AMRESCO Capital, L.P.
December 4, 1997

1.0 INTRODUCTION

This report provides the results of Dames & Moore's Phase II Environmental Site Assessment (ESA) for the industrial property ("subject property") located at 13767 Freeway Drive, Santa Fe Springs, Los Angeles County, California.

1.1 PURPOSE

A Phase I ESA was conducted by Dames & Moore for the subject property in October 1997. ESA findings indicated a history of storage and use of industrial solvents and other industrial chemicals at the subject property. Dames & Moore concluded that the potential existed for impacts to soil and groundwater, and recommended assessment of soil conditions at the locations of manufacturing area floor drains, sumps, clarifiers, a paint spray booth, large-scale chemical storage, and hazardous waste storage.

The Phase II ESA described in this report was conducted in response to that recommendation and included a soil gas survey at selected areas of the site as the first phase of the assessment. Based on elevated levels of several organic constituents at two areas of the site, followup soil and groundwater sampling and analysis were conducted in the areas of concern.

1.2 SCOPE

The Phase II ESA conducted by Dames & Moore included the following tasks:

- Review of available current and historical records regarding use and storage of hazardous and regulated substances at the subject property.
- Conduct subsurface investigations in selected areas of the subject property to evaluate whether past site activities have caused adverse impacts to underlying soils. Subsurface investigations included collection and analysis of soil gas samples, soil samples, and groundwater samples.
- Evaluate regulatory agency information, field data, and analytical data gathered as part of the above tasks and prepare this report describing the work done as part of the Phase II ESA as well as ESA findings.

1.3 LIMITATIONS

This report is based on information from field reconnaissance and visual observations of the subject property; review of reports and documentation supplied to Dames & Moore by regulatory agencies and Magellan Group; interviews; soil gas, soil, and groundwater sampling and analysis for selected constituents; and interpretation of the information, documentation, and laboratory analytical results obtained as part of this project and described in this report. Except as indicated, information contained in reports and other documentation reviewed as part of this assessment was not independently verified by Dames & Moore. Subsurface investigation, including soil gas sampling, soil sampling, and groundwater sampling, was limited to accessible portions of the site. Analyses conducted for soil gas, soil, and groundwater samples were selected to address likely contaminants at the site, based on our present knowledge of current and past use of the property. The analytical program was not intended to identify all possible hazardous constituents. Any use or re-use of this document or the findings, conclusions, or recommendations presented, is at the sole risk of the user.

This assessment was undertaken and completed in accordance with the professional standards and generally accepted practices of environmental consultants at the time of preparation of this report. The scope of services for this assessment should not be construed as a guarantee that no currently unrecognized environmental concerns exist at the subject property, nor was this assessment intended to be a definitive investigation of all potential environmental concerns at the subject property.

Opinions presented herein apply to the site conditions existing at the time of the assessment. They cannot necessarily apply to site changes of which Dames & Moore is not aware and has not had the opportunity to evaluate.

2.0 BACKGROUND

The subject property is located at 13767 Freeway Drive, Santa Fe Springs, California (Figure 1), and consists of approximately 4.265 acres of land developed with an approximately 80,722 square foot industrial building that was constructed in 1966 with subsequent additions in 1971. The facility currently houses Burke Industries, a manufacturer of silicone products. The site contains a paint spray booth, two clarifiers, two sumps, and three manufacturing area floor drains. Hazardous material and waste storage areas are located on the west and north exterior portions of the site.

Historical information reviewed by Dames & Moore for the Phase I ESA indicates that the site was first developed in 1966, having been previously used for agricultural purposes. Original use of the property was by Suzuki, for a motorcycle warehouse and showroom during the period from approximately 1966 through 1984. Records were not found which indicate manufacturing or large scale industrial chemical use by Suzuki, but an inactive clarifier permit for Suzuki noted discharge of wash water containing detergents, silt, and an unspecified solvent.

The site was subsequently used for boat sales and possible manufacture for a short period of time in approximately 1984 through 1985, and by the current silicone products manufacturing operation since approximately 1987. Burke Industries, the current tenant, is a listed RCRA Small Quantity Hazardous Waste Generator. Review of current and historical records for Burke Industries indicated use of industrial solvents, including 1,1,1-trichloroethane (TCA), 1,1,1-trichloroethylene (TCE), methyl ethyl ketone (MEK), alcohols, toluene, and xylene. Sampling of clarifier contents by Clayton Environmental Consultants in 1996 found relatively low concentrations of several volatile organic compounds, including 1,1-dichloroethane, TCA, and toluene.

The subject property is located in the Pressure Area of the Los Angeles Groundwater Basin, where groundwater occurs under confined conditions and locally as shallow perched and semiperched groundwater. An approximately southwesterly groundwater flow direction is reported for the site area by local water authorities.

2.1 CURRENT SITE CONDITIONS

The following description of current site conditions is based on October 1997 site reconnaissance and interview of the facility Safety Coordinator, Mr. Jay Pelzer. The facility conducts manufacture of silicone products for the aircraft and aerospace industries. The manufacturing process includes fabrication of molds. various types of silicone molding and forming operations, and associated process support activities.

Manufacturing areas are located in the central and rear (north) portions of the building. Manufacturing equipment includes presses, extruders, curing equipment, and winders. Quench and rinse tanks are used for molds. A large autoclave, used for heat treatment of silicone products, is located outside the north wall of the facility. Air compressors, chillers, a cooling tower, and boilers provide support services and are located outside the north and west sides of the facility. A shipping and loading dock area is located on the east side of the facility. Offices are located in the front (south) portion of the facility. Utility and hazardous material storage areas are located on the west exterior side of the property. Other utility areas are located outside the north wall of the building. Asphalt-paved parking areas are located on the north and west sides of the property.

Specific observations regarding areas of concern are discussed below:

<u>Hazardous Materials</u>

Hazardous materials storage and use at the facility is relatively limited. Most materials present in significant quantities were observed in containers or locked fireproof cabinets on the west side of the building. Small amounts of materials for immediate use, including paints, lubricants, and compressed gases, were located throughout the facility. The west side of the facility, where hazardous materials are stored, is paved with concrete. Significant staining or indications of spillage was not observed in this area.

Hazardous Wastes

The facility hazardous waste stream is fairly limited. Recently disposed wastes include used oil, citrus-based degreaser, mixed solvents, plastic and rubber powders, waste soap, silica debris, and oil absorbent. Wastes observed onsite by Dames & Moore included approximately twenty-four 55-gallon drums of waste oil located on pallets on a concrete pad in the northwest corner of the facility. Small quantities of waste oil were also observed in cans and open pans on the west side of the facility, apparently pending transfer to closed storage containers. Significant staining was not observed in areas where drums of waste oil were stored. Staining appeared to be limited mainly to areas on the west side of the building where leakage of oil from compressors and other equipment appeared to have taken place.

Wastewater

Process wastewater from the facility manufacturing process is currently limited to cleaning and mold quenching operations, as well as boiler water and cooling tower blowdown. A three-stage clarifier located outside the southwest corner of the building is used for discharge of this process water to the sanitary sewer under permit to the City of Santa Fe Springs.

A large sump on the north side of the building, just west of the autoclave and cooling tower, collects water from the cooling tower and other equipment in that area. A second clarifier/sump is located inside the building, in the mold storage room in the northwest portion of the building. Water from this clarifier/sump is discharged to the sewer through the clarifier at the southwest corner of the building. A small rainwater collection sump is located in the loading dock area. Water from this sump is apparently pumped to the stormwater sewer.

Three floor drains were observed in the manufacturing areas. Significant staining was not observed in the drain areas. The drain in the mold quench area receives water spillage from quench tanks associated with this operation.

Paint Spray Booth

A paint spray booth was observed in the southwest portion of the manufacturing area. The booth is reportedly no longer in use, although it is actively permitted with the South Coast Air Quality Management District. Staining or other concerns were not noted in the spray booth area.

2.2 PREVIOUS PHASE II ENVIRONMENTAL INVESTIGATIONS

Prior documents related to Phase II environmental assessments conducted at the subject property were reviewed as part of the Dames & Moore Phase I ESA. Information from these reviews is summarized in the following paragraphs.

- Applied Geosciences Inc., Hazardous Materials Assessment at the Former Suzuki Facility Located in the City of Santa Fe Springs, California, dated January 7, 1986 (This appears to be a typographic error and should be 1987, based on information elsewhere in the report). This report was prepared for Hazard Management Consulting of Southborough, Massachusetts. The assessment conducted by Applied Geosciences included review of information provided by regulatory agency personnel familiar with the site and a soil investigation program.

During a December 1986 site visit, Applied Geosciences personnel noted the presence of three drums labeled as containing trichloroethylene immediately adjacent to the north property boundary, on the adjoining Sta-Rite facility. Also noted was "a rectangular, above-ground tank that has a drain pipe extending from the tank to the railroad easement to the the west of the two properties". Discharge from the pipe had reportedly wetted and stained the surrounding soil. Other piping also projected out of the Sta-Rite building and onto the north parking lot of the subject property. The wall under the discharge point was reported to be stained brown.

The Applied Geosciences soil investigation included backhoe excavation of two trenches along the northern boundary of the property, to a depth of five feet. One trench was located immediately adjacent to the drum storage area, and the second was adjacent to the tank on the Sta-Rite facility. Soil samples were collected from trench walls at depths ranging from just below ground surface to four feet. Additional samples were collected from stained soil in the railroad easement. Selected samples were analyzed for Total Petroleum Hydrocarbons by Modified EPA Method 8015, for VOCs by EPA Method 624, for semi-volatile organics by GCMS, for heavy metals by ICPMS, and for pH. Fuel hydrocarbons were not detected. Two phthalate compounds were detected in one sample at concentrations up to 90 parts per million. 2-Butanone (MEK) was detected at a concentration of 6,400 micrograms per kilogram in one sample from the railroad easement. Toluene at 6 micrograms per kilogram was detected in a sample from the trench near the drum storage area. The pH levels were in the normal range. Levels of some metals (nickel, copper, zinc, arsenic, silver, cadmium, antimony, and lead) appeared elevated. Only arsenic and lead were found at levels above 10 x STLC (i.e., levels that would potentially cause excavated soil to be designated as hazardous waste based on California regulatory criteria).

Applied Geosciences concluded that petroleum hydrocarbons and VOCs detected in soil samples were at concentrations that "would not be cause for mitigation and would not be considered a hazardous waste under current regulatory standards". Elevated levels of heavy metals were detected in two samples. Additional characterization of the extent of elevated metals concentrations in the northwest portion of the property was recommended.

- CET Environmental Services, Inc., Summary of Soil Sampling and Analysis, Burke Industries – SFS Division, dated August 21, 1996. This report was prepared for Lincoln Property Company and documents soil sampling that was conducted July 17, 1996 by CET. The objective of the sampling was to further evaluate the presence of elevated metal concentrations in shallow soil at the northwestern corner of the site. Elevated metals concentrations and VOCs had been detected in an 1986 investigation by Applied Geosciences (see summary above).

CET's sampling included three soil borings that were sampled at the 1.5-foot base of each boring. The borings were located at the extreme northwest corner of the property, and at the southwest and northeast corners of a concrete pad that is present at the northwest corner of the site and used to store drums of waste materials. The samples were analyzed for CCR Metals and hexavalent chromium according to EPA 6000/7000 series methods.

All CCR metals results reported by CET were far below hazardous waste levels, and were concluded to probably represent background levels. CET did not analyze samples for VOCs, but characterized the levels of VOCs detected by Applied Geosciences as low, and concluded that they probably would not impact the groundwater or migrate offsite. They based this conclusion in part on an estimated depth to groundwater of 50 feet.

- Clayton Environmental Consultants, Phase II Sampling Results – Sumitomo Portfolio #1007, 13767 Freeway Drive, Santa Fe Springs, California, letter report dated September 25, 1996. The report is addressed to Mr. Gary Hayes, Archon Group. It notes that in 1996 CET noted a stain beneath a drum containing trichloroethane. However, Clayton was informed by a facility employee that the drum contained only rainwater.

  In September 1996 Clayton found the following stored in the area at the northwest corner of the facility: hydraulic fluid, a drum labeled "dust and debris", adhesive, unspecified solvent, and paint. Some staining was noted in the area. Visible cracking or fractures were not noted.

  Soil samples were collected at a depth of one foot at the approximate locations of the samples collected by CET in July 1996 (see below). The samples were analyzed for CCR metals, which were detected at low concentrations, consistent with CET's findings. CCR Metals are a suite of 17 of the most common heavy metal contaminants.

  The report notes that the facility's clarifier is located on the southwest corner of the property, and that it had only been in operation for the last 30 days. Boiler water effluent had been diverted to the clarifier at the request of the local fire department. Samples of sludge and water were collected from the clarifier. The sludge sample was analyzed for CCR metals and the water sample for VOCs (EPA Method 8260). Elevated levels of copper, lead, mercury, and silver were detected in the sludge sample. Low concentrations (approximately 5 micrograms per liter) of the following VOCs were detected in the water sample: bromodichloromethane, chloromethane, dibromochloromethane, and 1,1-dichloroethane. In addition, toluene and 1,1,1-trichloroethane were detected at 14 and 120 micrograms per liter, respectively. Clayton recommended that the clarifier be cleaned and inspected for possible leakage.

- Clayton Environmental Consultants Memorandum to Gary Hayes, dated January 8, 1997. This memorandum documents November 15, 1996 cleanout and inspection of a clarifier system at the site. Sludge and liquids were removed from the clarifier, which was then pressure washed and inspected. Inspection of the clarifier indicated no visible cracks with concrete in good condition.

3.0 PHASE II INVESTIGATION

Dames & Moore's Phase II subsurface investigation was carried out at the subject property on October 9 and 30, 1997. In order to evaluate the potential presence of soil impacts from past uses, soil gas samples were collected in areas of concern and analyzed onsite. Sampling locations were selected based on the presence of elements of concern such as clarifiers, sumps, drains, a paint spray booth, and areas where hazardous materials and wastes are known to have been stored. Based on soil gas survey findings, soil sampling was conducted in two areas of the site and groundwater samples were collected adjacent to the clarifier in the southwest portion of the facility.

A geophysical survey was conducted prior to collection of soil gas and soil samples, in order to locate subsurface utilities and other subsurface obstructions that might be damaged and/or represent a hazard during sampling. The geophysical survey information was used in finalizing sampling locations.

Soil gas samples were analyzed onsite by Transglobal Environmental Geochemistry's (TEG's) State-certified mobile laboratory. Soil and water laboratory analyses were conducted by TEG's Solana Beach and Tustin, California laboratories, which are certified by the California Department of Health Services to conduct the required analyses.

An account of Phase II subsurface investigation methodologies is provided in Section 3.1. Investigation findings are presented in Section 3.2.

3.1 METHODOLOGIES

3.1.1 Soil Gas Survey

A soil gas survey was conducted on October 9, 1997 by Transglobal Environmental Geochemistry (TEG). The survey was directly supervised in the field by a Dames & Moore environmental scientist.

3.1.1.1 Sampling Locations

As discussed above, soil gas samples were collected at locations of manufacturing area floor drains, sumps, clarifiers, the paint spray booth, large-scale chemical storage, and hazardous waste storage.

Table 1 provides a list of soil gas samples collected and indicates the element (i.e., clarifier, sump, etc.) investigated at each location. It also indicates the depth at which each sample was collected and provides a written description of each sampling location. A default sampling depth of 5 feet was used, except at the location of deep sumps and clarifiers, where a 10-foot collection depth was used. One sample (SV-6) was collected at a depth of 4 feet due to probe refusal that precluded deeper sampling.

Appendix A contains a field map that depicts soil gas sample locations.

3.1.1.2 Sample Collection

Soil vapor samples were collected at a total of 14 locations using probes constructed of 5/8-inch diameter stainless steel and equipped with a hardened, reverse-threaded steel tip. Nominal probe lengths are 6 feet although additional lengths were added to obtain deeper samples near clarifiers and sumps. An inert 1/8-inch polypropylene Nylaflow™ tube runs down the center of the probe to sampling ports above the tip. During sampling, the probe was driven into the ground using an electric rotary hammer. Once inserted to the desired depth, the probe was rotated 3 to 5 turns in a clockwise direction, opening the tip and exposing the vapor sampling ports. (This prevents clogging of the sampling ports and cross-contamination from the soils during insertion.) A soil vapor sample was then withdrawn from the Nylaflow™ tubing using a syringe connected via a valve. The first 10 cubic centimeters (cc) of vapor were discarded. The next 10 cubic centimeters (cc) of vapor were withdrawn in the syringe, which was securely closed and immediately transferred to TEG's onsite mobile laboratory.

To minimize the potential for cross-contamination between sampling locations, probe parts were cleaned of dirt and moisture prior to insertion. The Nylaflow™ tubing and sampling ports were flushed with ambient air between samples. Existing tubing was replaced if water, dirt, or other material was observed in tubing prior to insertion.

3.1.1.3 Analytical Program

Soil vapor samples were analyzed onsite by TEG's State-certified mobile field laboratory. The samples were entered onto chain of custody forms (Appendix B) and analyzed within approximately ten minutes of collection. Samples were analyzed for Total Volatile Petroleum Hydrocarbons (TVPH; modified EPA Method 8015), volatile aromatic hydrocarbons (BTEX; EPA Method 8020), and halogenated volatile organic compounds (EPA Method 8010). TEG's quality assurance/quality control program included analysis of method blanks at the start of the day and throughout the day, as necessary. A field duplicate sample was collected at one of the sample locations and analyzed as described above. Calibration standards were run at the beginning and end of the field day.

3.1.2 Soil Sampling and Analysis

Soil borings were drilled and sampled at four locations at the site on October 30, 1997 in order to evaluate impacts to soil in two areas where slightly to moderately elevated levels of organic compounds were detected in soil gas samples.

3.1.2.1 Soil Sampling Locations

Three soil borings were advanced to depths of 18 to 21 feet below grade in the immediate vicinity of the clarifier located at the southwest corner of the property. Boring P-1 was located immediately north of the clarifier and completed at a depth of 21 feet. Boring P-2 was located approximately 10 feet northwest of the clarifier and completed at a depth of 17 feet. Boring P-3 was located immediately southwest of the clarifier and completed at a depth of 18 feet. Because of the presence of multiple utility lines paralleling Freeway Drive, it was not possible to locate P-3 farther to the south.

One hand auger boring, HA-1, was advanced to a depth of 5 feet below grade inside the building, approximately three feet west of the paint spray booth.

Soil boring locations are depicted on a field map in Appendix A.

3.1.2.2 Sample Collection

Soil borings were drilled and sampled using TEG's Strataprobe™ direct-push soil sampling rig. Relatively undisturbed soil samples were collected as core to the total depth of the borings. A 24-inch long by 1½-inch diameter split-spoon sampler fitted with a 24-inch long clear acetate liner was driven into the soil to collect the samples. The sampler was driven at least 24 inches into the soil or until refusal, using a hydraulic drive hammer. Upon retrieval, the sample sleeves were removed and examined for indications of contamination. A sample section was then cut from the sleeve using a saw with a steel blade, and the cut ends covered with Teflon sheeting and fitted with snug-fitting plastic end caps. The sample was immediately labeled with pertinent information (including date, time of collection, boring designation, collector's initials) and placed into a chilled insulated shipping container with water ice for storage pending transport to the laboratory. Samples were transported under chain of custody by a laboratory courier to the laboratory at the end of the sampling day.

The hand auger boring, HA-1, was advanced using a steel hand auger and sampled using thin-wall sampling equipment equipped with stainless steel sample rings that served to contain the sample after collection. Samples were collected from HA-1 at 2 and 5 feet below grade. The samples were labeled, packaged, stored, and shipped in the same way as the Strataprobe samples.

Following retrieval of soil samples from the borings, a portion of the soil was monitored for volatile organic constituents using a Microtip™ photoionization detector (PID). Monitoring was carried out by placing a small amount of the soil sample in a sealable plastic bag, disagregating the soil, sealing the bag, and allowing the sample to equilibrate for a few minutes. The probe of the PID was then inserted into the plastic bag to obtain a reading. The measured result was recorded on the boring logs. The PID was calibrated according to manufacturer specifications at the beginning of the working day.

Logs describing drilling conditions and soils encountered were prepared for each boring by a Dames & Moore California Registered Geologist (Appendix C). Observations such as sample collection data, soil descriptive information (according to the Unified Soils Classification System), PID readings (discussed above), soil coloration, the degree of water saturation, and any observed odors or staining were recorded on the logs.

Between each sample interval, and before proceeding to the next boring location, soil sampling equipment was washed in a non-phosphate detergent solution, double rinsed in tap water, rinsed again in distilled water, and dried. Soil borings were backfilled with granular bentonite and completed at the ground surface with approximately 4 to 6 inches of concrete.

3.1.2.3 Analytical Program

The analytical program for soil samples was based on findings from the soil gas survey and on information reviewed as part of the Phase I ESA for this site. Two soil samples from each boring were analyzed for petroleum hydrocarbons by Modified EPA Method 8015, using gasoline, Stoddard solvent, and diesel fuel standards. Samples were also analyzed for volatile organic compounds (VOCs) by EPA Method 8260.

3.1.3 Groundwater Sampling and Analysis

Groundwater samples were collected from two clarifier-area borings on October 30, 1997 in order to evaluate potential impacts to shallow perched groundwater in the area of the clarifier.

3.1.3.1 Groundwater Sampling Locations

Groundwater samples were collected at two locations immediately adjacent to the clarifier. The samples were collected from Borings P-1 and P-3 at depths of roughly 20 feet, within the uppermost portion of the saturated zone. The location of these borings is depicted on a field map in Appendix A.

3.1.3.2 Sample Collection

Groundwater samples were collected immediately following completion of Borings P-1 and P-3. Sample collection was conducted using TEG's temporary well point sampling equipment. Upon completion of each boring at the top of the saturated zone, the well point was hydraulically pushed approximately 3 feet into the floor of the borehole. The sampler was then withdrawn approximately two feet in order to expose the temporary well point screen and allow groundwater to enter the sampler. The sample was brought to the surface using a peristaltic pump, which pumped groundwater from the sampler within the saturated zone through Teflon tubing up to the surface and directly into sample containers. This pumping method results in low-flow transport with minimal disturbance of the sample.

Samples for analysis for VOCs were collected in a set of three 40-milliliter (mL) laboratory-supplied vials with Teflon-lined septa seals. Samples for analysis for petroleum hydrocarbons were collected in laboratory-supplied 1-Liter amber glass bottles with Teflon-lined plastic caps. Because of very slow production rates in the P-3 temporary well point, it was not possible to collect sufficient sample (1 liter) for petroleum hydrocarbon analysis. Also because of very poor pump flow rates, water was not collected for field measurement of pH, specific conductivity and turbidity. Visual observations of water samples indicated turbidity in the low-moderate to low range. Sheen, floating imiscible substances, or unusual odors were not noted in groundwater samples.

Following collection, the samples were entered onto chain of custody forms (Appendix B) and sample containers were labeled with pertinent information (including date, time of collection, Boring designation, collector's initials) and placed into a chilled insulated shipping container with water ice for storage pending transport to the laboratory. Samples were transported under chain of custody by a laboratory courier to the laboratory at the end of the sampling day.

Between each sample interval, and before proceeding to the next boring location, groundwater sampling equipment was washed in a non-phosphate detergent solution, double rinsed in tap water, rinsed again in distilled water, and dried. Interior pump system parts were cleaned by pumping detergent and solution and rinse water through the pump and tubing.

3.1.3.3 Analytical Program

The analytical program for groundwater samples was based on findings from the soil gas survey and on information reviewed as part of the Phase I ESA for this site. The two samples were analyzed for VOCs by EPA Method 8260. A sample collected from the P-1 location was also analyzed for total petroleum hydrocarbons by Modified EPA Method 8015, using gasoline, Stoddard solvent, and diesel fuel standards.

3.2 PHASE II INVESTIGATION FINDINGS

3.2.1 Soil Gas Survey

Soil gas samples collected as part of this investigation were found to contain low concentrations of a number of halogenated and nonhalogenated volatile hydrocarbons.

- 1,1-DCE was detected in one sample at 4.5 micrograms per liter (μg/L).
- 1,1,1-TCA was detected in four samples at 3.8 to 46 μg/L.
- Acetone was detected in 10 samples at 1.3 to 110 μg/L.
- MEK was detected in one sample at 24 μg/L.
- Total Volatile Petroleum Hydrocarbons (TVPH) were detected in 11 samples at 3.9 to 4,400 parts per million by volume (ppmv).

Locations considered to represent a concern, based on the soil gas analysis data, were identified at the area of the clarifier at the southwest corner of the facility, and at the paint spray booth area. Sample SV-5 was collected at a depth of 10 feet just north of the clarifier. The sample was found to contain 4,400 ppmv TVPH, 46 µg/L TCA, 110 µg/L acetone, and 24 µg/L MEK. Sample SV-14 was collected at a depth of 5 feet just west of the paint spray booth inside the southwest portion of the building. It was found to contain 9.7 ppmv TVPH, 4.5 µg/L DCE, 41 µg/L TCA, and 1.6 µg/L acetone.

Full analytical results for soil gas samples are provided in the TEG laboratory report included in Appendix B.

3.2.2 Soil Sampling and Analysis

Soils in the area of investigation (the clarifier area in the southwest corner of the property, and the nearby paint spray booth area inside the building) were found to consist of interbedded silty fine sand and silty clay. Significant lateral variation was observed over the relatively short distance between the three borings. P-2, farthest to the north, consisted of silty fine sand to the 16-foot depth, where fine sand with some silt was present in the bottom foot of the probe core. P-3, at the south end of the clarifier, contained silty clay and clayey silt, with a clay layer at the 12-foot depth, and clayey silt present at the bottom of the probe core. P-1, at the north end of the clarifier, was similar to P-3, but clay and silty clay were present at the bottom of the core. Groundwater was encountered at a depth of approximately 17 feet in the three borings. No odors or other indication of contamination were encountered in either soil or groundwater samples. PID readings from soil samples were at or very near background levels.

The two samples chosen for analysis from each boring were selected based on PID readings and observations made during logging. Because obvious indications of contamination were not observed, a vadose zone sample with either slightly elevated PID reading, or a sample from a relatively fine-grained zone were selected in each boring, along with the sample from the bottom of each boring, at the top of the saturated zone.

Laboratory findings for petroleum hydrocarbons were non-detect for all soil samples. Relatively low levels of TCA (13 to 42 micrograms per kilogram, or µg/kg) were detected in all but two of the six clarifier-area soil samples. TCA was not detected in soil samples from the paint booth area. No other VOCs were detected in soil samples. Table 2 shows soil VOC results.

3.2.3 Groundwater Sampling and Analysis

Groundwater samples were found to contain relatively low concentrations of three VOCs: 1,1-dichloroethylene (DCE), 1,1-dichloroethane (DCA), and 1,1,1-TCA. TCA concentrations were below established drinking water Maximum Contaminant Limits (MCLs). Both DCE and DCA were detected at concentratons that somewhat exceed MCLs. DCE was found at 28 to 29 µg/L, compared to an MCL of 6 µg/L, and DCA at 11 µg/L, compared to a MCL of 5 µg/L. Petroleum hydrocarbons were not detected in the P-1 sample. Table 2 shows groundwater VOC results as well as drinking water MCLs for each detected compound.

The P-1 sample is believed to be upgradient of the clarifier and the P-3 sample downgradient, based on the reported groundwater flow direction in the site area. There was no statistically significant difference noted in the analytical results from the two samples.

4.0 SITE ASSESSMENT CONCLUSIONS

VOC concentrations found in soils are well below USEPA Region 9 Preliminary Remediation Goals (PRGs) for soil and are not considered to be a concern.

DCA and DCE appear to be present in shallow groundwater at concentrations that exceed drinking water MCLs, but concentrations are considered relatively low. Given the apparent lack of significant soil impacts in the areas investigated (based on soil gas and soil sampling findings), the lack of PCE or TCE impacts, and the relatively low levels of DCA and DCE in groundwater, as well as the lack of use of perched groundwater in this area, it is our opinion that the likelihood of a regulatory agency requiring remedial action, based on these findings, is low. It is possible, however, that installation of monitoring wells and a period of groundwater monitoring could be required.

Laboratory Reports and Chain of Custody Forms

teg

October 14, 1997

Ms. Karen Kinsella
Dames & Moore
6 Hutton Centre Drive
Suite 700
Santa Ana, CA 92707

SUBJECT: DATA REPORT – MANUFACTURING – 13767 FREEWAY DRIVE – SANTA FE SPRINGS, CA

TEG Project # 971009W1

Ms. Kinsella:

Please find enclosed a data report for the above referenced location. Soil vapor samples were analyzed on-site in TEG's DOHS certified mobile laboratory (CERT# 1745).

Project Summary

Soil vapor from 14 points was analyzed for:

- total petroleum hydrocarbons (TPH) by DOHS Modified EPA Method 8015
- volatile aromatic hydrocarbons (BTEX) by Modified EPA Method 8020
- volatile halogenated hydrocarbons by EPA Method 8010

The samples were received on-site in appropriate containers with appropriate labels, seals, and chain-of-custody documentation.

Project Narrative

The results for all analyses and required QA/QC analyses are summarized in the enclosed tables. All calibrations, blanks, surrogates, and spike recoveries fulfill quality control criteria. No data qualifiers (flags) apply to any of the reported.

TEG appreciates the opportunity to provide analytical services to Dames & Moore on this project. If you have any questions relating to this data or report, please do not hesitate to contact us.

Sincerely,

Blayne Hartman

SUBJECT: DATA REPORT – AMERESCO

TEG Project # 971030-10

Ms. Kinsella:

Please find enclosed a data report for the above referenced location. Soil samples were analyzed in TEG's DOHS certified mobile laboratory (CERT #1317).

Project Summary

The following analyses were conducted:

- 8 soils & 1 water for total petroleum hydrocarbons (TPH) by DOHS Modified EPA Method 8015

The samples were received chilled in appropriate containers with appropriate labels, seals, and chain-of-custody documentation.

Project Narrative

The results for all analyses and required QA/QC analyses are summarized in the enclosed tables. All calibrations, blanks, surrogates, and spike recoveries fulfill quality control criteria. No data qualifiers (flags) apply to any of the reported data.

TEG appreciates the opportunity to provide analytical services to Dames & Moore on this project. If you have any questions relating to this data or report, please do not hesitate to contact us.

Sincerely,

Blayne Hartman

Dear Mr. Chan:

In accordance with the above-referenced Caltrans Contract and Task Order number, Ninyo & Moore has conducted four Initial Site Assessments and a Supplemental Initial Site Assessment for the I-5 Carmenita Road Interchange Project located in Santa Fe Springs, California. The following report documents our findings and conclusions.

We appreciate the opportunity to be of service to you on this project. If you have any questions regarding this report, please contact the undersigned at your convenience.

Respectfully submitted,
NINYO & MOORE

1. INTRODUCTION

An Initial Site Assessment (ISA), dated June 30, 2004, was conducted for the California Department of Transportation, District 7 (the Department), by Professional Services Industries, Inc. (PSI). The ISA was conducted on 58 parcels to be affected by the Interstate 5 Freeway (I-5) and Carmenita Road Interchange Improvement Project located near Carmenita Road in the city of Santa Fe Springs, Los Angeles County, California (project area; Figure 1). At the time of the ISA, access was not available to 15 of the 58 parcels. Therefore, a site reconnaissance was not conducted at the 15 parcels (seven properties). Other information on the seven properties, including the physical setting, historical background summary, environmental database records search, and regulatory records review, was included in the ISA.

Throughout this report, “parcel” or “parcels” refers to the plot of land identified by the Los Angeles County Assessor’s Office; “property” refers to a single company or business that occupies one or more parcels, e.g., [redacted] is one property that comprises several parcels; “the Project” refers to the Carmenita Road Interchange Improvement Project; and “project area” refers to the group of properties that may be affected by the Project. Properties affected by the Project will be acquired either partially or fully by the Department.

The Department authorized Ninyo & Moore to perform a Supplemental Initial Site Assessment (SISA) which included conducting site reconnaissances at the seven properties that were not inspected in the 2004 ISA and a review of the 2004 ISA. This SISA has been performed in accordance with Caltrans Contract No. 07A1751 and Task Order No. 07A1751-11 dated November 22, 2005.

The Department also authorized Ninyo & Moore to perform four ISAs on portions of five additional parcels (four properties), including Los Angeles County Assessor’s Parcel Numbers ([redacted] and [redacted] and a portion of the [redacted] ([redacted] at Carmenita Road ([redacted] and [redacted] The ISAs have been performed in accordance with Caltrans Contract No. 07A1751 and Task Order No. 07A1751-11, Amendment No. 2, dated December 22, 2005.

Based on the results of this ISA and SISA, as well as a review of the previous ISA by PSI, a Work Plan is concurrently being prepared by Ninyo & Moore for Site Investigations (SIs) of selected property in the project area. Data gaps identified in the previous ISA by PSI will be addressed in the SI Work Plan.

1.1. Project Description

As presented in this report, Ninyo & Moore has been authorized to conduct four ISAs and a SISA within the project area outlined on Figure 1 to identify hazardous and potentially contaminated and hazardous waste problems associated with the project area and adjacent properties. The SISA includes review of relevant portions of the 2004 ISA in order to draw conclusions and make recommendations regarding the SISA parcels.

1.2. Site Description

The following table (Table 1) presents the property designation, Department property numbers, APN, address, and occupants. The location of each property within the project area is shown on Figure 1.

Table 1 – Description of Properties

Note:
APN – Assessor's Parcel Number

1.3. Limiting Conditions and Methodology

The scope of the SISA for the seven properties did not include descriptions of the project area's physical setting, historical background summary, environmental database records search, or regulatory records review. This SISA also did not include subsurface exploration, soil or water sampling, chemical analysis, or an evaluation of radon, lead, or asbestos. The scope of this evaluation did not include an evaluation of geotechnical conditions and/or hazards.

For the ISAs, the frontage areas were the only area inspected during the site reconnaissance. Other physical limitations (e.g., fences, locked doors, etc.) were not encountered during the site reconnaissance other than listed below. The ISAs did not include subsurface exploration, soil or water sampling, chemical analysis, or an evaluation of radon, lead, or asbestos. The scope of these evaluations did not include an evaluation of geotechnical conditions and/or hazards. Properties surrounding the frontage areas were visually inspected from public rights-of-way. Our observations were made from readily accessible vantage points. Although reasonable effort was made to view relevant features, some features may have been concealed.

Properties surrounding the project area were visually inspected from public rights-of-way. Our observations were made from readily accessible vantage points. Although reasonable effort was made to view relevant project area features, some features may have been concealed.

Access to the interior of the [redacted] was not granted. Therefore, observations were made from the exterior of the property buildings only. Several suites in the [redacted] could not be accessed as no one was in the suites at the time. Additionally, photographs could not be taken at some of the properties due to proprietary reasons.

2. PROJECT AREA AND VICINITY RECONNAISSANCE

On November 8, 2005, Ms. Krista Brodersen, Ms. Margie Carroll, and Mr. Jeff Arbour of Ninyo & Moore conducted reconnaissances of five of the properties, accompanied by Mr. Brian Wallace of the State of California Department of Transportation, Southern Right-Of-Way Region. A second reconnaissance was conducted on December 16, 2005, by Ms. Krista Brodersen and Mr. Brian Wallace of the remaining properties. Both reconnaissances involved a walking tour of the properties and visual observations of adjoining properties.

The following sections describe the location and the current uses of each property with regards to possible environmental concerns. Selected photographs of the properties and surrounding areas are including in Appendix A. Relevant information regarding the properties obtained from our review of the 2004 ISA is summarized throughout this report.

2.1. [redacted]

2.1.1. Property Description

The [redacted] property is located at [redacted] Firestone Boulevard in the city of Santa Fe Springs, Los Angeles County, California (Figure 2). The property is south of Firestone Boulevard, near the intersection of Firestone Boulevard and the southbound I-5 Firestone Boulevard on- and off-ramps. The property boundary information was obtained from maps provided by the Department.

The property is identified by the Los Angeles County Assessor's Office (LACA) as Parcel No. [redacted] The property is utilized by [redacted] as a fast food restaurant.

2.1.2. Property Characteristics

One parcel comprises the approximately 0.57-acre, rectangular-shaped property that contains a one-story, approximately 2,300-square-foot building and associated parking lot. The building was constructed in 1998 on a concrete pad with concrete tilt-up walls and roll-top roofing. The remaining areas of the property are asphalt parking and landscaping.

According to the 2004 ISA, the property was formerly occupied by a [redacted] restaurant.

2.1.3. Vicinity Characteristics

The property vicinity is used for commercial and industrial purposes. The property is bound to the south by the [redacted] beyond which are railroad tracks and an industrial area. An [redacted] gasoline station bounds the property to the west, beyond which is the I-5 Firestone Boulevard on- and off-ramps and Carmenita Boulevard. Firestone Boulevard bounds the property to the north, followed by I-5. East of the property is [redacted] beyond which are commercial and industrial properties.

2.1.4. Use and Storage of Hazardous Substances and Petroleum Products

Evidence of use and/or storage of hazardous substances was not observed during the reconnaissance.

2.1.5. Storage and Disposal of Hazardous Wastes

No evidence of hazardous waste generation, storage, or disposal was observed during our reconnaissance.

2.1.6. Aboveground and Underground Storage Tanks (ASTs and USTs)

No evidence of ASTs was found on the property. In addition, evidence of USTs (i.e., fill pipes, vent pipes, and emergency power generators) was not observed.

2.1.7. Wastewater Systems

Evidence of pits, sumps, drywells, or catchbasins was not observed on the property. However, an underground grease trap was observed on the west side of the building and is reportedly serviced on a regular basis.

According to the 2004 ISA, the former [redacted] restaurant had an Industrial Waste Permit (IWP) associated with it that was reported as closed. However, based on Ninyo & Moore's review of an Industrial Waste Discharge Permit for the property dated 1998, the waste permit was for a grease interceptor. A closure letter for the grease interceptor was not found.

2.1.8. Suspect Asbestos Containing Materials (ACMs)

Based on the age of the building (1998), it is unlikely that ACMs are present.

2.1.9. On-Property Polychlorinated Biphenyls (PCBs)

One utility-owned, pad-mounted transformer was observed in the northwest portion of the property. Evidence of leaks or stains was not observed. Other potential sources of PCBs were not observed.

2.1.10. Other Issues

Additional environmental concerns were not noted during the reconnaissance.

2.1.11. Potential Off-Property Issues

Several 55-gallon drums and groundwater monitoring wells were observed at the [redacted] gasoline station located west and adjacent to the property. Information on the groundwater monitoring wells was obtained from the State of California Water Resources Control Board's (SWRCB) GeoTracker website. According to maps provided, there are two groundwater monitoring wells in close proximity west of the [redacted] property. In January 2005, these groundwater wells had reported concentrations of total petroleum hydrocarbons as gasoline (TPHg) and methyl tertiary butyl ether (MTBE) in groundwater sampled. Groundwater beneath the [redacted] station is reported to be mounded with groundwater flowing to the north on the north side of the station and to the south on the south side of the station. Based on the presence of TPHg and MTBE in the wells closest to the [redacted] property, groundwater beneath the property may be impacted by the adjacent [redacted] facility. The adjacent [redacted] station is discussed further in Section 7.2.

2.2. [redacted]

2.2.1. Property Description

The [redacted] ([redacted]) property is located at [redacted] Firestone Boulevard in the city of Santa Fe Springs, Los Angeles County, California (Figure 3). The property is south of Firestone Boulevard, approximately 700 feet east of the intersection of Firestone Boulevard and the southbound I-5 Firestone Boulevard on- and off-ramps. The property boundary information was obtained from maps provided by the Department.

The property is identified by the LACA as Parcel No. [redacted] The property is utilized by ITP for warehousing and distribution of fasteners and hardware products.

2.2.2. Property Characteristics

The approximately 2.6-acre, irregularly-shaped property contains a two-story, approximately 55,600-square-foot building and associated parking lot. The building was constructed in 1995 on a concrete pad, concrete tilt-up walls, and with roll-top roofing. The remaining areas of the property are asphalt parking and landscaping.

According to an [redacted] representative, prior to constructing the property building in 1995, the property was previously occupied by an auto mechanic. According to the 2004 ISA, the property was previously occupied by [redacted]

2.2.3. Vicinity Characteristics

The property vicinity is used for commercial and industrial purposes. The property is bound to the south by railroad tracks, beyond which is an industrial area. A vending company bounds the property to the west. Firestone Boulevard bounds the property to the north, followed by I-5. East of the property is [redacted] company, beyond which is the [redacted] property.

2.2.4. Use and Storage of Hazardous Substances and Petroleum Products

Evidence of use and/or storage of hazardous substances was not observed during the reconnaissance.

2.2.5. Storage and Disposal of Hazardous Wastes

No evidence of hazardous waste generation, storage, or disposal was observed during our reconnaissance. However, the 2004 ISA indicates the former occupant of the property, [redacted] was a small quantity Resource Recovery and Conservation Act (RCRA) generator (SQG) that generated at least 100 kilograms per month (kg/month) but less than 1,000 kg/month of non-acutely hazardous waste. Evidence of a release was not reported, and no evidence of a release was observed during the reconnaissance. Records of the type and quantity of wastes generated by the former occupant were not available.

2.2.6. ASTs and USTs

No evidence of ASTs was found on the property. In addition, evidence of USTs (i.e., fill pipes, vent pipes, and emergency power generators) was not observed.

2.2.7. Wastewater Systems

Evidence of clarifiers, pits, sumps, drywells, or catchbasins was not observed on the property. Drains were observed in the two loading docks on the west side of the building. These drains are reportedly connected to the municipal sewer system.

According to the 2004 ISA, the former occupant of the property, [redacted] had a clarifier that was reportedly used for truck washing. The clarifier was reportedly removed from the property in 1996 and gained closure. However, the [redacted] representative indicated they had occupied the project area since 1995. Records were not found at the Los Angeles County Department of Public Works for the property address regarding a former clarifier.

2.2.8. Suspect ACMs

Based on the age of the building (1995), it is unlikely that ACMs are present in the buildings.

2.2.9. PCBs

Six utility-owned, pole-mounted transformers were observed on two poles along the southern boundary of the property. Evidence of leaks or stains was not observed. Other potential sources of PCBs were not observed.

2.2.10. Other Issues

Additional environmental concerns were not noted during the reconnaissance.

2.2.11. Potential Off-Property Issues

Railroad tracks bound the property to the south. Historically, railroad rights-of-way have been treated with oil or herbicides to prevent weeds from growing. Based on the possible historical use of hazardous materials on the [redacted] it is possible the ITP property may have been affected.

2.3. [redacted]

2.3.1. Property Description

The [redacted] property is located at [redacted] Carmenita Road in the city of Santa Fe Springs, Los Angeles County, California (Figure 4). The property is west of Carmenita Road, southwest of the intersection of Carmenita Road and Molette Street. The property boundary information was obtained from maps provided by the Department.

The property is identified by the LACA as Parcel No. 7005-004-041. The property is utilized by [redacted] as a carbon service company that buys and warehouses virgin carbon for use in carbon filtration systems.

2.3.2. Property Characteristics

One parcel comprises the approximately 2.2-acre, rectangular-shaped property that contains a two-story, approximately 86,600-square-foot building and associated parking lot. The building was constructed in 1975 on a concrete pad with concrete tilt-up walls and roll-top roofing. The remaining areas of the property are asphalt parking and landscaping.

According to the 2004 ISA, the property was occupied by [redacted] from approximately 1975 to 1983, [redacted] from 1983 to 1999, and [redacted] from 1999 to 2004.

2.3.3. Vicinity Characteristics

The property vicinity is used for commercial and industrial purposes. The property is bound to the south and southeast by the [redacted] (commercial and light industrial suites), beyond which is an industrial area. Molette Street bounds the property to the north, beyond which are industrial properties. The intersection of Carmenita Road and Molette Street is northeast of the property. The property is bound to the east by Carmenita Road, followed by industrial properties.

2.3.4. Use and Storage of Hazardous Substances and Petroleum Products

Virgin carbon was observed stored on the property in 55-gallon drums and in 1,500-pound bags stored on wooden pallets. Carbon stored on the property is reportedly not stored for more than 10 days at a time.

Propane canisters were observed stored in racks for use in forklifts. Propane canisters are reportedly brought in by an outside service.

2.3.5. Storage and Disposal of Hazardous Wastes

No evidence of hazardous waste generation, storage, or disposal was observed during our reconnaissance.

2.3.6. ASTs and USTs

No evidence of ASTs was found on the property. In addition, evidence of USTs (i.e., fill pipes, vent pipes, and emergency power generators) was not observed.

Two 9,940-gallon USTs were removed from the property in 1983 for Mother's Cookies without a permit from the [redacted] (SFSFD). The date the USTs were installed was not known, and a closure letter was not found.

According to a Los Angeles County Department of Public Works (LACDPW) Tank Inspection Report dated July 13, 1993, a 10-000-gallon UST was removed from the property by Environmental International Systems and Services (EIS) on that date. One soil sample was collected from beneath each end of the UST and analyzed for total petroleum hydrocarbons as gasoline (TPHg) and benzene, toluene, ethylbenzene, and total xylenes (BTEX). The fuel dispenser was reported located above the UST, so no dispenser sample was collected. The analytical results indicated TPHg and BTEX were at concentrations below the "reporting limit." On August 31, 1993, the County of Los Angeles Department of Public Works issued a closure letter to the property for the UST removal.

2.3.7. Wastewater Systems

Evidence of clarifiers, pits, sumps, drywells, or catchbasins was not observed.

2.3.8. Suspect ACMs

Based on the age of the building (1975), it is possible that ACMs are present.

2.3.9. PCBs

Six utility-owned, pole-mounted transformers on two poles were observed off-site along the southern boundary of the property. Evidence of leaks or stains was not observed. Other potential sources of PCBs were not observed.

2.3.10. Other Issues

Additional environmental concerns were not noted during the reconnaissance.

2.3.11. Potential Off-Property Issues

No potential off-site sources were observed to be an environmental concern to the property.

2.4. [redacted]

2.4.1. Property Description

The [redacted] property is located at [redacted] and [redacted] Firestone Boulevard in the city of Santa Fe Springs, Los Angeles County, California (Figure 5). The property is south of Firestone Boulevard, west of the intersection of Firestone Boulevard and Carmenita Road. The property boundary information was obtained from maps provided by the Department.

The property consists of six parcels identified by the LACA as Parcel Nos. [redacted] to -034. The property contains seven commercial buildings used as offices, retail, warehousing, distributing, and photo processing (see Table 1).

Several suites in the [redacted] could not be accessed as no one was in the suites at the time of our site reconnaissance. Additionally, some photographs could not be taken in several suites due to proprietary reasons.

2.4.2. Property Characteristics

Six parcels comprise the approximately 9-acre, irregularly-shaped property that contains seven buildings. An approximately 47,000-square-foot building, addressed [redacted] Firestone Boulevard, and associated parking lot occupy Parcel No. [redacted] The building is "U"-shaped, and the center portion of the building is two stories and contains offices and retail spaces. The remaining areas of the building are one story and are used for warehousing and distribution. The building was constructed in 1987 on a concrete pad with concrete tilt-up walls and roll-top roofing. The remaining areas of this parcel are asphalt parking and landscaping.

An approximately 23,400-square-foot building, addressed [redacted] Firestone Boulevard, and associated parking lot occupy Parcel No. 7005-001-030. The building is rectangular in shape with the southern half of the building two stories and the northern half of the building one story. The building contains offices and retail spaces. The building was constructed in 1987 on a concrete pad with concrete tilt-up walls and roll-top roofing. The remaining areas of this parcel are asphalt parking and landscaping.

An approximately 36,660-square-foot building, addressed [redacted] Firestone Boulevard, and associated parking lot occupy Parcel No. [redacted] The building is two-story and rectangular-shaped and was constructed in 1987 on a concrete pad with concrete tilt-up walls and roll-top roofing. The building is utilized by [redacted] for processing and distributing film. The remaining areas of this parcel are asphalt parking and landscaping.

An approximately 42,000-square-foot building, addressed [redacted] Firestone Boulevard, and associated parking lot occupy Parcel No. [redacted] The building is "U"-shaped, and the center portion of the building is two stories and contains offices and retail spaces. The remaining areas of the building are one story and are used for warehousing and distribution. The building was constructed in 1987 on a concrete pad with concrete tilt-up walls and roll-top roofing. The remaining areas of this parcel are asphalt parking and landscaping.

An approximately 42,000-square-foot building, addressed [redacted] Firestone Boulevard, and associated parking lot occupy parcel no. [redacted] The building is "U"-shaped, and the center portion of the building is two stories and contains offices and retail spaces. The remaining areas of the building are one story and are used for warehousing and distribution. The building was constructed in 1987 on a concrete pad with concrete tilt-up walls and roll-top roofing. The remaining areas of this parcel are asphalt parking and landscaping.

Two buildings addressed as [redacted] and [redacted] Firestone Boulevard occupy Parcel No. [redacted] at the east end of the property. An approximately 11,300-square-foot building and associated parking lot comprise [redacted] Firestone Boulevard. The building is irregularly shaped and is one story. It was constructed in 1987 on a concrete pad with concrete tilt-up walls and roll-top roofing. The building contains offices and retail spaces. An approximately 14,500-square-foot building and associated parking lot comprise [redacted] Firestone Boulevard. The building is rectangular-shaped and is one story. It was constructed in 1987 on a concrete pad with concrete tilt-up walls and roll-top roofing. The building contains offices and retail spaces. The remaining areas of this parcel are asphalt parking and landscaping.

According to the 2004 ISA, the property was formerly occupied by [redacted] and [redacted] from approximately 1978 to 1986 and operated a vegetable washing and packing company.

2.4.3. Vicinity Characteristics

The vicinity of the [redacted] property is used for commercial and industrial purposes. The property is bound to the south by railroad tracks and an industrial area. A furniture store and industrial properties bound the property to the west. North of the property is Firestone Boulevard, beyond which is I-5. East of the property is Carmenita Road, followed by vacant land.

2.4.4. Use and Storage of Hazardous Substances and Petroleum Products

Suite A in the [redacted] Firestone Boulevard building is occupied by [redacted] which conducts printing and copying. This tenant has been in this suite for approximately seven years and previously occupied Suite E for 11 years. A small printing press was observed in the suite that uses alcohol, water, and font solution inks. Small jars of ink were stored on shelves near the printing press. A small flammable cabinet was also observed and contained ½- to 1-liter containers of blanket wash (thinner).

[redacted] has occupied the [redacted] Firestone Boulevard building for approximately 18 years. This company processes and distributes film. In processing film negatives, the company uses developer bleach, fixer, and stabilizer. In processing paper for photographs, the company uses developer and bleach fixer. These chemicals are stored in plastic 55-gallon drums stored on the concrete floor. In the chemical storage area, an automatic mixing unit draws out the various chemicals from the 55-gallon drums on the first story through plastic tubing into several ASTs located on the mezzanine level. The mezzanine level containing the ASTs is referred to as the “tank farm.” Fifteen plastic ASTs were observed in the tank farm with capacities ranging from 30 to 350 gallons. The flooring of the tank farm was concrete, and the ASTs were stored on the concrete and on metal stands. Beneath and adjacent to the mezzanine level on the first floor is the waste treatment area which had one 700-gallon AST containing bleach fix and replenisher and two 250-gallon ASTs containing bleach fixer. Minimal staining was observed on the floor. Through gravity flow, the mixed chemicals are transferred through plastic tubing to the various film developing machines. Minor spills have reportedly occurred, and a spill log is kept. A flammable cabinet in the [redacted] building was also observed to contain 1-pint containers of cleaners. Propane canisters were observed at [redacted] stored in racks for use in forklifts. Propane canisters are reportedly brought in by an outside service.

Other evidence of use and/or storage of hazardous substances was not observed during the reconnaissance.

2.4.5. Storage and Disposal of Hazardous Wastes

As discussed in the previous section, Suite A at [redacted] Firestone Boulevard is occupied by [redacted] Waste inks are contained in 5-gallon containers and recycled by an outside service approximately once per year. Additionally, an approximate 5-gallon container of waste rags was observed. The waste rags are reportedly disposed of by an outside service approximately once per month.

A wastewater treatment area was observed beneath and adjacent to the mezzanine level on the first floor of the [redacted] building at [redacted] Firestone Boulevard. This area contains 14 steel-wool cartridges and three silver recovery units. All processed wastewater is reportedly run through the three silver recovery units and the 14 steel wool cartridges prior to being disposed of through a clarifier and then to the sewer.

Other evidence of hazardous waste generation, storage, or disposal was not observed during our property reconnaissance.

According to the 2004 ISA, three occupants of the properties were small quantity generators (State of California [redacted] and [redacted] with no reported violations. [redacted] and [redacted] are currently occupants of the properties.

2.4.6. ASTs and USTs

[redacted] at [redacted] Firestone Boulevard, has 15 plastic ASTs located on the mezzanine level or the "tank farm." The capacities of the ASTs range from 30 to 350 gallons. The flooring of the tank farm was concrete, and the ASTs were stored on the concrete and on metal stands. In the waste treatment area was one 700-gallon AST containing bleach fix and replenisher and two 250-gallon ASTs containing bleach fixer. Minimal staining was observed on the floor of the waste treatment area.

According to the 2004 ISA, the properties previously contained three USTs in association with [redacted] and [redacted] In 1986, the SFSFD oversaw the removal of two 10,000-gallon USTs (one containing diesel and one had unknown contents) and one 1,000-gallon diesel UST. The SFSFD reported no leaks were visible on the USTs. The report indicated that the SFSFD did not maintain official records of UST closures until the 1990s and a closure report would have most likely not been completed for the property. The former USTs at this property are further discussed in Section 6.3.

2.4.7. Wastewater Systems

[redacted] at [redacted] Firestone Boulevard, building contains a wastewater treatment area. All processed wastewater is reportedly run through three silver recovery units and 14 steel wool cartridges prior to being disposed of through a three-stage clarifier and then to the sewer. The clarifier has a capacity of approximately 1,000 gallons and is reportedly serviced by Safety-Kleen yearly. The clarifier is located on the north side of the property building (Figure 5).

Other evidence of clarifiers, pits, sumps, drywells, or catchbasins was not observed on the property.

2.4.8. Suspect ACMs

Based on the age of the property buildings (1987), it is unlikely that ACMs are present.

2.4.9. PCBs

Hydraulic elevators and associated equipment rooms were noted in the two-story buildings in the [redacted] buildings. Leaks or other problems with the elevators were not reported. The hydraulic elevators do not appear to be an environmental concern to the properties.

Pad-mounted, utility-owned transformers were noted throughout the properties. Leaks or stains were not observed beneath the noted transformers.

2.4.10. Other Issues

One possible groundwater monitoring well was observed north of the [redacted] building. The possible well was paved over with asphalt. If this is a groundwater monitoring well, the purpose of the well is unknown. Information was not found on this suspect well at the Regional Water Quality control Board (RWQCB). Other groundwater monitoring wells were not observed.

2.4.11. Potential Off-Property Issues

Railroad tracks bound the property to the south. Historically, railroad rights-of-way have been treated with oil and/or herbicides to prevent weeds from growing. Based on the possible historical use of hazardous materials on the [redacted] it is possible the [redacted] property may have been affected.

2.5. [redacted]

2.5.1. Property Description

The [redacted] property is located at [redacted] and [redacted] Firestone Boulevard in the city of Santa Fe Springs, Los Angeles County, California (Figure 6). The property is west of the intersection of Firestone Boulevard and Alondra Boulevard. The property boundary information was obtained from maps provided by the Department.

The property consists of three parcels identified by the LACA as Parcel Nos. 7005-014-009, -045, and -052. The properties are utilized by [redacted] for the manufacturing of specialty tubing for the aerospace industry and by [redacted] for van and truck rental and service.

Several areas of the [redacted] property could not be accessed due to security reasons. Additionally, some photographs could not be taken at this property due to proprietary reasons.

2.5.2. Property Characteristics

Three parcels comprise the approximately 15-acre, irregularly-shaped property. The property contains six buildings that are one- and two-story structures ranging in size from approximately 1,800 to approximately 40,900 square feet in area. The buildings were constructed between 1957 and 1980 and are on concrete pads with concrete tilt-up walls, corrugated metal walls, roll-top roofing, and corrugated metal roofing. The remaining areas of the property are asphalt and concrete parking.

2.5.3. Vicinity Characteristics

The vicinity of the property is used for commercial and industrial purposes. The property is bound to the south by railroad tracks, beyond which is an industrial area. The [redacted] bounds the property to the west. Firestone Boulevard bounds the property to the north, followed by I-5. East of the property is Alondra Boulevard and an industrial area.

2.5.4. Use and Storage of Hazardous Substances and Petroleum Products

Three hydraulic pumps were observed in a concrete bermed area located on the northwest side of the largest manufacturing building (Figure 6). The pumps are reportedly used for machinery in the interior of the building as part of the metal working process. Three approximately 20-gallon ASTs of hydraulic fluid were observed adjacent to the pumps. Cracks were observed in the concrete, and significant staining was observed throughout the bermed area. The hydraulic pumps are reportedly serviced regularly.

A corrosive and oil storage area was observed on a concrete pad inside a concrete berm on the south side of one of the buildings in the central portion of the property (Figure 6). This area contained four 55-gallon drums of used oil, one 55-gallon drum of nitric acid, and 20 55-gallon drums of new machine oil. The waste oil and nitric acid is reportedly recycled approximately every three months by an outside contractor. Cracks were observed in the concrete, and minimal staining was observed.

An approximate 250-gallon AST containing trichloroethylene (TCE) was observed on a concrete surface in secondary containment in the western manufacturing building and is discussed in Section 2.5.6.

Two approximately 1,000-gallon ASTs containing liquid argon and liquid nitrogen were observed in the central portion of the property and are discussed in Section 2.5.6.

A 4,000-gallon AST containing diesel and a 2,000-gallon AST containing gasoline were observed in the eastern portion of the property in the [redacted] area and are discussed in Section 2.5.6.

The [redacted] was observed to conduct maintenance on trucks and vans using aboveground hoists. The maintenance reportedly includes changing oil, changing tires, and filling fluids. One 400-gallon AST containing oil was observed in the [redacted] and is discussed in Section 2.5.6.

2.5.5. Storage and Disposal of Hazardous Wastes

Approximately twenty 55-gallon drums of waste oil labeled “hazardous waste” were observed on concrete in a fenced area within a concrete berm on the western portion of the property. Cracks were observed in the concrete, and minimal staining was observed. Scrap metal was observed stored adjacent to the drums in a concrete bermed area. The metal shavings were in two bins and appeared to have been coated in oil. The oil was dripping from the bins and flowed to a retention area. The spilled oil is reportedly pumped out of the retention area into 55-gallon drums on an as-needed basis. The waste oil and metal shavings are recycled approximately every three months by an outside contractor.

Four 55-gallon drums were observed adjacent to a 250-gallon AST containing TCE. One of the drums was labeled and used for waste TCE. The other three drums were not labeled. The 55-gallon waste TCE is reportedly recycled approximately every two years by an outside contractor. Minimal staining was observed; however, the concrete appeared in good condition.

A corrosive and oil storage area was observed on a concrete pad inside a concrete berm on the south side of a building in the central portion of the property (Figure 6). This area contained four 55-gallon drums of used oil. Cracks were observed in the concrete, and minimal staining was observed. The waste oil is reportedly removed by an outside contractor for recycling.

One 400-gallon AST containing waste oil was observed in the [redacted] and is discussed in Section 2.5.6.

According to the 2004 ISA, the [redacted] property is a small quantity generator with no reported violations.

2.5.6. ASTs and USTs

Two approximately 1,000-gallon ASTs containing liquid argon and liquid nitrogen were observed on a concrete pad inside a concrete berm in the central portion of the property (Figure 6). According to the [redacted] representative, the argon and nitrogen are used for the heat treatment process. The ASTs are reportedly filled approximately every two months by an outside contractor.

An approximate 250-gallon AST containing TCE was observed on a concrete pad in the western manufacturing building (Figure 6). The TCE is reportedly used as a degreaser. The AST is reportedly topped off approximately every two weeks with approximately 2 gallons of TCE. The TCE is brought on property by an outside contractor. Minimal staining was observed, and the concrete appeared in good condition.

A 4,000-gallon AST containing diesel and a 2,000-gallon AST containing gasoline were observed in the eastern portion of the property (Figure 6). The ASTs have been used by the [redacted] Car agency since approximately 2001. The ASTs were observed on a concrete pad. Pumps were observed attached to the ASTs. Evidence of leaks or stains was not observed.

A 400-gallon waste oil AST and a 400-gallon oil AST was observed in the [redacted] Car service area (Figure 6). The ASTs were observed on the concrete floor. Minimal staining was observed. The concrete appeared in good condition.

A degreaser with an approximate 4,000-gallon AST formerly containing tetrachloroethylene (PCE) was observed on a concrete pad inside a concrete berm in a building in the central portion of the properties (Figure 6). This degreaser was used for parts cleaning. PCE has reportedly not been used at the property since the mid-1980s. Minimal staining was observed. The concrete appeared in good condition.

The [redacted] areas of this property had contained six former USTs located beneath the current 4,000-gallon diesel AST and the 2,000-gallon gasoline AST in the eastern portion of the property (Figure 6). Two 10,000-gallon diesel USTs, two 10,000-gallon gasoline USTs, and two 550-gallon waste oil USTs were removed from the property in December 1989. Analytical results for soil samples collected from beneath the USTs at the time of removal showed elevated concentrations of total petroleum hydrocarbons (TPH), and benzene, toluene, ethylbenzene, and xylenes (BTEX) were detected. Six soil borings were then advanced in the vicinity of the USTs. One boring had detectable concentrations of TPH and BTEX to 15 feet bgs, with the 17-foot-bgs sample detecting no concentrations of TPH or BTEX. The area of the 10,000-gallon USTs was then excavated to approximately 17 feet bgs and the area of the 550-gallon USTs was excavated to approximately 8 feet bgs. Confirmation soil samples were collected from the excavations, and detectable concentrations of BTEX and TPH were not found. The excavated soil was subsequently disposed of off-site at a Class III landfill. A Final Groundwater Monitoring Report and Closure Request dated June 24, 1992, by ESE was submitted to Los Angeles County Department of Public Works (LACDPW) for the property. The report indicated groundwater at the property had been sampled quarterly from June 1991 to April 1992 and the groundwater did not contain petroleum hydrocarbon constituents over their respective Maximum Contaminant Levels (MCLs).

On September 28, 1992, the LACDPW issued a letter to [redacted] Firestone Boulevard indicating no further action was required at the property with respect to the former USTs.

Two former USTs that contained gasoline were reported in the vicinity of the wastewater treatment system (Figure 6). However, three vent pipes were observed in this area, which suggests three USTs were present. According to the representative from [redacted] the two USTs were reportedly removed in 1978 and confirmation sampling was conducted beneath the former USTs under Los Angeles County oversight. The capacity of the USTs was unknown by the [redacted] representative. Closure was reportedly obtained; however, documents regarding the USTs were not available for review at [redacted] or at regulatory agencies contacted during the 2004 ISA. This property is further discussed in Section 6.4.

2.5.7. Wastewater Systems

A wastewater treatment system was observed outside of the parts cleaning system (Figure 6). A three-stage clarifier is located near the wastewater treatment system (Figure 6). The capacity of the clarifier was unknown by the [redacted] representative. According to the [redacted] representative, all industrial water is run through the wastewater treatment system and [redacted] does not discharge wastewater to the sewer system. The wastewater is reportedly treated and recycled for reuse on the property.

According to the 2004 ISA, two clarifiers were noted on the east and west sides of the property. Five sumps were also reported in the vicinity of the wastewater treatment system.

2.5.8. Suspect ACMs

Based on the age of the buildings (1957 to 1980), it is possible that ACMs are present.

2.5.9. PCBs

Utility-owned, pole-mounted transformers were observed at several locations throughout the property. Evidence of leaks or stains was not observed.

Three hydraulic pumps were observed in the northern portion of the properties and are discussed in Section 2.5.4.

Other potential sources of PCBs were not observed at the property.

2.5.10. Other Issues

Evidence of leaks and stains were observed in the vicinity of stored drums of waste oil, scrap metal shavings, hydraulic pumps, the former PCE AST, and the corrosive and oil storage area. Cracks were also observed in the concrete.

Two water production wells were reported on the property. According to the [redacted] representative, the two wells were used until approximately 1960 when the property was connected to the city water. One of the production wells was observed on the northeastern portion of the property (Figure 6) and did not appear to be abandoned. The [redacted] representative did not know the location of the second production well.

2.5.11. Potential Off-Property Issues

Railroad tracks bound the property to the south. Historically, railroad rights-of-way have been treated with oil and/or herbicides to prevent weeds from growing. Based on the possible historical use of hazardous materials on the [redacted] it is possible the [redacted] property may have been affected.

2.6. [redacted]

2.6.1. Property Description

The [redacted] property is located at [redacted] Freeway Drive and [redacted] Radius Place in the city of Santa Fe Springs, Los Angeles County, California (Figure 7). The property is on the northwest intersection of Freeway Drive and Radius Place. The boundary information was obtained from maps provided by the Department.

The property consists of two parcels identified by the LACA as Parcel Nos. [redacted] and [redacted] The properties are utilized by [redacted] for offices and the manufacturing of aluminum wheel rims.

2.6.2. Property Characteristics

The approximately 2.1-acre, irregularly shaped property contains two two-story manufacturing buildings and associated parking lots. The building at [redacted] Freeway Drive was constructed in 1970 on a concrete pad with concrete tilt-up walls and roll-top roofing and is approximately 24,000 square feet in area. This building contains offices and a manufacturing area. Lathes, mills, presses, ovens, and other machinery are located in this building.

The building at [redacted] Radius Place was constructed in 1974 on a concrete pad with concrete tilt-up walls and roll-top roofing and is approximately 18,000 square feet in area. This building contains the assembly department, welding department, polishing department, storage, and minor manufacturing. Lathes, mills, presses, a parts washer, and other machinery are located in this building. The remaining areas of the property are asphalt parking and landscaping.

2.6.3. Vicinity Characteristics

The vicinity of the property is used for commercial and industrial purposes. The property is bound to the south by Freeway Drive and I-5. A truck dealership bounds the property to the west, beyond which is Carmenita Boulevard. An industrial area bounds the property to the north. Radius Place is southeast and east of the property, beyond which are Alloy Tool Steel and other industrial properties.

2.6.4. Use and Storage of Hazardous Substances and Petroleum Products

Observed in the [redacted] Freeway Drive building were lathes, mills, and other machinery on concrete that use lubricating oils and water-based solvents. The lathes and mills reportedly contain at least 55 gallons of lubricating oil and water-based solvents which are poured directly into the machines. The oil and solvents are poured into 5-gallon buckets from two 300-gallon ASTs on the property. These ASTs are further discussed in Section 2.6.6. Evidence of spills was observed around the machinery. Absorbent was observed on the spills and is reportedly swept daily and placed in 55-gallon drums for disposal.

Two 55-gallon drums of lubricating oil were observed on the concrete near the lathes, and one 55-gallon drum of oil was observed on the concrete near the ASTs. The drums had pumps in the bungholes and were reportedly used to fill machines.

Observed in the [redacted] Radius Place building were lathes, mills, and other machinery on concrete that use lubricating oils and water-based solvents. The lathes and mills hold the same oils and solvents as previously discussed. Evidence of spills was observed around the machinery and is handled in the previously discussed manner.

A parts washer unit was observed in the southeastern corner of the [redacted] Radius Place building and contained water-based solvents for cleaning metal parts. Evidence of spills was observed around the machinery. Absorbent was observed on the spills and is reportedly swept daily and placed in 55-gallon drums for disposal. According to a [redacted] representative, cleaning of metal parts was formerly conducted with a different machine that used TCE from approximately 1970 to 1998. This former machine was reportedly located in the same area as the current machine. However, the building at [redacted] Radius Place was not constructed until 1974, which indicates TCE may have been used in machinery in the [redacted] Freeway Drive building as well.

2.6.5. Storage and Disposal of Hazardous Wastes

Wastewater-based oil and solvents are reportedly pumped out of the machinery and replaced approximately once per month as part of maintenance. The waste materials are put into 55-gallon drums and stored north of the [redacted] Freeway Drive building inside an approximate 20-foot by 30-foot concrete berm. The berm is approximately 12 inches tall and contained 30 55-gallon drums of waste oil, water-based solvents, and absorbent. The berm was reportedly installed in 1995.

Metal cuttings produced reportedly have a coating of lubricating oil and are stored in a 40-yard bin south of the [redacted] Freeway Drive building. Oil was observed leaking from the bin. The bin is emptied approximately every two weeks by an outside metal recycling service.

This property is further discussed in Section 6.5.

2.6.6. ASTs and USTs

Two 300-gallon ASTs were observed in the [redacted] Freeway Drive building. The ASTs were on several wood pallets and contained lubricating oil and water-based solvent. The ASTs are reportedly exchanged approximately every three weeks. Minimal leaks were observed on the concrete.

An approximate 500-gallon propane AST was observed northeast of the [redacted] Radius Place building. The propane is used to fuel 8-gallon tanks used to fuel forklifts. A metal cage was observed next to the AST that contained four 8-gallon propane tanks. The propane AST is reportedly filled monthly.

An approximate 250-gallon AST containing argon was observed east of the [redacted] Radius Place building. The argon is used for welding and is filled every six weeks.

2.6.7. Wastewater Systems

Evidence of clarifiers, pits, sumps, drywells, or catchbasins was not observed on the property.

2.6.8. Suspect ACMs

Based on the age of the buildings (1970 and 1974), it is possible that ACMs are present.

2.6.9. PCBs

Two utility-owned, pad-mounted transformers were observed on the properties. Evidence of leaks or stains was not observed. Other potential sources of PCBs were not observed at the property.

2.6.10. Other Issues

In the [redacted] Freeway Drive building, a rotary press was observed with an underground motor that was in a concrete pit. The pit was approximately 20 feet long by 24 feet wide and 12 feet deep. Access to the motor was not gained, but it was observed through a metal grate. The motor reportedly uses lubricating oils.

An approximately 10-foot by 10-foot patch was observed in the [redacted] Freeway Drive building that formerly contained a motor for a press. The press and motor were reportedly removed in 2000, and the excavation was backfilled with pea rock. All presses located in the two buildings reportedly have foundation pits approximately 3 feet deep that house motors.

2.6.11. Potential Off-Property Issues

No potential off-site sources were observed to be an environmental concern to the property.

2.7. [redacted]

2.7.1. Property Description

The [redacted] property is located at [redacted] and [redacted] Carmenita Road in the city of Santa Fe Springs, Los Angeles County, California (Figure 8). The property is southwest of Carmenita Road, south of the intersection of Carmenita Road and Molette Street. The property boundary information was obtained from maps provided by the Department.

The property is identified by the LACA as Parcel No. 7005-004-024. The property contains two multi-tenant commercial buildings used as offices, retail, warehousing, manufacturing, and distributing (see Table 1).

Access to the interior of the property was not granted. Therefore, observations were made from the exterior of the property buildings only.

2.7.2. Property Characteristics

The property is approximately 3.25 acres, rectangular-shaped, and contains two one-story buildings and associated parking lot. The buildings were constructed in 1963 and 1964 on concrete pads with concrete tilt-up walls and roll-top roofing. The building at [redacted] Carmenita Road is on the north side of the property and is approximately 62,800 square feet in area. The building at [redacted] Carmenita Road is on the south side of the property and is approximately 76,000 square feet in area.

2.7.3. Vicinity Characteristics

The property vicinity is used for industrial purposes. The property is bound to the south and west by industrial areas. North of the property is [redacted] beyond which is Molette Street and industrial properties. East of the property is Carmenita Road, beyond which are industrial properties.

2.7.4. Use and Storage of Hazardous Substances and Petroleum Products

Evidence of use and/or storage of hazardous substances were not observed outside of the property buildings during the reconnaissance. Observations were made from the exterior of the property buildings only.

According to the 2004 ISA, [redacted] operates as a metal etching and polishing business that uses hazardous materials. However, evidence of hazardous materials was not observed as PSI did not gain access to the property. A report included in the 2004 ISA from the Air Quality Management District (AQMD) dated September 26, 2000, indicated [redacted] had several permits to operate circuit board etchers and a chemical scrubber beginning in 1989. [redacted] is currently a tenant at the [redacted] Further information regarding this tenant is provided in Section 7.6.

A report included in the 2004 ISA from the AQMD dated September 10, 1991, indicated [redacted] Associates at [redacted] Carmenita Road had a permit to operate a printing press screen. [redacted] Associates is not a current tenant of the property.

An AQMD report in the 2004 ISA indicated Appleton's Custom Metal at [redacted] Carmenita Road (Figure 8) had several permits beginning in 1987 to operate a drying oven, TCE degreaser, and a paint and solvent spray booth. Appleton's Custom Metal is not a current tenant of the property.

A report included in the 2004 ISA from the AQMD indicated [redacted], at [redacted] Carmenita Road (Figure 8) had several permits beginning in 1984 to operate a paint and solvent spray booth, drying oven, TCE degreaser, hexavalent chrome plating tank, nickel plating line tanks, and an "other aqueous solution" tank. [redacted] Inc., is not a current tenant of the property.

Based on names of the tenants of the [redacted] observed during the site reconnaissance, other tenants suspected of using hazardous materials were not observed.

This property is further discussed in Section 6.6.

2.7.5. Storage and Disposal of Hazardous Wastes

No evidence of hazardous waste generation, storage, or disposal was observed outside of the property buildings during the reconnaissance. Observations were made from the exterior of the property buildings only.

According to the 2004 ISA, three occupants of this property were reported as small quantity generators, including [redacted] Company, [redacted] Inc., and [redacted] No reported violations were found for the three occupants. The [redacted] Company is currently an occupant of the property. Further information regarding these tenants is provided in Section 7.6.

A letter included in the 2004 ISA from [redacted] Inc., to the SFSFD dated January 24, 1995, confirmed that [redacted] Inc., had removed the discharge point in the tenant suite from the sewer and no further water discharge was being made to the sewer. The letter also indicated the "plating solutions, treatment area and equipment has been removed from the facility and no business is being conducted." [redacted] Inc., is not a current tenant of the property.

2.7.6. ASTs and USTs

No evidence of ASTs was found on the property. In addition, evidence of USTs (i.e., fill pipes, vent pipes, and emergency power generators) was not observed. Observations were made from the exterior of the property buildings only.

According to a site plan for [redacted] at [redacted] Carmenita Road, Suites N, P, and S, dated January 18, 1985, reviewed at the SFSFD, the following ASTs were in the suites: nickel, nickel strip, black nickel, brass, brass passivator, "elec. cleaner," "elec. cleaner strip," bronze, sodium nitrate strip, muriatic dip, degreaser, acid copper, nitric acid dip, zincate, chrome, and water. The ASTs were listed with capacities from 40 to 810 gallons. The site plan also showed an interceptor in the suite that was 36 inches long by 23 inches wide by 30 inches deep.

2.7.7. Wastewater Systems

Evidence of pits, sumps, drywells, or catchbasins was not observed at the property. However, an apparent three-stage clarifier was observed east of the [redacted] Carmenita Road building. According to the 2004 ISA, [redacted] operates a three-stage clarifier with a neutralizing system. According to files reviewed at the SFSFD, [redacted] Company at [redacted] Carmenita Road, Suite [redacted] was issued a permit on December 20, 1965, for a “neutralizing tank – sand and grease tank.”

According to files reviewed at the LACDPW, wastewater was produced by three tenants of the [redacted] including IMB Electronics, Inc. (IMB), at [redacted] Carmenita Road, Suite A, Johnson Electronics, Inc. (Johnson), at [redacted] Carmenita Road, Suite R, and A1 Metal Finishing at [redacted] Carmenita Road, Suites N, P, and S. The wastewater operations were listed as the following: spray booth and metalizing water wash, printed circuit fabrication and cleaning of assembled PC boards, and plating operations, respectively. The wastewater operations are further discussed in Section 6.6.

Ninyo & Moore reviewed an On-Site Hazardous Waste Treatment, Fixed Treatment Unit Conditional Authorization, Facility Specific and Unit Specific Notification report for A1 Metal Finishing that was completed by Jorgensen Environmental, Inc. (JEI), in March 1993 at the SFSFD. The report indicated A1 Metal Finishing had two wastewater treatment systems that treated aqueous waste during metal finishing operations. The metal finishes at the suites were listed as acid copper plating, brass plating, copper-cyanide plating, chrome plating, nickel plating, and zincate immersion plating. The wastewater operations are further discussed in Section 6.6.

2.7.8. Suspect ACMs

Based on the age of the buildings (1963 and 1964), it is possible that ACMs are present in the property buildings.

2.7.9. PCBs

Twelve utility-owned, pole-mounted transformers were observed along the northern boundary of the property, and six utility-owned, pole-mounted transformers were observed along the southern boundary of the property. Evidence of leaks or stains was not observed. Other potential sources of PCBs were not observed at the property. Observations were made from the exterior of the property buildings only.

2.7.10. Other Issues

Neither access to the interior of the property buildings nor an interview with a property representative was granted.

A narrative letter dated September 24, 1980, was included in the 2004 ISA from the SFSFD regarding a release at [redacted] Inc., at [redacted] Carmenita Road. A caustic chemical leak was reported at the property, and it was determined to originate from [redacted] Inc. IT Corporation (IT) was called to the property for emergency clean-up. Upon entering the tenant space, an opened container of acid was emitting vapors. Additionally, open acid containers were stored outside the tenant space along with "poison – cyanide" containers. IT used absorbent on the spill and closed the open containers. The SFSFD issued several violations to [redacted] Inc.

2.7.11. Potential Off-Property Issues

No potential off-site sources were observed to be an environmental concern to the property.

2.8. Frontage of [redacted]

2.8.1. Property Description

The [redacted] property is located at [redacted] Carmenita Road in the city of Santa Fe Springs, Los Angeles County, California (Figure 9). The property is southeast of Carmenita Road, south of the intersection of Carmenita Road and Molette Street. The property boundary information was obtained from maps provided by the Department.

The [redacted] property is identified by the LACA as Parcel No. [redacted] The frontage area of the [redacted] property along

Carmenita Road was the only area inspected during the property reconnaissance. The [redacted] uses the property as the corporate office for [redacted] Warehouse (grocery store chain) and a food warehouse and distribution facility.

2.8.2. Property Characteristics

The approximately 200 linear feet of frontage inspected consisted of sidewalk, landscaping, and a portion of a parking lot. The sidewalk and parking lot were made of concrete. Markers for underground utilities, including water and electric, were observed in the sidewalk. A utility-owned, pole-mounted transformer was also observed. This property is further discussed in Section 6.7.

2.8.3. Vicinity Characteristics

The property vicinity is used for industrial purposes. The frontage area is bound to the north by an industrial plant, beyond which are railroad tracks and a commercial area. South and west of the frontage area is Carmenita Road, followed by an industrial area. East of the frontage area is the [redacted] followed by an industrial area.

2.8.4. Use and Storage of Hazardous Substances and Petroleum Products

Evidence of use and/or storage of hazardous substances was not observed in the frontage area during the reconnaissance.

2.8.5. Storage and Disposal of Hazardous Wastes

No evidence of hazardous waste generation, storage, or disposal was observed in the frontage area during the reconnaissance.

2.8.6. ASTs and USTs

No evidence of ASTs or USTs was found in the frontage area.

2.8.7. Wastewater Systems

Evidence of clarifiers, pits, sumps, drywells, or catchbasins was not observed in the frontage area.

2.8.8. Suspect ACMs

There were no structures in the frontage area; therefore, ACMs are not a concern.

2.8.9. PCBs

One utility-owned, pole-mounted transformer was observed in the sidewalk of the frontage area. Evidence of leaks or stains was not observed. Other potential sources of PCBs were not observed in the frontage area.

2.8.10. Other Issues

Additional environmental concerns were not noted during the reconnaissance.

2.8.11. Potential Off-Property Issues

The frontage area of the [redacted] property is surrounded by properties used for industrial purposes. However, because the frontage area is adjacent to the street, it is not located adjacent or near industrial processes at the adjacent properties. Based on our review of case files for off-property facilities with known releases and our site vicinity reconnaissance, no off-property issues of environmental concern were identified.

2.9. [redacted] Right-Of-Way

2.9.1. Property Description

The [redacted] parcels consists of portions of the [redacted] right-of-way located on the east and west side of Carmenita Road, north of the intersection of Carmenita Road and Molette Street in the city of Santa Fe Springs, Los Angeles

County, California (Figure 10). The boundary information was obtained from maps provided by the Department.

The [redacted] right-of-way parcels are identified by the LACA as Parcel Nos. [redacted] and [redacted]

2.9.2. Property Characteristics

The [redacted] consisted of railroad tracks. The ground was covered with gravel in the area of the railroad tracks, and the remaining areas were fallow ground covered with weeds and trash. Two marked underground pipelines were noted along each side of the railroad tracks.

2.9.3. Vicinity Characteristics

The vicinity of the properties is used for industrial purposes. The [redacted] is bound in all directions by industrial areas.

2.9.4. Use and Storage of Hazardous Substances and Petroleum Products

Historically, railroad rights-of-way have been treated with oil and/or herbicides to prevent weeds from growing. Specific evidence of oil dumping or herbicides was not observed on the parcels.

Marked underground natural gas and petroleum pipelines were observed along the railroad tracks. The pipelines appeared to run parallel to the railroad tracks on the north and south side of the tracks (Figure 10).

Other evidence of use and/or storage of hazardous substances was not observed on the parcels during the reconnaissance.

2.9.5. Storage and Disposal of Hazardous Wastes

No evidence of hazardous waste generation, storage, or disposal was observed on the parcels during the reconnaissance.

2.9.6. ASTs and USTs

No evidence of ASTs or USTs was found on the parcels.

2.9.7. Wastewater Systems

Evidence of clarifiers, pits, sumps, drywells, or catchbasins was not observed on the [redacted]

2.9.8. Suspect ACMs

There were no structures in the [redacted] therefore, ACMs are not a concern.

2.9.9. PCBs

Potential sources of PCBs were not observed on the [redacted]

2.9.10. Other Issues

Additional environmental concerns were not noted during the reconnaissance.

2.9.11. Potential Off-Property Issues

North of the [redacted] are an [redacted] and a vacant lot that was a former Mobil gasoline station. These facilities have leaked gasoline that has impacted groundwater with petroleum hydrocarbons. Multiple groundwater monitoring wells are associated with these facilities and are north of the [redacted] In 2005, these groundwater wells had reported concentrations of TPHg, MTBE, and BTEX in the groundwater sampled. Based on this information, groundwater beneath the [redacted] may have been impacted by these facilities.

2.10. Frontage of [redacted]

2.10.1. Property Description

The [redacted] property is located at [redacted] Freeway Drive in the city of Santa Fe Springs, Los Angeles County, California (Figure 11). The property is north of Freeway Drive between Spring Avenue and Marquardt Avenue. The property boundary information was obtained from maps provided by the Department.

The [redacted] property is identified by the LACA as Parcel No. [redacted] The frontage area along Freeway Drive was the only area inspected during the reconnaissance. The site is used by [redacted] for the manufacturing of heating and cooling units.

2.10.2. Property Characteristics

The approximately 500 linear feet of frontage area inspected consisted of landscaping and a portion of a parking lot. The parking lot was made of asphalt. Fire hydrants, a water main, and utility-owned, pole-mounted utilities were observed in the frontage area. This property is further discussed in Section 6.8.

2.10.3. Vicinity Characteristics

The property vicinity is used for industrial purposes. The frontage area is bound to the north by the industrial property [redacted] South of the frontage area is Freeway Drive followed by I-5. East of the frontage area is the former Burke Industries, beyond which is Marquardt Avenue and an industrial area. West of the frontage area is Spring Avenue, beyond which is an industrial area.

2.10.4. Use and Storage of Hazardous Substances and Petroleum Products

Evidence of use and/or storage of hazardous substances was not observed in the frontage area during the reconnaissance.

2.10.5. Storage and Disposal of Hazardous Wastes

No evidence of hazardous waste generation, storage, or disposal was observed in the frontage area during the reconnaissance.

2.10.6. ASTs and USTs

No evidence of ASTs or USTs was found in the frontage area.

2.10.7. Wastewater Systems

Evidence of clarifiers, pits, sumps, drywells, or catchbasins was not observed in the frontage area.

2.10.8. Suspect ACMs

There were no structures in the frontage area; therefore, ACMs are not a concern.

2.10.9. PCBs

Potential sources of PCBs were not observed in the frontage area.

2.10.10. Other Issues

Additional environmental concerns were not noted during the reconnaissance.

2.10.11. Potential Off-Property Issues

No potential off-site sources were observed to be an environmental concern to the front-age area.

2.11. Frontage of Former Burke Industries

2.11.1. Property Description

The former Burke Industries property is located at 13767 Freeway Drive in the city of Santa Fe Springs, Los Angeles County, California (Figure 11). The property is north of

Freeway Drive between Spring Avenue and Marquardt Avenue. The property boundary information was obtained from maps provided by the Department.

The former Burke Industries property is identified by the LACA as Parcel No. 8069-015-045. The frontage along Freeway Drive was the only area inspected during the reconnaissance. The property is currently vacant but was formerly used by Burke Industries to manufacture silicone gaskets and seals for the commercial and military aircraft industries.

2.11.2. Property Characteristics

The approximately 400 linear feet of frontage area inspected consisted of landscaping. Fire hydrants and utility-owned, pole-mounted utilities were observed in the frontage area. This property is further discussed in Section 6.9.

2.11.3. Vicinity Characteristics

The property vicinity is used for industrial purposes. The frontage area is bound to the north by the former industrial property Burke Industries (vacant). South of the frontage area is Freeway Drive, followed by I-5. East of the frontage area is Marquardt Avenue, beyond which is an industrial area. West of the frontage area is [redacted] beyond which is Spring Avenue and an industrial area.

2.11.4. Use and Storage of Hazardous Substances and Petroleum Products

Evidence of use and/or storage of hazardous substances was not observed in the frontage area during the reconnaissance.

2.11.5. Storage and Disposal of Hazardous Wastes

No evidence of hazardous waste generation, storage, or disposal was observed in the frontage area during the reconnaissance.

2.11.6. ASTs and USTs

No evidence of ASTs or USTs was found in the frontage area.

2.11.7. Wastewater Systems

Evidence of clarifiers, pits, sumps, drywells, or catchbasins was not observed in the frontage area.

2.11.8. Suspect ACMs

There were no structures in the frontage area; therefore, ACMs are not a concern.

2.11.9. PCBs

Potential sources of PCBs were not observed in the frontage area.

2.11.10. Other Issues

Additional environmental concerns were not noted during the reconnaissance.

2.11.11. Potential Off-Property Issues

No potential off-site sources were observed to be an environmental concern to the frontage area.

3. PROJECT AREA TOPOGRAPHY, GEOLOGY, AND HYDROGEOLOGY

The project area is generally flat with no significant topographical features such as hills, mounds, or valleys. Based on a review of the United States Geological Survey 7.5 Minute Series, Whittier Quadrangle map, dated 1965 and photorevised in 1981, the project area is situated at elevations from approximately 65 to 85 feet above mean seal level. The project vicinity slopes gently downward to the south.

The project area is situated on the Santa Fe Springs Plain area of the Los Angeles Coastal Plain. Prominent area features include the Puente and Coyote Hills to the northeast, east, and southeast and the San Gabriel River to the west. The Coastal Plain area generally consists of alluvial materials deposited by the Los Angeles, San Gabriel, and Santa Ana Rivers during the late Pleistocene.

The project area vicinity is underlain by late Pleistocene alluvium of the Lakewood Formation. The Lakewood Formation consists of interbedded clays, silts, silty sands, and sands representative of stream-type alluvial and flood-plain deposits.

Groundwater levels and flow directions vary beneath the project area. Based on review of available information on leaking tank sites obtained from the State of California Water Resources Control Board's (SWRCB) GeoTracker website and case file reviews at the RWQCB, the depth to shallow groundwater in the project area vicinity ranges in depths from approximately 15 to 40 feet bgs. Groundwater flow directions vary significantly in the project area. In the southern portion of the project area, generally south of Firestone Boulevard, the groundwater flow direction has been measured by others generally to the south. In the northern portion of the project area, generally north of Firestone Boulevard, the groundwater flow direction has been measured by others ranging from northwest to north to east.

Surface water runoff in the project area generally follows surface topography toward the south. There are no natural bodies of water within the project area. No areas of ponded water were observed during the site reconnaissance. The nearest body of surface water to the project area is the La Cañada Verde Creek, located approximately 500 feet east and northeast of the eastern end of the project area.

4. ENVIRONMENTAL DATABASE REVIEW

Ninyo & Moore obtained and reviewed two environmental database search reports for the ISAs. One report was obtained for the [redacted] property located at [redacted] Carmenita Road and for the [redacted] property. The second report was obtained for [redacted] Company at [redacted] Freeway Drive and former Burke Industries at 13767 Freeway Drive. The reports and properties are referred to as Carmenita Report/Properties (Superior Distribution Center and [redacted] and Freeway Report/Properties ([redacted] Company and former Burke Industries).

The computerized, environmental information database searches were performed by Environmental FirstSearch (FirstSearch) on January 12, 2006. The FirstSearch search included federal, state, and local databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted sites of environmental concern are presented in Appendices B and C. In addition, a description of the assumptions and approach to the database searches is provided in Appendices B and C. The review was conducted to evaluate whether subject properties or facilities within the project area vicinity have been reported as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

The database searches identified surrounding facilities of potential environmental concern on various databases. Four unmapped facilities were identified in the vicinity of the subject properties. However, based on the addresses provided for the facilities and/or the types of databases on which these properties are listed, there is a low potential that the environmental integrity of the project area has been adversely affected by these unmapped off-site sources.

The following paragraphs describe the databases that contain noted facilities of environmental concern and include a discussion of the regulatory status of the facilities and potential environmental impact to the subject properties. Discussion of locations of listed facilities being upgradient, crossgradient, or downgradient to properties in the project area are relative to the assumed direction of groundwater flow.

4.1. Carmenita Properties

The following paragraphs describe the databases that contain noted facilities of environmental concern and include a discussion of the regulatory status of the facilities and potential environmental impact to the subject properties.

4.1.1. National Priorities List (NPL): Distance Searched – 1 mile

The NPL is the United States Environmental Protection Agency's (EPA's) database of uncontrolled or abandoned hazardous waste facilities identified for priority remedial actions under the Superfund program.

Neither the Carmenita Properties nor facilities located within a 1-mile radius from the properties were listed on this database.

4.1.2. Corrective Action Report (CORRACTS): Distance Searched – 1 mile

The EPA maintains this database of Resource Conservation and Recovery Act (RCRA) facilities that are undergoing corrective action. A corrective action order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.

The Carmenita Properties were not listed on this database. Two facilities, [redacted] Corporation at [redacted] Borate Street and [redacted] and Distributing Division at [redacted] Alondra Boulevard, were listed on this database. The facilities are approximately 0.77 mile northeast and 0.96 mile southeast of the Carmenita Properties, respectively. Specific information regarding the CORRACTS listing was not provided. Based on the distance of these facilities from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties.

4.1.3. Calsites Database (Calsites): Distance Searched – ½ mile

The Calsites database is maintained by the California Environmental Protection Agency (Cal-EPA), Department of Toxic Substances Control (DTSC). This database contains information on Annual Workplan (AWP) facilities and both known and potentially contaminated facilities. Two-thirds of these facilities have been classified, based on available information, as needing no further action (NFA) by the DTSC. The remaining facilities are in various stages of review and remediation to determine if a problem exists.

The Carmenita Properties were not listed on this database. Two facilities were listed on the database within ½ mile from the project area. Hillerich & Bradsby was listed at 15601 South Resin Place, approximately 0.15 mile southeast of and downgradient from the Carmenita Properties. The activity listed was “discovery,” and the activity status of this facility was listed as “site referred to RCRA.” It appears that the Los Angeles County Health Department inspected the facility several times and noted liquid waste discharges onto Carmenita Road. The substances discharged were reported as solvent, oily sludge, and TCE. Based on the downgradient location of this facility relative to the properties, there is a low potential for impact to the Carmenita Properties.

A second facility, the Metro Biological Laboratories, was listed as located at 14905 Carmenita Road, approximately 0.37 mile north of and upgradient from the Carmenita Properties. The activity status of this facility was listed as “no further action for DTSC.” It appears that a preliminary endangerment assessment was conducted at this facility for the DTSC which required unspecified further action. The further action was reportedly completed, and DTSC then required no further action. Based on the “no further action” issued by the DTSC for this facility, there is a low potential for impact to the Carmenita Properties.

4.1.4. Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List: Distance Searched – ½ mile

The CERCLIS database contains facilities which are either proposed or on the NPL and facilities which are in the screening and assessment phase for possible inclusion on the NPL.

Neither the Carmenita Properties nor properties located within a ½-mile radius from the properties were listed on this database.

4.1.5. CERCLIS Archived Sites (CERCLIS NFRAP): Distance Searched – Property

The CERCLIS NFRAP database is maintained by the Cal-EPA, DTSC. This database contains information on AWP facilities and both known and potentially contaminated facilities for which assessments have been completed and no further steps will be taken to add the site to the NPL. This listing does not necessarily mean there is no hazard associated with the facility, only that it is not judged to be a potential NPL facility.

The Carmenita Properties were not listed on this database.

4.1.6. Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) Facilities List: Distance Searched – ½ mile

The RCRA TSD database is a compilation by the EPA of facilities that report generation, storage, transportation, treatment, or disposal of hazardous waste.

Neither the Carmenita Properties nor facilities located within a ½-mile radius from the properties were listed on this database.

4.1.7. Leaking Underground Storage Tank (LUST) Lists: Distance Searched – ½ mile

The FirstSearch database of LUST information system is obtained from by the State Water Resources Control Board (SWRCB) and the Regional Water Quality Control Board, Santa Ana Region (RWQCB).

The Carmenita Properties were not listed on this database. Eighteen facilities were identified on this list within a ½-mile radius from the Carmenita Properties. Eleven of the facilities have a status reported as "closed." Three of the LUST facilities are open cases that are located either downgradient or crossgradient from the Carmenita Properties. Based on the closed status and/or direction from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties from these 14 facilities. The remaining four LUST facilities are discussed below.

An [redacted] No. [redacted] gasoline station located at [redacted] Firestone Boulevard is northeast of the [redacted] The substance leaked was listed as "gasoline," the media affected was listed as "other," and the status was listed as "remedial action." Groundwater monitoring wells were observed at this [redacted] station during the property reconnaissance. Information on the groundwater monitoring wells was obtained from the SWRCB GeoTracker website and from case files at the RWQCB. According to maps provided, there are multiple groundwater monitoring wells north of the [redacted] In January 2005, these groundwater wells had reported concentrations of TPHg, MTBE, and benzene in groundwater sampled. Based on this information, the [redacted] facility may have impacted soil and/or groundwater beneath the railroad right-of-way, the adjacent [redacted] property, and the Department right-of-way to the north. This property is further discussed in Section 7.9.

A former [redacted] gasoline station, located at [redacted] Firestone Boulevard, is adjacent and north of the [redacted] This facility is currently vacant. The substance leaked was listed as "gasoline," the media affected was listed as "other," and the status was listed as "remedial action." Information on the facility was obtained from the SWRCB GeoTracker website and from case files at the RWQCB. According to the reports and maps provided, there are multiple groundwater monitoring wells northwest of the [redacted] In July 2005, it was concluded that these groundwater wells contained a variety of petroleum hydrocarbons, including TPHg, MTBE, and BTEX in groundwater sampled. It was also concluded that the petroleum hydrocarbon presence in groundwater had not been assessed southeast of the facility. Based on this information, soil and/or groundwater beneath the [redacted] and Department right-of-way to the north may have been impacted by the former Mobil facility. This property is further discussed in Section 7.8.

A [redacted] Station No. [redacted] located at [redacted] Carmenita Road is approximately 0.33 mile north (downgradient) of the [redacted] The substance leaked was listed as "gasoline," the media affected was listed as groundwater, and the status was listed as “remediation plan.” Based on the distance and downgradient direction of this facility from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties. This property is further discussed in Section 7.3.

The [redacted] Property, located at [redacted] Excelsior Drive, approximately 0.44 mile north (downgradient) of and upgradient to the Carmenita Properties, is on the list. The substance leaked was listed as gasoline, the media affected was listed as “other,” and the status was listed as “remediation plan.” Based on the distance and downgradient direction of this facility from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties. This property is further discussed in Section 8.4.

4.1.8. Solid Waste Landfill Sites (SWLF): Distance Searched – ½ mile

The SWLF database consists of open and closed solid waste disposal facilities and transfer stations. The data comes from the Integrated Waste Management Board’s Solid Waste Information System (SWIS) and the SWRCB’s Waste Management Unit Database (WMUD) database.

The Carmenita Properties were not listed on this database. Four facilities were identified within a ½-mile radius from the Carmenita Properties. These four facilities are all Lakin Tire West, Inc., facilities. These facilities are listed as “active” tire dealers that reportedly accept passenger and truck tires as waste. Violations were not reported. Based on the lack of reported violations and type of wastes, there is a low potential for impact to the Carmenita Properties from these facilities.

4.1.9. Underground Storage Tank (UST) Registration List: Distance Searched – Property and Adjoining Properties

The UST database is provided by the SWRCB. Inclusion on this list is for permitting purposes and is not indicative of a release.

The Carmenita Properties were not listed on this database. Four adjoining facilities were listed on this database. The first facility is the City of Santa Fe Springs Fire Department (listed four times) at [redacted] South Carmenita Road approximately 100 feet southwest of and downgradient to [redacted] This facility had two USTs (1,000 gallons and 700 gallons) that contained diesel. The USTs were reportedly removed in 1992 and gained closure in 1997. The USTs had leaked, and the RWQCB was the lead agency. Based on the case status and downgradient direction from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties. This facility is discussed further in Section 8.3.

An unnamed "existing industrial facility" at 15511 Carmenita Road, approximately 100 feet southwest of and downgradient to [redacted] was listed on the database. This facility reportedly had an unknown number of USTs at the facility that were removed before July 1, 1997. This facility is not listed as a LUST case. Based on the case status and downgradient location from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties.

The third facility listed is Mothers Cookies at [redacted] South Carmenita Road (currently [redacted] approximately 500 feet northwest of and crossgradient to [redacted] and approximately 500 feet southwest and downgradient from the [redacted] property. This facility reportedly had one 10,000-gallon UST installed in 1985 and removed in 1993. Leaks were not reported. Based on the distance from the Carmenita Properties, status of this facility, and the downgradient or crossgradient location from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties.

The fourth facility listed is [redacted] at [redacted] Firestone Boulevard, approximately 0.14 mile northeast of and upgradient to the [redacted] This facility reportedly had three USTs installed in 1965. One was removed in 1970, and the other two were removed in 1987. Additional USTs were installed at the facility in 1970 (one UST) and in 1987 (two USTs). This facility is on the LUST list and is further discussed in that section.

4.1.10. RCRA Generators List: Distance Searched – Property and Adjoining Properties

This list identifies facilities that generate hazardous waste as defined by RCRA. Inclusion on these lists is for permitting purposes and is not indicative of a release.

The Carmenita Properties were not listed on this database. Six adjoining facilities were listed on this database. The first facility is the Alondra Industrial Park at 15524 Carmenita Road, adjacent and southeast of (downgradient) [redacted] This facility is a large quantity generator with no reported violations. Based on the lack of violations reported and the downgradient location from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties.

The second facility is [redacted] at [redacted] Carmenita Road ([redacted] located west of and crossgradient to [redacted] across Carmenita Road. This facility is a small quantity generator with no reported violations. Based on the lack of violations reported and the crossgradient location from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties.

Two facilities were on this list as occupying two different suites of the same address. [redacted] and IBM Electronic Products, Inc., are listed occupying [redacted] Carmenita Road, located west of and crossgradient to [redacted] across Carmenita Road. These facilities are small quantity generators with no reported violations. Based on the lack of violations reported and the crossgradient location from the Carmenita Properties, there is a low potential for impact to the Carmenita Properties.

The fifth facility is Howard Hughes Oil Company at 15605 Carmenita Road, approximately 0.05 mile southwest of and downgradient to [redacted] This facility is reported on the list, but no information was provided. This facility is not listed on other databases of known releases. Based on the downgradient location from the Carmenita Properties and the lack of other listings for this facility, there is a low potential for impact to the Carmenita Properties.

The sixth facility is Liberty Vegetable Oil Company at 15306 Carmenita Road, between the [redacted] and [redacted] This facility is reported as a large quantity generator with no reported violations. Based on the lack of violations reported, the type of material handled in bulk (vegetable oil), and the lack of other listings for this facility, there is a low potential for impact to the Carmenita Properties.

4.2. Freeway Properties

The following paragraphs describe the databases that contain noted facilities of environmental concern, and include a discussion of the regulatory status of the facilities and potential environmental impact to the subject properties.

4.2.1. NPL: Distance Searched – 1 mile

The NPL is the EPA database of uncontrolled or abandoned hazardous waste facilities identified for priority remedial actions under the Superfund program.

Neither the Freeway Properties nor facilities located within a 1-mile radius from the properties were listed on this database.

4.2.2. CORRACTS: Distance Searched – 1 mile

The EPA maintains this database of RCRA facilities that are undergoing corrective action. A corrective action order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.

The Freeway Properties were not listed on this database. Two facilities, [redacted] and Distributing Division at [redacted] Alondra Boulevard and [redacted] Corporation at [redacted] Borate Street, were listed on this database. The facilities are approximately 0.59 mile southeast and 0.64 mile north of the Freeway Properties, respectively. Specific information regarding the CORRACTS listing was not provided. Based on the distance of these facilities from the Freeway Properties, there is a low potential for impact to the Freeway Properties.

4.2.3. Calsites: Distance Searched – ½ mile

The Calsites database is maintained by the Cal-EPA, DTSC. This database contains information on AWP facilities and both known and potentially contaminated properties. Two-thirds of these facilities have been classified, based on available information, as needing NFA by the DTSC. The remaining facilities are in various stages of review and remediation to determine if a problem exists.

The Freeway Properties were not listed on this database. Two facilities were listed on the database within ½ mile from the property. The Metro Biological Laboratories was listed at 14905 Freeway Road, approximately 0.57 mile northwest of and crossgradient from the Freeway Properties. The activity status of this facility was listed as "no further action for DTSC." It appears that a preliminary endangerment assessment was conducted at this facility for the DTSC which required unspecified further action. The further action was completed, and DTSC then required no further action. Based on the "no further action" issued by the DTSC and the distance from the Freeway Properties, there is a low potential for impact to the Freeway Properties from this facility.

A second facility, Diesel Recon Company, was listed at 14044 Freeway Drive, approximately 0.57 mile southeast of and crossgradient from the Freeway Properties. The activity status of this facility was listed as "preliminary endangerment assessment." It appears that the Diesel Recon Company and the DTSC are participating in a voluntary cleanup of the facility. The DTSC has required further action at the facility due to health risks associated with chromium. Additionally, volatile organic compounds (VOCs), petroleum hydrocarbons, and polyaeromatic hydrocarbons (PAHs) were found at the facility. Based on the distance and location of this property relative to the Freeway Properties, there is a low potential for impact to the Freeway Properties.

4.2.4. CERCLIS: Distance Searched – ½ mile

The CERCLIS database contains facilities which are either proposed or on the NPL and facilities which are in the screening and assessment phase for possible inclusion on the NPL.

Neither the Freeway Properties nor facilities located within a ½-mile radius from the properties were listed on this database.

4.2.5. CERCLIS NFRAP: Distance Searched – Properties

The CERCLIS NFRAP database is maintained by the Cal-EPA, DTSC. This database contains information on AWP facilities and both known and potentially contaminated facilities for which assessments have been completed and no further steps will be taken to add the facility to the NPL. This listing does not necessarily mean there is no hazard associated with the facility, only that it is not judged to be a potential NPL facility.

The Freeway Properties were not listed on this database.

4.2.6. RCRA TSD Facilities: Distance Searched – ½ mile

The RCRA TSD database is a compilation by the EPA of facilities that report generation, storage, transportation, treatment, or disposal of hazardous waste.

Neither the Freeway Properties nor facilities located within a ½-mile radius from the properties were listed on this database.

4.2.7. LUST: Distance Searched – ½ mile

The database of LUST information system is obtained from by the SWRCB and the RWQCB.

The Freeway Properties were not listed on this database. Twenty-two facilities were identified on this list within a ½-mile radius from the Freeway Properties. Sixteen of the facilities have a status reported as “closed.” Four of the LUST facilities are open cases that are located either downgradient or crossgradient from the Freeway Properties. Based on the closed status, distance, and/or direction from the Freeway Properties, 20 of these facilities are unlikely to be a concern to the Freeway Properties. The two nearest open cases are discussed below.

Carmenita Ford Truck Sales, located at 13443 Freeway Drive, is northwest of the Freeway Properties. The substance leaked was listed as waste oil, the media affected was listed as "soil only," and the status was listed as "remedial action." Based on the substance leaked and the media affected, there is a low potential for impact to the Freeway Properties from this facility. This facility is discussed further in Section 7.4.

The [redacted] Property, located at [redacted] Excelsior Drive, approximately 0.32 mile north of and upgradient to the Freeway Properties, is on the list. The substance leaked was listed as gasoline, the media affected was listed as "other," and the status was listed as "remediation plan." Based on the distance from this facility to the properties, there is a low potential for impact to the Freeway Properties from this facility. This facility is discussed further in Section 8.4.

4.2.8. SWLF: Distance Searched – ½ mile

The SWLF database consists of open and closed solid waste disposal facilities and transfer stations. The data comes from the Integrated Waste Management Board's SWIS and the SWRCB's WMUD database.

The Freeway Properties were not listed on this database. Two facilities were identified within a ½-mile radius from the Freeway Properties. These are Lakin Tire West, Inc., facilities listed as "active" tire dealers that accept passenger and truck tires as waste. Violations were not reported. Based on the lack of reported violations and type of wastes, there is a low potential for impact to the Freeway Properties from this facility.

4.2.9. UST Registration: Distance Searched – Properties and Adjoining Properties

The UST database is provided by the SWRCB. Inclusion on this list is for permitting purposes and is not indicative of a release.

The Freeway Properties or adjoining facilities were not listed on this database.

4.2.10. RCRA Generators: Distance Searched – Properties and Adjoining Properties

This list identifies facilities that generate hazardous waste as defined by RCRA. Inclusion on these lists is for permitting purposes and is not indicative of a release.

[redacted] at [redacted] Freeway Drive (a portion of the Freeway Properties) was listed on this database as a small quantity generator. The facility conducts manufacturing of air conditioning and air heating equipment. Violations were not reported. Based on the lack of violations reported, there is a low potential for impact to the Freeway Properties from this facility.

The former occupant of 13767 Freeway Drive, Kirkhall-TA Division, was listed as a small quantity generator with no reported violations. Based on the lack of violations reported, there is a low potential for impact to the Freeway Properties.

5. REVIEW OF HISTORICAL LAND USE INFORMATION

The following sections summarize the results of our review of historical land use sources, including aerial photographs, Sanborn Fire Insurance maps, historical city directories, topographic maps, and oil and gas maps for [redacted] Carmenita Road ([redacted] portions of the [redacted] Freeway Drive ([redacted] and 13767 Freeway Drive (former Burke Industries).

In general, the project area was historically used for agricultural purposes from at least 1928 to the late 1950s when I-5 was constructed. Commercial/industrial buildings began to be constructed in the project area in the 1960s. The area was also occupied by residential and agricultural properties at this time. By the mid-1970s, the project area was fully developed with commercial, industrial, and residential properties. The project area has been used for commercial, industrial, and residential purposes from the mid-1970s to the present.

5.1. Historical Aerial Photographs Review

Historical aerial photographs for the years 1938, 1954, 1963, 1972, 1985, and 1997 were provided by RUPP Aerial Photographs (RUPP) of Corona, California, and were reviewed by Ninyo & Moore. A 2004 aerial photograph was provided by www.terraserver.com. The following Table 2 presents a summary of our review. Copies of the aerial photographs are provided in Appendices D and E.

Table 2 – Historical Aerial Photograph Reviews

Property Designation	1938	1954	1963	1972	1985	1997	2004
[redacted] Center	Agriculture	Agriculture	Agricultural	Agricultural	Agricultural	Current Building	Current Building
[redacted]	Railroad Tracks	Railroad Tracks	Railroad Tracks	Railroad Tracks	Railroad Tracks	Railroad Tracks	Railroad Tracks
[redacted]	Agriculture	Agriculture	One Industrial Building	One Industrial Building	One Industrial Building	Current Building	Current Building
Former Burke Industries	Agriculture	Agriculture	Agriculture	One Industrial Building	One Industrial Building	Current Building	Current Building

Other on-site features of possible environmental concern were not noted in the aerial photographs reviewed.

5.2. Sanborn Fire Insurance Maps

Sanborn Fire insurance rate maps for the [redacted] Carmenita Road, portions of the [redacted] Freeway Drive, and 13767 Freeway Drive and immediate surrounding area were requested from FirstSearch. According to FirstSearch, Sanborn Fire Insurance Maps were not available.

5.3. Historical City Directories

Ninyo & Moore reviewed selected historical city directories for the Carmenita and Freeway Properties and vicinity at the Haines Criss-Cross Directory in Fullerton, California, and at the Sherman Gardens Library in Corona del Mar, California, between the years 1963 and 2004. Table 3 below presents a summary of the site listings. Copies of city directories are included in Appendices F and G.

Table 3 – City Directories

Year	Address	Occupant
1965	[redacted] Carmenita Road	No Listing
	[redacted] Freeway Drive	No Listing
	13767 Freeway Drive	No Listing
1972	[redacted] Carmenita Road	No Listing
	[redacted] Freeway Drive	Miami Carey Company
	13767 Freeway Drive	Suzuki US Motor
1976	[redacted] Carmenita Road	No Listing
	[redacted] Freeway Drive	[redacted] Division
	13767 Freeway Drive	Suzuki US Motor
1980	[redacted] Carmenita Road	No Listing
	[redacted] Freeway Drive	[redacted] Division
	13767 Freeway Drive	Suzuki International USA, Inc.
1985	[redacted] Carmenita Road	No Listing
	[redacted] Freeway Drive	[redacted] Division
	13767 Freeway Drive	DMG Corp.
1990	[redacted] Carmenita Road	Asiana Airlines
	[redacted] Freeway Drive	[redacted]
	13767 Freeway Drive	SFS Industries
1994	[redacted] Carmenita Road	No Listing
	[redacted] Freeway Drive	[redacted]
	13767 Freeway Drive	SFS Industries
2000	[redacted] Carmenita Road	No Listing
	[redacted] Freeway Drive	[redacted]
	13767 Freeway Drive	Burke Industries
2004	[redacted] Carmenita Road	[redacted] Warehouse
	[redacted] Freeway Drive	[redacted]
	13767 Freeway Drive	Kirkhall-TA

Based on our review of city directories for properties in the immediate site vicinity, the site vicinity appears to have been historically used for residential, commercial, and light industrial purposes.

5.4. Topographic Maps

Ninyo & Moore reviewed the United States Geological Survey (USGS) 7.5 Minute Series Whittier, California, Topographic Quadrangle Map, dated 1965 and photorevised in 1981. The map shows the [redacted] Railroad tracks, the [redacted] Freeway Drive building, and the 13767 Freeway Drive building. The [redacted] was not shown. The areas surrounding the Carmenita and Freeway Properties appeared developed as an urban area.

5.5. Oil and Gas Maps

Ninyo & Moore reviewed the State of California, Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) W1-5 map. Based on map information, the properties and immediate vicinity do not lie within active oil fields. Two "plugged and abandoned-dry hole" wells appear northwest of the subject properties. No active or abandoned oil or gas wells were shown on the Carmenita or Freeway Properties.

5.6. [redacted]

Building permits for [redacted] Carmenita Road, [redacted] Freeway Drive, and 13767 Freeway Drive were reviewed at the City of Santa Fe Springs. General permits were on file for the three addresses that included electrical, plumbing, tenant improvements, and sign permits. Permits that would indicate environmental concerns other than listed were not noted.

A permit for the construction of a "concrete tilt-up warehouse" at [redacted] Carmenita Road was issued on August 25, 1987. The owner of the property was listed as Liberty Vegetable Oil, the current adjacent facility.

On January 25, 1966, a permit was issued for the construction of a new 82,000-square-foot "manufacturing and warehouse" at [redacted] Freeway Drive. A permit for an industrial incinerator was issued to the Phillip Carey Manufacturing Company on March 20, 1969. On February 1, 1993, a permit was issued to Casey Rooney for "Freon (R-22) bulk storage system installation, concrete pad and plumbing-tank."

A permit for the construction of a 55,700-square-foot "showroom, office, warehouse" at 13767 Freeway Drive was issued to Excelsior Properties on March 10, 1966. On May 22, 1978, a permit was issued for a "mezzanine and offices" to US Suzuki Motors.

6. REGULATORY RECORDS REVIEW – PROJECT PROPERTIES

Ninyo & Moore requested regulatory agency records pertaining to the properties included in the SISA and ISAs (Table 1) from the Los Angeles County Department of Public Works (LACDPW), Los Angeles Regional Water Quality Control Board (RWQCB), [redacted] (SFSFD), and California State Fire Marshall (CSFM). The files available were reviewed and area summarized below. A copy of the pertinent information obtained from the regulatory agencies is included in Appendices H through J.

6.1. [redacted]

An Industrial Waste Discharge Permit was issued to the property by the city of Santa Fe Springs on November 20, 1998, by the SFSFD for a grease interceptor.

6.2. [redacted]

A memo in the SFSFD file dated March 18, 1983, indicated two 9,940-gallon fuel USTs were on the property. The memo stated "tanks apparently removed without notifying fire department."

According to a LACDPW Tank Inspection Report dated July 13, 1993, a 9,950-gallon UST was removed from the property by EIS. One soil sample was collected from beneath each end of the UST and analyzed for TPHg and BTEX. The fuel dispenser was reported located above the UST so no dispenser sample was collected. The analytical results indicated TPHg and BTEX were at concentrations below the "reporting limit." On August 31, 1993, the County of Los Angeles Department of Public Works issued a closure letter to the property for the UST removal.

A LACDPW closure certification for the UST removed in 1993 was issued to the property on August 31, 1993.

6.3. [redacted]

An Industrial Waste Survey for [redacted] at [redacted] Firestone Boulevard dated August 25, 1978, indicated industrial waste was produced at the property in the form of "vegetable washing and truck wash."

A LACDPW Application for UST Closure for [redacted] at [redacted] Firestone Boulevard dated December 31, 1985, stated that three USTs were to be removed from the property.

A memorandum by the city of Santa Fe Springs dated January 6, 1986, regarding [redacted] at [redacted] Firestone Boulevard indicated a Los Angeles County Waste Engineer witnessed the removal of three diesel USTs. Two USTs had 10,000-gallon capacity and one UST had 1,000-gallon capacity. The USTs were reportedly found intact with no leaks noted. The location of the USTs was not reported.

An Inspector's Report by the city of Santa Fe Springs dated January 14, 1986, regarding [redacted] Firestone Boulevard indicated [redacted] facilities had been demolished to make way for a business park.

An Industrial Wastewater Discharge permit from the city of Santa Fe Springs dated July 15, 2003, was on file for [redacted] at [redacted] Firestone Boulevard for a clarifier.

6.4. [redacted]

Records for the [redacted] property at [redacted] Firestone Boulevard (former Ryder facility, currently Budget) indicated six USTs were formerly located beneath the current 4,000-gallon diesel AST and the 2,000-gallon gasoline AST in the eastern portion of the property (Figure 6). According to a report by ESE entitled Results of a Tank Removal/Site Characterization and Soil Remediation Programs for Ryder Transportation Resources located at [redacted] Firestone Boulevard, Santa Fe Springs, California, dated July 13, 1990, two 10,000-gallon diesel USTs, two 10,000-gallon gasoline USTs, and two 550-gallon waste oil USTs were removed from the area in December 1989. Soil samples were collected from beneath each of the USTs and analyzed for TPH and BTEX. Elevated concentrations of TPH and BTEX were detected in the samples analyzed from beneath the diesel and gasoline USTs. Six soil borings were then advanced in the vicinity of the USTs. One boring had detectable concentrations of TPH and BTEX to 15 feet bgs, with the 17-foot-bgs sample having no detectable concentrations of TPH or BTEX. The area of the 10,000-gallon USTs was then excavated to approximately 17 feet bgs, and the area of the 550-gallon USTs was excavated to approximately 8 feet bgs. Confirmation soil samples were collected from the sidewalls and bottom of the excavations and analyzed for TPH and BTEX. Detectable concentrations of BTEX and TPH were not found in the confirmation samples. Approximately 900 cubic yards of excavated soil was stockpiled on the property from March to May 1990, and the soil was treated with a liquid peroxide solution. The stockpiled soil was subsequently disposed of off-site at a Class III landfill.

A report by ESE entitled Results of a Site Assessment for [redacted] Rental, Inc., Used Truck Center Located at [redacted] Firestone Boulevard in Santa Fe Springs, California, dated July 29, 1991, indicated three groundwater monitoring wells were installed at the property. The depth to groundwater beneath the property was approximately 15 feet bgs with the direction of flow being east. Analytical results from the soil and groundwater samples collected indicated no detectable concentrations of TPH or BTEX with the exception of one well. Toluene was detected in one groundwater sample at levels reported below the California Department of Health Services action level.

A Final Groundwater Monitoring Report and Closure Request dated June 24, 1992, by ESE was submitted to LACDPW for the property. The report indicated groundwater at the property had been sampled quarterly from June 1991 to April 1992 and the groundwater did not contain petroleum hydrocarbon constituents over their respective Maximum Contaminant Levels (MCLs).

On September 28, 1992, the LACDPW issued a letter to [redacted] Firestone Boulevard indicating no further action was required at the property with respect to the former USTs.

6.5. [redacted]

A letter from [redacted] to the SFSFD received on September 21, 1998, indicated [redacted] had analyzed polishing dust residue for metals. A note on the letter by the SFSFD indicated "does not appear to be haz waste."

A Hazardous Materials Business Plan dated May 13, 2002, for the property indicated the following chemicals were on site: argon, motor oil, oxygen, perchlorethylene (PCE), propane, hydraulic oil, and solvent.

6.6. [redacted]

A permit was issued to [redacted] Company at [redacted] Carmenita Road, Suite A, on December 20, 1965, for a "neutralizing tank – sand and grease tank."

A site plan dated July 3, 2000, for [redacted] Company at [redacted] Carmenita Road, Suite A, indicated the suite contained a neutralizing AST.

A permit was issued by the LACDPW to IMB at [redacted] Carmenita Road, Suite A, dated December 12, 1975, indicating the water producing operations at the suite were a spray booth and metalizing water wash.

Plans were submitted to the LACDPW by Johnson Electronics, Inc. (Johnson), at [redacted] Carmenita Road, Suite R, dated May 20, 1980, indicating the water producing operations at the suite were printed circuit fabrication and cleaning of assembled PC boards.

A site plan for A1 Metal Finishing at [redacted] Carmenita Road, Suite S, dated January 18, 1985, indicated the following ASTs were in the suite: nickel, nickel strip, black nickel, brass, brass passivator, "elec. cleaner," "elec. cleaner strip," bronze, sodium nitrate strip, muriatic dip, degreaser, acid copper, nitric acid dip, zincate, chrome, and water. The ASTs were listed with capacities from 40 to 810 gallons. The site plan also showed an interceptor in the suite that was 36 inches long by 23 inches wide by 30 inches deep.

An On-Site Hazardous Waste Treatment, Fixed Treatment unit Conditional Authorization, Facility Specific and Unit Specific Notification report for A1 Metal Finishing was completed by Jorgensen Environmental, Inc. (JEI), in March 1993. The report indicated A1 Metal Finishing had two wastewater treatment systems that treated aqueous waste during metal finishing operations. Hazardous waste treatment operations, sludge processing system, and metal finishing occur in Suite N while the offices were located in Suite S. The metal finishes at the suite were listed as acid copper plating, brass plating, copper-cyanide plating, chrome plating, nickel plating, and zincate immersion plating.

A letter was issued by A1 Metal Finishing at [redacted] Carmenita Road, Suite S, to the LACDPW dated January 24, 1995, indicating the discharge to the sewer point had been removed.

A Work Plan for A1 Metal Finishing, Suites N, P, and S, dated February 14, 1995, was completed by IWS Environmental, Inc. (IWS), and reviewed at the SFSFD. The Work Plan indicated A1 Metal Finishing ceased operations in September 1994 and left hazardous materials (new and used) in the suites. The hazardous materials were removed from the site, and soil samples were collected throughout the suites. The analytical results indicated metals above regulatory levels in three locations. The Work Plan described the planned excavation of the three areas.

A Closure Report for A1 Metal Finishing dated April 10, 1995, was completed by IWS indicating approximately 22 yards of soil were removed from three areas of the suites. Soil samples were collected from the bottom of the excavations and analyzed. The report indicated soils impacted by metals had been removed; however, the analytical results and diagrams of excavations, etc., were not provided in the closure report.

6.7. [redacted]

A letter dated March 6, 2001, from [redacted] Warehouse to the City of Santa Fe Springs indicated they were leasing the property at [redacted] Carmenita Road and would be using it as a warehouse. The letter indicated [redacted] Warehouse would have waste in the form of melting ice in coolers, which they indicated was not an environmental concern.

According to the CSFM, three pipelines are located in the vicinity of [redacted] Carmenita Road and [redacted] and 13767 Freeway Drive. The specific location of the pipelines was not provided. The pipelines were described as follows: a 10-inch crude oil pipeline owned by Chevron/LA, a 16-inch refined product (gasoline, jet fuel, gas oil) pipeline owned by Kinder Morgan, and a 12-inch empty pipeline owned by Pacific Terminals, LLC. The information provided did not indicate a leak from the pipelines. During the site reconnaissance, at least two pipelines were identified within the [redacted] north of the [redacted] property. No pipeline placards or other markings where observed within or adjacent to the [redacted] frontage area.

6.8. [redacted]

Records for [redacted] Freeway Drive included a Hazardous Materials Business Plan for [redacted] dated November 6, 2003. The report indicated the property contained the following chemicals: acetylene, argon, hydraulic oil, lacquer thinner, heavy medium oil, nitrogen, oxygen, hydrocarbon (Frick oil No. 3), semi-synthetic hydrocarbon (Frick oil No. 3), petroleum solvent, propane, waste oil, refrigerated oxygen, oxygen and carbon dioxide in argon, and argon in helium. Spills or leaks were not reported.

According to the CSFM, three pipelines are located in the vicinity of [redacted] Carmenita Road and [redacted] and 13767 Freeway Drive. The specific location of the pipelines was not provided. The pipelines were described as follows: a 10-inch crude oil pipeline owned by Chevron/LA, a 16-inch refined product (gasoline, jet fuel, gas oil) pipeline owned by Kinder Morgan, and a 12-inch empty pipeline owned by Pacific Terminals, LLC. The information provided did not indicate a leak from the pipelines. During the site reconnaissance, no pipeline placards or other markings where observed within or adjacent to the [redacted] frontage area.

6.9. Former Burke Industries

Records for 13767 Freeway Drive included a Permit for Industrial Wastewater Discharge for the former Burke Industries dated January 21, 1998. The wastewater producing operations on the permit were listed as “boiler blowdown, non-contact coolant tank water, exchange, cooling tower bleed-off, and water softener reject. The raw materials used were reported as: silicone rubber, stainless steel wire, and nylon thread.” The constituents of wastewater discharge were listed as “light sand residue from parts cleaning, mild detergent from mold cooling.”

The file also included a Hazardous Materials Business Plan for The former Burke Industries dated June 1, 2000. The report indicated the property was a small quantity generator that contained the following hazardous materials: oily rags, adhesives, solvents, oil/water, and oily absorbent.

On November 14, 2003, a letter was issued from Kirkhall-TA at 13767 Freeway Drive describing the decommissioning of the activities at the property. Kirkhall-TA manufactured silicone gaskets and seals for the commercial and military aircraft industries and purchased the assets of former Burke Industries on May 29, 2002. The report indicates equipment and processes were mostly transferred to another location in Brea. Hazardous materials were produced in emptying and cleaning the equipment which was transferred off-site for recycling under hazardous materials manifests. Approximately 1,225 gallons of petroleum oil, 2 tons of petroleum contaminated debris, 34 empty 55-gallon drums, one 55-gallon drum of mixed solvents, one 55-gallon drum of organic peroxides, two 55-gallon drums of miscellaneous flammable materials, and one 55-gallon drum of organic nitrates were removed from the property. A three-stage clarifier and below grade vault were also cleaned. Spills or leaks were not reported.

According to the CSFM, three pipelines are located in the vicinity of [redacted] Carmenita Road and [redacted] and 13767 Freeway Drive. The specific location of the pipelines was not provided. The pipelines were described as follows: a 10-inch crude oil pipeline owned by

Chevron/LA, a 16-inch refined product (gasoline, jet fuel, gas oil) pipeline owned by Kinder Morgan, and a 12-inch empty pipeline owned by Pacific Terminals, LLC. The information provided did not indicate a leak from the pipelines. During the site reconnaissance, no pipeline placards or other markings where observed within or adjacent to the former Burke Industries frontage area.

7. REGULATORY RECORDS REVIEW – OFF-SITE FACILITIES OF POTENTIAL CONCERN

Ninyo & Moore requested regulatory agency records pertaining to facilities of potential concern in the vicinity of the Project Area from the LACDPW, RWQCB, SFSFD, and CSFM. The files available were reviewed and area summarized below.

7.1. Vacant Lot (Former Mobil No. 18), [redacted] and [redacted] Firestone Boulevard, Santa Fe Springs

An Application for Storage Tank Closure was completed by Mobil on August 14, 1998. The application indicated the property had one 12,000-gallon gasoline UST, two 10,000-gallon gasoline USTs, and one 500-gallon waste oil UST.

A report, Site Demolition and Underground Storage Tank Removal at Former [redacted] GHD, by [redacted] ([redacted]), dated October 30, 1998, indicated the service station building, two hoists, one clarifier, fuel dispensers, and four USTs were removed from the property in January 1988. Soil samples were collected beneath the former USTs, and hoists and TPH was detected up to 9,460 mg/kg. Seven groundwater monitoring wells were installed on the site – three in 1990, two in 1992, and two in 1998. Groundwater sampling was conducted on the property from 1993 to the date of the report (1998) and was recommended to continue.

[redacted]r submitted a Fourth Quarter 2005 Site Conceptual Model Update for the property dated January 13, 2006, to the RWQCB. The report described multiple investigations at the property that included additional groundwater monitoring well installation and the operation of a soil vapor extraction (SVE) unit from 2000 to ongoing. The source of the contamination was reported as the former USTs, southern dispenser island, and possibly the adjacent [redacted] gasoline station. Active SVE, liquid phase hydrocarbons (LPH) removal, and periodic groundwater monitoring under the regulatory oversight of the RWQCB are ongoing activities at this facility. Several feet of LPH have historically been measured in several wells on the property. During the fourth quarter 2005, a sheen of LPH was observed in wells at the property. Dissolved phase petroleum hydrocarbon constituents in groundwater extend beyond the property boundaries to the east (toward the [redacted] facility, discussed below) and southeast (toward the [redacted] Based on the distribution of petroleum hydrocarbon constituents in groundwater, the former Mobil facility may have impacted groundwater beneath the [redacted]

7.2. [redacted] Service Station ([redacted] Firestone Boulevard, Santa Fe Springs

An industrial wastewater permit was issued by the LACDPW on November 25, 1981, to Wehbi's Service Center at [redacted] Firestone Boulevard.

A LACDPW inspector's report dated May 29, 1986, indicated the site was an [redacted] mini mart and self service gasoline station. A wastewater interceptor could not be located and the inspector indicated the file would be closed.

A Business Plan dated February 16, 2000, was submitted for the property to the SFSFD. The Business Plan indicated the property had three 12,000-gallon gasoline USTs.

A Dispenser Soil Sampling report was submitted by Delta Environmental Consultant, Inc. (Delta), for the property dated May 17, 2001. The report indicated soil sampling was conducted beneath dispenser locations during dispenser island replacements. Fourteen soil samples were collected and analyzed. Detectable concentrations of TPHg, BTEX, and MTBE were found in the soil samples.

A Site Conceptual Model Update, Second Quarter 2004, by Delta was issued for the site on July 15, 2004. The report indicated three USTs were removed and replaced in 1987. From 1987 to 2004, several phases of soil and groundwater investigations had been completed under the regulatory oversight of the RWQCB. A Site Conceptual Model Update by Delta dated January 11, 2006, reports that soil and groundwater remediation activities in the form of LPH recovery, SVE, and groundwater air sparging had been conducted at the property since 1995, 1992, and 2005, respectively. These remediation activities and quarterly groundwater monitoring are ongoing. LPH has historically been found in three wells on the north and northeast areas of the property. The SVE system has been operating at the property since 1992 with over 270,000 pounds of fuel hydrocarbons removed to date. The groundwater gradient on the property is reported as primarily to the north. However, wells to the south and southwest of the property show the gradient as south to southwest due to a "groundwater mound" located just south of the property. Based on the distribution of petroleum hydrocarbon constituents in groundwater, the [redacted] facility may have impacted soil and groundwater beneath the [redacted] to the south, the [redacted] property to the east, the former Mobile station property to the northwest, and Department right-of-way to the north.

7.3. [redacted] Corporation [redacted] Alondra Boulevard, Santa Fe Springs

CPC is located approximately 700 feet southwest (potentially upgradient) of the Freeway Properties and approximately 1,800 feet southeast (crossgradient) of the Carmenita Properties. CPC is just across the [redacted] from the [redacted] property. An Industrial Waste Survey dated January 22, 1970, for CPC indicated the facility was used for sales and rental of large construction equipment (big rigs, carry alls, heavy trucks, tractors, cranes, etc.) and repair of equipment. A "2' x 2' receptor" was reported at the facility and the industrial waste was listed as "sand – grease – oil." An Industrial Waste Survey dated August 24, 1972, for CPC indicated the facility had a 1,200-gallon clarifier.

On September 8, 1987, a Notice of Violation was issued to the facility by the SFSFD for "excessive oil/grease/solids in pretreatment facilities." On October 8, 1987, CPC sent a letter and hazardous waste management to the SFSFD indicating the clarifier had been cleaned.

The SFSFD issued a letter to CPC dated June 10, 1999, indicating they had reviewed a UST Closure Report dated January 18, 1999, submitted by Alton Geoscience (Alton). No further action was required in regards gasoline, diesel, and waste oil USTs (number and location of USTs not specified). A copy of the UST Closure Report was not found in the case file at the SFSFD or the RWQCB.

A Unified Program Consolidated Form was completed on December 12, 2000, by CPC that indicated two USTs (one 1,000-gallon diesel UST and one 1,000-gallon waste oil UST installed in 1998) were at the facility.

Based on the case status and distance from the Freeway and Carmenita Properties, there is a low potential for impact to the Freeway and Carmenita Properties. There is a low to moderate potential for this property to have impacted groundwater beneath the [redacted] property.

7.4. [redacted] Cornet Avenue, Santa Fe Springs

The [redacted] is located approximately 700 feet west (crossgradient) of the Carmenita Properties and approximately ½ mile west (crossgradient) of the Freeway Properties. The [redacted] is immediately west (crossgradient) of the [redacted] and [redacted] properties. On January 4, 1983, an Application for Business Operation Tax Certificate indicated Santa Fe Looseleaf Company, a looseleaf binder manufacturer, was to occupy the facility.

In inspection report dated January 31, 1989, and February 14, 1989, indicated the building was vacant. The inspector contacted the owner of the facility, Moss Kotake, who indicated two USTs were at the facility and were to be removed.

A permit to remove two USTs dated February 16, 1989, was completed that indicated two gasoline USTs (1,000-gallon and 1,500-gallon) were to be removed.

A Tank Removal Soil Sample Analysis report by Geological Audit Services, Inc., dated March 16, 1989, indicated two USTs (1,000-gallon and 1,500-gallon) were removed from the facility and four soil samples were collected from beneath the USTs. The soil samples were analyzed for TPH and BTEX with no detectable concentrations of either found. LACDPW issued a letter dated May 31, 1989, stating that it did not approve the closure requested for the two USTs removed. The LACDPW requested additional, unspecified information. On January 10, 1990, the LACDPW issued closure for the two USTs removed from the facility.

A letter was issued to Unitec (automotive training school) by the SFSFD on December 9, 1999, that indicated Unitec submitted samples results from the manufacturer of an aqueous based part cleaner solution used at the facility and claimed the waste solution produced was non-hazardous. The SFSFD required Unitec to analyze a sample of the waste produced at the facility.

Based on the results of soil sampling, case status, and the lack of remaining USTs at the [redacted] there is a low potential for impact to the Freeway or Carmenita Properties or other properties in the project area.

7.5. [redacted] Carmenita Road, Santa Fe Springs

The SFSFD station is located approximately 170 feet southwest (downgradient) of the [redacted] frontage and approximately 280 feet south (downgradient) of the [redacted] An Application for Closure was issued for the facility on August 13, 1992, for one 1,000-gallon diesel UST.

A report for the property dated September 1992 by Advanced Environmental Concepts, Inc. (AEC), titled Tank Removal and Continuing Soils Investigation indicated one 1,000-gallon diesel UST was removed from the facility in 1992. Two soil samples were collected from beneath the UST at approximately 10½ feet bgs. Diesel was detected in the soil samples up to 22,200 mg/kg. Additional soil investigation was recommended.

In January 1993, an Excavation Remediation and Groundwater Well Installation Report was completed by AEC. Five soil borings were advanced at the facility. Analysis of soil samples from these borings indicated the diesel in the soil was confined to a radius of approximately 15 feet and a depth of approximately 19 feet bgs. Approximately 98 tons of impacted soil was excavated from this area. The eastern extent of the diesel plume could not be excavated as it was under a building. Three groundwater monitoring wells were installed at the facility in December 1992. Groundwater samples collected from the wells did not have detectable concentrations of diesel.

A Quarterly Groundwater Monitoring Report for the facility by John L. Hunter and Associates, Inc. (Hunter), dated July 18, 1994, indicated groundwater samples collected did not have detectable concentrations of TPH. The groundwater gradient was reported as east.

On July 24, 1996, the RWQCB indicated no further action was required of the facility regarding the 1,000-gallon diesel UST except the abandonment of groundwater monitoring wells. AEC issued a letter dated September 5, 1996, indicating three groundwater monitoring wells on the facility were abandoned.

On January 4, 1998, a permit was issued for the facility for one UST. The size, contents, date of installation, etc., were not provided. On January 1, 2001, a UST permit was issued for the facility for a 1,000-gallon diesel UST. The UST was reported as having "continuous interstitial monitoring."

A Hazardous Materials Inventory report for the [redacted] dated 2000 indicated the following hazardous materials were on the facility: cat cracked distillate, hydrotreated distillate, and gas oil.

Based on the distance and downgradient direction from project area properties, there is a low potential for the SFSFD station to impact the project area.

7.6. [redacted] Excelsior Drive, Norwalk

The [redacted] is located approximately 0.4 mile northwest (downgradient) of the Freeway Properties, 0.35 mile northeast (downgradient) of the Carmenita Properties, and generally north (downgradient) of the project area. Lindmark Engineering, Inc. (LEI), issued a Phase II Environmental Assessment for the facility on August 14, 1995. The report indicates the facility was leased by a painting company from 1959 to 1971 and a truck leasing company from 1972 to 1994. A septic system and cesspool were installed on the facility in 1963. Two 10,000-gallon USTs, a 500-gallon waste oil UST, and a clarifier were installed on the facility in 1972. In 1987, the two 10,000-gallon USTs were removed and gasoline was found in the soil to 22 feet bgs. In 1994, the 550-gallon waste oil UST and clarifier were removed. Petroleum hydrocarbons and halogenated volatile organic compounds were found in the soil beneath the clarifier. Soil samples were collected, and three groundwater monitoring wells were installed at the facility in 1995. The results indicated the soil sand groundwater was impacted by gasoline and BTEX. The groundwater gradient was reported as northeast. Further assessment was recommended.

A Phase II Site Assessment Report for the facility by Lofy Engineering (Lofy) dated June 29, 2000, indicated 11 groundwater monitoring wells were installed on the facility. TPHg and BTEX were detected in the groundwater samples analyzed. The report determined the contamination source was the former USTs on the facility. A pilot gas extraction test was conducted on the facility that was reported as a viable option for cleanup of the contamination.

A Quarterly Monitoring and Sampling Report for the facility was issued by The Source Group, Inc. (SGI), on April 8, 2005. The report indicated free product was detected in two of the monitoring wells and TPHg in the water ranged from 130 µg/l to 34,000 µg/l. The preparation of a Remedial Action Plan and continued groundwater monitoring were recommended.

Based on the location of the [redacted] downgradient to the properties in the project area, relative to groundwater flow, there is a low potential for impact to the project area.

8. DISCUSSION AND CONCLUSIONS

Based upon the results of the ISAs and SISA as described herein, the following discussion and conclusions regarding the seven SISA properties and four ISA properties are presented.

In general, the project area was historically used for agricultural purposes from at least 1928 to the late 1950s when I-5 was constructed. Commercial/industrial buildings began to be constructed at the project area in the 1960s. The project area was also occupied by residential and agricultural properties at this time. By the mid-1970s, the project area was developed with commercial, industrial, and residential properties. The project area has been used for commercial, industrial, and residential uses from the mid-1970s to the present. Specific discussion and conclusions regarding the seven SISA properties and four ISA properties are presented in the following sections.

8.1. [redacted]

The property at [redacted] Firestone Boulevard has been occupied by [redacted] as a fast food restaurant since 1998. The groundwater beneath the [redacted] property may have been contaminated by the adjacent [redacted] gasoline station to the west.

8.2. [redacted]

[redacted] at [redacted] Firestone Boulevard has occupied the property since 1995 and uses the property for warehousing and distribution of fasteners and hardware products. Prior to 1995, the property was occupied by [redacted] Company. Possible contamination issues at the ITP property include the following: former auto/equipment service, former clarifier, and adjacent [redacted]

8.3. [redacted]

The property at [redacted] Carmenita Road is occupied by [redacted] since 1999 and is a carbon service company that buys and warehouses virgin carbon for use in carbon filtration systems. The property was occupied by [redacted] Center from approximately 1973 to 1983 and [redacted] from approximately 1983 to 1999. Possible contamination issues at the [redacted] property include the following: former USTs, suspect ACMs, and upgradient LUST site.

8.4. [redacted]

The [redacted] contains seven commercial buildings used as offices, retail, warehousing, and distributing. Two businesses located in two buildings in the [redacted] were observed to use and/or store hazardous substances. These include [redacted] at [redacted] Firestone Boulevard, Suite [redacted] which uses small quantities of inks and alcohol, and Fujicolor Processing at [redacted] Firestone Boulevard, which uses film developing chemicals in film developing machines. The chemicals are stored in ASTs located on the second floor mezzanine within a concrete containment area. No significant leaks or stains were observed at the ASTs. Waste liquid from the film developing machines is processed through 14 steel-wool cartridge filters and three silver recovery units. The wastewater is then run through a three-stage clarifier before being discharged to the industrial sewer system. The [redacted] was previously occupied by [redacted] and [redacted] until approximately 1986. [redacted] operated at least three fuel USTs at the site which were removed in 1986. No sampling was performed at the former UST area when the USTs were removed. Possible contamination issues at the [redacted] property include the following: clarifier, suspect ACMs, former USTs, and adjacent [redacted]

8.5. [redacted]

[redacted] uses the property at [redacted] and [redacted] Firestone Boulevard for the manufacturing of aerospace products. This eastern portion of this property is also used by [redacted] Car (formerly [redacted] Rental) for van and truck rentals and service. Possible contamination issues at the [redacted] property include the following: wastewater treatment system, hydraulic pumps, TCE AST, former PCE AST, former USTs, former LUST, paint spray booths, drum storage area, other waste storage areas, suspect ACMs, and adjacent [redacted]

8.6. [redacted]

[redacted] has used [redacted] Freeway Drive and [redacted] Radius Place for offices and the manufacturing of aluminum wheel rims since 1970 and 1974, respectively. Possible contamination issues at the [redacted] property include the following: hazardous materials storage area, general use of oils and solvents, and former TCE parts washer.

8.7. [redacted]

The [redacted] and [redacted] Carmenita Road property contains two commercial buildings used as offices, retail, warehousing, and distributing since approximately 1963. Possible contamination issues at the [redacted] property include the following: clarifier, suspect ACMs, former TCE degreaser, former chrome plating, and upgradient LUST facility.

8.8. Frontage of [redacted]

The frontage of the [redacted] at [redacted] Carmenita Road was the only area inspected during the property reconnaissance. The frontage inspected consisted of sidewalk, landscaping, and a portion of a parking lot. The [redacted] property is used for offices and food warehouse and distribution. Based on the results of this ISA, no recognized environmental conditions have been identified at this property.

8.9. [redacted]

Properties occupied by [redacted] located near the intersection of Carmenita Road and Molette Street were inspected. Possible contamination issues at the [redacted] property include the following: petroleum pipeline, natural gas pipeline, herbicides, oil, and upgradient LUST facility.

8.10. Frontage of [redacted] and Former Burke Industries

The frontage of [redacted] and former Burke Industries at [redacted] and 13767 Freeway Drive was the only area inspected during the property reconnaissance. Possible contamination issues at the Frontage of [redacted] and Former Burke Industries properties include the general use of petroleum hydrocarbons, solvents, and Freon and possible location of refined product underground pipeline.

9. RECOMMENDATIONS

Based on the results of this ISA and SISA, Ninyo & Moore makes the following recommendations:

9.1. [redacted]

A subsurface investigation should be conducted at the ITP property to evaluate the presence of petroleum hydrocarbons, solvents, metals, oils, and herbicides beneath the property.

9.2. [redacted]

A geophysical investigation is recommended at the [redacted] property to locate the former UST pits so the pits can be evaluated for the presence of hazardous materials. A subsurface investigation should be conducted at the [redacted] property to evaluate the presence of petroleum hydrocarbons and solvents beneath the property.

9.3. [redacted]

A geophysical investigation is recommended at the [redacted] property to locate the former UST pits so the pits can be evaluated for the presence of hazardous materials. A subsurface investigation should be conducted at the [redacted] property to evaluate the presence of petroleum hydrocarbons in the former UST area and photo-processing chemicals in the area of the clarifier at Fujicolor Processing. The suspected groundwater monitoring well should be properly abandoned in accordance with current regulatory guidelines.

9.4. [redacted]

A subsurface investigation should be conducted at the [redacted] property to evaluate the presence of petroleum hydrocarbons, VOCs, semi-VOCs, metals, oils, and herbicides beneath the property. Groundwater production wells that are no longer in use should be properly abandoned in accordance with current regulatory guidelines.

9.5. [redacted]

A subsurface investigation should be conducted at the [redacted] property to evaluate the presence of petroleum hydrocarbons, solvents, metals, and oils beneath the property.

9.6. [redacted]

A subsurface investigation should be conducted at the [redacted] property to evaluate the presence of petroleum hydrocarbons, solvents, metals (including hexavalent chromium), cyanide, pH, and oils beneath the property.

9.7. [redacted] Properties

A subsurface investigation should be conducted at the [redacted] properties to evaluate the presence of metals, oils, PCBs, and herbicides beneath the property. The underground pipelines should be located, and soil sampling should be conducted in the vicinity of the pipelines.

9.8. Frontage of [redacted] and Former Burke Industries

A subsurface investigation should be conducted at the frontage of [redacted] and Former Burke Industries properties to evaluate the presence of solvents, metals, Freon, and oils beneath the property. The suspect underground pipeline should be located, and soil sampling should be conducted in the vicinity of the pipeline if found to be near the property.

10. LIMITATIONS AND EXCEPTIONS OF THE ASSESSMENT

The opinions and recommendations presented in this report are based upon the results of a property reconnaissance and a review of available background information. The scope of this evaluation did not include subsurface exploration, soil or water sampling, or chemical analysis. Further assessment of possible adverse environmental impacts from past on-property activities and activities on surrounding facilities may be accomplished by a more comprehensive assessment, which would likely include excavation or on-property soil borings, soil sampling and analysis, and installation of groundwater monitoring wells.

The opinions presented herein apply to property conditions existing at the time of our Phase I Environmental Property Assessment, and cannot be taken to apply to property changes or conditions of which we are not aware and/or have not had the opportunity to evaluate.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding project information, or the content, interpretations presented, or completeness of this document.

Opinions and judgments expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions. In the event conditions change from those described in this Phase I Environmental Property Assessment, Ninyo & Moore reserves the right to review such conditions and to modify, as appropriate, the assessments and conclusions provided in this report.

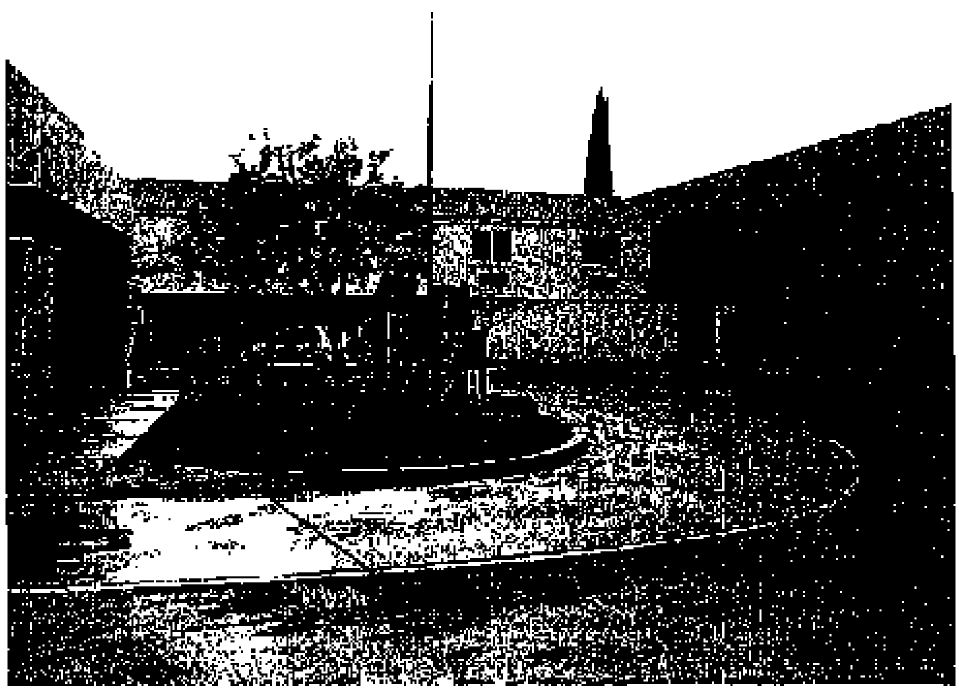
APPENDIX A

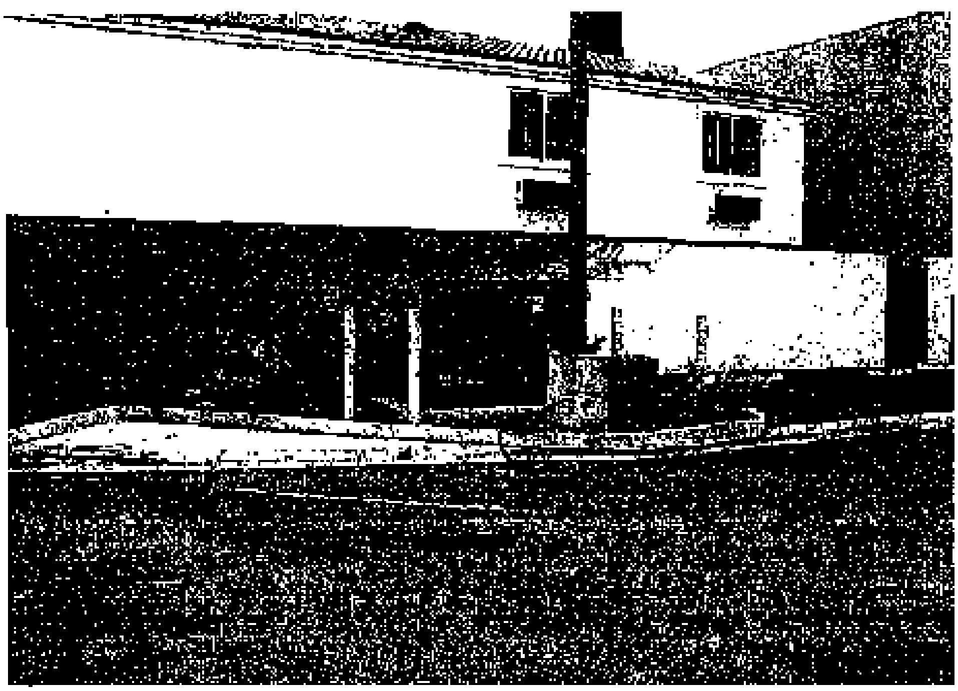
PHOTOGRAPHIC DOCUMENTATION

Photograph No. 1: View of [redacted] facing west from Firestone Boulevard.



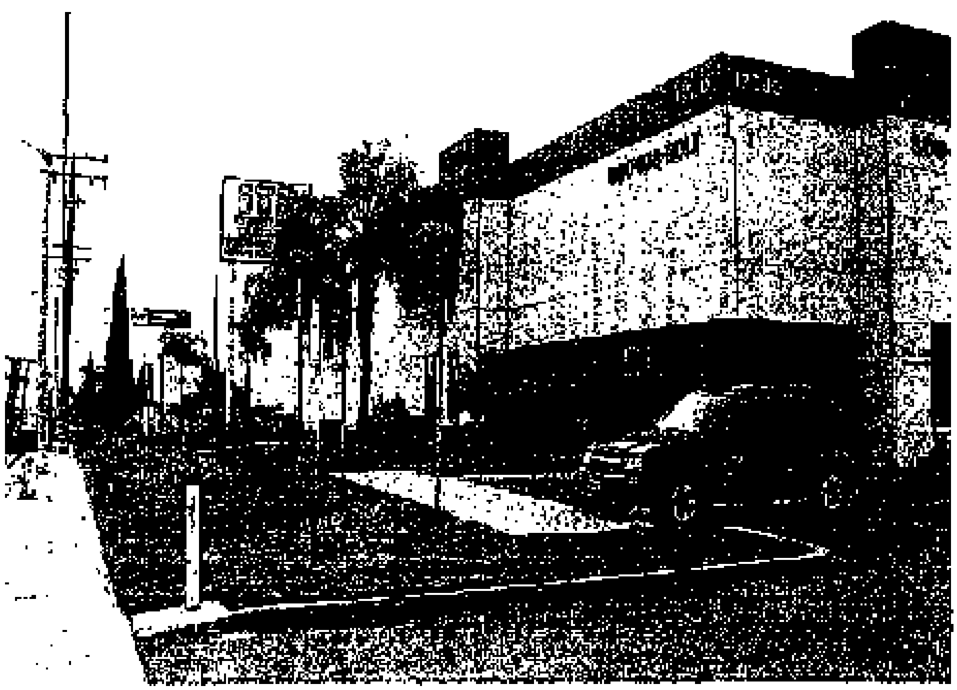
Photograph No. 2: View of the southern portion of the [redacted] parcel.

Photograph No. 3: **View of the underground grease trap on the east side of the [redacted] building.**

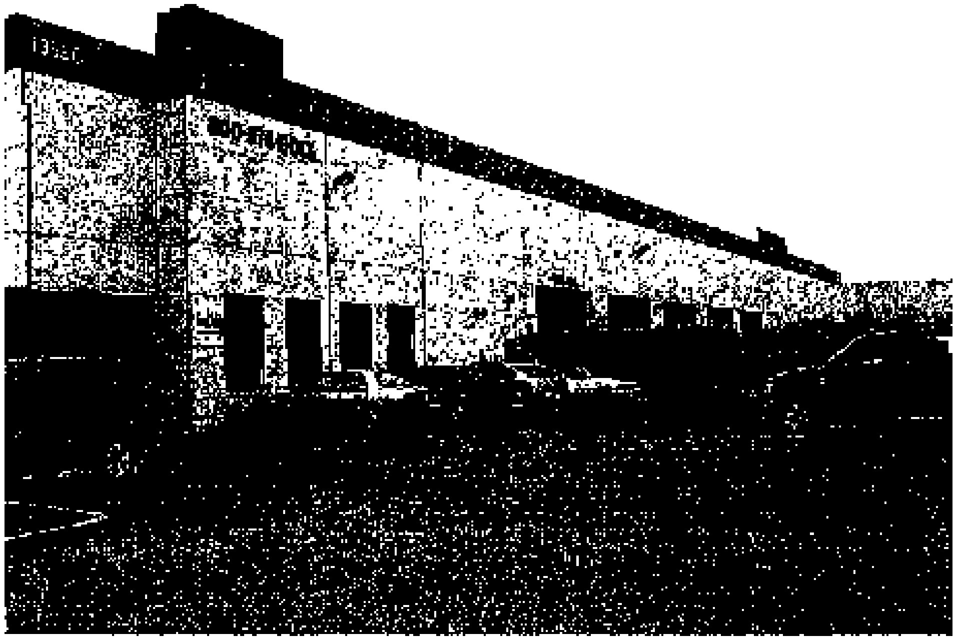


Photograph No. 4: **View of the transformer at the [redacted] parcel and the adjacent hotel to the east.**

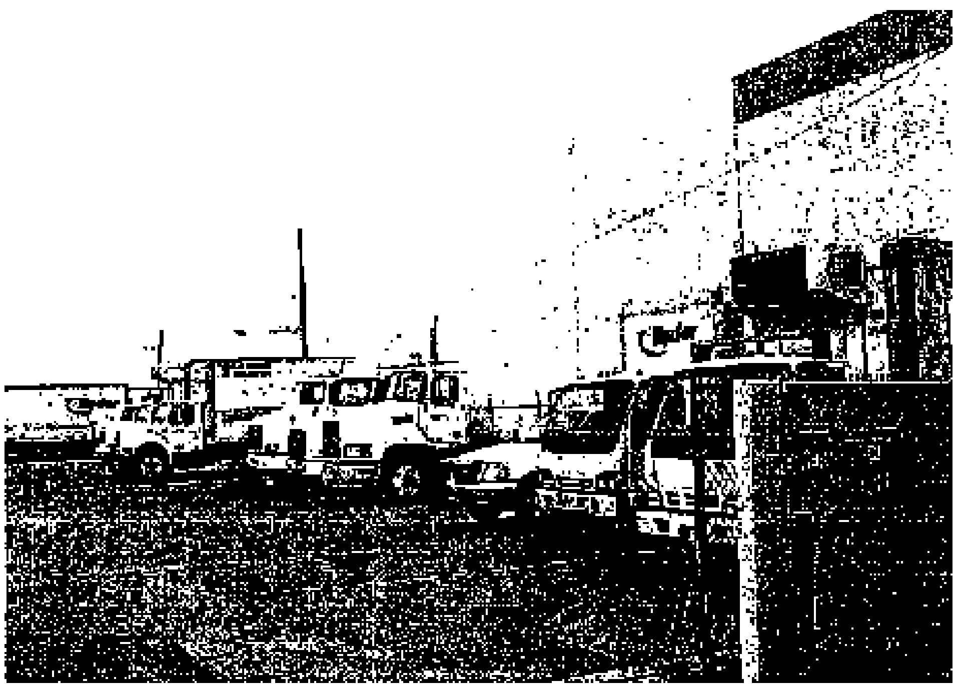
Photograph No. 5: **View of the ARCO station adjacent and west of the [redacted] parcel.**



Photograph No. 6: **View of Industrial Threaded Products facing southeast.**

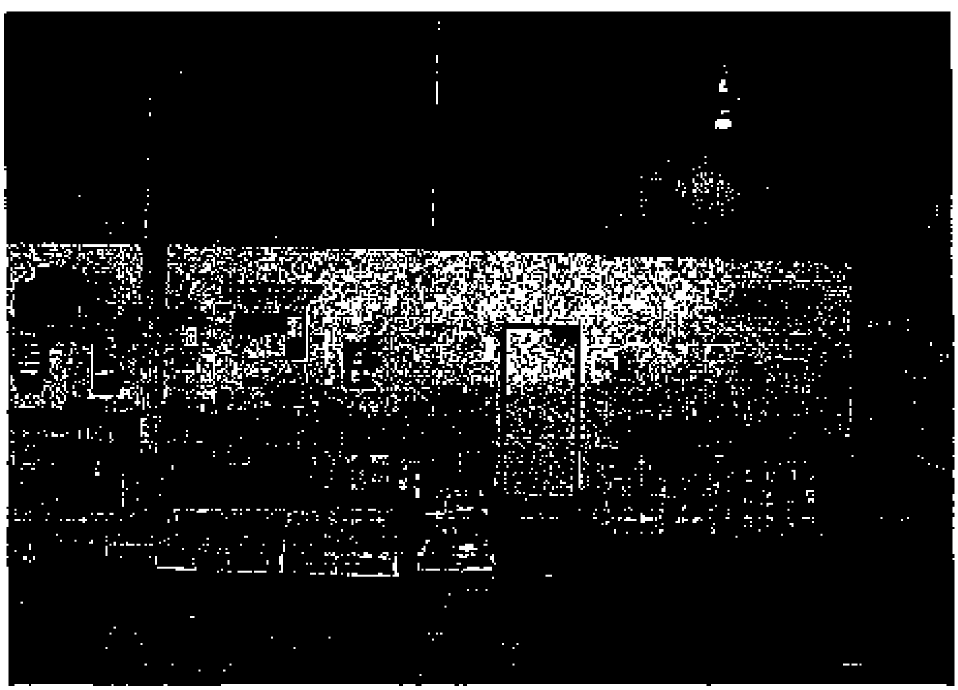


Photograph No. 7: View of the [redacted] Products building facing south-southwest.

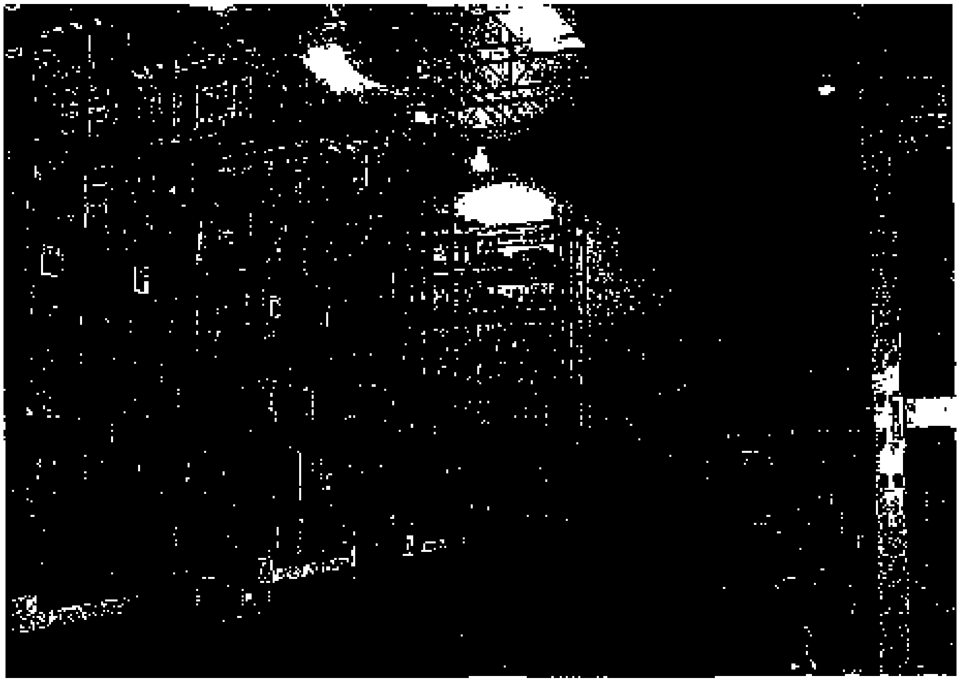


Photograph No. 8: View of the east side of the [redacted] Products building.

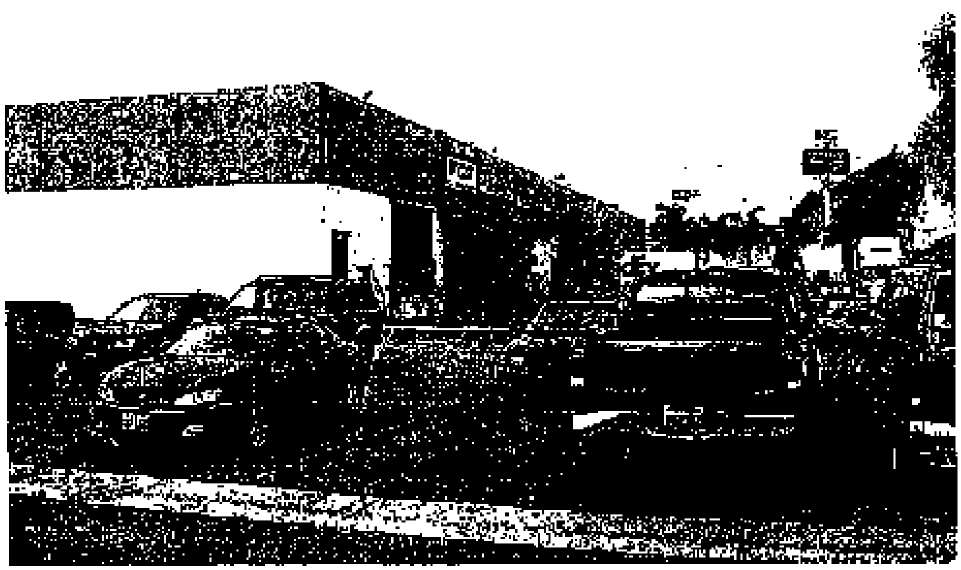
Photograph No. 9: **View of the northern side of the [redacted] Products building.**



Photograph No. 10: **View of the interior of the [redacted] Products building facing the offices.**



Photograph No. 11: View of the warehouse inside the [redacted] Products building.

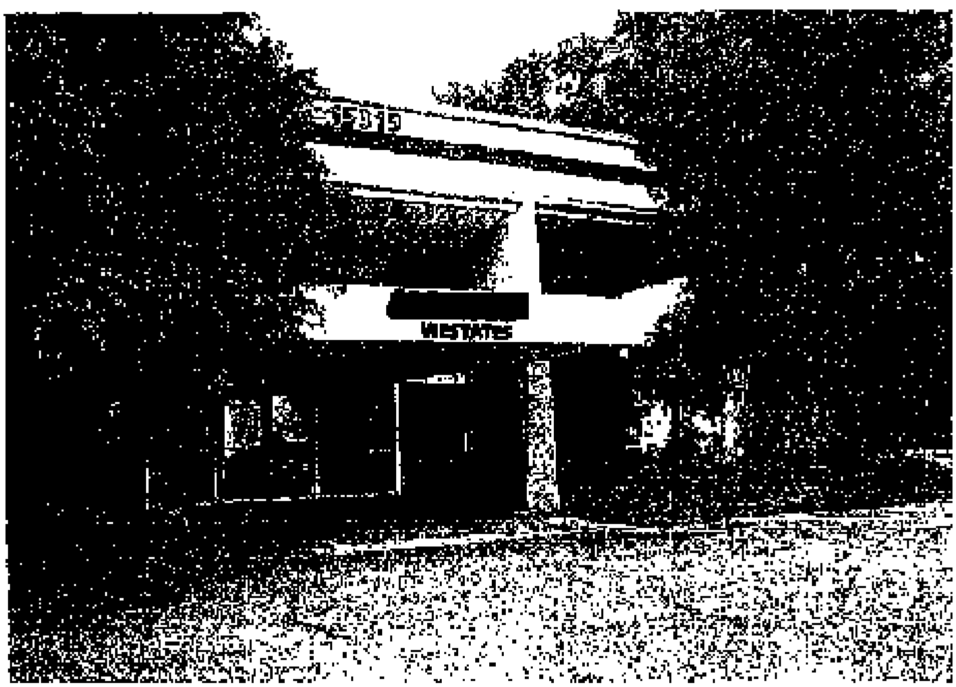


Photograph No. 10: View from the [redacted] Products building facing west.

Photograph No. 11: **View from the [redacted] Products building facing north.**

Photograph No. 12: **View from the [redacted] Products building facing south.**

Photograph No. 13: View of the [redacted] property located east of the [redacted] Products parcel.

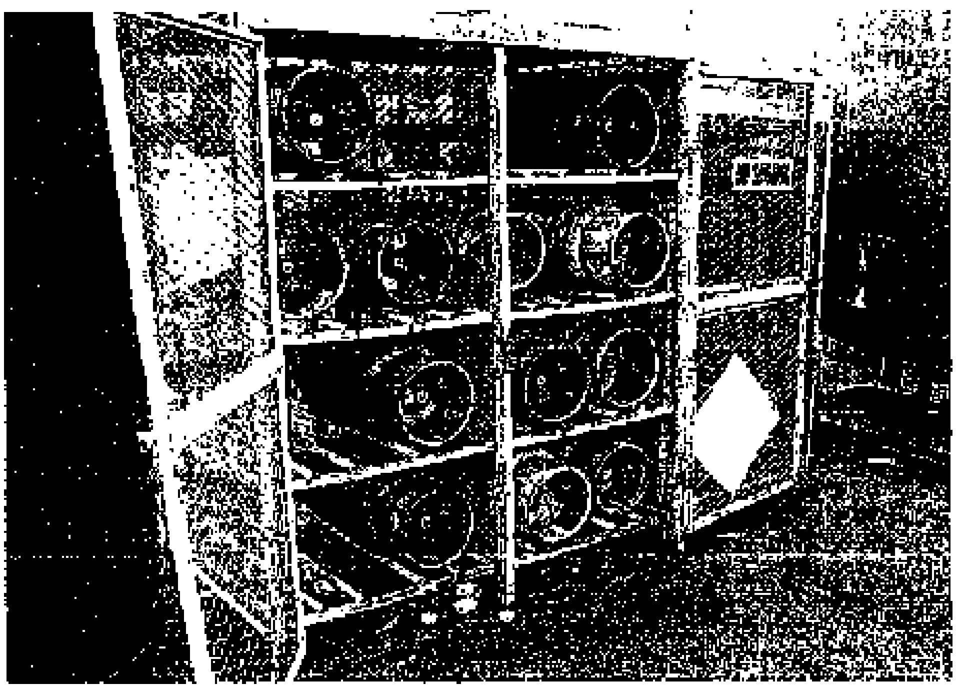


Photograph No. 14: View of the [redacted] building.

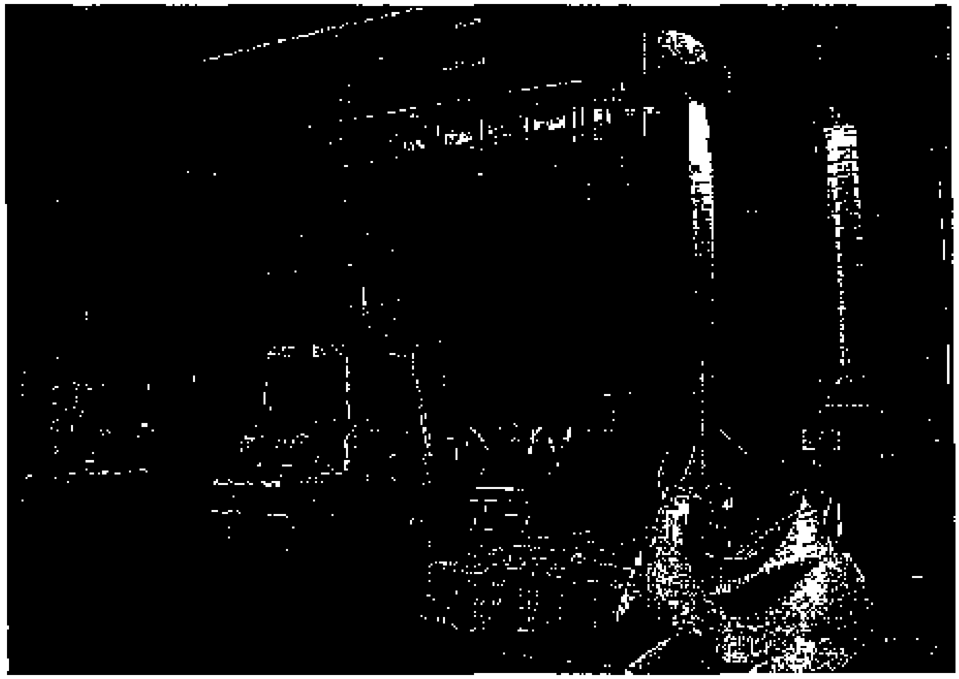
Photograph No. 15: View of the north side of the [redacted] parcel.

Photograph No. 16: View of the storage area east of the [redacted] building.

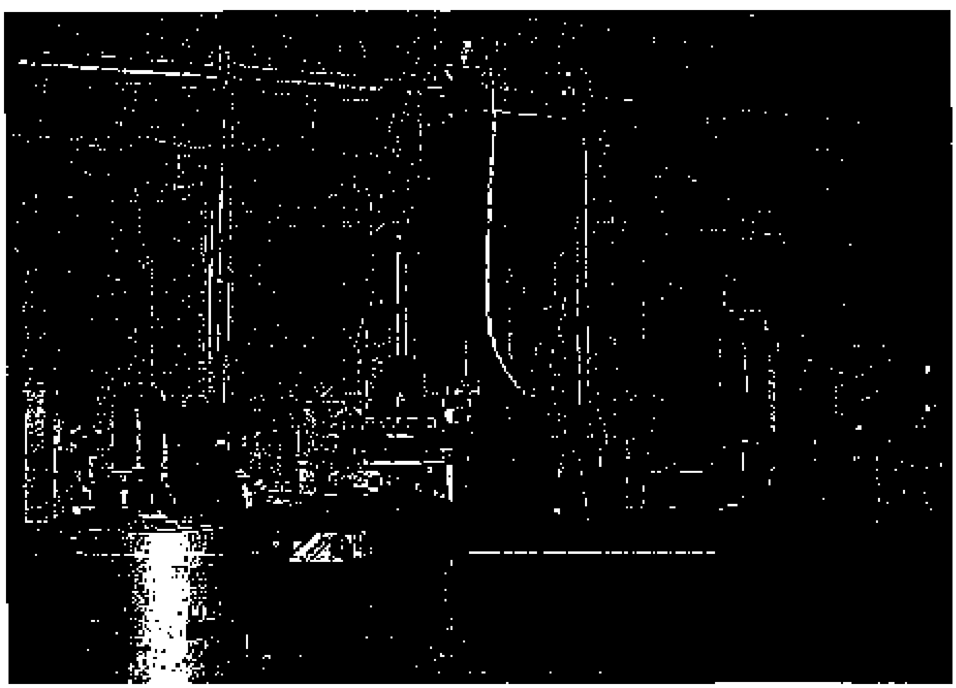
Photograph No. 17: **View of empty drum storage at the [redacted] parcel.**



Photograph No. 18: **View of propane canister storage at the [redacted] parcel.**



Photograph No. 19: View of equipment inside the [redacted] building.



Photograph No. 20: View of equipment inside the [redacted] building.

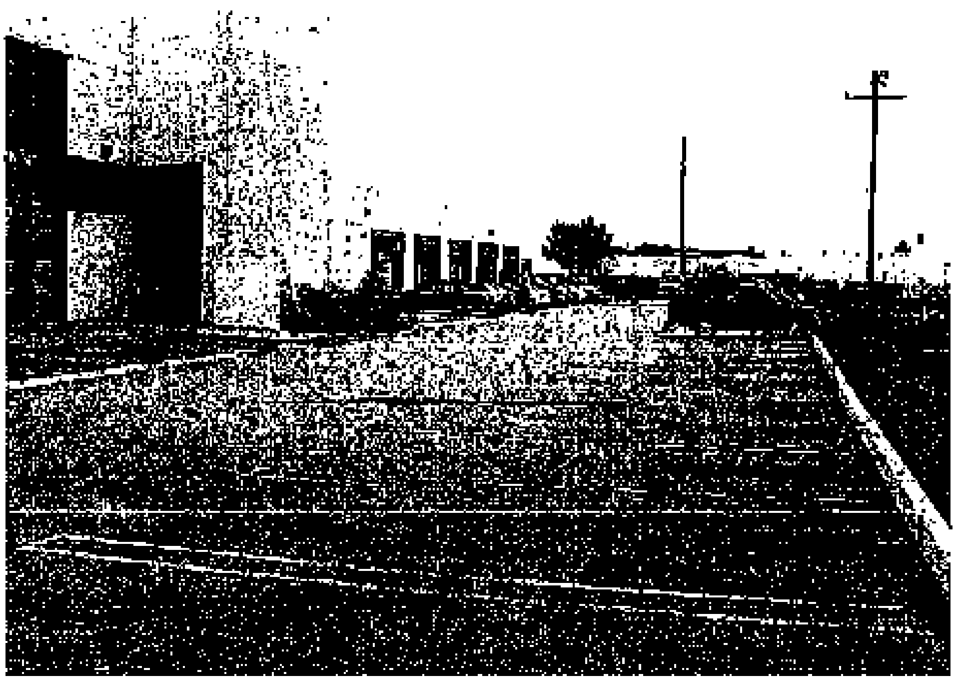
Photograph No. 21: **View of carbon storage at the [redacted] parcel.**

Photograph No. 22: **View of the northern boundary of the [redacted] parcel.**

Photograph No. 23: View from the [redacted] parcel facing west onto Carmenita Road.

Photograph No. 24: View from the [redacted] parcel facing south.

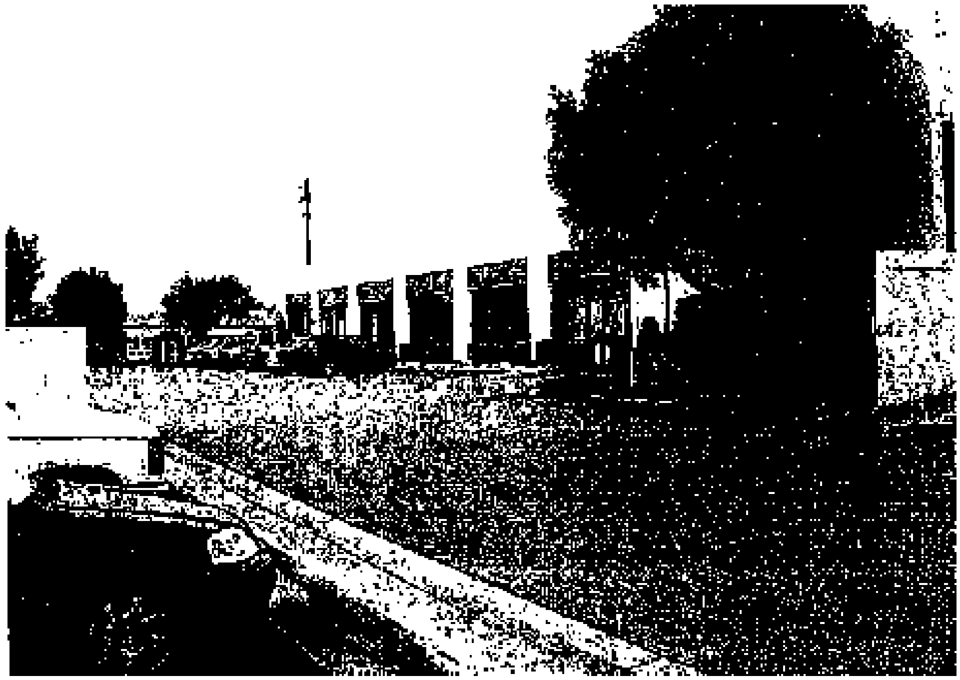
Photograph No. 25: View of the [redacted] Firestone Boulevard building in the [redacted] facing east.



Photograph No. 26: View of the northwest side of the [redacted] Firestone Boulevard building in the [redacted]

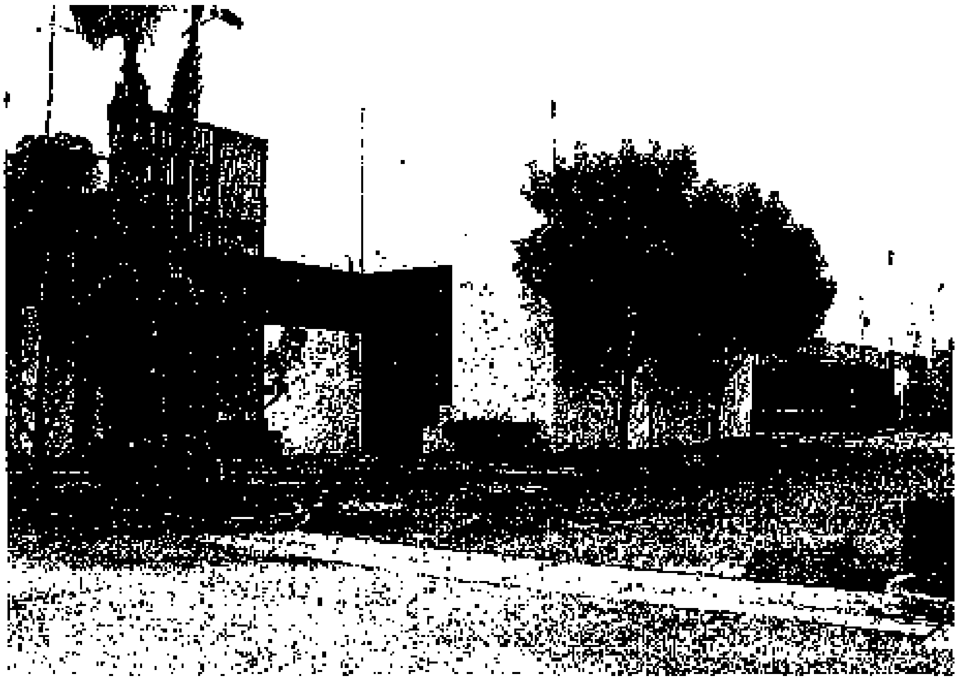
Photograph No. 27: View of the south side of the [redacted] Firestone Boulevard building in the [redacted].

Photograph No. 28: View of the [redacted] Firestone Boulevard building in the [redacted] facing west.



Photograph No. 29: View of the southeast side of the [redacted] Firestone Boulevard building in the [redacted].

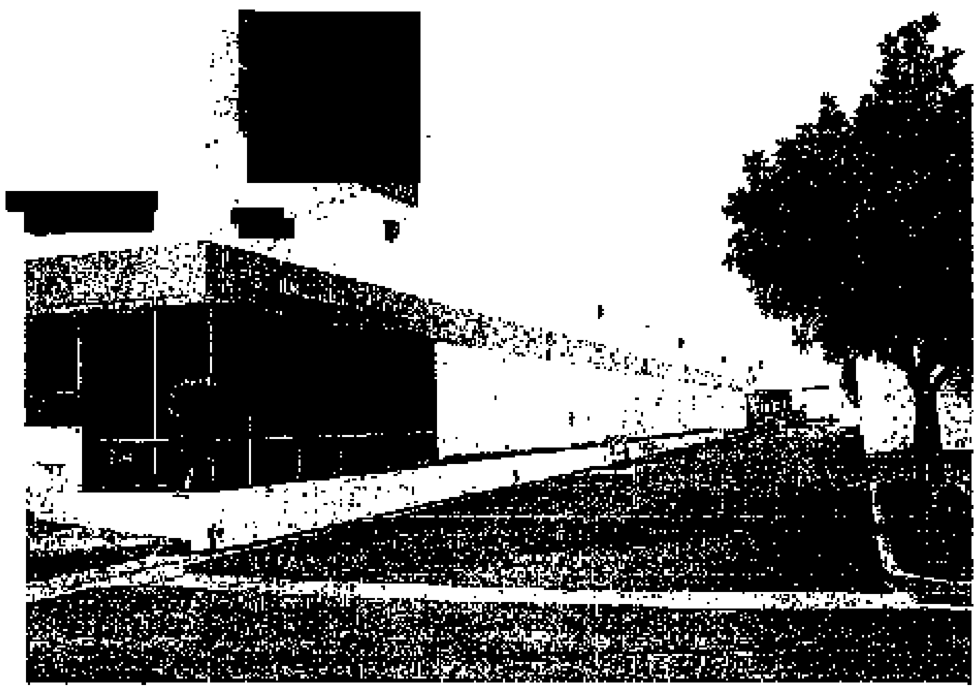
Photograph No. 30: View of the [redacted] Firestone Boulevard building in the [redacted] facing east.



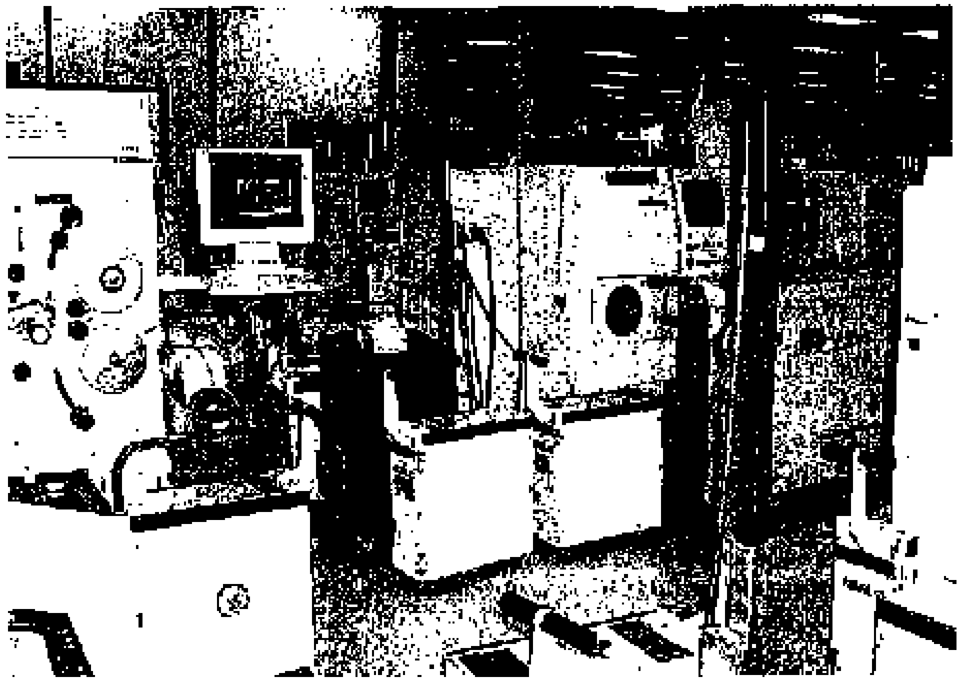
Photograph No. 31: View of the east side of the [redacted] Firestone Boulevard building in the [redacted].

Photograph No. 32: View of the [redacted] Firestone Boulevard building in the [redacted]

Photograph No. 33: **View facing east of the [redacted] Firestone Boulevard building on the left and of the [redacted] Firestone Boulevard building on the right.**



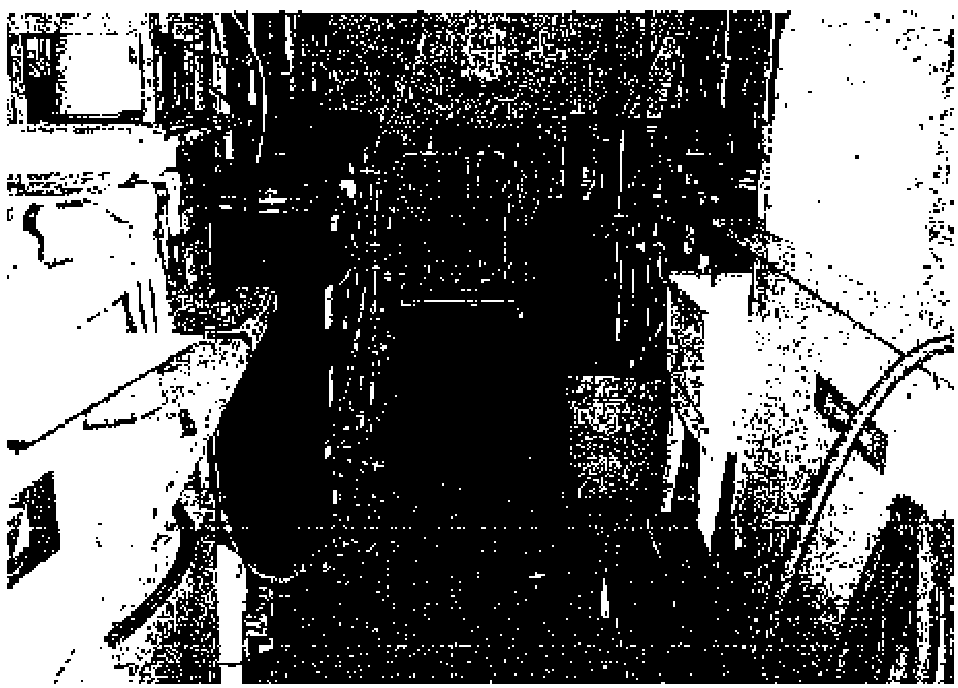
Photograph No. 34: **View facing west of the [redacted] Firestone Boulevard building in the [redacted]**



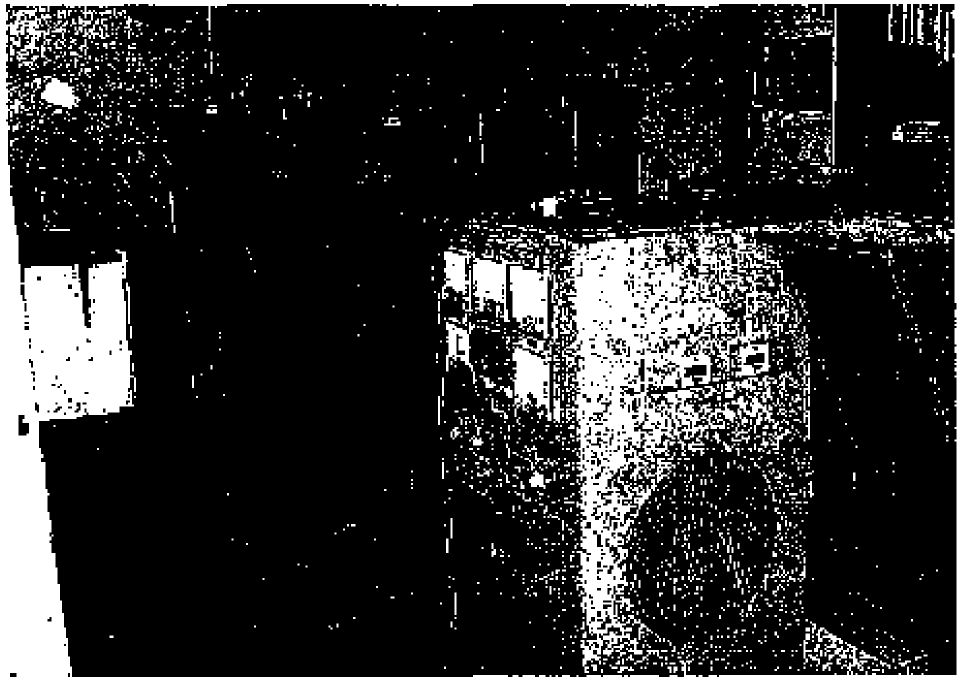
Photograph No. 35: View of the interior of the [redacted] Firestone Boulevard building in the [redacted]

Photograph No. 36: View of the interior of the [redacted] Firestone Boulevard building in the [redacted]

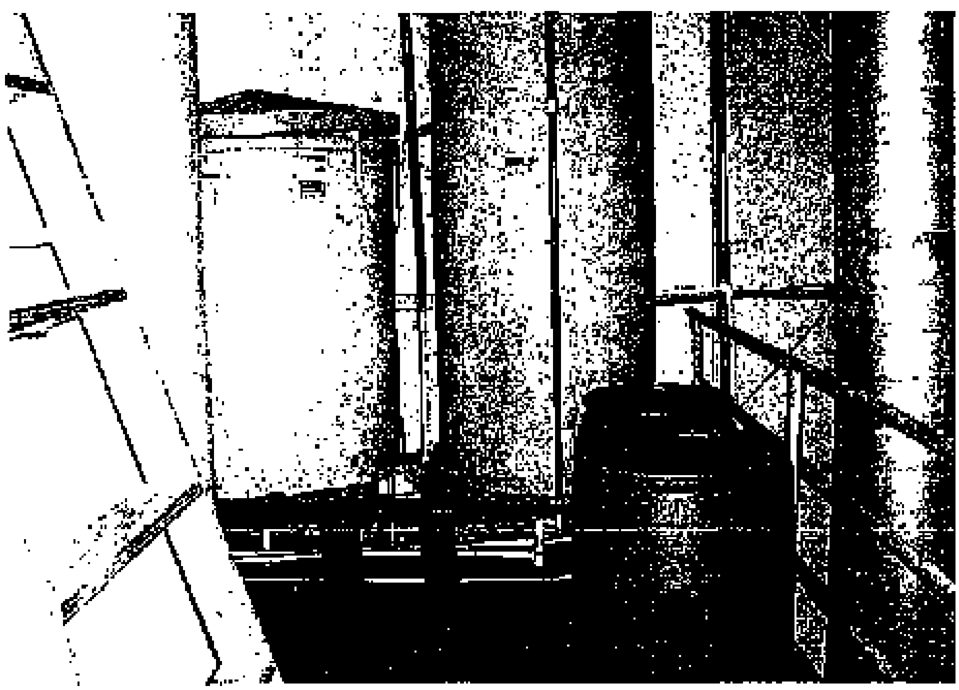
Photograph No. 37: View of the drums of photo processing chemicals at Fujicolor Processing, Inc., in the [redacted] Firestone Boulevard building in the [redacted]



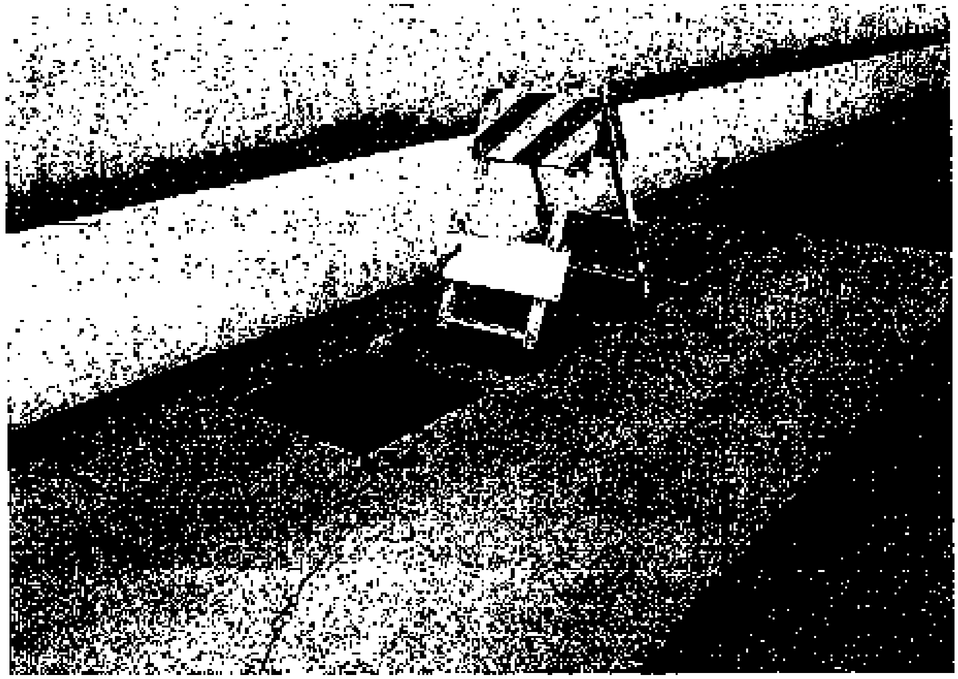
Photograph No. 38: View of the waste processing area at [redacted] Inc., in the [redacted] Firestone Boulevard building in the Carmenita Commerce Center.



Photograph No. 39: View of the silver recovery units at [redacted], in the [redacted] Firestone Boulevard building in the [redacted]



Photograph No. 40: View of the AST storage area at [redacted], in the [redacted] Firestone Boulevard building in the Carmenita Commerce Center.



Photograph No. 41: View of the clarifier north of [redacted], in the [redacted] Firestone Boulevard building in the [redacted]

Photograph No. 42: View of an apparent groundwater monitoring well north of [redacted] in the [redacted] Firestone Boulevard building in the [redacted]

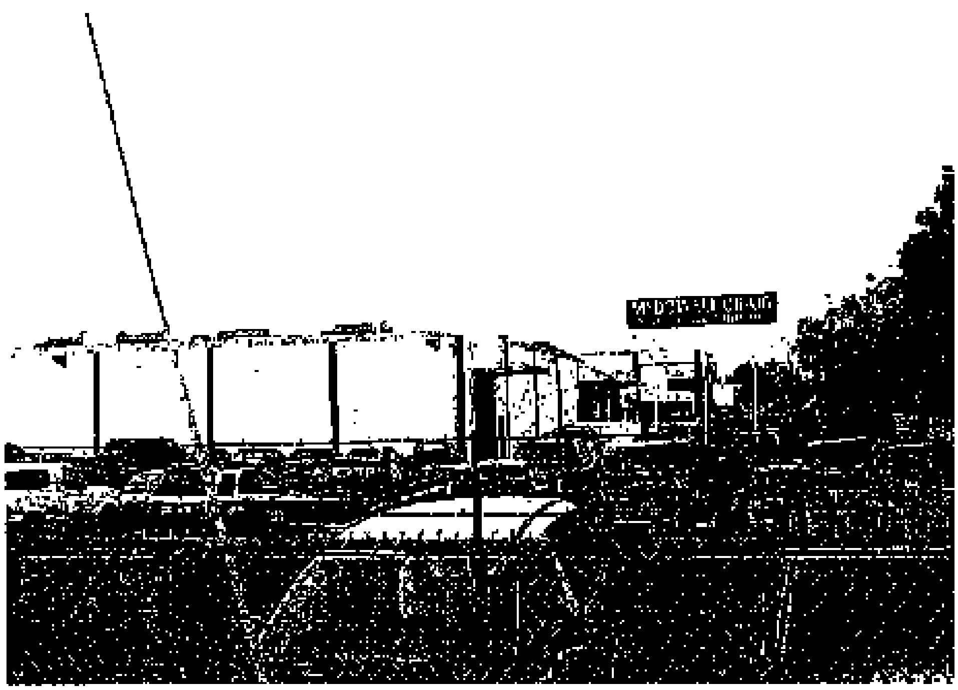
Photograph No. 43: View of the north side of the [redacted] and [redacted] Firestone Buildings in the [redacted] facing east.

Photograph No. 44: View of the north side of the [redacted] and [redacted] Firestone Buildings in the [redacted] facing west.

Photograph No. 45: View of the [redacted] Firestone Boulevard building in the background and the [redacted] Firestone Boulevard building on the left.

Photograph No. 46: View of the [redacted] Firestone Boulevard in the [redacted]

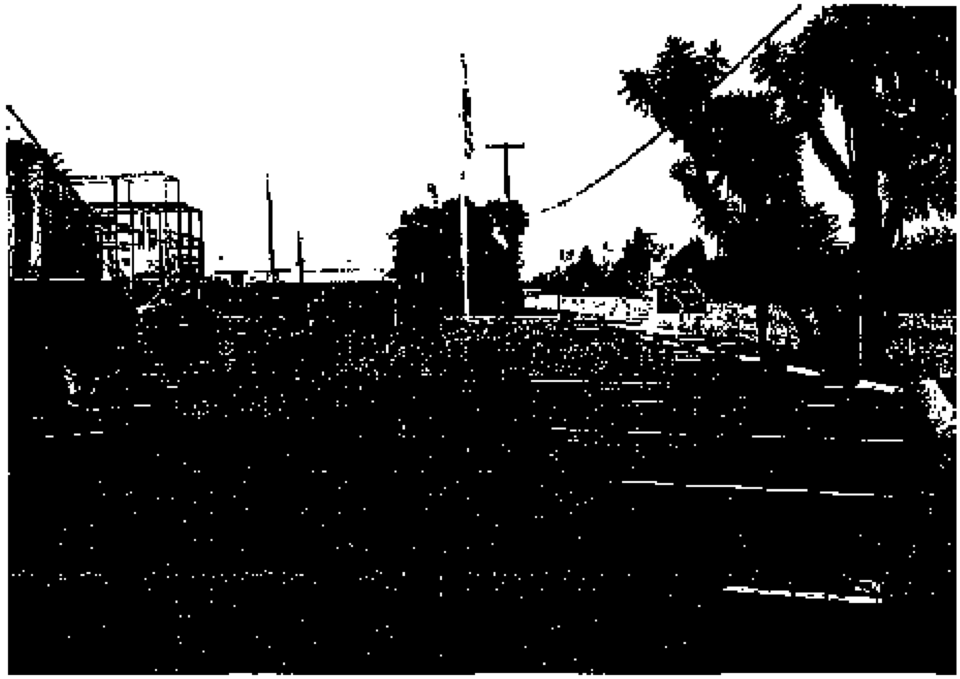
Photograph No. 47: **View of the area south of the [redacted].**



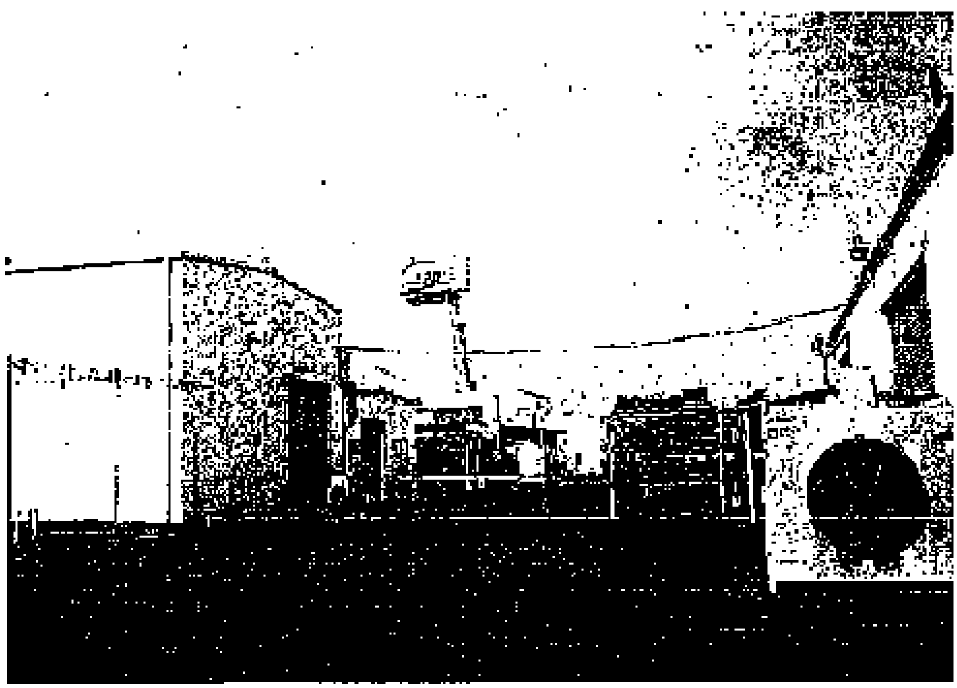
Photograph No. 48: **View of the area west of the [redacted].**

Photograph No. 49: View of the area north of the [redacted]

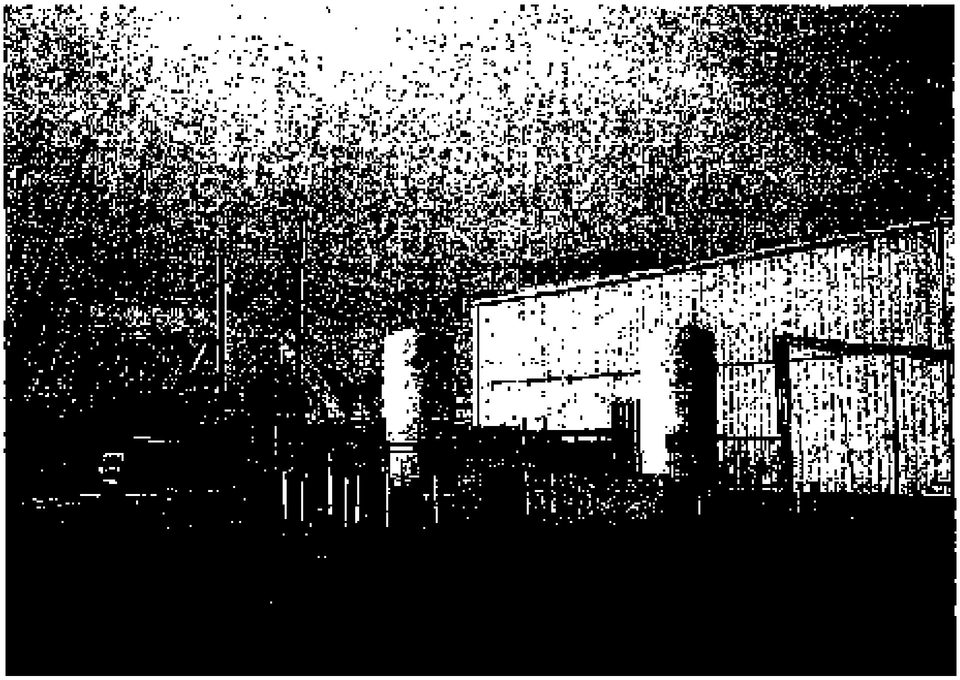
Photograph No. 50: View of the area east of the [redacted], beyond which is Carmenita Road.



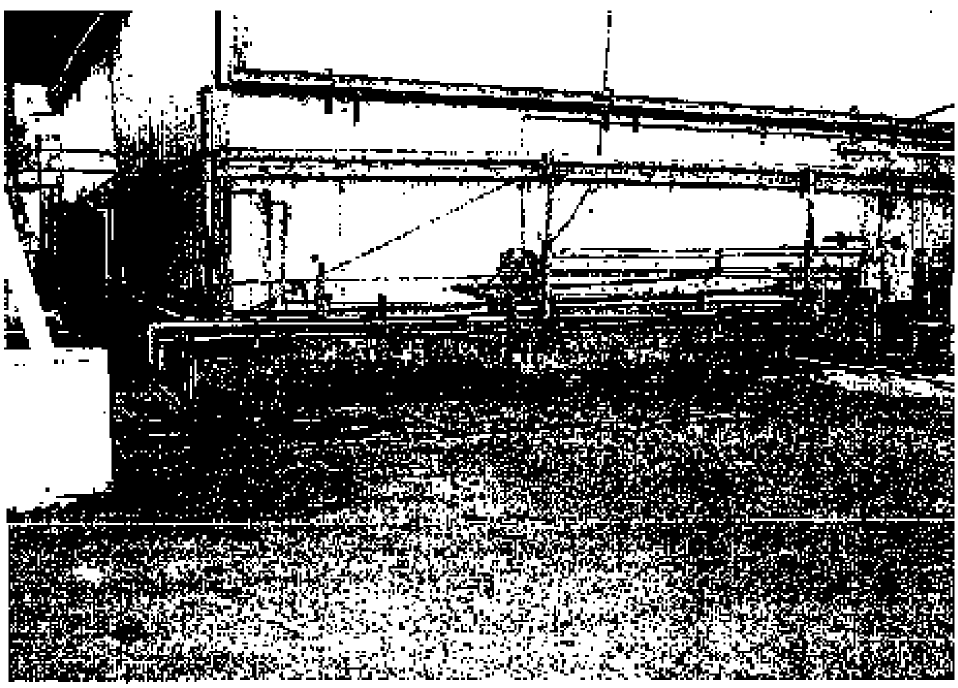
Photograph No. 51: View of parking lot in eastern portion of the [redacted] property facing north.



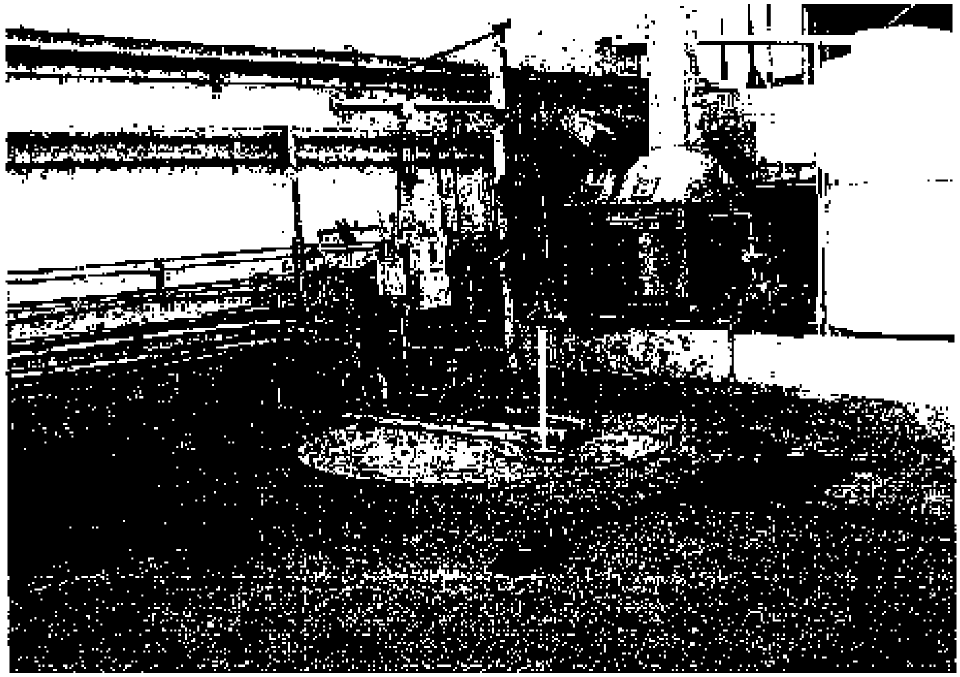
Photograph No. 12: Photograph No. 52:View of the central portion of the [redacted] property. In view is the storage of metal pipes and the manufacturing buildings.



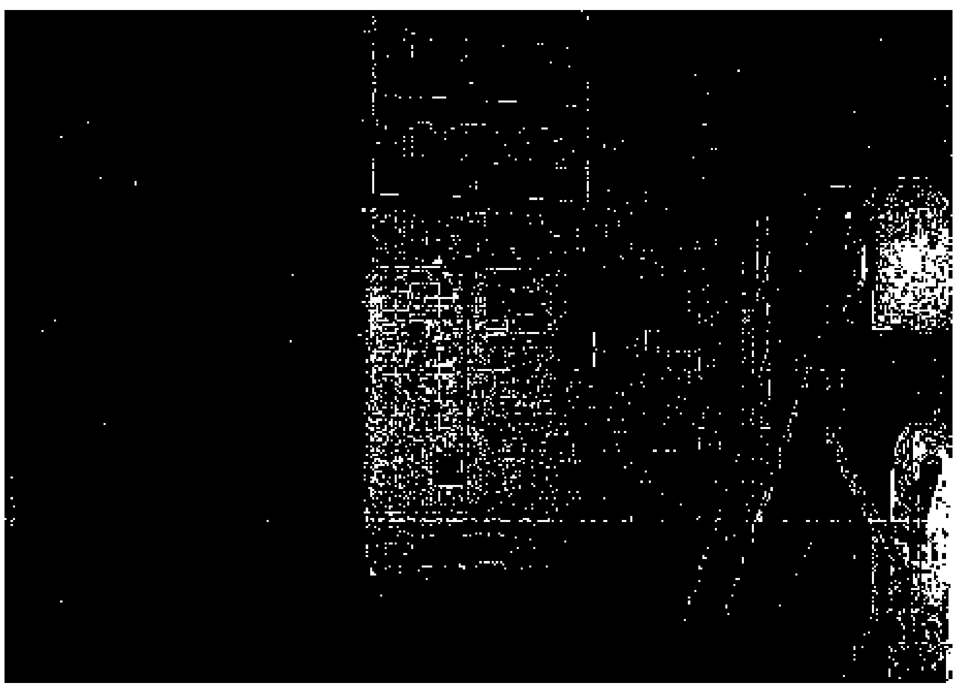
Photograph No. 53: View of one liquid nitrogen and liquid argon ASTs in central portion of the [redacted] property facing west.



Photograph No. 54: View of a three stage clarifier facing outside the part washing system on the [redacted] property.

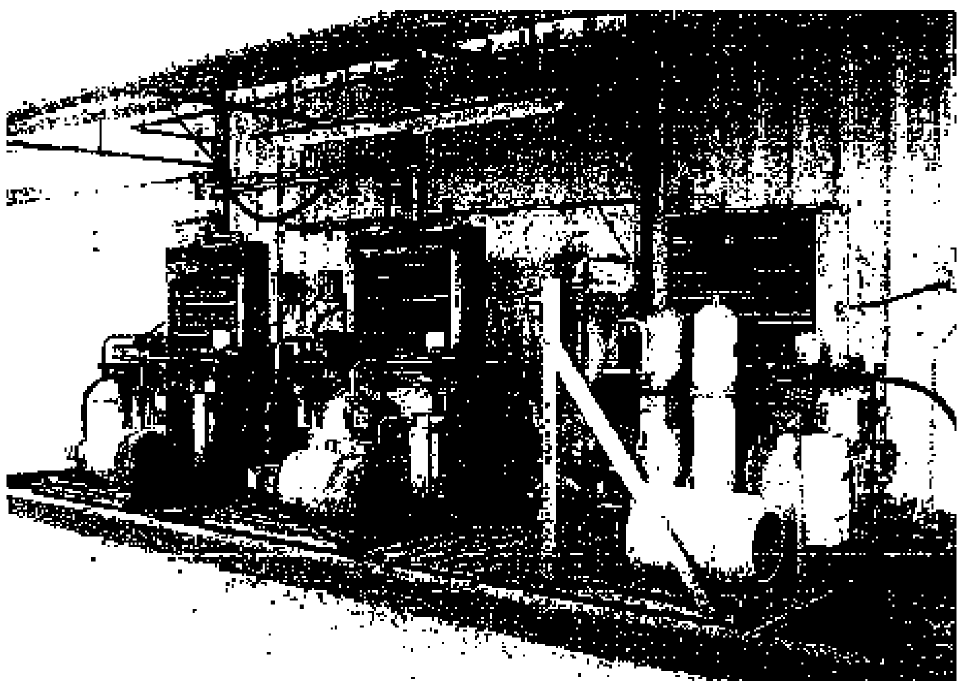


Photograph No. 55: View of the water treatment system outside the parts cleaning system at the [redacted] property.

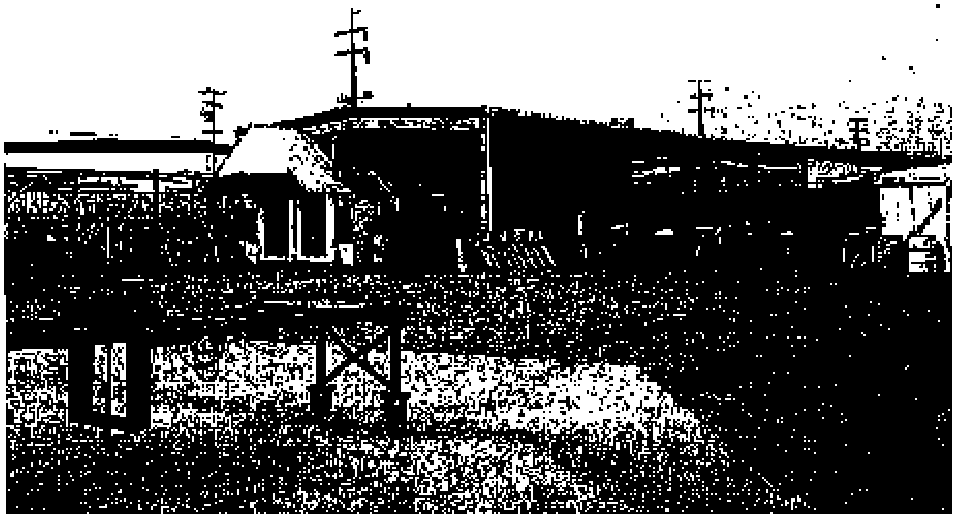


Photograph No. 56: View of a parts-cleaner at the [redacted] property that is reportedly no longer in use that contains a 4,000-gallon tank that formerly contained TCE.

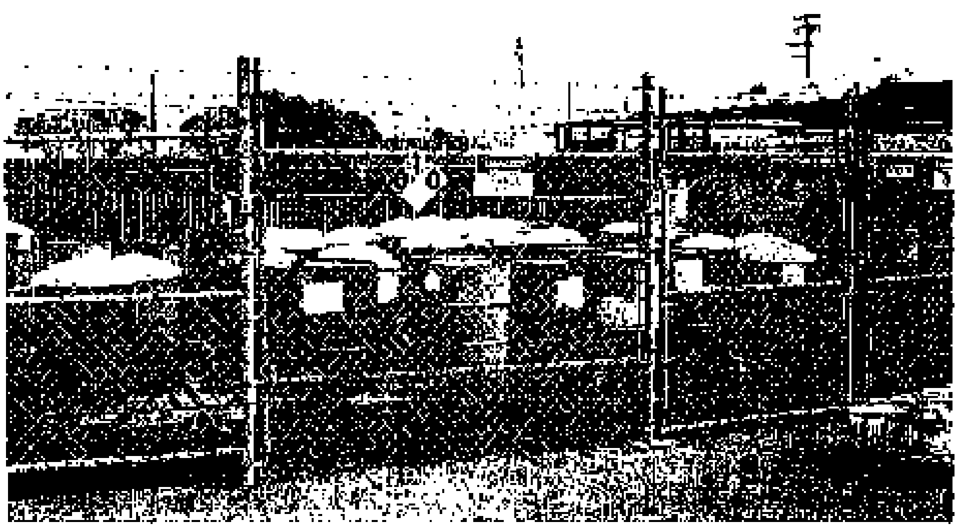
Photograph No. 57: **View facing east of a storage area at the [redacted] property.**



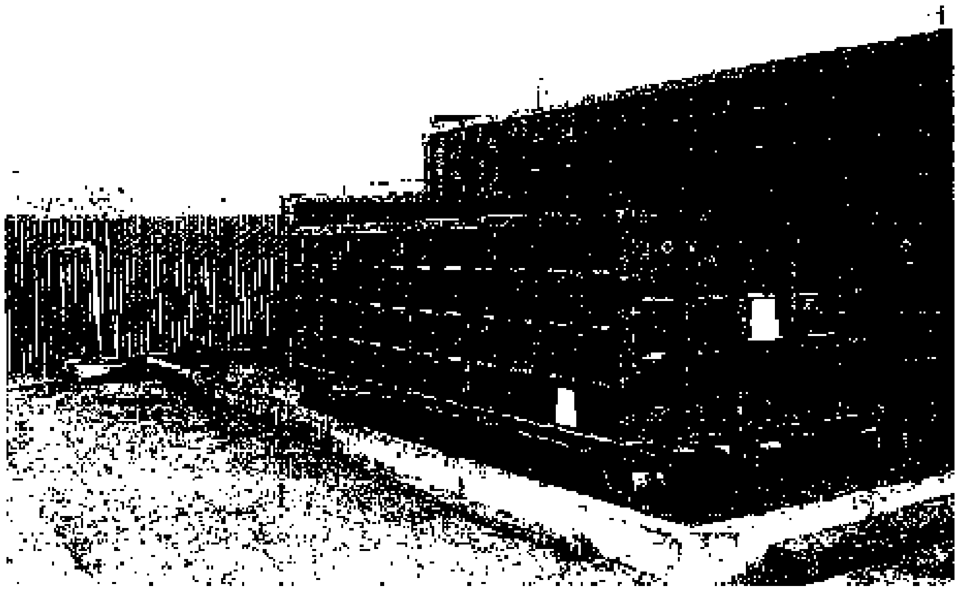
Photograph No. 58: **View of three hydraulic pumps at the [redacted] property.**



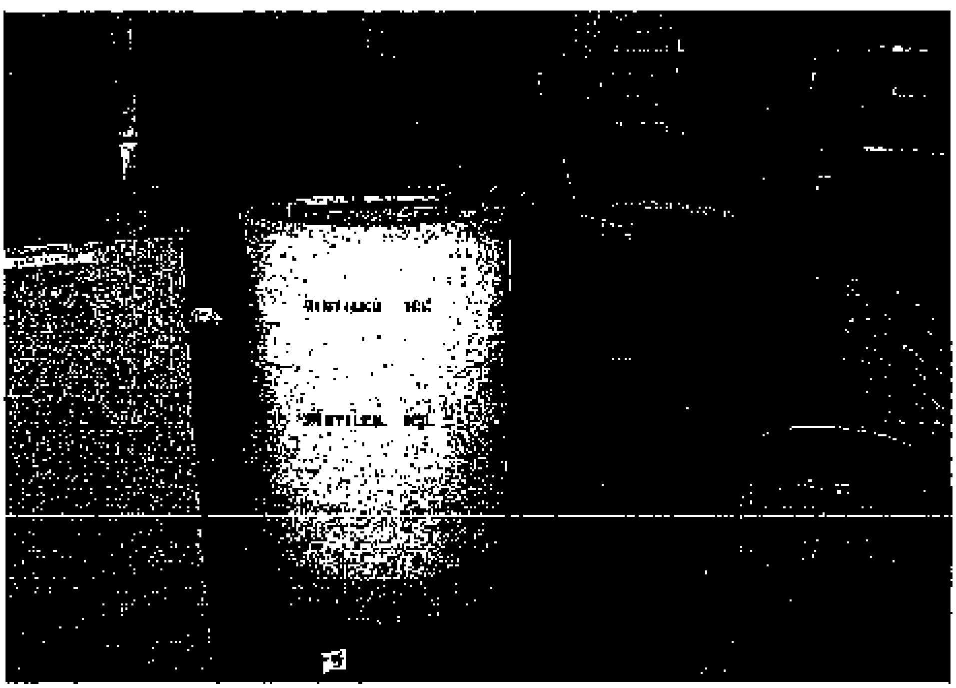
Photograph No. 59: View of a paint booth on the [redacted] property facing northwest.



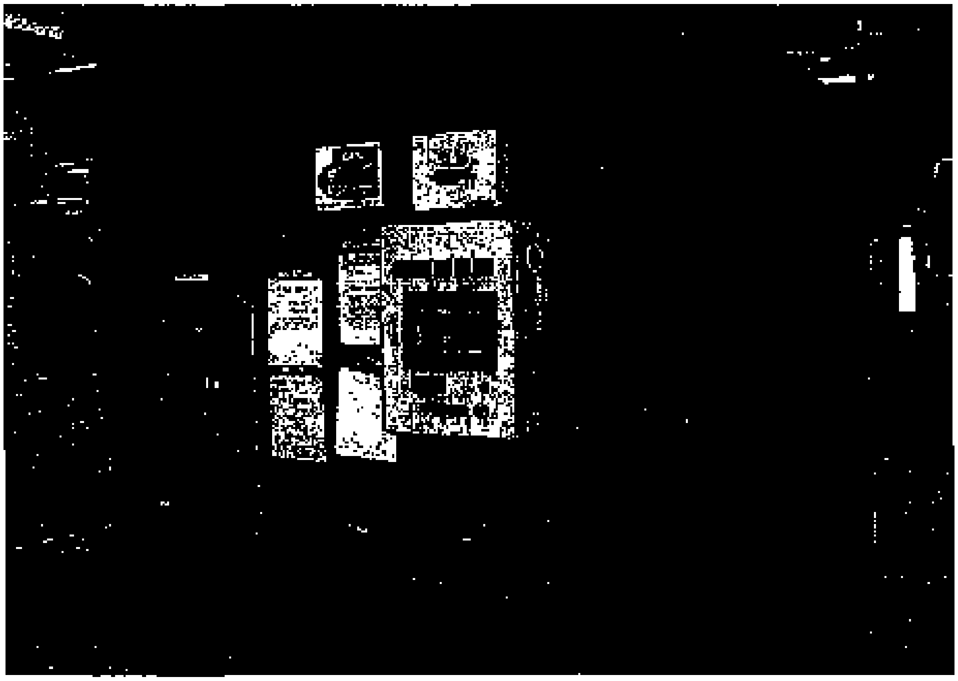
Photograph No. 60: View facing east of several 55-gallon drums labeled as haz-waste and used oil. According to the site contact they are removed periodically by a contractor. The area is paved with asphalt and is in relatively poor condition. No significant signs of staining noted.



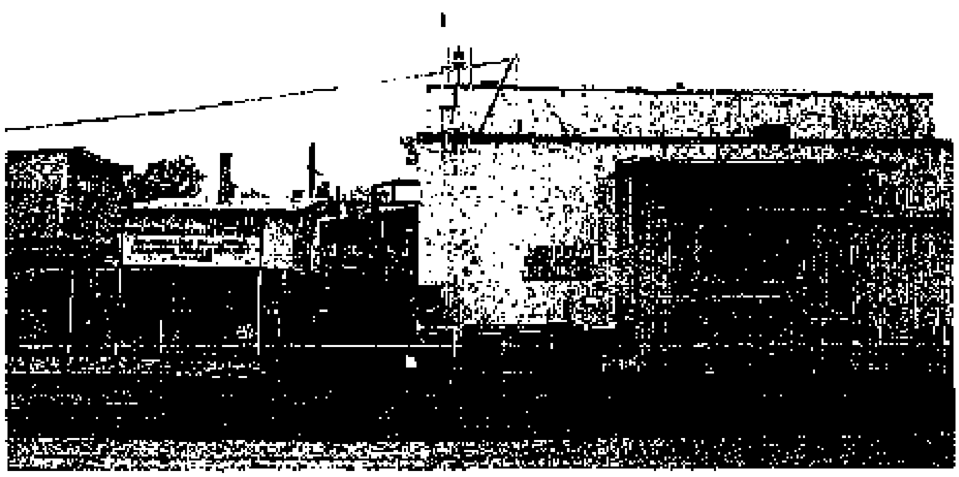
Photograph No. 61: View facing east of the two containers of scrap metal on a concrete pad at the [redacted] property.



Photograph No. 62: View of two 55-gallon drums at the LeFiell property.



Photograph No. 63: View of the TCE using product cleaner at the [redacted] property.



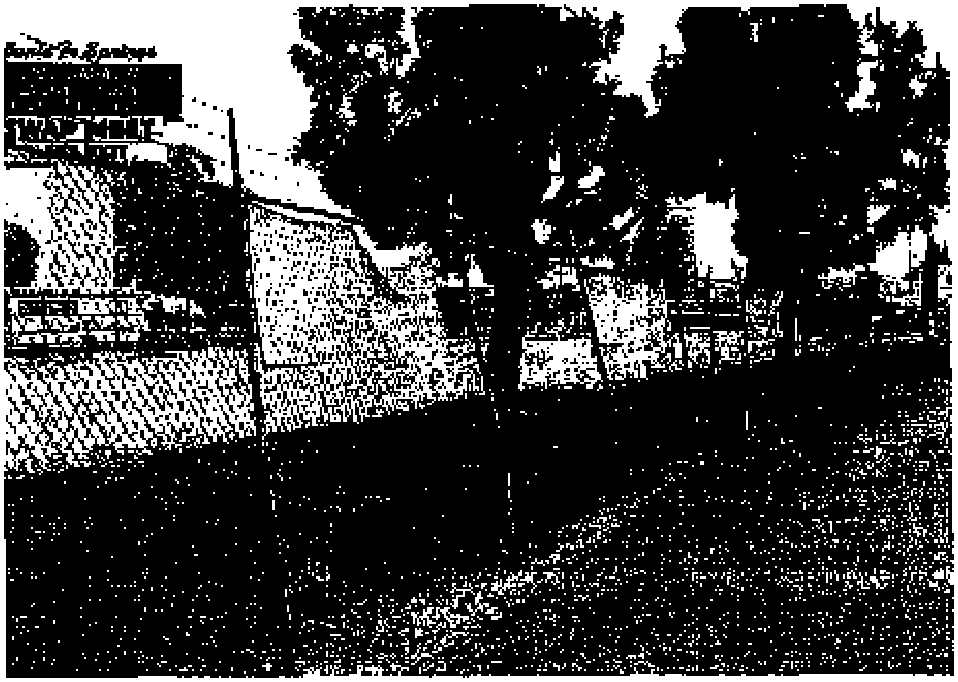
Photograph No. 64: View of three vent pipes protruding from the ground in the area of the former gasoline USTs at the [redacted] property.

Photograph No. 65: View of groundwater production well in a parking lot in the eastern portion of the [redacted] property.

Photograph No. 66: View of eastern portion of parking lot of the [redacted] property where Budget is located.

Photograph No. 67: **View of the Budget parking lot facing south on the [redacted] property. Fuel ASTs are in the background.**

Photograph No. 68: **View of the interior of the maintenance area of the [redacted] facility within the [redacted] property.**

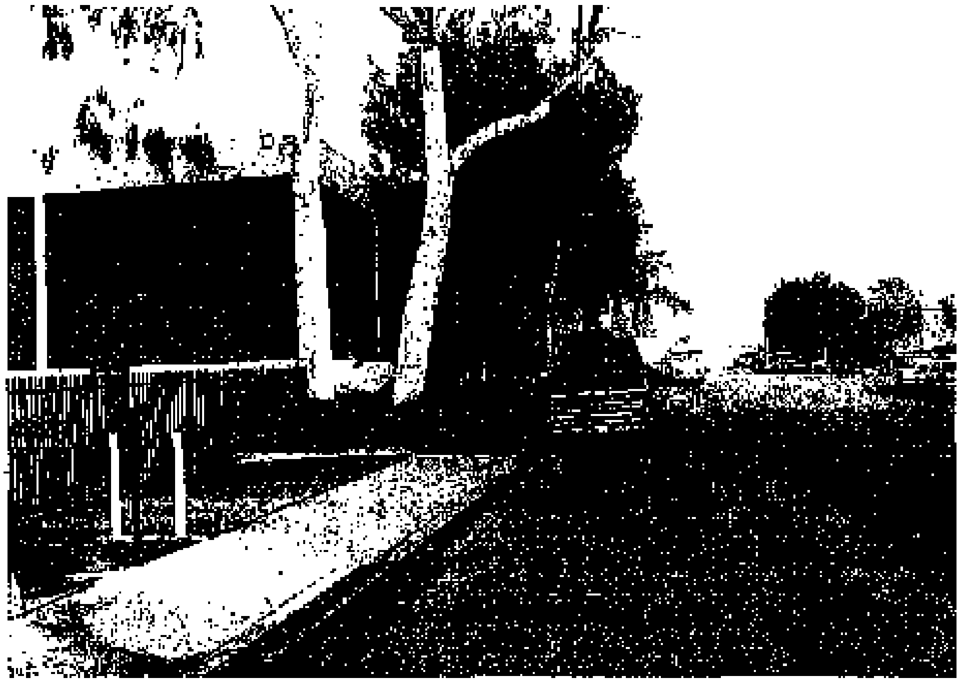


Photograph No. 69: View of Firestone Boulevard facing south from the [redacted] property.

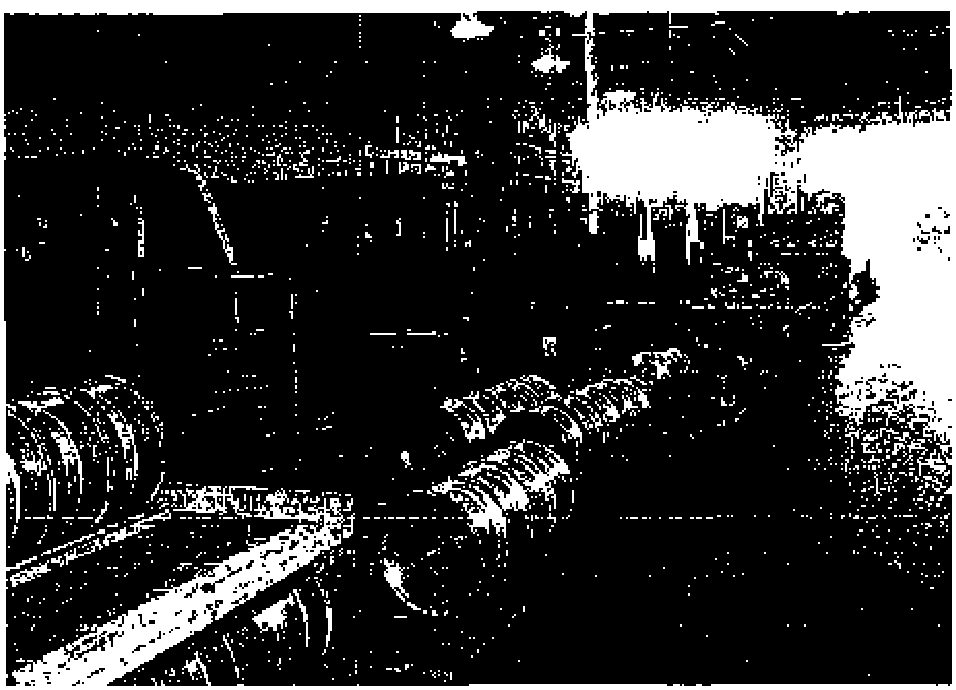
Photograph No. 70: View of the Railroad right-of-way bounding the [redacted] property to the west.

Photograph No. 71: View of Railroad tracks to the west of the [redacted] property.

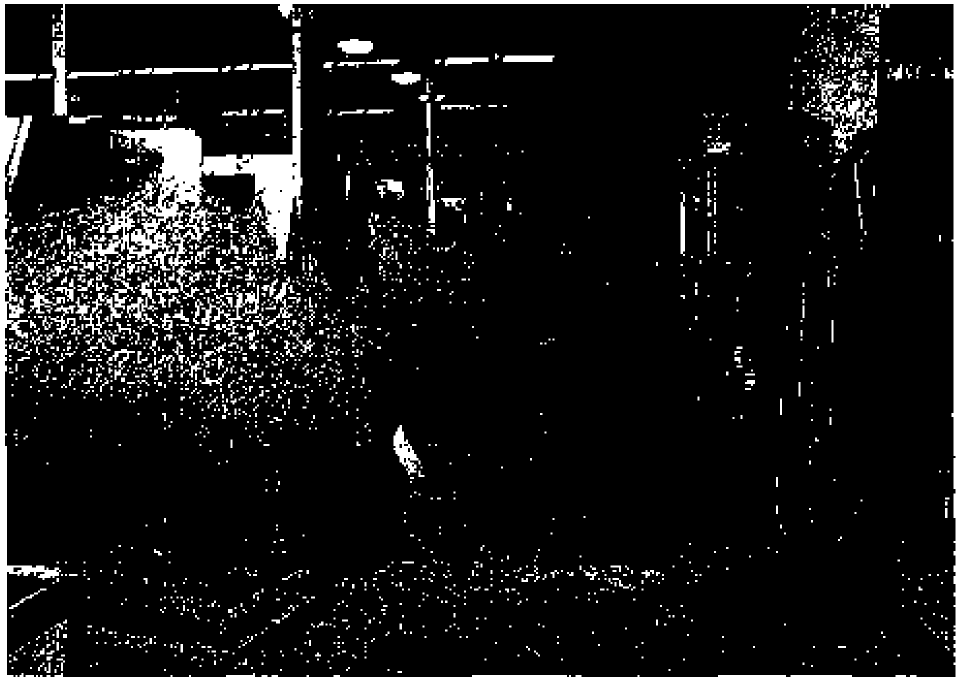
Photograph No. 72: View of Firestone Boulevard followed by Interstate 5 from the [redacted] property facing east.



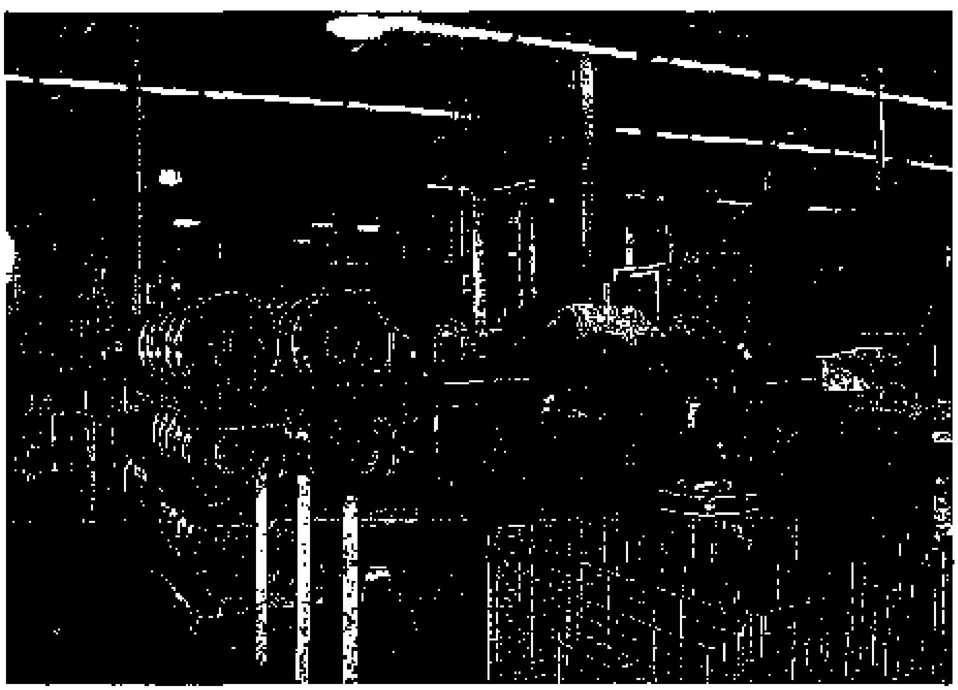
Photograph No. 73: View of the Center Line Wheel Corporation building at [redacted] Freeway Drive facing north.



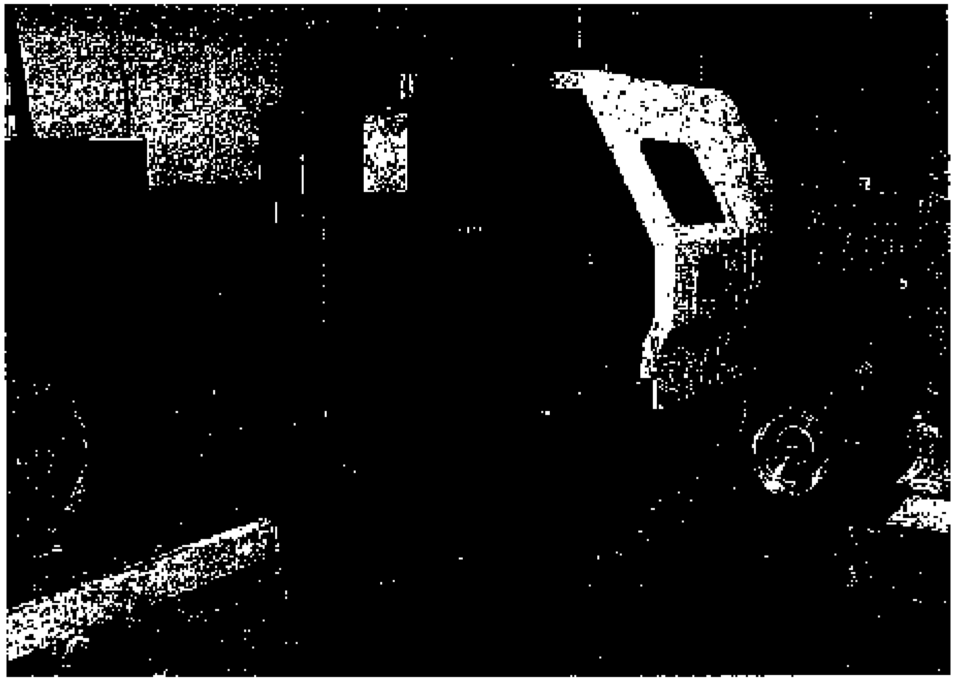
Photograph No. 74: View of lathes inside the [redacted] building at [redacted] Freeway Drive.



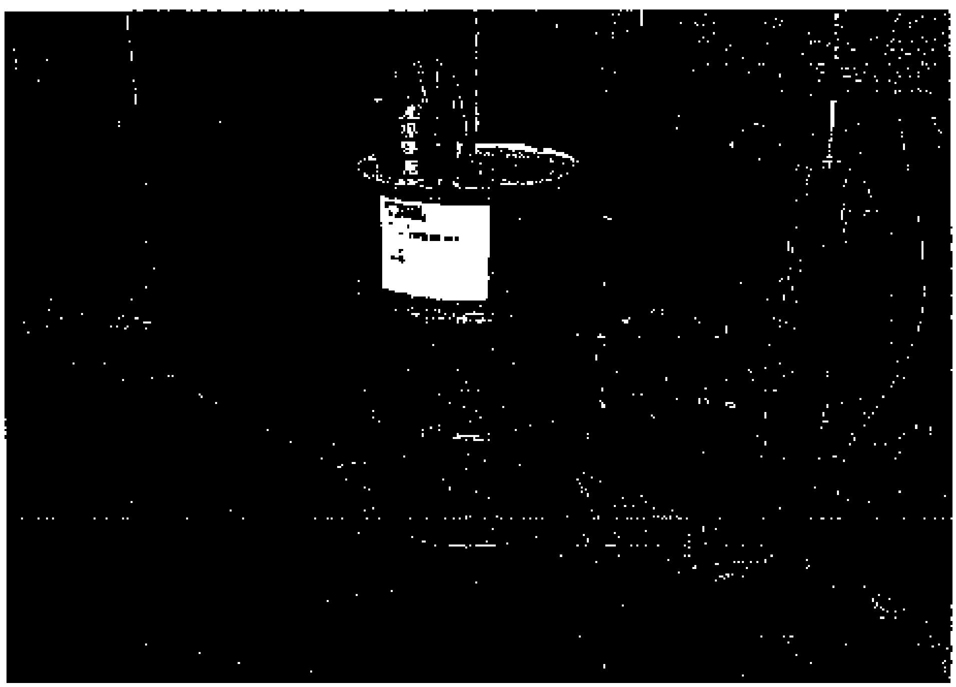
Photograph No. 75: View of waste metal from the lathes inside the [redacted] building at [redacted] Freeway Drive.



Photograph No. 76: View of the interior of the [redacted] building at 13521 Freeway Drive.



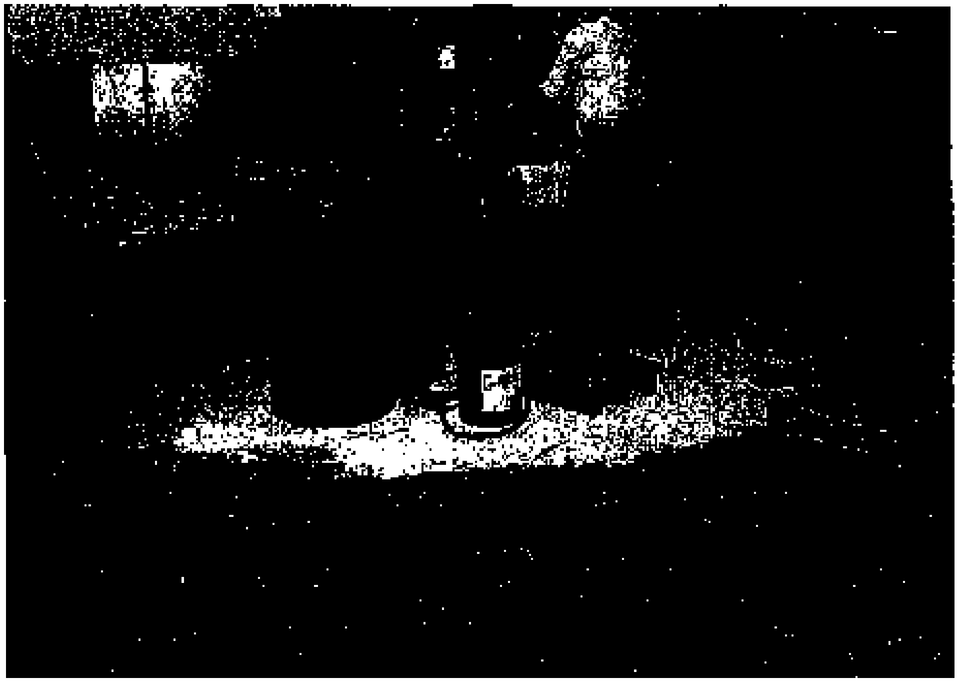
Photograph No. 77: View of a mill inside the [redacted] building at [redacted] Freeway Drive.



Photograph No. 78: View of an oil drum inside the [redacted] building at [redacted] Freeway Drive.

Photograph No. 79: View of spills and absorbent on the concrete floor inside the [redacted] building at [redacted] Freeway Drive.

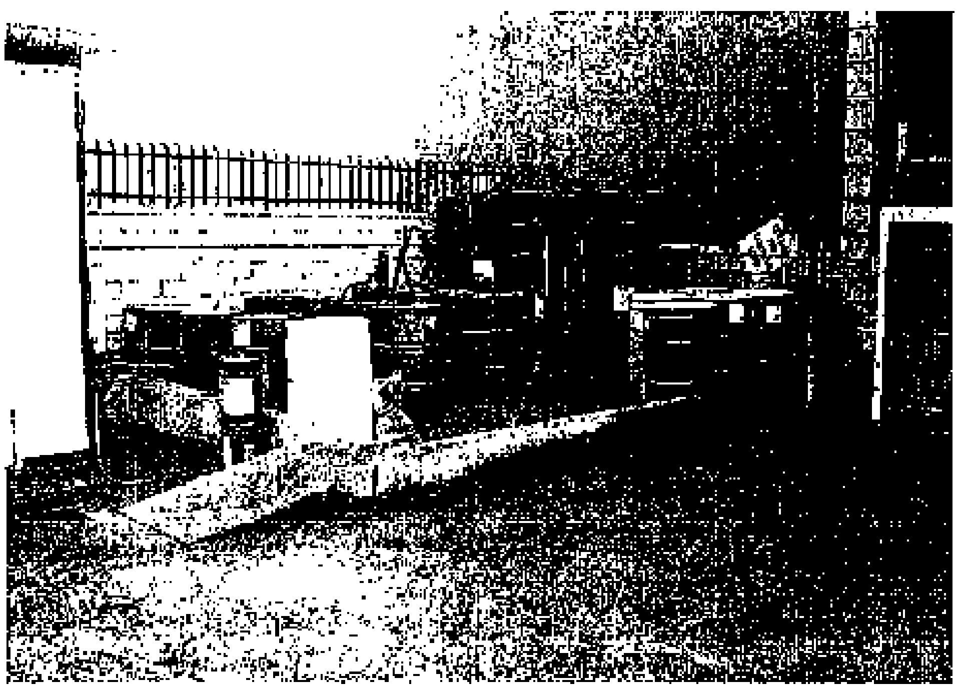
Photograph No. 80: View of the two ASTs inside the [redacted] building at [redacted] Freeway Drive.



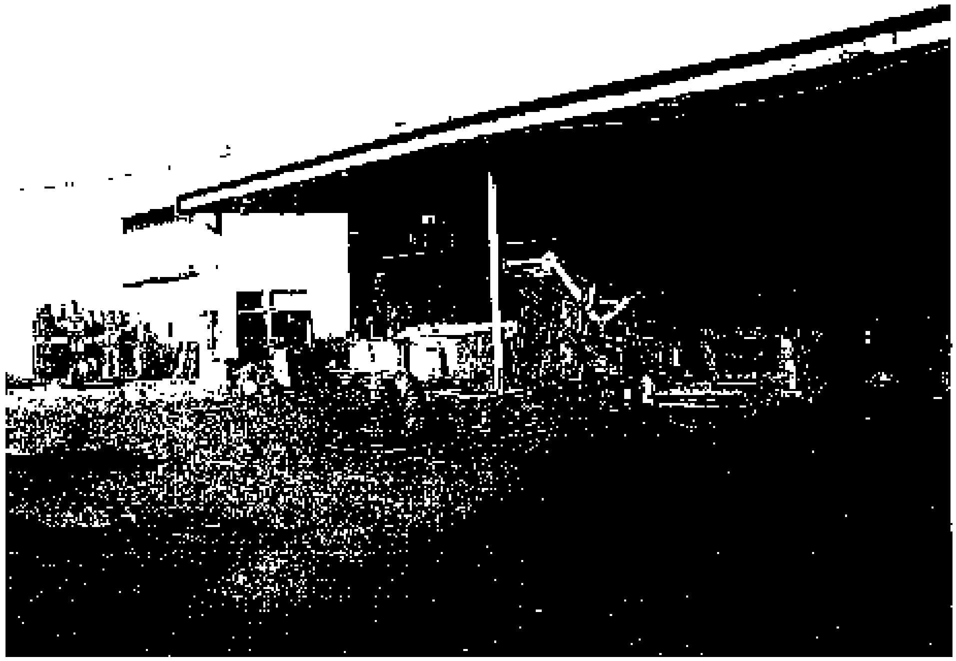
Photograph No. 81: View of a press inside the [redacted] building at [redacted] Freeway Drive.

Photograph No. 82: View of the motor pit for a press inside the [redacted] building at [redacted] Freeway Drive.

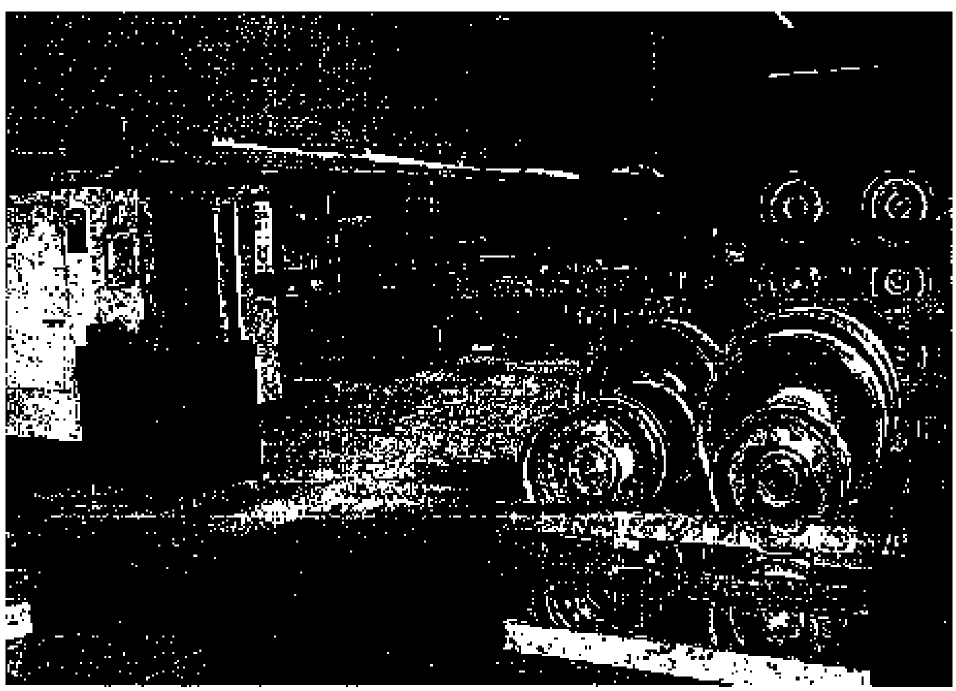
Photograph No. 83: View of the north side of the [redacted] building at [redacted] Freeway Drive.



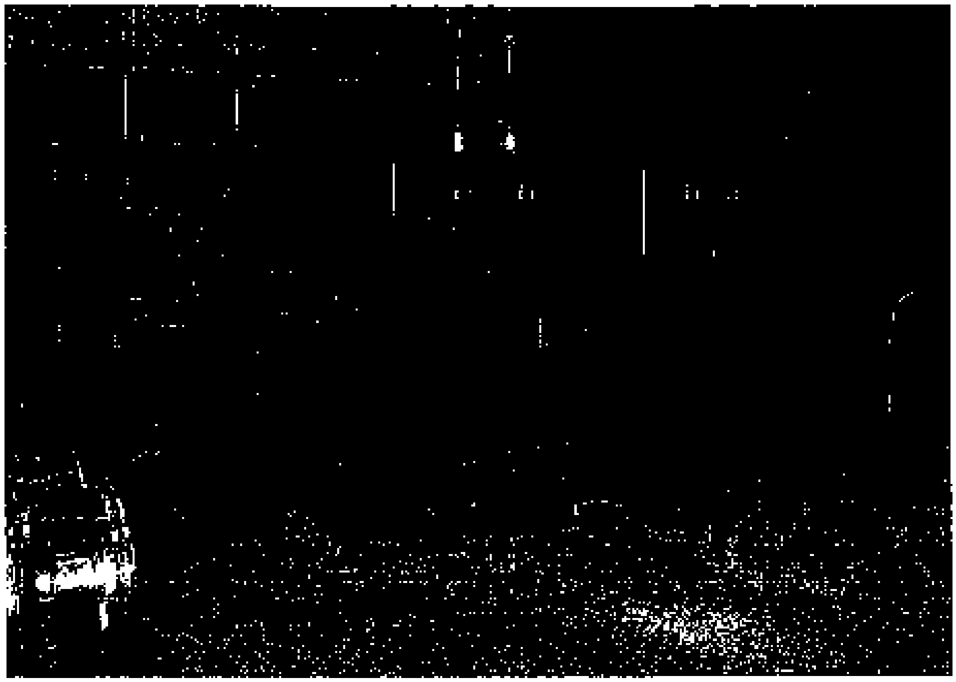
Photograph No. 84: View of the hazardous material storage area on the north side of the [redacted] building at [redacted] Freeway Drive.



Photograph No. 85: View of the south side of the [redacted] building at [redacted] Radius Place.

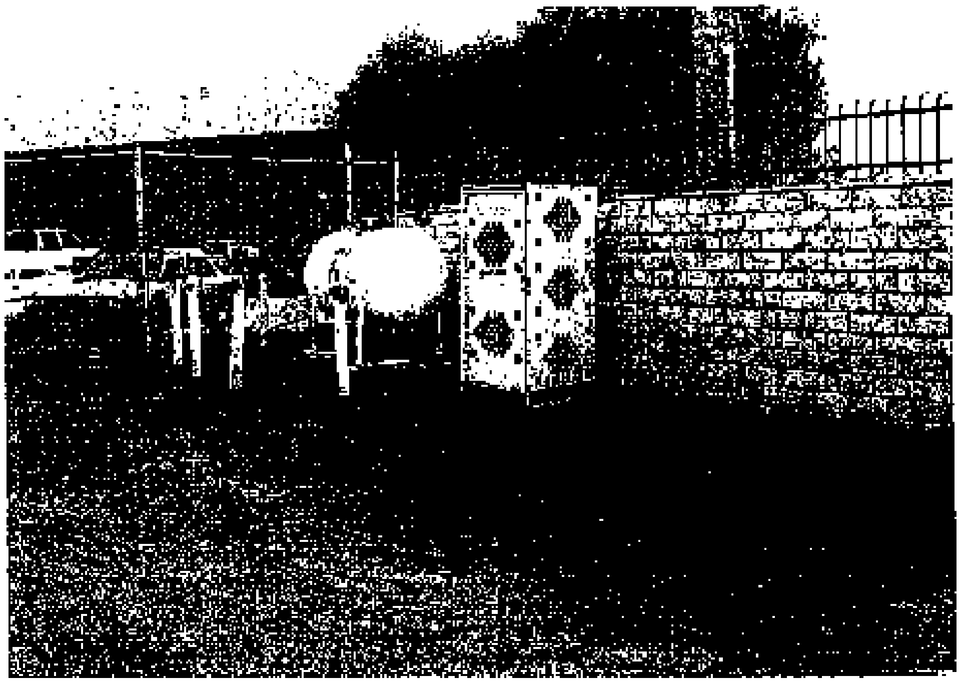


Photograph No. 86: View of the interior of the [redacted] building at [redacted] Radius Place.

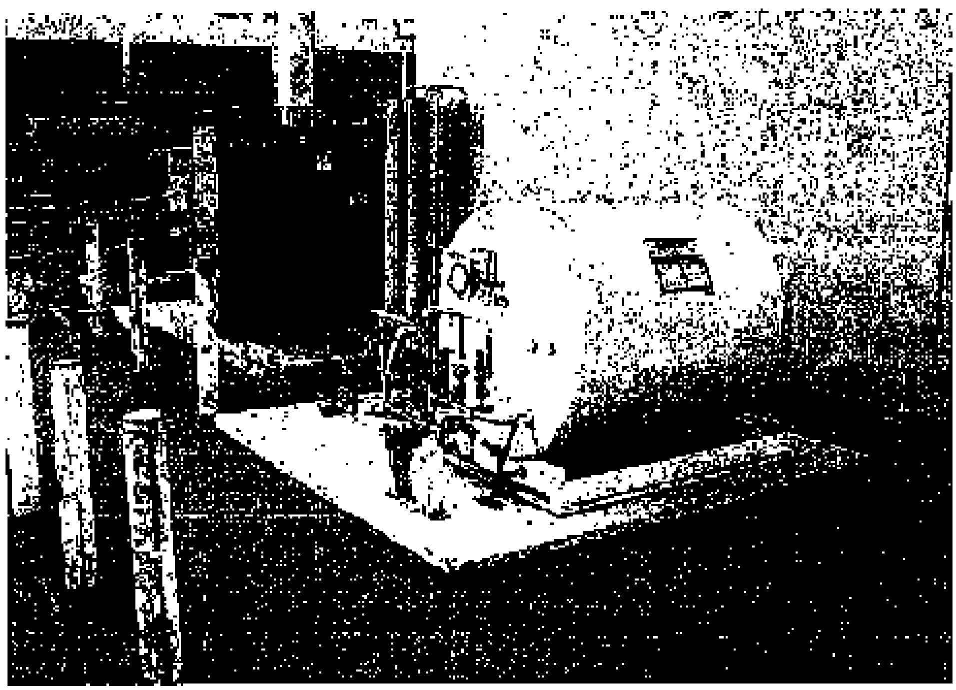


Photograph No. 87: View of the parts washer inside the [redacted] building at [redacted]Radius Place.

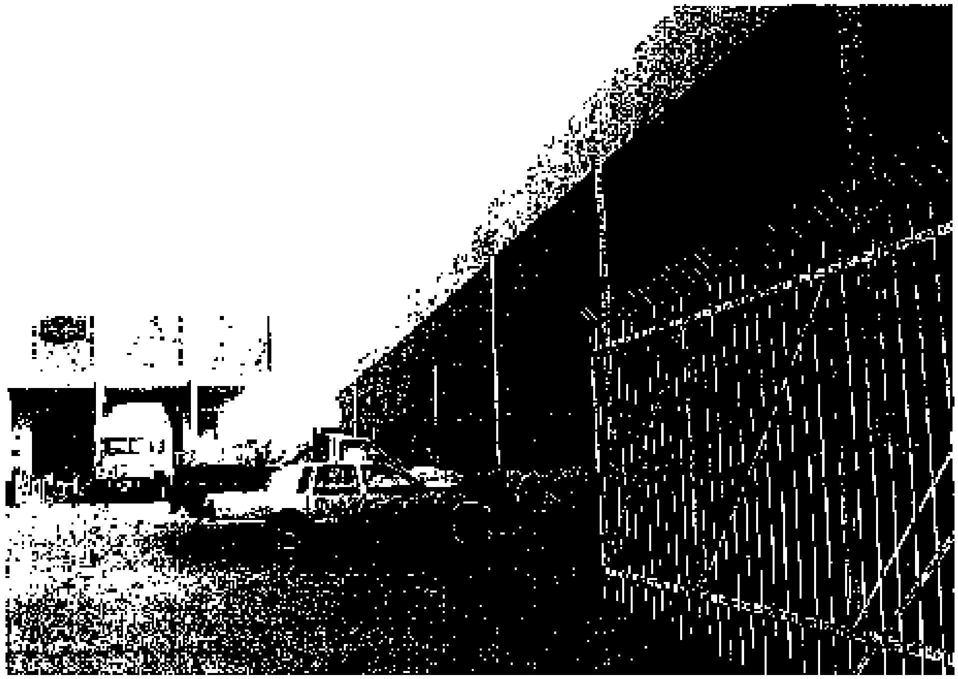
Photograph No. 88: View of the polishing area of the [redacted] building at [redacted]Radius Place.



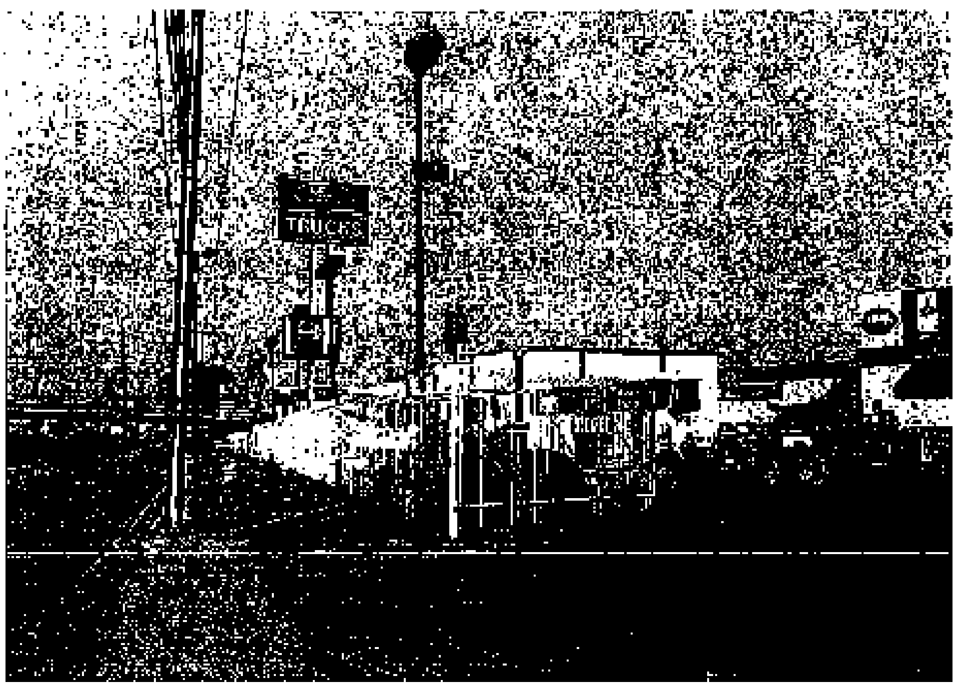
Photograph No. 89: View of the propane AST and storage east of the [redacted] Corporation building at [redacted] Radius Place.



Photograph No. 90: View of the argon AST and transformer southeast of the [redacted] building at [redacted] Radius Place.



Photograph No. 91: View of the west side of the [redacted] parcels.



Photograph No. 92: View west of the [redacted]parcels.

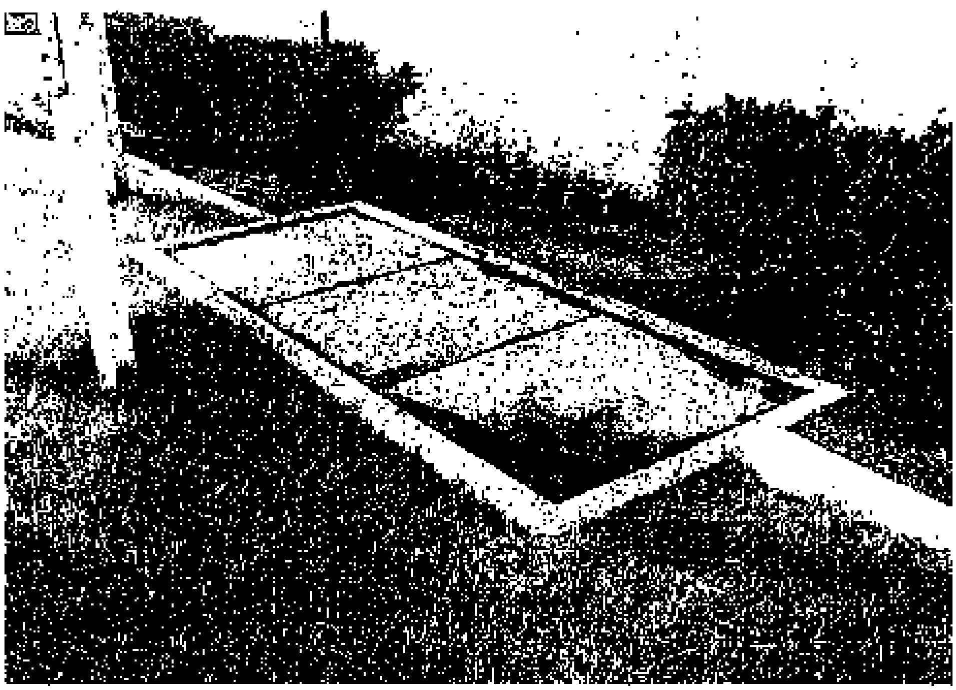
Photograph No. 93: **View east of the [redacted] parcels.**

Photograph No. 94: **View north to northeast of the [redacted] parcels.**

Photograph No. 95: View of the [redacted] Carmenita Road building in the [redacted]

Photograph No. 96: View of the [redacted] Carmenita Road building in the [redacted]

Photograph No. 97: View of the north side of the [redacted] Carmenita Road building in the [redacted]



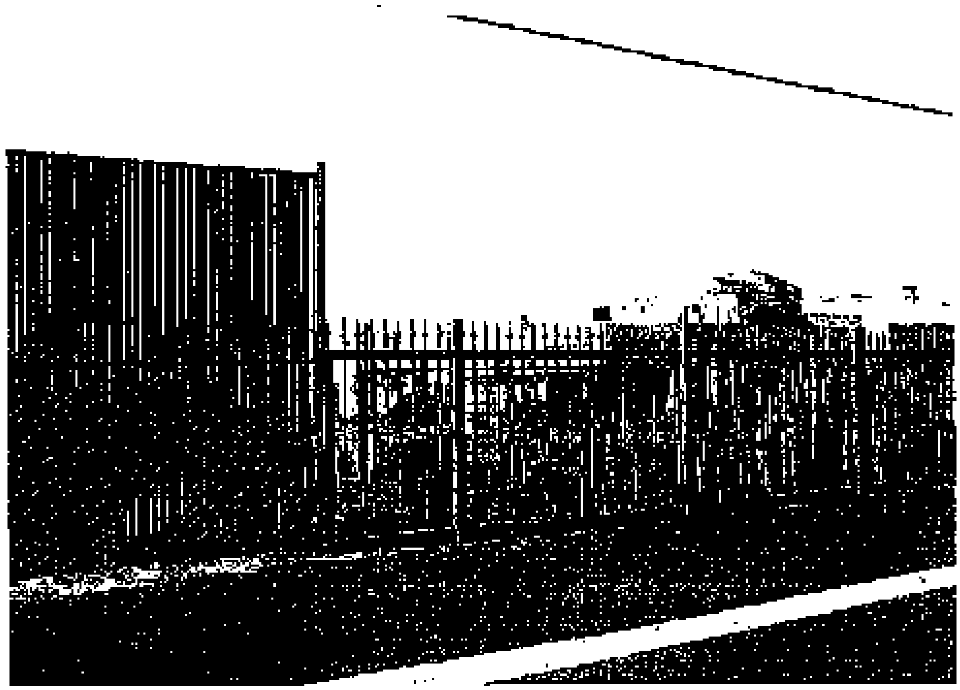
Photograph No. 98: View of the apparent clarifier on the west side of the [redacted] Carmenita Road building in the [redacted]

Photograph No. 99: View of the [redacted] Carmenita Road building in the Carmenita Business Center.

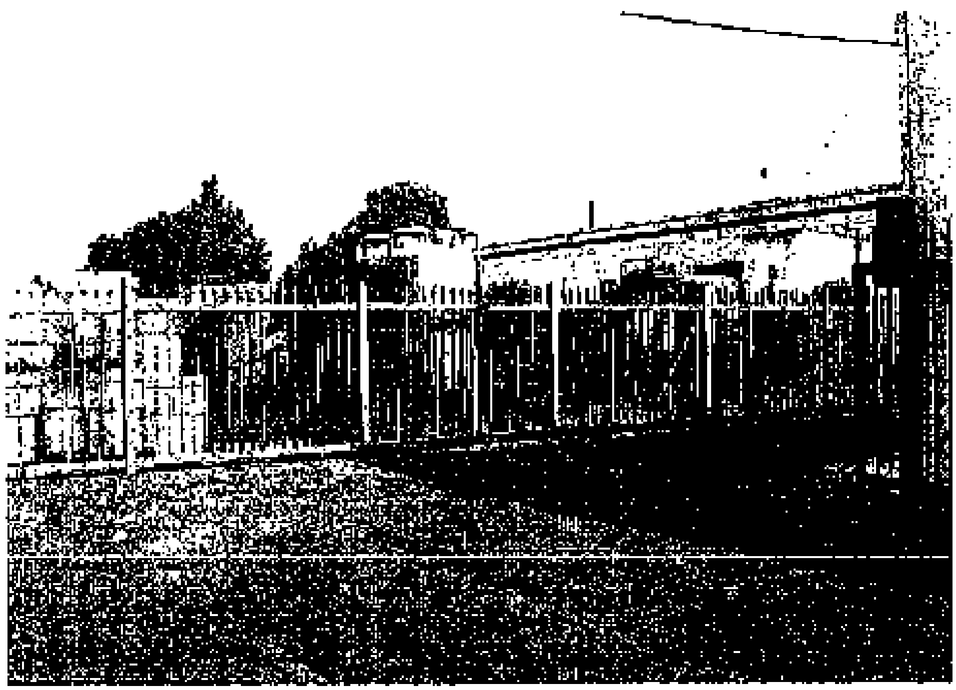
Photograph No. 100: View of the [redacted] Carmenita Road building in the [redacted]

Photograph No. 101: View of the south side of the [redacted] Carmenita Road building in the [redacted]

Photograph No. 102: View of the west side of the [redacted]

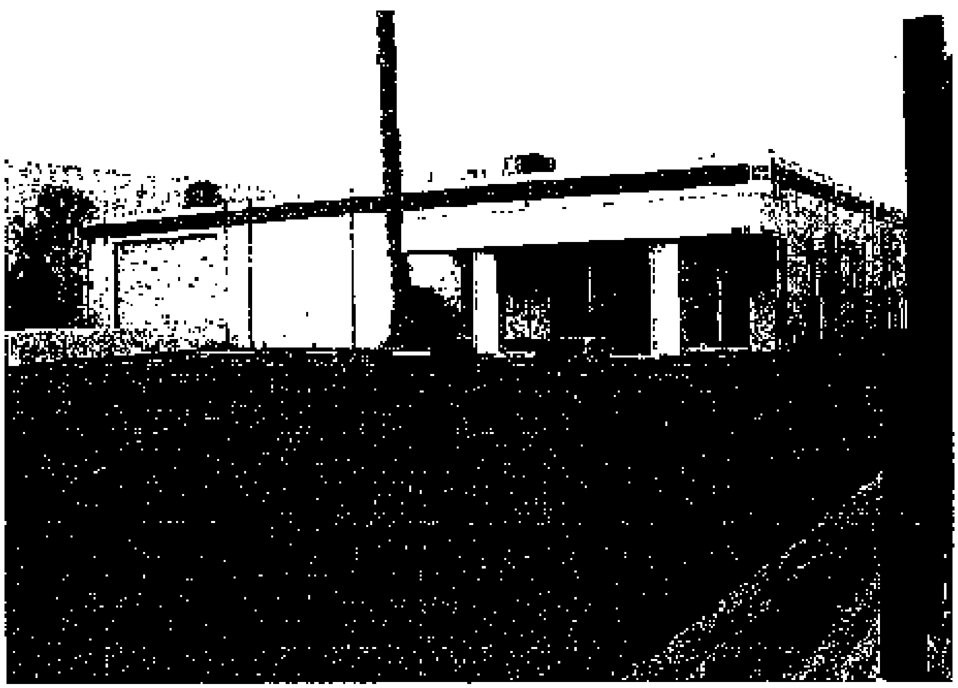


Photograph No. 103: View from the [redacted] facing west.



Photograph No. 104: View from the [redacted] facing north onto the US Filter parcel.

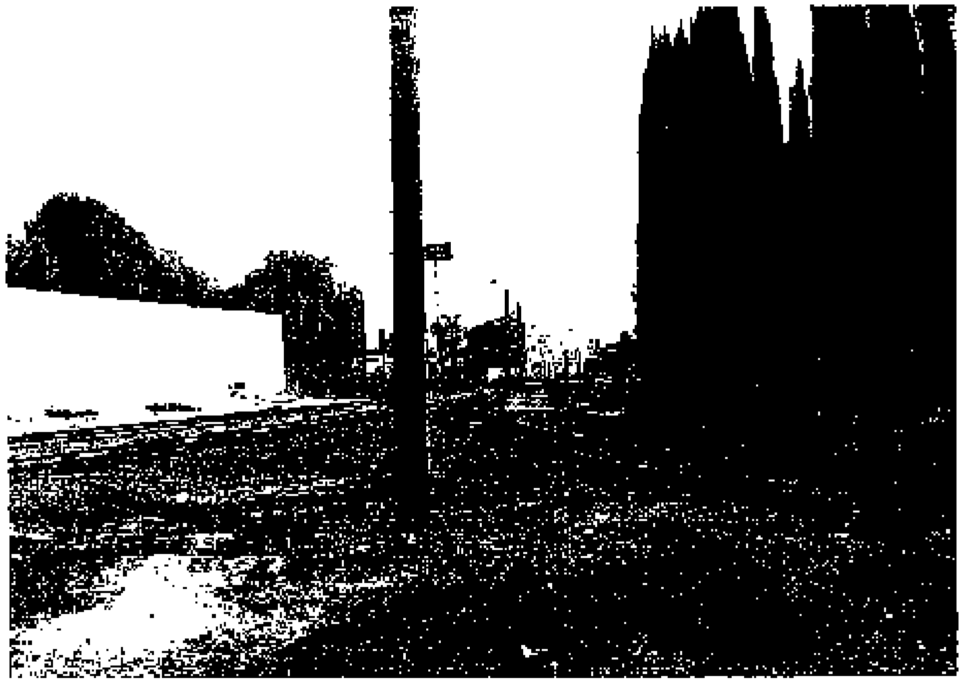
Photograph No. 105: View from the [redacted] facing east across Carmenita Boulevard.



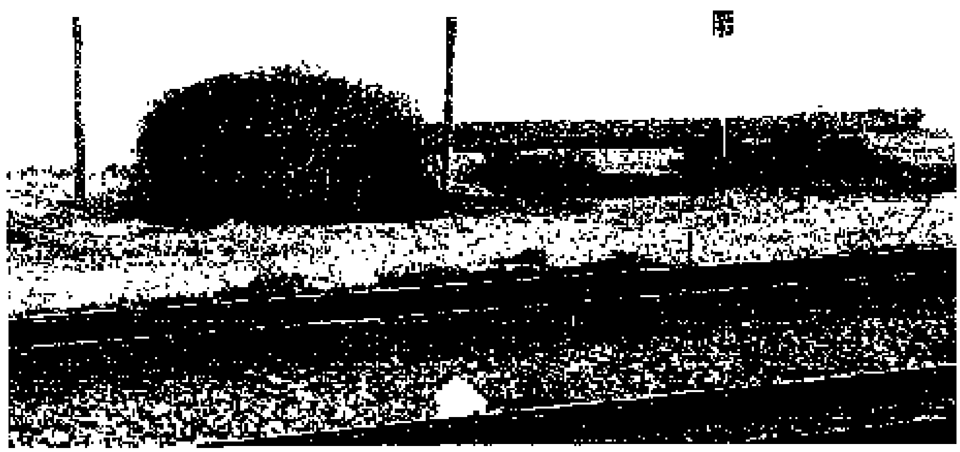
Photograph No. 106: View from the [redacted] facing south.

Photograph No. 107: View of the frontage of the [redacted] Center facing north.

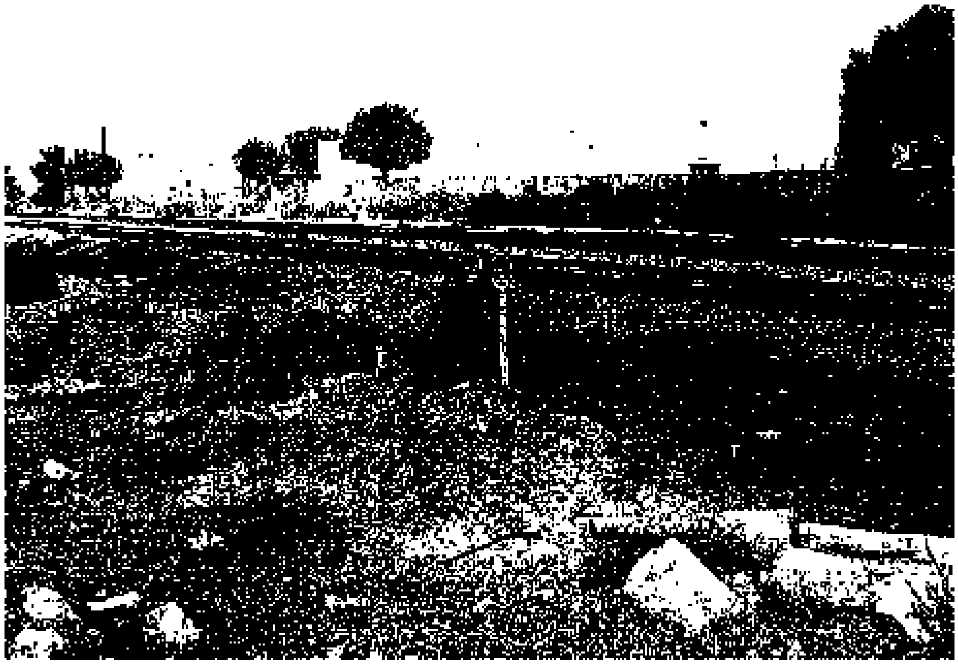
Photograph No. 108: View of the frontage of the [redacted] facing south.



Photograph No. 109: View of the [redacted] right-of-way facing east.

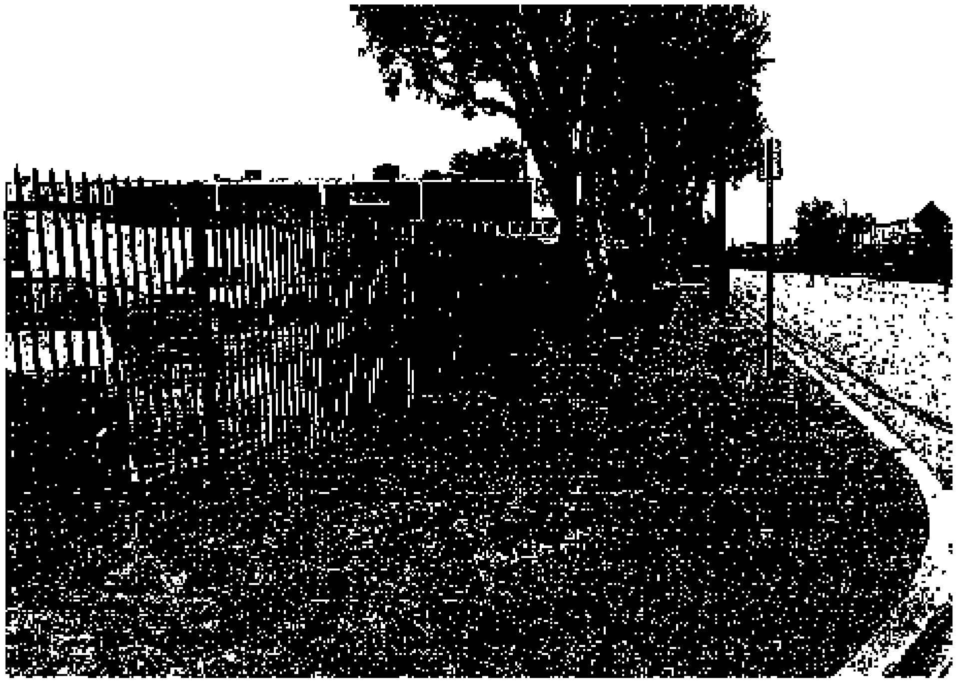


Photograph No. 110: View of the petroleum pipeline marker in the [redacted] right-of-way.



Photograph No. 111: View of the natural gas pipeline marker in the [redacted] right-of-way.

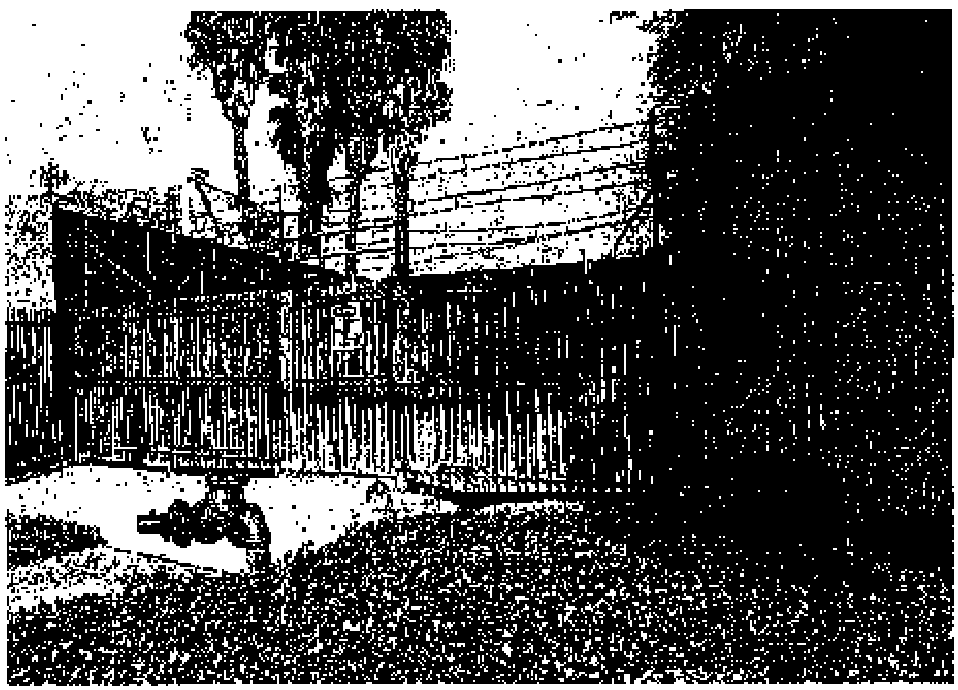
Photograph No. 112: View of the [redacted] right-of-way off Carmenita Boulevard facing west.



Photograph No. 113: View of the frontage of [redacted] facing east on Freeway Drive.

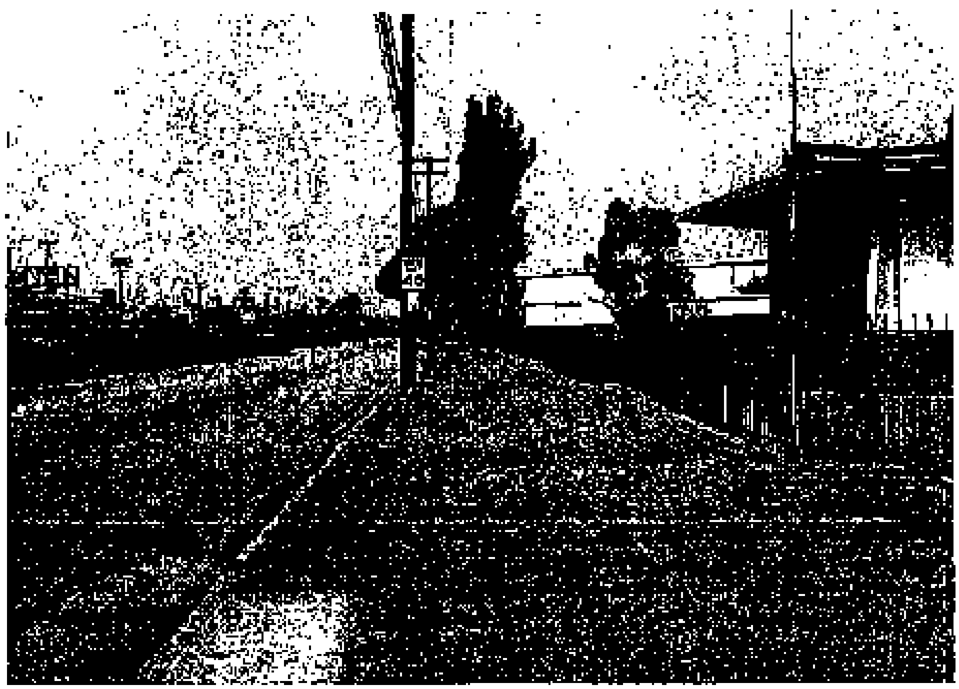
Photograph No. 114: View of the frontage of [redacted] facing east on Freeway Drive.

Photograph No. 115: **View of the frontage of [redacted] facing west on Freeway Drive.**



Photograph No. 116: **View of the frontage of [redacted] facing north.**

Photograph No. 117: View of the frontage of [redacted] and Burke Industries facing east on Freeway Drive.



Photograph No. 118: View of the frontage of Burke Industries facing west along Freeway Drive.

Photograph No. 119: View of the frontage of Burke Industries facing west from Marquardt Avenue.

Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to TRACK Info Services, certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in TRACK Info Services's databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although TRACK Info Services uses its best efforts to research the actual location of each site, TRACK Info Services does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of TRACK Info Services's services proceeding are signifying an understanding of TRACK Info Services's searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997. Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards. Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.
The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997. Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards. Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997. Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards. Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997. Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards. Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

Groundwater Contamination:	
Number of Sources Contributing to Contamination at the Site:	0

OTHER AGENCY ID NUMBERS (blank below = not reported by agency)

ID SOURCE NAME, & VALUE: *CALSTARS CODE 400661*

BACKGROUND INFORMATION (blank below = not reported by agency)

The 3.83 acre rectangular-shaped property was used from 1960-1996 for the mixing and blending of organochlorine insecticides, herbicides, etc - including DDT, DDE, DDD, Endrin, lead, etc. Contaminated soil was remediated by excavation and incineration - without agency oversight. The site is being acquired by the City of Cerritos for the construction of a senior citizen residence.

DTSC COMMENTS REGARDING THIS SITE (blank below = not reported by agency).

Comments Date:

1 *DTSC amended the VCA to review the revised PEA equivalent report. DTSC completed the review of the revised PEA and did concur with no further action recommendation. DTSC and John Enoto entered into a Voluntary Cleanup Agreement for the review of PEA (equivalent) documentation for the site which was remediated without DTSC oversight. DTSC completed review of the PEA Equivalent documents and issued their comments. The response is due September 19, 1997. DTSC received response to comments on the PEA. Health Risk Assessment is under review by HERD. DTSC completed the review of response to comments and issued comments to the PEA and required further action at the site. DTSC received revised PEA for the site after further cleanup at the site.*

<u>**DTSC COMMENTS REGARDING THIS SITE (blank below = not reported by agency)**</u>

Comments Date:

1 *DTSC and Diesel ReCon Company executed a Voluntary Cleanup Agreement for a Preliminary Endangerment Assessment on the formerly leased property. DTSC recommended further action due to an unacceptable health risk level attributed to chromium. DTSC further recommends delineating the lateral and vertical extent of VOC, petroleum hydrocarbons, PAHs and metals contamination at the site. DTSC plans to write a letter inviting Diesel Recon to conduct further removal investigation (RI) at the facility under the voluntary cleanup program.*

Environmental FirstSearch Database Descriptions

NPL: *EPA* NATIONAL PRIORITY LIST - Database of confirmed, proposed or deleted Superfund sites.

CERCLIS: *EPA* COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM - Database of current and potential Superfund sites currently or previously under investigation.

NFRAP: *EPA* COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM ARCHIVED SITES - database of Archive designated CERCLA sites that, to the best of EPA's knowledge, assessment has been completed and has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA TSD: *EPA* RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM TREATMENT, STORAGE, and DISPOSAL FACILITIES. - Database of facilities licensed to store, treat and dispose of hazardous waste materials.

RCRA COR: *EPA* RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of RCRA facilities with reported violations and subject to corrective actions.

RCRA GEN: *EPA* RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of facilities that generate or transport hazardous waste or meet other RCRA requirements.LGN - Large Quantity GeneratorsSGN - Small Quantity GeneratorsVGN – Conditionally Exempt Generator.Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List) facilities.

RCRA NLR: *EPA* RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of facilities not currently classified by the EPA but are still included in the RCRIS database. Reasons for non classification:Failure to report in a timely matter.No longer in business.No longer in business at the listed address.No longer generating hazardous waste materials in quantities which require reporting.

ERNS: *EPA/NRC* EMERGENCY RESPONSE NOTIFICATION SYSTEM - Database of emergency response actions. Data since January 2001 has been received from the National Response System database as the EPA no longer maintains this data.

STATE SITES: *CA EPA* SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.The SMBRPD displays information in six categories. The categories are:1. CalSites Properties (CS)2. School Property Evaluation Program Properties (SCH)3. Voluntary Cleanup Program Properties (VCP)4. Unconfirmed Properties Needing Further Evaluation (RFE)Please Note: FirstSearch Reports list the above sites as DB Type (STATE).5. Unconfirmed Properties Referred to Another Local or State Agency (REF)6. Properties where a No Further Action Determination has been made (NFA)Please Note: FirstSearch Reports list the above sites as DB Type (OTHER).Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.CORTESE LIST-Pursuant to Government Code Section 65962.5, the Hazardous Waste and Substances Sites List has been compiled by Cal/EPA, Hazardous Materials Data Management Program. The CAL EPA Dept. of Toxic Substances Control compiles information from subsets of the following databases to make up the CORTESE list:1. The Dept. of Toxic Substances Control; contaminated or potentially contaminated hazardous waste sites listed in the CAL Sites database, Formerly known as ASPIS are included (CALSITES formerly known as ASPIS).2. The California State Water Resources Control Board; listing of Leaking Underground Storage Tanks are included (LTANK)3. The California Integrated Waste Management Board; Sanitary Landfills which have evidence of groundwater contamination or known migration of hazardous materials (formerly WB-LF, now AB 3750).Note: Track Info Services collects each of the above data sets individually and lists them separately in the following First Search categories in order to provide more current and comprehensive information: CALSITES: SPL, LTANK: LUST, WB-LF: SWL

SPILLS-1990: *CA EPA* SLIC REGIONS 1 - 9- The California Regional Water Quality Control Boards maintain report of sites that have records of spills, leaks, investigation, and cleanups.

SWL: *CA IWMB/SWRCB/COUNTY* SWIS SOLID WASTE INFORMATION SYSTEM-The California Integrated Waste Management Board maintains a database on solid waste facilities, operations, and disposal sites throughout the state of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites. For more information on individual sites call the number listed in the source field.Please Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.WMUDS-The State Water Resources Control Board maintained the Waste Management Unit Database System (WMUDS). It is no longer updated. It tracked management units for several regulatory programs related to waste management and its potential impact on groundwater. Two of these programs (SWAT & TPCA) are no longer on-going regulatory programs as described below. Chapter 15 (SC15) is still an on-going regulatory program and information is updated periodically but not to the WMUDS database. The WMUDS System contains information from the following agency databases: Facility, Waste Management Unit (WMU), Waste Discharger System (WDS), SWAT, Chapter 15, TPCA, RCRA, Inspections, Violations, and Enforcement's.Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.ORANGE COUNTY LANDFILLS LIST- A list maintained by the Orange County Health Department.

PERMITS: *CA COUNTY* SAN DIEGO COUNTY HE17 PERMITS- The HE17/58 database tracks establishments issued permits and the status of their permits in relation to compliance with federal, state, and local regulations that the County oversees. It tracks if a site is a hazardous waste generator, TSD, gas station, has underground tanks, violations, or unauthorized releases. For more information on a specific file call the HazMat Duty Specialist at the phone number listed in the source information field.SAN BERNARDINO COUNTY HAZARDOUS MATERIALS PERMITS- Handlers and Generators Permit Information Maintained by the Hazardous Materials Division.

OTHER: *CA EPA/COUNTY* SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.The SMBRPD displays information in six categories. The categories are:1. CalSites Properties (CS)2. School Property Evaluation Program Properties (SCH)3. Voluntary Cleanup Program Properties (VCP)4. Unconfirmed Properties Needing Further Evaluation (RFE)Please Note: FirstSearch Reports list the above sites as DB Type (STATE).5. Unconfirmed Properties Referred to Another Local or State Agency (REF)6. Properties where a No Further Action Determination has been made (NFA)Please Note: FirstSearch Reports list the above sites as DB Type (OTHER).Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.LA COUNTY SITE MITIGATION COMPLAINT CONTROL LOG- The County of Los Angeles Public Health Investigation Compliant Control Log.ORANGE COUNTY INDUSTRIAL SITE CLEANUPS- List maintained by the Orange County Environmental Health Agency.RIVERSIDE COUNTY WASTE GENERATORS-A list of facilities in Riverside County which generate hazardous waste.SACRAMENTO COUNTY MASTER HAZMAT LIST-Master list of facilities within Sacramento County with potentially hazardous materials.SACRAMENTO COUNTY TOXIC SITE CLEANUPS-A list of sites where unauthorized releases of potentially hazardous materials have occurred.

REG UST/AST: *CA EPA/COUNTY/CITY* ABOVEGROUND STORAGE TANKS LISTING-The Above Ground Petroleum Storage Act became State Law effective January 1, 1990. In general, the law requires owners or operators of AST's with petroleum products to file a storage statement and pay a fee by July 1, 1990 and every two years thereafter, take specific action to prevent spills, and in certain instances implement a groundwater monitoring program. This law does not apply to that portion of a tank facility associated with the production oil and regulated by the State Division of Oil and Gas of the Dept. of Conservation.SWEEPS / FIDS STATE REGISTERED UNDEGROUND STORAGE TANKS- Until 1994 the State Water Resources Control Board maintained a database of registered underground storage tanks statewide referred to as the SWEEPS System. The SWEEPS UST information was integrated with the CAL EPA's Facility Index System database (FIDS) which is a master index of information from numerous California agency environmental databases. That was last updated in 1994. Track Info Services included the UST information from the FIDS database in its First Search reports for historical purposes to help its clients identify where tanks may possibly have existed. For more information on specific sites from individual paper files archived at the State Water Resources Control Board call the number listed with the source information.INDIAN LANDS UNDERGROUND STORAGE TANKS LIST- A listing of underground storage tanks currently on Indian Lands under federal jurisdiction. California Indian Land USTS are administered by US EPA Region 9.CUPA DATABASES & SOURCES- Definition of a CUPA: A Certified Unified Program Agency (CUPA) is a local agency that has been certified by the CAL EPA to implement six state environmental programs within the local agency's jurisdiction. These can be a county, city, or JPA (Joint Powers Authority). This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994.A Participating Agency (PA) is a local agency that has been designated by the local CUPA to administer one or more Unified Programs within their jurisdiction on behalf of the CUPA. A Designated Agency (DA) is an agency that has not been certified by the CUPA but is the responsible local agency that would implement the six unified programs until they are certified.Please Note: Track Info Services, LLC collects and maintains information regarding Underground Storage Tanks from majority of the CUPAS and Participating Agencies in the State of California. These agencies typically do not maintain nor release such information on a uniform or consistent schedule; therefor, currency of the data may vary. Please look at the details on a specific site with a UST record in the First Search Report to determine the actual currency date of the record as provided by the relevant agency. Numerous efforts are made on a regular basis to obtain updated records.

LEAKING UST: *CA SWRCB/COUNTY* LUSTIS- The State Water Resources Control Board maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks. Information for this database is collected from the states regional boards quarterly and integrated with this database.SAN DIEGO

COUNTY LEAKING TANKS- The San Diego County Department of Environmental Health maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks within its HE17/58 database. For more information on a specific file call the HazMat Duty Specialist at phone number listed in the source information field.

OTHER: ***EPA*** SECTION SEVEN TRACKING SYSTEM (SSTS) – database of registration and production data for facilities which manufacture pesticides.AEROMETRIC INFORMATION RETRIEVAL SYSTEM (AIRS) – database of detailed information pertaining to sites which submit air emissions reports. Developed under the Clean Air Act, this database also maintains data on compliance status and enforcement actions.

RADON: *NTIS* NATIONAL RADON DATABASE - EPA radon data from 1990-1991 national radon project collected for a variety of zip codes across the United States.

Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to TRACK Info Services, certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in TRACK Info Services's databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although TRACK Info Services uses its best efforts to research the actual location of each site, TRACK Info Services does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of TRACK Info Services's services proceeding are signifying an understanding of TRACK Info Services's searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997. Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards. Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997. Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards. Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

UST HISTORICAL DATA
This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.
The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997. Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST's at their location were upgraded or removed in adherence with the 1998 RCRA standards. Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by Track Info Services. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

ID SOURCE NAME, & VALUE:	*CALSTARS CODE 400461*

BACKGROUND INFORMATION (blank below = not reported by agency)

The 3.85 acre rectangular-shaped property was used from 1960-1996 for the mixing and blending of organochlorine insecticides, herbicides, etc - including DDT, DDE, DDD, Endrin, lead, etc. Contaminated soil was remediated by excavation and incineration - without agency oversight. The site is being acquired by the City of Cerritos for the construction of a senior citizen residence.

DTSC COMMENTS REGARDING THIS SITE (blank below = not reported by agency)

Comments Date:

: *DTSC amended the VCA to review the revised PEA equivalent report. DTSC completed the review of the revised PEA and did concur with no further action recommendation. DTSC and John Enoto entered into a Voluntary Cleanup Agreement for the review of PEA (equivalent) documentation for the site which was remediated without DTSC oversight. DTSC completed review of the PEA Equivalent documents and issued their comments. The response is due September 19, 1997. DTSC received response to comments on the PEA. Health Risk Assessment is under review by HERD. DTSC completed the review of response to comments and issued comments to the PEA and required further action at the site. DTSC received revised PEA for the site after further cleanup at the site.*

DTSC COMMENTS REGARDING THIS SITE (blank below = not reported by agency)

Comments Date:

: *DTSC and Diesel ReCon Company executed a Voluntary Cleanup Agreement for a Preliminary Endangerment Assessment on the formerly leased property. DTSC recommended further action due to an unacceptable health risk level attributed to chromium. DTSC further recommends delineating the lateral and vertical extent of VOC, petroleum hydrocarbons, PAHs and metals contamination at the site. DTSC plans to write a letter inviting Diesel Recon to conduct further removal investigation (RI) at the facility under the voluntary cleanup program.*

Environmental FirstSearch Database Descriptions

NPL: ***EPA*** NATIONAL PRIORITY LIST - Database of confirmed, proposed or deleted Superfund sites.

CERCLIS: ***EPA*** COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM - Database of current and potential Superfund sites currently or previously under investigation.

NFRAP: ***EPA*** COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM ARCHIVED SITES - database of Archive designated CERCLA sites that, to the best of EPA's knowledge, assessment has been completed and has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA TSD: ***EPA*** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM TREATMENT, STORAGE, and DISPOSAL FACILITIES. - Database of facilities licensed to store, treat and dispose of hazardous waste materials.

RCRA COR: ***EPA*** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of RCRA facilities with reported violations and subject to corrective actions.

RCRA GEN: ***EPA*** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of facilities that generate or transport hazardous waste or meet other RCRA requirements.LGN - Large Quantity GeneratorsSGN - Small Quantity GeneratorsVGN – Conditionally Exempt Generator.Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List) facilities.

RCRA NLR: ***EPA*** RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of facilities not currently classified by the EPA but are still included in the RCRIS database. Reasons for non classification:Failure to report in a timely matter.No longer in business.No longer in business at the listed address.No longer generating hazardous waste materials in quantities which require reporting.

ERNS: ***EPA/NRC*** EMERGENCY RESPONSE NOTIFICATION SYSTEM - Database of emergency response actions. Data since January 2001 has been received from the National Response System database as the EPA no longer maintains this data.

STATE SITES: ***CA EPA*** SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.The SMBRPD displays information in six categories. The categories are:1. CalSites Properties (CS)2. School Property Evaluation Program Properties (SCH)3. Voluntary Cleanup Program Properties (VCP)4. Unconfirmed Properties Needing Further Evaluation (RFE)Please Note: FirstSearch Reports list the above sites as DB Type (STATE)5. Unconfirmed Properties Referred to Another Local or State Agency (REF)6. Properties where a No Further Action Determination has been made (NFA)Please Note: FirstSearch Reports list the above sites as DB Type (OTHER).Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.CORTESE LIST-Pursuant to Government Code Section 65962.5, the Hazardous Waste and Substances Sites List has been compiled by Cal/EPA, Hazardous Materials Data Management Program. The CAL EPA Dept. of Toxic Substances Control compiles information from subsets of the following databases to make up the CORTESE list:1. The Dept. of Toxic Substances Control; contaminated or potentially contaminated hazardous waste sites listed in the CAL Sites database. Formerly known as ASPIS are included (CALSITES formerly known as ASPIS).2. The California State Water Resources Control Board; listing of Leaking Underground Storage Tanks are included (LTANK)3. The California Integrated Waste Management Board; Sanitary Landfills which have evidence of groundwater contamination or known migration of hazardous materials (formerly WB-LF, now AB 3750).Note: Track Info Services collects each of the above data sets individually and lists them separately in the following First Search categories in order to provide more current and comprehensive information: CALSITES: SPL, LTANK: LUST, WB-LF: SWL

SPILLS-1990: *CA EPA* SLIC REGIONS 1 - 9- The California Regional Water Quality Control Boards maintain report of sites that have records of spills, leaks, investigation, and cleanups.

SWL: *CA IWMB/SWRCB/COUNTY* SWIS SOLID WASTE INFORMATION SYSTEM-The California Integrated Waste Management Board maintains a database on solid waste facilities, operations, and disposal sites throughout the state of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites. For more information on individual sites call the number listed in the source field.Please Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.WMUDS-The State Water Resources Control Board maintained the Waste Management Unit Database System (WMUDS). It is no longer updated. It tracked management units for several regulatory programs related to waste management and its potential impact on groundwater. Two of these programs (SWAT & TPCA) are no longer on-going regulatory programs as described below. Chapter 15 (SC15) is still an on-going regulatory program and information is updated periodically but not to the WMUDS database. The WMUDS System contains information from the following agency databases: Facility, Waste Management Unit (WMU), Waste Discharger System (WDS), SWAT, Chapter 15, TPCA, RCRA, Inspections, Violations, and Enforcement's.Note: This database contains poor site location information for many sites in the First Search reports; therefore, it may not be possible to locate or plot some sites in First Search reports.ORANGE COUNTY LANDFILLS LIST- A list maintained by the Orange County Health Department.

PERMITS: *CA COUNTY* SAN DIEGO COUNTY HE17 PERMITS- The HE17/58 database tracks establishments issued permits and the status of their permits in relation to compliance with federal, state, and local regulations that the County oversees. It tracks if a site is a hazardous waste generator, TSD, gas station, has underground tanks, violations, or unauthorized releases. For more information on a specific file call the HazMat Duty Specialist at the phone number listed in the source information field.SAN BERNARDINO COUNTY HAZARDOUS MATERIALS PERMITS- Handlers and Generators Permit Information Maintained by the Hazardous Materials Division.

OTHER: *CA EPA/COUNTY* SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.The SMBRPD displays information in six categories. The categories are:1. CalSites Properties (CS)2. School Property Evaluation Program Properties (SCH)3. Voluntary Cleanup Program Properties (VCP)4. Unconfirmed Properties Needing Further Evaluation (RFE)Please Note: FirstSearch Reports list the above sites as DB Type (STATE).5. Unconfirmed Properties Referred to Another Local or State Agency (REF)6. Properties where a No Further Action Determination has been made (NFA)Please Note: FirstSearch Reports list the above sites as DB Type (OTHER).Each Category contains information on properties based upon the type of work taking place at the site. For example, the CalSites database is now one of the six categories within SMPBRD and contains only confirmed sites considered as posing the greatest threat to the public and/or the potential public school sites will be found within the School Property Evaluation Program, and those properties undergoing voluntary investigation and/or cleanup are in the Voluntary Cleanup Program.LA COUNTY SITE MITIGATION COMPLAINT CONTROL LOG- The County of Los Angeles Public Health Investigation Compliant Control Log.ORANGE COUNTY INDUSTRIAL SITE CLEANUPS- List maintained by the Orange County Environmental Health Agency.RIVERSIDE COUNTY WASTE GENERATORS-A list of facilities in Riverside County which generate hazardous waste.SACRAMENTO COUNTY MASTER HAZMAT LIST-Master list of facilities within Sacramento County with potentially hazardous materials.SACRAMENTO COUNTY TOXIC SITE CLEANUPS-A list of sites where unauthorized releases of potentially hazardous materials have occurred.

REG UST/AST: *CA EPA/COUNTY/CITY* ABOVEGROUND STORAGE TANKS LISTING-The Above Ground Petroleum Storage Act became State Law effective January 1, 1990. In general, the law requires owners or operators of AST's with petroleum products to file a storage statement and pay a fee by July 1, 1990 and every two years thereafter, take specific action to prevent spills, and in certain instances implement a groundwater monitoring program. This law does not apply to that portion of a tank facility associated with the production oil and regulated by the State Division of Oil and Gas of the Dept. of Conservation.SWEEPS / FIDS STATE REGISTERED UNDERGROUND STORAGE TANKS- Until 1994 the State Water Resources Control Board maintained a database of registered underground storage tanks statewide referred to as the SWEEPS System. The SWEEPS UST information was integrated with the CAL EPA's Facility Index System database (FIDS) which is a master index of information from numerous California agency environmental databases. That was last updated in 1994. Track Info Services included the UST information from the FIDS database in its First Search reports for historical purposes to help its clients identify where tanks may possibly have existed. For more information on specific sites from individual paper files archived at the State Water Resources Control Board call the number listed with the source information.INDIAN LANDS UNDERGROUND STORAGE TANKS LIST- A listing of underground storage tanks currently on Indian Lands under federal jurisdiction. California Indian Land USTS are administered by US EPA Region 9.CUPA DATABASES & SOURCES- Definition of a CUPA: A Certified Unified Program Agency (CUPA) is a local agency that has been certified by the CAL EPA to implement six state environmental programs within the local agency's jurisdiction. These can be a county, city, or JPA (Joint Powers Authority). This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994.A Participating Agency (PA) is a local agency that has been designated by the local CUPA to administer one or more Unified Programs within their jurisdiction on behalf of the CUPA. A Designated Agency (DA) is an agency that has not been certified by the CUPA but is the responsible local agency that would implement the six unified programs until they are certified.Please Note: Track Info Services, LLC collects and maintains information regarding Underground Storage Tanks from majority of the CUPAS and Participating Agencies in the State of California. These agencies typically do not maintain nor release such information on a uniform or consistent schedule; therefor, currency of the data may vary. Please look at the details on a specific site with a UST record in the First Search Report to determine the actual currency date of the record as provided by the relevant agency. Numerous efforts are made on a regular basis to obtain updated records.

LEAKING UST: *CA SWRCB/COUNTY* LUSTIS- The State Water Resources Control Board maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks. Information for this database is collected from the states regional boards quarterly and integrated with this database.SAN DIEGO

COUNTY LEAKING TANKS- The San Diego County Department of Environmental Health maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks within its HE17/58 database. For more information on a specific file call the HazMat Duty Specialist at phone number listed in the source information field.

OTHER: ***EPA*** SECTION SEVEN TRACKING SYSTEM (SSTS) – database of registration and production data for facilities which manufacture pesticides.AEROMETRIC INFORMATION RETRIEVAL SYSTEM (AIRS) – database of detailed information pertaining to sites which submit air emissions reports. Developed under the Clean Air Act, this database also maintains data on compliance status and enforcement actions.

RADON: ***NTIS*** NATIONAL RADON DATABASE - EPA radon data from 1990-1991 national radon project collected for a variety of zip codes across the United States.

APPENDIX H

PERTINENT SITE INFORMATION – [redacted]

WORKERS' COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.)

Policy No. ______ Company ______

☐ Certified copy is hereby furnished.

☑ Certified copy is filed with the county building inspection department.

Date 25 Aug 87 Applicant [signature]

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(This section need not be completed if the permit is for one hundred dollars ($100) or less.)

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws.

Date ______ Applicant ______

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

Facility Decommissioning Report
Kirkhill-TA Co., SFS Division
13767 Freeway Drive
Santa Fe Springs, California

Dear Mr. Diaz:

This report serves to describe the decommissioning activities associated with the cessation of operations at the Kirkhill-TA Co., SFS Division facility located at 13767 Freeway Drive, Santa Fe Springs, California. The facility principally manufactured silicone gaskets and seals for the commercial and military aircraft industries. Manufacturing operations ceased August 22, 2003 with the transfer of needed personnel, equipment, and processes to the Kirkhill-TA Co. facility located in Brea, California. Final decommissioning activities were complete on November 5, 2003.

Kirkhill-TA Co. (KTA) purchased certain assets of the former Burke Industries, SFS Division on May 29, 2002. KTA assumed the lease of the property as part of the bankruptcy proceedings. KTA operated the Santa Fe Springs facility from May 29, 2003 until the closure described above on November 5, 2003. As of the date of this report, the building is currently vacant.

Decommissioning activities included the following:

- ***Transfer of Usable Hazardous Materials to the Brea Facility***
- ***Equipment Disconnection and Disposition***
- ***Disposal of Hazardous Wastes***
- ***Equipment and Debris Disposal***
- ***Facility Cleaning and Rehabilitation***

A brief summary of each task is described below.

A significant portion of the personnel, equipment, and processes were transferred from the Santa Fe Springs facility to the KTA facility located in Brea, California. The Brea facility also manufactures silicone gaskets and seals for the commercial and military aircraft industries. Many of the hazardous materials used in the manufacturing process were used at both facilities. A licensed hazardous materials transporter under a straight bill of lading transferred needed

hazardous materials to the Brea facility for reuse. A copy of the bill of lading is attached to this report.
Facilities Maintenance personnel between August 22 and the end of September 2003 disconnected all equipment. Manufacturing equipment was disconnected, cleaned, emptied of fluids, and then transferred to either the Brea facility or the KTA Haskon Division facility located in Taunton, Massachusetts. Ancillary equipment (i.e., boilers, compressors, tables, etc.) and idled manufacturing equipment were staged onsite for resale or salvage. The equipment disconnection and cleaning generated significant quantities of waste petroleum and petroleum contaminated debris.

On September 25th 2003, approximately 1,225 gallons of accumulated petroleum oil were transported offsite via a vacuum truck by a licensed hazardous waster transporter for recycling at a permitted facility. A copy of the recycling receipt is attached to this report. During this time, all remaining hazardous materials that had no further use were collected for disposal as hazardous waste. On October 22 and 23, 2003 the following materials were transported offsite by a licensed transporter for disposal/recycle as a hazardous waste: approximately 2 tons of petroleum contaminated debris, thirty four empty 55-gallon drums, one 55-gallon drum of mixed solvents, one 55-gallon lab pack of organic peroxides, two 55-gallon lab pack of miscellaneous flammable materials, and one 55-gallon lab pack of inorganic nitrates. Copies of the hazardous waste manifests are attached to this report.

The ancillary equipment and idled manufacturing equipment was evaluated for resale or salvage. Any equipment with resale value was sold and All Variety Metal of Santa Ana, California took the remaining equipment for scrap value. The facility was manually cleaned, several wooden demising walls in the manufacturing area were removed, selected areas inside and outside the building were pressure washed, miscellaneous attached structures were removed from the building, and several areas of the concrete floor in the manufacturing area were repaired. On November 5th, 2003 the onsite below grade vault and 3-stage clarifier were cleaned and emptied. Approximately 500-gallons of water and sludge were transported offsite via a vacuum truck by a licensed hazardous waster transporter for treatment at a permitted facility. A copy of the bill of lading is attached to this report.

The parking lots and street gutter along Marquart and Freeway Drive were swept on October 30, 2003 to complete the decommissioning activities. Photographs of the decommissioned facility are attached to this report.

KTA has requested the facility's hazardous waste identification number be terminated with the State of California (copy attached). KTA respectfully requests that the City of Santa Fe Springs terminates the facility's' hazardous material handler, hazardous waste generator, and special use permits at this time. Please feel free to contact me at (714) 529-4901 extension 5150 if any further information is required.

Sincerely,

Andrew Keller
Director Environmental Health and Safety

PROFESSIONAL EXPERIENCE AND RESPONSIBILITIES
Senior Environmental Geologist, is a California Registered Environmental Assessor with over 16 years experience. His experience includes performing and managing preliminary environmental site assessments, building material surveys, site characterizations, remediation feasibility studies, risk assessments, site remediation, remediation monitoring and confirmation, and site closure. He has been responsible for numerous government and private projects involving contaminated soil and groundwater throughout California. His project experience includes:

- **Santa Ana Unified School District:** Environmental Geologist of Phase I Environmental Site Assessments of one proposed school site and one school site expansion project. The Phase I assessments were performed in accordance with California Department of Education and California Education Code requirements. Project manager of pre-demolition hazardous building material surveys of three auto dealership buildings at a proposed school site at Main Street and Warner Avenue in Santa Ana, California.
- **Orange County Transportation Authority (OCTA):** Environmental Geologist performing Phase I and Phase II environmental site assessments along the I-5 Corridor in Orange County for the OCTA's Environmental Investigation and Remedial Services contract. Additional services under this contract included: site remediation feasibility studies and design, and site remediation.
- **Metro Pasadena Blue Line Transit Project, California:** Project Environmental Geologist providing environmental consulting services to conduct Phase I environmental site assessments and asbestos surveys for two parcels required for construction and operation of the Metro Pasadena Blue Line Transit Project.
- **Caltrans Maintenance Stations, California:** Environmental Geologist performing hazardous waste site investigations, asbestos surveys at various residential and industrial properties and the development of remedial action plans at Caltrans Maintenance Stations and various other Caltrans project sites under master contracts.
- **Environmental Consulting Services, Los Angeles County Metropolitan Transportation Authority, California:** Environmental Geologist planning, directing and reviewing environmental assessments, hazardous waste evaluations for Environmental Impact Studies and Reports for road and rail widening and realignment for various cities and rail authorities in southern California.
- **Phase II Investigation, Ormand Beach, Metropolitan Water District of Southern California, Oxnard, California:** Project Environmental Geologist responsible for performing a Phase II Investigation at a possible contaminated 300 acre property at Ormand Beach.
- **Environmental Site Assessments:** Project Environmental Geologist providing environmental site assessment of multiple properties in Los Angeles and the western United States for several major land developers.
- **Long Beach Naval Station Redevelopment Plan EIS, Long Beach, California:** Senior Environmental Geologist providing geotechnical consulting services for the Port of Long Beach for the redevelopment plan. Services included providing specific portions of the EIS relating to site geology and seismicity. Efforts consisted of review of existing data to describe the site topography, stratigrapy, structural geology, soil characteristics, and potential hazards such as active fault rupture and strong ground motion.
- **Environmental Consulting Services, Los Angeles County Metropolitan Transportation Authority, California:** Senior Environmental Geologist planning, directing and reviewing environmental assessments, hazardous waste evaluations for Environmental Impact Studies and Reports for road and rail widening and realignment for various cities and rail authorities in southern California.

Member American Indoor Air Quality Council
Certificate of Attendance, Mold Awareness Seminar, 2002
OSHA 40-hour Hazardous Waste Operations and Emergency Response Certification
First Aid and CPR 8-hour Certified

PROFESSIONAL RESPONSIBILITIES AND PROJECT EXPERIENCE

As a Senior Staff Environmental Scientist for Ninyo & Moore, Ms. Brodersen performs property transfer site assessments and hazardous material assessments, performs data acquisition, documentation, and dissemination of data related to all phases of environmental investigations, conducts investigations of subsurface contamination, including site reconnaissance, mapping and logging of exploratory borings, coordinates and supervises subsurface drilling activities, conducts investigations of subsurface contamination, including site reconnaissance, mapping and logging of exploratory borings, performs groundwater sampling and pollutant evaluations, prepares workplans, remedial action plans, and environmental site assessment reports, conducts limited asbestos surveys for residential, commercial and industrial buildings, and conducts microbial and indoor air quality assessments for residential and commercial buildings. Ms. Brodersen has four years experience in environmental consulting. Ms. Brodersen's project experience includes:

- **Phase I Environmental Site Assessments:** Performing Phase I environmental site assessments of commercial, industrial, agricultural, and residential properties throughout the western United States for various financial institutions and land developers. Reviewing regulatory files various government agencies to determine the extent of contamination at facilities. Performing Phase I environmental site assessments of large blocks of residential, commercial and industrial properties being considered as potential public school sites.
- **Newhall Land and Farming Company, Santa Clarita, California:** Ms. Brodersen performed numerous Phase I Environmental Assessments for a major residential and commercial development. Responsibilities of Ms. Brodersen included site reconnaissance, agency record reviews, historical records review, and interviews with land owners and agency officials. The properties contained recognized environmental conditions such as: existing underground storage tanks, former underground storage tanks, oil pipelines beneath the properties, leaking oil pipelines adjacent to properties, and storage of hazardous materials. Phase II investigations were completed where appropriate and the properties are destined for redevelopment.
- **Phase II Environmental Site Assessments:** Conducting Phase II subsurface investigations for industrial, commercial and residential properties with petroleum and solvent contamination utilizing various technologies including hand-auger, hollow-stem and direct-push drilling methods. Performing sampling and profiling of excavated contaminated soil for off-site disposal at licensed facilities.
- **Puente Hills Toyota, City of Industry, California:** Ms. Brodersen oversaw the removal of a clarifier and approximately 2,700 tons of soil impacted with waste oil from former underground storage tank pits and hydraulic hoist pits. Ms. Brodersen was responsible for collecting soil samples, managing a construction crew, managing the transportation of impacted soil to the proper disposal facilities, and interacting with regulators. The property was remediated and received a no further action letter by the Los Angeles County Department of Public Works.
- **Commercial property, Los Angeles, California:** Ms. Brodersen oversaw soil sampling, soil gas sampling, and the installation and development of numerous groundwater monitoring wells at a commercial property formerly occupied by two separate gasoline stations. Ms. Brodersen is responsible for conducting quarterly monitoring of the property.
- **Environmental Tenant Audits:** Performing environmental tenant exit audits of hazardous materials usage, storage and disposal at commercial and industrial facilities.
- **Subsurface Characterization:** Installation and development of groundwater monitoring wells. Studies by back-hoe trenching and studies of groundwater monitoring wells.
- **Asbestos Surveys:** Performing asbestos surveys for various buildings throughout Southern California. The asbestos surveys included collection of interior and exterior suspect building materials samples in conjunction with Phase I Environmental Site Assessments.
- **Microbial Investigations:** Performing sampling survey for bioaerosols, microbial contaminants, and air quality.
- **Veterans Park and Sports Complex, Carson, California:** Ms. Brodersen oversaw the removal and clearance sampling of mold impacted building materials located throughout the sports complex.

EXECUTIVE SUMMARY

This report presents the results of soil, soil vapor, and groundwater sampling conducted by WorleyParsons Komex on April 16, 2008 at Former Burke Industries, located at 13767 Freeway Drive, in Santa Fe Springs, California (herein referred to as the Site.

The purpose of this investigation was to provide an assessment of soil, soil vapor, and groundwater conditions at the Site in order to evaluate the potential impact of suspected contaminants on the planned CalTrans' construction activities as part of the Route 5 – Carmenita Road interchange improvement project as well as provide a cost estimate for any necessary Site cleanup as part of the acquisition.

Scope of Work

The project scope of work included the installation of 3 soil vapor probes, the collection of soil vapor samples at 1.5 and 4.6 meters (m) below ground surface (bgs) (in two of the boreholes) and at 1.6 and 4.6 m bgs in the third borehole. Vapor samples were then submitted for analysis of volatile organic compounds (VOCs) using an on-site mobile laboratory. The scope of work also included the advancement of 3 shallow soil boreholes to first groundwater and the collection of soil samples and three groundwater samples for analysis of total petroleum hydrocarbons, VOCs, semi-VOCs (SVOCs), pH, and Title 22 metals(including hexavalent chromium and aluminum (groundwater samples).

Findings of Investigation

A concentration of benzene below the residential and industrial California Human Health Screening Levels (CHHSLs) for shallow soil vapor human health screening levels, (vapor intrusion), of 0.122ug/L was reported in one sample during the investigation. Benzene was detected at 1.5 m (5 ft) bgs. . (redundant sentence)

Concentrations of arsenic, above the residential and industrial CHHSLs, were detected in all 9 of the soil samples collected during this investigation. These concentrations ranged from 2.8 mg/kg to a maximum concentration of 11 mg/kg (borehole 966-701 at 7.6 m [25 ft] bgs). The residential and industrial CHSSLs for arsenic are 0.07 and 0.24 mg/kg, respectively. Naturally occurring arsenic in soil is often present at concentrations that exceed both residential and industrial values provided by the CHHLS. A report issued by the DTSC in 2005 concluded that background concentration for naturally occurring arsenic in soils at Los Angeles Unified School District (LAUSD) sites with a 95% upper confidence limit of the 99th percentile concentration is 6 mg/kg. The DTSC states that the data presented in the report should not be used as site specific clean-up goals for school site, or non-school sites, but the data is useful for comparative purposes (DTSC 2005).

Total chromium was detected in all 9 soil samples ranging in concentration from 12 mg/kg to a maximum concentration of 23 mg/kg (borehole 966-703 at 1.5 m). However, concentrations did not exceed the residential and industrial total chromium CHHSL of 100,000 mg/kg. Hexavalent chromium was only reported in one soil sample from 966-703 at 1.5 m bgs at a concentration of 1 mg/kg, below the residential CHHSL of 17 mg/kg for hexavalent chromium.

Cis-1,2-dichloroethene was reported above laboratory reporting limits and California Department of Public Health Drinking Water Standard MCL of 6 ug/L in two of the three groundwater samples at concentrations of 13 and 30 ug/L, in boreholes 966-702 and 966-703 respectively.

Conclusions and Recommendations

The following conclusions were reached regarding data collected during this investigation:

a) The soil vapor survey, encompassing six probes in three boreholes indicates the presence of benzene at the reporting limit of 0.1 ug/L. Benzene was detected in borehole 966-701 at the 1.67 m (5.5 ft) sample, indicating the presence of VOCs in the shallow soil vapor beneath the Site.

b) The soil investigation activities, encompassing nine soil samples from three soil boreholes indicates the presence of benzene in all three boreholes ranging in concentration from 5.1 to 15 ug/kg (in borehole 966-703 from 7.6 m (25 ft) bgs). Toluene was also detected in all three boreholes at concentrations ranging from 5.5 to 12 ug/kg, all at the 7.6 m (25 ft) depth. The data indicate the presence of VOCs in soils underlying the Site.

c) Chlorinated solvents, TCE, and the degradation product, cis-1,2-dichloroethene, were detected in all three groundwater samples, with the highest concentrations from borehole 966-703, towards the northwest. The contaminants encountered are consistent the historical activities at former Burke Industries which manufactured gaskets and seals with the use of petroleum hydrocarbons and solvents.

d) Some metals detected in soil and groundwater marginally exceeded their applicable standards. Concentrations of arsenic typical of background conditions for soils at Los Angeles Unified School District were detected in soil samples collected as part of this investigation.

e) Quality assurance/quality control data are acceptable, indicating that the data collected is valid and reliable interpretations may be drawn for the purposes of this investigation.

f) Based on the findings of the investigation conducted at the Site, WorleyParsons Komex recommends further site investigation to delineate the vertical and horizontal extent of the contamination in groundwater, and preparation of a remedial action plan to address the issues.

PHASE II ENVIRONMENTAL SITE INVESTIGATION REPORT FORMER BURKE INDUSTRIES 13767 FREEWAY DRIVE, SANTA FE SPRINGS, CALIFORNIA

---

1. PROJECT DESCRIPTION

This report presents the results of soil, soil vapor, and groundwater sampling conducted by WorleyParsons Komex between April 16, 2008 at Former Burke Industries, located at 13767 Freeway Drive, in Santa Fe Springs, California (herein referred to as the Site; **Figure 1**). This work was conducted on behalf of the California Department of Transportation, District 7 (CalTrans).

1.1 Purpose and Objective

CalTrans proposes to improve the I-5 interchange at Carmenita Road. The existing interchange is inadequate for the present and future traffic demands, therefore, new infrastructure must be developed to improve present traffic congestion and to accommodate predicted future traffic demands.

The purpose of this investigation was to provide an assessment of soil, soil vapor, and groundwater conditions at the Site in order to evaluate the potential impact of suspected contaminants on the planned CalTrans' construction activities as part of the Route 5 – Carmenita Road interchange improvement project as well as provide a cost estimate of any potentially necessary cleanup for the Site acquisition. The project objectives were as follows:

a) Conduct a soil vapor survey to evaluate the Site for the presence of volatile organic compounds (VOCs);

b) Advance boreholes and collect samples for the evaluation of shallow soils, and samples for the evaluation of first groundwater for the presence of total petroleum hydrocarbons, pH, VOCs, semi-VOCs (SVOCs), and metals, (including hexavalent chromium and aluminum);

c) Prepare a Site investigation report of the findings of the soil vapor, soil, and groundwater data, including an evaluation and discussion of the data, and preparation of recommendations including, estimated costs to remove/remediate chemically-impacted soils and groundwater and/or conduct additional site investigation activities, as necessary.

1.2 Project Background and Previous Investigations

In June 2004, Professional Service Industries, Inc. (PSI) completed an Initial Site Assessment (ISA) of the I-5 Widening Project located in the Cities of Santa Fe Springs and Norwalk, Los Angeles County, California. The ISA included a field reconnaissance of the Site vicinity and its adjoining properties, interviews, and review of historic records and regulatory databases in an effort to identify evidence of previously recognized environmental conditions (current and historic). No hazardous material incidents were reported to have taken place on the Site. The Site was not identified in the Environmental FirstSearch database or during the regulatory records review as having any regulated quantities of hazardous materials, USTs, or any spills or releases to the environment (PSI, 2004).

In June 2006, Ninyo & Moore (N&M) conducted an ISA of the Site. According to N&M, the Site has no specific areas of suspected contamination within the frontage take area, although the subsurface beneath the take area may have been impacted by the general use of petroleum hydrocarbons, and solvents at the former Burke Industries, a manufacturer of gaskets and seals (N&M 2006).

Also in June 2006, N&M prepared a site investigation work plan for several properties, including the Site. In this work plan, N&M recommended the following scope of work:

a) Advance two soil boreholes to 4.6 meters (m [15.09 feet {ft.}]) below ground surface (bgs) and analyze soils samples for petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and metals.

A Site plan depicting N&M-recommended soil borehole locations was included in the work plan. CalTrans and WorleyParsons discussed the proposed plan and amended it to include one more borehole, include groundwater samples, and to expand the analysis (details of the amended scope of work are in Section 4.4).

2. SITE DESCRIPTION

2.1 Site Location

The parcel is identified by the Los Angeles County Assessor's Parcel Number (APN) 8069-015-045, with the address 13767 Freeway Drive, Santa Fe Springs, California. It is located approximately 2,100 feet east of Carmenita Road, north of Interstate Highway 5.

2.2 Site and Vicinity Land Usage

The Site is currently a vacant landscaped portion of a larger property which was formerly used by Former Burke Industries for the manufacturing of gaskets and seals. The proposed take area of the property only includes the landscaped frontage area adjacent to Freeway Drive. The Site is located in an industrial area dominated by warehouses, businesses, fast-food restaurants, railroad tracks and other manufacturing/industrial facilities.

The Site is bordered to the south by Route 5 and to the north by commercial/industrial park. To the east and to the west are various industrial facilities.

2.3 Regional Physiographic Setting

According to the U.S. Geological Survey (USGS) topographic map, Whittier, California Quadrangle (1981), the Site elevation is approximately 78 feet above mean sea level. The Site is located within the Santa Fe Springs Plain of the Los Angeles Central Groundwater Basin.

2.4 Regional Hydrogeology and Drainage

The Coastal Plain of Los Angeles County is a deep groundwater reservoir filled by unconsolidated alluvial sands, gravels, clays, and silts. Fresh-water aquifers extend to depths of over 2,000 feet. The Site lies within the Central Basin groundwater basin.

Groundwater levels vary beneath the Site. Based on review of available information on LUST sites obtained from the State Water Resources Control Board GeoTracker website, the depth to shallow groundwater in the Site vicinity ranges from approximately 15 to 30 feet bgs. The groundwater flow direction in the Site vicinity is primarily to the north and east; however, groundwater flows to the south and southwest in localized areas, specifically near Carmenita Road south of Firestone Boulevard. Regional groundwater flow is to the southwest (N&M, 2006).

2.5 Regional Geology

Los Angeles County is underlain by the Los Angeles County Coastal Plain and is bounded by the Santa Monica Mountains to the north, the low lying Elysian, Repetto, Merced, and Puente Hills to the northeast, a political boundary coinciding with the boundary between Los Angeles County and Orange County to the southeast, and the Pacific Ocean to the southwest. The Site is situated on the Santa Fe Springs Plain of the Los Angeles Coastal Plain. Prominent features include the Puente and Coyote Hills to the northeast, east, and southeast and the San Gabriel River to the west. The Santa Fe Springs Plain is located south of Whittier and east of the San Gabriel River, in the area of the City of Santa Fe Springs. The Santa Fe Springs Plain is a low, slightly rolling topographic feature and represents a continuation of the Coyote Hills Uplift to the southeast. The Los Angeles Coastal Plain surficial geology generally consists of alluvial materials deposited by the Los Angeles, San Gabriel, and Santa Ana Rivers during the late Pleistocene (N&M, 2006).

The Site area is underlain by over 100 feet of late Pleistocene alluvium, part of the Lakewood Formation. The Lakewood Formation consists of interbedded, unconsolidated, clays, silts, silty sands, and sands representative of stream-type alluvial and floodplain deposits (N&M, 2006).

2.6 Site-Specific Stratigraphy

Based on lithologic data obtained from soil boreholes (**Appendix 1**) logged during this investigation, the Site lithology can be generally described as follows: a 1.5 m (5 ft) interval of silt, underlain by a light brown sand, interbedded with silty sand/sandy silt to the total depth of investigation at boreholes 966-701 and 966-702, 8.4 and 8.7 m (27.8 and 28.8 ft) bgs, respectively. In borehole 966-703 silty sand was encountered from surface to approximately 6.09 m (20 ft), followed by silty clay to the total depth of the borehole, 8.8 m (29 ft).

2.7 Site-Specific Hydrogeology

During site investigation activities groundwater was encountered between 6.1 and 6.5 m bgs (20.04 and 21.4 feet bgs). In boreholes 966-701 and 966-702, groundwater was encountered in a silty sand to sandy silt material, at approximately 6.39 and 6.5 m (20.99 and 21.4 feet) bgs, respectively. In borehole 966-703 groundwater was encountered in a silty clay material at 6.1 m (20.04 ft) bgs.

3. INVESTIGATIVE METHODS

3.1 Investigation Summary

On April 16 2008, three soil vapor probes and three soil boreholes were advanced at the Site by InterPhase Environmental, under the supervision of WorleyParsons personnel. Prior to advancing the soil vapor probes and soil boreholes, each of the borehole locations was investigated by Spectrum Geophysics for evidence of subsurface utilities using a combination of ground penetrating radar, a high sensitivity metal detector, a shallow focus metal detector, and an electromagnetic utility locator. The sole purpose of Spectrum's investigation was subsurface utility clearance in order to confirm that the proposed borehole locations were free of underground obstructions prior to commencing drilling activities. A copy of Spectrum Geophysics project summary field report is contained in **Appendix 2**. Additionally, prior to any subsurface investigation, Dig Alert was notified 48 hours prior to the commencement of field work. All field work was conducted in accordance with the Project Health and Safety Plan (HaSP) contained in **Appendix 4,** which included a daily tailgate safety meeting.

The soil vapor probes were advanced to 4.6 m (15 ft) bgs for the collection of soil vapor samples at 1.6 and 4.4 m (5.5 and 14.5 ft) bgs in boreholes 966-701 and 966-702, in borehole 966-703 the probes were set at 1.37 and 4.4 m (4.5 and 14.5 ft) bgs. The soil vapors probe depths were adjusted due to subsurface lithology (probes were not placed in silt or clay) and with prior approval with the CalTrans field supervisor. The three soil boreholes (966-701, 966-702 and 966-703) were advanced to 8.47, 8.77 and 8.83 m (27.8, 28.8, and 29 ft) bgs, respectively. Soil samples were collected at 1.5, 4.6, and 7.6 m (5, 15 and 25 ft) bgs. Groundwater samples were collected from all three boreholes. The borehole locations, depicted on **Figure 2,** were placed at each end of the long narrow take section. No facilities or structures exist on the strip of property investigated, therefore the locations of the boreholes were placed in areas that would provide representative samples exhibiting average properties of the site as a whole and represent the variability of the site.

It should be noted that this scope of work differs from the original N&M site investigation work plan. These differences include changes in sample depths and laboratory analyses. The full extent of these changes is discussed in **Section 4.4**.

3.2 GPS Survey of Borehole Locations

On May 1, 2008, the latitude and longitude of the exterior site boreholes were surveyed using a Trimble® GeoExplorer 2005 Series global positioning system (GPS) unit. All borehole locations were surveyed to within an accuracy of 6-inches or less. A table summarizing the GPS survey data for the Site boreholes is included in **Table 7**.

3.3 Direct Push Soil Sampling Methodology

In accordance with Task Order No. 4, the soil boreholes were initially advanced using a 4-inch diameter hand auger, from the surface to a depth of 1.5 m (5 ft) bgs, then continued using a direct push drill. On April 16, 2008, InterPhase Environmental, under the supervision of WorleyParsons Komex personnel advanced three boreholes using the direct push method. All of these boreholes were cored and sampled using a 1.25-inch diameter by 2-foot long sample barrel retrieving samples in acetate sleeves. Soil samples were collected from 1.5, 4.6, and 7.6 m (5, 15, and 25 feet) bgs within each borehole.

Below 1.5 m (5 ft) bgs, the boreholes were sampled advancing a core barrel equipped with an acetate sample sleeve two feet into the undisturbed soil.

3.3.1 Soil Logging and Sample Collection

Soil samples collected during the advancement of each soil borehole were continuously observed for significant changes in lithology. Soil samples were described and recorded on a borehole log by a WorleyParsons Komex geologist in accordance with the visual manual protocols for the Unified Soil Classification System (USCS). This information included borehole and sample depths, sample recovery, visual descriptions (including soil type, grain size, sedimentary textures, color, plasticity, density and moisture content) and field VOC readings using a photoionization detector (PID). Soil borehole logs presenting the lithologic descriptions and soil intervals sampled at each borehole are included in **Appendix 1**.

Soil samples were collected from the acetate sleeves using USEPA Method 5035 for VOC analysis. Easy Draw soil sample syringes were used to collect 5-gram aliquots of soil from each of the soil samples for VOC and TPHg analyses. The sub-cored soil sample was extruded from the syringe into pre-labeled 40-milliliter (mL) volatile organic analysis (VOA) vials, provided by Sierra Analytical Labs, containing pre-measured quantities of preservative. One vial contained 10 mL of methanol preservative and the other two vials contained 5.0 mL of sodium bisulfate preservative. Three sub-cored soil samples were collected from each primary soil sample. After the 5-gram aliquot of soil was extruded into the vial, the vial was immediately capped. The sample labels on the vials and the chain-of-custody from were filled out and the vials placed in a cooler maintained at 4 degrees Centigrade (plus or minus 2 degrees Centigrade). The acetate sleeve containing the remainder of the soil samples were capped with Teflon sheeting and plastic end caps for analysis of petroleum hydrocarbons, carbon chain speciation, SVOCs Title 22 metals, aluminum, chromium, and pH. Each set of soil samples was placed in a clean re-sealable plastic bag. Additionally, a small amount of soil was set aside in a re-sealable plastic bag for in-field headspace analysis using a PID.

The samples were kept in direct possession of the field geologist or in a secured and locked refrigerator at WorleyParsons Komex's offices in Long Beach, California until transfer of sample custody to Sierra Analytical Labs. Sierra Analytical Labs inspected the samples and acknowledged receipt of the samples in good condition and at the proper temperature by signing the chain-of-custody form. Each sample was labeled according to the CalTrans sample naming convention (e.g. 966-703-1.5), including the date and time of sample collection and the initials of the sampler.

3.3.2 Abandonment Procedures

Upon completion of soil sample collection activities, the boreholes were backfilled to within 6 inches of the ground surface with hydrated bentonite chips. Bentonite chips were hydrated with potable water at an approximate ratio of 2 parts chips to 1 part water. The upper 6 inches of the boreholes was then patched with the grass removed prior to advancing boreholes in 966-701 and 966-702. In borehole 966-703 the borehole was backfilled with bentonite to surface. Photo documentation is provided in **Appendix 5**.

3.4 Soil Vapor Sampling Methodology

Soil vapor sampling was performed in accordance with the joint Department of Toxic Substances Control (DTSC) and Regional Water Quality Control Board, Los Angeles Region (RWQCBLAR) Advisory for Active Soil Gas Investigations (Cal/EPA, January 2003) and the N&M Site investigation work plan (N&M, 2006). A California Department of Public Health Environmental Laboratory Accreditation Program (ELAP) certified mobile laboratory operated by H&P was used to sample and analyze soil vapor samples on-Site. A unique polyethylene syringe was used at each soil vapor sampling location to purge and sample soil vapor at a rate between 100 to 200 milliliters per minute.

3.4.1 Purge Volume Test

During the first day of soil vapor sampling, a purge test was conducted in soil vapor probe 966-701-1.67 to determine the optimum purge volume. One, three, and seven volumes were purged from the soil vapor probe. Benzene was detected in all three purge volume tests at 0.1 ug/L; therefore, a default of three purge volumes was used for the sampling program, in accordance with the Soil Gas advisory document.

3.4.2 Soil Vapor Probe Installation and Sampling

Temporary soil vapor sampling wells were installed at each soil vapor sampling location using a direct push drill rig. A 1.25-inch diameter hollow steel drill rod with a solid stainless steel cone at the tip was advanced through the soil to the target depth and retracted. Temporary vapor wells were constructed in each of the three boreholes using virgin 0.17-inch inside diameter (ID) Polyethylene tubing and a virgin 1-inch “air stone” screened section. The borehole annular space surrounding the air stone section was filled with washed gradation 2/12 Monterey sand to serve as a filter pack. Above the filter pack for the deeper soil vapor probe a one foot section of dry bentonite was placed, followed by hydrated bentonite. The dry bentonite is placed with the objective of collecting a depth discrete sample by preventing ambient air intrusion and cross contamination. In the shallow vapor probes, a one foot interval of bentonite was placed above and below the filter pack. In the remainder of the annular space, a seal was constructed using bentonite chips, which were hydrated in place and allowed to set. During the placement of the filter pack and the granular bentonite, a tape measure was placed down the borehole to insure correct depth, and to assure that bridging did not occur. The temporary vapor probes were allowed to equilibrate for a minimum of 30 minutes prior to soil vapor sampling. Refer to the borehole logs in **Appendix 1** for the soil vapor probe construction details.

Three volumes of void space were purged at a rate between 100 to 200 milliliters per minute using a virgin syringe prior to sample collection. Soil vapor samples were collected by H&P Mobile Geochemistry (H&P) personnel using a vapor-tight syringe in accordance with the DTSC protocol for soil vapor surveys (DTSC, 2003).

Two soil vapor samples were collected from each probe at 1.6 m and 4.4 m (5.5 ft and 14.5 ft) bgs in boreholes 966-701 and 966-702, and at 1.37 and 4.4 m (4.5 and 14.5 ft) bgs in borehole 966-703. A total of six primary soil vapor samples and two additional purge test samples were collected for VOC analysis.

3.4.3 Leak Test Compound

The compound 1,1-difluoroethane (1,1-DFA) was used as a leak detect compound. The leak detect compound was applied to a cloth, which was then placed at the interface between the polyethylene tubing and the ground surface in all soil vapor sampling locations with the objective to assess the potential of atmospheric air infiltrating the soil vapor probe through the surface seal.

3.4.4 Abandonment Procedures

When soil vapor sampling was completed, the sample tubing was removed. After removal, the remaining void was backfilled with hydrated bentonite chips until slightly below grade. The remaining uppermost void of the boreholes were then patched with the grass removed prior to advancing boreholes in 966-701 and 966-702. In borehole 966-703 the borehole was backfilled with bentonite to surface.

3.4.5 Quality Assurance/Quality Control

Quality assurance/quality control (QA/QC) sampling and procedures were followed in accordance with the Cal/EPA protocol for soil vapor investigations (January, 2003). Surrogates (dibromofluoromethane, 1,2-dichloroehtnae-d4, toluene-d8, and 4-bromofluorobenzene) were added to samples to assess any losses of vapor from the syringe during the interval between sample collection and analysis by evaluating the recovery rates. Additionally, an analytical method blank was analyzed during sample analysis. A desktop review of the laboratory report indicates that all surrogate recoveries and blank analysis were within acceptable limits. Duplicate samples were analyzed at a rate of one per day. Blanks were not analyzed during this investigation.

3.5 Groundwater Sampling Methodology

Temporary groundwater wells were installed and constructed using new 1-inch O.D. PVC. Once temporary wells were installed, groundwater levels were measured using a Solinist Model 101 water level meter with an accuracy of up to 0.01 ft, and groundwater samples were collected using a disposable 0.75-inch diameter polyethylene bailer to extract groundwater from the screened interval.

3.5.1 Screen Placement

During drilling activities, groundwater was encountered at approximately 6 m (20 ft) bgs. Prior to the installation of the temporary wells and selecting the screen placement, the drill rods were left in place for a minimum of 10 minutes to allow groundwater levels to equilibrate. Once the groundwater level stabilized, a groundwater level measurement was taken with a Solinist water level meter. The boreholes were advanced to approximately 8.7 m (28 ft) bgs before placing the screened interval of the temporary well in order to have enough saturated screen length to obtain an adequate groundwater sample. The ten foot length screen interval was then placed across the static water level.

3.5.2 Fluid Measurement and Groundwater Sampling

After installation of the temporary well in boreholes 966-701, 966-702 and 966-703 and prior to sample collection, the depth to groundwater from the ground surface was measured using an electric water level meter and recorded in the field notes. Groundwater measurements for each borehole were as follows:

a) 966-701. Groundwater depth was 6.5 m (21.4 ft) bgs;

b) 966-702. Groundwater depth was 6.39 m (20.99 ft) bgs; and

c) 966-703. Groundwater depth was 6.1 m (20.04 ft) bgs.

The groundwater samples were collected using a polyethylene disposable bailer by gently lowering the bailer just below the water surface, being careful to avoid disturbing the groundwater surface. Each sample was transferred from the bailer into four 40 mL volatile organic analysis (VOA) vials preserved with hydrochloric acid (HCl), filled until a meniscus formed, capped, and checked for any air bubbles. If air bubbles were observed or sample vial overfilled, the sample was discarded and new sample collected. Groundwater samples were also collected from each borehole for metals and SVOC analysis. The groundwater sample for SVOCs and metals was poured into a one liter amber bottle. The sample labels on the containers and chain-of-custody form were filled out and the containers placed in a cooler maintained at 4 degrees C (plus or minus 2 degrees C).

Sample handling, transport, and delivery to the laboratory were performed using chain-of-custody procedures in general accordance with American Society for Testing and Materials (ASTM) Method

D4840: Standard Practice for Sampling Chain of Custody Procedures. Copies of chain of custody forms are included along with the analytical laboratory reports in **Appendix 4**.

Duplicate soil gas samples were collected as part of the field QA/QC program. Duplicate soil and groundwater samples were not collected, and field blank samples were not collected.

3.6 Sample Analyses

Soil samples submitted for analysis were screened in the field using a PID, calibrated with isobutylene. Field screening was conducted in order to assess each sample for the presence of VOCs. Headspace screening was conducted by placing a small portion of a soil sample in a re-sealable plastic bag. After a short period of equilibration, the tip of the PID was inserted through the plastic to obtain and record each headspace reading. Headspace measurements for each soil sample were recorded on the soil borehole logs included in **Appendix 1**.

Soil samples were analyzed for the following:

- TPH in accordance with United States Environmental Protection Agency (USEPA) Method 8015M;
- VOCs in accordance with USEPA Method 8260B;
- SVOCs in accordance with USEPA Method 8270C;
- Title 22 metals in accordance with USEPA Method 6010B;
- Hexavalent chromium in accordance with USEPA Method 7199A (Method 7196 was not used because it is less sensitive and cannot achieve as low a detection level as Method 7199A); and,
- pH in accordance with Conventional Chemistry Parameters by APHA/EPA Method.

Soil vapor samples were analyzed on-site by a mobile laboratory for VOCs in accordance with USEPA Method 8260B.

Groundwater samples were analyzed for the following:

- TPH in accordance with United States Environmental Protection Agency (USEPA) Method 8015M;
- VOCs in accordance with USEPA Method 8260B;

  SVOCs in accordance with USEPA Method 8270C;
- Title 22 metals (including hexavalent chromium and aluminum) in accordance with USEPA Method 6010B.
- Hexavalent chromium in accordance with updated USEPA Method 7199

3.7 Decontamination Procedures

All reusable downhole drilling and sampling equipment was decontaminated by manually cleaning the equipment between each borehole or between each use. Soil sampling tools were cleaned between each use and new gloves donned, while hand augering equipment was cleaned between each borehole. Manual cleaning procedures included an initial tap water rinse to remove visible soil and mud and any residual contaminants followed by an Alconox and water wash, rinse with tap water, and final rinse with deionized water. A plastic brush was used to clean all downhole tools. Decontamination water used to clean drilling and sampling equipment was contained in labeled Department of Transportation (DOT)-approved 15-gallon drum and temporarily stored off-Site at a CalTrans-approved location. Excess soil cuttings removed from the boreholes were also stored in a labeled DOT-approved 55-gallon drum and temporarily stored at the off-Site CalTrans location.

3.8 Disposal of Investigation Derived Waste

Soil cuttings and decontamination water generated during the investigation are temporarily stored at the CalTrans temporary storage facility in clearly labeled Department of Transportation (DOT)-approved 55-gallon drums. After profiling, the wastes were removed from the Site by a licensed waste transporter for off-site disposal and sent to Crosby and Overton in Long Beach, CA.

4. FIELD OBSERVATIONS AND INVESTIGATIVE RESULTS

During this investigation, nine soil samples and three groundwater samples were collected and submitted to Sierra Analytical of Laguna Hills, California for chemical analyses, and six soil vapor samples were analyzed on-Site by a mobile laboratory operated by H&P. Both mobile and fixed laboratories are certified with the California Department of Public Health ELAP for analysis of samples. **Table 1** summarizes analytical data for TPH and VOC analysis of soil samples, **Table 2** summarizes the analytical data for SVOCs analysis of soil samples, **Table 3** summarizes the results of the Title 22 metals analysis for soil samples, **Table 4** summarizes the results of pH in soil samples, **Table 5** summarizes the VOC, SVOCs, and metals analysis for groundwater samples, and **Table 6** summarizes the VOC analytical data for the soil vapor samples.

4.1 Soil Analytical Results

4.1.1 TPH, VOCs, and SVOCs

TPH was not detected above laboratory reporting limits in any of the 9 soil samples collected at the Site during the current investigation.

Benzene was reported in 3 of the 9 soil samples; 5.1 ug/kg from borehole 966-701 at 1.5 m (4.9 ft) bgs, 11 ug/kg from borehole 966-702 at 7.6 m (24.9 ft) bgs, and a maximum concentration of 15 ug/kg from borehole 966-703 at 7.6 m (24.9 ft) bgs.

Toluene was reported in 3 of the 9 soil samples; 5.5 ug/kg from borehole 966-701 at 7.6 m (24.9 ft) bgs, 7.9 ug/kg from borehole 966-703 at 7.6 m (24.9 ft) bgs, to a maximum concentration of 12 ug/kg from borehole 966-702 at 7.6 m (24.9 ft) bgs.

SVOCs were not detected above laboratory reporting limits in any of the 9 soil samples collected at the Site during the current investigation.

A summary of the TPH, VOCs, and SVOCs in soil results are contained in **Table 1** and **Table 2**. Analytical laboratory reports are included in **Appendix 4**.

4.1.2 Metals

A summary of metal analytical results for the 9 soil samples collected during this investigation is presented in **Table 3**. The following metals were detected in soil samples during this investigation:

a) Arsenic, detected in all 9 soil samples at concentrations ranging from 2.8 mg/kg to a maximum concentration of 11 mg/kg in borehole 966-701 at 7.6 m (25 ft) bgs;

b) Barium, detected in all 9 soil samples at concentrations ranging from 66 mg/kg to a maximum concentration of 200 mg/kg in borehole 966-703 at 1.5 m (5 ft) bgs;

c) Cobalt, detected in all 9 soil samples at concentrations ranging from 6.8 mg/kg to a maximum concentration of 11 mg/kg in borehole 966-701 at 1.5 m (5 ft) bgs, 966-702 at 1.5 m (5 ft) bgs, and 966-703 at 1.5 and 4.6 m (5 and 15 ft) bgs;

d) Copper, detected in all 9 soil samples at concentrations ranging from 13 mg/kg to a maximum concentration of 31 mg/kg in borehole 966-703 at 1.5 m (5 ft) bgs;

e) Total lead, detected in all 9 soil samples at concentrations ranging from 2.6 mg/kg to a maximum concentration of 4.8 mg/kg in borehole 966-703 at 1.5 m (5 ft) bgs;

f) Nickel, detected in all 9 soil samples at concentrations ranging from 8.9 mg/kg to a maximum concentration of 17 mg/kg in borehole 966-701 at 1.5 m (5 ft) bgs, and 966-703 at 1.5 m (5 ft) bgs;

g) Silver, detected in all 9 soil samples at concentrations ranging from 1.3 mg/kg to a maximum concentration of 2.1 mg/kg in borehole 966-701 at 1.5 m (5 ft) bgs, and 966-702 at 1.5 m (5 ft) bgs;

h) Hexavalent chromium was only detected in one soil sample at a concentration of 1.0 mg/kg from 966-703 at 1.5 m (5 ft) bgs.

i) Total chromium, detected in all 9 soil samples at concentrations ranging from 12 mg/kg to a maximum concentration of 23 mg/kg in borehole 966-703 at 1.5 m (5 ft) bgs;

j) Vanadium, detected in all 9 soil samples at concentrations ranging from 22 mg/kg to a maximum concentration of 40 mg/kg in borehole 966-703 at 1.5 m (5 ft) bgs; and

k) Zinc, detected in all 9 soil samples at concentrations ranging from 29 mg/kg to a maximum concentration of 50 mg/kg in boreholes 966-701 at 1.5 m (5 ft) bgs.

The metals' concentrations in soils relative to California Human Health Screening Levels (CHHSLs) and RWQCB ESLs are discussed in **Section 7**. Analytical laboratory reports are included in **Appendix 4**.

4.1.3 pH

pH analysis was conducted for all soil samples during the current investigation, results ranging in concentration from 7.24 pH Units in 966-701 at 4.6 m (15 ft) bgs to 7.87 pH Units in 966-703 at 7.6 m (25 ft) bgs.

4.2 Groundwater Analytical Results

Three groundwater grab samples were collected during the current investigation from boreholes 966-701, 966-702, and 966-703.

4.2.1 TPH VOCs, and SVOCs

A summary of the TPH, VOCs, and SVOCs in groundwater are contained in **Table 5**. Analytical laboratory reports are included in **Appendix 4**.

TPH was not detected above laboratory reporting limits in any of the groundwater samples collected during the current investigation.

1,1 Dichloroethane was detected above reporting laboratory limits in one sample at a concentration of 2.6 ug/L in groundwater sample from 966-703.

1,1 Dichloroethylene was detected above laboratory reporting limits in one sample at a concentration of 5.6 ug/L in groundwater sample from 966-703.

Cis-1,2 Dichloroethene (cis-1,2 DCE) was reported in all three groundwater samples ranging in concentration from 1.4 ug/L to a maximum concentration of 30 ug/L from 966-703.

Trichloroethene (TCE) was detected above reporting laboratory limits in one sample at a concentration of 2.9 ug/L in groundwater sample from 966-703

SVOCs were not detected above laboratory reporting limits in any of the groundwater samples collected during the current investigation.

4.2.2 Metals

A summary of metal analytical results for the 3 groundwater samples collected during this investigation are presented in **Table 5**. The following metals were detected in groundwater samples during this investigation:

a) Aluminum, only detected from the groundwater sample collected from borehole 966-702 at a concentration of 0.11 mg/L.

b) Barium, detected in all three groundwater samples ranging in concentrations from 0.16 mg/L to a maximum concentration of 0.31 mg/L from 966-701;

c) Molybdenum, detected in two of the groundwater samples, 966-701 and 966-702, at concentrations of 0.047 and 0.062 mg/L, respectively.

The metals' concentrations in groundwater relative to California Human Health Screening Levels (CHHSLs) and RWQCB ESLs are discussed in **Section 7**. Analytical laboratory reports are included in **Appendix 4**.

4.3 Soil Vapor Sample Analytical Results

A total of 6 soil vapor samples were analyzed on-Site by a mobile laboratory. Benzene was the only VOC detected at the laboratory reporting limit of 0.1 ug/L, in borehole 966-701 at the 1.6 m (5.5 ft) bgs sample.

Surrogates were added to the samples after collection with the intent to verify that no significant loss of VOCs occurred from the time the sample was collected to the time the sample was analyzed. A desktop review of the laboratory report indicates that surrogate recoveries were all within acceptable limits.

The leak detect compound, 1,1-DFA, was not detected in the soil vapor samples collected during this investigation confirming that atmospheric air did not enter the soil vapor probes through the surface seal. Complete mobile laboratory analysis results including QA/QC results are provided in **Table 6** and **Appendix 4**.

4.4 Field Deviations from Scope of Work

As discussed previously in this report, the completed scope of work of the investigation differs from the original N&M site investigation work plan as follows:

a) The investigation was expanded to encompass three boreholes, an increase of one from the original two proposed boreholes.

b) The chemicals of concern were expanded from the original scope (TPH, VOCs, and metals) to include SVOCs, aluminum, hexavalent chromium, and pH. Aluminum was only analyzed in groundwater samples.

c) The total depth of both boreholes was adjusted to first groundwater encountered during drilling.

d) Addition of soil vapor sampling at each of the three boreholes. The depth of the soil vapor probes was adjusted in the field, with prior approval of the on-Site CalTrans Task Manager, to the following depths: 966-701 probes set at 1.67 and 4.4 m (5.5 and 14.5 ft) bgs; 966-702 probes set at 1.67 and 4.4 m (5.5 and 14.5 ft) bgs; 966-703 probes set at 1.37 and 4.4 m (4.5 and 14.5 ft) bgs. The soil vapor samples were analyzed for VOCs using USEPA Method 8260B.

e) A groundwater sample was collected from each borehole, and analyzed for TPH, VOCs, SVOCs, metals (including aluminum and hexavalent chromium).

5. QUALITY ASSURANCE/QUALITY CONTROL

5.1 Laboratory QA/QC Results

Data accuracy was evaluated by examining the method blanks, matrix spike/matrix spike duplicates (MS/MSD) percent recoveries and relative percent differences (RPDs), laboratory control sample (LCS) percent recoveries, surrogate percent recoveries, and in-house laboratory duplicates (ILDs). The MS/MSD and LCS percent recoveries were analyzed at the appropriate frequency, correctly reported, and were within quality control limits. The overall accuracy of the MS/MSD percent recoveries, RPD values, LCS percent recoveries, ILDs, and surrogate recoveries were acceptable. Laboratory QA/QC results are included with the laboratory analytical reports in **Appendix 4**.

Spiked samples are prepared and analyzed in the laboratory to define the accuracy of the analytical procedure.

- LCS samples are prepared to demonstrate that the method is in control and are analyzed at a minimum frequency of one per batch. LCS samples provide information on the accuracy of the method and the precision of data for the spike analytes. LCS and laboratory control duplicate (LCSD) samples are prepared by spiking two aliquots of a blank matrix with the target analytes for each method. Alternatively, a certified Standard Reference Material (SRM) is extracted and analyzed as a control sample. One LCS is prepared on every day of sample preparation or for every batch of 20 field samples prepared (whichever is more frequent). The LCS % recovery is calculated and evaluated relative to laboratory-specified upper and lower control limits. LCS are prepared and analyzed at the analytical method-specified frequency.
- MS and MSD samples show the effect of the individual sample matrix on analyte recovery and are analyzed at a minimum frequency of one per batch. MS and MSD samples provide information on the accuracy of the method for the specific sample matrix and the precision of data for both the spike analytes and un-spiked positive results. MS/MSD samples are prepared in the laboratory by spiking two aliquots of a field sample with target analytes (or a subset of target analytes). The frequency of matrix spike/matrix spike duplicate sample preparation is typically 1 per 20 field samples. The % recovery is calculated by dividing the concentration found by the concentration spiked and multiplying by 100. MS and MSD samples are prepared and analyzed at the analytical method-specified frequency.
- Surrogate analytes are spiked into all field samples analyzed for VOCs to demonstrate analytical accuracy on a sample-specific basis.

All samples were received by the laboratory intact, at 4 degrees C, and accompanied by chain of custody documentation. The samples requiring preservation were verified prior to sample preparation and analysis. All holding times were met.

Data accuracy was evaluated by examining the method blanks, laboratory control sample (LCS) percent recovery, matrix spike/matrix spike duplicate (MS/MSD) percent recovery and relative percent difference (RPD) and surrogate percent recovery results. Laboratory QA/QC results are included with the laboratory analytical reports in Appendix 4.

LCS and MS/MSD samples were analyzed at the appropriate frequency of 1 per batch of 20 samples. Laboratory QA/QC results were correctly reported, and were generally within quality control limits. All results are accepted based on overall batch adherence to QA/QC standards. Specific results outside of control limits are described below:

a) MS/MSD percent recoveries of antimony, molybdenum, thallium and zinc, and MSD percent recoveries of barium and selenium were below lower recovery limits in analytical batch B8D1803. Project soil sample 966-703-7.6 was spiked for the MS/MSD. Because all batch LCS analytes were within recovery limits, the sample preparation procedures and instrument function were reliably in control. Though not reported as part of the Title 22 Metals analyte list, aluminum was detected in this sample at a high concentration. The listed elements are highly susceptible to inductively-coupled argon plasma spectroscopy (ICAPS) response suppression due to high aluminum concentrations. There is no analytical method provision for mitigating this effect. Because the MS and/or MSD recoveries were less than 50% below the lower recovery limit for all analytes and all batch LCS analytes were within recovery limits, the laboratory analyst chose not to reanalyze the sample at a higher dilution. The spiked sample results may be affected by a slight low bias due to the matrix interference; therefore, it is possible that the presence of antimony, molybdenum, thallium and selenium at low levels may have been undetected at or above laboratory reporting limits. However, it is likely that the presence of these elements would not have been detected in at the elevated laboratory reporting limits that would have resulted from dilution of the sample; therefore, these results were not further qualified. Because zinc was detected above the laboratory reporting limit, the result was not further qualified.

b) The MSD percent recovery of arsenic was slightly (0.2%) below the lower recovery limit in analytical batch B8D1803. Project soil sample 966-703-7.6 was spiked for the MS/MSD. The MS percent recovery of arsenic in the sample was only 0.1% above the lower recovery limit. The low MS/MSD recoveries are likely due to the suppressive effect of a high aluminum concentration in the sample. Because all batch LCS analytes were within recovery limits, the sample preparation procedures and instrument function were reliably in control. The spiked sample result may be affected by a slight low bias due to the matrix interference; however, because arsenic was detected above the laboratory reporting limit, the result was not further qualified.

c) The MSD percent recovery of barium was slightly (2.8%) below the lower recovery limit in analytical batch B8D1803. Project soil sample 966-703-7.6 was spiked for the MS/MSD. The low MSD recovery is likely due to the suppressive effect of a high aluminum concentration in the sample. Additionally, MS/MSD recoveries are often low where the source result is higher than the spike level (160 mg/kg and 93.8 mg/kg, respectively, in sample 966-703-7.6). Because all batch LCS analytes were within recovery limits, the sample preparation procedures and instrument function were reliably in control. The spiked sample result may be affected by a slight low bias due to the matrix interference; however, because barium was detected above the laboratory reporting limit, the result was not further qualified.

d) The MS recovery and the MS/MSD RPD were above control limits for mercury in analytical batch B8D1805. Project soil sample 966-703-7.6 was spiked for the MS/MSD. Because the LCS was within control limits, the sample preparation procedures and instrument function were reliably in control. The analytical laboratory could not provide a likely systemic explanation of the high MS recovery; therefore, the result may be due to human error during the manual introduction of the spike into the sample. Note that the LCS and MS recovery spikes are manually introduced separately, and variability factors differ for each spike. However, because the MS recovery of mercury was above the upper control limit, the spiked sample may be affected by a high bias. Mercury was not detected in sample 966-703-7.6 at or above the laboratory reporting limit of 0.16 mg/kg; therefore, the high bias does not affect the reported sample result.

The MS/MSD percent recovery of aluminum and the MSD recovery of barium were above upper recovery limits in analytical batch B8D2109. A non-project aqueous sample was used for the MS/MSD. Because all batch LCS analytes were within recovery limits, the sample preparation procedures and instrument function were reliably in control. The analytical laboratory could not provide a likely systemic explanation of the high MS and/or MSD recoveries; therefore, the results may be due to human error during the manual introduction of the spike into the sample. Note that the LCS and MS recovery spikes are manually introduced separately, and variability factors differ for each spike. Another possible explanation for the high barium recovery is that due to the ubiquity of the element in the environment, the spiked sample may have become contaminated during handling. Because the MS and/or MSD recoveries of aluminum and barium were above the upper control limit, the spiked sample may be affected by a high bias. The spiked sample was a non-project sample and may have been handled differently from site samples. The high bias did not result in aluminum or barium exceeding a regulatory level and, therefore, did not require any action.

6. DATA EVALUATION AND DISCUSSION

6.1 Environmental Screening Levels for Soil and Groundwater

For purposes of this investigation, the Office of Environmental Health Hazard Assessment (OEHHA) on the behalf of Cal-EPA publication, *Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties* (Cal-EPA, 2005), were compared with chemical concentrations detected in soil samples collected at the Site. This document is a guidance document, which presents lookup tables of conservative Screening Levels of 54 hazardous chemicals commonly found at sites with contaminated soil. This document was developed as a tool to assist in the evaluation of contaminated sites for potential adverse threats to human health. The CHHSLs are used to screen sites for potential human health concerns where releases of hazardous chemicals to soils have occurred.

This document was developed by the OEHHA using standard exposure assumptions and chemical toxicity values published by USEPA and Cal-EPA and is limited to human health concerns. Although information provided in the document is not intended to establish policy or regulation, it does provide an alternative to preparing site-specific screening levels or attempting to quantify risk in a more formal risk assessment by comparing data collected at a site directly to the document's CHSSLs and evaluating the need for additional work. Notably, CHHSLs do not constitute regulatory cleanup standards and cannot be used as a stand alone tool for final cleanup and court decisions. Specifically, use of CHHSLs may not be protective of groundwater resources or address other potential environmental concerns such as leaching of contaminants from soil into groundwater.

The OEHHA document consists of lookup tables for soil, soil vapor, and indoor air. Soil CHHSLs address the potential direct exposure of residents and workers to contaminants in soil. Separate CHHSLs are listed for residential and commercial/industrial land uses. Notably, volatile organic contaminants (VOCs, petroleum hydrocarbons) are not included in the CHHSLs. As such, the USEPA's Region 9 Preliminary Remediation Goals (PRGs) for VOCs, TPH and other chemicals not included in the CHHSLs were used for comparison with chemical concentrations in the soil samples collected at the Site.

If both CHHSLs and PRGs were not available for the chemicals detected in the soil samples at the Site, then the California Regional Water Quality Control Board publication, *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater* (RWQCB, 2005) document was used for comparison. This document is a technical report, which presents lookup tables of conservative Environmental Screening Levels (ESLs, previously referred to as "Risk-Based Screening Levels or RBSLs") of over 100 chemicals commonly found at sites with contaminated soil and groundwater.

This document was prepared by staff of the RWQCB and is intended to help expedite the preparation of environmental risk assessments at sites where impacted soils and groundwater have been identified. Although information provided in the document is not intended to establish policy or regulation, it does provide an alternative to preparing site-specific screening levels or attempting to quantify risk in a more formal risk assessment by comparing data collected at a site directly to the document's ESLs and evaluating the need for additional work.

The RWQCB document is divided into separate lookup tables of soil and groundwater ESLs, based on contamination depth, and whether or not groundwater is a current or potential source of drinking water. For purposes of this investigation, "Summary Table A (ESLs for Shallow Soils [less than or equal to 3 meters bgs]" and "Groundwater is a Current or Potential Source of Drinking Water" were used as ESLs.

6.1.1 Arsenic Screening Levels

Metal concentrations detected in soils at the Site were compared to the CHHSLs with the exception of arsenic since naturally occurring arsenic is often present in soils at concentrations that exceed both the residential and industrial CHHSLs (0.07 and 0.24 mg/kg, respectively). The DTSC has issued a final report of background concentrations for naturally occurring arsenic in soils at Los Angeles Unified School District (LAUSD) sites (DTSC, 2005). Based on the data analyzed, the calculated 95% upper confidence limit of the 99^{th} percentile in the LAUSD is 6.0 mg/kg. The DTSC states that the background arsenic data presented in the report should not be interpreted as a cleanup or remedial goal for schools sites. Nor should the data be used for non-school sites. However, the data presented in the DTSC report is useful for comparison purposes.

Seventeen soil samples collected from nearby I-5/Carmenita Road investigation sites (Industrial Threaded Products, at depths ranging from 0.0 to 7.6 m (0.0 to 24.9 ft) bgs, and analyzed for metals contained arsenic concentrations below and above 6.0 mg/kg. One sample at 7.6 m bgs contained 9 mg/kg of arsenic, very similar to the arsenic reported in the 7.6 m samples from boreholes 966-701 and 966-702. Furthermore, arsenic concentrations during an investigation in 2007 at Choice Lithographics (an I-5/Carmenita Road investigation site) indicate levels at 1.8 mg/kg to a maximum concentration of 4.5 mg/kg (borehole 966-214 at 0.2 m (0.5 ft) bgs). Soil samples collected during an investigation conducted at Union Pacific Railroad (another I-5/Carmenita Road investigation site) in 2007 resulted in eight soil samples containing arsenic concentrations above 6.0 mg/kg, which is considered a background concentration in Los Angeles County (DTSC, 2005). Based on these data, it appears that 6.0 mg/kg is a conservative value to use as a background arsenic concentration.

6.2 VOCs and SVOCs in Soil

TPH was not detected above laboratory reporting limits in any of the soil samples collected at the Site during the current investigation. Benzene and toluene were reported in 3 of the 9 soil samples analyzed during the current investigation. The concentrations reported for both constituents did not exceed CHHSL, USEPA PRGs, or SFRWQCB ESLs.

SVOCs were not detected above laboratory reporting limits in any of the soil samples collected at the Site during the current investigation.

6.3 Metals in Soil

Concentrations of arsenic, above the residential and industrial CHHSLs, were detected in all nine of the soil samples collected during this investigation. These concentrations ranged from 2.8 mg/kg to a maximum concentration of 11 mg/kg (borehole 966-701 at 7.6 m [25 ft] bgs). The residential and industrial CHSSLs for arsenic are 0.07 and 0.24 mg/kg, respectively. Naturally occurring arsenic in soil is often present at concentrations that exceed both residential and industrial values provided by CHHLS. A report issued by the DTSC in 2005 concluded that background concentrations for naturally occurring arsenic in soils at Los Angeles Unified School District (LAUSD) sites with a 95% upper confidence limit of 99th percentile concentration is 6 mg/kg. The DTSC states that the data presented in the report should not be used as site specific clean-up goals for school site, or non-school sites, but the data is useful for comparative purposes (DTSC 2005). During the current investigation only two soil samples exceeded the comparative background arsenic concentration of 6.0 mg/kg, from borehole 966-701 at 7.6 m with a concentration of 11 mg/kg and 966-702 at 7.6 m with a concentration of 8.5 mg/kg.

Cobalt concentrations above the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) ESL of 10 mg/kg were detected in four of the nine soil samples collected during the current investigation, at a concentration of 11 mg/kg in all 4 samples, marginally above the ESL standard. None of the cobalt concentrations exceeded the residential or industrial CHHSLs. There are no established PRGs for this constituent.

Total chromium was detected in all nine soil sample ranging in concentration from 12 mg/kg to a maximum concentration of 23 mg/kg (borehole 966-703 at 1.5 m). Total chromium did not exceed residential or industrial SFBRWQCB ESLs (for depths greater than 3 meters bgs) of 2,500 and 5,000 mg/kg, respectively.. Hexavalent chromium was only reported in one soil sample from 966-703 at 1.5 m at a concentration of 1 mg/kg, below the residential CHHSL of 17 mg/kg for hexavalent chromium (**Table 3**).

6.4 VOCs in Groundwater

Cis-1,2-dichloroethene was reported above laboratory reporting limits and exceeded CDPH maximum contaminant level (MCL) and SFBRWQCB ESL (for depths greater than 3 meters bgs) of 6 ug/L in two of the three groundwater samples at concentrations of 13 and 30 ug/L, in boreholes 966-702 and 966-703 respectively. Cis-1,2-dichloroethene was not detected in soil samples

6.5 Metals in Groundwater

Molybdenum concentrations reported in groundwater samples collected, 0.047 mg/L in 966-701 and 0.062 mg/L in 966-702, exceeded SFBRWQCB ESL of 0.035 mg/L but not the industrial PRG of 0.18 mg/L. From the information available, it does not appear as though molybdenum was used in on-Site operations, current or historic. Former Burke Industries included the general use of petroleum hydrocarbons and solvents during the manufacturing of gaskets and seals.

6.6 VOCs in Soil Vapor

Benzene was detected below the residential and industrial CHHSLs for shallow soil vapor human health screening levels, vapor intrusion, of 0.122 ug/L in soil vapor sample 966-701 at 1.67 m (5.5 ft) bgs. Screening levels for direct exposure to VOCs in soil were not developed by OEHHA because OEHHA believes the soil gas levels are the most appropriate basis for screening numbers based on soil gas intrusion into indoor air (reference: Human-Exposure-Based Screening Numbers Developed to Aid Estimation of Cleanup Costs for Contaminated Soil, January 2005). The assumptions in the current USEPA models do not take into account the mass of the analyte, but include conservative estimates on the rate and degree of exposure by the inhalation and ingestion pathways. The assumptions used may be conservative for highly volatile chemicals that are not expected to remain at significant concentration in the soil over time following off-gassing to the outdoor air (Cal EPA, 2005).

7. CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions

The following conclusions were reached regarding data collected during this investigation:

a) The soil vapor survey, encompassing six probes in three boreholes indicated the presence of benzene at the reporting limit of 0.1 ug/L. Benzene was detected in borehole 966-701 at the 1.67 m (5.5 ft) sample, indicating the presence of VOCs in the shallow soil vapor beneath the Site.

b) The soil investigation activities, encompassing nine soil samples from three soil boreholes indicates the presence of benzene in all three boreholes ranging in concentration from 5.1 to 15 ug/kg in borehole 966-703 from 7.6 m (25 ft) bgs. Toluene was also detected in all three boreholes at concentrations ranging from 5.5 to 12 ug/kg, all at the 7.6 m (25 ft) depth. The data indicate the presence of VOCs in soils underlying the Site.

c) Chlorinated solvents, TCE, and degradation product, cis-1,2-dichloroethene, were detected in all three groundwater samples, with the highest concentrations from borehole 966-703, towards the northwest. Cis-1,2-DCE exceeded the MCLs in two of the three groundwater samples. Former Burke industries operations included the use of petroleum hydrocarbons and solvents during the manufacturing of gaskets and seals..

d) Concentrations of metals typical of background conditions for soils in Los Angeles County (DTSC, 2005) were detected in soil and groundwater samples collected as part of this investigation. Some metal concentrations in soil and groundwater marginally exceeded the applicable criteria. Naturally occurring arsenic in soil is often present at concentrations that exceed both residential and industrial values provided by CHHLS. A report issued by the DTSC in 2005 concluded that background concentrations for naturally occurring arsenic in soils at LAUSD sites with a 95% upper confidence limit of 99^{th} percentile concentration is 6 mg/kg.

e) Quality assurance/quality control data is acceptable, indicating that the data collected is valid and reliable interpretations may be drawn for the purposes of this investigation.

f) SVOCs were not detected above laboratory reporting limits in any of the soil or groundwater samples collected during the current investigation.

7.2 Recommendations

Based on the findings of the investigation conducted at the Site, WorleyParsons Komex recommends further site investigation to delineate the vertical and horizontal extent of the contamination and determine if the Former Burke Industries site is the source of contamination in groundwater.

Cis-1,2 DCE was detected in groundwater at the Site in excess of the SFBRWQCB groundwater ESL and CDPH MCL of 6.0 ug/L.. The source of the cis-1,2 DCE concentrations in groundwater is unknown, since it was not detected in soils at the Site. However, cis-1,2 DCE concentrations present in groundwater may be related to the use of solvents during operations of former Burke Industries. Based on the planned construction activities, groundwater is not expected to be encountered during grading and excavating activities. However, since the source of the cis-1,2 DCE in groundwater is unknown, it is possible that the RWQCB would require additional assessment, groundwater monitoring or remediation at the Site in order to further evaluate the extent and nature of the cis-1,2 DCE in groundwater. Accordingly, groundwater monitoring wells should be installed at the Site and quarterly monitoring initiated to verify the nature and extent of the cis-1,2 DCE detections in groundwater. A cost estimate to install monitoring wells, conduct quarterly monitoring and carry out in situ remediation are discussed in Section 8.

8. REMEDIATION COST ESTIMATE

As part of the Site investigation, WorleyParsons Komex has prepared a cost estimate for remediation of contaminated groundwater and for further evaluation of groundwater at the Site.

Based on the undefined extent and unconfirmed source of cis-1,2 DCE in groundwater at the Site, it will be necessary to further evaluate groundwater conditions and remediate groundwater. For purposes of this cost estimate, it has been assumed that installation of four groundwater monitoring wells at the Site would be adequate for the further evaluation of groundwater conditions.

Following monitoring well installation and sampling, the groundwater data would be evaluated and a remedial action plan prepared with the intent of in situ treatment of the groundwater with hydrogen release compound (HRC) followed by quarterly monitoring for two years. It is anticipated that in situ treatment can shorten remediation time for sites, particularly where chlorinated solvents are an issue.

A detailed cost estimate, including labor, equipment and expenses and assumptions related to installation of groundwater monitoring wells at the Site, preparation of a site investigation work plan for regulatory agency review and approval, quarterly groundwater monitoring and in-situ groundwater remediation is contained in Appendix 6.

9. CLOSURE

We trust that this report satisfies your current requirements and provides suitable documentation for your records. If you have any questions or require further details, please contact the undersigned at any time.

Notes:

TPH = Total Petroleum Hydrocarbons; analyzed using EPA Method 8015B

VOCs = Volatile Organic Compounds; analysed using EPA Method 8260B

m BGS = Meters below ground surface

mg/kg = Milligrams per kilogram

ug/kg = Micrograms per kilogram

<1.0 = Not detected at or above the indicated laboratory reporting limit

Bold indicates that the analyte was detected at or above the laboratory reporting limit

-- = Not analyzed or not applicable

Res CHHSL = California Human Health Screening Level for residential land use (California Environmental Protection Agency. 2005. Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties. January.)

Ind CHHSL = California Human Health Screening Level for industrial land use (California Environmental Protection Agency. 2005. Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties. January.)

Res SFBRWQCB ESL (<=3m) = California Regional Water Quality Control Board, San Francisco Bay Region Environmental Screening Level for residential land use, shallow soil (less than or equal to 3 meters below ground surface), and where groundwater is a current or potential source of drinking water (California Regional Water Quality Control Board, San Francisco Bay Region. 2008. Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater. May.)

Res SFBRWQCB ESL (>3m) = California Regional Water Quality Control Board, San Francisco Bay Region Environmental Screening Level for residential land use, deep soil (greater than 3 meters below ground surface), and where groundwater is a current or potential source of drinking water (California Regional Water Quality Control Board, San Francisco Bay Region. 2008. Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater. May.)

Ind SFBRWQCB ESL (<=3m) = California Regional Water Quality Control Board, San Francisco Bay Region Environmental Screening Level for industrial land use, shallow soil (less than or equal to 3 meters below ground surface), and where groundwater is a current or potential source of drinking water (California Regional Water Quality Control Board, San Francisco Bay Region. 2008. Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater. May.)

Ind SFBRWQCB ESL (>3m) = California Regional Water Quality Control Board, San Francisco Bay Region Environmental Screening Level for industrial land use, deep soil (greater than 3 meters below ground surface), and where groundwater is a current or potential source of drinking water (California Regional Water Quality Control Board, San Francisco Bay Region. 2008. Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater. May.)

Res PRG = USEPA Region 9 Preliminary Remediation Goal for residential areas (United States Environmental Protection Agency, Region 9. 2008. Regional Screening Levels for Chemical Contaminants at Superfund Sites. May 20.)

Ind PRG = USEPA Region 9 Preliminary Remediation Goal for industrial areas (United States Environmental Protection Agency, Region 9. 2008. Regional Screening Levels for Chemical Contaminants at Superfund Sites. May 20.)

Notes:
TPH = Total Petroleum Hydrocarbons; analyzed using EPA Method 8015B
VOCs = Volatile Organic Compounds; analysed using EPA Method 8260B
SVOCs = Semi-volatile organic compounds; analyzed using EPA Method 8270C
Title 22 Metals and aluminum analyzed using EPA 6000/7000 Series Methods
m BGS = Meters below ground surface
mg/L = Milligrams per liter
ug/L = Micrograms per liter
<1.0 = Not detected at or above the indicated laboratory reporting limit
Bold indicates that the analyte was detected at or above the laboratory reporting limit
-- = Not analyzed or not applicable
GW SFBRWQCB ESL (>3m) = California Regional Water Quality Control Board, San Francisco Bay Region Environmental Screening Level for groundwater, deep soil (greater than 3 meters below ground surface), and where groundwater is a current or potential source of drinking water (California Regional Water Quality Control Board, San Francisco Bay Region. 2008. Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater. May.)

MCL = Maximum Contaminant Level for Drinking Water Contaminants (California Department of Public Health. 2007. Comparison of Federal and State MCLs. September 20.) California MCLs are presented where available.

*1 = Indicates that the GW SFBRWQCB ESL (>3m) was exceeded
*2= Indicates that the MCL was exceeded

Borehole # 966-701

PROJECT # 6H754A

Project Name: Former Burke
Client: Caltrans
Location: 13767 Freeway Drive, in grass by fence
Drilled by: Interphase Environmental
Drilling Method: Direct-push
Hole Diameter: 2"
Drill Date: 4/16/08
Compiled by: LM/RAL

Sampling Method: 2' sampler
Northing: 543206.6469 m

Warranty:

Spectrum Geophysics was retained to conduct a subsurface investigation of the above facility to characterize the shallow subsurface. Our findings are subject to certain limitations due to site conditions and the instruments employed. We conducted this investigation in a manner consistent with our profession using similar methods. No other warranty as to the performance or deliverables is expressed or implied.

Contents

Results of Subsurface Investigation
Refrigerator Manufacturers, Inc.
13767 Freeway Drive
Santa Fe Springs, California

Introduction

On April 3, 2008 Spectrum Geophysics conducted a subsurface investigation on portions of an easement bordering Freeway Drive in Santa Fe Springs, California. The purpose was to investigate three proposed ground intrusion sites (PGIS) for detectable subsurface utilities and possible metallic USTs.

Methods

The equipment used in this investigation consisted of a Fisher TW-6 shallow-focus terrain conductivity meter, Dynatel 500A cable locator, Radiodetection RD400 utility locator, and a Sensors and Software ground penetrating radar (GPR) unit coupled to a 250-MHz antenna.

GPR and EM utility-locating methods were used on each PGIS to delineate the surface trace of detectable conduits and to identify buried objects having no surface expression. The following paragraphs discuss the methods used.

1.) The PGIS were investigated for detectable subsurface utilities or other buried features. Utilities that were exposed above ground in the vicinity of the area were directly connected to, traced out, and mapped on a site map (Figure 1).

2.) The PGIS were investigated using a shallow-focus terrain conductivity meter to detect buried metallic utilities that were not exposed above ground.

3.) The PGIS were investigated with a passive electromagnetic receiver tuned to 50/60 Hz, radio, and audio frequencies to detect buried utilities that might reradiate an electromagnetic field.

4.) GPR data from 12 traverses were collected. GPR data were produced in the form of vertical cross sections and interpreted in the field for anomalies whose signatures might indicate the presence of subsurface conduits or other features of interest.

Results and Conclusions

A geophysical interpretation map is presented in Figure 1. The penetration depth of the GPR signal was approximately 1-3 feet in the areas investigated. As a consequence, some subsurface utilities may not have been detected due to the shallow penetration of the GPR. Because of this limitation, Spectrum cannot guarantee that all nonmetallic conduits, such as sewers and pvc water lines, have been identified within the areas of investigation.

Three PGIS were investigated for the presence of detectable subsurface utilities. The PGIS were marked on the ground with white spray-painted circles and wood stakes.

The surface trace of detected utilities near each PGIS was marked on the ground with spray paint and wood stakes.

EM-61 data, used to detect the presence of possible underground storage tanks (USTs), was not collected at these locations due to the proximity of the PGIS to buildings and iron fences.

GPR data collected indicated no evidence of a possible UST in the three areas investigated.

Limitations

GPR

The performance capability of GPR is dependent on the soil electrical conductivity at the site. If the soil conductivity is high, attenuation of the radar signal in the soil can severely restrict the maximum penetration depth of the radar signal. Under favorable conditions depth of penetration can be greater than 10 feet, however, average depths of GPR penetration in the Southwest tend to range between 3-5 feet. Soils high in clay content and moisture will have higher signal attenuation. GPR surveys should be performed in the dry season if at all possible, especially at sites located in California. Soil moisture, especially in high-clay soils, only increases the radar attenuation rates, further limiting the radar performance.

Because the GPR signal penetration was limited to 1 to 3 feet below ground surface during this investigation, Spectrum cannot guarantee that USTs are not present in the areas of investigation.

General

It should be understood that the location of subsurface objects and utilities is dependent upon the recognition of physical phenomena at the ground surface. These phenomena can be magnetic fields or electro-magnetic waves that give rise to a surface expression which in turn is interpreted as representative of subsurface objects. These waves, however, may be attenuated and/or distorted by a number of factors including soil moisture, corrosion, and proximity to other surface and subsurface facilities.

1. INTRODUCTION

Use this Health and Safety Plan (HaSP) for the field program for Phase II field activities including advance of direct push boreholes, soil gas probes and soil, groundwater and soil-gas sampling at three Caltrans sites located in the city of Santa Fe Springs.

1.1 Purpose of This HaSP

This HaSP presents the minimum health and safety requirements for establishing and maintaining a safe working environment during the implementation of the planned Site activities.

1.2 Organization of This HaSP

This HaSP is organized into 10 sections. A brief overview of these sections is listed below.

Section 1: This section presents the purpose, organization, changes to, and limitations of this HaSP. Use this information to familiarize yourself with this HaSP.

Section 2: This section presents the Site background information needed to implement this HaSP. Use this information to familiarize yourself with the Site.

Section 3: This section presents the planned Site activities addressed by this HaSP. Contact the Site Health and Safety Officer immediately if the requirements of this HaSP are conflicting, the scope of work changes, or the expected Site conditions change.

Section 4: This section presents the roles and responsibilities of project safety personnel. Project safety personnel include the Site Workers, Site Health and Safety Officer, Project Manager, and Corporate Health and Safety Manager. Use the roles and responsibilities listed in this section to implement this HaSP.

Section 5: This section presents the site hazards. Planned Site activities may result in exposure to biological, chemical, and physical hazards. Familiarize yourself with these hazards before conducting the planned Site activities.

Section 6: This section describes the personal protective equipment (PPE) required for the work. Verify this protective equipment is on-hand before conducting the planned Site activities. Select the required level of protective equipment using the results of monitoring.

Section 7: This section describes the monitoring required to protect your health and safety. Perform this monitoring to prevent heat stress and unhealthful exposure to noise emissions and airborne contaminants.

Section 8: This section describes injury and illness prevention. Follow these procedures to safely perform the planned Site activities.

Section 9: This section presents emergency response procedures. Follow these procedures in the event of an emergency.

Section 10: This section presents CHSM certification of this HaSP. Do not use this HaSP unless it has been certified by the CHSM.

1.3 Changes to This HaSP

Contact the Site Health and Safety Officer immediately if:

- The requirements within this HaSP are found to be conflicting;
- The scope of work changes; or
- The site conditions encountered during the course of the work are found to differ substantially from those anticipated.

In the event of conflicting requirements within this HaSP, use the procedures or practices that provide the highest degree of personnel protection until further direction is received from the Project Field Supervisor. If work plan specifications change or if site conditions encountered during the course of the work are found to differ substantially from those anticipated, the Corporate Health and Safety Manager will be informed immediately upon their discovery and appropriate changes made to this HaSP.

1.4 Limitations of this HaSP

This document is prepared for the exclusive use of employees of WorleyParsons Komex. When specified in contract documents, this HaSP may cover the activities of WorleyParsons Komex subcontractors. However, this HaSP does not address hazards associated with tasks and equipment that are specialties of the subcontractor (e.g., installation of traffic control equipment). Subcontractors are responsible for developing, maintaining, and implementing their own health and safety programs, policies, and procedures. Employees of the owners, the client and its subcontractors, and Federal, State, and Local agencies are expected to observe the safety rules and regulations established by their respective organizations in addition to the requirements of this document.

Preparation of this Site HaSP was based upon site investigation activities normally conducted by personnel at sites where hazardous or potentially hazardous materials may be present and from information regarding the chemical contaminants present at the site.

This HaSP complies with applicable Occupational Safety and Health Administration (OSHA) and California OSHA regulations, particularly those in the United States Code of Federal Regulations (CFR), Title 29, Sections 1910.120 and 1926, and California Code of Regulations (CCR) Title 8 (CCR 5192).

2. SITE BACKGROUND

This section presents the Site background information needed to implement this HaSP. Use this information to familiarize yourself with the Site.

2.1 Client

WorleyParsons Komex's client is Caltrans District 7 (the Department). Client task manager is Penny Nakashima.

2.2 Site Location

The Sites are properties that the Department is proposing to acquire. The Properties are located at the following addresses:

1 Former Burke Industries, 13767 Freeway Dr., Santa Fe Springs, CA

2 Industrial Threaded Products, 13580 Firestone Blvd., Santa Fe Springs, CA

3 McDowell & Craig Furniture, 13146 Firestone Blvd., Santa Fe Springs, CA

The location of the three properties is presented in the Site Vicinity Map (Figures 1) and the Site Location Maps (Figures 2.1, 2.2 and 2.3).

2.3 Site Description

The Properties are all located in an urban area with mixed land use (commercial, industrial and residential). Each property is described below:

1. McDowell & Craig Furniture - This property is occupied by McDowell & Craig Furniture and is used for the manufacturing of office furniture. The proposed take area of the property only includes a narrow strip of land along the northeastern frontage area adjacent to Firestone Boulevard. The facility contains several potential environmental concerns, including a former petroleum solvent underground storage tank (UST) with documented contamination and no documented remediation, general use of oil and solvents, a degreaser, and a clarifier. These features are not located within or adjacent to the proposed take area. Based on the manufacturing activities and use of hazardous materials at the site, the property may have been impacted by petroleum hydrocarbons and VOCs.

   Soil and groundwater sampling is needed to assess if the activities at the property have impacted the soil beneath the proposed take area of the property.

2. Industrial Threaded Products – This property contains a commercial building used for warehousing and distribution of fasteners and hardware products since 1995. Prior to 1995, the property was occupied by Santa Fe Equipment Company which formerly conducted auto/equipment service and operated a clarifier. Railroad tracks are located adjacent to and south of the property. The property contains several potential environmental concerns,

including former auto/equipment service area, former clarifier and adjacent railroad right-of-way.

Soil and soil vapor sampling is needed to assess if the activities at the property have impacted the soil beneath the proposed take area of the property.

3. Former Burke Industries. This property, currently vacant, was used by Burke Industries for the manufacturing of gaskets and seals. The proposed take area of the property only includes the landscaped frontage area adjacent to Freeway Drive. Based on the former manufacturing activities at the site, the property may have been impacted by petroleum hydrocarbons, VOCs and metals.

   Soil sampling is needed to assess if the former manufacturing activities at the property have impacted the soil beneath the proposed take area of the property.

2.4 Local Climate

The climate in Santa Fe Springs is characterized by moderate temperatures and wind speeds with comfortable humidity and limited precipitation. Temperatures are normally mild with rare extremes above 100 degrees (°) Fahrenheit or below freezing. Hotter than normal temperatures can occur from June through September. Colder than normal temperatures can occur from November through March.

In general, light winds blow across the Los Angeles Basin for most of the year. The wind blows onshore in the morning and early afternoon toward the desert and mountains and offshore in the late afternoon and evening. Wind speeds rarely exceed 15 miles per hour (mph). However, during periods of strong "Santa Ana conditions," wind speeds can exceed 25 mph in the Basin.

The Los Angeles Basin typically cycles through periods of below normal precipitation and periods of above normal precipitation. Mean annual precipitation is approximately 14.5 inches. Approximately 12.2 inches occurs from November through March.

3. PLANNED SITE ACTIVITIES

This HaSP covers all fieldwork and field activities associated with the field activities to be conducted at the three properties. These activities are expected to include, but are not limited to, proposed advancement of boreholes and soil gas probes, advancement of hand auger boreholes and collection of soil and groundwater samples as described below. Details of the anticipated scope of work are included in the accompanying Work Plan.

3.1 Survey of Underground Utilities

This task also includes marking of the Site, a visual Site reconnaissance and hand tape survey check, utility verification (including underground service alert [USA or Dig-Alert] notification) and a critical path evaluation for scheduling. WorleyParsons Komex will also coordinate with Caltrans to keep the surrounding property owners and tenants informed of any field work that may have an effect on their properties, such as noise, working hours, traffic control, vehicular access, or other concerns.

3.2 Boreholes

The scope of work for each Site is as follows:

1. McDowell & Craig Furniture. Two soil borings (both to 9.1m/30 ft) or first groundwater) are included in the scope of work to assess the soil and groundwater in the frontage area of the property. Soil and groundwater samples from these borings will be analyzed for petroleum hydrocarbons and VOCs.

2. Industrial Threaded Products. One boring will be advanced to 4.6m/15 ft to assess soil beneath the former clarifier. The soil samples collected will be analyzed for petroleum hydrocarbons, VOCs, and metals. Three borings will be advanced to 1.5m/5ft to assess the soil adjacent to the railroad tracks. The soil samples collected will be analyzed for petroleum hydrocarbons, VOCs and metals. Two borings will be advanced to 4.6m/15 ft to assess the soil beneath the former auto service area. The soil samples collected will be analyzed for petroleum hydrocarbons, VOCs and metals. Eight locations in this area will have soil vapor sampling conducted to determine the presence of VOCs.

3. Former Burke Industries. Three soil borings to 9.1m/30 ft or first groundwater are included in the scope of work to assess the soil in the frontage area of the property. Soil samples from these borings will be analyzed for petroleum hydrocarbons, VOCs and metals.

All direct push boreholes will be hand cleared to 2.4m/8 ft bgs with a hand auger.

3.3 Soil Sampling

Soil samples will be collected using glass jars for metals and pesticides and Encore samplers for VOCs. Soil samples will be described for lithologic, hydrogeologic, and geotechnical properties using the Unified Soil Classification System (USCS). In addition, soil sub-samples will be collected for field volatile organic compound (VOC) headspace testing using a photoionization detector (PID).

3.4 Soil Gas Sampling

Soil gas (vapor) sampling will be conducted in the vicinity of the former auto service center at the Industrial Threaded Products site only. Soil gas sampling is conducted by pumping the gas up from the soil though a tube and extracting a sample with a syringe. The soil gas sample is analyzed onsite in a mobile laboratory.

3.5 Groundwater Sampling

Groundwater will be sampled used the hydropunch technique (water is pumped to the surface and put into volatile organic analysis (VOA) vials).

3.6 Decontamination

Borehole, hand auger and sampling equipment will be decontaminated prior to use at each boring location. Standard decontamination procedures outlined in Section 9 will be used. Typical decontamination procedures consist of a 3 bucket decon in which the first bucket is filled with tap water and Alconox and the second bucket is filled with just tap water. The third bucket is filled with deionized water. Any equipment that comes into contact with soil or groundwater such as hand augers and sampling equipment will be decontaminated using the three bucket decon procedure. The spent solutions, wash materials, brushes, and the like shall be considered contaminated and so treated.

3.7 Waste Disposal

All soil waste, groundwater and decontamination water generated during the direct push and sampling activities will be collected and transported to a centralized location where it will be stored in drums.

After the contents of drums have been profiled, a licensed hazardous waste contractor will remove the drums from temporary storage and take them for disposal or treatment at a permitted waste facility.

4. PROJECT SAFETY PERSONNEL

This section presents the roles and responsibilities of project safety personnel. Project safety personnel include the Site Workers, Site Health and Safety Officer, Project Manager, and Corporate Health and Safety Manager. Use the roles and responsibilities listed in this section to implement this HaSP.

4.1 Site Workers

In general, Site workers are required to do the following:

a) Read and understand this HaSP;

b) Comply with this HaSP;

c) Contact the SHSO immediately if the requirements of this HaSP are conflicting, the scope of work changes, or the expected Site conditions change.

More specifically, Site workers are required to do the following:

a) Meet the training and certification requirements of this HaSP;

b) Discuss the requirements of this HaSP at the project initiation meeting;

c) Show up for work fit for duty;

d) Discuss the planned Site activities and Site hazards at the daily tailgate safety meetings;

e) Perform Safe Performance Self Assessments (SPSAs) prior to conducting tasks;

f) Be familiar with and participate in the development of Job Safety Analysis (JSAs);

g) Participate in Peer Safety Observations (PSOs);

h) Report all losses and near losses;

i) Perform monitoring required by this HaSP;

j) Setup and maintain the necessary work zones;

k) Control access to the work zones;

l) Implement proper decontamination procedures;

m) Handle, store and dispose of waste according to proper procedures;

n) Perform the planned Site activities;

o) Stop work when conditions are unsafe;

p) Follow emergency response procedures specified in this HaSP; and

q) Document work progress and maintain copies of field forms.

Site workers will report to the Site Health and Safety Officer (SHSO).

4.2 Site Health and Safety Officer (SHSO)

In general, the SHSO is required to do the following:

a) Meet the requirements of the Site workers;

b) Verify Site worker compliance with this HaSP; and

c) Contact the PM immediately if the requirements of this HaSP are conflicting, the scope of work changes, or the expected Site conditions change.

More specifically, the SHSO is required to do the following:

a) Hold a project initiation meeting;

b) Provide the required site safety equipment;

c) Verify Site workers have the required training and certification;

d) Verify the Site workers are fit for duty;

e) Hold the daily tailgate safety meetings;

f) Post safety information;

g) Perform safety inspections;

h) Perform SPSAs prior to conducting tasks;

i) Be familiar with and participate in the development of JSAs;

j) Participate in Peer Safety Observations (PSOs);

k) Report all losses and near losses;

l) Verify the appropriate level of PPE is used;

m) Verify that access to work areas is controlled and any visitors have the required training and certifications; and

n) Coordinate emergency response actions from the field.

The SHSO will report to the PM.

4.3 Project Manager (PM)

In general, the PM is required to do the following:

a) Verify the SHSO and Site workers have complied with this HaSP; and

b) Contact the CHSM immediately if the requirements of this HaSP are conflicting, the scope of work changes, or the expected Site conditions change.

More specifically, the PM is required to do the following:

a) Perform project orientation;

b) Attend the project initiation meeting;

c) Perform SPSAs prior to conducting tasks;

d) Perform loss and near loss investigations;

e) Perform field safety audits; and

f) Coordinate emergency response actions from the office.

The WorleyParsons Komex PM will not typically be in the field during planned site activities. The WorleyParsons Komex PM reports to the CHSM.

4.4 Corporate Health and Safety Manager (CHSM)

In general, the CHSM is required to do the following:

a) Verify the PM, SHSO, and Site workers have complied with this HaSP; and

b) Change or clarify the requirements of this HaSP if they are found to be conflicting, the scope of work changes, or the expected Site conditions change.

More specifically, the CHSM is required to do the following:

a) Verify this HaSP complies with all applicable local, state, and federal regulations;

b) Verify employees have the required training and certifications;

c) Verify the company has established the required health and safety programs;

d) Conduct field safety audits and HSE inspections;

e) Review and approve loss and near loss investigation reports;

f) Schedule review and approve Peer Safety Observations (PSOs);

g) Report OSHA reportable incidents;

h) Develop and distribute Safety Alerts and Health and Safety monthly summary reports;

i) Oversee awards and incentive programs for health and safety performance; and

j) Enforce and take disciplinary action for violations of WorleyParsons Komex's health and safety policy and programs.

5. SITE ACTIVITY HAZARDS

This section presents the hazards associated with the planned Site activities. Planned Site activities may result in exposure to physical, chemical, and biological hazards. Familiarize yourself with these hazards before conducting the planned Site activities.

5.1 Site Activity Hazard Levels

Site activity hazard levels are listed in Table A.

Table A Site Activity Hazard Levels

Potential Hazard	Hand Auger	Concrete Coring	Direct Push	Soil Sampling	Soil Gas Sampling	Decon	Waste Disposal
Traffic	High	Low	High	High	High	High	High
Heavy Equipment	Low	Low	High	Low	Low	Low	Moderate
Trips/Falls	Moderate	Moderate	Moderate	Moderate	Moderate	Moderate	Moderate
Heat Stress	Moderate	Low	Moderate	Moderate	Moderate	Moderate	Moderate
Noise	Low	High	High	Low	Low	Low	Low
Utilities	Moderate	Moderate	Moderate	Low	Low	Low	Low
Illumination	Low	Low	Low	Low	Low	Low	Low
Electrical	Low	Moderate	Moderate	Low	Low	Low	Low
Flammable Hazards	Low	Low	Moderate	Low	Low	Low	Low
Materials Handling	Low	Moderate	Moderate	Moderate	Low	Moderate	High
Biological Hazards	Moderate	Low	Moderate	Moderate	Moderate	Moderate	Moderate
Inhalation of volatiles	Moderate	Low	Moderate	Moderate	Moderate	Low	Low
Skin and Eye contact	Low	Low	Moderate	Moderate	Low	Moderate	Moderate
Ingestion	Low	Low	Low	Low	Low	Low	Low
Inhalation of Dust	Low	High	Moderate	Moderate	Low	Low	Low

Use this table to be more attentive to the most probable site activity hazards. Use the following sections for a more detailed analysis of these hazards.

5.2 Physical Hazards

Physical hazards associated with the planned Site activities are as follows:

a) Traffic;

b) Heavy Equipment;

c) Slips, Trips, and Falls;

d) Heat Stress;

e) Noise;

f) Utilities

g) Illumination;

h) Electrical shock;

i) Fire/Explosion;

j) Materials and Equipment Handling;

k) Safety Equipment Failure.

These hazards are analyzed in further detail in the following sections.

5.2.1 Traffic Safety

Fork lift, automobile and truck traffic may be present on Site and when working off-site. When working in an area with vehicular traffic, clearly delineate the work area by use of cones or delineators, snow fencing or barricades, signs, and other appropriate warning devices to restrict vehicular access. Personnel will use high-visibility clothing (e.g., bright orange vest) at all times at this Site. Be particularly cautious and aware of vehicular traffic when entering and exiting work zones.

5.2.2 Slips, Trips, Falls

Conduct site walk and hazards analysis to identify and remove or mark slips, trips and falls hazards prior to beginning field tasks. Watch where you are walking in the work zone. Take extra caution while working to keep work area free from tools, augers, hoses, and other tripping hazards. There will be objects on the ground outside of your normal field of vision. The ground surface may not be level or may be slippery. Use barriers to prevent workers from walking into areas where these hazards are most significant. Post signs where necessary. Keep small tools off the ground and away from walking areas. Keep walking areas free of debris. Clean up work area when work is completed.

5.2.3 Heat Stress

Heat stress hazard could be an issue when working outdoors during this project although in mid March extremely high temperatures are not anticipated. Daily temperature is unpredictable. Temperature will very significantly depending on location. The temperature near the ground particularly on asphalt is generally significantly higher than the temperature at standing level. The Cal OSHA heat illness standard requires employers to take four steps that include shade, drinking water, training and written procedures. Workers must be encouraged to drink water regularly during work (at least 4 eight ounce glasses every hour). Employees must have on-site 2 gallons of clean, cool, potable water per person per 8-hour shift. Shade must be provided for recovery rest periods when workers need relief from the heat. Frequent breaks should be taken in cooler, shaded areas. The frequency and length of the breaks must be adequate and would depend on the conditions in the field. Stand in the shade where possible (use easy-up shade awnings where practical). Wear appropriate PPE such as hats. Wear layered clothing to allow adjustments to temperature changes. Implement a work/rest regimen as needed to reduce overall heat exposure. Acclimatize the body (new workers start at 50% of the anticipated total workload and gradually increase the workload each succeeding day for about a week).

Supervisors and site workers must be trained in the risks of heat illness, how to recognize heat illness symptoms, understand the importance of "acclimatization" of workers new to the climate or returning from a long vacation or illness and the measures to protect themselves and their co-workers (see Table B). If a worker exhibits symptoms of possible heat illness, seek medical attention by following the procedures outlined in Section 9 Emergency Response Procedures.

Table B Heat Stress Symptoms

Condition	Signs	Symptoms	Response
Heat Rash or Prickly Heat	Red rash on skin.	Intense itching and inflammation.	Stop working, seek shade, increase fluid intake and observe affected worker.
Heat Cramps	Heavy sweating, lack of muscle coordination.	Muscle spasms, and pain in hands, feet, or abdomen.	Stop working, seek shade, increase fluid uptake. When work resumes increase rest periods. Closely observe affected worker for more serious symptoms.
Heat Exhaustion	Heavy sweating, pale, cool, moist skin; lack of coordination; fainting.	Weakness, headache, dizziness, nausea.	Stop work. Remove worker to a cool, shady area. Administer fluids and allow worker to rest in cool area until fully recovered. Increase rest periods and closely observe worker for additional signs of heat exhaustion. If symptoms of heat exhaustion recur, treat as above and release worker from the day's activities after he/she has fully recovered.
Heat Stroke	Red, hot, dry skin; disorientation; unconsciousness	Lack of or reduced perspiration; nausea; dizziness and confusion; strong, rapid pulse.	Stop work. Immediately contact emergency medical services by dialing 911. Remove the victim to a cool, shady location and observe for signs of shock. Attempt to comfort and cool the

Condition	Signs	Symptoms	Response
			victim by administering small amounts of cool water (if conscious), loosening clothing, and placing cool compresses at locations where major arteries occur close to the body's surface (neck, underarms, and groin areas). Carefully follow instructions given by emergency medical services until help arrives.

5.2.4 Noise

Wear ear plugs if sound levels exceed 85 dBA (decibels). Sound levels will be high around certain equipment. The SHSO will inform Site personnel when and if ear plugs are required. A general rule is that if normal conversation becomes difficult due to noise at arms length ("arms length rule"), ear plugs are required.

5.2.5 Illumination

Use adequate lighting if work activities occur before sunrise or after sunset. Lighting must meet the requirements of 29 CFR 1926.65(m). This requirement can be met using light stands (preferable) or vehicle headlights (use sparingly).

5.2.6 Electrical Shock

Electrical equipment associated with the planned Site activities includes the electric concrete saw. Electrical shock can also be associated with unplanned site activities and events such as downed electrical lines and lightning.

For the planned site activity, verify the equipment is off when connecting and disconnecting electrical cords. Wear gloves when connecting and disconnecting electrical cords. Verify gloves are dry. Verify that the cords to be connected are not significantly worn or wiring exposed.

Verify electrical equipment is suitably grounded and insulated. Use ground fault circuit interrupters (GFCI), or equivalent, with electrical equipment to reduce the potential for electrical shock.

Follow the equipment manufacturer's instructions when performing equipment maintenance in the field. Use lockout/tagout procedures in accordance as outlined in the WorleyParsons Komex HSE Manual Section 21. For jobs in field requiring lockout/tagout a site specific procedure must be available on-site. Isolate the piece of equipment, lock/tag the energy source, and verify effectiveness of the isolation. Only employees who perform the lockout/tagout procedure may remove their own tags/locks.

Avoid downed electrical wires when working in the street. Stop work immediately in the event of lightning.

5.2.7 Fire/Explosion

Generation of heat or sparks in where combustible materials are present can cause fires. Flammable vapors or conditions that could cause explosions are not anticipated to be associated with these Sites or project; however, care should be exercised when working with hot equipment or generating sparks. The potential for fires or explosions associated with the planned Site activities are associated with the gasoline in the vehicle's and equipment fuel tanks. The presence of dry brush could also present a fire hazard.

Minimize heat near the fuel tanks. Keep possible sources of ignition (e.g. cigarettes) away from the access ports to these tanks as well as dry brush and other combustible materials.

Stop work in the event of a fire. Use a fire extinguisher for small fires. Contact the fire department for large fires.

5.2.8 Materials and Equipment Handling

Use safe handling practices, proper lifting techniques, and proper personal safety equipment such as sturdy boots and work gloves. Where practical, use mechanical devices to assist in the movement of equipment and materials. Do not attempt to move heavy objects by yourself without using appropriate mechanical aids such as drum dollies or hydraulic lift gates. The movement and handling of equipment and materials on the Site can pose a risk to workers in the form of muscle strains and minor injuries.

5.2.9 Safety Equipment Failure

Stop work if monitoring instruments such as the photo ionization detector (PID) or any safety equipment fails. Contact the SHSO. The SHSO will evaluate whether work conditions are safe to proceed.

5.3 Chemical Hazards

Chemical hazards associated with the work to be undertaken at the Site include dermal contact with, and accidental ingestion of, contaminated soil and groundwater and chemicals and inhalation of harmful vapors.

Potential chemical hazards at the three sites are as follows:

1. Former Burke Industries. Petroleum hydrocarbons, VOCs and metals in soil.
2. McDowell & Craig Furniture. Petroleum hydrocarbons and VOCs in soil and groundwater.
3. Industrial Threaded Products. Petroleum hydrocarbons, VOCs, metals in soil.

The table in Appendix E lists the known and potential chemical hazards associated with the Site (TPH, MTBE, benzene, toluene, ethylbenzene, xylene (BTEX), trichloroethylene (TCE), tetrachloroethene (PCE) and lead) and provides the following information:

- Permissible Exposure Limits (PELs)

- Immediately Dangerous to Life and Health (IDLH)
- Lower Explosive Limit (LEL).

The primary route of exposure to the aforementioned chemicals is inhalation of vapors and dusts. Workers at the site are required to use the PPE and monitoring procedures specified in the following sections to maintain safe work practices. Use the emergency response procedures specified in the following sections in the event of illness. Use the NIOSH Pocket Guide to Chemical Hazards for supplemental information concerning the chemicals in groundwater and soil vapor found at the sites during the course of the project.

5.4 Biological Hazards

a) Biological hazards associated with the planned Site activities are as follows:

b) Spiders. Avoid contact with spiders and areas where they may hide. The black widow and brown recluse spiders are the most venomous. A bite by a black widow or brown recluse spider requires immediate medical attention. Depending upon the site and situation, either call 911 or transport the victim to the nearest hospital. Tarantulas are not anticipated to be a hazard at this Site.

c) Other Poisonous Insects. Avoid contact with insects and their hives. Common examples include bees and wasps. Most bites and stings can be handled by first aid treatments. Stings from insects such as bees and wasps can be fatal if a severe allergic reaction such as anaphylactic shock occurs. Severely allergic personnel should take medication prescribed by their doctor immediately to reverse the effects of the sting. If the victim experiences a severe reaction, a constricting band should be placed between the sting and the heart. The bitten area should be kept below the heart if possible. Transport the victim to the nearest hospital. It is a WorleyParsons Komex requirement that employees with a history of allergic reaction carry an EPI pen (a pre-filled syringe that contains the drug epinephrine). Scorpions are not anticipated to be a hazard at this Site. If mosquitoes prove to be a hazard wear mosquitoe repellant.

d) Poisonous reptiles. Snakes (e.g., rattlesnakes) are the most common poisonous reptiles. Personnel should avoid contact and areas that may harbor snake populations including high grass, shrubs, and crevices. If snakebite occurs, a tourniquet should be applied between the bite and the heart. The wound should be immobilized and held below the level of the heart. The victim must be taken immediately to the nearest hospital.

e) Poisonous plants. Common examples include poison ivy, poison oak oleander and poison sumac. Personnel should avoid contact. Long-sleeved shirts and pants will allow some protection against inadvertent contact. If contact occurs with a poisonous plant, all contaminated clothing should be removed and the exposed areas washed thoroughly with soap and water, followed by rubbing alcohol. Calamine lotion can be applied if the rash is mild. Medical advice should be sought if a severe reaction occurs or there is a known history of previous sensitivity.

f) Dogs and Other Fur-Bearing Animals (including mice and rats). Avoid contact with these animals. Do not attempt to feed these animals. Dogs can carry the rabies virus or ticks that may transmit Lyme disease to humans.

Immediately notify the SHSO if any biological hazards are encountered at the Site and if you are allergic or sensitive to any specific biological hazard. The SHSO is responsible for evaluating appropriate measures to prevent exposure to biological hazards.

6. SAFETY/PERSONAL PROTECTIVE EQUIPMENT

This section describes the personal protective equipment (PPE) required for the work. Verify this protective equipment is on-hand before conducting the planned Site activities. Select the required level of protective equipment using the results of monitoring.

6.1 Safety Equipment

Locate basic emergency and first aid equipment at the Project Work Zone and the Contaminant Reduction Zone, as appropriate. Use this equipment in the event of an emergency. This equipment is listed in Table C.

Table C Safety Equipment

Equipment Type	Quantity required
Communication	
Cell Phone	One at first-aid station
Extra battery	One at first-aid station
First Aid Equipment	
Industrial First Aid Kit	One at first-aid station
Eye Wash Station	One at first-aid station
Fire Extinguishers	
Multipurpose Dry Chemical with rating of 20-A:120-B:C	One at first-aid station
Bottle of wash water	One at first-aid station
Construction tape and barriers to delineate work zone	Kept on trucks
Decontamination equipment	Kept on trucks
Spill containment equipment	Kept on trucks
A vehicle with keys in the ignition (when on-site) for transport of slightly injured personnel to the hospital. When working offsite, keep keys where readily accessible to all field staff.	One near work area.

6.2 Level D

Use the following PPE for Level D:

a) Work shirt and long pants (short pants may be worn with the approval of the PM);

b) American National Standards Institute (ANSI)-approved steel-toed boots or safety shoes;

c) ANSI-approved safety glasses;

d) ANSI-approved hardhat; and

e) ANSI-approved safety vests (orange or yellow).

Use the following PPE for increased protection at Level D:

a) Outer nitrile gloves and inner nitrile surgical gloves when direct contact with chemically affected soils or groundwater is anticipated (e.g., nitrile surgical gloves may be used for collecting or classifying samples as long as they are removed and disposed of immediately after each sampling event).

b) Chemical-resistant clothing (e.g., Tyvek or polycoated Tyvek coveralls) when contact with chemically affected soils or groundwater is anticipated. Paper coveralls are permissible when working in a dust environment;

c) Safety shoes/boots with protective overboots or knee-high polyvinyl chloride (PVC) polyblend boots when direct contact with chemically affected soils is anticipated;

d) Hearing protection;

e) Sturdy work gloves; or

f) Back brace (when lifting heavy equipment).

6.3 Level C

Use the following additional PPE for level C:

a) NIOSH/OSHA-approved half-face air-purifying respirator (APR) equipped with filter cartridges as specified in Section 6.4;

b) NIOSH/OSHA-approved full-face APRs in lieu of half-face APRs and safety glasses if action levels are exceeded and contaminants may splash;

c) Chemical-resistant clothing (e.g., Tyvek, polycoated Tyvek, or Saranex coveralls) when contact with chemically affected soils or groundwater is anticipated. Paper coveralls are permissible when working in a dust environment;

d) Outer nitrile gloves and inner nitrile surgical gloves when direct contact with chemically affected soils or groundwater is anticipated (e.g., nitrile surgical gloves may be used for collecting or classifying samples as long as they are removed and disposed of immediately after each sampling event); and

e) Safety shoes/boots with protective overboots or knee-high PVC polyblend boots when direct contact with chemically affected soils is anticipated.

The SHSO is responsible for setting the level of protection. Contact the Project Manager and Corporate Health and Safety Manager immediately if Level C PPE is required.

6.4 Respiratory Protection

The standard respirator assigned to WorleyParsons Komex employees for Level C work consists of a half-face air-purifying respirator made by North. Depending on site conditions, the SHSO may require some or all WorleyParsons Komex field personnel to wear a full-face air-purifying respirator also made by North.

The standard respirator cartridge used by WorleyParsons Komex is the North "piggyback" cartridge 7581P100 combined to remove particulate and gas vapors. These "piggyback" cartridges do not have a change-out schedule. Breathing is easy when the cartridges are new, but becomes more difficult when the cartridges are close to being spent. As soon as breathing becomes more difficult, change out the cartridges immediately.

Inspect respirators before taking them into the field. Install cartridges. Perform a positive and negative pressure check. Store the entire respirator assembly in a sealed plastic bag. Clean respirators after use. Each individual is responsible for inspecting and maintaining his or her own respirator.

7. MONITORING PROCEDURES

This section describes the monitoring required to protect your health and safety. Perform this monitoring to prevent heat stress and unhealthful exposure to noise emissions and airborne contaminants.

7.1 Instrumentation

Use the following instrumentation to monitor environmental conditions:

a) Use a thermometer to measure the ambient air temperature in the work zone.

b) Use a sound level meter to monitor noise emissions within the work zone.

c) Use a portable photo-ionization detector (PID) to measure the concentration of volatile organic compounds (VOCs) in the worker breathing zone. Use an 11.7 electron-volt lamp, or equivalent, calibrated to isobutylene in survey mode for organic vapors.

d) When applicable, a mounted wind sock to indicate wind direction and intensity.

7.2 Procedures

The thermometer and sound level meter do not require daily field calibration. These instruments will be calibrated by the provider prior to use. Operate the instruments using the manufacturer's instructions. If either heat or noise are considered to be and issue, measure the temperature and/or sound level prior to the start of work and after the completion of work at the first well location. If sound and/or temperature prove to be above levels of concern, conduct the same measures at each subsequent location. Record the measurements on the field forms.

Calibrate the PID at the Site each day prior to its use. Record the calibration in the logbook. Operate the PID using the manufacturer's instructions. Measure the VOC concentration in the work area breathing zone prior to the start of work and after the completion of work at each boring location. Record the measurements on the field forms. Allow the PID to monitor the ambient air continuously during work. Set the alarm at the lowest action level 1 ppm sustained for 30 seconds). Re-calibrate the PID during the day as desired (usually once a day unless problematic, i.e., filter gets clogged with soil, bulb needs cleaning). Verify calibration using zero air or span gas. If the PID will not hold calibration, stop work until the PID can be replaced or repaired.

Observe the personnel and authorized visitors for indications of impaired health due to contaminant exposure, heat stress, or other site hazards.

7.3 Action Levels

Action levels have been established for each monitoring parameter. Use these action levels to make informed health and safety decisions. These decisions include:

a) Starting and stopping work;

b) Selecting and modifying the extent of the work zone; and

c) Selecting and modifying the level of PPE required.

Action levels are listed in Table D.

Table D Action Levels

Instrument	Reading	Action
Photo Ionization Detector (PID)/ In breathing zone	PID reading: less than 1 ppm	**Continue** Work in Level D.
	PID reading: more than 1 ppm for more than 30 seconds and for every 1 ppm increase until 5 ppm	Stop work, move upwind, monitor perimeter, and notify SHSO and PM; may continue in **Level C** or wait until levels decrease.
	PID reading: sustained at more than 5 ppm;	**Stop work**, move upwind, monitor perimeter, and notify CHSM and PM.
Thermometer	> 80 F	Take heat stress precautions which include drinking water regularly and taking frequent breaks in the shade.
Sound Level Meter	> 85 dBA	Wear ear plugs

Table E Additional Stop Work Action Levels

Condition	When to Stop Work
Heat	Above 105° (this as protection for the equipment as well as people)
Cold	Less than 25° (for people and equipment)
Fog	Visibility less than 25 feet
Rain/mist	Water ponding
Wind	Greater than 25 mph
Lightning	Threatening weather
Earthquake	At occurrence

Fire	At occurrence
Accident	At occurrence
Equipment failure	At occurrence

8. SITE CONTROL AND DECONTAMINATION PROCEDURES

It is critical to control activities and movements of personnel and equipment at the Site. The SHSO will see that a site control program is implemented that includes the establishment of work zones and site security. Implement Decontamination (Decon) procedures to protect personnel and the surrounding community from the hazardous substances encountered during site activities.

8.1 Site Control

The planned Site activities require work zones at each boring. The work zone generally encompasses a perimeter three feet around the boring, the equipment, personnel, and the work vehicle. The work zone moves with the personnel and equipment from boring to boring.

Take the following actions regarding the work zone and security:

a) Conduct the planned Site activities within the work zone using the prescribed PPE;

b) Control access to the work zone to prevent slips, trips, and falls, exposure to hazardous substances, or other Site hazards;

c) Use existing physical and topographical barriers to support your efforts to control access to the work zones;

d) Use the results of monitoring combined with climatic conditions to adjust the extent of the work zone when necessary;

e) Verify visitors entering the work zones have the appropriate training, have read this HaSP, and have signed the daily safety training form;

f) Document visitor entry/exit, vehicle entry/exit, results of security checks, and details of any security problems in the daily field report; and

g) Report difficulties controlling access to the work zone to the SHSO.

The SHSO will be responsible for evaluating practical work considerations.

8.2 DECONTAMINATION PROCEDURES

8.2.1 PERSONNEL DECONTAMINATION

Despite protective procedures, personnel may encounter potentially hazardous compounds while performing work tasks. If so, decontamination must take place using an Alconox wash, followed by a rinse with clean water. Implement decontamination procedures for levels C and D as follows:

- Equipment drop;
- Suit (tyvek) removal;
- Safety boot wash and rinse;

- Inner glove wash and rinse;
- Respirator removal;
- Inner glove removal; and
- Field wash of hands and face.

Only employ those steps that are applicable with the level of PPE worn and extent of contamination present. The SSO will maintain adequate quantities of clean water to be used for personal decontamination (i.e., field wash of hands and face), whenever a suitable washing facility is not located in the immediate vicinity of the work area. Dispose of disposable items and decon wash and rinse water in appropriate containers. Nondisposable items may need to be sanitized before reuse. Each Site worker is responsible for the maintenance, decontamination, and sanitizing of their own PPE.

8.2.2 EQUIPMENT DECONTAMINATION

Decontaminate borehole, hand auger and sampling equipment prior to use at each boring location. Use the standard decontamination procedures outlined in Section 9. Typical decontamination procedures consist of a three bucket decon in which the first bucket is filled with tap water and alconox and the second bucket is filled with just tap water. The third bucket is filled with deionized water. Decon any equipment that comes into contact with soil or groundwater such as hand augers and sampling equipment using the three bucket decon procedure. The spent solutions, wash materials, brushes, and the like shall be considered contaminated and so treated.

9. INJURY AND ILLNESS PREVENTION

This section describes injury and illness prevention. Refer also the WorleyParsons Komex Injury and Illness' Prevention Plan (IIPP) and the WorleyParsons Komex Health, Safety and Environment Manual. Follow these procedures to safely perform the planned Site activities.

9.1 Project Orientation

The PM is responsible to provide a copy of this HaSP to the SHSO, subcontractors and subconsultants. Instruct them to read, understand, and accept the provisions of this HaSP prior to commencing work.

9.2 Project Initiation

Attend a project initiation meeting. Discuss the contents of this HaSP. It is the Site worker's responsibility to read, understand, and accept the provisions of this HaSP prior to commencing work. Sign the Compliance Agreement. The SHSO is responsible for supervising this meeting.

9.3 Training and Certification

Access to the Site and work area is limited to personnel possessing evidence of the following training and certifications:

a) 40-hour OSHA training;

b) First aid and cardiopulmonary resuscitation (CPR) training;

c) Loss Prevention System (LPS) awareness training;

d) Annual medical clearance to perform hazardous waste and emergency response operations;

e) Annual 8-hour OSHA refresher training;

f) Annual respirator fit testing;

g) Annual CPR refresher training;

h) First aid refresher training every three years;

i) Initial project orientation; and

j) Daily safety meetings and signature.

9.4 Fit for Duty

Consumption of alcohol, use of illegal or controlled substances, or certain prescription or over-the-counter medicines, altered mental state, personal injury, or fatigue can affect the fitness of an individual and interfere with the legitimate business interests of WorleyParsons Komex at the Site. Any individual found to be unfit for duty will be prevented from entering/working at the Site until it is determined they are fit to return to duty.

The SHSO is responsible for verifying that each individual signing the Tailgate Safety Meeting Form is fit for duty. The SHSO will complete a Loss/Near Loss Investigation Report Form for any individual that is found to be unfit for duty and inform the PM of the incident. Subcontractors who have personnel unfit for duty will be notified and provided with the opportunity to replace the impaired individuals at the Site.

9.5 Daily Tailgate Safety Meetings

Attend daily "tailgate" safety meetings. Discuss the content and organization of this HaSP including daily planned Site activities and the Site hazards associated with these activities. Complete and sign the Daily Tailgate Safety Meeting Form. This form is provided in Appendix C. The SHSO is responsible for holding daily "tailgate" safety meetings.

9.6 Posting Safety Information

Post the following information in the work zone during work:

a) Emergency phone numbers;

b) Directions to the nearest hospital; and

c) WorleyParsons Komex HaSP.

9.7 Hazard Communication

Material Safety Data Sheets (MSDS) for commercial hazardous chemicals present in the work area are provided in Appendix D. Use the MSDS to familiarize yourself with the hazards of the chemicals present.

9.8 Safety Inspection

Conduct a safety inspection of the work site before each day's activities to verify compliance with the requirements of the HaSP. Document your findings in the WorleyParsons Komex Site Safety Checklist. Immediately address issues of noncompliance. General Safe Work Practices that WorleyParsons Komex employees in the field must adhere to are found in Appendix B of this HaSP. The checklist is provided in Appendix C. The SHSO is responsible for safety inspections.

9.9 Loss and Near Loss Investigation

Report losses and near losses to the CHSM preferably by the end of the work shift but at a maximum within 24 hours of their occurrence. Losses include:

a) Illness resulting from chemical exposure or unknown causes;

b) Physical injury, including those that do not require medical attention;

c) Fire, explosions, and flashes resulting from activities performed by WorleyParsons Komex personnel;

d) Property equipment damage;

e) Vehicular accidents occurring on Site or while traveling to and from the Site;

f) Infractions of safety rules and requirements;

g) Unexpected chemicals exposure (indicated by irritation of eyes, nose, throat, or skin);

h) Hazardous materials spill or release to the environment; and

i) Notice of violation (NOV) issued by a regulatory agency.

Initiate investigation within 24 hours of occurrence. Complete a Loss/Near Loss Investigation Report within 14 days of the loss occurrence. The report must include photographs or drawings of what occurred (where applicable), determination of the root causes of why the loss occurred, and recommendations for corrective action. Complete corrective action within 30 days if possible. The SHSO, PM, and CHSM are jointly responsible for the Loss/Near Loss Investigation Report. The report form is provided in Appendix C.

9.10 Records

Maintain the following health and safety records on the Site during work:

a) Site Safety and Health Plan (and changes);

b) Persons on Site, their affiliation, and purpose;

c) Tailgate Safety Meeting forms (or as reported in the Daily Field Memo);

d) Site Safety Inspection Reports; and

e) Loss and Near Loss Investigation reports.

The SHSO is responsible for maintaining these records.

10. EMERGENCY RESPONSE PROCEDURES

This section presents emergency response procedures. Follow these procedures in the event of an emergency.

10.1 Recognize an Emergency

An emergency is a serious situation or occurrence that happens unexpectedly and demands immediate action. Emergencies may occur as a result of the hazards associated with the planned Site activities, or they may occur as a result of the hazards of activities unrelated to the planned Site activities. Potential emergencies associated with the planned site activities can include:

a) An injury or illness to Site personnel;

b) Damage to an underground conduit (utility);

c) An accident, fire or explosion.

Once an emergency has been recognized, be calm and use your first aid, CPR, and emergency response training. Use the Check-Call-Care guidance provided by the American Red Cross. This is summarized below.

10.2 Assess the Emergency

Take the following actions to assess an emergency:

a) Check the scene to determine whether it's safe for you to provide assistance;

b) Check the scene to find out what happened;

c) Check if someone is sick or injured, and how many victims there are;

d) Check if there are other Site workers or bystanders who can assist; and

e) Check the victims for consciousness.

10.3 Signal the Emergency

Take the following actions to signal an emergency:

a) Signal Site personnel or bystanders within ear shot of the emergency.

b) Signal personnel or bystanders outside of earshot by using a vehicle horn.

c) Signal Site personnel outside of the range of your vehicle horn by radio or telephone.

d) Call 9-1-1 if assistance is needed from the medical personnel, police department, or fire department;

e) Call the SHSO, PM and CHSM using the contact information on the Emergency Response Plan at the front of this document; and

f) Contact an emergency response contractor, if needed.

10.4 Respond to the Emergency

Take the following actions to respond to the emergency:

a) Find the person signaling the emergency and provide assistance if safe;

b) Care for the sick or injured;

c) If the injury or illness is life-threatening, administer first aid and dial 9-1-1. Use your first aid training. Follow the directions given by emergency medical personnel via telephone.

d) If the injury or illness is not life-threatening, administer first aid using your first aid training. Transport sick or injured to the hospital identified in the following section.

e) Evacuate the scene of the emergency if unsafe and muster at the predetermined muster area; (the muster area is to be determined and communicated at the tailgate safety meeting prior to each day's work).

f) Provide limited emergency response measures if safe.

10.5 Responding to a Hazardous Material Spill

Take the following actions to respond to a Hazardous Material Spill emergency:

a) Locate the source of the spill and determine the hazard it poses to the health and safety of site workers and the public;

b) Attempt to stop or reduce the flow if it can be done without risk to personnel;

c) Otherwise, isolate the spill area and control entry by unauthorized personnel;

d) De-energize all sources of ignition that are located within 100 feet of the spill, including vehicle engines;

e) Call an emergency cleanup contractor as soon as possible if the spill is of such nature or extent that it cannot be safely contained, or poses an imminent threat to human health or the environment.

Additional spill containment measures are listed below.

- Stand upright or rotate containers to stop the flow of liquids. This step should be accomplished as soon as the spill or leak occurs, providing it is safe to do so.
- Use sorbent pads, booms, or adjacent soil to dike or berm the spill, or to solidify liquids.
- Place sorbent pads, soil, or booms, if used, in appropriate containers after use, pending disposal.
- Collect Contaminated tools and equipment should also be collected for subsequent cleaning or disposal.

10.6 Hospital Address and Route

If immediate medical attention is required and it is safe to transport the person to a hospital, use the following hospital:

10.6.1 Name, Address, Telephone Number

La Palma Intercommunity Hospital

7901 Walker St., La Palma CA 90623

Phone Number: (714) 670-7400

10.6.2 Directions to Hospital

McDowell & Craig Furniture

Use the hospital route map presented as Figure 3.

1.	Start out going SE on FIRESTONE BLVD toward MARQUARDT AVE.	1.0 miles
2.	Continue on MARQUARDT AVE. until it becomes WALKER ST.	1.8 miles
3.	Continue on WALKER ST.	1.0 miles
4.	END AT 7901 Walker St, La Palma CA 90623-1722	

Total Estimated Time: 10 minutes **Total Estimated Distance:** 3.8 miles

Industrial Threaded Products

Use the hospital route map presented as Figure 3.

1.	Start out going SE on FIRESTONE BLVD toward MARQUARDT AVE.	0.3 miles
2.	Continue on MARQUARDT AVE. until it becomes WALKER ST.	1.8 miles
3.	Continue on WALKER ST.	1.0 miles
4.	END AT 7901 Walker St, La Palma CA 90623-1722	

Total Estimated Time: 8 minutes **Total Estimated Distance:** 3.1 miles

Former Burke Industries

Use the hospital route map presented as Figure 3.

1.	Start out going SE ON FREEWAY DR toward MARQUARDT AVE	0.3 miles
2.	Turn RIGHT onto ALONDRA BLVD	0.2 miles
3.	Turn LEFT at MARQUARDT AVE and continue until it becomes	

	WALKER ST.	1.8 miles
4.	Continue on WALKER ST.	1.0 miles
4.	Turn RIGHT onto WALKER ST	0.8 miles
5.	END AT 7901 Walker St, La Palma CA 90623-1722	

Total Estimated Time: 10 minutes **Total Estimated Distance:** 3.3 miles

11. CERTIFICATION

This HaSP has been reviewed and approved by the WorleyParsons Komex CHSM and the project Certified Industrial Hygienist. This HaSP satisfies the requirements of the Occupational Safety and Health Act 1910.120 and CCR 8 as implemented by the WorleyParsons Komex CHSM. Do not use this HaSP unless the CHSM's signature appears below.

Appendix A Job Safety Analyses

JOB SAFETY ANALYSIS		
Job Title: Mobilization and Demobilization		
Client: Caltrans	**Supervisor:** Ralph Beck	**Date Revision:** 5/17/07
Site & Location: 1-5 and Carmenita Road	**Analysis by:** Tom Browne, Buck Toler, Andy Gray	**Equipment:** Depends on Job
Required Personal Protective Equipment: safety vest, steel-toed boots required at all times. Hardhat required when working off-site in streets. As appropriate to task, gloves will be needed.		
Site Specific Hazard Analysis		
Sequence of Basic Job Steps	**Potential Hazards**	**Recommended Actions**
		Perform SPSA before each step

General Hazard Analysis		
Sequence of Basic Job Steps	**Potential Hazards**	**Recommended Actions**
		- Perform SPSA before each step
1. Arrive at Site – Unloading and Mobilization of Equipment	1a. Physical injury and equipment damage from being struck by moving vehicles. 1b. Physical injury from improper operation of truck lift gate. 1c. Overexertion caused by heavy lifting when unloading 1d. Injuries due to slips, trips and falls	1a. Note if any on-site traffic. If traffic, park away from traffic flow. When working offsite, park vehicle between work and traffic when possible. 1a. Use designated parking areas. 1a. If necessary, set up traffic cones and caution tape and/or use a traffic control monitor to do it. 1a.Wear proper PPE (traffic vest, safety boots, and, when in public street, use hard hat). 1b. Keep hands, feet, other appendages, clothing, and jewelry clear of lift gate when in operation. 1b. For light objects, lower lift gate half way to ground to serve as a step for climbing into bed of truck. For heavy objects, lower lift gate to ground and load (note load limit of 2,000 lb). If person is raised on lift gate, assistant must press the button. 1b. Use lift gate when climbing on and off of the truck. 1c. Use proper lifting technique (lift with legs not back). 1c. Wear proper PPE, leather gloves, steel-toed boots and vest. 1d. Keep site free of debris that are tripping hazards. 1d. Locate and mark any permanent

General Hazard Analysis		
Sequence of Basic Job Steps	**Potential Hazards**	**Recommended Actions**
		- Perform SPSA before each step
		structures that present tripping hazards (i.e., sprinklers, pipes, wells) prior to unloading and mobilization activity. 1d. Remove all trip hazards by keeping materials/objects organized and out of walkways 1d. Keep work surfaces dry when possible. 1d. Install rough work surface covers when possible. 1d. Stay aware of footing and do not run.
	1e. Damage to fixed structures being struck by Company vehicle	1e. Locate and mark any permanent structures that could be damaged by truck.
2. Site Cleanup – Demobilization and Loading of Equipment	2a. Physical injury and equipment damage from being struck by moving vehicles.	2a. If any on-site traffic (including pedestrian), wear vest and watch for vehicles. 2a. Remove cones and other traffic control equipment
	2b. Hazards, public nuisance due to poor housekeeping	2b. Make careful visual sweep of site and remove or secure any hazardous and unsightly items/areas.
	2c. Loss due to theft or vandalism	2c. Check tools and equipment left on site. Secure gates and buildings prior to leaving site.

ExxonMobil Refining & Supply - Global Remediation
JOB SAFETY ANALYSIS   Revised January 2005

COMPANY/ PROJECT NAME or ID/ LOCATION (City, State) Gregg Drilling and Testing/ ExxonMobil/Wilmington Townlot Unit, Wilmington, California	DATE 7/11/05	☒ NEW ☐ REVISED	PAGE 1 of 1

WORK ACTIVITY (Description):
Direct Push Sampling and Testing

DEVELOPMENT TEAM	POSITION / TITLE	REVIEWED BY:	POSITION / TITLE
P. Keating	Vice President	B. Howard	Project Manager
J. Contreras	Scheduling/Driller		

MINIMUM REQUIRED PERSONAL PROTECTIVE EQUIPMENT (SEE CRITICAL ACTIONS FOR TASK-SPECIFIC REQUIREMENTS)

☒ REFLECTIVE VEST	☐ GOGGLES	☐ AIR PURIFYING RESPIRATOR	☒ GLOVES ~~Nitrile or~~ Leather
☒ HARD HAT	☐ FACE SHIELD	☐ SUPPLIED RESPIRATOR	☐ OTHER
☐ LIFELINE / HARNESS	☒ HEARING PROTECTION	☒ PPE CLOTHING ~~Level D~~	
☒ SAFETY GLASSES	☒ SAFETY SHOES		

JOB STEPS	*POTENTIAL HAZARDS	*CRITICAL ACTIONS TO MITIGATE HAZARDS
1. Initial set-up and site evaluation. Advancing Direct push samping tooling and equipment into subsruface	-Slips, trips or falls while accessing equipment	Strong communication among all personnel within work exclusion zone. Survey site for tripping hazards and exercsie deliberate foot placement.
2. Advancing Direct push samping tooling and equipment into subsruface	Pinch points on moving parts	Maintaining visual contact with all moving parts while handling tooling and equipment, practice good housekeeping. Avoid placing hands near sharp edges or potential pinch points.
3. Adding/removing rods and samplers from drill string during set-up, sampling, and removal.	Back injury from lifting heavy equipment. Foot injury from dropping tooling. Pinch points on adjoining sections	Use proper lifting and load transfer techniques. Maximum load lifted by single worker should not exceed 50lbs. Tools should not intentionally be dropped to the ground, but rather placed in the appropriate area. Keeps hand away from joint sections when adding or removing rods or samplers to avoid pinch points.
4. Advancing Direct push sampling tooling and equipment into subsruface	Inadquate space for operations, impact on sourrounding , observing Personnel	Gain acknowledgement from operator when approaching moving equipment and exercise care not to walk or stand in equipment blind spots. Do not wear loose fitting clothing or apparel, wear gloves at all times
5. Handing soil and/or groundwater samples, or samplers and rods.	Chemical contamination	Wear nitrile gloves when handling potentially contaminated tooling or samples. Assume tooling is contaminated if recently used and not cleaned and assume all samples are contaminated unless specifically instructed.
6. Advancing Direct push samping tooling and equipment into subsruface	Physical fatigue.	Monitor body temperature, and take breaks as needed drinking sufficient fluids. Fluid intake may depend on environmental working temperature, amount of perspiration can be used as a guide for fluid intake (i.e. profuse sweating = frequent hydration breaks)
7. Operating hydraulic hammer to advance Direct push sampling tooling and equipment into subsurface	Noise	All personnel operating hydraulic hammering direct push equipment shall wear appropriate hearing protection. All personnel working within 20 feet of the hammering location shall wear hearing protection. Additionally, GREGG personnel shall take the responsibility, in coordination with the Site Safety Officer, to identify loud noise conditions and exclusions areas. GREGG personnel will also temporarily halt work activities, in coordination with the Site Safety Officer, to notify new personnel or jobsite observers of noise hazard conditions.
8. Breaking split spoon to retrieve sample	Injury from dropped tooling, chemical contamination	Use proper tools to clamp sample and break apart. Place tools in stable areas to avoid falling. Wear nitirile gloves when handing samples.

ExxonMobil Refining & Supply - Global Remediation

JOB SAFETY ANALYSIS Revised January 2005

[1] Each Job or Operation consists of a set of steps. Be sure to list all the steps in the sequence that they are performed. Specify the equipment or other details to set the basis for the associated hazards in Column 2

[2] A hazard is a potential danger. What can go wrong? How can someone get hurt? Consider, but do not limit, the analysis to: **Contact** - victim is struck by or strikes an object; **Caught** - victim is caught on, caught in or caught between objects; **Fall** - victim falls to ground or lower level (includes slips and trips); **Exertion** - excessive strain or stress / ergonomics / lifting techniques; **Exposure** - inhalation/skin hazards. Specify the hazards and do not limit the description to a single word such as "Caught"

[3] Aligning with the first two columns, describe what actions or procedures are necessary to eliminate or minimize the hazards. Be clear, concise and specific. Use objective, observable and quantified terms. Avoid subjective general statements such as, "be careful" or "use as appropriate".

JOB SAFETY ANALYSIS		
Job Title: Decontamination Operation (Drilling)		
Client: Cal Trans	**Supervisor:** Ralph Beck	**Date:** 12/20/04
Site & Location:	**Analysis by:** Buck Toler	**Equipment:** High Pressure Stream Cleaner
Required Personal Protective Equipment: Level D, vest, steel-toed boots required at all times. Hardhat required when overhead hazard or when working off-site in streets. As appropriate: safety glasses, hearing protection and gloves.		
Site Specific Hazard Analysis		
Sequence of Basic Job Steps	**Potential Hazards**	**Recommended Actions**
1. Site Specific Considerations	1a. Cold Stress	1a. Wear proper PPE and warm clothes

General Hazard Analysis		
Sequence of Basic Job Steps	**Potential Hazards**	**Recommended Actions**
		- Perform SPSA before each step.
1. Decon set up	1a. Exposure to site traffic 1b. Pedestrian traffic 1c. Decon unit shifting while disconnecting from drill rig	1a. Set up exclusion zone to include decon unit if possible 1b. Position decon unit close to drill rig inside exclusion zone 1c. Chalk tire to prevent unit from moving
2. Decontamination of augers and soil cleaning equipment	2a. Noise up to 100 dB 2b. High pressure water or steam 2c. Physical injury of muscle or back. 2d. Cuts from sharp metal edges 2e. Pinch points and falling objects 2f. Slipping hazard due to wet surface	2a. Hearing protection must be worn 2b. Proper PPE to include safety glasses and gloves 2c. Be careful when lifting heavy objects. Use proper lifting techniques (lift with the muscles in your legs not the muscles in you lower back). 2d. Keep hands, feet, other appendages, clear of sharp edge equipments when cleaning. Move carefully, using two persons when necessary and wear gloves. 2e. Restrict decon to one layer of augers at a time 2f. Lay down plywood or sand, wear non-slip boots if appropriate for situation
3. Clean-up	3a. Slips, trips and falls 3b. Heavy lifting.	3a. Make careful visual sweep of site 3a. Check for tools, debris, or dirt left on-site 3a. Watch your step 3b. Be careful when lifting heavy objects. Use proper lifting techniques (lift with the muscles in your legs not

General Hazard Analysis		
Sequence of Basic Job Steps	**Potential Hazards**	**Recommended Actions**
		the muscles in you lower back).
4. Preparation for leaving site when work is completed	4a. Materials falling off truck	4a. Perform a pre-trip walk around to make sure everything is secure 4a. Put all tools away where they will not fall off truck 4a. Make sure all safety pins and other securing devices are in place 4a. Double check safety pin that hold cart on decon unit

SITE SPECIFIC HAZARD ANALYSIS		
JOB STEPS	**POTENTIAL HAZARDS**	**CRITICAL ACTIONS TO MITIGATE HAZARDS**
1. Site Walk and Set-up.	1a. Rodent holes: trip hazard.	1a. Walk with caution with eyes to the ground when walking across open field and in areas covered by grass.
	1b. Pollen from grass.	1b. Provide antihistamine medicine to staff with sensitive allergies as recommended by their doctors.

GENERAL HAZARD ANALYSIS		
JOB STEPS	**POTENTIAL HAZARDS**	**CRITICAL ACTIONS TO MITIGATE HAZARDS**
1. Clearance of Sampling location.	1a. Injuries due to slips, trips, and falls.	1a. Walk with caution.
	1b. Damage to underground utilities.	1b. Obtain a utility location map before starting the work.
2. Mast-up drill rig	2a. Overhead obstruction / Power lines.	2a. Check the area for obstructions.
		2a. Have a lookout watch while driller moves vehicle or raises mast.
		2a. Do not move drill dig with mast rasied.
		2a. Keep mast at least 15 feet from overhead power lines.
	2b. Uneven surfaces.	2b. Level truck using hydraulic jacks and jack pad if needed.
3. Remove asphalt or concrete surface.	3a. Flying debris.	3a. Communicate with co-workers and make sure nobody is in the way.
		3a. Add water for dust control.
4. Push rod collect samples.	4a. Pinch points	4a. Stay away from moving parts.
	4b. Noise up to 115dB	4b. Hearing protection must be worn.
	4c. Chemical or Hydrocarbon exposure	4c. Wear nitrile rubber gloves if there is a skin exposure potential.
	4d. Electrical hazard	4d. Upgrade to OSHA level C if necessary.
	4e. Injury from heavy lifting or equipment.	4e. Use appropriate lifting technique (legs not back).
	4f. Dust Exposure	4f. Wear PPE (respirator or dust mask) if high dust levels.
	4g. Injuries due to slips, trips, and falls.	4g. Walk with caution.
5. Backfilling	5a. Injuries due to slips, trips, and falls.	5a. Walk / move with caution.
	5b. Dust exposure	5b. Use proper PPE (respirator) if action levels exceeded.
		5b. Wear nitrile gloves.
	5c. Inadequate sealing of hole.	5c. Pour granular bentonite and hydrate.

		5c. When mixing grout, mix to specification and completely fill the hole.
	5d. Cement dust exposure	5d. Do not allow cement to come in contact with skin and avoid breathing cement dust.
	5e. Moving parts.	5e. Wear proper PPE including work gloves, safety glasses, and other PPE as required.
		5e. Keep hands clear of moving parts.
6. Decontaminate tooling	6a. High pressure water or steam.	6a. Proper PPE to include safety glasses and gloves.

Appendix B Safe Work Practices

SAFE WORK PRACTICES

To maintain strong safety awareness and enforce safe procedures, the following personnel requirements and prohibitions have been established for the Site:

- The subject work area will be restricted to authorized visitors and personnel. Daily tailgate safety meetings will be held to discuss current site conditions, field tasks being performed, planned modifications, and work concerns. Tailgate safety meetings will be conducted on a daily basis at the beginning of each shift. Attendance rosters will be recorded and maintained by the PFS.
- All personnel entering the site will be required to identify themselves to the PM or PFS. Personnel who have not attended a tailgate safety meeting on that day will be required to do so with the SHSO or other authorized representative. Personnel unfamiliar with the site will be informed of site hazards and instructed to avoid contact with contaminated surfaces, soils, sample materials, or related equipment, and will be instructed to remain a minimum of 50 feet (15.3 m) upwind of all active work areas.
- All personnel will adhere to the decontamination procedures outlined in this Site HaSP.
- Removal of materials from protective clothing or equipment by blowing, shaking, or any other means that may disperse contaminated materials into the air is prohibited.
- Legible precautionary labels will be affixed to containers of raw materials, intermediate products, mixtures, waste debris, and contaminated personal protective equipment.
- Contaminated Personal Protective Equipment (PPE) will not be removed from the site until it has been cleaned or properly packaged and labeled.
- Hands will be thoroughly washed upon leaving contaminated or suspected contaminated areas before eating, drinking, or other such activity.
- All hazardous wastes, soil samples, and other contaminated materials, which are removed from the subject site, will be accompanied by appropriate shipping papers.
- No running or horseplay.
- Medicine and alcohol can worsen the effects from exposure to toxic chemicals. Prescribed drugs will not be taken by personnel on operations where the potential for absorption, inhalation, or ingestion of toxic substances exists, unless specifically approved by a qualified physician. Alcoholic beverage intake will not be allowed during breaks.
- Safety devices on equipment must be left intact and used as designed.
- Equipment and tools will be kept clean and in good repair, and used only for their intended purpose.
- Respiratory devices may not be worn with beards or long sideburns, or under other conditions that prevent a proper seal.
- Accidents or injuries associated with work at the Site will be immediately reported to the SHSO. If necessary, an incident report will be initiated by the SHSO.

- The "buddy system" will be used whenever appropriate.
- To prevent head injury, ANSI-approved hard hats will be worn at all times while workers are in areas where overhead obstructions or falling objects may be encountered.
- To prevent eye injuries, workers must wear ANSI-approved safety glasses during field activities.

Appendix C Required Forms

a) Site Safety Checklist

b) Tailgate Safety Meeting Form

c) Loss and Near Loss Reporting and Investigation Form

d) Notice of Violation

e) Health and Safety Compliance Agreement

SITE SAFETY CHECKLIST

Project Name: ______________________________ Task Number: ______________

Specific Location: ______________________________ Date: ______________

Type of Work: ______________________________ Time:

Checklist	Yes	No	N/A	Remarks
Written Health and Safety Plan (HaSP) is on Site				
JSAs written, on-site, and everyone familiar with them				
HaSP has been read and signed by all site personnel including visitors				
Daily tailgate safety meetings have been held and documented				
Site personnel have appropriate training and medical clearance				
Emergency response numbers available and route to hospital map				
Everyone knows emergency response procedures				
Site zones are set up and observed where appropriate				
Access to the work area limited to authorized personnel				
Decontamination procedures are followed and match the requirements of the HaSP				
Decontamination stations (including hand/ face wash) are set up and used				
PPE used matches HaSP requirements				
Hearing protection used where appropriate				
Respirators are properly cleaned and stored				
Emergency and first aid equipment is on site as described in HaSP				
Drinking water is readily available				
Phone is readily accessible for emergency use				

Proper drum and material handling techniques are used				
Drums and waste containers are labeled appropriately				
Chemical spill absorbents available in work area				
Adequate number of appropriate refuse containers				
Extension cords are grounded and protected from water and vehicle				
Ground-fault circuit interrupters are used with electrical equipment				
Tools and equipment are in good working order, properly stored when in not in use, when in use				
Lighting is adequate				
Free of slip, trip or fall hazards				
Is air monitoring equipment available and operational

Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	EINECS
7732-18-5	Water	62-64%	231-791-2
7647-01-0	Hydrogen chloride	36-38%	231-595-7

Hazard Symbols:
Risk Phrases:

Section 3 - Hazards Identification

EMERGENCY OVERVIEW

Appearance: Clear, colorless to faintly yellow.
DANGER! CORROSIVE. SENSITIZER. MAY CAUSE SEVERE RESPIRATORY AND DIGESTIVE TRACT IRRITATION WITH POSSIBLE BURNS. CAUSES EYE AND SKIN BURNS.
Target Organs: None.

Potential Health Effects

Eye:
May cause irreversible eye injury. Vapor or mist may cause irritation and severe burns. Contact with liquid is corrosive t the eyes and causes severe burns.

Skin:

Material Safety Data Sheet
Hydrochloric Acid

May be absorbed through the skin in harmful amounts. Contact with liquid is corrosive and causes severe burns and ulceration.

Ingestion:
May cause circulatory system failure. Causes severe digestive tract burns with abdominal pain, vomiting, and possible death. May cause corrosion and permanent tissue destruction of the esophagus and digestive tract.

Inhalation:
Causes severe irritation of upper respiratory tract with coughing, burns, breathing difficulty, and possible coma. May cause pulmonary edema and severe respiratory disturbances.

Chronic:
Prolonged or repeated skin contact may cause dermatitis. Repeated exposure may cause erosion of teeth. May cause conjunctivitis and photosensitization.

Section 4 - First Aid Measures

Eyes:
Flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower lids. Get medical aid immediately. Do NOT allow victim to rub or keep eyes closed.

Skin:
Get medical aid. Rinse area with large amounts of water for at least 15 minutes. Remove contaminated clothing and shoes.

Ingestion:
Do NOT induce vomiting. If victim is conscious and alert, give 2-4 cupfuls of milk or water. Get medical aid immediately.

Inhalation:
Remove from exposure to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

Notes to Physician:
Treat symptomatically and supportively.

Antidote:
No specific antidote exists.

Section 5 - Fire Fighting Measures

General Information:
As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. Not flammable, but reacts with most metals to form flammable hydrogen gas. Use water spray to keep fire-exposed containers cool.

Extinguishing Media:
Substance is nonflammable; use agent most appropriate to extinguish surrounding fire.

Autoignition Temperature:
Not available.

Flash Point:
Not available.

NFPA Rating:
NFPA Rating: Not published.

Explosion Limits:
Lower: Not available. Upper: Not available.

Section 6 - Accidental Release Measures

General Information:
Use proper personal protective equipment as indicated in Section 8.

Spills/Leaks:
Large spills may be neutralized with dilute alkaline solutions of soda ash, or lime. Absorb spill using an absorbent, non-combustible material such as earth, sand, or vermiculite.

Material Safety Data Sheet
Hydrochloric Acid

Section 7 - Handling and Storage

Handling:
Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Use with adequate ventilation. Do not get on skin or in eyes. Do not ingest or inhale.

Storage:
Keep away from heat and flame. Do not store in direct sunlight. Store in a cool, dry, well-ventilated area away from incompatible substances.

Storage Code:
White

Section 8 - Exposure Controls, Personal Protection

Engineering Controls:
Use adequate general or local exhaust ventilation to keep airborne concentrations below the permissible exposure limits.

Exposure Limits

Chemical Name:	ACGIH	NIOSH	OSHA
Water	None listed.		
Hydrogen chloride	None listed.	C 5 ppm; C 7 mg/m3	C 5 ppm; C 7 mg/m3;

OSHA Vacated PELs

Personal Protective Equipment

Eyes:
Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133.

Skin:
Wear appropriate protective gloves to prevent skin exposure.

Clothing:
Wear appropriate protective clothing to prevent skin exposure.

Respirators:
Follow the OSHA respirator regulations found in 29CFR 1010.134. Always use a NIOSH-approved respirator when necessary.

Section 9 - Physical and Chemical Properties

Physical State: Liquid
Appearance: Clear, colorless to faintly yellow.
Odor: Strong, pungent.
pH: 1.1 (0.1N sol).
Vapor Pressure: 160 mm Hg
Vapor Density: 1.257 (Air=1)
Evaporation Rate: 2.0 (Butyl acetate=1)
Viscosity: Not available.
Boiling Point: 230 F
Freezing/Melting Point: -101 F
Decomposition Temperature: 3239.6 F
Solubility: 823g/L water at 32F.
Specific Gravity/Density: 1.19 (Water=1)
Molecular Formula: HCl

Material Safety Data Sheet
Hydrochloric Acid

Molecular Weight 36.46

Section 10 - Stability and Reactivity

Chemical Stability:
Stable under normal temperatures and pressures.

Conditions to Avoid:
Incompatible materials, light.

Incompatibilities with Other Materials
Acetate, acetic anhydride, alcohols + hydrogen cyanide, 2-aminoethanol, ammonium hydroxide, calcium carbide, calciu phosphide, cesium acetylene carbide, cesium carbide, chlorosulfonic acid, 1,1-difluoroethylene, ethylene diamine, ethyleneimine, fluorine, lithium silicide, magnesium boride, mercuric sulfate, oleum, perchloric acid, potassium permanganate, b-propiolactone, propylene oxide, rubidum acetylene carbide, rubidum carbide, silver perchlorate + carbo tetrachloride, sodium, sodium hydroxide, sulfuric acid, uranium phosphide, vinyl acetate. Substance polymerizes on contact with aldehydes or epoxides.

Hazardous Decomposition Products
Hydrogen chloride, hydrogen gas.

Hazardous Polymerization
May occur.

Section 11 - Toxicological Information

RTECS:
CAS# 7647-01-0: MW4025000.

LD50/LC50:
CAS# 7732-18-5: Oral, rat: LD50 = >90 mL/kg
CAS# 7647-01-0: Inhalation, mouse: LC50 =1108 ppm/1H
Inhalation, rat: LC50 =3124 ppm/1H
Oral, rabbit: LD50 = 900 mg/kg

Carcinogenicity:
CAS# 7732-18-5: Not listed as a carcinogen by ACGIH, IARC, NIOSH, NTP, OSHA, or CA Prop 65.
CAS# 7647-01-0: Not listed as a carcinogen by ACGIH, IARC, NIOSH, NTP, OSHA, or CA Prop 65.

Epidemiology:
No information available.

Teratogenicity:
Embryo or Fetus: Stunted fetus, ihl-rat TCLo=450 mg/m3/1H Specific Developmental Abnormalities: homeostasis, ihl-rat TCLo=450 mg/m3/1H.

Mutagenicity
No information available.

Neurotoxicity
No information available.

Section 12 - Ecological Information

Ecotoxicity:
Trout LC100=10 mg/L/24H Shrimp LC50=100-330 ppm Starfish LC50=100-330mg/L/48H Shore crab LC50=240 mg/L/48H Chronic plant toxicity=100 ppm

Environmental:
Substance will neutralize soil carbonate-based components.

Physical:
No information available.

Other:
None.

Material Safety Data Sheet
Hydrochloric Acid

Section 13 - Disposal Considerations

Dispose of in a manner consistent with federal, state, and local regulations.

RCRA D-Maximum Concentration of Contaminants
None of the components are on this list.

RCRA D Series - Chronic Toxicity Reference Levels
None of the components are on this list.

RCRA F Series Wastes
None of the components are on this list.

RCRA P Series Wastes
None of the components are on this list.

RCRA U Series Wastes
None of the components are on this list.

RCRA Substances Banned from Land Disposal
None of the components are on this list.

Section 14 - Transport Information

	US DOT	IATA	IMO	RID/ADR	Canadian TDG
Shipping Name:	HYDROCHLORIC ACID, SOLUTION	No information available.	No information available.	No information available.	HYDROCHLORIC ACID
Hazard Class:	8				8(9.2)
UN Number:	UN1789				UN1789
Packing Group:	II				II

Section 15 - Regulatory Information

US Federal

TSCA
CAS# 7732-18-5 is listed on the TSCA inventory.
CAS# 7647-01-0 is listed on the TSCA inventory.

Health and Safety Reporting List
None of the components are on this list.

Chemical Test Rules
None of the components are on this list.

TSCA Section 12b
None of the components are on this list.

TSCA Significant New Use Rule (SNUR)
None of the components are on this list.

CERCLA/SARA Reportable Quantities (RQ)
CAS# 7647-01-0: final RQ = 5000 pounds (2270 kg)

CERCLA/SARA Threshold Planning Quantities (TPQ)
CAS# 7647-01-0: TPQ = 500 pounds

SARA Codes
CAS# 7647-01-0: acute.

CERCLA/SARA Section 313
This material contains Hydrogen chloride (CAS# 7647-01-0, 36-38%),which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR Part 373.

Clean Air Act - Hazardous Air Pollutants (HAPs)
CAS# 7647-01-0 is listed as a hazardous air pollutant (HAP).

Material Safety Data Sheet
Hydrochloric Acid

Clean Air Act - Class 1 Ozone Depletors
None of the components are on this list.

Clean Air Act - Class 2 Ozone Depletors
None of the components are on this list.

Clean Water Act - Hazardous Substances
CAS# 7647-01-0 is listed as a Hazardous Substance under the CWA.

Clean Water Act - Priority Pollutants
None of the components are on this list.

Clean Water Act - Toxic Pollutants
None of the components are on this list.

OSHA - Highly Hazardous
CAS# 7647-01-0 is considered highly hazardous by OSHA.

US State

State Right to Know
Hydrogen chloride can be found on the following state Right-to-Know lists: California, New Jersey, Florida, Pennsylvania, Minnesota, Massachusetts.

California Regulations
No information available.
No information available.

European/International Regulations

European Labelling in Accordance with EC Directives:

Section 16 - Other Information

MSDS Creation Date: December 20, 1995
Revision Date: March 17, 1997
Revision Number: 1

PORTAGAS - VIA ENVIROSUPPLY

Material Safety Data Sheet

1. Product Identification

CHEMICAL NAME; CLASS: NONFLAMMABLE GAS MIXTURE
Containing the Following Component in an Air Balance Gas:
Isobutylene: 0.0005-0.9%

MSDS Number: 161058

PRODUCT USE: Calibration of Monitoring and Research Equipment
SUPPLIER/MANUFACTURER'S NAME: Portagas
ADDRESS: 6717-B Polk Street
Houston, TX 77011
BUSINESS PHONE: General MSDS Info: (713) 928-6477
EMERGENCY PHONE: INFOTRAC :(800) 535-5053

2. Composition and Information on Ingredients

CHEMICAL NAME	CAS #	mole %	EXPOSURE LIMITS IN AIR					
			ACGIH		OSHA			OTHER
			TLV ppm	STEL ppm	PEL ppm	STEL ppm	IDLH ppm	
Oxygen	7782-44-7	0 - 23.5%	There are no specific exposure limits for Oxygen.					
Isobutylene	115-11-7	0.0005 - 0.9%	There are no specific exposure limits for Isobutylene.					
Air	7727-37-9	Balance	There are no specific exposure limits for Air. Air is a simple asphyxiant (SA). Oxygen levels should be maintained above 19.5%.					

Note: NE = None Established, SA = Simple Asphyxiate

3. Hazard Identification

SYMPTOMS OF OVER-EXPOSURE BY ROUTE OF EXPOSURE: The most significant route of over-exposure for this product is by inhalation.
INHALATION: Due to the small size of an individual cylinder of this product, no unusual health effects from over-exposure to the product are anticipated under routine circumstances of use. If this product is released in a small, poorly ventilated area (i.e. an enclosed or confined space), an oxygen-deficient environment may occur. Individuals breathing such an atmosphere may experience symptoms which include headaches, ringing in ears, dizziness, drowsiness, unconsciousness, nausea, vomiting, and depression of all the senses.

PORTAGAS

Material Safety Data Sheet

HAZARDOUS MATERIAL INFORMATION SYSTEM		
HEALTH	(BLUE)	1
FLAMMABILITY	(RED)	0
REACTIVITY	(YELLOW)	0
PROTECTIVE EQUIPMENT		B
EYES	RESPIRATORY	HANDS / BODY
See Section 8		
For routine industrial applications		

HEALTH EFFECTS OR RISKS FROM EXPOSURE: An Explanation in Lay Terms. Over-exposure to this gas mixture may cause the following health effects:

ACUTE: Due to the small size of the individual cylinder of this product, no unusual health effects from exposure to the product are anticipated under routine circumstances of use. The most significant hazard associated with this gas mixture is the potential for exposure to oxygen-deficient atmospheres. Symptoms of oxygen deficiency include respiratory difficulty, ringing in ears, headaches, and shortness of breath, wheezing, headache, dizziness, indigestion, nausea, unconsciousness, and death. The skin of a victim of over-exposure may have a blue color.

CHRONIC: There are currently no known adverse health effects associated with chronic exposure to this gas.

TARGET ORGANS: Respiratory system.

4. First Aid Measures

RESCUERS SHOULD NOT ATTEMPT TO RETRIEVE VICTIMS OF OVER-EXPOSURE TO THIS PRODUCT WITHOUT ADEQUATE PERSONAL PROTECTIVE EQUIPMENT. At a minimum, Self- Contained Breathing Apparatus and Fire-Retardant Personal Protective equipment should be worn. Adequate fire protection must be provided during rescue situations.

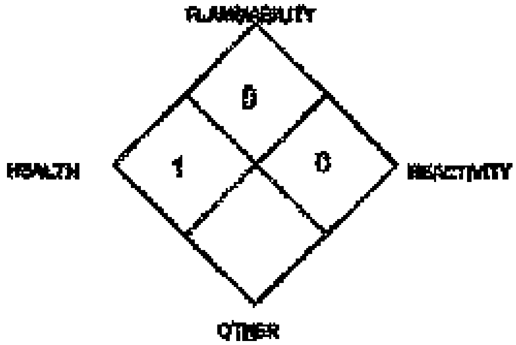
SKIN and EYE CONTACT: Due to the presence of Ethylene Oxide in this gas mixture, over-exposures to the eyes may cause irritation (i.e. redness, stinging). Victim(s) who experience any adverse effect after over-exposure to this product must be taken for medical attention. Rescuers should be taken for medical attention if necessary. Take a copy of the label and the MSDS to physician or other health professional with victim(s).

PORTAGAS

Material Safety Data Sheet

5. Fire-Fighting Measures

NFPA RATING



FLASH POINT, (method): Non-flammable gas.
AUTOIGNITION TEMPERATURE: N/A
FLAMMABLE LIMITS (in air by volume, %):
Lower (LEL): N/A
Upper (UEL): N/A
The following information is for the gas mixture.
FIRE EXTINGUISHING MATERIALS: Extinguish fires of this gas mixture by shutting-off the source of the gas. U-1se water sprays to cool fire-exposed containers, structures, and equipment.
Explosion Sensitivity to Mechanical Impact: Not sensitive.
Explosion Sensitivity to Static Discharge: Not sensitive.

6. Accidental Release Measures

LEAK RESPONSE: Due to the small size and content of the cylinder, an accidental release of this product presents significantly less risk of an oxygen deficient environment and other safety hazards than a similar release from a larger cylinder. However, as with any chemical release, extreme caution must be used during emergency response procedures. In the event of a release in which the atmosphere is unknown, and in which other chemicals are potentially involved, evacuate immediate area. Such releases should be responded to by trained personnel using pre-planned procedures. Proper protective equipment should be used. In case of a leak, clear the affected area, protect people, and respond with trained personnel. Allow the gas mixture to dissipate. If necessary, monitor the surrounding area (and the original area of the release) for oxygen. Oxygen levels must be above 19.5% before non-emergency personnel are allowed to reenter area. If leaking incidentally from the cylinder, contact your supplier.

7. Handling And Use

WORK PRACTICES AND HYGIENE PRACTICES: Be aware of any signs of dizziness or fatigue; exposures to fatal concentrations of this product could occur without any significant warning symptoms, due to oxygen deficiency. Use non-sparking tools when working with this gas mixture. Do not attempt to repair, adjust, or in any other way modify the cylinders containing this gas mixture. If there is a malfunction or another type of operational problem, contact nearest distributor immediately.

STORAGE AND HANDLING PRACTICES: Cylinders should be firmly secured to prevent falling or being knocked-over. Cylinders must be protected from the environment, and preferably kept at room temperature (approximately 21°C; 70°F). Cylinders should be stored in dry, well-ventilated areas away from sources of heat, ignition and direct sunlight. Keep storage area clear of materials that can burn. Protect cylinders against physical damage. Cylinders should be separated from oxygen cylinders, or other oxidizers, by a minimum distance of 20 ft. or by a barrier of non-combustible material at least 5 ft. high, having a fire-resistance rating of at least 0.5 hours. Isolate from other incompatible chemicals (refer to Section 10, Stability and Reactivity). Storage areas must meet national electrical codes for Class 1 Hazardous Areas. Post "No Smoking or Open Flames" signs in storage or use areas. Consider installation of leak detection for combustible gas levels and alarm for storage and use areas. Have appropriate extinguishing equipment in the storage area (i.e. sprinkler system, portable fire extinguishers).

STORAGE AND HANDLING PRACTICES (Continued): Full and empty cylinders should be segregated. Use a first-in, first-out inventory system to prevent full containers from being stored for long periods of time. These cylinders are not refillable.

SPECIAL PRECAUTIONS FOR HANDLING GAS CYLINDERS: WARNING! Compressed gases can present significant safety hazards. During cylinder use, use equipment designed for these specific cylinders. Ensure all lines and equipment are rated for proper service pressure.

PROTECTIVE PRACTICES DURING MAINTENANCE OF CONTAMINATED EQUIPMENT: Follow practices indicated in Section 6 (Accidental Release Measures). Make certain application equipment is locked and tagged out safely. Purge gas-handling equipment with inert gas (i.e. nitrogen) before attempting repairs. Always use product in areas where adequate ventilation is provided.

8. Exposure Controls – Personal Protection

VENTILATION AND ENGINEERING CONTROLS: No special ventilation systems or engineering controls are needed under normal circumstances of use. As with all chemicals, use this product in well-ventilated areas.

RESPIRATORY PROTECTION: No special respiratory protection is required under normal circumstances of use. If respiratory protection is required for emergency response to this product, follow the requirements of the Federal OSHA Respiratory Protection Standard (29 CFR 1910.134) or equivalent State standards.

EYE PROTECTION: Safety glasses.
HAND PROTECTION: No special protection is needed under normal circumstances of use.
BODY PROTECTION: No special protection is needed under normal circumstances of use.

9. Physical and Chemical Properties

Unless otherwise specified, the following information is for Nitrogen, the main component of this gas mixture.
GAS DENSITY @ 32°F (0°C) and 1 atm: 0.072 lbs/ ft3 (1.153 kg/m3)
BOILING POINT: -195.8°C (-320.4 °F)
FREEZING/MELTING POINT @ 10 psig -210°C (-345.8°F)
SPECIFIC GRAVITY (air = 1) @ 70°F (21.1°C): 0.906
pH: Not applicable.
SOLUBILITY IN WATER vol/vol @ 32°F (0°C) and 1 atm: 0.023
MOLECULAR WEIGHT: 28.01
EVAPORATION RATE (nBuAc = 1): Not applicable.
EXPANSION RATIO: Not applicable.
ODOR THRESHOLD: Not applicable.
SPECIFIC VOLUME (ft3/lb): 13.8
VAPOR PRESSURE @ 70°F (21.1°C) psig: Not applicable.
COEFFICIENT WATER/OIL DISTRIBUTION: Not applicable.
The following information is for this gas mixture.
APPEARANCE AND COLOR: This product is a colorless, odorless gas.
HOW TO DETECT THIS SUBSTANCE (warning properties): There are no unusual warning properties associated with a release of this product.

10. Stability and Reactivity

STABILITY: Normally stable in gaseous state.
DECOMPOSITION PRODUCTS: The thermal decomposition products of Isobutylene include carbon oxides. The other components of this gas mixture do not decompose, per se, but can react with other compounds in the heat of a fire.
MATERIALS WITH WHICH SUBSTANCE IS INCOMPATIBLE: Titanium will burn in Nitrogen (the main component of this product). Lithium reacts slowly with Nitrogen at ambient temperatures. A component of this product (Isobutylene) are also incompatible with strong oxidizers (i.e. chlorine, bromine pentafluoride, oxygen difluoride, and nitrogen trifluoride).
HAZARDOUS POLYMERIZATION: Will not occur.
CONDITIONS TO AVOID: Contact with incompatible materials. Cylinders exposed to high temperatures or direct flame can rupture or burst.

11. Toxicological Information

SUSPECTED CANCER AGENT: The components of this gas mixture are not found on the following lists: FEDERAL OSHA Z LIST, NTP, CAL/OSHA, and IARC; therefore, they are not considered to be, nor suspected to be, cancer-causing agents by these agencies.
IRRITANCY OF PRODUCT: Not applicable.
SENSITIZATION TO THE PRODUCT: This gas mixture is not known to cause sensitization in humans.
REPRODUCTIVE TOXICITY INFORMATION: Listed below is information concerning the effects of this product and its components on the human reproductive system.
Mutagenicity: No mutagenicity effects have been described for this gas mixture.
Embryotoxcity: No embryotoxic effects have been described for this gas mixture.
Teratogenicity: No teratogenicity effects have been described for this gas mixture.
Reproductive Toxicity: No reproductive toxicity effects have been described for gas mixture.
A mutagen is a chemical which causes permanent changes to genetic material (DNA) such that the changes will propagate through generation lines. An embryotoxin is a chemical which causes damage to a developing embryo (i.e. within the first eight weeks of pregnancy in humans), but the damage does not propagate across generational lines. A teratogen is a chemical which causes damage to a developing fetus, but the damage does not propagate across generational lines. A reproductive toxin is any substance which interferes in any way with the reproductive process.
MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE: Acute or chronic respiratory conditions may be aggravated by over-exposure to the components of this product.
RECOMMENDATIONS TO PHYSICIANS: Administer oxygen, if necessary; treat symptoms; eliminate exposure.
BIOLOGICAL EXPOSURE INDICES (BEIs): Currently, Biological Exposure Indices (BEIs) are not applicable for the components of this gas mixture.

12. Ecological Information

ENVIRONMENTAL STABILITY: The components of this gas mixture occur naturally in the atmosphere. The gas will be dissipated rapidly in well-ventilated areas. The following environmental data are applicable to the components of this product.
OXYGEN: Water Solubility = 1 volume Oxygen/32 volumes water at 20°C. Log Kow = -0.65

NITROGEN: Water Solubility = 2.4 volumes Nitrogen/100 volumes water at 0°C. 1.6 volumes Nitrogen/100 volumes water at 20°C.
EFFECT OF MATERIAL ON PLANTS or ANIMALS: No evidence is currently available on this product's effects on plant and animal life.
EFFECT OF CHEMICAL ON AQUATIC LIFE: No evidence is currently available on this product's effects on aquatic life.

13. Disposal Considerations

PREPARING WASTES FOR DISPOSAL PREPARING WASTES FOR DISPOSAL: Waste disposal must be in accordance with appropriate Federal, State, and local regulations. Cylinders with undesired residual product may be safely vented outdoors with the proper regulator. For further information, refer to Section 16 (Other Information).

14. Transportation Information

THIS MATERIAL IS HAZARDOUS AS DEFINED BY 49 CFR 172.101 BY THE U.S. DEPARTMENT OF TRANSPORTATION.
PROPER SHIPPING NAME: Compressed gases, n.o.s. (Nitrogen, Oxygen)
HAZARD CLASS NUMBER and DESCRIPTION: 2.2 (Non-Flammable Gas)
UN IDENTIFICATION NUMBER: UN 1956
PACKING GROUP: Not applicable.
DOT LABEL(S) REQUIRED: Non-Flammable Gas
NORTH AMERICAN EMERGENCY RESPONSE GUIDEBOOK NUMBER (1996): 126
MARINE POLLUTANT: The components of this gas mixture are not classified by the DOT as Marine Pollutants (as defined by 49 CFR 172.101, Appendix B).
SPECIAL SHIPPING INFORMATION: Cylinders should be transported in a secure position, in a well-ventilated vehicle. The transportation of compressed gas cylinders in automobiles or in closed-body vehicles can present serious safety hazards. If transporting these cylinders in vehicles, ensure these cylinders are not exposed to extremely high temperatures (as may occur in an enclosed vehicle on a hot day). Additionally, the vehicle should be well-ventilated during transportation.
Note: DOT 39 Cylinders ship in a strong outer carton (overpack). Pertinent shipping information goes on the outside of the overpack. DOT 39 Cylinders do not have transportation information on the cylinder itself.
TRANSPORT CANADA TRANSPORTATION OF DANGEROUS GOODS REGULATIONS: THIS MATERIAL IS CONSIDERED AS DANGEROUS GOODS. Use the above information for the preparation of Canadian Shipments

15. Regulatory Information

SARA REPORTING REQUIREMENTS: The components of the gas mixture are subject to the reporting requirements of Sections 302, 304, and 313 of Title III of the Superfund Amendments and Reauthorization Act, as follows:

COMPONENT	SARA 302	SARA 304	SARA 313
Oxygen	NO	NO	NO
Nitrogen	NO	NO	NO
Isobutylene	NO	NO	NO

TSCA INVENTORY STATUS: The components of this gas mixture are listed on the TSCA Inventory.

CERCLA REPORTABLE QUANTITY (RQ): Not applicable.

OTHER U.S. FEDERAL REGULATIONS:

- No component of this gas mixture is subject to the requirements of CFR 29 1910.1000.
- Vinyl Chloride is subject to the reporting requirements of Section 112(r) of the Clean Air Act. The Threshold Quantity for this gas is 10,000 pounds. Due to the small size of the cylinder for this mixture, this regulation should not apply.
- This gas mixture does not contain any Class I or Class II ozone depleting chemicals (40 CFR part 82).
- Nitrogen is not listed as a Regulated Substance, per 40 CFR, Part 68, of the Risk Management for Chemical Releases. Hydrogen is listed under this regulation in Table 3, as a Regulated Substance (Flammable Substance), in quantities of 10,000 lbs (4,553 kg) or greater. Due to the small size of the cylinder for this mixture, this regulation should not apply.

OTHER CANADIAN REGULATIONS: This gas mixture is categorized as a Controlled Product, Hazard Classes A and B1, as per the Controlled Product Regulations.

16. Other Information

INFORMATION ABOUT DOT-39 NRC (Non-Refillable Cylinder) PRODUCTS

DOT 39 cylinders ship as hazardous materials when full. Once the cylinders are relieved of pressure (empty) they are not considered hazardous material or waste. Residual gas in this type of cylinder is not an issue because toxic gas mixtures are prohibited. Calibration gas mixtures typically packaged in these cylinders are nonflammable n.o.s., UN 1956. A small percentage of calibration gases packaged in DOT 39 cylinders are flammable or oxidizing gas mixtures.

For disposal of used DOT-39 cylinders, it is acceptable to place them in a landfill if local laws permit. Their disposal is no different than that employed with other DOT containers such as spray paint cans, household aerosols, or disposable cylinders of propane (for camping, torch etc.).

Disclaimer: To the best of Portagas's knowledge, the information contained herein is reliable and accurate as of this date; however, accuracy, suitability or completeness are not guaranteed and no warranties of any type, either express or implied, are provided. The information contained herein relates only to this specific product. If Acetylene is combined with other materials, all component properties must be considered. Data may be changed from time to time. Be sure to consult the latest edition.

Appendix E Chemical Hazards Table

COC No.	Known Compound	Recommended Exposure Limit	Description & Control ***Health hazards listed below may be experienced when exposed to pure or concentrated forms of the chemical or compound**
1.	Total Extractable Petroleum Hydrocarbons (TEPH – aka., TPH)	PEL: Not Established Petroleum Distillates are similar and have a PEL of 500 ppm. IDLH: 2000 ppm	Liquid mixture of aliphatic and aromatic hydrocarbons with hydrocarbon/gasoline odor. Combustible liquid that will leave oil sheen on water. Hazard: headache, nausea, eye and throat irritation. May cause cardiac arrhythmia. Chronic exposure may cause liver damage. Possible exposure to vapors and also by inhalation, skin contact and/or ingestion from contaminated dust and soil particles. PID will detect TPH. First Aid: Wash the exposed area immediately. Seek medical attention if swallowed.
2.	Methyl t-Butyl Ether (MTBE)	PEL: 40 ppm; ACGIH TLV: 50 ppm; LEL: 1.6 %	Properties: MTBE is a clear liquid with a distinct ether-like odor. It is primarily used in the formulation of gasoline as an octane enhancer and oxygenator. Hazard: It can cause headaches, nausea, dizziness, and irritation of the nose, throat, and eyes. It may cause developmental toxicity and may be carcinogenic. First Aid: Wash the exposed area immediately. Respiratory support if breathed. Seek medical attention immediately if swallowed.
3.	Tertiary Butyl Alcohol (TBA)	PEL: 100 ppm; IDLH: 1600 ppm; LEL: 2.4%; UEL: 8.0%	Properties: It is colorless, non-volatile, flammable liquid with camphorous odor. Its vapor is 2.6 times denser than air. Hazard: Inhalation may cause mild eye, nose and throat irritation. Ingestion may cause nausea, while headaches, vertigo, dizziness and lack of coordination may possibly occur from direct skin or eye contact. TBA is reported to be a carcinogen and the target organs are the liver, kidneys, upper respiratory system and central nervous system First Aid: Wash the exposed area immediately. If breathed, move to fresh air. Seek medical attention immediately if swallowed.

COC No.	Known Compound	Recommended Exposure Limit	Description & Control ***Health hazards listed below may be experienced when exposed to pure or concentrated forms of the chemical or compound**
4.	BTEX		
	Benzene: (Carcinogen)	Skin absorption PEL: 1.0 ppm; IDLH: 500 ppm; STEL:5 ppm; LEL:1.2%; UEL: 7.8%	Properties: Colorless, flammable, moderately volatile liquid with strong petroleum like odor. Hazard: Mild eye, nose and throat irritation, headache, drowsiness, dizziness and loss of coordination. Carcinogenic. First Aid: Wash the exposed area immediately. Respiratory support if breathed. Seek medical attention immediately if swallowed.
	Toluene:	Skin absorption PEL: 50 ppm IDLH: 500 ppm STEL : 150ppm LEL: 1.1% UEL: 7.1%	
	EthylBenzene:	PEL: 100 ppm IDLH: 800 ppm; LEL: 0.8% UEL: 6.7%	

COC No.	Known Compound	Recommended Exposure Limit	Description & Control ***Health hazards listed below may be experienced when exposed to pure or concentrated forms of the chemical or compound**
	Xylene:	PEL: 100 ppm IDLH:900 ppm LEL:1.1% UEL: 7.0%	
5.	Diesel Fuel	None Exist	Properties: Light amber color combustible liquid having petroleum odor, with low volatility. Hazard: Mild eye, nose, throat irritation, nausea, headache and dizziness. First Aid: Wash the exposed area. Move to fresh air.
6.	Trichloroethene (TCE) (Carcinogen)	PEL:25 ppm; IDLH: 1000 ppm; LEL: 8%; UEL: 10.5%	Properties: Colorless liquid with pleasant odor. Symptoms: Headache, dizziness, nausea, tiredness and unconsciousness, visual disturbance and respiratory irritation. Long-term exposure may cause brain, cardiac, kidney and liver damage. Caution: Personnel Protective Equipment like gloves, chemical resistant clothing and respiratory protection should be used. Smoking and open flames should be strictly prohibited in the area. First Aid: Wash the exposed area immediately. Respiratory support if breathed. Seek medical attention immediately if swallowed.
7.	Tetrachloroethene (PCE)	PEL:25 ppm;	Properties: Colorless liquid with pleasant odor.

COC No.	Known Compound	Recommended Exposure Limit	Description & Control ***Health hazards listed below may be experienced when exposed to pure or concentrated forms of the chemical or compound**
	(Carcinogen)	IDLH:150 ppm	Symptoms: Headache, dizziness, nausea, tiredness and unconsciousness and respiratory and eye irritation. Long-term exposure may cause brain, kidney and liver damage. Caution: Personnel Protective Equipment like gloves, chemical resistant clothing and respiratory protection should be used. Smoking and open flames should be strictly prohibited in the area. First Aid: Wash the exposed area immediately. Respiratory support if breathed. Seek medical attention immediately if swallowed.
8.	Lead	PEL : 0.05 mg/ m^3; IDLH :100 mg/ m^3	Properties: Bluish-white, silvery gray soft metal, may be present in environmental dust and mist. It may also be present in compound form. Hazard: Lassitude, insomnia, anorexia, constipation, abdominal pain, low-blood pressure, anemia, tremors. First Aid: Wash the exposed area immediately. Respiratory support if breathed. Seek medical attention immediately if swallowed

RE:6H754

Work Order No.: 0804339

Attached are the results of the analyses for samples received by the laboratory on 04/17/08 09:37.

The samples were received by Sierra Analytical Labs, Inc. with a chain of custody record attached or completed at the submittal of the samples.

The analyses were performed according to the prescribed method as outlined by EPA, Standard Methods, and A.S.T.M.

The remaining portions of the samples will be disposed of within 30 days from the date of this report.
If you require any additional retaining time, please advise us.

Sincerely,

Richard K. Forsyth

Richard K. Forsyth
Laboratory Director

Sierra Analytical Labs, Inc. is certified by the California Department of Health Services (DOHS), Environmental Laboratory Accredidation Program (ELAP) No. 2320.

CASE NARRATIVE

SAMPLE RECEIPT:	Samples were received intact, at 4 °C, and accompanied by chain of custody documentation.
PRESERVATION:	Samples requiring preservation were verified prior to sample preparation and analysis.
HOLDING TIMES:	All holding times were met, unless otherwise noted in the report with data qualifiers.
QA/QC CRITERIA:	All quality objective criteria were met, except as noted in the report with data qualifiers.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

		CADD Operator	40	hour	$ 102.11	$4,084
TOTAL	TASK 9:					**$22,295**

ASSUMPTIONS

1) A two event HRC Injection Program is assumed. Two injection events are based on the average number of events required to reduce contaminant concentrations below the cleanup level (i.e 6 µg/L)
2) Target treatment interval will be from 20 to 25 feet bgs.

3) HRC injection will be completed using direct-push technology.

4) During each injection event, approximately 54 direct-push injection locations will be placed.

5) Cost estimate assumes that the scope of groundwater remediation required by the LARWQCB is limited to chlorinated solvent impacts observed on-site during June 2007 site investigation completed by WorleyParsons Komex. Scope of groundwater remediation does not consider potential for contamination from off-site sources to migrate on-Site in the future which may require remediation and could potentially delay issuance of regulatory closure for this Site .

6) All costs es imated to wi hin plus or minus 15% accuracy.

RE: **FOURTH QUARTER 2020**
LEFIELL MANUFACTURING COMPANY, SANTA FE SPRINGS, CA

On behalf of LeFiell Manufacturing Company (LeFiell), Tetra Tech BAS (BAS) is submitting the attached data, collected at the LeFiell property in Santa Fe Springs, California (Figures 1 and 2), during the Fourth Quarter of 2020 *(Data Submittal)*. This Data Submittal has been prepared in accordance with discussions between LeFiell, the Department of Toxic Substances Control (DTSC) and BAS, and within the regulatory framework provided by DTSC's Voluntary Cleanup Program (VCP) and the Voluntary Cleanup Agreement (VCA) between DTSC and LeFiell (May 2009).

This Data Submittal includes results obtained as part of the following activities:

- Operation of the Building H Soil Vapor Extraction (SVE) system (RAW Implementation);
- Fourth Quarter 2020 groundwater and soil vapor monitoring and sampling, conducted in December 2020.

CONTENTS

This Data Submittal includes the following exhibits and attachments:

FOURTH QUARTER 2020 ACTIVITIES AND RESULTS

Brief summaries of the activities performed during the Fourth Quarter 2020 and their results are presented herein to supplement and provide context for the attached exhibits. The summaries are presented in chronological order, to the degree possible.

SVE OPERATIONS IN THE AREA OF BUILDING H

During the Fourth Quarter 2020, the SVE system was operated in the Building H area of the site intermittently from October 7 to December 21, 2020, using the same protocols and procedures as were established previously, and in accordance with the approved *Removal Action Workplan* (RAW, June 16, 2020). As such, the system was operated so as to avoid periods of extreme heat, storm or quarterly sampling events, as well as to allow for vapor rebound(s), carbon change-out(s) and/or system repairs. Data collected as part of the SVE operations in the Building H area of the site is presented in Tables 1 and 2, and illustrated by Figures 3 and 4.

A total of approximately 27 days of active extraction were conducted in the Building H area during the Fourth Quarter of 2020, resulting in a removal of approximately 24 lbs of VOCs. Since August 2020, when SVE operations commenced in this area of the site, approximately 62 lbs of VOCs were removed from the subsurface.

The effect of Building H SVE operations is discussed under the *Soil Vapor* heading further herein.

GROUNDWATER AND SOIL VAPOR MONITORING AND SAMPLING

Fourth Quarter 2020 groundwater and soil vapor monitoring and sampling was performed on December 21, 22 and 23, 2020. All field activities and analytical testing were performed in accordance with previously established protocols, detailed in earlier submittals. In accordance with the recommendations made in previous submittals[1], only selected wells and probes were sampled during this reporting period. Data obtained as a result of groundwater and soil vapor monitoring and sampling are included in Tables 3, 4 and 5 and illustrated by Figures 5, 6 and 7(A and B).

Groundwater

<u>Water Elevations</u>

As shown on Figure 5, groundwater beneath the site flows in an easterly direction, at an average gradient of approximately 0.95% (0.0095 ft/ft between wells MW-4 and MW-17).

Data presented on Table 3 indicates that groundwater levels, when averaged across the site, fell by approximately 0.62 feet since September 2020. Also on average, December

---

[1] *Groundwater Well Installation and Fourth Quarter 2013 Sampling Report* (BAS, February 28, 2014); *Second Quarter 2014 Data Submittal* (BAS, August 13, 2014); *Second Quarter 2015 Data Submittal* (BAS, August 7, 2015); *Second Quarter 2016 Data Submittal* (BAS, August 1, 2016); *Second Quarter 2017 Data Submittal* (BAS, July 31, 2017); *Fourth Quarter 2017 Data Submittal* (BAS, February 9, 2018); *Second Quarter 2019 Data Submittal* (BAS, August 1, 2019) and *Second Quarter 2020 Data Submittal* (BAS, July 31, 2020).

2020 groundwater elevations are higher than December water levels measured in 2018 and 2016 (similar to other quarterly observations in 2020), but lower than those measured in all other years, for which data is available. December 2020 water elevations are over 5.5 feet lower than the historic high levels recorded in April 2011.

Analytical Results

As presented on Table 4, in December 2020 groundwater contaminant concentrations were found to be within historically established ranges of concentrations for the majority of sampled wells, except as follows:

- Concentrations of 1,1-DCA, 1,1-DCE, cis-1,2-DCE, PCE and/or TCE were found at or near historic lows at wells MW-2, MW-9 and MW-10;
- Conversely, concentration of cis-1,2-DCE was found at an historic high at well MW-8.

A total VOC groundwater isoconcentration map, illustrating the extent of the groundwater plume beneath the site, is included as Figure 6.

Soil Vapor

As presented in Table 5, during the current monitoring period, the concentrations of target analytes in soil vapor were mostly within historically established ranges of concentrations for probes located in the areas of Buildings D, F and L (SV-4, SV-5, SV-11, SV-14, SV-15 and SV-20), although new minimums were observed at probes SV-4-15, SV-11-5 and SV-14-15. PCE isoconcentration maps, illustrating the extent of the soil gas plumes beneath the site, are included as Figures 7A and 7B.

At probes located in the area of Building H (SV-1, SV-2, SV-12 and SV-19, i.e., probes situated within the zone of influence of the SVE system), as well as nearby peripheral probes (SV-3 and SV-17), vapor concentrations have reached new lows and/or near lows, including multiple non-detectable levels, at most probes and for most analytes. Concentrations of target analytes (PCE and TCE) were found to be below site-specific soil gas screening levels (SLs) for most probes at both depths, indicating that remediation of subsurface beneath Building H area of the site is nearly complete.

PLANNED ACTIVITIES

The First Quarter 2021 groundwater and soil vapor sampling is anticipated to take place in March 2021. The event will include sampling of selected wells and probes.

As previously reported, BAS has been working with the LA-RWQCB, the City of Santa Fe Springs and the Los Angeles County Sanitation Districts (LACSD) on permitting of the groundwater corrective action testing activities for the central portion of the site. In August 2020, the City of Santa Fe Springs and the LACSD issued the industrial waste discharge (IWD) permit for the pump-and-treat pilot test. On December 9, 2020, BAS received the LA-RWQCB approval of the waste discharge requirements for the ISCO pilot test around Building F. With the receipt of these approvals, BAS is currently working with LeFiell on initiation of groundwater corrective action testing in 2021.

NOTES:

OR Over-range, i.e., over 15,000 ppmv
(IND) Well is closed to blower, induced vacuum shown
NM Not Monitored
* Readings are likely elevated due to ambient conditions in the vicinity of the parts cleaner

Note that PID readings are taken during system operation and represent dynamic conditions. The influent reading is not taken at exactly the same time as individual wells. Thus, the influent PID reading may not correlate exactly to those of individual wells.

NOTES:

(1) Surveyed top of well casing.
(2) Measured from top of casing.
(3) Screen installed at the bottom of each well
* MW-9 through MW-12 were sampled on 1/7/2014.

NOTES:

ft amsl	feet above mean sea level
<1.0	Not Detected above laboratory Reporting Limit (RL) shown
J	Detection is below the laboratory RL, but above the laboratory method detection limit (MDL). Reported value is estimated.
	No Sample Collected or Data Not Available
q	Laboratory LCS or LCSD was outside of acceptance limits; or other laboratory issues were noted
28	Values in bold have exceeded the California Primary MCLs.
B	Analyte detected in method blank

1,1-DCA	1,1-Dichloroethane	trans-1,2-DCE	trans-1,2-Dichloroethene	PCE	Tetrachloroethene
1,1-DCE	1,1-Dichloroethene	1,1,1-TCA	1,1,1-Trichloroethane	TCE	Trichloroethene
cis-1,2-DCE	cis-1,2-Dichloroethene	1,2-DCA	1,2-Dichloroethane	VC	Vinyl chloride

(1) Based on conversations with the lab, concentration of 1,4-dioxane in well MW-8 in August 2014 is considered to be anomalous

SUBJECT: NO FURTHER ACTION (NFA) DETERMINATION FOR SOIL AND GROUNDWATER (FOR COMMERCIAL/INDUSTRIAL LAND USE)

SITE/CASE: FORMER FRIGID COIL FACILITY
13711 FREEWAY DRIVE, SANTA FE SPRINGS, CALIFORNIA, 90670
(SCP NO. 1225, SITE ID NO. 2040314)

Dear Mr. Werwie:

California Regional Water Quality Control Board, Los Angeles Region (Regional Board) staff has completed its review of information in our file pertaining the Former Frigid Coil Facility (Site) located at 13711 Freeway Drive in Santa Fe Springs, California.

Soil, soil vapor, and groundwater investigations have been completed at the Site and you have requested a No Further Action (NFA). Our review and the basis of a NFA determination pertains to historical operational information, soil, soil vapor and groundwater data obtained from 2006 to 2010 at the Site, contained in the following documents:

- Phase I Environmental Site Assessment (Phase I). Environmental Resources Management (ERM). June 13, 2006.
- Phase II Environmental Site Assessment (Phase II). ERM. January 2008. (Reported environmental sampling conducted between May 2006 and November 2007 in the areas of potential concern).
- Quarterly Groundwater Monitoring Reports. Geosyntec Consultants (Geosyntec). 2008 and 2009.
- Environmental Assessment. Geosyntec. March 10, 2009. (Reported environmental investigation conducted in January 2009).

- Final Environmental Assessment. Geosyntec. August 5, 2011. (Reported environmental investigation conducted in March 2010 and included all historical analytical data collected at the Site by Geosyntec).

This letter provides Site background information, a summary of the soil and groundwater environmental investigations, and our rationale for a NFA determination for soil and groundwater for the Site.

Background

The Site is a 4.9 acre parcel containing a single 82,000 square foot warehouse. The property has been used for light industrial purposes by two parties: Miami Carey and Celotex prior to 1971, and Frigid Coil from approximately 1971 through July of 2007. As of June 1, 2010, Martinez Trucking is using the property for office, warehousing, distribution and truck parking. The Site is under the property management of The Gilbert Foundation. The owners intend to use the Site for commercial/light industrial purposes only. See attached Covenant and Environmental Restriction on Property (Enclosure 1).

Frigid Coil's operations consisted of the assembly of air handlers and other custom heating, ventilation, and air conditioning (HVAC) units. Ancillary operations included equipment maintenance and hydrostatic testing. Frigid Coil formerly stored Freon (R-22) in an approximately 6,500 gallon above ground storage tank outside on the northern portion of the property. Additionally, wastewater from the outdoor steam cleaning operations was discharged to the storm sewer system prior to 1993 (when a sump was installed in the outdoor yard). Principal materials used at the facility included stainless steel, copper coil, welding gases, and hydraulic oils. No underground storage tanks (USTs) are located at the Site.

Regional and Hydrogeological Setting

The Site is located on the Central Basin of the Los Angeles Coastal Plain. The first major aquifer beneath the Site is the Artesia Aquifer, located at depths ranging from approximately 80 to 150 feet below ground surface (bgs). The Bellflower Aquiclude overlays the Artesia Aquifer and restricts groundwater movement from the overlying sediments. A perched aquifer is present above the Bellflower Aquiclude at depths ranging from 20 to 40 feet bgs. Shallow groundwater wells present at the Site are screened in this perched aquifer. The base of the Bellflower Aquiclude is found at a depth of approximately 80 feet bgs in the Site vicinity. Deeper aquifers include the Gage Aquifer, located at a depth ranging from approximately 160 to 210 feet bgs in the Site vicinity. The next major aquifer present beneath the Site is the Lynwood Aquifer, which is found at depths ranging from 850 to 1,000 feet bgs. The Silverado Aquifer is present beneath the Site at depths ranging from approximately 1,060 to 1,240 feet bgs.

The closest well to the Site is designated as LACDPW Well No. 1051W (3S/11W-20R2). Well No. 1051W is owned by the City of Santa Fe Springs and is located approximately 2,200 feet southwest of the Site. The well is designated as municipal supply well, and is located hydrogeologically up-gradient of the Site. Chemical analyses of groundwater samples collected from wells in the vicinity of the Site indicate elevated concentrations of arsenic, but no detectable organic constituents.

Site Assessment

Several phases of environmental investigations were conducted from 2006 to 2010 by two different consultants, ERM and Geosyntec. In addition, groundwater monitoring has been conducted since 2006. All the phases of assessment generated similar or consistent results. The major findings are described in the following paragraphs.

Total petroleum hydrocarbons (TPH) were detected in shallow soils at the site. However, step-out sampling indicated that presence of TPH was limited in area and depth (within the first 5 feet bgs). Maximum detected concentrations of TPH in soil were 260 milligrams per kilogram (mg/kg) for the gasoline range (TPHg), 770 mg/kg for the diesel range (TPHd), and 1,200 mg/kg for the oil range (TPHo). These detections were limited in areal extent and there was no track to groundwater, in addition the concentration of risk driver compounds such as volatile organic compounds (VOCs) in co-located soil gas and soil samples was negligible.

VOCs were investigated across the Site using soil and soil gas sampling. Selected sampling locations targeted potential sources of contamination and were distributed across the Site both inside and outside the building. VOC concentrations were mostly not detected in soil samples. When detected in soil, VOCs were present at trace level concentrations below screening levels for the protection of human health and groundwater. The levels of VOCs detected in soil did not identify any major source of contamination at the Site. Detected VOCs and their corresponding highest concentration in micrograms per kilogram (μg/kg) shown in parenthesis included: benzene (9.2 μg/kg), toluene (180 μg/kg), ethylbenzene (44 μg/kg), xylenes (160 μg/kg), and tetrachloroethylene (7.3 μg/kg).

VOC concentrations in soil vapor samples were mostly not detected. When detected, VOCs concentrations were equal or lower than 1 microgram per liter (μg/L). Soil gas samples were collected beneath the slab and every five feet to 15 feet bgs (groundwater occurs at 20 feet bgs). No track to groundwater was detected. Detected VOCs and their corresponding highest concentration in μg/L shown in parenthesis included: benzene (0.063 μg/L), toluene (0.18 μg/L), ethylbenzene (0.21 μg/L), xylenes (1 μg/L), tetrachloroethylene (0.95 μg/L), and trichloroethylene (0.09 μg/L).

Only one soil vapor sample detected tetrachloroethylene at a concentration that exceeded its corresponding California Human Health Screening Level (CHHSL) for commercial/industrial

use of 0.6 μg/L. Area weighted average concentrations were calculated for each analyte detected in sub-slab vapor samples. The soil vapor results were compared to commercial CHHSLs. None of the chemicals detected had area weighted average concentrations that exceeded their respective soil vapor CHHSL concentrations. Therefore, residual chemical concentrations at the Site are unlikely to pose an unacceptable human health risk to workers at the Site.

California Administrative Manual (CAM) metals were tested in soil samples. All of the CAM 17 metals analyzed appeared to be representative of background concentrations and, except for arsenic, were detected at concentrations below the USEPA Region 9 regional soil screening levels (RSL) published in June 2011 for commercial/industrial land use.

Arsenic was detected at concentrations exceeding RSLs for commercial/industrial land use. The highest concentration detected was 29 mg/kg. The Department of Toxic Substance Control (DTSC) has reported that background concentrations of arsenic in southern California soils commonly exceed risk based concentrations in school sites. Furthermore, the DTSC has published an upper-bound arsenic concentration of approximately 12 mg/kg for Los Angeles County. A statistical analysis of the data indicated that arsenic concentrations on Site are comparable to the DTSC reported regional levels, appear to be background, and are not associated with any Site-specific release or operation. In addition, the single sample point with the highest concentration appears to be a statistical outlier.

Groundwater beneath the Site is impacted with chlorinated VOCs. Shallow groundwater occurs at a depth of approximately 20 feet bgs and has consistently flowed to the north-northeast since 2006. Chlorinated solvents were rarely detected in soil and soil vapor at the Site. When detected, VOCs occurred in trace concentrations in shallow soil and soil vapor samples and no track to groundwater was observed. Therefore, there is no evidence that the Site is a contributor to the groundwater contamination.

Currently, the DTSC is overseeing assessment of an up-gradient facility, the LeFiell Manufacturing Company (LeFiell), located to the south/southwest across the Freeway 5 from the Site. High concentrations of chlorinated VOCs in soil and groundwater have been detected at the LeFiell site. The DTSC has directed LeFiell to conduct additional groundwater delineation across the Freeway 5 to the northwest of LeFiell towards the former Frigid Coil site. (Enclosure 2).

Summary and Conclusion

Based on the review of information contained in our file, Regional Board staff recommends a soil and groundwater NFA determination for the Site based on the following reasons:

- Since 2006, intensive soil, soil gas and groundwater investigations have been conducted at the Site.

- TPH was the main chemical of concern detected, but the releases appeared to be limited in concentration and extent.
- VOCs, risk drivers at industrial sites, were mostly non-detected or detected at trace concentrations in soil and soil gas and do not pose a risk to human health or to groundwater.
- Arsenic concentrations in soil appear to be background and not the result of a release at the Site.
- Groundwater contamination beneath the Site was not caused by the Site operations but from an up-gradient source. The DTSC is currently investigating the potential source of groundwater contamination directly up-gradient from the site.

Recent legislation, AB 2436, prohibits the Regional Board from issuing a closure letter or making a determination that a "No Further Action" is required if a property is not suitable for unrestricted use, unless a land use restriction is recorded. We determined that a Covenant and Environmental Restriction on Property (Covenant) is necessary for the Site for the protection of public health or safety due to the background concentration of arsenic and residual concentration of TPH in soil. The Covenant was filed and recorded in Official Records, Recorder's Office, Los Angeles County on December 28, 2011. (Enclosure 1).

Therefore, with the provision that the information provided to Regional Board was accurate and representative of Site conditions, Regional Board staff has determined that the residual contamination in the soil beneath the Site does not pose a significant threat to the environment and human health. However, if new contamination is discovered, you are required to provide verbal notification to this Regional Board immediately and submit a follow-up written report within 72 hours. In addition, appropriate health and safety measures must be fully implemented. Any contaminated soils that may be removed from the Site shall be removed only to a legal point of disposal. Please notify this Regional Board of any change in operations, regarding the storage and handling of chemicals, or the processing and disposal of wastes. If this property is sold to another party, we must be informed by the new owners of any change in facility operations, such as storage and handling of chemicals, or the processing or disposal of wastes.

You may be requested access for groundwater monitoring for the investigation currently being conducted up-gradient at the LeFiell site overseen by the DTSC . The Regional Board encourages you to cooperate with the investigation. When it is appropriate to destroy the wells on site, please do so in accordance with the California Department of Water Resources, Bulletin 74-81 and Bulletin 74-90, California Well Standards and submit a well destruction report to this Regional Board.

Please note that Regional Board staff oversight charges for work associated with NFA letter will be billed on the fourth quarter of fiscal year 2011-2012 invoice, in the same manner as previously billed.

The jurisdiction requirements of other agencies, such as the United States Environmental Protection Agency, are not affected by the Regional Board's issuance of this NFA letter for the Site. Such agencies may choose to make their own determination concerning the Site.

If you have any questions regarding this matter, please contact Dr. Angelica Castaneda, project manager, at (213) 576-6737 (acastaneda@waterboards.ca.gov) or Ms. Thizar Tintut-Williams, Unit Chief, at (213) 576-6723 (twilliams@waterboards.ca.gov).

Sincerely,

Samuel Unger

Samuel Unger, P.E.
Executive Officer

COVENANT AND ENVIRONMENTAL RESTRICTION
ON PROPERTY

FORMER FRIGID COIL FACILITY
13711 FREEWAY DRIVE
SANTA FE SPRINGS, CALIFORNIA 90670
ASSESSOR'S PARCEL NUMBER: 8069-015-055
LARWQCB SITE CLEANUP PROGRAM CASE NO. 1225

This Covenant and Environmental Restriction on Property ("Covenant") is made as of the 21st day of DECEMBER, 2011 by GILBERT-BLANK LLC ("Covenantor"), a California limited liability company, who is the Owner of record of that certain property situated at 13711 Freeway Drive, in the City of Santa Fe Springs, County of Los Angeles, State of California, which is more particularly described in Exhibits A and B attached hereto and incorporated herein by this reference (hereinafter referred to as the "Property"), for the benefit of the California Regional Water Quality Control Board, Los Angeles Region ("Board"), with reference to the following facts:

A. Nature of Covenant. This Covenant is an environmental covenant provided for by Civil Code section 1471 and required by the Board pursuant to Water Code section 13307.1 because hazardous materials, as defined in section 25260 of the Health and Safety Code, are present on the land and in the groundwater under the Property.

B. Presence of Hazardous Materials on and under the Property. A series of field investigations were undertaken by the former tenant of the Property, Johnson Controls, Inc., between 2006 and 2010. These investigations concluded that only minor concentrations of residual hazardous materials located at the Property were related to past site operations. The primary hazardous material of concern is arsenic, an inorganic chemical, which is naturally occurring at the Property.

Detections of constituents in soil samples from the Property did not exceed United States Environmental Protection Agency (USEPA) Region IX Residential Regional Screening Levels

This document filed for recording by Chicago Title Insurance and trust as an accommodation only. It has not been examined as to its execution or as its effect upon the title.

18579

(June 2011) with the exception of arsenic. Arsenic was observed at levels that are consistent with background levels of arsenic established by the California Department of Toxic Substances Control (DTSC). In soil vapor, only benzene and perchlorethylene were detected at levels above industrial/commercial California Human Health Screening Levels (CHHSLs), and only beneath the existing building located on the Property. However, the area-weighted average concentrations for these constituents did not exceed industrial/commercial CHHSLs.

Total petroleum hydrocarbons (TPH) in the gasoline range (TPHg), diesel range (TPHd), and oil range (TPHo) were detected in shallow soil at the Property. Detected concentrations of TPH in shallow soil did not warrant active remediation because they were below the regulatory screening levels under a commercial/industrial land use and did not impact the groundwater beneath the Property.

Groundwater monitoring at the Property indicated that there are two near-surface groundwater zones, one occurring at approximately 47 to 49 feet above mean sea level with a gradient trending north-northeast (shallow zone), and a second, deeper zone occurring at approximately 24 feet above mean sea level, with a gradient trending northwest. The only inorganic constituent detected in the groundwater above drinking water standards was arsenic. Organic constituents detected in groundwater above drinking water standards included mainly chlorinated volatile organic compounds such as trichloroethylene, perchloroethylene and their breakdown products. Benzene was detected in concentrations that exceeded the California, but not the Federal, drinking water standard. Based on a variety of factors, including groundwater gradient data and the lack of significant detections of the constituents observed in groundwater in soil or soil vapor, the Board determined that the constituents detected in groundwater were not the result of on-site operations and had their origin in off-site releases.

Because the area-weighted average concentrations of constituents detected in the soil and soil vapor do not exceed industrial/commercial CHHSLs, and because they are not the source of the constituents detected in the groundwater, the Board did not require any remedial action at the Property other than the recordation of this Covenant.

C. Land Uses and Population Potentially Affected. The Property is used for industrial, roadway and commercial purposes and is adjacent to industrial, roadway and commercial land uses.

D. Disclosure and Sampling. Disclosure of the presence of hazardous materials on and under the Property has been made to the Board and extensive sampling of the Property has been conducted. Different phases of assessments yielded consistent results indicating that negligible contamination originated from past site operations.

E. Use of Property. Covenantor desires and intends that in order to benefit the Board, and to protect present and future public health and safety, the Property shall be used in accordance with the provisions of this Covenant so as to avoid potential harm to persons or property that might result from any residual hazardous materials at the Property.

ARTICLE I
GENERAL PROVISIONS

1.1 Provisions to Run with the Land. This Covenant sets forth protective provisions, covenants, conditions and restrictions (collectively referred to as "Restrictions") upon and subject to which the Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. These Restrictions are reasonably necessary to protect present and future human health and safety or the environment as a result of the presence on the land of hazardous materials. Each and all of the Restrictions shall run with the land and pass with each and every portion of the Property, and shall apply to, inure to the benefit of, and bind the respective successors, assigns, and lessees thereof for the benefit of the Board and all Owners and Occupants. Each and all of the Restrictions: (a) are imposed upon the entire Property, unless expressly stated as applicable to a specific portion of the Property; (b) run with the land pursuant to section 1471 of the Civil Code; and (c) are enforceable by the Board.

1.2 Concurrence of Owners and Lessees Presumed. All purchasers, lessees, and possessors of all or any portion of the Property shall become Owners or Occupants as defined herein and shall be deemed by their purchase, leasing, or possession of the Property to be bound by the Restrictions and to agree for and among themselves, their heirs, successors, and assignees, and the agents, employees, and lessees of such owners, heirs, successors, and assignees, that the Restrictions herein established must be adhered to for the benefit of the Board and all Owners and Occupants, and that the interest of all Owners and Occupants of the Property shall be subject to the Restrictions.

1.3 Incorporation into Deeds and Leases. Covenantor desires and covenants that the Restrictions shall be incorporated in and attached to each and all deeds and leases of all or any portion of the Property. Recordation of this Covenant shall be deemed binding on all successors, assigns, and lessees, regardless of whether a copy of this Covenant has been attached to or incorporated into any given deed or lease.

1.4 Purpose. It is the purpose of this instrument to convey to the Board real property rights, which will run with the land, to address past environmental contamination and naturally occurring hazardous materials at the Property to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

ARTICLE II
DEFINITIONS

2.1 Board. "Board" shall mean the California Regional Water Quality Control Board, Los Angeles Region and shall include its successor agencies, if any.

2.2 Improvements. "Improvements" shall mean all buildings, structures, roads, driveways, gradings, re-gradings, and paved areas, constructed or placed upon any portion of the Property.

2.3 Occupant or Occupants. "Occupant" or "Occupants" shall mean Owners and those

persons entitled by ownership, leasehold, or other legal relationship to the right to use and/or occupy all or any portion of the Property.

2.4 Owner or Owners. "Owner" or "Owners" shall mean the Covenantor and Covenantor's successors in interest who hold title to all or any portion of the Property.

ARTICLE III
DEVELOPMENT, USE AND CONVEYANCE OF THE PROPERTY

3.1 Restrictions on Development and Use. Covenantor promises to restrict the use of the Property as follows:

a. Development and use of the Property shall be restricted to industrial, roadway, commercial, and/or office space;

b. No residence for human habitation shall be permitted on the Property;

c. No hospitals shall be permitted on the Property;

d. No public or private schools for persons under 21 years of age shall be permitted on the Property;

e. No care or community centers for children or senior citizens, or other uses that would involve the regular congregation of children or senior citizens, shall be authorized on the Property;

f. Any excavation conducted on the Property shall be performed pursuant to an appropriate and fully implemented Health and Safety Plan. Any soils containing hazardous materials brought to the surface by grading, excavation, trenching, or backfilling shall be managed by the Owner, Owner's agent, Occupant or Occupant's agent in accordance with all applicable provisions of local, state and federal law;

g. No Owner or Occupant shall drill, bore, otherwise construct, or use a well for the purpose of extracting water for any use, including but not limited to, domestic, potable, or industrial uses, unless expressly permitted in writing by the Board; nor shall the Owner or Occupant permit or engage any third party to do such acts;

h. The Owner and Occupant shall notify the Board of each of the following: (1) the type, cause, location and date of any disturbance to existing impervious surfaces and (2) the type and date of repair of such disturbance. Notifications to the Board shall be made by registered mail within ten (10) working days of both the date of discovery of such disturbance and the date of completion of repairs;

i. The Covenantor agrees that the Board, and any persons acting pursuant to Board orders, shall have reasonable access to the Property for the purposes of inspection, surveillance,

maintenance, or monitoring as provided in Division 7 of the Water Code; and

j. No Owner or Occupant shall act in any manner that threatens or is likely to aggravate or contribute to the existing residual hazardous materials present at the Property.

3.2 Enforcement. Failure of an Owner or Occupant to comply with any of the Restrictions set forth in Paragraph 3.1 shall be grounds for the Board, by the authority of this Covenant, to require that the Owner or Occupant modify or remove, or cause to be modified or removed, any Improvements constructed in violation of that Paragraph. Violation of this Covenant shall also be grounds for the Board to file civil actions against the Owner or Occupant as provided by law. Nothing in this Covenant shall limit the Board's authority under Division 7 (commencing with section 13000) of the Water Code or other applicable laws.

3.3 Notice in Agreements. After the date of recordation hereof, all Owners and Occupants shall execute a written instrument which shall accompany all purchase agreements or leases relating to all or any portion of the Property. Any such instrument shall contain the following statement:

> The land described herein is subject to a Covenant and Environmental Restriction dated as of DECEMBER 21, 2011, and recorded on ______________, 20___, in the Official Records of Los Angeles County, California, as Document No. __________. This Covenant and Environmental Restriction imposes certain covenants, conditions, and restrictions on usage of the property described herein due to the presence of residual hazardous materials in soils and in the groundwater under the property described herein. This statement is not a declaration that a hazard exists.

ARTICLE IV
VARIANCE AND TERMINATION

4.1 Variance. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a written variance from the provisions of this Covenant.

4.2 Termination. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a termination of the Restrictions as they apply to all or any portion of the Property.

4.3 Term. Unless terminated in accordance with Paragraph 4.2 above, by law or otherwise, this Covenant shall continue in effect in perpetuity.

ARTICLE V
MISCELLANEOUS

5.1 No Dedication Intended. Nothing set forth herein shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property or any portion thereof to the general

public.

5.2 Notices. Whenever any person gives or serves any notice, demand, or other communication with respect to this Covenant, each such notice, demand, or other communication shall be in writing and shall be deemed effective (a) when delivered, if personally delivered to the person being served or an official of a government agency being served, or (b) three (3) business days after deposit in the mail if mailed by United States mail, postage paid certified, return receipt requested, addressed:

If To: "Covenantor":

GILBERT-BLANK LLC

Santa Monica, California 90403-4749

If To: "Board":

Regional Water Quality Control Board
Los Angeles Region
Attention: Executive Officer
320 W. 4th Street, Suite 200
Los Angeles, California 90013

5.3 Partial Invalidity. If any portion of the Restrictions or terms set forth herein is determined by a court having jurisdiction to be invalid for any reason, the remaining portion shall remain in full force and effect as if such portion had not been included herein.

5.4 Recordation. This instrument shall be executed by the Covenantor and by the Executive Officer of the Board. This instrument shall be recorded by the Covenantor in the County of Los Angeles within ten (10) days of the date of execution.

5.5 References. All references to Code sections include successor provisions.

5.6 Construction. Any general rule of construction to the contrary notwithstanding, this instrument shall be liberally construed in favor of the Covenant to preserve and implement the purpose of this instrument and the policies and purposes of the Water Code. If any provision of this instrument is found to be ambiguous, an interpretation consistent with the purpose of this instrument that would render the provision valid shall be favored over any interpretation that would render it invalid.

IN WITNESS WHEREOF, the parties execute this Covenant as of the date set forth above.

MEMORANDUM

TO : Armen Minassian
Project Manager
Brownfields and Environmental Restoration Program

FROM : John A. Naginis, CEG John Naginis
Senior Engineering Geologist
Chatsworth Geological Services Unit

CONCUR : Craig Christmann, PG
Senior Engineering Geologist
Chatsworth Geological Services Unit

DATE : November 1, 2011

SUBJECT: Geologic Services Unit (GSU) review of: Subsurface Site Assessment Report, LeFiell Manufacturing Company, 13700 Firestone Boulevard, Santa Fe Springs, CA 90670, California, Dated: September 2011

PCA 12020 Site Code 301483-11 Log No.: 20009493 Zip Code: 90670

As requested, GSU staff have reviewed the above referenced Interim Subsurface Site Assessment Report (Report), prepared by Hemphill, Green & Associates for LeFiell Manufacturing Company. Previous investigations have indicated that groundwater and soil vapor at the site are contaminated with volatile organic compounds (VOCs), however the contamination had not been fully characterized. The current site assessment was performed to provide additional delineation of VOCs in soil, soil gas and groundwater. The work was performed in general accordance with a Site Investigation Workplan that was approved by DTSC in October, 2010.

GSU staff has reviewed the Report for completeness and conformance with DTSC guidance. GSU staff did not provide a detailed review of the Human Health Risk assessment. This memo includes general comments regarding site conditions and delineation of contamination, as well as specific comments that address specific sections of the report.

Questions regarding this memo should be directed to John Naginis at (818) 717-6626 or JNaginis@DTSC.ca.gov.

General Comments

1 – Delineation of Groundwater Contamination

The lateral extent of groundwater has been delineated along the northwest and southeast ends of the property. However the lateral extent has not been delineated towards the northeast and towards the southwest. Based on groundwater elevation data from on-site wells, the groundwater flow direction is towards the northeast and east. Consequently, the down gradient extent of groundwater contamination has not been delineated. Interstate 5 is adjacent to the northeast side of the property, so it appears that groundwater contamination may extend beneath the freeway. To delineate the lateral extent of groundwater contamination, sampling points and/or groundwater monitoring wells will be required on the east side of Interstate 5. The delineation of groundwater contamination is also required southwest of well MW-4. It appears that groundwater contamination may extend off-site in this area.

The vertical extent of contamination has not been delineated. All of the wells on-site have well screens installed at the top of the water table. Based on the high contaminant concentrations detected in the wells, and the density of the contaminants, the vertical extent of groundwater contamination requires delineation.

2. – Evaluation of Groundwater Flow

Based on the location and construction of the seven groundwater monitoring wells installed on-site, the direction of groundwater flow is fairly well defined. As mentioned in the previous comment the vertical extent of contamination needs to be delineated. In addition, the vertical component of groundwater flow has not been evaluated. Vertical groundwater gradients need to be delineated to evaluate whether vertical groundwater flow could be causing contaminants to migrate into deeper portions of the aquifer.

3 – Remedial Investigation and Feasibility Study

Section 3.5 of the report recommends conducting a remedial investigation and feasibility study to identify technically and economically feasible methods for remediating the soil vapor and groundwater contamination. GSU staff concurs with this recommendation. As noted above, additional investigation should include delineating the vertical extent of contamination and evaluating vertical groundwater gradients.

Specific Comments

4 – Section 3.4.2.3 Leak Test

A leak check compound was used to verify that ambient air was not infiltrating the soil vapor sampling train. However, the report does not state what chemical was used as the leak check compound. This section should be revised to state the chemical used as the leak check compound.

5 – Section 3.5 – Summary of Investigation Findings & Recommendations

Tetrachloroethene (PCE) was detected in groundwater monitoring wells MW-3 and MW-6 at relatively low concentrations. The report refers to these wells as up-gradient property boundary wells, and concludes that the PCE detections suggest an off-site source of contamination. While these two wells are up-gradient of most wells on-site, they are cross gradient to, and have a slightly lower groundwater elevation than well MW-4, the well with the highest PCE concentrations. Consequently, it is very probable, that the PCE in wells MW-3 and MW-6 are the edges of the contaminant plume rather than the result of off-site contamination.

6 – Figures 3.4 through 3.13

These figures show VOC concentrations in soil gas along with isoconcentration gradients. Each figure shows these data for a specific compound at a specific depth. Based on investigation data, there appears to be at least two sources that released VOCs to the subsurface. A former vapor degreaser near soil vapor point SV-4 and a former parts cleaner near soil vapor point SV-1. Based on this conceptual model, the soil vapor isoconcentration contours were interpreted as two separate plumes restricted to these two areas. However, there are no data indicating that two discrete plumes are present and that the VOCs are not present continuously between the two areas.

For example, on Figure 3.4 1,000 µg/L and 500 µg/l isoconcentration lines are drawn between vapor points SV-2 and SV-11, indicating that there is an area of low PCE concentrations between these two points. However, there are no data points between these two soil vapor points. PCE was detected at a concentration of 1,700 µg/L at SV-2 and, 8,200 µg/L at SV-11. Unless data exists to show there is a decrease in concentrations between the two points, a better interpretation is to assume that the contamination extends between the two points. The isoconcentration lines on these figures should be reinterpreted using the assumption that when contamination is detected at two adjacent points, the contamination extends between the two points. This reinterpretation should be done on Figures 3.4 through 3.13.

The isoconcentration line intervals need to be consistent on the figures. For example, on Figure 3.4 the isoconcentration intervals near sampling point SV-1 are1,500 µg/L, 1,000 µg/L, and 500 µg/L, while the isoconcentration lines around SV-4 do not include the 1,500 µg/L isoconcentration line. Figures 3.4 through 3.13 all need to be double checked for consistent use of isoconcentration lines and corrected if necessary.

7 – Figure 3.15 through 3.17

Isoconcentration lines in groundwater were interpreted in a manner similar to the interpretation of soil vapor isoconcentration lines. Two separate plumes are identified, one centered on well MW-2, and the other centered on MW-4, without any data between the two points indicating a reduction in contaminant concentrations. The groundwater isoconcentration lines on Figures 3.15 through 3.17 need to be

reinterpreted using the assumption that when contamination is detected at two adjacent points, the contamination extends between the two points.

DATE: November 1, 2011

SUBJECT: Review of a Subsurface Site Assessment Report for the LeFiell Manufacturing Company, 13700 Firestone Boulevard, Santa Fe Springs, California.

PCA: 12020 Site Code: 301483-11

Background

This is an 11 acre property located at the northwest corner of Marquardt Avenue and Alondra Boulevard in Santa Fe Springs, California. It is bordered by Firestone Boulevard and the I-5 freeway on the northwest, and by the Southern Pacific Rail Road on the southeast. The site is currently occupied by Budget Rent A Car (@13770) and by LeFiell's manufacturing and administrative operations (@13700 and 13750). It is slated for immediate redevelopment, where a strip of the property adjacent to the Firestone Boulevard will be taken over by Caltrans to expand the I-5 freeway. Portions of Buildings B and D will be demolished, and Buildings L and M will be added on to the property. The entire site will be paved with the exception of landscaping areas along the perimeter of the property.

The LeFiell Manufacturing Company has been operating at the site since the 1950s. It is involved in the design and production of precision tubular parts for commercial airplanes and the defense and aerospace industries. Former activities at the site that have contributed to contamination include the operation of sumps, clarifiers, underground storage tanks (USTs) storing gasoline or waste oil, and the use of degreasing solvents. A 2007 assessment of the site found tetrachloroethylene (PCE) and trichloroethylene (TCE) at concentrations up to 11,000 ug/L and 1,600 ug/L in groundwater. A 2010 soil vapor survey found PCE at concentrations upto 15,000 ug/L and 18,000 ug/L @ 5 ft and

15 ft bgs. Currently, the facility operates a closed-loop vacuum degreaser located in the manufacturing building.

Previous investigations at the site found that the subsurface (soil gas and groundwater) is contaminated with high concentrations of volatile organic compounds (VOCs). In the current report, potential health effects of these VOCs to current and future receptors at the site (via the vapor intrusion pathway) are evaluated. Since the site will remain an industrial/commercial facility, the two types of receptors that were evaluated were a commercial/industrial worker and a construction worker.

Document Reviewed

The Human and Ecological Risk Office (HERO) reviewed the report titled "Subsurface Site Assessment Report", dated September 2011. The report was prepared for LeFiell Manufacturing Company, by Hemphill, Green & Associates LLC. The documents were received by HERO on October 5, 2011.

Scope of Review

HERO reviewed these documents with emphasis on those aspects that affect the risk to human health. HERO's review addressed issues concerning the methodology and conclusions of the report. Any future changes or additions to the document should be clearly identified.

General Comments

In general, HERO concurs with the conclusions of the health risk assessment, i.e., that VOCs may pose unacceptable risks/hazards to current and future workers at the site via the vapor intrusion pathway. Based on these findings, subsurface mitigation of VOCs was recommended. HERO notes that since the estimated cancer risks and non-cancer hazards were far greater than 10^{-4} and 1, respectively, indoor air and paired subsurface sampling should be conducted in buildings that are currently occupied by workers (General Comment # 1). Workers involved in redevelopment activities who may come in contact with VOCs in the subsurface should follow appropriate health and safety procedures (General Comment # 2). Interim measures such as sub-slab venting and depressurization should be implemented to mitigate vapor intrusion into current and future buildings onsite (General Comment # 3).

1) **Indoor Air and subsurface sampling:** HERO recommends concurrent indoor air and subsurface (sub-slab and/or soil gas) sampling in existing buildings, in order to estimate health risks to current onsite workers. Indoor air and subsurface sampling locations should be selected following guidance provided in DTSC's

October 2011, *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance)*. The report concluded that cancer risks to onsite workers are in the 10^{-1} range, using maximum soil gas concentrations. If indoor air concentrations are unacceptable, buildings might have to be evacuated until the subsurface is successfully remediated.

For future reference, HERO recommends that the report clearly identify buildings onsite that are currently occupied, along with soil vapor probes located nearest to those buildings. VOC data corresponding to each of the occupied buildings (i.e., the sampling location closest to those buildings) should then be used to evaluate risks/hazards to workers in those specific buildings. If the results of the subsurface sampling indicate that cumulative cancer risks exceed 10^{-5} and non-cancer hazards are above 1, indoor air sampling should be implemented. The report states that risks/hazards to current commercial/industrial workers coming in contact via the vapor intrusion pathway were overestimated since the maximum detected concentrations were used (page 4-17).

2) **Construction worker:** Please follow appropriate health and safety procedures to protect workers involved in redevelopment of the site, since risks/hazards for the construction worker were estimated to be above acceptable levels.

3) **Site redevelopment:** HERO recommends following guidance provided in DTSC's *Vapor Intrusion Mitigation Advisory* to minimize volatilization of contaminants from the subsurface into indoor air spaces of existing and future buildings. Methods for mitigating vapor intrusion into existing/future buildings include installation of sub-slab ventilation and depressurization systems. The above-mentioned procedures can be used as an interim response action until VOC concentrations in soil, soil gas and groundwater are within acceptable levels.

Specific Comments:

1) **Table 3.4:** For future reference, the detection limits of contaminants being analyzed should not exceed risk-based screening levels, in order to ensure the risks/hazards from exposures to these chemicals are not being under-estimated. The detection limits for benzene and vinyl chloride exceed risk-based screening values (CHHSLs or RSLs) in some of the sampling locations. It may be necessary to use TO-15 methodology to achieve these detection limits.

2) **Table 4.4:** For future reference, please evaluate TCE risks/hazards using the most recent toxicity data released by the USEPA's Integrated Risk Information System (IRIS).

Recommendations and Conclusions

HERO strongly recommends indoor air and paired sub-surface (sub-slab and/or soil gas) sampling at existing buildings onsite to ensure that workers are not being exposed to unacceptable risks/hazards. Workers involved in site redevelopment should use appropriate health and safety measures to minimize exposures to VOCs in the subsurface. Interim measures, such as sub-slab venting and depressurization may need to be implemented in current and future buildings onsite.

HERO notes that the decisions made in this document are site specific and should not be construed as a policy decision applicable to other sites. If you have additional questions please feel free to contact me at (714) 484-5448 or SRoysemm@dtsc.ca.gov.

Milwaukee, WI 53201

APPROVAL OF SITE CHARACTERIZATION WORK PLAN, PURSUANT TO CALIFORNIA WATER CODE SECTION 13267 – FORMER FRIGID COIL FACILITY AT 13711 FREEWAY DRIVE, SANTA FE SPRINGS, CALIFORNIA, 90670 (SCP NO. 1225, SITE ID NO. 2040314)

Dear Mr. Werwie:

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board) is the state regulatory agency responsible for protecting water quality in Los Angeles and Ventura Counties including the property at 13711 Freeway Drive in Santa Fe Springs, California (site). To accomplish this, the Regional Board issues investigative orders and requirements for submission of technical reports authorized by the Porter-Cologne Water Quality Control Act.

On June 7, 2008, the Regional Board issued a 13267 Order (Order) to conduct assessment at the site. In response to the Order, soil gas, soil matrix and groundwater sampling was conducted and the document "Environmental Assessment" (report) dated March 10, 2009, was submitted to the Regional Board by Geosyntec Consultants (Geosyntec). Based on the review of the report, Regional Board staff identified several data gaps remaining in the assessment work and discussed them with site representatives during a meeting held at this Regional Board office on September 2, 2010. Subsequently, a "Supplementary Site Assessment Workplan" dated February 24, 2010 was submitted to this Regional Board by Geosyntec. Regional Board staff inspected the site on March 4, 2010, with representatives of Geosyntec and K2 Enviro, Inc., consultant for the property owner, and suggested additional sampling locations. After several discussions between Regional Board staff and Geosyntec, the current scope of work was finalized for this phase of work. It is our understanding that the field work is currently being implemented at the site.

Your work plan is approved and authorized to be implemented. After the completion of the field work, you shall prepare and submit a technical report documenting the results, conclusions, and recommendations by **August 15, 2010**. The work to be conducted under this phase of the investigation falls within the scope of the Order. Therefore, this new due date is an amendment to the existing Order. Pursuant to section 13268 of the CWC, failure to submit the required technical report by the specified due date may result in civil liability administratively imposed by the Regional Board in an amount up to one thousand dollars ($1000) for each day the technical report is not received.

Past technical submittals did not include a statement that the reports were submitted under penalty of perjury pursuant to section 13267 of the California Water Code (CWC). In the August 15, 2010 report and subsequent reports, you are required to include a perjury statement in compliance with CWC section

13267. The perjury statement shall be signed by a senior authorized Johnson Controls, Inc. representative (and not by consultant). It shall be in the following format:

" I, [NAME], do hereby declare, under penalty of perjury under the laws of the State of California, that I am [JOB TITLE] for Johnson Controls, Inc., that I am authorized to attest to the veracity of the information contained in [NAME AND DATE OF REPORT] is true and correct, and that this declaration was executed at [PLACE], [STATE], on [DATE]."

If you have any questions, please feel free to contact Dr. Angelica Castaneda, at (213) 576 6737 or Mr. Adnan Siddiqui, Unit Chief at (213) 576-6812, or Dr. Arthur Heath, Section Chief at (213) 576-6725.

Sincerely,

Samuel Unger A.E.O.

EXECUTIVE SUMMARY

This Environmental Assessment Report ("Report") presents a summary of investigational activities conducted at the Former Johnson Control Inc. ("JCI") Frigid Coil Facility property located at 13711 Freeway Drive, Santa Fe Springs, CA ("Site"). In its June 7, 2008 letter, the Regional Water Quality Control Board ("RWQCB") listed a number of tasks that would be required to assess the following:

1) Revise the Site-wide soil vapor survey to evaluate of potential health risk to Site occupants; and

2) Evaluate the potential for, magnitude of, and nature of, Site impacts to groundwater contamination.

Investigation of these issues is necessary to obtain closure for the former Frigid Coil Facility. This Report has been prepared to meet these requirements.

As part of the environmental assessment, soil, soil vapor, and groundwater samples were collected at the Site. The soil vapor results were compared to commercial California Human Health Screening Levels ("CHHSLs") (Cal-EPA, 2005). None of the chemicals detected had area weighted average concentrations that exceed their respective soil vapor CHHSL concentrations. Therefore, residual chemical concentrations at the Site are unlikely to pose an unacceptable human health risk to workers at the Site, and soil remediation is not required to mitigate potential exposure risks.

Additionally, no evidence was found of potential releases at the Site impacting the underlying groundwater. Although volatile organic compounds ("VOCs") were detected in soil, soil vapor and groundwater samples, the types of VOCs detected in soil were different than the types of VOCs detected in groundwater and soil vapor. Further, VOC concentrations detected in soil decreased with depth. The highest groundwater concentrations were detected in sample locations near the upgradient side of the Site. VOC detections were minimal in deep soil vapor probes adjacent to the highest groundwater concentrations. Based on groundwater concentrations, VOC concentrations detected in soil vapor were considerably lower than would be expected if the impacts to groundwater originated from the Site.

Based upon these observations, it does not appear that Site activities have contributed to local groundwater impacts, and, therefore, no further action is recommended for the Site.

1. INTRODUCTION

1.1 Terms of Reference

This Environmental Site Assessment Report ("Report") presents a summary of the investigation activities conducted at the Former Johnson Control Inc. ("JCI") Frigid Coil Facility property located at 13711 Freeway Drive, Santa Fe Springs, CA ("Site") (Figure 1). This Report is submitted to the Los Angeles Regional Water Quality Control Board ("RWQCB") by Geosyntec Consultants, Inc. ("Geosyntec"), on behalf of JCI, in accordance with the RWQCB requirements presented in its June 7, 2008 letter.

This Report was prepared by Ms. Marlene Duffy, P.G. and James Allen, both of Geosyntec, and reviewed by Mr. Andrew Barnes, P.G. and Mr. Robert Ettinger, also of Geosyntec, in accordance with the peer review policy of the firm.

1.2 Purpose and Overview

The purpose of this Report is to respond to the RWQCB California Water Code Section 13267 Order, dated June 7, 2008. The two goals of this Report are to:

1) Revise the Site-wide soil vapor survey to evaluate potential health risks to Site occupants; and
2) Evaluate the potential for, magnitude of, and nature of, Site impacts to groundwater contamination.

1.3 Report Organization

The remainder of this Report is organized as follows:

Section 2 – "Background" describes current Site conditions, former Site operating history and Site geology and hydrogeology.

Section 3 – "Investigation Methodology" provides a summary of field activities associated with the environmental assessment.

Section 4 – "Results" provides a summary of findings from field activities associated with the environmental assessment.

Section 5 – "Discussion" analyzes the findings and relates to them to the broader questions site health risk and source of local groundwater contamination.

Section 6 – "Conclusions and Recommendations" – provides a summary of the environmental assessment, as well as a recommendation for future Site activities.

2. BACKGROUND

2.1 Site Description and Location

The Site is located at 13711 Freeway Drive in Santa Fe Springs, California (Figure 1). The Site is a 4.9 acre parcel containing a single 82,000 square foot warehouse (Figure 2). The Site's legal description is Lot 15 of Tract 23559, in the City of Santa Fe Springs, Los Angeles County, California. The assessor's parcel number ("APN") is 8069-015-055.

The land use surrounding the property generally consists of light industrial and warehousing facilities. Freeway Drive and Interstate 5 are directly south of the Site, Spring Avenue and El Tapatio Market offices to the west, Ross Bindery to the north, and an abandoned railroad spur and vacant building is located to the east of the Site.

The Site currently operates as a goods warehouse by First Imperial Trading Company who leases the property from current owner of the property, The Gilbert Foundation.

2.2 Site Background

The property has been used for light industrial purposes by two parties: Philip Carey Company from approximately 1971 thru 1980; and Frigid Coil from approximately 1980 thru July of 2007. The recognized environmental conditions ("RECs") identified in the Phase I Site Investigation (i.e., heavily stained concrete observed throughout the facility), were identified as potential source areas for subsurface contamination.

During Frigid Coil operation of the facility, primary operations included the assembly of air handlers and custom heating, ventilation, and air conditioning ("HVAC") equipment. Other operations included equipment maintenance and hydrostatic testing. No data are available regarding site activities during Philip Carey Company operation.

Three previous Site investigation Reports were prepared for the Frigid Coil Facility by Environmental Resources Management, Inc. ("ERM") on behalf of JCI. A brief summary of their contents is provided below.

- *Phase I Site Investigation – Frigid Coil Facility*, Environmental Resources Management, June 13, 2006 ("ERM, 2006a")

This report identified environmental liabilities and potential asset retirement obligations relating to the Site. Based on the information and data obtained during this investigation, ERM identified Site conditions potentially indicative of releases and threatened releases of hazardous substances and petroleum products. Heavily stained concrete was observed at several locations in the interior of the facility, extending to wall joints.

- *Phase II Site Investigation – Frigid Coil Facility*, Environmental Resources Management, June 23, 2006 ("ERM, 2006b")

This report provided a summary and results of ERM's subsurface shallow soil and shallow soil-gas investigation including installation of several groundwater monitoring wells. The purpose of the Site investigation was to assess the potential for subsurface impacts that may have been caused by historical releases at the Site.

- *Phase II Environmental Site Assessment – Frigid Coil Facility*, Environmental Resources Management, January, 2008 ("ERM, 2008")

This report revised the 2006, *Phase II Site Investigation* (ERM, 2006b) and provided a summary and results of additional subsurface shallow soil step-out sampling. The work also included the installation of additional groundwater monitoring wells. Similar to the 2006, *Phase II Site Investigation*, the purpose of the investigation was to assess the lateral and vertical extent of subsurface impacts that may have been caused by historical releases at the Site. This report concluded that the source of groundwater contamination was an unknown offsite source. The RWQCB concluded that the soil vapor data included in this report was not reliable, soil matrix VOC testing needed to be conducted, and the existing soil and groundwater database was inadequate at the time to reach these conclusions. These RWQCB findings are the impetus for the investigation that is the subject of this Report.

2.3 Geology and Hydrogeology

The Site is located within the Central Block of Los Angeles Basin, a coastal alluvial basin that extends from Beverly Hills southeast to central Orange County. The central block is bounded on the northeast by the Whittier fault, Elysian and Repetto Hills, and on the southwest by the Newport-Inglewood Fault Zone. The primary geologic feature of the central block is the Downey Plain, a northwest trending syncline approximately 10 to 14 miles wide. Miocene, Pliocene, and Pleistocene deposits in the central block are more than 22,000 feet thick (CDWR, 1961).

A groundwater depth database for Southern California shows depth to first groundwater within a several mile radius of the Site ranges from approximately 8 feet below ground surface (ft bgs) to 50 ft bgs (LARWQCB, 2009).

The Site is located within the forebay area of the Los Angles Central Basin. The Central Basin is bounded on the north by the La Brea high surface divide, on the northeast and east by the Elysian, Repetto, Merced, and Puente Hills, and on the southwest by the Newport Inglewood fault zone. The southeast boundary closely follows Coyote Creek, but is a provincial boundary between Los Angeles and Orange County. The Site is located approximately 2 miles northwest of the Coyote Creek boundary. The main surface water features in the basin are the Los Angeles and San Gabriel Rivers, which cross the basin and discharge into the Pacific Ocean (CDWR, 2004).

Unconsolidated sediments encountered from cores collected during field work conducted in January 2009 were predominantly fine grained sediments, consisting primarily of silts, sands, silty sands and interbedded clays. Several distinct sand packages were traceable across the Site. The approximate depths of these sand packages were around 20 feet bgs, 30 feet bgs, and 40 feet bgs. These findings are largely consistent with the findings of the *Phase II Environmental Site Assessment* conducted by ERM in 2008. The additional data obtained in January 2009 has improved the resolution of the data, filling in the gaps between sample locations and has helped to correlate lithologies spatially.

The *Phase II Environmental Site Assessment* (ERM, 2008) reported that groundwater was encountered between 21 and 40 feet bgs at the Site. The variability in the depth of the groundwater and flow direction was attributed to the localized variation in lithology. During the January 2009 field work, the first wet sediments were typically encountered at approximately 20 feet bgs as well. Based on a review of the well construction logs and the lithology at the Site, the variability in depth to groundwater in different monitoring wells is more likely attributed to screening across different sand packages.

Potentiometric elevations within different sand units would be expected to vary, and because the monitoring wells are screened across different sand units, the variability in the groundwater elevations is expected.

3. INVESTIGATION METHODOLOGY

3.1 General

Field work at the Site was carried out in general compliance with the Environmental Assessment Workplan ("Workplan") [Geosyntec, 2008]. Daily field logs are included in Appendix A. A health and safety plan was prepared and reviewed by all field team members (Appendix B). A tailgate meeting was conducted at the beginning of each field day to discuss project related health and safety topics. Equipment blanks, trip blanks and duplicate samples were collected to fulfill quality control requirements as outlined in the Workplan.

3.2 Pre-Field Activities

On January 20, 2009, prior to the commencement of intrusive work, sample locations were marked, Geosyntec notified Underground Service Alert of Southern California to mark/clear utilities leading to the property and a geophysical survey was conducted to identify the potential presence of subsurface utilities or other obstructions at sampling locations. Several proposed borehole locations were moved based on the suspected presence of subsurface utilities or features. On January 22, 2009, concrete coring was performed at boring locations both inside and outside the building.

3.3 Soil Sampling

As discussed in the Workplan, soil samples were collected from twelve (12) locations at depths of 1, 5 and 10 ft bgs (Figure 3). Soil samples were collected from the same borings used for groundwater or soil vapor sampling and were described using the Unified Soil Classification System to total depth (Appendix C). The soil samples collected were analyzed at a fixed laboratory for the following parameters:

- Thirty-six (36) soil samples were collected and were sent to a fixed laboratory for volatile organic compounds (VOCs) analysis by EPA Method 8260B.

- Twenty-four (24) soil samples were collected from SB-7R, SB-14, SB-15, SB-16, SB-17, SB-18, SB-19 and SB-20 and analyzed for Total Petroleum

Hydrocarbons (TPH) – Gasoline (TPHg), TPH – Diesel (TPHd) and TPH – Oil Range Organics (TPHoro) by EPA Analytical Method 8015M. .

- Eighteen (18) samples were collected from SB-7R, SB-16, SB-17, SB-18, SB-19, and SB-20 and analyzed for arsenic by EPA Analytical Method 6010B.

3.4 Soil Gas Sampling

Fourteen (14) external (i.e., outside of the building footprint) soil vapor samples were collected from seven locations (Figure 4) in accordance with the DTSC and RWQCB guidance (RWQCB/DTSC, 2003). Soil vapor probes were installed by a direct push rig. As outlined in RWQCB's letter dated December 8, 2008, the probe depths were selected to be the coarsest grained strata within the targeted zone down to 15 ft bgs. Each probe was installed in a separate boring. The borings were cored to the desired depth and probes were installed in the center of a one foot sand pack. Hydrated bentonite was placed above the sand pack and the probes were allowed to equilibrate overnight. Prior to sampling, a purge test was performed to assess the necessary volume for a representative purge volume. Based on the results of the purge test, a minimum of seven casing volumes were purged from the soil vapor probes prior to sampling. Samples were then collected and analyzed by a mobile laboratory for VOCs by EPA Analytical Method 8260B.

Following sampling, pneumatic testing was conducted at each location. Results of the pneumatic testing are shown in Appendix E.

3.5 Sub-Slab Soil Gas Sampling

In order to evaluate the potential for subsurface vapor intrusion into indoor air, nine (9) sub-slab soil vapor samples were collected and analyzed by a mobile laboratory (Figure 4). Probes were installed in the center of a six inch sand pack beginning at the bottom of the concrete slab in the building. Hydrated bentonite was placed above the sand pack to seal the probes to the concrete and the probes were allowed to equilibrate over a weekend prior to sampling. Prior to sampling, a purge test was performed to assess the necessary volume for a representative purge volume. Based on the results of the purge test, a minimum of seven probe volumes were purged from the soil vapor probes prior to sampling. Samples were then collected and analyzed by a state certified mobile laboratory for VOCs by EPA Analytical Method 8260B. Following sampling, pneumatic testing was conducted at each location. Results of the pneumatic testing are shown in Appendix E.

3.6 DPT Groundwater Sampling

Groundwater samples were collected at eight (8) locations (Figures 5 and 6). Direct push rods were advanced to the desired sampling depth at each location. Sampling depths were chosen based on observations of soil cores at target depths of 20, 30, and 40 ft bgs. The actual depth of samples collected were within the nearest coarse grain strata that was in proximity to the aforementioned target depths.

The rods were then pulled back four to five feet to expose the screen interval. Two (2) samples were collected from approximately 20 ft bgs at DPT-17 and DPT-19. The remaining locations were also screened near 20 ft bgs, but did not yield a sample. Groundwater samples were collected from approximately 30 ft bgs and 40 ft bgs in all eight (8) locations. Samples to be analyzed for 1,4-dioxane were collected using pre-cleaned disposable tubing and check valve. Samples to be analyzed for VOCs were collected using a small disposable bailer. Groundwater samples were sent to a fixed laboratory for VOC and 1,4-dioxane analysis using EPA Analytical Methods 8260B and 8270C, respectively.

Groundwater monitoring wells were sampled in January 2009 and potentiometric surface maps were constructed as shown on Figure 5 (Geosyntec, 2009). DPT and groundwater monitoring well locations are shown on Figure 6.

4. RESULTS

4.1 Soil Sampling

As described in Section 3.3, soil samples were analyzed for VOCs, TPH, and arsenic. Detected analytes are summarized on Table 1 and shown on Figure 3. Soil sampling laboratory reports are included Appendix D. Vertical distributions of soil concentrations are shown on Figure 7. A summary of soil sampling results are as follows:

- One or more analytes were detected in SB-7R, SB-9, SB-14, SB-15, SB-16, SB-17, SB-18, SB-19, and SB-20.
- At a depth of 1 ft bgs, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzne, arsenic, ethylbenzene, isopropylbenzene, xylenes, n-propylbenzene, toluene, TPHd, TPHg and TPHoro were detected.
- At a depth of 5 ft bgs, arsenic, MEK, ethylbenzene, TPHg, xylenes, and toluene were detected.
- Arsenic was the only analyte detected at or above its reporting limit from samples collected at 10 feet bgs in any soil boring location.
- The only analyte detected at concentrations greater than the EPA Region 9 Industrial Preliminary Remediation Goal (regional screening levels [RSL]) was arsenic.

4.2 External Soil Vapor Sampling

As discussed in Section 3.4, external soil vapor samples were analyzed for VOCs by a mobile laboratory and pneumatic testing was conducted at each of the probe locations. VOC detections are summarized in Table 2 and shown on Figure 4. Soil vapor laboratory reports are included Appendix D. A summary of pneumatic testing results are shown on Table 3A, while the associated field forms are included in Appendix E. A summary of soil vapor results are as follows:

- One or more analytes were detected in SV-2R, SV-14, SV-15, and SV-16.

- Analytes detected in shallow (0-6 ft bgs) probes included ethylbenzene, m,p-xylenes, o-xylene, PCE, toluene, and TCE.

- Analytes detected in deep (> 6 ft bgs) probes included m,p-xylenes, PCE, and TCE.

- All detected concentrations were less than California EPA's California Human Health Screening Levels ("CHHSLs") [Cal EPA, 2005] for industrial/commercial soil vapor.

- Calculated permeabilities ranged from 3.8E-08 cm^2 to 2.6E-06 cm^2.

4.3 Sub-Slab Soil Vapor Sampling

As discussed in Section 3.5, sub-slab soil vapor samples were analyzed for VOCs by a mobile laboratory and pneumatic testing was conducted at each of the probe locations. VOC detections are outlined in Table 4 and shown on Figure 4. Sub-slab soil vapor laboratory reports are included Appendix D. Pneumatic testing results are shown on Table 3B, while associated pneumatic testing results are presented in Appendix E. Area average concentrations calculations are presented in Appendix F. A summary of sub-slab soil vapor results are as follows:

- Analytes were detected in SV-3R, SV-4R, SV-6R, SV-7R, SV-8R, SV-11R, and SV-13.

- Detected analytes included benzene, m,p-xylenes, PCE, and toluene.

- Screening levels were modified by adjusting the commercial/industrial indoor air CHHSLs by the DTSC default attenuation factor for commercial buildings with a concrete slab.

- Benzene and PCE were detected at concentrations greater than the screening levels (but within an order of magnitude) in four of the nine sub-slab soil vapor probes.

- Area weighted concentrations were found to be no greater than the screening levels (Appendix F and Table 4).

- Permeabilities ranged from 5.2E-08 to 1.2E-09 cm^2.

4.4 DPT Groundwater Sampling

Groundwater data was obtained from both monitoring wells during the January 2009 sampling event and from the DPT sample locations. Based on the potentiometric levels recorded during the January 2009 groundwater monitoring sampling event (Geosyntec, 2009), groundwater flow direction is estimated to be to the north-northeast (Figure 5). This flow direction was estimated using wells with similar screen intervals, and excluded Wells MW-3 and MW-4, which both have screened intervals extending much deeper than all other on-Site wells.

As discussed in Section 3.6, groundwater DPT samples were analyzed for VOCs and 1,4-dioxane. Detected VOC and 1,4-dioxane concentrations for DPT and monitoring well concentrations are shown in Table 5 and illustrated in Figure 6. Vertical distributions of groundwater and soil vapor concentrations are shown in Figures 8a-c. Groundwater laboratory reports are included Appendix D. A summary of groundwater sampling results are as follows:

- One or more analytes were detected in all DPT and monitoring well locations, except DPT-18.

- Analytes detected include 1,1-DCE, 1,1-DCA, benzene, cis-1,2-DCE, toluene, MTBE, trans-1,2-DCE, TCE, and 1,4-dioxane.

- Analytes detected at concentrations above Federal (40 CFR 141.61) and/or California (22 CCR 64435, 64444.5) Maximum Contaminant Levels include

1,1-DCA, 1,1-DCE, benzene, cis-1,2-DCE, trans-1,2-DCE, TCE, and vinyl chloride.

- The highest concentrations are found in the deeper samples.

5. DISCUSSION

As discussed in Section 1, the goals of this Report are to:

1) Revise the Site-wide soil vapor survey to evaluate potential health risks to Site occupants; and
2) Evaluate the potential for, magnitude of, and nature of, Site impacts to groundwater contamination.

5.1 Health Risk Evaluation

In order to evaluate whether any potential health risks to Site occupants exist, a human health risk evaluation was conducted. External soil vapor survey results were compared to soil vapor CHHSLs for industrial/commercial use and sub-slab soil vapor survey results were compared to indoor air industrial/commercial CHHSLs with an attenuation factor to account for the concrete slab. Detected concentrations of analytes in external soil vapor were less than industrial/commercial CHHSLs (Table 3). Concentrations of detected analytes in sub-slab soil vapor samples were greater than screening levels calculated assuming a 10^{-6} target risk level, but were less than screening levels assuming a 10^{-5} target risk level.

Area weighted average concentrations were calculated for each analyte detected in sub-slab soil vapor samples (Table 4 and Appendix F). The soil vapor results were compared to commercial California Human Health Screening Levels, CHHSLs (Cal-EPA, 2005). None of the chemicals detected had area weighted average concentrations that exceed their respective soil vapor CHHSL concentrations. Therefore, residual chemical concentrations at the Site are unlikely to pose an unacceptable human health risk to workers at the Site, and soil remediation is not required to mitigate potential exposure risks.

Arsenic was detected in concentrations that exceed the RSLs in all soil borings. Arsenic in southern California is naturally occurring in soils with concentrations exceeding the EPA industrial use PRG of 1.6 mg/kg (DTSC, 2005). DTSC has concluded that the background concentration for arsenic in naturally occurring southern

California soils is 12 mg/kg (Cal EPA/DTSC, 2008). The maximum concentration of arsenic in Site soils is 11.3 mg/kg which is less than background concentrations.

5.2 Groundwater Impact Source Evaluation

Based on previous sampling events, there have been impacts to groundwater either from the Site, from a source upgradient of the Site, or from both. If the Site impacted groundwater, one or more of the following conditions would likely be true:

1) Similar analytes (or breakdown products) would be detected in soils and in groundwater;
2) Similar analytes (or breakdown products) would be detected in soils closest to the groundwater table;
3) The highest groundwater concentrations would be detected in wells or groundwater sample locations not located on the upgradient side of the Site;
4) The highest groundwater concentrations would be detected in shallow groundwater samples; and
5) Concentrations of analytes in soil vapor samples would be greater than or equal to the groundwater concentration adjusted by the Henry's Law Constant.

These criteria and their applicability to the Site are discussed below.

1) *Similar analytes (or breakdown products) would be detected in soils and in groundwater.*

The analytes detected in soils were mostly hydrocarbons and fuel related analytes (ethylbenzene, toluene, xylenes, etc.). Analytes detected in groundwater samples were mostly chlorinated compounds (1,2-DCA, 1,2-DCE, cis-1,2-DCE, trans-1,2-DCE, etc). Although some hydrocarbon related analytes were also detected in groundwater (benzene, MTBE, and toluene). Therefore, similar analytes/breakdown products were not detected in soils and in groundwater.

2) *Similar analytes (or breakdown products) would be detected in soils closest to the groundwater table.*

As shown in Figure 7, the majority of detected analytes were detected in the 1 ft bgs samples. Arsenic was the only analyte detected in the 5 ft bgs samples, with the exception of SB-16. Arsenic is also the only analyte detected in a 10 ft bgs sample. Therefore, analytes detected in groundwater are not detected in soils closest to the groundwater table.

3) *The highest groundwater concentrations would be detected from wells or groundwater sample locations not located on the upgradient side of the Site.*

The highest concentrations of analytes in groundwater were detected in MW-3, MW-4, and DPT-20 (Figure 5). These locations are the southern-most sample locations at the Site. With groundwater flow direction to the north-northeast of the Site, the highest concentrations in groundwater are therefore on the upgradient side of the Site as opposed to the downgradient side The location of high-concentration sample locations is indicative that the source of elevated groundwater concentrations is likely somewhere to the south/southwest of the Site. There are a number of sites listed on the Geotracker website which are located to the south/southwest of the Site. Some of these sites have contaminants of concern similar to those found in groundwater at the Site.

4) *The highest groundwater concentrations would be detected in shallow groundwater samples.*

As shown in Figures 8a-c,VOC concentrations generally increase with depth. In general at locations where more than one depth of groundwater was sampled, more VOCs were detected at higher concentrations in the deeper samples than in the shallow samples. The highest concentration of every VOC detected in DPT samples was detected in a deep (approximately 40 ft bgs) groundwater sample with the exception of MTBE. The highest groundwater concentrations are not detected in shallow groundwater samples at this Site.

5) *Concentrations of analytes in soil vapor samples would be greater than or equal to the groundwater concentration adjusted by the Henry's Law Constant.*

An evaluation was performed in Table 6, comparing the highest observed concentrations of VOCs in groundwater (from any depth) and the highest observed concentrations of VOCs in soil vapor (from any depth, including sub-slab). The VOCs included in this analysis were those detected in groundwater only. It would be expected that if the source of the groundwater VOC contamination originated on Site, the concentrations of VOCs in soil vapor would, at a minimum, correspond with the volatilized fraction of those concentrations found in groundwater, in accordance with Henry's Law. The maximum expected concentration of groundwater was estimated using Henry's Law, using the observed volatilized fraction (i.e., the highest concentration of observed soil vapor. For conservative purposes, it was assumed that neither dilution, nor attenuation occurred from the potential source of contamination to groundwater.

For each analyte, the observed maximum concentration of groundwater exceeded the maximum expected concentration, generally by at least one order of magnitude. Thus, based on observed groundwater concentrations, the soil vapor concentrations observed on Site are lower than what would be expected if the Site was the source of the impacted groundwater.

6. CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

The purpose of this environmental Site assessment was to evaluate the potential health risks to Site occupants and evaluate the potential for Site impacts to groundwater under the Site.

Based on the soil vapor survey conducted as part of this analysis and the health risk screening evaluation, the potential risks resulting from constituents detected in soil vapor at the Site do not exceed the 10^{-6} risk level. Additionally, the area average sub-slab concentrations were found to be no greater than the screening levels.

Additionally, the Site does not appear to have impacted the groundwater at the Site. The conditions encountered at the Site during the environmental Site assessment do not correlate with conditions that would be expected if the Site impacted groundwater.

Based on the results of the environmental assessment, the source of groundwater impacts appears to be located to the south/southwest of the Site. There are a number of impacted sites located to the south/southwest of the Site which are listed in the Geotracker database.

6.2 Recommendations

Based on the results of the EA, no further action is recommended for the Site.

DAILY FIELD REPORT

PROJECT: Johnson Controls Frigid Coil Facility
LOCATION: 13711 Freeway Drive, Santa Fe Springs, CA
PROJECT NO.: HW1148 TASK NO.:
DESCRIPTION: boring marking and geophysics DATE: 30 day 01 month 2009 year
CONTRACTOR(S): Geovision
WEATHER, TEMPERATURE: 70's, partly cloudy, still

0940 depart Huntington Beach
1020 arrive on site, Geovision arrives on site
James Allen from Huntington Beach office on
site
1025 James Allen finds FC building supervisor
he agrees that we may work 9am-5pm
instead of 10am to 6pm and we may begin work
outside earlier
1115 complete marking locations on paved areas
move to locate borings in railroad right of way
1130 found alley to access locations SV17 and SV20
near building at 15315 Marquardt Ave, return to Geovision
1145 original location for SV3 DPT19 locations is
not surrounded by utilities, moved locations
approximately 30 feet N, James Allen departs
site
James
1150 request permission to recharge batteries
from front office, permission given and
recharging begins
1240 Danny from Interphase arrives on site
to check locations, suggests truck
mounted rig for majority of outside locations
and track rig for indoor locations
1300 Danny from Interphase departs site
check in with Geovision, moved SV12R north feet south
3.3 feet east

DAILY FIELD REPORT

PROJECT: Johnson Controls Frigid Coil Facility

LOCATION: 13711 Freeway Drive, Santa Fe Springs, PROJECT NO.: HW1148 TASK NO.:

DESCRIPTION: geophysical clearance DATE: 20 day 01 month 2009 year

CONTRACTOR(S): Geovision

WEATHER, TEMPERATURE: 70's, partly cloudy

1305 Geovision suggests moving original SV, SB, and DPT locations ~1 ft to either side of joint in concrete

1325 complete marking indoor locations

mobilize to SB17 and SB20

1345 gas line appears to run right next to building near SB17 and SB20

1425 spoke with plant manager El, he will call if it will be okay to start outside work before 9am

1500 finish clearing borings, office is closed Geovision and Geosyntec depart site

1550 arrive back in Huntington Beach

NAME: Marlene Duffy PROJECT NO.: HW1148 HOURS: 6

Sheet No. 2 of 2

Geosyntec consultants

DAILY FIELD REPORT

PROJECT: Frigid Coil Facility Johnson Controls
LOCATION: Santa Fe Springs, CA PROJECT NO.: HW1134 TASK NO.:
DESCRIPTION: Soil and groundwater sampling DATE: 22 day 01 month 2009 year
CONTRACTOR(S): Interphase and Blaine Tech
WEATHER, TEMPERATURE: Overcast, mid 60's, rain off and on

0800 depart Huntington Beach
0835 arrive on site, Blaine Tech already on site, Travis concrete coring crew arrives, gates still locked
0845 Interphase Danny & Gilbert on site, health and safety tailgate
0900 begin collecting water levels & setting up to sample at DPT-19
0910 begin drilling DPT-19
0950 rain begins
1005 showed concrete corer indoor locations
groundwater sample containers arrive from Microbac
10:30 begin sampling MW-4
10:40 complete sampling MW-4 42.82' depth to water
1045 Blaine Tech drum arrives on site
1105 screen set from 40'-44' bgs at DPT-19
1130 begin sampling MW-3 25.14' Depth to water
final depth to water 25.20', begin sampling DPT-19
1135 owner of business approaches work area wants to show an area in NE corner of property that was "very dirty when we moved in" asks how long we will be on site, I tell him we will hopefully finish on Tuesday, he wants to know how we chose locations for sampling I tell him they were given to me by the project manager, he starts ~~discussing~~ telling me about the troubles with the business and asks if the property

NAME: Marlene Duffy PROJECT NO.: HW1134 HOURS

Sheet No. 1 of

Geosyntec consultants

DAILY FIELD REPORT

PROJECT: Frigid Coil Facility Johnson Controls

LOCATION: Santa Fe Springs PROJECT NO.: HW1134 TASK NO.:

DESCRIPTION: groundwater & soil sampling DATE: 22 day 01 month 2007 year

CONTRACTOR(S): Interphase, Blaine Tech

WEATHER, TEMPERATURE: overcast, mid 60's, rain off and on

~~1130~~ mo 1135 cont owner knew there were problems before his business moved in, I tell him I am not sure about the details of what was done before or what was known.

1145 business owner departs site

1205 Complete sampling DPT-19-40

1215 begin sampling MW-6

1222 final depth to water 22.31' in ~~1~~ MW-6 Interphase tremie grouting boring with concrete bentonite mix

1245 begin drilling second boring for groundwater sampling at DPT-19-30' with sample 30'-34'

1259 begin sampling MW-5 ~~x~~

1305 begin sampling DPT-19-30' final depth to water in MW-5 22.85'

1320 complete sampling at ~~DPT-19-?~~ MW-5 and DPT-19-30' grouting DPT-19-30' boring

1335 begin drilling DPT-19-20'

1400 well installed waiting for water 20'-24' screen interval

1414 sample MW-2

1420 Concrete corer departs site drillers break for lunch

1440 spoke with James Allen regarding progress, he instructs to only collect core / log the geology to 10' then direct push to install ~~last~~ ~~the~~ two next sample screens / drillers finish lunch

DAILY FIELD REPORT

PROJECT: Johnson Controls - Frigid Coil Facility

LOCATION: Santa Fe Springs, CA PROJECT NO.: HW1134 TASK NO.:

DESCRIPTION: soil & groundwater sampling (non) DATE: 22 day 01 month 2009 year

CONTRACTOR(S): Interphase & Blaine Tech

WEATHER, TEMPERATURE: Warm

1450 DPT-19-20 slow infiltration, left screen and casing in place, begin drilling
1520 complete groundwater quarterly sampling
1525 installing casing and screen for DPT-18-40' screen 40'-44'
1545 still no water in screen from 40'-44', pulling screen up 1 foot
1550 Blaine Tech departs site
1600 phone call with Andrew Barnes and James Allen new instructions are to core to 40 ft bgs at each location then simply direct push to 20ft and 30ft
1610 begin sampling in DPT-18-40,
1640 begin drilling DPT-18-20
1655 attempt to sample DPT-19-20 while waiting for water level to rise in DPT-18-20, only 2 feet of water in screen
1710 Well screen went dry in DPT-19-20 after 1/2 liter collected, no water in DPT-18-20 spoke with Robbie Ettinger regarding soil vapor sampling if we are not able to do shut in test with helium, we need to create a mound of sandy bentonite around each probe and hydrate to seal also will use tracer of isopropyl alcohol
1715 beginning to get dark, no water in two shallow borings, covering with buckets sealed with bentonite

Sheet No. 1 of 1

Geosyntec consultants

DAILY FIELD REPORT

PROJECT: Frigid Coil Facility Johnson Controls

LOCATION: Inside Warehouse PROJECT NO. HW1148 TASK NO.:

DESCRIPTION: Soil gas and groundwater sampling DATE: 23 day 01 month 2009 year

CONTRACTOR(S): Interphase

WEATHER, TEMPERATURE: raining, cool, 50-60°

10:25 depart Huntington Beach
11:10 arrive on site, check in with Kyle regarding progress. PID lamp not working Ashread will send another
12:05 Kyle goes to collect ice for samples Marlene adding new tree way values to soil gas probes per instructions from Kevin Coffman
1230 Robert from the mobile lab calls says that lab calibration has been unsuccesful and they will not be able to run samples today begin drilling DPT-7R-40
1255 Kyle departs site after dropping off ice Robert returns after checking with his office, they do not have enough summa cannisters to collect all indoor samples today, attempted to call James Allen and Andrew Barnes, left message for James, spoke with Robbie Ettinger, tedlar bags are not a good solution because they would need to be run today
1330 received call from James Allen, we do have access to the site on Monday, Robert departs site with soil samples from SB-7R
1335 terminate boring at 44 ft bgs DPT-7R-40 to be collected from 39-44 ft bgs
1340 begin drilling DPT-7-30 (screen 29-34')
1400 finished setting screen in DPT-7-30

NAME: Marlene Duffy PROJECT NO. HW1148 HOURS:

PROJECT: JCI - Frigid Coil

LOCATION: Santa Fe Springs PROJECT NO.: HW1148 TASK NO.:

DESCRIPTION: soil vapor probe, soil sampling DATE: 23 day 01 month 2009 year

CONTRACTOR(S): Interphase

WEATHER, TEMPERATURE: overcast, cool

1715 setting up outside fence to sample SB-15
1735 Complete drilling SB-15 based on core, probe for SV-15-15 will be set at 10.5'-11.5' for the sand with a 1" stainless steel screen at the center of the sand pack
1755 cleaning up, coiled soil vapor probe top in sand and covered with asphalt to protect over the weekend
1800 based on work remaining outside the fence, we agree to meet at 8am Monday
1805 all depart site, 1 small drum outside fence, 2 55-gallon drums inside fence track rig parked inside building
1655 arrive back in Huntington Beach

PROJECT: JCI - Frigid Coil

LOCATION: Santa Fe Springs — PROJECT NO.: HW1148 — TASK NO.:

DESCRIPTION: Soil, groundwater, soil vapor sampling — DATE: 26 day 01 month 2009 year

CONTRACTOR(S): Interphase

WEATHER, TEMPERATURE: clear, cool in morning

0650 depart Huntington Beach
0724 arrive on site
0755 phone call from James Allen with instructions to core and log the entire sample from DPT-18-30 then potentially readjust the sample interval for DPT-18-20; begin sampling DPT-19-20 for 1,4-Dioxane then attempt to sample for VOCs; and core and install soil vapor probes at each location first then later go back to sample for groundwater to avoid off gassing from groundwater
0800 Interphase on site Danny, Marco, Paul and Cesar
Health and Safety tailgate
0815 begin drilling/coring SV-16 with crew 2
crew 1 begins with installing probe with sand pack from 4' to 5' bgs at SV-15
0840 decide based on geology to set probe in SV-16 with sand packs from 3.5' to 4.5' and 8.5' to 9.5'
Rachel arrives on site
0905 Rachel goes to collect ice
0910 mobile lab arrives on site, checked DPT-7R-20, no water
0950 based on geology, setting screens at 12.5-13.5' and 9-10' in SV-14
1005 based on geology, setting first probe from 8.5' to 9.5' in SV-10R, shallow probe to be set from 4' to 5'
1050 begin drilling SV-1
1110 based on geology, decide to set probes at SV-1 at 9.5-10.5' ; 4.5-5.5'

PROJECT: JCI - Frigid Coil

LOCATION: Santa Fe Springs | PROJECT NO.: HJ1148 | TASK NO.:

DESCRIPTION: GW soil, soil vapor sampling | DATE: 26 day 01 month 2009 year

CONTRACTOR(S): Interphase

WEATHER, TEMPERATURE: warm, overcast

1115 check in with Rachel, based on soil core in SV-9B, they will set probes with sands packs from 9-10' bgs and 3.5-4.5 feet bgs
1200 begin drilling DPT-1-40
1245 check in with Rachel, DPT-9 did not have water until 29' bgs, sample will not be collected from DPT-9-20 due to lack of water, DPT-9-30 from 32-36' DPT-9-40 set from
1300 DPT-1-40 set from 35-44, DPT-1-30 set from 31-36 DPT-1-20 set from 19-24
1315 Rachel departs site, James Allen arrives on site drillers break for lunch, no water in DPT-7-20
1425 begin set up for pneumatic sub slab ~~results~~ tests
1445 Business owner and shop superintendant stop by to see what we are doing, James Allen speaks with them regarding how deep the holes are and when we will complete work inside the building
1530 mobile lab departs site
1600 unable to collect sample from DPT-7-20, pulling
1650 complete checking cleanup in warehouse move to pull DPT-13-20 and sample DPT-19-20
1725 complete sampling in DPT-19-20, only able to collect 1 VOA before well went dry mobilizing track rig to DPT-17 location and grouting up DPT-19-20

PROJECT: JCI - Frigid Coil
LOCATION: Santa Fe Springs PROJECT NO.: HR1148 TASK NO.:
DESCRIPTION: Soil, gw, and soil vapor sampling DATE: 27 day 01 month 2009 year
CONTRACTOR(S): Interphase
WEATHER, TEMPERATURE: Clear, cold

0608 depart Huntington Beach
0650 arrive at site DPT-17 and DPT-20 location track rig in place, waiting for Interphase
0700 Interphase arrives on site, health and safety tailgate, conversation with Danny regarding best way to access DPT-17 and DPT-20 based on difficulties maneuvering, will try to use truck instead of track
0800 began drilling at 0755, took maneuvering to position rig over railroad tracks
0855 terminate SB-17, DPT-40 to be screened 39-44, DPT-30 to be screened 28-32, DPT-17-20 to be screened 17-21
0900 mobile lab arrives on site, go to open gate
0915 gates open to fenced area
1035 sampling progressing slowly with DPT-17-20 and DPT-17-40, going over with
1125 based on lithology, setting soil vapor probes at 9-10' bgs and 5.5-6.5' sand pack in SV-2
1250 based on lithology, set screens from 34-44 and 28-32', formation near 20' does not yield much water after four hours based on core, not enough water in shallow boring and deep boring at DPT-17 to complete sampling, a second attempt will be made after DPT-20 is complete

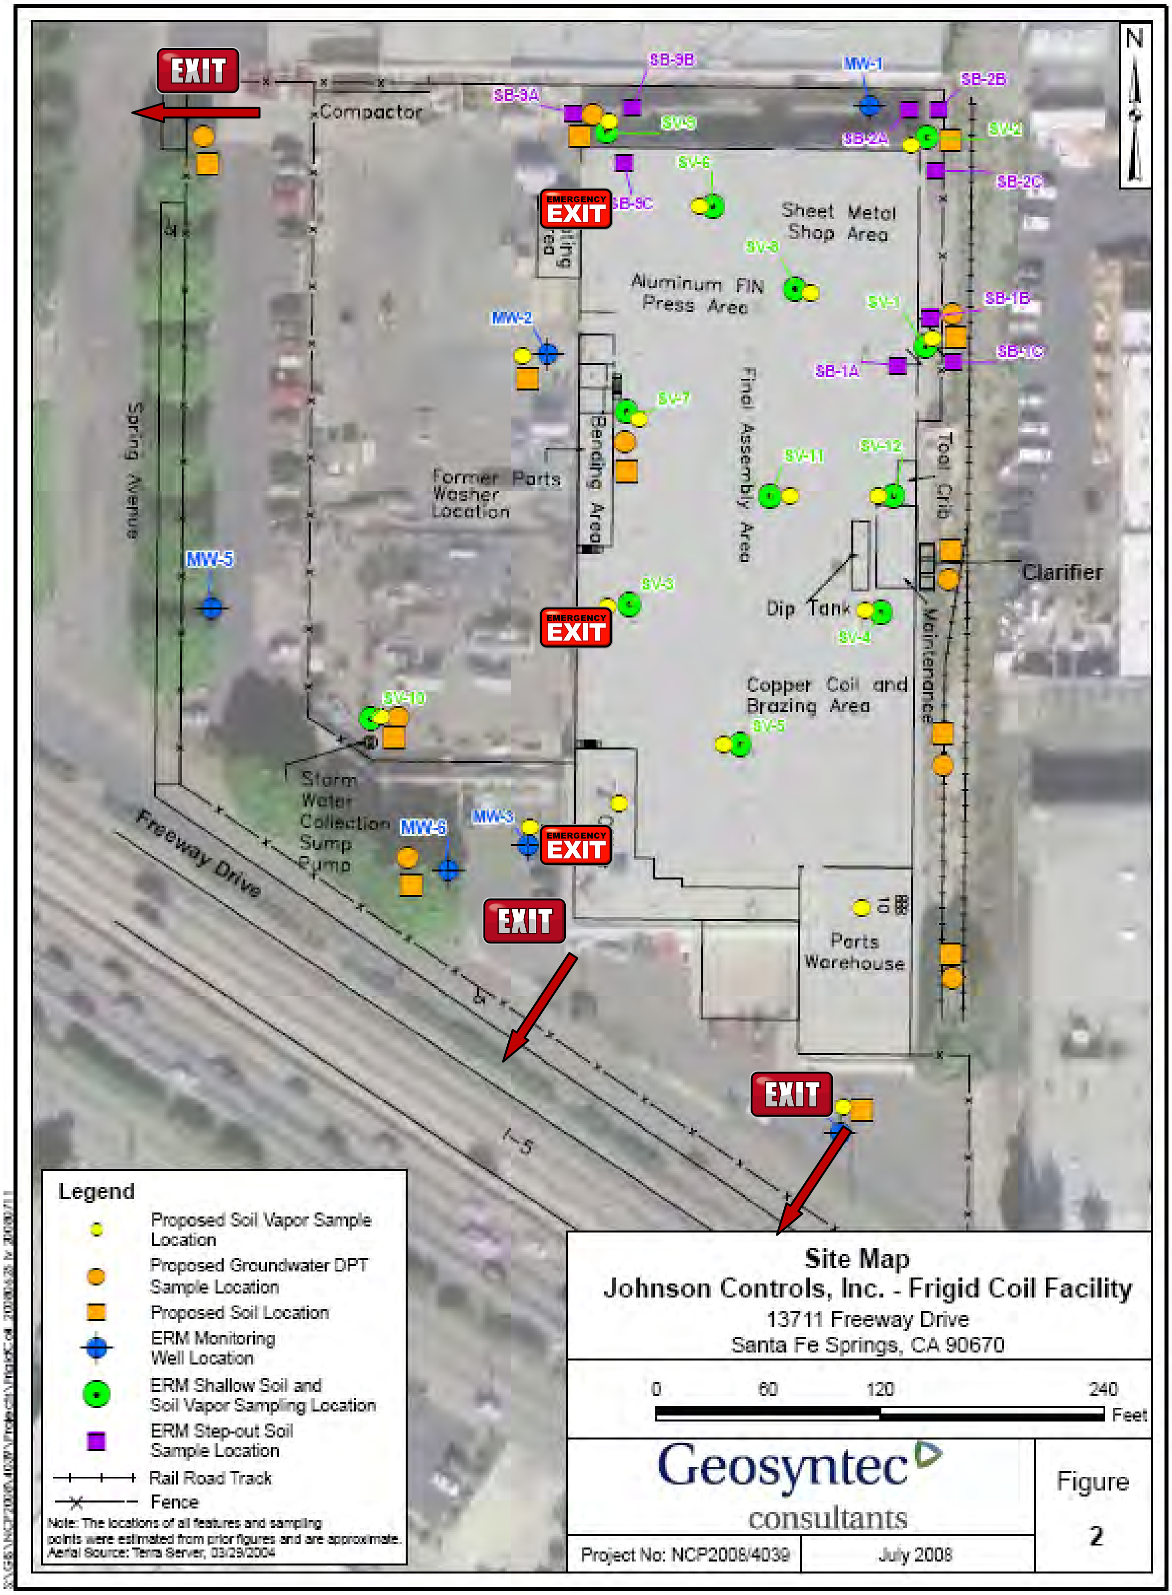
SITE MAP



Instructions for Incident Reporting

If Serious and/or Life Threatening

If Serious and/or Life Threatening seek immediate medical attention at the hospital/facility that provides emergency care listed in the HASP, Office Preparedness Plan, or on the office bulletin board.

If Non-Life Threatening

Manager/Supervisor calls the EHS Department at **(804) 349-8067** or **(404) 435-4722**—to discuss appropriate medical attention (even if he/she thinks medical attention is not required.). If unable to contact the EHS Department within one (1) hour, a detailed voicemail with information about the incident must be provided and Gail Hapeman in Human Resources [(561) 922-1002] must also be contacted to obtain the name and address of nearest Workers' Compensation provider.

- Manager/Supervisor contacts Gail Hapeman in Human Resources —Office: (561) 922-1002, Mobile: (561) 789-6830 with additional details of the incident by the end of the work shift.
- Within 24 hours, the Manager/Supervisor completes a draft of the Manager's Report of Incident that is found on the EHS website and sends to Gail Hapeman at (561) 922-1101.
- Manager/Supervisor forwards the finalized paperwork within 48 hours to both EHS (dprokopchak@geosyntec.com); fax (804) 332-6732 and HR (ghapeman@geosyntec.com); fax (561) 922-1101 for review, documentation, and implementation into our case management program.
- Contractors are responsible for compliance with their internal safety procedures regarding Incident Reporting. Geosyntec will document the Contractor's incident in their Project Logbook.
- In the event of a vehicle accident that does not involve injuries, please follow the procedures outlined in EHS 105—Driver Safety.

TABLE OF CONTENTS

1. SIGNATURES

1.1 Preparers and Reviewers

This HASP, which must be maintained on site when field work is being performed, addresses the health and safety hazards of each phase of site operation, including the procedures and equipment required for worker protection. Only the Site Health and Safety Officer (SHSO) can change or amend this document, in agreement with the Environmental Health and Safety Coordinator (EHSC), and Project Manager. The SHSO must initial any change made to the HASP at the relevant section. Major amendments (e.g., changes in personal protective equipment, addition of tasks, etc.) must be documented in Section 3 and in Appendix A. This HASP must be reviewed and amended on an annual basis for projects lasting more than one year.

Prepared by:	James Allen	1/15/09
	SHSO	Date
Reviewed by:	Marlene Duffy	1/15/09
	EHSC	Date
Approved by:	Andrew Barnes	1/15/09
	Associate-in-Charge Manager	Date

Copy Cover Sheet to: EHSC

1.2 Site Workers

A pre-entry briefing conducted by the SHSO must be held prior to initiating the field work of this project. All sections of this HASP must be reviewed during this briefing. Any worker not in attendance at the initial meeting must be trained by the SHSO on the information covered in the pre-entry briefing. Tailgate meetings must be held at the beginning of each day by the SHSO to discuss important health and safety issues concerning tasks to be performed during that shift. Topics discussed in the tailgate meetings must be documented in a daily field log. Weekly site health and safety audits must be performed and documented by the SHSO for projects lasting more than one week. After reading the HASP and attending a pre-entry briefing, Geosyntec employees must sign the following acknowledgment statement.

"I have read, understand, and agree with the information set forth in this HASP. I have also attended a pre-entry briefing. I agree to perform my work in accordance with this HASP."

Signature	Printed Name	Date

2. DISCLAIMER

This HASP was prepared in accordance with Geosyntec Consultants' Health and Safety Procedures for use by Geosyntec project staff. This plan complies with Geosyntec internal review procedures. Geosyntec does not endorse the use of this HASP by others. This document and its contents should not be used by firms other than Geosyntec or by persons other than Geosyntec employees without a thorough peer review by their health and safety managers. Should the work outlined in this HASP be executed by contractors other than Geosyntec, the HASP should be modified and reviewed to comply with such company's corporate health and safety procedures. In the event that a contractor other than Geosyntec executes this work, the contractor should complete independent analyses of hazards and mitigation measures, and should update all HASP tables, text, figures, and appendices prior to commencing work. Geosyntec assumes no responsibility for the accuracy, content, or health and safety of non-Geosyntec personnel during the implementation of the work in this HASP by other parties.

3. HASP AMENDMENTS

Over the course of this project, it is possible that the project-specific details and working conditions will change. This HASP shall be reviewed and amended as necessary to effectively describe the changing working conditions and to mitigate the potential health and safety issues that may arise during the project. Amendments to the HASP should be briefly described in the following spaces provided. The full text of the amendments should be provided in Appendix A.

AMENDMENT 1:

Date: __________ Project Manager: ____________ EHSC: ___________________
Brief description of amendment:

____

____

AMENDMENT 2:

Date: __________ Project Manager: ____________ EHSC: ___________________
Brief description of amendment:

____

4. SITE/TASK DESCRIPTION

The following is a brief description of the site, including information as to the location, approximate size, previous usage, and current usage. A description of the tasks to be performed is also presented.

- Site Location: 13711 Freeway Drive, Santa Fe Springs, CA
- Approximate Size of Site: 4.9 acres
- Previous Site Usage: HVAC and refrigeration manufacturing
- Current Site Usage: Warehousing
- Tasks for this project include:

  Task 1: Soil Vapor Sampling

  Task 2: DPT Soil and Groundwater Sampling

  Task 3: Groundwater Monitoring

  Task 4:

  Task 5:

  Task 6:

  Task 7:

  Task 8:

- Description of Surrounding Property/Population:

North	Industrial-Warehouse	East	Industrial/Commercial
South	Freeway Drive and I-5	West	Spring Drive and Industrial

5. KEY PERSONNEL AND HEALTH AND SAFETY RESPONSIBILITIES

Table 1 lists project personnel and their responsibilities in regard to health and safety concerns on this project.

6. WORKER TRAINING

Table 2 presents the training and medical monitoring that project personnel have received in accordance with the company Environmental, Health, and Safety (EH&S) Training Program. Pre-entry briefings and daily tailgate meetings shall also be conducted to facilitate site-specific training.

7. MAPS AND SITE CONTROL

7.1 Routes to Hospital and Urgent Care Facility

A hospital and an urgent care facility near the site have been identified. Figure 1A presents the route to the hospital, for emergency care. Figure 1B presents the route to an urgent care facility, for non-emergency care. Both figures also include the facility name, phone number, and written directions from the site. The figures are included after the cover page of this HASP.

7.2 Site Map

A site map is presented on Figure 2, located inside the cover of this HASP. The site map is intended to show the location of the work zone(s), to provide on-site orientation, and to delineate evacuation routes. Changes may be made to the site map by the SHSO based on changing site conditions. The site map should be accessible in the work area.

7.3 Buddy System

The buddy system is required for all tasks. The buddy system includes maintaining regular contact with onsite Geosyntec personnel, clients, and/or contractors to periodically check on the condition of site workers. In situations when only one employee is performing field work, on-site personnel must have appropriate communication devices on his/her persons at all times and shall maintain contact with off-site personnel. The field worker must communicate with off-site personnel, at a minimum, of three times daily: (1) upon arriving at the site; (2) midway through the work day; and (3) upon departing from site.

7.4 Controlled Work Zones

APPLIES TO TASK: ☒① ☒② ☒③ ☐④ ☐⑤ ☐⑥ ☐⑦ ☐⑧ ☐ Not Applicable

The area(s) where work is to be performed shall be called the Work Zone. The boundaries of Work Zone shall be marked using the following methods:

- ☐ Warning tape
- ☒ Traffic cones
- ☐ Signs
- ☐ Fence
- ☐ Other: ______________________

7.5 Site Access

Access to the site must be controlled using the following method:

- ☐ Sign in/Sign out log
- ☐ Guard
- ☐ Identification badges
- ☒ Check in with SHSO
- ☒ Other: Check with Babloo Swahny inside warehouse office

7.6 Visitors

Visitors to the site may need to be continually escorted for safety purposes. Geosyntec employees must not be allowed into the Work Zone until they have received the proper personal protective equipment (PPE) and they have read, understand, and meet the requirements outlined in this HASP. Other visitors under Geosyntec's direction (subcontractors, etc.) may review this HASP for site familiarity, but they are ultimately responsible for their own health and safety (see disclaimer in Section 1).

7.7 Safe Work Practices

General Safe Work Practices that must be implemented during work activities at this site are listed in Table 3.

7.8 Inspections

For projects lasting longer than one week, the SHSO must conduct weekly health and safety inspections. The inspections must be documented using the Weekly Health & Safety Inspection Checklist included in Appendix B. The Weekly Health & Safety Inspection Checklist should be kept on file at the project site.

8. HAZARD ANALYSIS AND MITIGATORS

Site specific hazards have been identified through hazard analysis. Hazard analysis included a review of chemical, physical, and biological hazards. The analysis also identified health and safety hazard mitigators needed to protect workers, which are presented in Appendix C.

8.1 Chemical Hazards

Chemical hazards (e.g., fire, explosion, high/low pH water) due to the tasks to be performed were analyzed. Hazard mitigators for each chemical hazard identified are presented in Appendix C. These hazard mitigators must be implemented for each task in which they are applicable, as summarized in the table in Appendix C.

Potential exposure pathways to chemical health hazard agents include inhalation, dermal exposure, and/or ingestion. To effectively manage risk to exposure, constituents of concern (COCs) have been identified. Potential exposure to these COCs will be mitigated through engineering, administrative, and/or PPE controls. The COCs are documented and/or suspected materials present based on previous operations/activities. The identified COCs for this project are listed in Appendix D with appropriate hazard information, including signs of exposure. Hazard Mitigators, which include control measures and methods to minimize exposure, are presented in Appendix C. Also, airborne levels of COCs may be estimated or measured to evaluate levels of PPE that will be required for individual tasks. The type(s) of air monitoring to be performed are discussed in Section 9.

8.2 Physical Hazards

Physical hazards (e.g., electrocution due to drilling, etc.) due to the tasks to be performed and due to the site setting and condition (e.g., slips, trips, or falls due to rocky terrain, etc.) were analyzed. Hazard mitigators for each physical hazard identified are presented in Appendix C. These hazard mitigators must be implemented for each task in which they are applicable, as summarized in the table in Appendix C.

8.3 Biological Hazards

Biological hazards (e.g., allergic reactions to poisonous plants or insects indigenous to the area, etc.) associated with tasks to be performed were analyzed. Hazard mitigators for each biological hazard identified are presented in Appendix C. These hazard

mitigators must be implemented for each task in which they are applicable, as summarized in the table in Appendix C.

9. AIR MONITORING

APPLIES TO TASK: ☒① ☒② ☐③ ☐④ ☐⑤ ☐⑥ ☐⑦ ☐⑧ ☐ Not Applicable

Air monitoring will be performed to evaluate airborne exposure levels associated with the COCs on site. Hazardous conditions may include concentrations that may cause acute or chronic illness, potential oxygen deficient environments, or potential explosive environments. Air monitoring may also be performed to evaluate the adequacy of engineering, administrative, and/or PPE controls. Air monitoring may be "real-time" (e.g., the instrument provides immediate results at the project), using multi-gas meters, photoionization detectors (PIDs), or colorimetric tubes. "Non-real-time" monitoring may also be performed by collecting samples and forwarding to a laboratory for analysis and quantification.

The type(s) of air monitoring equipment required to evaluate COCs is outlined in Appendix E. Monitoring equipment must be calibrated based on the manufacturer's requirements. Calibration results and air monitoring measurements must be documented. Based on the results noted and site activities or scope of work changes, the frequency of air monitoring may be adjusted on site by the SHSO with the consent of the Project Manager and communication with the EHSC.

10. PERSONAL PROTECTIVE EQUIPMENT

The PPE required for each task is presented in Appendix D. Required equipment and types of protective clothing materials, as well as an indication of the initial level of protection to be utilized, are listed. The level of protection may be upgraded or downgraded by the SHSO according to mitigation measures required in Appendix C or according to action guidelines provided in Appendix D. The PPE that is utilized must be documented in a daily field log.

11. DECONTAMINATION

The SHSO and Project Manager will determine the type and level of decontamination procedures for both personnel and equipment based on evaluation of specific work activities in the controlled work zones. In an emergency, the primary concern is to prevent the loss of life or serious injury to personnel. Medical treatment will take precedence over decontamination in the event of a life threatening and/or serious

injury/illness. Personnel will perform decontamination in designated and identified areas upon leaving "hot zones" where the potential exists for exposure to hazardous chemical, biological, or environmental conditions.

Decontamination of personnel in Level D (modified) will consist of closure and disposal of coveralls, disposable boots, and gloves, (if applicable).

Decontamination of personnel in Level C PPE, if applicable, will consist, at a minimum, of:

- Removal and cleaning/disposal of boot covers, coveralls, and outer gloves;
- Removal, cleaning, and storage of respiratory protection;
- Washing of boots or other non-disposable PPE (e.g., hard hat, safety glasses/goggles, etc.) suspected of being contaminated using a soap solution followed by a water rinse; and
- Removal and disposal of inner gloves.

Wash solutions and PPE may require disposal at a licensed waste facility. Hand tools and sampling equipment shall be decontaminated as needed by washing in decontamination basins with appropriate solutions, or, if possible, by dry decontamination.

12. EMERGENCY PREPAREDNESS AND RESPONSE

A table presenting a list of contacts and telephone numbers for the applicable local off-site emergency responders is provided inside the front cover of this HASP (after figures). If the nature of the site work and COCs requires that off-site responders be notified before work begins on this project, the date that the pre-notification was made is presented in the table.

The following emergency response equipment is required for this project:

☒ Fire Extinguisher (Type ABC)
☐ Eyewash bottle
☒ First Aid Kit
☐ Other: ____

In the event that an on-site emergency develops, the procedures delineated in Table 4 are to be followed immediately. In addition, the instructions for reporting the incident presented in Appendix E shall be followed. Appendix E also includes forms that must be provided to the physician(s) giving care to a potentially injured or ill employee.

13. CONFINED SPACE ENTRY

☐ APPLICABLE ☒ NOT APPLICABLE

The task(s) for this project involve confined-space entry. Workers must abide by the company's Confined Space Entry Program [29 CFR §1910.120(j)].

14. SPILL CONTAINMENT

☒ APPLICABLE ☐ NOT APPLICABLE

The task(s) for this project involve handling of drums and/or containers that contain stored chemicals and/or wastes associated with sampling, excavation, transportation, etc. Workers must implement the hazard mitigating procedures for drum/container handling presented in Appendix C.

15. CHEMICAL HAZARD COMMUNICATION LABELING

☒ APPLICABLE ☐ NOT APPLICABLE

The following procedures must be followed for chemicals brought onto the site by Geosyntec personnel (i.e., decontamination solution, sampling preservatives, KB-1 solution, sodium permanganate, etc.) while performing the tasks of this project:

- Labels on primary chemical containers must not be defaced.
- Chemical containers must be stored in appropriate storage containers.
- Secondary containers and storage cabinets must be correctly and clearly labeled using the Hazardous Materials Identification System (HMIS).
- Chemicals incompatible with each other must not be stored together.
- Workers must receive training on the chemical hazards.
- Material Safety Data Sheets (MSDSs) for the chemical must be included in Appendix F.

When chemicals are used on site, workers must abide by Geosyntec's Hazard Communication Program.

Table 1

Key Personnel and Health & Safety Responsibilities

Principal-in-Charge or Associate-in-Charge Andrew Barnes	*Project Manager (PM)* James Allen	*Site Health & Safety Officer (SHSO)* James Allen	*Project Personnel* Refer to Table 2	*Environmental, Health & Safety Coordinator (EHSC)* Marlene Duffy
• Approve this HASP and amendments, if any. • Verify that elements of this HASP are implemented.	• Approve this HASP and amendments, if any. • Monitor the field logbooks for health and safety work practices employed. • Coordinate with SHSO so that emergency response procedures are implemented. • Verify that corrective actions are implemented. • Verify and document that personnel receive this plan and are aware of its provisions and potential hazards associated with site operations, and that they are instructed in safe work practices and familiar with emergency response procedures. • Provide for appropriate monitoring, personal protective equipment, and decontamination materials.	• Prepare and implement project HASP and amendments, if any, and report to the Project Manager for action if any deviations from the anticipated conditions exist and authorize the cessation of work if necessary. • Verify that site personnel meet the training and medical requirements. • Conduct pre-entry briefing and daily tailgate safety meetings. • Verify that all monitoring equipment and personal protective equipment is operating correctly according to manufacturer's instructions and such equipment is utilized by on-site personnel. Calibrate or verify calibration of all monitoring equipment and record results. • Verify that decontamination procedures are being implemented. • Implement site emergency response and follow-up procedures. • Notify the EHSC in the event an emergency occurs. • Perform weekly inspections.	• Provide verification of required health and safety training and medical surveillance prior to arriving at the site. • Notify the SHSO of any special medical conditions (e.g., allergies). • Attend pre-entry briefings and daily tailgate safety meetings. • Immediately report any accidents and/or unsafe conditions to the SHSO. • Be familiar with and abide by the HASP. • Be ultimately responsible for his or her own safety.	• Review and audit HASP and amendments. • Maintain a copy of the cover sheet of each completed HASP. • Notify Director of Environment, Health & Safety in the event an emergency occurs. • Assist with the implementation of the corporate health and safety program. • Consult on health and safety issues.

SIMONS, ANDREW	I	10/7/2004		5/15/2008	2/5/2007	11/1/2006	6/30/2005	10/5/2007	12/8/2006	

Footnotes:
1 CPR Refresher: every year; First Aid Refresher: every three years.
2 Annual Medical Surveillance for EH&S Category I, Biannual Medical Surveillance for EH&S Categories II & III.
3 For EH&S Categories I & II Only.
4 Could Include task-specific training, project-specific training, or project-specific medial surveillance.

Table 3

General Safe Work Practices

- Minimize contact with impacted materials. Do not place equipment on the ground. Do not sit or kneel on potentially contaminated surfaces.
- Employees who are suspected of being under the influence of illegal drugs or alcohol will be removed from the site. Workers taking prescribed medication that may cause drowsiness shall not operate heavy equipment.
- Practice good housekeeping. Keep everything orderly and out of potentially harmful situations.
- Use of contact lenses may not be allowed under certain hazardous working conditions.
- The following conditions must be observed when operating a motor vehicle.
  - Wearing of seat belts is mandatory
  - The use of headlights is mandatory during periods of rain, fog, or other adverse weather conditions
  - A backup warning system or use of vehicle horn is mandatory when the vehicle is engaged in a backward motion
  - All posted traffic signs and directions from flagmen must be observed
  - Equipment and/or samples transported in vehicles must be secured from movement
  - The use of vehicles acquired by Geosyntec by non-Geosyntec personnel is prohibited
- In an unknown situation, always assume the worst reasonable conditions
- Be observant of your immediate surroundings and the surroundings of others. It is a team effort to notice and warn of dangerous situations. Withdrawal from a hazardous situation to reassess procedures is the preferred course of action.
- Conflicting situations may arise concerning safety requirements and working conditions. These must be addressed and resolved rapidly by the SHSO and PM to relieve any motivations or pressures to circumvent established safety policies.
- Unauthorized breaches of specified safety protocol must not be allowed. Workers unwilling or unable to comply with the established procedures must be discharged.

Geosyntec consultants

Table 4

Emergency Response Procedures

- The SHSO (or alternate) should be immediately notified via the on-site communication system. The SHSO assumes control of the emergency response.
- If applicable, the SHSO must notify off-site emergency responders (i.e., fire department, hospital, police department, etc.) and must inform the response team of the nature and location of the emergency on site.
- If applicable, the SHSO calls for evacuation of the site. Site workers should move to their respective refuge stations using the evacuation routes provided on the Site Map.
- For small fires, flames should be extinguished using the fire extinguisher. Large fires should be handled by the local fire department.
- If chemicals are accidentally splashed into eyes or onto skin, use eyewash and/or shower.
- If a worker is injured, first aid shall be administered by workers certified in first aid.
- After an incident has occurred, the instruction for incident reporting presented in Appendix E must be followed.

Note that EMERGENCY RESPONSE PROCEDURES are separate from instructions for injury response and reporting, located elsewhere in this HASP.

Appendix A

HASP Amendments

Discuss details of amendments to this HASP here. Include amendment number, date, and details of amendments.

Geosyntec consultants

Appendix B

Weekly Health & Safety Inspection Checklist

Project: Frigid Coil Facility Environmental Investigation Date: ______________________
Inspected by: ____

Category	*Observations/Corrective Actions (N/A, if Not Applicable)*
Pre-entry briefing records are current	
Tailgate meeting records are current	
Training/medical surveillance/respiratory protection records are current	
Site map is posted	
Buddy system is implemented	
Work zones are identified	
Site access is controlled	
Visitors are being escorted	
On-site/off-site communications are in working order	
Safe work practices are being implemented	
Any additional hazards incurred?	
Air monitoring equipment is in working condition	
Air monitoring records are being recorded in field logbook	
Air monitoring calibration records are being recorded in field logbook	
PPE storage area is neat and organized	
Standard operating procedures are being implemented	
Housekeeping at decontamination zone is appropriate	
Decontamination procedures are being implemented	
Emergency response equipment is in working condition	
Route to hospital is posted	
Confined space entry program is being implemented	
Spill containment equipment is available	
Chemical inventory is up to date	
Material safety data sheets are available	
Primary and secondary containers are properly labeled	
Housekeeping at the chemical storage area is appropriate	

Appendix C

Hazard Analysis and Hazard Mitigators

TASKS	
①Soil Vapor Install and Sampling	⑤
②DPT Soil and Groundwater Sampling	⑥
③Groundwater Monitoring	⑦
④	⑧

TASK #	①	②	③	④	⑤	⑥	⑦	⑧
I. Chemical Hazards								
Fire								
Permanganate Handling								
Reactivity								
Skin absorption								
II. Physical Hazards								
Bioaugmentation Culture Handling								
Boating								
Chainsaw								
Cold Stress								
Compressed Gas Cylinder	x	x						
Downhole Logging								
Drilling (including Indoor)	x	x						
Drum and Container Handling	x	x	x					
Electrocution								
Excavation/Trenching								
Eye Injury	x	x	x					
Fall Protection								
Flash flood								
Hand/Foot Injury	x	x	x					
Heat Stress	x	x	x					
Heavy Equipment	x	x						
Helicopter								
Knives / Blades	x							

TASK #	①	②	③	④	⑤	⑥	⑦	⑧
Lifting Heavy Loads	x	x	x					
Lockout/Tagout								
Loud Noise	x	x						
Nuclear Gauge Radiation Exposure								
Portable Power/Hand Tool	x	x	x					
Slips, Trips, and Falls	x	x	x					
Thoroughfares	x	x	x					
Truck Crane								
Urban Environments								
Utility Protection								
Welding and Cutting								
Other:								
III. Biological Hazards								
Allergic Reaction to Poisonous Plants								
Alligators								
Dogs								
Insects / Vermin / Snakes	**x**	**x**	**x**					
Medical Waste								
Mountain Lions								
Stinging Insects								
Other:								

An X in a box indicates that the listed hazard is applicable to the respective task. The appropriate Hazard Mitigators are presented in this Appendix.

COMPRESSED GAS CYLINDER

- Keep cylinder valve caps screwed on at all times when regulators and gauges are not attached to the cylinder and when the cylinder is being moved.
- Do not use force to remove valve cap if stuck.
- Protect cylinders from cuts and abrasions.
- Use extreme care not to drop cylinders.
- Secure cylinders in an upright position using chains or other approved restraints.
- Do not use cylinders for rollers or support.
- Do not tamper with cylinder valves or safety devices.
- Do not lift cylinders using the protective valve caps.
- Do not substitute oxygen for compressed air.
- Store all oxygen cylinders at least 20 feet from all fuel gas cylinders and gasoline or diesel storage tanks.
- Keep cylinders away from exposure to open flame.
- Do not use oil or grease on oxygen cylinders or regulator connections to avoid an explosion.
- All cylinders must be labeled and indicate when they have been emptied.
- Check all valves and fittings on a cylinder for leaks with each use. If leakage is found, place a tag on the cylinder indicting the defect, and report it to the SHSO.
- Leak test all connections using soap solution where possible.
- Be certain that the second stage of the regulator is closed, after attaching the regulator to the cylinder, but before opening the cylinder valve.
- Stand to one side of the regulator gauge while you slowly open the cylinder valve 1/4 of a turn.
- Keep wrench on the valve stem of an acetylene cylinder when in use.
- Close the cylinder valve and bleed the pressure off hoses on cylinders when not in use.
- Use a cylinder cart to transport cylinders distances greater than 2 feet.

DRILLING (Including Indoor)

- All members of the drilling crews shall be trained in the standard operating safety features and procedures to be utilized during operation, inspection, and maintenance of the equipment.
- Wear hard hats, steel toed boots, hearing protection and safety glasses at all times when performing drilling operations.
- Conduct a survey, prior to bringing drilling equipment to the job site, to identify overhead electrical hazards, potential subsurface hazards, and terrain hazard. Once on site, before drilling equipment is moved, the travel route shall again be visually surveyed for overhead and terrain hazards. Document possible hazards and communicate them to the drilling crew.
- Use only drilling equipment equipped with two easily-accessible emergency shutdown devices, one for the operator and one for the helper. Shutdown devices should be tested at the beginning of each day.
- Do not transport drilling equipment with the mast in the upward position.
- Extend outriggers per the manufacturer's specifications.
- Monitor weather conditions. Operations shall cease during electrical storms or when electrical storms are imminent.
- Wearing of loose clothing (e.g., open shirts, hooded sweatshirts, etc) is not permitted.
- When appropriate use auger guides on hard surfaces.
- Verbally alert employees and visually ensure employees are clear from dangerous parts of equipment prior to starting or engaging equipment.
- Channel the discharge of drilling fluids away from the work area to prevent the ponding of water.
- Use hoists only for their designed intent. Hoists shall not be loaded beyond their rated capacity. Steps shall be taken to prevent two-blocking of hoists (the condition when the lower load block or hook assembly comes in contact with the upper load block, or when the load block comes in contact with the boom tip).Follow the equipment manufacturer's procedures if ropes become caught in, or objects are pulled into a cathead.
- Do not run or rotate drill rods through rod slipping devices. No more than 5 feet of drill rod column shall be hoisted above the top of the drill mast. Drill rod tool joints shall not be made up, tightened, or loosened while the rod column is supported by a rod slipping device.
- Control dust using dust suppression techniques.
- Clean augers, drill casing, or drill rod only when the rotating mechanism is in neutral and the pipe is stationary is stopped.

- Cap and flag open boreholes; open excavations shall be barricaded.
- Keep all hand tools used during drilling operations clean and in good working condition.
- Check fire extinguishers and notify all onsite personnel to their whereabouts.
- Check cables for frays and hydraulic hoses for leaks daily.
- In situations where ambient water level may be above top of well screen, during well construction, ensure that well casing is vented to prevent air pressure build-up in blank casing above screen.

Indoor Drilling

- Conduct a survey, prior to bringing drilling equipment to the job site, to identify ceiling height, overhead hazards, potential subsurface hazards, terrain hazard, and building stability particularly during drilling activities. Identify sources of ventilation (including open doorways for cross ventilation and fans to assist in air flow). Once on site, before drilling equipment is moved, the travel route shall again be visually surveyed for overhead and terrain hazards and avenues of ventilation will be opened or turned on.
- Notify and/or evacuate all building occupants prior to start of drilling activities.
- All drilling rig exhaust will be redirected outdoors by tubing. The perimeter of the outdoor exhaust area shall be roped off a suitable distance to allow proper ventilation of exhaust.
- Monitor ambient oxygen percentage and carbon monoxide concentrations in the work zone, as well as entire indoor area, to prevent low oxygen or high carbon monoxide environments. Operations shall cease and the building will be evacuated if levels become dangerous.

DRUM AND CONTAINER HANDLING

- Only trained personnel should open drums containing unknown materials.
- Bulging drums or containers are an indication of pressure build-up. Open all drums or bungs extremely slowly to determine the presence of vapors or pressure inside the drum. If the possibility of fire or explosion exists, a protective shield should be used and/or remote opening devices. Employees not directly involved with opening a container shall be kept a safe distance away.
- Use only drums and containers that meet the appropriate DOT, OSHA, and EPA regulations.
- Utilize drum/container handling equipment whenever possible. The equipment should have a sufficiently rated load capacity and should be able to operate smoothly on the available surface.
- Label and identify drums and containers when moved to the staging areas to safely identify and classify their contents. Segregate incompatible drums.
- Inspect the integrity of the drum container before moving. Any drum or container lacking integrity shall be placed within an over pack container.
- Staging areas require adequate escape routes. Staging area should provide secondary containment for all moved drums.
- Employees must be warned of the potential hazards associated with the contents of containers or drums prior to moving said containers or drums.
- Organize site operation to minimize the amount of drum or container movement. Have a clear view of the available pathway when moving drums. If needed, an additional person should be available to provide guidance.
- Never stand on drums or containers.
- Use non-sparking tools and appropriate grounding and bonding equipment.
- Appropriate fire extinguishing equipment must be onsite at all times during drum handling.
- Spill control equipment shall be onsite in areas where spills ruptures or leaks may occur.

EYE INJURY

- Wear appropriate eye protection according to the task at hand.

HAZARD	TYPE OF PROTECTION
Impact	Safety glasses with side shield or vented safety goggles
Heat (Sparks)	Vented safety goggles or safety glasses with a face shield
Chemical	Hooded vented safety goggles or full-face respirator (if mild chemicals then safety glasses with side shield is acceptable)
Light Radiation	Tinted/reflective safety glasses or tinted/reflective face shield
Dust	Hooded vented safety goggles

- Apply anti-fog product to lens not previously treated.
- Minimize the amount of vapor or particulate matter generated, if possible.
- Avoid touching the face and eyes.
- Flush eyes with water for at least 15 minutes if chemicals do get into the eyes. If condition persists, seek medical attention.
- If dust or foreign objects are in your eyes, do not rub your eyes.
- If an object becomes embedded in the eye, do not attempt to remove. Lightly bandage your eyes, or both eyes, if possible and immediately seek medical attention.
- Do not wear contact lenses if chemical or dust hazard is present (e.g. decontamination or preservation chemicals used during sampling).
- Provide on-site training to workers before tasks at hand.
- If visitors enter area, stop work until they are properly protected.

HAND/FOOT INJURY

- Wear protective gloves as required in the Health and Safety Plan. Gloves should be chosen to suit the work being performed (e.g., chemical resistant gloves will be worn when handling chemicals or sampling for suspected chemicals).
- Steel-toed/steel-shanked safety boots must be worn whenever working around heavy objects (or as required by the HASP). Insulated and/or waterproof boots may also be warranted depending on weather conditions. Boots should be inspected periodically for signs of wear (e.g., cracks in rubber or along soles) and replaced as required.
- Durable footwear which provides adequate ankle support should be worn when working in rugged terrain.
- Use proper lifting techniques to avoid dropping heavy loads on hands and feet (refer to lifting heavy loads hazard mitigator)
- Be aware of moving machinery and heavy equipment in the work area and tuck away any loose clothing.

HEAT STRESS

Prevention:

- Drink plenty of hydrating fluids, such as Gatorade® or water. In high heat, a minimum of one gallon per day should be consumed. Fluid should be consumed frequently. Don't wait until thirsty.
- Provide cooling devices, when necessary, to aid natural body heat exchange during prolonged work or severe heat exposure. Devices include field showers, hose-down areas, shade umbrellas/tents, wide-brim hats, and cooling jackets, vests, or suits.
- If amenable to work conditions, wear light-colored, loose fitting, "breathable" clothing.
- Avoid prolonged periods of exposure. Take breaks as necessary. Higher heat exposure requires more frequent breaks.
- Be able to recognize the signs, symptoms and how to treat for heat stress. Signs, symptoms and treatment are listed below.

Signs and Symptoms:

- Mild heat stress - Decreased energy, slight loss of appetite, nausea, lightheadedness.
- Moderate heat stress - heavy sweating, thirst, faintness, headache, confusion.
- Severe heat stress (heat stroke) - Throbbing headache, confusion, irritability, rapid heartbeat, difficulty breathing, dry skin (no sweating), vomiting, diarrhea.

Treatment:

- Mild and Moderate heat stress - Take to cool place, drink cool (not cold) fluids, remove excess clothing, rest.
- Severe heat stress - Call 911 for an ambulance and get to a cool place, remove excess clothing and rest.
- Adjust work and rest schedules as needed. Establish a work regimen that will provide adequate rest periods for cooling down. This may require additional shifts of workers.
- Provide shelter or shaded areas (77o F is best) to protect personnel during rest periods.
- Maintain worker's body fluids at normal levels to ensure that the cardiovascular system functions adequately. Daily fluid intake must equal the approximate amount of water lost in sweat. Workers are encouraged to drink more than the amount required to satisfy thirst (recommend water and sport drinks, not coffee or soda), because thirst is not an adequate indicator of adequate salt and fluid replacement.
- Remove impermeable protective garments during rest periods.
- Do not assign other tasks to personnel during rest periods.

HEAVY EQUIPMENT

Working around Heavy Equipment

- Yield to heavy equipment.
- Listen for warning signals on heavy equipment.
- Perform a visual inspection and walk around parked heavy equipment before moving to assure that equipment is in good condition and that there are no personnel on the ground that could be injured or objects that could be damaged by vehicle movement.
- Wear hearing protection if required.
- Wear traffic vests for increased visibility.
- Maintain eye contact with the heavy equipment operator when working near equipment.
- Be aware of changes in sound of equipment which may indicate a change in direction.

Heavy Equipment Operators

- use hand rails and footholds when mounting and dismounting equipment,
- Brakes, steering, clutches and controls shall be tested.
- Pay attention to workers on the ground who may be in the path and provide warning prior to moving the equipment.
- Permit no one to ride on, or in, heavy equipment. This includes any portion of a backhoe, bulldozer, forklift or the back of a pickup truck, except in locations specifically designed for passenger use and approved by the SHSO.
- Keep haulage vehicles under positive control at all times while operating. Vehicles shall be kept in gear when descending grades.
- Do not use heavy equipment on slopes with steepness exceeding 3H: 1V unless operations are consistent with manufacturer's recommendations (if the Owner's Manual is not with the equipment or does not specify slope operating procedures, see the SHSO).
- Operate equipment with booms, blades, buckets, beds, etc., lowered or in a stable position while on slopes. Safety cables tethered to appropriate anchors shall be used for equipment working on steep slopes, where appropriate.
- Suspend in slings or support by hoists or jacks heavy equipment in need of repair. The equipment must also be blocked or cribbed before working underneath.
- Shut off motors, do not allow smoking, and use proper dispensing equipment when refueling gasoline-operated equipment to prevent fire hazards.
- Lower hydraulic systems (e.g., blades, etc.) to the ground, set brakes, and shut down equipment if malfunction occurs.
- Use rollover protection and seat belts.

KNIVES / BLADES

- Always wear proper protective equipment. This should include:

  - heavy-duty leather gloves,

  - steel-toed boots with non-slip soles, and

  - hardhat and eye protection.

- Check the work area and make sure that:

  - the ground is free of obstacles such as rocks, stumps, holes, and wet or otherwise slippery conditions.

  - you can get a firm footing on the ground.

- Route cords, hoses, and cables supplying power to portable power tools to prevent tripping hazards.
- Protect tools from corrosion damage.
- Keep tools free of accumulated dirt and unnecessary oil or grease.
- Worn, damaged or dull blades should be sharpened or replaced as necessary.

LIFTING HEAVY LOADS

- Proper lifting techniques include:
  - *Feet* - Feet should be parted, with one foot alongside the object being lifted and one behind. Feet should be comfortably spread to give greater stability. The rear foot should be in position for the upward thrust of the lift.
  - *Back* - Use the sit-down position and keep the back straight, but remember that "straight" does not mean "vertical". A straight back keeps the spine, back muscles, and organs of the body in correct alignment. It minimizes the compression of the abdomen that can cause a hernia.
  - *Arms and Elbows* - The load should be drawn close to the body, and the arms and elbows should be tucked in. When the arms are held away from the body, they lose much of their strength and power. Keeping the arms tucked in also helps keep body weight centered.
  - *Palm* - The palm grip is one of the most important elements of lifting. The fingers and the hand are extended around the object to be lifted. Use the full palm; fingers alone have very little power.
  - *Chin* - Tuck in the chin so the neck and head continue the straight back line. Keep the spine straight and firm.
  - *Body Weight* - Position the body so its weight is centered over the feet. This provides a more powerful line of thrust and assures better balance. Start the lift with a thrust of the rear foot. Shift hand positions so the object can be boosted after knees are bent. Straighten knees as object is lifted or shifted to the shoulders. To change direction, lift the object to a carrying position, and turn the entire body, including the feet. Do not twist your body. In repetitive work, both the person and the material should be positioned so that the worker will not have to twist his body when moving the material. If the object is too heavy to be handled by one person, get help.

- Limit continuous lifting of weights to 50 pounds or the maximum allowed by the client whichever is less. Lifts of heavier weights are permitted on an interim basis. Help shall be obtained for lifting of loads greater than 50 pounds or the maximum allowed by the client whichever is less. Mechanical equipment should be used on heavy materials when possible. If mechanical assistance is not available, adequate manpower to maintain the 50-pound limit per employee will be required.
- Do not lift more weight than can be handled comfortably, regardless of load weight. If necessary, help should be requested to lift a load so that the lifting is comfortable.
- Use drum dollies when moving drums or barrels.

- Inspect objects for grease or slippery substances before they are lifted to ensure that the object will not slip.
- Do not carry long, bulky or heavy objects without first verifying that the way is clear and that vision is unobstructed. This ensures that other persons or objects will not be struck by the load.
- Do not carry loads that cannot be seen over or around.
- Exercise caution when lifting above the chest level.
- Make sure workers are physically suited for the job before assigning jobs requiring heavy and/or frequent lifting. A person's lifting ability is not necessarily indicated by his height or weight.
- Before lifting an object, consideration should be given to how the object will be set down without pinching or crushing hands or fingers. For example, to place an object on a bench or table, the object should be set on the edge and pushed far enough onto the support so it will not fall. The object can then be released gradually as it is set down, and pushed in place with the hands and body from in front of the object.
- When two or more people are handling the same object, one should "call the signals". All the persons on the lift should know who this person is and should warn him if anyone in the crew is about to relax his grip.

LOUD NOISE

- Wear hearing protection in areas with constant or loud noise.
- Know the effects of noise, including:
  - Workers being startled, annoyed, or distracted.
  - Physical damage to the ear, pain, and temporary and/or permanent hearing loss.
  - Communication interference that may increase potential hazards due to the inability to warn of danger and proper safety precautions to be taken.
- Implement the company Hearing Conservation Program when noise exposures equal or exceed an 8-hour, time-weighed average (TWA) sound level of 85 decibels on the A-weighed scale (dB).
- Utilize feasible administrative or engineering controls if workers are subjected to noise exceeding an 8-hour TWA sound level of 90 dB.

PORTABLE POWER/HAND TOOL

- Read instruction manual for the safe operation of any portable power tool.
- Route cords, hoses, and cables to prevent tripping hazards or contact with equipment.
- Avoid abusing the power supply lines of portable equipment. Excessive scraping, kicking, stretching, and exposure to grease and oils will damage lines or cause them to fail prematurely, and possibly injure the operator or fellow workers.
- Inspect cords, hoses, and cables for wear or deterioration.
- Do not use electrically powered tools near flammable materials or explosive atmosphere, unless they are of the explosion-proof type meeting the National Electrical Code for potentially explosive work areas. Employees operating the equipment should be aware of sparks and or metal fragments when using this equipment.
- Ground-check portable electric power tools with metal cases initially and quarterly. At no time will electrical power equipment be operated without proper grounding. All electrical cords and cables, including extension cords, shall include a third wire ground.
- Prohibit operations of electric tools in wet or damp areas.
- Size cords adequately for length and the electrical demand of the tool. Otherwise, they may cause a fire hazard.
- Limit use of tools to the purpose for which the tool is intended (e.g., wrenches will not be used as hammers). Defective tools (e.g., with mushroomed heads or split or defective handles) shall not be used.
- Keep tools free of accumulated dirt and unnecessary oil or grease. Moving and adjustable parts shall be lubricated frequently to prevent wear and misalignment.
- Replace or repair damaged or worn tools promptly. Temporary or makeshift repairs are prohibited. At the discretion of the supervisor, discard all tools that cannot be repaired safely. Supervisors shall decide when to discard a tool.
- Store tools in suitable boxes or containers. Loose tools shall not be stored on ledges or where they might fall. Tools shall be picked up when a job is completed and not be allowed to accumulate in the work area. Store all tools in a safe place.
- Do not use conducting (i.e., metal) tools around electrical facilities. Insulated tools, approved for electrical work, shall be tested frequently for proper insulation.
- Select the correct size and type of wrench for each job. Wrench handles shall not be extended with a pipe or cheater because the jaws will spread.
- Repair mushroomed punch, drift and chisel heads. Mushroomed heads represent crystallized metal that will break and fly off when struck.
- Wear eye protection at all times.
-

SLIPS, TRIPS, AND FALLS

- Wear the proper foot wear and clothing for the task at hand.
- Pay attention to the work environment and become aware of all equipment and vehicles active onsite and use caution when moving about.
- Use caution when walking on sloped areas (especially geosynthetics), particularly when moisture is present. Use caution when walking on soft or uneven surfaces; e.g., marsh areas. Watch for icy conditions in cold weather.
- Follow the established designated safe paths for travel and keep these areas free from debris. Avoid steep or slippery slopes and paths near operation vehicles and equipment.
- Follow good housekeeping procedures. Never assume that someone else will clean up a spill or put away an object.
- Remove or clearly mark objects that pose tripping hazards.
- Prevent water accumulation where practicable.
- Cables and/or wiring should be taped down, when possible. Locate cables and/or wiring out of the commonly used areas.
- Mark or repair any opening or hole in the floor.
- Carry objects in a manner that allows you to see in the area you are moving in. Do not carry objects that are too large or bulky. Do not carry more weight than you can balance and keep stable. Understand that PPE can reduce or limit your field of vision and mobility.
- Use the proper ladder for the task at hand and do not exceed the recommended height. Do not use the top two rungs of a ladder. Ensure a flat and stable footing for the placement of a ladder. Utilize the buddy system to help secure the ladder. When working over 6 ft., utilize fall prevention measures. Obey height and weight guidelines and/or rules.
- Use the handrail when using stairs. Be aware of stairway blockages.
- If conditions even slightly resemble an unsafe environment, do not make any assumptions that the integrity of a workplace is intact.
- Never jump over or into a trench or excavation.
- Walk, do not run.
- Maintain proper lighting so obstacles are clearly visible

THOROUGHFARES

- Obtain necessary permits to use/block public thoroughfares.
- All care should be taken to ensure the integrity of walking and working surfaces, including the use of barriers, toe-kicks, etc. to warn personnel and the public of the potential fall and tripping hazards. Guardrails or barrier walls should be constructed surrounding open pits and trenches as appropriate.
- Traffic control plans will be produced and followed when required by the permitting agency or when working on or adjacent to a highway or a busy street. The traffic control plan shall be brought to the site and shall delineate the locations of applicable signs, signals and barricades; describe the necessity for flaggers; and provide other traffic control information.
- Signaling equipment and directions by flaggers shall conform to the latest edition of the U.S. Department of Transportation – Federal Highway Administration, Manual on Uniform Traffic Control Devices for Streets and Highways (http://mutcd.fhwa.dot.gov).
- Flaggers shall be provided with and shall wear fluorescent orange-red or fluorescent yellow-green garments while flagging. Warning garments worn at night shall be made of reflective material. The garments should meet the requirements of ISEA, American National Standard for High-Visibility Apparel.
- Barricades for protection of employees shall conform to the portions of the latest edition of the U.S. Department of Transportation – Federal Highway Administration,, Manual on Uniform Traffic Control Devices for Street and Highways (http://mutcd.fhwa.dot.gov), relating to barricades.

INSECT / VERMIN / SNAKES

- Be able to recognize insects/vermin/snakes indigenous to the site location and habitats. Learn the indigenous dangerous species (e.g., spiders, snakes, and ticks) prior to entering the field and know the first aid treatments.
- Poisonous venomous snakes swim on top of the water, non-poisonous venomous snakes swim with only their heads above water.
- Advise the SHSO if you have allergies to any insects prior to engaging in any field activities.
- Include the following preventative measures as necessary: wear light-colored clothing, keep clothing buttoned, tuck pant legs into socks, and keep shirt tails tucked in, boots, hoods, netting, gloves, masks, insect repellants or other personal protection.
- Snake bite kits are commercially available and should be carried by field personnel when working where poisonous snakes exist. In the case of a snake bite, keep the patient calm, restrict activity and immobilize the bite area (do not elevate), and immediately obtain medical attention.
- Report any bites or stings to the SHSO and seek medical attention immediately.

The task(s) for which these Hazard Mitigators apply are presented in the Appendix C Directory

- **Physician Return-to-Work Authorization**

Instructions for Incident Reporting

If Serious and/or Life Threatening seek immediate medical attention at the hospital/facility that provides emergency care listed in the HASP, Office Preparedness Plan, or on the office bulletin board.

If Non-Life Threatening

Manager/Supervisor calls the EHS Department at **(804) 349-8067** or **(404) 435-4722**—to discuss appropriate medical attention (even if he/she thinks medical attention is not required.). If unable to contact the EHS Department within one (1) hour, a detailed voicemail with information about the incident must be provided and Gail Hapeman in Human Resources [(561) 922-1002] must also be contacted to obtain the name and address of nearest Workers' Compensation provider.

- Manager/Supervisor contacts Gail Hapeman in Human Resources —Office: (561) 922-1002, Mobile: (561) 789-6830 with additional details of the incident by the end of the work shift.
- Within 24 hours, the Manager/Supervisor completes a draft of the Manager's Report of Incident that is found on the EHS website and sends to Gail Hapeman at (561) 922-1101.
- Manager/Supervisor forwards the finalized paperwork within 48 hours to both EHS (dprokopchak@geosyntec.com); fax (804) 332-6732 and HR (ghapeman@geosyntec.com); fax (561) 922-1101 for review, documentation, and implementation into our case management program.
- Contractors are responsible for compliance with their internal safety procedures regarding Incident Reporting. Geosyntec will document the Contractor's incident in their Project Logbook.
- In the event of a vehicle accident that does not involve injuries, please follow the procedures outlined in EHS 105—Driver Safety.

Contact Information

Dear Medical Provider:

On behalf of Geosyntec Consultants/MMI Engineering, you are authorized to evaluate and treat the above Geosyntec/MMI employee today for an alleged work-related injury or illness.

Employee Name: ________________________________
Alleged Injury: ________________________________
Date of Alleged Injury: ____________________________
Date of Medical Evaluation: ________________________

Geosyntec/MMI strives to reduce OSHA recordables; therefore, ***please do not prescribe or dispense prescription medications if OTC medications if non-prescription strength can be used*.** It is our primary interest to ensure this employee returns to work full duty. If a full duty release is not possible, Geosyntec/MMI may be able to find light duty for the **employee**; ***unless it is unavoidable, please do not prescribe lost time.*** We would appreciate it if you would complete the attached form "Physical Status for Return to Work", or a similar form, to assist us in evaluating this employee's work capabilities.

- Please fax a copy of all medical paperwork and "Physical Status for Return to Work Form" to Dale Prokopchak at (804) 332-6732.
- Invoices and supporting medical records should be mailed to:

  Denise Emmanuelli
  Senior HR Representative
  Geosyntec Consultants
  5901 Broken Sound Parkway, NW, Suite 300
  Boca Raton, FL 33487
  Phone: 561.922.1112
  Fax: 561.922.1101

Thank you for your assistance.

Very truly yours,

Dale Prokopchak, CIH, CSP
Director of Environmental Health and Safety

Geosyntec consultants

PHYSICAL STATUS FOR RETURN TO WORK
PLEASE FAX COMPLETED FORM TO DALE PROKOPCHAK AT (804) 332-6732

Employee Name ___________________________ Date of Injury/Illness _______________

TO BE COMPLETED BY TREATING PHYSICIAN

Diagnosis ____
I saw and treated this patient on (date) _______________ and:

__ Release the patient to full duty with no limitations on (date) _______________
__ Patient may return to work with the following limitation on (date) _______________ and may work an 8 hr. shift unless specified otherwise.

LIFTING CAPACITY

__ Occasional lifting (10 lbs. max.) and lifting and carrying occasionally. Walking and standing occasionally.
__ Occasional lifting (20 lbs. max.). Significant walking, standing; or sitting with pushing and pulling with arms or legs.
__ Occasional lifting (50 lbs. max.) with frequent lifting and/or carrying up to 25 pounds.

OTHER ACTIVITIES

SINGLE DURATION							IN AN 8 HOUR DAY PATIENT MAY DO				
LIMITATION	NO LIMITATION	< 1/2 hr	1/2-1 hr	1-2 hr	2-4 hr	4-6 hr	1/2-1 hr	1-2 hr	2-4 hr	4-6 hr	6-8 hr
SIT											
STAND											
WALK											
USE RIGHT HAND											
USE LEFT HAND											

	NO LIMITATION	FREQUENTLY (31%-60%)	OCCASIONALLY (1%.-30%)	NEVER

ALCONOX MSDS

Section 1 : MANUFACTURER INFORMATION

Product name: Alconox

Supplier: Same as manufacturer.

Manufacturer: Alconox, Inc.
30 Glenn St.
Suite 309
White Plains, NY 10603.

Manufacturer emergency phone number: 800-255-3924.
813-248-0585 (outside of the United States).

Manufacturer: Alconox, Inc.
30 Glenn St.
Suite 309
White Plains, NY 10603.

Supplier MSDS date: 2005/03/09

D.O.T. Classification: Not regulated.

Section 2 : HAZARDOUS INGREDIENTS

C.A.S.	CONCENTRATION %	Ingredient Name	T.L.V.	LD/50	LC/50
25155-30-0	10-30	SODIUM DODECYLBENZENESULFONATE	NOT AVAILABLE	438 MG/KG RAT ORAL 1330 MG/KG MOUSE ORAL	NOT AVAILABLE
497-19-8	7-13	SODIUM CARBONATE	NOT AVAILABLE	4090 MG/KG RAT ORAL 6600 MG/KG MOUSE ORAL	2300 MG/M3/2H RAT INHALATION 1200 MG/M3/2H MOUSE INHALATION
7722-88-5	10-30	TETRASODIUM PYROPHOSPHATE	5 MG/M3	4000 MG/KG RAT ORAL 2980 MG/KG MOUSE ORAL	NOT AVAILABLE
7758-29-4	10-30	SODIUM PHOSPHATE	NOT AVAILABLE	3120 MG/KG RAT ORAL 3100 MG/KG MOUSE ORAL >4640 MG/KG RABBIT DERMAL	NOT AVAILABLE

Section 2A : ADDITIONAL INGREDIENT INFORMATION

Note: (supplier).
CAS# 497-19-8: LD50 4020 mg/kg - rat oral.
CAS# 7758-29-4: LD50 3100 mg/kg - rat oral.

Section 3 : PHYSICAL / CHEMICAL CHARACTERISTICS

Physical state: Solid

Appearance & odor: Almost odourless.
White granular powder.

Odor threshold (ppm): Not available.

Vapour pressure (mmHg): Not applicable.

Vapour density (air=1): Not applicable.

By weight: Not available.

Evaporation rate (butyl acetate = 1): Not applicable.

Boiling point (°C): Not applicable.

Freezing point (°C): Not applicable.

pH: (1% aqueous solution).
9.5

Specific gravity @ 20 °C: (water = 1).
0.85 - 1.10

Solubility in water (%): 100 - > 10% w/w

Coefficient of water\oil dist.: Not available.

VOC: None

Section 4 : FIRE AND EXPLOSION HAZARD DATA

Flammability: Not flammable.

Conditions of flammability: Surrounding fire.

Extinguishing media: Carbon dioxide, dry chemical, foam.
Water
Water fog.

Special procedures: Self-contained breathing apparatus required.
Firefighters should wear the usual protective gear.

Auto-ignition temperature: Not available.

Flash point (°C), method: None

Lower flammability limit (% vol): Not applicable.

Upper flammability limit (% vol): Not applicable.

Not available.

Sensitivity to mechanical impact: Not applicable.

Hazardous combustion products: Oxides of carbon (COx).
Hydrocarbons.

Rate of burning: Not available.

Explosive power: None

Section 5 : REACTIVITY DATA

Chemical stability:	Stable under normal conditions.
Conditions of instability:	None known.
Hazardous polymerization:	Will not occur.
Incompatible substances:	Strong acids. Strong oxidizers.
Hazardous decomposition products:	See hazardous combustion products.

Section 6 : HEALTH HAZARD DATA

Route of entry:	Skin contact, eye contact, inhalation and ingestion.
<u>Effects of Acute Exposure</u>	
Eye contact:	May cause irritation.
Skin contact:	Prolonged contact may cause irritation.
Inhalation:	Airborne particles may cause irritation.
Ingestion:	May cause vomiting and diarrhea. May cause abdominal pain. May cause gastric distress.
Effects of chronic exposure:	Contains an ingredient which may be corrosive.
LD50 of product, species & route:	> 5000 mg/kg rat oral.
LC50 of product, species & route:	Not available for mixture, see the ingredients section.
Exposure limit of material:	Not available for mixture, see the ingredients section.
Sensitization to product:	Not available.
Carcinogenic effects:	Not listed as a carcinogen.
Reproductive effects:	Not available.
Teratogenicity:	Not available.
Mutagenicity:	Not available.
Synergistic materials:	Not available.
Medical conditions aggravated by exposure:	Not available.
<u>First Aid</u>	
Skin contact:	Remove contaminated clothing. Wash thoroughly with soap and water. Seek medical attention if irritation persists.
Eye contact:	Check for and remove contact lenses. Flush eyes with clear, running water for 15 minutes while holding eyelids open: if irritation persists, consult a physician.
Inhalation:	Remove victim to fresh air. Seek medical attention if symptoms persist.
Ingestion:	Dilute with two glasses of water. Never give anything by mouth to an unconscious person. Do not induce vomiting, seek immediate medical attention.

Section 7 : PRECAUTIONS FOR SAFE HANDLING AND USE

Leak / Spill: Contain the spill.
Recover uncontaminated material for re-use.
Wear appropriate protective equipment.
Contaminated material should be swept or shoveled into appropriate waste container for disposal.

Waste disposal: In accordance with municipal, provincial and federal regulations.

Handling procedures and equipment: Protect against physical damage.
Avoid breathing dust.
Wash thoroughly after handling.
Keep out of reach of children.
Avoid contact with skin, eyes and clothing.
Launder contaminated clothing prior to reuse.

Storage requirements: Keep containers closed when not in use.
Store away from strong acids or oxidizers.
Store in a cool, dry and well ventilated area.

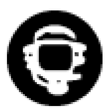
Section 8 : CONTROL MEASURES

<u>Precautionary Measures</u>

Gloves / Type:

Neoprene or rubber gloves.

Respiratory / Type:



If exposure limit is exceeded, wear a NIOSH approved respirator.

Eye / Type:

Safety glasses with side-shields.

Footwear / Type: Safety shoes per local regulations.

Clothing / Type: As required to prevent skin contact.

Other / Type: Eye wash facility should be in close proximity.
Emergency shower should be in close proximity.

Ventilation requirements: Local exhaust at points of emission.

LEHIGH SOUTHWEST CEMENT COMPANY
MATERIAL SAFETY DATA SHEET
FOR
PORTLAND CEMENT

REVISED DATE: OCTOBER, 2002

1. PRODUCT/COMPANY IDENTIFICATION

Supplier:
Lehigh Southwest Cement Company
2300 Clayton Road, Suite 300
Concord, CA 94520
Phone (925) 609-6920
Fax (925) 609-6930
Contact Number:
(USE SALES OFFICE PHONE NUMBER)

Chemical Family: Calcium Compounds

Chemical Name and Synonyms:
Portland Cement (CAS # 65997-15-1), Hydraulic Cement Types I, I (WRA), II, III, V

Trade Name and Synonyms:
Lehigh Portland Cement Types I, II, III, V
Lehigh Plastic Cement

2. EMERGENCY AND FIRST AID

EMERGENCY INFORMATION: Portland cement is a light gray or white powder. When in contact with moisture in eyes or on skin, or when mixed with water, portland cement becomes highly caustic (pH > 12) and will damage or burn (as severely as third-degree) the eyes or skin. Inhalation may cause irritation to the moist mucous membranes of the nose, throat and upper respiratory system or may cause or may aggravate certain lung diseases or conditions. Use exposure controls or personal protection methods described in Section 10.

EYES: Immediately flush eye thoroughly with water. Continue flushing eye for at least 15 minutes, including under lids, to remove all particles. Call physician immediately.

SKIN: Wash skin with cool water and pH-neutral soap or a mild detergent. Seek medical treatment if irritation or inflammation develops or persists. Seek immediate medical treatment in the event of burns.

INHALATION: Remove person to fresh air. If breathing is difficult, administer oxygen. If not breathing, give artificial respiration. Seek medical help if coughing and other symptoms do not subside. Inhalation of large amounts of portland cement require immediate medical attention.

INGESTION: Do not induce vomiting. If conscious, have the victim drink plenty of water and call a physician immediately.

ACCIDENTIAL RELEASE MEASURES Clean up spilled material without causing it to become airborne or mixed with water to limit potential harm. Wear appropriate personal protective equipment. Dispose of waste material according to local, state or federal regulations.

3. COMPOSITION INFORMATION

DESCRIPTION:

This product consists of finely ground portland cement clinker mixed with a small amount of gypsum (calcium sulfate dihydrate). The portland cement clinker is made by heating to a high temperature a mixture of substances such as limestone, sand, clay and shale. Portland cement is essentially hydraulic calcium silicates contained in a crystalline mass, not separable into individual components. Major compounds are:

$3CaO \cdot SiO_2$	Tricalcium Silicate	CAS #12168-85-3
$2CaO \cdot SiO_2$	Dicalcium Silicate	CAS #10034-77-2
$3CaO \cdot Al_2O_3$	Tricalcium Aluminate	CAS #12042-78-3
$4CaO \cdot Al_2O_3 \cdot Fe_2O_3$	Tetracalcium aluminoferrite	CAS #12068-35-8
$CaSO_4 \cdot 2H_2O$	Calcium Sulfate dihydrate (Gypsum)	CAS #7778-18-9 (CAS #13397-24-5)

4. HAZARDOUS INGREDIENTS

COMPONENT	OSHA PEL (8-Hour TWA)	ACGIH TLV-TWA (1995-1996)	NIOSH REL (8-Hour TWA)
Portland Cement (CAS #65997-15-1) 50 to 95% by weight	5 mg respirable dust/m^3 15 mg total dust/m^3	10 mg total dust/m^3	
Calcium sulfate (CAS #7778-18-9) [Gypsum (CAS #13397-24-5)] 0 to 10% by weight	5 mg respirable dust/m^3 15 mg total dust/m^3	10 mg total dust/m^3	
Iron oxide (CAS #1309-37-1) 0 to 15% by weight	10 mg/m^3	5 mg/m^3	
Calcium carbonate (CAS #1317-65-3) 0 to 5% by weight	5 mg respirable dust/m^3 15 mg total dust/m^3	10 mg total dust/m^3	
Magnesium oxide (CAS #1309-48-4) 0 to 5% by weight	15 mg total dust/m^3	10 mg total dust/m^3	
Calcium oxide (CAS #1305-78-8) 0 to 5%[1] by weight	5 mg/m^3	2 mg/m^3	
Crystalline silica (CAS #14808-60-7) 0 to 5% by weight	$\frac{\text{10 mg of respirable dust/m}^3}{\% SiO_2 + 2}$ $\frac{\text{30 mg of total dust/m}^3}{\% SiO_2 + 2}$ $\frac{\text{250 million particles/ft}^3}{\% SiO_2 + 5}$	0.05 mg respirable quartz/m^3	0.05 mg respirable quartz dust/m^3

TRACE INGREDIENTS:

Due to the use of substances mined from the earth's crust, trace amounts of naturally occurring, potentially harmful constituents may be detected during chemical analysis. Portland cement may contain up to 0.75% insoluble residue. A small amount of this residue includes free crystalline silica. Portland cement also may contain trace (<0.05%) amounts of chromium salts or compounds (including hexavalent chromium) or other metals (including nickel compounds) found to be hazardous or toxic in some chemical forms. These metals are present mostly as trace substitutions within the principal minerals. Other trace constituents may include potassium and sodium sulfate compounds.

[1] If Portland/Lime blended product "0 to 25%" values.

5. HAZARD IDENTIFICATION

POTENTIAL HEALTH EFFECTS:

NOTE: Potential health effects may vary depending upon the duration and degree of exposure. To reduce or eliminate health hazards associated with this product, use exposure controls or personal protection methods as described in Section 10.

EYE CONTACT:

(Acute/Chronic) Exposure to airborne dust may cause immediate or delayed irritation or inflammation of the cornea. Eye contact by larger amounts of dry powder or splashes of wet portland cement may cause effects ranging from moderate eye irritation to chemical burns and blindness.

SKIN CONTACT:

(Acute) Exposure to dry portland cement may cause drying of the skin with consequent mild irritation or more significant effects attributable to aggravation of other conditions. Discomfort or pain cannot be relied upon to alert a person to a hazardous skin exposure.

(Chronic) Dry portland cement coming in contact with wet skin or exposure to wet portland cement may cause more severe skin effects, including thickening, cracking or fissuring of the skin. Prolonged exposure can cause severe skin damage in the form of chemical (caustic) burns.

(Acute/Chronic) Some individuals may exhibit an allergic response upon exposure to portland cement. The response may appear in a variety of forms ranging from a mild rash to severe skin ulcers.

INHALATION:

(Acute) Exposure to portland cement may cause irritation to the moist mucous membranes of the nose, throat and upper respiratory system. Pre-existing upper respiratory and lung diseases may be aggravated by inhalation of portland cement.

(Chronic) Inhalation exposure to free crystalline silica may cause delayed lung injury including silicosis, a disabling and potentially fatal lung disease, and/or cause or aggravate other lung diseases or conditions.

INGESTION:

(Acute/Chronic) Internal discomfort or ill effects are possible if large quantities are swallowed.

CARCINOGENIC POTENTIAL:

Portland cement is not recognized as a carcinogen by NTP, OSHA, or IARC. However, it may contain trace amounts of heavy metals recognized as carcinogens by these organizations. In addition, IARC classifies crystalline silica, a trace constituent, as a known human carcinogen (Group I). NTP has characterized respirable silica as "reasonably anticipated to be a carcinogen." (See also Section 13.)

6. PHYSICAL/CHEMICAL DATA

APPEARANCE/ODOR:	Gray, white or colored powder, odorless	PHYSICAL STATE:	Solid (Powder)
BOILING POINT:	> 1000°C	MELTING POINT:	Not applicable
VAPOR PRESSURE:	Not applicable	VAPOR DENSITY:	Not applicable
pH (IN WATER) (ASTM D 1293-95)	12 to 13	SOLUBILITY IN WATER:	Slightly soluble (0.1% to 1.0%)
SPECIFIC GRAVITY (H_2O = 1.0):	3.15	EVAPORATION RATE:	Not applicable

7. FIRE AND EXPLOSION

FLASH POINT:	None	LOWER EXPLOSIVE LIMIT:	None
AUTO IGNITION TEMPERATURE:	Not combustible	UPPER EXPLOSIVE LIMIT:	None
FLAMMABLE LIMITS	Not applicable	SPECIAL FIRE FIGHTING PROCEDURES:	None
EXTINGUISHING MEDIA:	Not combustible	UNUSUAL FIRE AND EXPLOSION HAZARDS:	None
HAZARDOUS COMBUSTION PRODUCTS:	None		

8. STABILITY AND REACTIVITY DATA

STABILITY: Product is stable. Keep dry until used.

CONDITIONS TO AVOID: Unintentional contact with water. Contact with water will result in hydration and produces (caustic) calcium hydroxide.

INCOMPATIBILITY: Wet portland cement is alkaline. As such, it is incompatible with acids, ammonium salts and aluminum metal.

HAZARDOUS DECOMPOSITION: Will not occur.

HAZARDOUS POLYMERIZATION: Will not occur.

9. PRECAUTIONS FOR HANDLING, STORAGE AND DISPOSAL

HANDLING AND STORAGE Keep dry until used. Handle and store in a manner so that airborne dust does not exceed applicable exposure limits. Use adequate ventilation and dust collection. Use exposure control and personal protection methods as described in Section 10.

SPILL: Use dry clean-up methods that do not disperse dust into the air or entry into surface water. Material can be used if not contaminated. Place in an appropriate container for disposal or use. Avoid inhalation of dust and contact with skin and eyes. Use exposure control and personal protection methods as described in Section 10.

DISPOSAL: Comply with all applicable local, state and federal regulations for disposal of unusable or contaminated materials. Dispose of packaging/containers according to local, state and federal regulations.

10. EXPOSURE CONTROLS/PERSONAL PROTECTION

RESPIRATORY PROTECTION:	Use local exhaust or general dilution ventilation to control dust levels below applicable exposure limits. Minimize dispersal of dust into the air. If local or general ventilation is not adequate to control dust levels below applicable exposure limits or when dust causes irritation or discomfort, use MSHA/NIOSH approved respirators.
EYE PROTECTION:	Wear safety glasses with side shields or goggles to avoid contact with the eyes. In extremely dusty environments and unpredictable environments, wear tight-fitting unvented or indirectly vented goggles to avoid eye irritation or injury. Contact lenses should not be worn when handling cement or cement containing products.
SKIN PROTECTION:	Wear impervious abrasion- and alkali-resistant gloves, boots, long-sleeved shirt, long pants or other protective clothing to prevent skin contact. Promptly remove clothing dusty with dry portland cement or clothing dampened with moisture mixed with portland cement, and launder before re-use. If contact occurs, wash areas contacted by material with pH neutral soap and water.

11. TRANSPORTATION DATA

Portland cement is not hazardous under U.S. DOT regulations.

12. TOXICOLOGICAL AND ECOLOGICAL INFORMATION

For a description of available, more detailed toxicological and ecological information, contact Lehigh Cement Company.

13. OTHER REGULATORY INFORMATION

Status under US OSHA Hazard Communication Rule 29 CFR 1910.1200:	Portland cement is considered a hazardous chemical under this regulation and should be included in the employer's hazard communication program.
Status under CERCLA/Superfund, 40 CFR 117 and 302:	Not listed.
Hazard Category under SARA (Title III), Sections 311 and 312:	Portland cement qualifies as a hazardous substance with delayed health effects.
Status under SARA (Title III), Section 313:	Maybe subject to reporting requirements under Section 313. Contact sales office for further information.
Status under TSCA (as of May 1997):	Some substances in portland cement are on the TSCA inventory list.
Status under the Federal Hazardous Substances Act:	Portland cement is a hazardous substance subject to statutes promulgated under the subject act.

Status under California Proposition 65:	This product contains crystalline silica, a substance known to the State of California to cause cancer. This product also may contain trace amounts of heavy metals known to the State of California to cause cancer, birth defects or other reproductive harm.

14. OTHER INFORMATION

This MSDS provides information on various types of portland cement products. A particular product's composition may vary from sample to sample. The information provided herein is believed by Lehigh Cement Company to be accurate at the time of preparation or prepared from sources believed to be reliable. Health and safety precautions in this data sheet may not be adequate for all individuals or situations. Users have the responsibility to comply with all laws and procedures applicable to the safe handling and use of the product, to determine the suitability of the product for its intended use, and to understand possible hazards associated with mixing portland cement with other materials. This product neither contains nor is directly manufactured with any controlled ozone depleting substances, Class I and II. SELLER MAKES NO WARRANTY, EXPRESS OR IMPLIED, CONCERNING THE PRODUCT OR THE MERCHANTABILITY OR FITNESS THEREOF FOR ANY PURPOSE OR CONCERNING THE ACCURACY OF ANY INFORMATION PROVIDED BY LEHIGH CEMENT COMPANY.

Health Hazards/Precautionary Measures: Causes severe skin irritation. Aspiration hazard if swallowed. Can enter lungs and cause damage. Use with adequate ventilation. Avoid contact with eyes, skin and clothing. Do not taste or swallow. Wash thoroughly after handling.

Physical Hazards/Precautionary Measures: Flammable liquid and vapor. Keep away from heat, sparks, flames, static electricity or other sources of ignition.

Appearance: Straw-colored to dyed red
Physical Form: Liquid
Odor: Characteristic petroleum

HFPA Hazard Class:
Health: 0 (Least)
Flammability: 2 (Moderate)
Reactivity: 0 (Least)

HMIS Hazard Class
Not Evaluated

2. COMPOSITION/INFORMATION ON INGREDIENTS

HAZARDOUS COMPONENTS	% VOLUME	Limits	EXPOSURE GUIDELINE Agency	Type
Diesel Fuel No. 2 CAS# 68476-34-6	100	100* mg/m3	ACGIH	TWA-SKIN
Naphthalene CAS# 91-20-3	<1	10ppm	ACGIH	TWA
		15ppm	ACGIH	STEL
		10ppm	OSHA	TWA
		250ppm	NIOSH	IDLH

All components are listed on the TSCA inventory

Tosco Low Sulfur No. 2 Diesel meets the specifications of 40 CFR 60.41 for low sulfur diesel fuel.

Note: State, local or other agencies or advisory groups may have established more stringent limits.
Consult an industrial hygienist or similar professional, or your local agencies, for further information.

*Proposed ACGIH (1999)

3. HAZARDS IDENTIFICATION

Potential Health Effects:

Eye: Contact may cause mild eye irritation including stinging, watering, and redness.

Skin: Severe skin irritant. Contact may cause redness, itching, burning, and severe skin damage. Prolonged or repeated contact can worsen irritation by causing drying and cracking of the skin, leading to dermatitis (inflammation). Not actually toxic by skin absorption, but prolonged or repeated skin contact may be harmful (see Section 11).

Inhalation (Breathing): No information available. Studies by other exposure routes suggest a low degree of toxicity by inhalation.

Ingestion (Swallowing): Low degree of toxicity by ingestion. ASPIRATION HAZARD – This material can enter lungs during swallowing or vomiting and cause lung inflammation and damage.

Signs and Symptoms: Effects of overexposure may include irritation of the nose and throat, irritation of the digestive tract, nausea, diarrhea and transient excitation followed by signs of nervous system depression (e.g., headache, drowsiness, dizziness, loss of coordination, disorientation and fatigue).

Cancer: Possible skin cancer hazard (see Sections 11 and 14).

Target Organs: There is limited evidence from animal studies that overexposure may cause injury to the kidney (see Section 11).

Developmental: Inadequate data available for this material.

Pre-Existing Medical Conditions: Conditions aggravated by exposure may include skin disorders and kidney disorders.

4. FIRST AID MEASURES

Eye: If irritation or redness develops, move victim away from exposure and into fresh air. Flush eyes with clean water. If symptoms persist, seek medical attention.

Skin: Immediately remove contaminated shoes, clothing, and constrictive jewelry and flush affected area(s) with large amounts of water. If skin surface is damaged, apply a clean dressing and seek immediate medical attention. If skin surface is not damaged, cleanse affected area(s) thoroughly by washing with mild soap and water. If irritation or redness develops, seek immediate medical attention.

Inhalation (Breathing): If respiratory symptoms develop, move victim away from source of exposure and into fresh air. If symptoms persist, seek medical attention. If victim is not breathing, clear airway and immediately begin artificial respiration. If breathing difficulties develop, oxygen should be administered by qualified personnel. Seek immediate medical attention.

Ingestion (Swallowing): Aspiration hazard; Do not induce vomiting or give anything by mouth because this material can enter the lungs and cause severe lung damage. If victim is drowsy or unconscious and vomiting, place on the left side with the head down. If possible, do not leave victim unattended and observe closely for adequacy of breathing. Seek medical attention.

5. FIRE FIGHTING MEASURES

Flammable Properties:

Flash Point: >125°F/>52°
OSHA Flammability Class: Combustible liquid
LEL %: 0.3 / UEL %; 10.0
Autoignition Temperature: 500°F/260°C

Unusual Fire & Explosion Hazards: This material is flammable and can be ignited by heat, sparks, flames, or other sources of ignition (e.g., static electricity, pilot lights, or mechanical/electrical equipment, and electronic devices such as cell phones, computers, calculators, and pagers which have not been certified as intrinsically safe). Vapors may travel considerable distances to a source of ignition where they can ignite, flash back, or explode. May create vapor/air explosion hazard indoors, in confined spaces, outdoors, or in sewers. Vapors are heavier than air and can accumulate in low areas. If container is not properly cooled, it can rupture in the heat of a fire.

Extinguishing Media: Dry chemical, carbon dioxide, or foam is recommended. Water spray is recommended to cool or protect exposed materials or structures. Carbon dioxide can displace oxygen. Use caution when applying carbon dioxide in confined spaces. Water may be ineffective for extinguishment, unless used under favorable conditions by experienced fire fighters.

Fire Fighting Instructions: For fires beyond the incipient stage, emergency responders in the immediate hazard area should wear bunker gear. When the potential chemical hazard is unknown, in enclosed or confined spaces, or when explicitly required by DOT, a self contained breathing apparatus should be worn. In addition, wear other appropriate protective equipment as conditions warrant (see Section 8).

Isolate immediate hazard area, keep unauthorized personnel out. Stop spill/release if it can be done with minimal risk. Move undamaged containers from immediate hazard area if it can be done with minimal risk.

Water spray may be useful in minimizing or dispersing vapors and to protect personnel. Cool equipment exposed to fire with water, if it can be done with minimal risk. Avoid spreading burning liquid with water used for cooling purposes.

6. ACCIDENTAL RELEASE MEASURES

Flammable. Keep all sources of ignition and hot metal surfaces away from spill/release. The use of explosion-proof equipment is recommended.

Stay upwind and away from spill/release. Notify persons down wind of the spill/release, isolate immediate hazard area and keep unauthorized personnel out. Stop spill/release if it can be done with minimal risk. Wear appropriate protective equipment including respiratory protection as conditions warrant (see Section 8).

Prevent spilled material from entering sewers, storm drains, other unauthorized drainage systems, and natural waterways. Dike far ahead of spill for later recovery or disposal. Use foam on spills to minimize vapors (see Section 5). Spilled material may be absorbed into an appropriate material.

Notify fire authorities and appropriate federal, state, and local agencies. Immediate cleanup of any spill is recommended. If spill of any amount is made into or upon navigable waters, the contiguous zone, or adjoining shorelines, notify the National Response Center (phone number 800-424-8802).

7. HANDLING AND STORAGE

Handling: Open container slowly to relieve any pressure. Bond and ground all equipment when transferring from one vessel to another. Can accumulate static charge by flow or agitation. Can be ignited by static discharged. The use of explosion-proof equipment is recommended and may be required (see appropriate fire codes). Refer to NFPA-704 and/or API RP 2003 for specific bonding/grounding requirements.

Do not enter confined spaces such as tanks or pits without following proper entry procedures such ASTM D-4276 and 29CFR 1910.146. The use of appropriate respiratory protection is advised when concentrations exceed any established exposure limits (see Sections 2 and 8).

Do not wear contaminated clothing or shoes. Keep contaminated clothing away from sources of ignition such as sparks or open flames. Use good personal hygiene practices.

High pressure injection of hydrocarbon fuels, hydraulic oils or greases under the skin may have serious consequences even though no symptoms or injury may be apparent. This can happen accidentally when using high pressure equipment such as high pressure grease guns, fuel injection apparatus or from pinhole leaks in tubing or high pressure hydraulic oil equipment.

“Empty” containers retain residue and may be dangerous. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose such containers to heat, flame, sparks, or other sources of ignition. They may explode and cause injury or death. “Empty” drums should be completely drained, properly bunged, and promptly shipped to the supplier or a drum reconditioner. All containers should be disposed of in an environmentally safe manner and in accordance with governmental regulations.

Before working on or in tanks which contain or have contained this material, refer to OSHA regulations, ANSIZ49.1 and other references pertaining to cleaning, repairing, welding, or other contemplated operations.

Storage: Keep container(s) tightly closed. Use and store this material in cool, dry, well-ventilated areas away from heat, direct sunlight, hot metal surfaces, and all sources of ignition. Post area “No Smoking or Open Flame.” Store only in approved containers. Keep away from incompatible material (see Section 10). Protect container(s) against physical damage. Outdoor or detached storage is preferred. Indoor storage should meet OSHA standards and appropriate fire codes.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Engineering controls: If current ventilation practices are not adequate to maintain airborne concentration below the established exposure limits (see Section 2), additional ventilation or exhaust systems may be required. Where explosive mixtures may be present, electrical systems safe for such locations must be used (see appropriate electrical codes).

Personal Protective Equipment (PPE):

Respiratory: A NIOSH certified air purifying respirator with an organic vapor cartridge maybe used under conditions where airborne concentrations are expected to exceed exposure limits (see Section 2).

Protection provided by air purifying respirators is limited (see manufacturer's respirator selection guide). Use a positive pressure air supplied respirator if there is a potential for an uncontrolled release, exposure levels are not known, or any other circumstances where air purifying respirators may not provide adequate protection.

A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements must be followed whenever workplace conditions warrants a respirator's use.

Skin: The use of gloves impervious to the specific material handled is advised to prevent skin contact, possible irritation and skin damage (see glove manufacturer literature for information on permeability). Depending on conditions of use, apron and/or arm covers may be necessary.

Eyes/Face: Approved eye protection to safeguard against potential eye contact, irritation, or injury is recommended. Depending on conditions of use, a face shield may be necessary.

Other Protective Equipment: Eye wash and quick-drench shower facilities should be available in the work area. Thoroughly clean shoes and wash contaminated clothing before reuse. It is recommended that impervious clothing be worn when skin contact is possible.

9. PHYSICAL AND CHEMICAL PROPERTIES

Note: Unless otherwise stated, values are determined at 20°C (68°F) and 760 mm Hg (1atm).

Appearance: Straw-colored to dyed red
Physical State: Liquid
Odor: Characteristic petroleum
pH: unavailable
Vapor Pressure (mm Hg): 0.40
Vapor Densisty (air=1):>3
Boiling Point/Range: 320-700°F /160-371°C
Freezing/Melting Point: No Data
Solubility in Water: Negligible
Specific Gravity: 0.81-0.88 @ 60°F
Percent Volatile: Negligible
Evaporation Rate (nBuAc=1): <1
Viscosity: 32.6-40.0 SUS @ 100°F
Bulk Density: 7.08 lbs/gal
Flash Point: >125°F / >52°C
Flammable/Expolsive Limits (%): LEL: 0.3 / UEL: 10.0

10. STABILITY AND REACTIVITY

Stability: Stable under normal ambient and anticipated storage and handling conditions of temperature and pressure. Flammable liquid and vapor. Vapor can cause flash fire.

Conditions To Avoid: Avoid all possible sources of ignition (see Sections 5 and 7).

Materials to Avoid (Incompatible Materials): Avoid contact with strong oxidants such as liquid chlorine, concentrated oxygen, sodium hypochlorite, calcium hypochlorite, etc.

Hazardous Decomposition Products: The use of hydrocarbon fuels in an area without adequate ventilation may result in hazardous levels of combustion products (e.g., oxides of carbon, sulfur and nitrogen, benzene and other hydrocarbons) and/or dangerously low oxygen levels. ACGIH has included a TLV of 0.05 mg/m3 TWA for diesel exhaust particulate on its 1999 Notice of Intended Changes. See Section 11 for additional information on hazards of engine exhaust.

Hazardous Polymerization: Will not occur.

11. TOXICOLOGICAL INFORMATION

Diesel Fuel No. 2 (CAS# 68476-34-6)

Carcinogenicity: Chronic dermal application of certain middle distillate streams contained in diesel fuel No. 2 resulted in an increased incidence of skin tumors in mice. This material has not been identified as carcinogen by NTP, IARC, or OSHA. Diesel exhaust is a probable cancer hazard based on tests with laboratory animals.

Target Organ(s): Limited evidence of renal impairment has been noted from a few case reports involving excessive exposure to diesel fuel No. 2.

Naphthalene (CAS# 91-20-3)

Carcinogenicity: Naphthalene has been evaluated in two year inhalation studies in both rats and mice. The National Toxicology Program (NTP) concluded that there is clear evidence of carcinogenicity in male and female rats based on increased incidences of respiratory epithelial adenomas and olfactory epithelial neuroblastomas of the nose. NTP found some evidence of carcinogenicity in female mice (alveolar adenomas) and no evidence of carcinogenicity in male mice. Naphthalene has not been identified as a carcinogen by IARC or OSHA.

12. ECOLOGICAL INFORMATION

Not evaluated at this time

13. DISPOSAL CONSIDERATIONS

This material, if discarded as produced, would be a RCRA “characteristic” hazardous waste due to the characteristic(s) of ignitability (D001) and benzene (D018). If the material is spilled to soil or water, characteristic testing of the contaminated materials is recommended. Further, this material, once it becomes a waste, is subject to the land disposal restrictions in 40 CFR 268.40 and may require treatment prior to disposal to meet specific standards. Consult state and local regulations to determine whether they are more stringent then the federal requirements.

Container contents should be completely used and containers should be emptied prior to discard. Container ?insate? could be considered a RCRA hazardous waste and must be disposed of with care and in compliance with federal, state and local regulations. Large empty containers, such as drums, should be returned to the distributor or to a drum reconditioner. To assure proper disposal of smaller containers, consult with state and local regulations and disposal authorities.

14. TRANSPORT INFORMATION

DOT Shipping Description:	Diesel Fuel, NA1983
Non-Bulk Package Marking:	Diesel Fuel, 3, NA 1993, III

15. REGULATORY INFORMATION

EPA SARA 311/312 (Title III Hazard Categories):

Acute Health:	Yes
Chronic Health:	Yes
Fire Hazard:	Yes
Pressure Hazard:	No
Reactive Hazard:	No

SARA 313 and 40 CFR 372:
This material contains the following chemicals subject to the reporting requirements of SARA 313 and 40 CFR 372:

Component	CAS Number	Weight %
-- None known --		

California Proposition 65:
Warning: This material contains the following chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm, and are subject to the requirements of California Proposition 65 (CA Health & Safety Code Section 25249.5):

Component	Effect
Benzene	Cancer, Developmental and Reproductive Toxicant
Toluene	Developmental Toxicant

Diesel engine exhaust, while not a component of this material, is on the Proposition 65 list of chemicals known to the State of California to cause cancer.

Carcinogen Identification:
This material has not been identified as a carcinogen by NTP, IARC, or OSHA. See Section 11 for carcinogenicity information of individual components, if any. Diesel exhaust is a probable cancer hazard based on tests in laboratory animals. It has been identified as carcinogen by IARC.

EPA (CERCLA Reportable Quantity: None

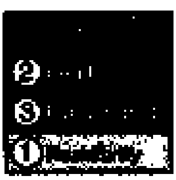
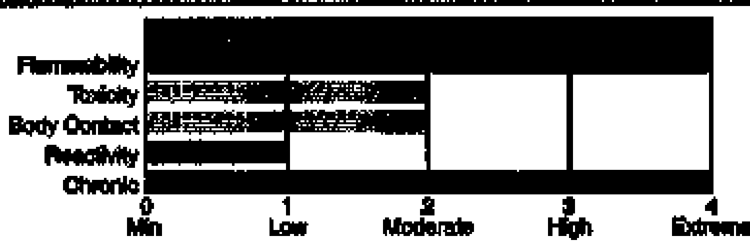
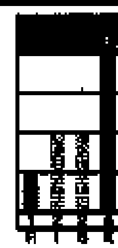
STEL: 500 ppm; 1480 mg/m^3.







ANSI Signal Word

Danger!

Fire Diamond

Flammable

☆☆☆☆☆ Emergency Overview ☆☆☆☆☆

Clear liquid; distinctive odor. Irritating to eyes/skin/respiratory tract. Also causes: dizziness, drunkenness, unconsciousness. Absorbed through skin. Chronic: dermatitis. Possible cancer hazard. Flammable. Can form explosive mixtures in air.

Potential Health Effects

Primary Entry Routes: inhalation, ingestion, skin contact

Target Organs: skin, eye, respiratory system, central nervous system (CNS)

Acute Effects

Inhalation: The vapor is discomforting to the upper respiratory tract and may be harmful if exposure is prolonged. Inhalation hazard is increased at higher temperatures. Acute effects from inhalation of high concentrations of vapor are pulmonary irritation, including coughing, with nausea; central nervous system depression - characterized by headache and dizziness, increased reaction time, fatigue and loss of coordination. If exposure to highly concentrated solvent atmosphere is prolonged this may lead to narcosis, unconsciousness, even coma and possible death. WARNING: Intentional misuse by concentrating/inhaling contents may be lethal. High inhaled concentrations of mixed hydrocarbons may produce narcosis characterized by nausea, vomiting and lightheadedness. Inhalation of aerosols may produce severe pulmonary edema, pneumonitis and pulmonary hemorrhage. Inhalation of petroleum hydrocarbons consisting substantially of low molecular weight species may produce irritation of mucous membranes, incoordination, giddiness, nausea, vertigo, confusion, headache, appetite loss, drowsiness, tremors and anesthetic stupor. Massive exposures may produce central nervous system depression with sudden collapse and deep coma; fatalities have been recorded. Irritation of the brain and/or apneic anoxia may produce convulsions. Although recovery following overexposure is generally complete, cerebral micro- hemorrhage of focal post-inflammatory scarring may produce eleptiform seizures some months after the exposure. Pulmonary episodes may include chemical pneumonitis with edema and hemorrhage. The lighter hydrocarbons may produce kidney and neurotoxic effects. Liquid paraffins may produce anesthesia and depressant actions leading to weakness, dizziness, slow and shallow respiration, unconsciousness, convulsions and death. C_{5-7} paraffins may also produce polyneuropathy. Aromatic hydrocarbons accumulate in lipid-rich tissues (typically the brain, spinal cord and peripheral nerves) and may produce functional impairment manifested by nonspecific symptoms such as nausea, weakness, fatigue, vertigo; severe exposures may produce inebriation or unconsciousness. Many of the petroleum hydrocarbons are cardiac sensitizers and may cause ventricular fibrillations.

Eye: The liquid may produce eye discomfort and is capable of causing temporary impairment of vision and/or transient eye inflammation, ulceration. The vapor is discomforting to the eyes. Petroleum hydrocarbons may produce pain after direct contact with the eyes. Slight, but transient, disturbances of the corneal epithelium may also result. The aromatic fraction may produce irritation and lachrymation. The material may produce moderate eye irritation leading to inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis.

Skin: The material is moderately discomforting to the skin if exposure is prolonged. The material contains a component that may be absorbed through the skin and may cause drying of the skin, which may lead to dermatitis from repeated exposures over long periods. Toxic effects may result from skin absorption. Open cuts, abraded or irritated skin should not be exposed to this material. The material may accentuate any pre-existing dermatitis condition.

Ingestion: Considered an unlikely route of entry in commercial/industrial environments. The liquid may produce gastrointestinal discomfort and may be harmful if swallowed. Ingestion may result in nausea, pain and vomiting. Vomit entering the lungs by aspiration may cause potentially lethal chemical pneumonitis. Ingestion of petroleum hydrocarbons may produce irritation of the pharynx, esophagus, stomach and small intestine with edema and mucosal ulceration. Resulting symptoms include a burning sensation in the mouth and throat. Large amounts may produce narcosis with nausea and vomiting, weakness or dizziness, slow and shallow respiration, swelling of the abdomen, unconsciousness and convulsions. Myocardial injury may produce arrhythmias, ventricular fibrillation and electrocardiographic changes. Central nervous system depression may also occur. Light aromatic hydrocarbons produce a warm, sharp, tingling sensation on contact with taste buds and may anesthetize the tongue. Aspiration into the lungs may produce coughing, gagging, and a chemical pneumonitis with pulmonary edema and hemorrhage.

Carcinogenicity: NTP - Not listed; IARC - Group 2B, Possibly carcinogenic to humans; OSHA - Not listed; NIOSH - Listed as carcinogen; ACGIH - Class A3, Animal carcinogen; EPA - Not listed; MAK - Not listed.

Chronic Effects: Chronic solvent inhalation exposures may result in nervous system impairment and liver and blood changes. Prolonged or continuous skin contact with the liquid may cause defatting with drying, cracking, irritation and dermatitis following. Chronic poisoning may occur from vapor inhalation or skin absorption. The most significant toxic effect is insidious and irreversible injury to the blood-forming tissue by benzene. Leukemia may develop. Chronic exposure may cause headache, fatigue, loss of appetite and lassitude with incipient blood effects including anemia and blood changes. Gasoline "sniffing" has caused severe nerve damage. Repeated or prolonged exposure to mixed hydrocarbons may produce narcosis with dizziness, weakness, irritability, concentration and/or memory loss, tremor in the fingers and tongue, vertigo, olfactory disorders, constriction of visual field, paresthesias of the extremities, weight loss and anemia and degenerative changes in the liver and kidney. Chronic exposure by petroleum workers to the lighter hydrocarbons has been associated with visual disturbances, damage to the central nervous system, peripheral neuropathies (including numbness and paresthesias), psychological and neurophysiological deficits, bone marrow toxicities (including hypoplasia, possibly due to benzene) and hepatic and renal involvement. Chronic dermal exposure to petroleum hydrocarbons may result in defatting which produces localized dermatoses. Surface cracking and erosion may also increase susceptibility to infection by microorganisms.

Inhalation: Remove to fresh air. Lay patient down. Keep warm and rested. If breathing is shallow or has stopped, ensure clear airway and apply resuscitation. Transport to hospital, or doctor.

Eye Contact: Immediately hold the eyes open and wash continuously for at least 15 minutes with fresh running water. Ensure irrigation under eyelids by occasionally lifting the upper and lower lids. Transport to hospital or doctor without delay. Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.

Skin Contact: Immediately remove all contaminated clothing, including footwear (after rinsing with water). Wash affected areas thoroughly with water (and soap if available). Seek medical attention in event of irritation.

Ingestion: Contact a Poison Control Center. If swallowed, do NOT induce vomiting. Give a glass of water.

After first aid, get appropriate in-plant, paramedic, or community medical support.

Note to Physicians: For acute or short term repeated exposures to petroleum distillates or related hydrocarbons:

1. Primary threat to life from pure petroleum distillate ingestion and/or inhalation is respiratory failure.
2. Patients should be quickly evaluated for signs of respiratory distress (e.g. cyanosis, tachypnea, intercostal retraction, obtundation) and given oxygen. Patients with inadequate tidal volumes or poor arterial blood gases (pO_2 <50 mm Hg or pCO_2 >50 mm Hg) should be intubated.
3. Arrhythmias complicate some hydrocarbon ingestion and/or inhalation and electrocardiographic evidence of myocardial injury has been reported; intravenous lines and cardiac monitors should be established in obviously symptomatic patients. The lungs excrete inhaled solvents, so that hyperventilation improves clearance.
4. A chest x-ray should be taken immediately after stabilization of breathing and circulation to document aspiration and detect the presence of pneumothorax.
5. Epinephrine (adrenalin) is not recommended for treatment of bronchospasm because of potential myocardial sensitization to catecholamines.
Inhaled cardioselective bronchodilators (e.g. Alupent, Salbutamol) are the preferred agents, with aminophylline a second choice.
6. Lavage is indicated in patients who require decontamination; ensure use of cuffed endotracheal tube in adult patients.

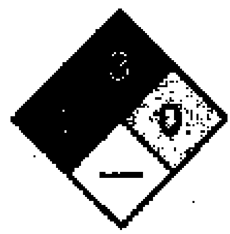
[illegible]

Flash Point: -43 °C

Autoignition Temperature: 280 °C

LEL: 1.4% v/v

UEL: 7.6% v/v



Fire Diamond

Extinguishing Media: Foam. Dry chemical powder. Bromochlorodifluoromethane (BCF) (where regulations permit). Carbon dioxide.

General Fire Hazards/Hazardous Combustion Products: Liquid and vapor are highly flammable. Severe fire hazard when exposed to heat, flame and/or oxidizers. Vapor forms an explosive mixture with air. Severe explosion hazard, in the form of vapor, when exposed to flame or spark. Vapor may travel a considerable distance to source of ignition. Heating may cause expansion/decomposition with violent rupture of containers. On combustion, may emit toxic fumes of carbon monoxide (CO).

Fire Incompatibility: Avoid contamination with oxidizing agents, i.e. nitrates, oxidizing acids, chlorine bleaches, pool chlorine etc., as ignition may result.

Fire-Fighting Instructions: Alert fire department and tell them location and nature of hazard. May be violently or explosively reactive. Wear breathing apparatus plus protective gloves. Prevent, by any means available, spillage from entering drains or water ways. If safe, switch off electrical equipment until vapour fire hazard removed.
Use water delivered as a fine spray to control fire and cool adjacent area. Avoid spraying water onto liquid pools. Do not approach containers suspected to be hot. Cool fire exposed containers with water spray from a protected location. If safe to do so, remove containers from path of fire.

Section 6 - Accidental Release Measures

Small Spills: Remove all ignition sources. Clean up all spills immediately. Avoid breathing vapors and contact with skin and eyes. Control personal contact by using protective equipment. Contain and absorb small quantities with vermiculite or other absorbent material. Wipe up. Collect residues in a flammable waste container.

Large Spills: Clear area of personnel and move upwind. Alert fire department and tell them location and nature of hazard. May be violently or explosively reactive. Wear breathing apparatus plus protective gloves. Prevent, by any means available, spillage from entering drains or water ways. No smoking, naked lights or ignition sources. Increase ventilation. Stop leak if safe to do so.
Water spray or fog may be used to disperse/absorb vapor. Contain spill with sand, earth or vermiculite. Use only spark-free shovels and explosion proof equipment. Collect recoverable product into labeled containers for recycling. Absorb remaining product with sand, earth or vermiculite. Collect solid residues and seal in labelled drums for disposal. Wash area and prevent runoff into drains.
If contamination of drains or waterways occurs, advise emergency services.

Regulatory Requirements: Follow applicable OSHA regulations (29 CFR 1910.120).

Handling Precautions: Avoid generating and breathing mist. Avoid all personal contact, including inhalation. Wear protective clothing when risk of exposure occurs. Use in a well-ventilated area. Prevent concentration in hollows and sumps. DO NOT enter confined spaces until atmosphere has been checked. Avoid smoking, bare lights, heat or ignition sources. When handling, DO NOT eat, drink or smoke. Vapor may ignite on pumping or pouring due to static electricity. DO NOT use plastic buckets. Ground and secure metal containers when dispensing or pouring product. Use spark-free tools when handling. Avoid contact with incompatible materials. Keep containers securely sealed. Avoid physical damage to containers. Always wash hands with soap and water after handling. Work clothes should be laundered separately. Use good occupational work practices. Observe manufacturer's storing and handling recommendations. Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions.

Recommended Storage Methods: Metal can, metal drum. Packing as recommended by manufacturer. Check all containers are clearly labeled and free from leaks.

Regulatory Requirements: Follow applicable OSHA regulations.

Engineering Controls: CARE: Use of a quantity of this material in confined space or poorly ventilated area, where rapid build-up of concentrated atmosphere may occur, could require increased ventilation and/or protective gear. Use in a well-ventilated area. If inhalation risk of overexposure exists, wear a NIOSH approved organic-vapor respirator. Correct respirator fit is essential to obtain adequate protection. In confined spaces where there is inadequate ventilation, wear full-face air supplied breathing apparatus. Provide adequate ventilation in warehouse or closed storage areas.

Personal Protective Clothing/Equipment

Eyes: Safety glasses with side shields; or as required, chemical goggles.
Contact lenses pose a special hazard; soft lenses may absorb irritants and all lenses concentrate them.

Hands/Feet: Barrier cream with polyethylene gloves or PVC gloves. Safety footwear. Do NOT use this product to clean the skin.

Respiratory Protection:

Exposure Range >300 to 1000 ppm: Air Purifying, Negative Pressure, Half Mask
Exposure Range >1000 to 15,000 ppm: Air Purifying, Negative Pressure, Full Face
Exposure Range >15,000 to 300,000 ppm: Supplied Air, Constant Flow/Pressure Demand, Full Face
Exposure Range >300,000 to unlimited ppm: Self-contained Breathing Apparatus, Pressure Demand, Full Face
Cartridge Color: black

Other: Overalls. Ensure that there is ready access to eye wash unit. Ensure there is ready access to an emergency shower.

Appearance/General Info: Purple, highly flammable, volatile liquid with characteristic sharp odor. Floats on water. Consists of a complex mixture of hydrocarbons with small amounts of residual benzene from the refining operations.

Physical State: Liquid
Vapor Pressure (kPa): 53.33 at 20 °C
Vapor Density (Air=1): > 2
Formula Weight: Not applicable.
Specific Gravity (H_2O=1, at 4 °C): 0.72-0.735 at 15 °C
Water Solubility: Insoluble
Evaporation Rate: Fast

pH: Not applicable
pH (1% Solution): Not applicable.
Boiling Point Range: 38.89 °C (102 °F)
Freezing/Melting Point Range: Not available
Volatile Component (% Vol): 100
Decomposition Temperature (°C): Not available.

Stability/Polymerization: Presence of incompatible materials. Product is considered stable. Hazardous polymerization will not occur.

Storage Incompatibilities: Avoid storage with oxidizers.

Unless otherwise specified, data extracted from RTECS - Registry of Toxic Effects of Chemical Substances

TOXICITY
Oral (rat) LD50: 18800 mg/kg

IRRITATION
- Skin (rabbit): 500 mg/24h mild

Environmental Fate: No data found.
Ecotoxicity: No data found.
Biochemical Oxygen Demand (BOD): 8%, 5 days

Disposal: Consult manufacturer for recycling options and recycle where possible. Follow all applicable federal, state, and local laws. Incinerate residue at an approved site. Recycle containers where possible, or dispose of in an authorized landfill.
BEWARE: Empty solvent, paint, lacquer and flammable liquid drums present a severe explosion hazard if cut by flame torch or welded. Even when thoroughly cleaned or reconditioned, the drum seams may retain sufficient solvent to generate an explosive atmosphere in the drum.

DOT Transportation Data (49 CFR 172.101):

Shipping Name: MOTOR SPIRIT OR GASOLINE OR PETROL
Hazard Class: 3.1
ID No.: 1203
Packing Group: II
Label: Flammable Liquid[3]

Additional Shipping Information: PETROL

CAS # 8006-61-9 **Danger!** 1 3

Flammable

Gasoline

gasolene; motor spirits; natural gasoline; petrol

Clear liquid; distinctive odor. Irritating to eyes/skin/respiratory tract. Also Causes: dizziness, drunkenness, unconsciousness. Absorbed through skin. Chronic: dermatitis. Possible cancer hazard. Flammable. Can form explosive mixtures in air.

Target Organs

3 9 10

Eyes

Skin

Respiratory System

Nervous System

Liver

Kidneys

Personal Protective Equipment

8

Goggles

Gloves

Apron

Check to see is respirator required?

Emergency Procedures

First Aid

4

Inhalation: Remove to fresh air and support breathing as needed. Eyes/Skin: Remove contaminated clothing. Flush with plenty of water for at least 15 min. Thoroughly wash skin with soap and water. Ingestion: Do not induce vomiting! Consult physician.

Fire

5

Flammable. Can form explosive mixtures in the air. Use dry chemical, carbon dioxide, or foam. Water may be ineffective for extinguishment, but should be used to knock-down vapors and cool containers.

Spills & Leaks

6

Notify safety personnel, isolate and ventilate area. Shut off ignition sources. Take up with inert material such as sand or vermiculite. Do not release to sewers or waterways. Cleanup crew should protect against exposure.

Consult MSDS 0467 for more information

Material Safety Data Sheet
Bentonite MSDS

Section 1: Chemical Product and Company Identification

Product Name: Bentonite

Catalog Codes: SLB1441, SLB2935, SLB4435

CAS#: 1302-78-9

RTECS: CT9450000

TSCA: TSCA 8(b) inventory: Bentonite

CI#: Not applicable.

Synonym: Montmorillonite;

Chemical Name: Not available.

Chemical Formula:
(Al,Fe1.67Mg.33)Si10(OH)2Na(+)Ca(++)/2.33

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call:
1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Bentonite	1302-78-9	100

Toxicological Data on Ingredients: Bentonite LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of eye contact (irritant), of inhalation. Slightly hazardous in case of skin contact (irritant), of ingestion.

Potential Chronic Health Effects:
Hazardous in case of inhalation.
CARCINOGENIC EFFECTS: Not available.
MUTAGENIC EFFECTS: Not available.
TERATOGENIC EFFECTS: Not available.
DEVELOPMENTAL TOXICITY: Not available.
The substance is toxic to lungs.
Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Cold water may be used. WARM water MUST be used. Get medical attention.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: Non-flammable.

Auto-Ignition Temperature: Not applicable.

Flash Points: Not applicable.

Flammable Limits: Not applicable.

Products of Combustion: Not available.

Fire Hazards in Presence of Various Substances: Not applicable.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available.
Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions: Not applicable.

Special Remarks on Fire Hazards: Not available.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Do not breathe dust. Avoid contact with eyes. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If you feel unwell, seek medical attention and show the label when possible.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection:
Splash goggles. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 10 from ACGIH (TLV) [United States]
Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid.

Odor: Odorless.

Taste: Not available.

Molecular Weight: Not available.

Color: Beige. (Light.)

pH (1% soln/water): Not available.

Boiling Point: Not available.

Melting Point: Decomposes.

Critical Temperature: Not available.

Specific Gravity: 2.5 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility:
Very slightly soluble in cold water, hot water.
Insoluble in methanol, diethyl ether, n-octanol, acetone.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Not available.

Corrosivity: Not available.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Eye contact. Inhalation.

Toxicity to Animals:
LD50: Not available.
LC50: Not available.

Chronic Effects on Humans: Causes damage to the following organs: lungs.

Other Toxic Effects on Humans:
Hazardous in case of inhalation.
Slightly hazardous in case of skin contact (irritant), of ingestion.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations: TSCA 8(b) inventory: Bentonite

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC): R36- Irritating to eyes.

HMIS (U.S.A.):

Health Hazard: 2

Fire Hazard: 0

Reactivity: 0

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 2

Flammability: 0

Reactivity: 0

Specific hazard:

Protective Equipment:
Gloves.
Lab coat.
Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate.
Splash goggles.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

MESA Specialty Gases & Equipment
3619 Pendleton Avenue, Suite C
Santa Ana, California 92704 USA

MATERIAL SAFETY DATA SHEET

Chemical Name: Hexane, Air
Chemical Formula: C6H14/Air
Chemical Family: Nonflammable Gas Mixture
Hazard Classification: Compressed Gas, N.O.S., UN1956, Green Label
Phone Number for Information: Infotrac
Emergency Contact: 800-535-5053 (Int'l 352-323-3500)

SECTION 1 – MATERIAL IDENTIFICATION

COMPONENT	CAS No.	CONCENTRATION	OSHA PEL	ACGIH TLV
Hexane	110-54-3	< 0.6 mole%	50 ppm	50 ppm
Air (79% N2 + 21% O2)	See below	Balance	None	None
Nitrogen	7727-37-9			
Oxygen	7782-44-7			

SECTION 2 – PHYSICAL/CHEMICAL CHARACTERISTICS

Boiling Point: N/A	**Specific Gravity (H2O)= 1, 20 deg C):** N/A
Vapor Pressure (mm Hg, 20 deg C): N/A	**Melting Point:** N/A
Vapor Density (Air = 1): 1.000	**Evaporation Rate (Butyl Acetate = 1):** N/A
Solubility in Water: N/A	
Appearance and Odor: Colorless and odorless	

SECTION 3 – FIRE AND EXPLOSION HAZARD DATA

Flash Point (Method Used): Nonflammable gas	**Flammable Limits: LEL:** N/A **UEL:** N/A
Extinguishing Media: N/A	
Special Fire Fighting Procedures: Wear NIOSH/MSHA approved SCBA and full protective equipment. Stop flow of gas if this can be done safely. Use water spray to keep cylinders cool.	
Unusual Fire and Explosion Hazards: Gas cylinders may rupture violently when exposed to fire. Cylinder valve is equipped with a pressure relief device to safely vent the cylinder if it is exposed to elevated pressure in a fire.

SECTION 4 – REACTIVITY HAZARD DATA
Stability: Stable
Incompatibility: None
Hazardous Decomposition or Byproducts: None
Hazardous Polymerization: None

SECTION 5 – HEALTH HAZARD DATA		
Routes of Entry: Inhalation		
Health Hazards (Acute and Chronic): None		
Carcinogenicity: NTP? No	**IARC Monographs?** No	**OSHA Regulated?** No
Medical Conditions Generally Aggravated by Exposure:		
Emergency and First Aid Procedures: Remove person to uncontaminated area. SCBA may be required to prevent asphyxiation of rescue workers. Keep warm and at rest. Lay victim face down with head and chest lower than hips to improve drainage from lungs. If breathing is labored, administer pure oxygen. If breathing has stopped, start artificial respiration. Get immediate medical attention for serious exposure.		

SECTION 6 – PRECAUTIONS FOR SAFE HANDLING AND USE
Steps to be Taken in Case Material is Released or Spilled: Ventilate enclosed areas. Move leaking cylinder to fume hood or safe outdoor area.
Precautions to be Taken in Handling or Storing: Gas or liquefied gas are to be used with the appropriate pressure regulating control and high pressure equipment. Cylinders should be secured with mounting brackets away from heavily traveled areas. Keep cylinder in dry, cool, well ventilated area away from heat, flame, sparks or corrosive chemicals. Cylinders should be moved by suitable hand trucks.
Other Precautions: Use monitoring equipment if hazardous conditions are suspected or likely to occur.

SECTION 7 – CONTROL MEASURES
Respiratory Protection (Specify Type): Use self-contained breathing apparatus in emergency or rescue situations.
Ventilation: Enclosed area must be provided with general or local exhaust ventilation to avoid hazardous conditions.
Protective Clothing or Equipment: Safety glasses and shoes should be worn when handling high pressure cylinders or hazardous materials.

Subject: Final Environmental Assessment Report
Frigid Coil Facility
13711 Freeway Drive
Santa Fe Springs, California

Dear Dr. Castaneda,

On behalf of Johnson Controls, Inc. (JCI), Geosyntec Consultants, Inc. (Geosyntec) submits this Final Environmental Assessment Report (Report). This Report presents a summary of supplemental investigation activities conducted at the Former Johnson Control Inc. (JCI) Frigid Coil Facility property located at 13711 Freeway Drive, Santa Fe Springs, CA (Site). These activities were performed on a voluntary basis by JCI in support of a No Further Action determination for the Site by the Los Angeles Regional Water Quality Control Board.

If you have any questions about the Report, please contact the undersigned at (714) 969-0800. Thank you.

Sincerely yours,

Andy Simons
Senior Staff Geologist

Final Environmental Assessment
Frigid Coil Facility
Santa Fe Springs, CA

This Environmental Assessment for the former Frigid Coil Facility in Santa Fe Springs, California, was prepared by Geosyntec Consultants (Geosyntec) on behalf of Johnson Controls, Inc. This document was prepared by Mr. Andy Simons and reviewed by Mr. Andrew Barnes, both of Geosyntec, in general accordance with Geosyntec's internal review policy. The Work Plan presented herein was prepared in accordance with generally accepted professional engineering and geologic practice, and includes data/information provided by others. No attempt to verify the accuracy of data/information provided by others was made. No warranty is expressed or implied.

EXECUTIVE SUMMARY

This Environmental Assessment Report (Report) presents a summary of investigational activities conducted at the Former Johnson Control Inc. (JCI) Frigid Coil Facility located at 13711 Freeway Drive, Santa Fe Springs, CA (Site). In its June 7, 2008 order, the Los Angeles Regional Water Quality Control Board (LARWQCB) requested that JCI:

1) Revise the Site-wide soil vapor survey to evaluate potential health risks to Site occupants; and
2) Evaluate the potential for, magnitude of, and nature of, Site impacts to groundwater contamination.

Geosyntec Consultants, Inc. (Geosyntec) conducted field investigations and submitted the initial report of findings to the LARWQCB on March 10, 2009 in response to their June 7, 2008 Order and Requirement for Site Assessment. On March 29, 2010, JCI proposed voluntary, supplemental site assessment activities at the Site with the goal of achieving a No Further Action (NFA) determination from the LARWQCB. This document contains the results of the supplemental site assessment.

As part of the environmental assessment, soil, soil vapor, and groundwater samples were collected at the Site. The soil analytical results were compared to EPA Region IX Residential Regional Screening Levels (RSLs) (EPA, 2009). Detections of chemicals in soil did not exceed the RSLs, with the exception of arsenic. Arsenic in southern California is naturally occurring in soils with concentrations exceeding the EPA industrial use RSL of 1.6 mg/kg (EPA, 2011). Volatile organic compound (VOC) concentrations detected in soil were found to generally decrease with depth.

The soil vapor results were compared to commercial California Human Health Screening Levels (CHHSLs) (Cal EPA, 2005). Because the area-weighted average concentrations of chemicals detected in the sub-slab vadose zone did not exceed their respective adjusted indoor air CHHSLs, residual chemical concentrations at the Site are unlikely to pose an unacceptable health risk for commercial/industrial workers. Further, VOC detections were minimal in deep soil vapor probes adjacent to the highest groundwater concentrations. Based on groundwater concentrations, VOC concentrations detected in soil vapor were considerably lower than would be expected if the impacts to groundwater originated from the Site. Based on the concentration and distribution of chemicals in the vadose zone, however, it does not appear that past Site activities have contributed to local groundwater impacts.

Additionally, no evidence was found of potential releases at the Site impacting the underlying groundwater. Although VOCs were detected in soil, soil vapor and groundwater samples, the VOCs were detected at higher concentrations in the deeper wells, and higher concentrations were also detected at the southern upgradient Site boundary, which is indicative of an off-Site contributing source. Indeed, several sites were identified in the agency database to the south and south-east of the site with similar constituents of concern as those found in Site groundwater.

A review of Geotracker and Envirostor revealed eleven sites within 0.5 mile of the Site. Four of the eleven were open at the time of this report and two, Alondra Industrial Park (AIP) and LeFiell Manufacturing Company, were identified to have similar contaminant chemistry as the Site. LeFiell Manufacturing Company is located directly upgradient from the Site, and chlorinated VOCs have been detected in soil, soil vapor, and groundwater at its location. Trichloroethene (TCE) was detected in shallow groundwater at the LeFiell Manufacturing site at concentrations an order of magnitude higher than those detected in shallow groundwater at the Site. Tetrachloroethene (PCE) was detected in shallow groundwater at the LeFiell Manufacturing site at concentrations four orders of magnitude greater than those detected in shallow groundwater at the Site. The impacts at the LeFiell Manufacturing site have significantly higher concentrations than those found at the Site. The LeFiell Manufacturing site is in the preliminary stages of investigation with the California Department of Toxic Substances Control (DTSC) and a Site Investigation Work Plan was submitted to the DTSC in April 2010. Although the investigation at the LeFiell Manufacturing site is ongoing, it appears to be the source of groundwater contamination at the Site.

The concentrations of chemicals found in Site soil and soil vapor are unlikely to pose an unacceptable exposure risk. Therefore, vadose zone remediation is unwarranted. Additionally, it does not appear that Site activities have contributed to local groundwater impacts, and, therefore, NFA is recommended for the Site.

1. INTRODUCTION

1.1 Terms of Reference

This Environmental Assessment Report (Report) presents a summary of the investigation activities conducted at the Former Johnson Controls Inc. (JCI) Frigid Coil Facility located at 13711 Freeway Drive, Santa Fe Springs, California (Site) (Figure 1). This Report is submitted to the Los Angeles Regional Water Quality Control Board (LARWQCB) by Geosyntec Consultants, Inc. (Geosyntec), on behalf of JCI, in accordance with the LARWQCB requirements presented in its April 5, 2010 letter.

This Report was originally prepared by Ms. Marlene Duffy, P.G. and Mr. James Allen, both of Geosyntec, finalized by Mr. Andy Simons, G.I.T., of Geosyntec, and reviewed by Mr. Andrew Barnes, P.G., also of Geosyntec, in accordance with the peer review policy of the firm.

1.2 Purpose and Overview

On March 10, 2009, Geosyntec submitted the initial Environmental Assessment Report (Geosyntec, 2009b) to the LARWQCB, responding to the LARWQCB California Water Code Section 13267 Order and Requirement for Site Assessment, dated June 7, 2008. The two goals of the Report were to:

1) Revise the Site-wide soil vapor survey to evaluate potential health risks to Site occupants; and
2) Evaluate the potential for, magnitude of, and nature of, Site impacts to groundwater contamination.

Based on the LARWQCB review of the initial Environmental Assessment Report, several data gaps were identified. Geosyntec met with the LARWQCB at the Site on March 4, 2010 to discuss additional investigative activities proposed to resolve outstanding data gaps. In response, Geosyntec discussed a proposed scope of work with the LARWQCB on March 29, 2010, outlining additional voluntary investigation activities to be conducted.

On April 5, 2010, the LARWQCB sent a letter to JCI authorizing the additional investigation work. Field work was completed on April 7, 2010. As a condition of the April 5, 2010 approval letter, a summary report detailing the results of the additional investigation is required. This Report serves to incorporate the additional data collected during the 2010 investigation with the existing data set and re-evaluate the conclusions of the initial Environmental Assessment Report.

1.3 Report Organization

The remainder of this Report is organized as follows:

- Section 2 – "Background" describes current Site conditions, former Site operating history and Site geology and hydrogeology.
- Section 3 – "Investigation Methodology" provides a summary of field activities associated with the environmental assessment.
- Section 4 – "Results" provides a summary of findings from field activities associated with the environmental assessment.
- Section 5 – "Discussion" analyzes the findings and relates them to the broader questions of Site health risks and sources of local groundwater contamination.
- Section 6 – "Conclusions and Recommendations" provides a summary of the environmental assessment, as well as a recommendation for future Site activities.

2. BACKGROUND

2.1 Site Description and Location

The Site is located at 13711 Freeway Drive in Santa Fe Springs, California (Figure 1). The Site is a 4.9 acre parcel containing a single 82,000 square foot warehouse (Figure 2). The Site's legal description is Lot 15 of Tract 23559, in the City of Santa Fe Springs, Los Angeles County, California. The assessor's parcel number (APN) is 8069-015-055.

The land use surrounding the property generally consists of light industrial and warehousing facilities. Freeway Drive and Interstate 5 are directly south of the Site, Spring Avenue and El Tapatio Market offices to the west, Ross Bindery to the north, and an abandoned railroad spur and vacant building is located to the east of the Site. To the south of Interstate 5, there are numerous light industrial facilities.

As of June 1, 2010, a new tenant is in the process of occupying the facility. The site is under the property management of The Gilbert Foundation.

During GeoTracker and EnviroStor database searches, 11 other sites were identified within 0.5 miles of the Site (Figure 3). Four of the 11 sites still had open or active remediation or investigation status with either the LARWQCB or California Department of Toxic Substances Control (DTSC). Two sites, Alondra Industrial Park (AIP) and LeFiell Manufacturing Company (LeFiell), were identified as having similar contaminant chemistry as found in the groundwater of the Site.

The AIP site was occupied from the early 1970s by several industries involved in metal recycling, sheet metal fabrication, manufacturing of aluminum products, and precious metal recycling. In 1997, soil impacted with volatile organic compounds (VOCs) was excavated and disposed of off-site. Since 2003, a soil vapor extraction (SVE) system operates at the AIP site and removes VOCs from the soils beneath. Groundwater is impacted with VOCs and groundwater monitoring activities are being conducted. A dual-phase extraction (SVE and groundwater extraction) system is being implemented, and was scheduled to be operational by the fall of 2010 (LARWQCB, 2010).

LeFiell has been manufacturing tubular parts for the aerospace and marine industries since the late 1950s. A subsurface investigation for a portion of the site immediately adjacent to Firestone Boulevard was initiated by the California Department of Transportation (Caltrans) in 2006. During the investigation, chlorinated aliphatic hydrocarbons (CAHs), including tetrachloroethene (PCE) and trichloroethene (TCE), were detected in soil, soil vapor and groundwater. DTSC indicated that further investigation was required to determine the nature and extent of the subsurface impacts

(Ninyo & Moore, 2007). LeFiell entered into the voluntary clean-up program in May 2009 (DTSC, 2010).

2.2 Site Background

The property has been used for light industrial purposes by two parties: Miami Carey and Celotex prior to 1971; and Frigid Coil from approximately 1971 through July of 2007. The recognized environmental conditions (RECs) identified in the Phase I Site Investigation (i.e., heavily stained concrete observed throughout the facility), were identified as potential source areas for subsurface contamination (ERM, 2006a).

During Frigid Coil's operation of the facility, primary operations included the assembly of air handlers and custom heating, ventilation, and air conditioning (HVAC) equipment. Other operations included equipment maintenance and hydrostatic testing. No data is available regarding Site activities during Miami Carey and Celotex operations.

Several previous Site investigation reports were prepared for the Frigid Coil Facility. A brief summary of their contents is provided below.

- *Phase I Site Investigation – Frigid Coil Facility*, Environmental Resources Management, June 13, 2006 (ERM, 2006a)

This report identified environmental liabilities and potential asset retirement obligations relating to the Site. Based on the information and data obtained during this investigation, ERM identified Site conditions potentially indicative of releases and threatened releases of hazardous substances and petroleum products. Heavily stained concrete was observed at several locations in the interior of the facility, extending to wall joints.

- *Phase II Site Investigation – Frigid Coil Facility*, Environmental Resources Management, June 23, 2006 (ERM, 2006b)

This report provided a summary and results of ERM's subsurface shallow soil and shallow soil-gas investigation including installation of several groundwater monitoring wells. The purpose of the Site investigation was to assess the potential for subsurface impacts that may have been caused by historical releases at the Site.

- *Phase II Environmental Site Assessment – Frigid Coil Facility*, Environmental Resources Management, January, 2008 (ERM, 2008)

This report revised the 2006, *Phase II Site Investigation* (ERM, 2006b) and provided a summary and results of additional subsurface shallow soil step-out sampling. The work also included the installation of additional groundwater monitoring wells. Similar to the 2006, *Phase II Site Investigation*, the purpose of the investigation was to assess the lateral and vertical extent of subsurface impacts that may have been caused by historical releases at the Site. This report concluded that the source of groundwater contamination was an unknown off-site source. The LARWQCB concluded that the soil vapor data included in this report was not reliable, additional soil matrix VOC testing needed to be conducted, and the existing soil and groundwater database was inadequate at the time to reach these conclusions. These LARWQCB findings are the impetus for the investigation that is the subject of this Report.

- Environmental Assessment Report – Frigid Coil Facility, Geosyntec Consultants, 2009 (Geosyntec, 2009b)

This report responded to the LARWQCB's June 7, 2008 order to conduct additional investigation at the Site. In 2009, soil, soil vapor, and groundwater samples were collected at the Site. The report concluded that residual chemical concentrations in soil and soil vapor at the Site were unlikely to pose an unacceptable human health risk to workers and that soil remediation was not required to mitigate potential exposure risks. Additionally, the report concluded that there was no evidence to suggest potential releases at the Site impacting the underlying groundwater. This Report revises the 2009 document with Site investigation data collected in early 2010.

- 3rd Quarter 2008 through 4th Quarter 2009 Quarterly Monitoring Reports, Geosyntec Consultants (Geosyntec, 2008b, 2009a, 2009c, 2009d, 2009e, 2010)

These monitoring reports were prepared in response to the LARWQCB's June 7, 2008 order to collect additional groundwater data at the Site. Data was collected on six separate monitoring events. The reports concluded that there was a northeasterly flow in the shallow water-bearing zone, and that the groundwater chemistry data was consistent throughout the six groundwater monitoring events.

2.3 Geology and Hydrogeology

The Site is located within the Central Block of the Los Angeles Basin, a coastal alluvial basin that extends from Beverly Hills southeast to central Orange County. The central block is bounded on the northeast by the Whittier fault, Elysian and Repetto Hills, and on the southwest by the Newport-Inglewood Fault Zone. The primary geologic feature of the central block is the Downey Plain, a northwest trending syncline approximately

10 to 14 miles wide. Miocene, Pliocene, and Pleistocene deposits in the central block are more than 22,000 feet (ft) thick (CDWR, 1961).

Unconsolidated sediments encountered from cores collected during field work conducted in 2009 and 2010 were predominantly fine grained sediments, consisting primarily of silts, sands, silty sands and interbedded clays. Several distinct sand packages were traceable across the Site. The approximate depths of these sand packages were around 20 feet below ground surface (ft bgs), 25 ft bgs, and 50 ft bgs. These findings are largely consistent with the findings of the *Phase II Environmental Site Assessment* conducted by ERM in 2008. The additional data obtained in 2009 and 2010 has improved the resolution of the data, filling in the gaps between sample locations and has helped to correlate lithologies spatially. This increased resolution is shown on Figures 4A through 4C.

For correlation purposes, sediments were divided into coarse and fine grained units. Well graded and poorly graded sands were lumped together as coarse grained units while silts and clays were lumped together as fine grained units. Due to their variable content of fines, silty sands, sandy silts, and sandy clays were grouped in with either coarse or fine grained units. In general, when these units were found adjacent to coarse grained units, they were categorized with the coarse unit and when they were adjacent to fine grained units, they were categorized with fine grained units.

Based on the results of the 2009 and 2010 field work, the vadose zone (from the surface to approximately 20 ft bgs) was found to be comprised of interbedded coarse and fine units. With the exception of some areas below the building and in the corners of the property, the upper 10 ft of the Site is generally coarse grained. An approximately 5 ft thick, laterally continuous fine grained unit is present at depths beginning from 15 to 20 ft bgs. A groundwater depth database for southern California shows depth to first groundwater within a several mile radius of the Site ranges from approximately 8 ft bgs to 50 ft bgs (LARWQCB, 2009). The Site is located within the forebay area of the Los Angeles Central Basin. The Site is located approximately 2 miles northwest of the Coyote Creek boundary. The main surface water features in the basin are the Los Angeles and San Gabriel Rivers, which cross the basin and discharge into the Pacific Ocean (CDWR, 2004).

The *Phase II Environmental Site Assessment* (ERM, 2008) reported that groundwater was encountered between 21 and 40 ft bgs at the Site. The variability in the depth of the groundwater and flow direction was attributed to the localized variation in lithology. During the 2009 and 2010 field work, the first wet sediments were typically encountered at approximately 20 ft bgs as well.

As with the vadose zone sediments, saturated sediments were found to be interbedded with coarse and fine grained units. For Site characterization purposes, two coarse-grained water-bearing units are of primary interest. The upper coarse grained unit is 10 to 15 ft thick with the top occurring at 23 to 30 ft bgs. A laterally continuous 15- to 20-ft thick fine grained unit separates the upper and lower coarse grained units. The thickness of the lower coarse grained unit was not determined as part of this study, but is at least 20 ft. Based on sieve analyses conducted in the field, the lower coarse grained unit is coarser and better graded than the upper coarse grained unit (Appendix A).

Potentiometric elevations within wells completed in the upper coarse grained unit were found to be approximately 25 ft higher than those in the lower coarse grained units. Based on a review of the well construction logs and the lithology at the Site, the variability in depth to groundwater noted in early studies is likely due to screening across different sand packages. Groundwater flow direction in the upper coarse grained unit was found to be north-northeast with a gradient magnitude between 0.0044 and 0.0100 while the flow direction in the lower coarse grained unit was found to be northwest with a gradient of 0.00023 (Figure 5). At the AIP site located to the southwest of the Site (Figure 3), the predominant flow direction was also found to be to the north with steeper gradients in the shallow zone than in the deep zone (LFR, 2007).

3. INVESTIGATION METHODOLOGY

3.1 General

Field work at the Site was carried out in accordance with the Environmental Assessment Workplan approved by the LARWQCB (Workplan), with sampling locations shown on Figure 6 (Geosyntec, 2008a). Daily field logs are included in Appendix B. A health and safety plan was prepared and reviewed by field team members (Appendix C). A tailgate meeting was conducted at the beginning of each field day to discuss project related health and safety topics. Equipment blanks, trip blanks and duplicate samples were collected to fulfill quality control requirements as outlined in the Workplan.

3.2 Quality Assurance/Quality Control

The following Quality Assurance/Quality Control (QA/QC) procedures were included in the investigation:

- Duplicate soil, soil vapor, and groundwater samples were collected and analyzed at the fixed laboratory at a rate of 10% of the primary samples.

- Equipment blanks for soil and groundwater sampling methods were collected and analyzed for each day of sampling when non-dedicated sampling equipment was used.

- Trip blanks were included in each cooler containing VOC samples.

Samples analyzed by the off-Site laboratory were transferred under chain-of-custody control and were subject to the laboratory's conventional QA/QC analytical procedures, including method blank and matrix spike/lab control sample analyses. Soil and groundwater samples were kept iced at a temperature of no more than four degrees Celsius.

Duplicate soil vapor samples were collected at a rate of 10% of the primary samples and for soil vapor samples analyzed by the mobile laboratory.

QA/QC irregularities were not observed during the 2009 and 2010 field investigations.

3.3 Pre-Field Activities

On January 20, 2009, prior to the commencement of intrusive work, sample locations were marked, Geosyntec notified Underground Service Alert of Southern California to mark/clear utilities leading to the property and a geophysical survey was conducted to identify the potential presence of subsurface utilities or other obstructions at sampling locations. Several proposed borehole locations were moved based on the suspected presence of subsurface utilities or features. On January 22, 2009, concrete coring was performed at boring locations both inside and outside the building.

On March 9, 2010, Geosyntec notified Underground Service Alert of Southern California to mark/clear utilities leading to the property prior to the second round of intrusive work. For sampling conducted the week of March 15 through 19, 2010, concrete coring and asphalt cutting were conducted prior to drilling and sampling activities. On March 30, 2010, concrete coring was performed for additional sample locations both inside and outside the building. Sample locations were cleared to 5 feet with a hand auger.

3.4 Soil Sampling

Soil samples were collected in 2009 from 12 locations at depths of 1, 5, and 10 ft bgs (Figures 7 and 8). Soil samples were collected from the same borings used for groundwater or soil vapor sampling and were described using the Unified Soil Classification System (USCS) to total depth (Appendix D). The soil samples collected were analyzed at a fixed laboratory for the following parameters:

- 36 soil samples were collected for VOC analysis by EPA Method 8260B.

- 24 soil samples were collected from SB-7R, SB-14, SB-15, SB-16, SB-17, SB-18, SB-19 and SB-20 and analyzed for Total Petroleum Hydrocarbons (TPH) – Gasoline (TPHg), TPH – Diesel (TPHd) and TPH – Oil Range Organics (TPHoro) by EPA Method 8015M.

- 18 samples were collected from SB-7R, SB-16, SB-17, SB-18, SB-19, and SB-20 and analyzed for arsenic by EPA Method 6010B.

Additional samples were collected in March and April 2010 based on the evaluation of the results from the 2009 sampling. Soil samples were collected from 24 additional locations in 2010 (Figures 7 and 8). The soil samples collected were analyzed at a fixed laboratory for the following parameters:

- Soil samples were collected using a hand auger at depths of 1, 5, and 15 ft bgs from MW-6D, MW-8S, SB-21, SB-22, SV-23, SV-24, and SV-25 and analyzed for VOCs by EPA Method 8260B, TPHg, TPHd, and TPHoro by EPA Method 8015M, and arsenic by EPA Method 6010B.

- Soil samples were collected from 1 and 5 ft bgs from SV-26, SV-29, SV-30, SV-31, SV-32, SB-34, SV-35, SV-36, SV-37, SV-38, SB-39, SV-40, and SV-41 and analyzed for VOCs by EPA Method 8260B, TPHg, TPHd, and TPHoro by EPA Method 8015M, and CAM-17 metals by EPA Method 6010B.

- Samples collected from 1 and 5 ft bgs from SV-37 and SV-38 were also analyzed for SVOCs by EPA Method 8270C.

- Soil samples were collected from 1, 5, and 10 ft bgs from SB-27, SB-28, SB-33, and SV-42 and analyzed for VOCs by EPA Method 8260B, TPHg, TPHd, and TPHoro by EPA Method 8015M, and CAM-17 metals by EPA Method 6010B.

3.5 Soil Vapor Sampling

During the 2009 sampling event, 14 soil vapor samples were collected from seven locations outside of the building footprint (Figure 9) in accordance with DTSC and LARWQCB guidance (LARWQCB/DTSC, 2003). Soil vapor probes were installed by a direct push rig. As outlined in LARWQCB's letter dated December 8, 2008, the probe depths were selected to target the coarsest grained strata within the depth of interest down to 15 ft bgs. Each probe was installed in a separate boring.

During the 2010 sampling event, an additional 14 soil vapor samples were collected from 10 locations beyond the building footprint in accordance with the DTSC and LARWQCB guidance (LARWQCB/DTSC, 2003). Probe depths were selected to collect samples from the coarse grained strata near the targeted depth. Eight of the probes were installed as nested probes in four borings down to 15 ft bgs. The remaining six probes were installed in borings to 5 ft bgs. Soil vapor probes were installed by hand auger.

The borings were cored to the desired depth, and probes were installed in the center of a 1-ft sand pack. Hydrated bentonite was placed above the sand pack, and the probes were allowed to equilibrate overnight. Prior to sampling in 2009 and 2010, a purge test was performed to assess the necessary volume for a representative purge volume. Based on the results of the 2009 purge test (finding the maximum concentration at seven purge volumes), approximately seven probe volumes were purged from the soil vapor probes prior to sampling. Based on the non-detect results of the 2010 purge test, the standard minimum of three probe volumes were purged from the soil vapor probes prior to sampling. Samples were then collected and analyzed by a mobile laboratory for

VOCs by EPA Method 8260B. Duplicate samples for fixed laboratory analysis by EPA Method TO-15 were also collected at a rate of 10% of the soil vapor sample locations.

Following sampling, pneumatic testing was conducted at each location. Results of the pneumatic testing are included in Appendix E.

3.5.1 Sub-Slab Soil Vapor Sampling

In order to evaluate the potential for subsurface vapor intrusion into indoor air, nine sub-slab soil vapor samples were collected and analyzed by a mobile laboratory in 2009 (Figure 9). Probes were installed in the center of a 6-inch sand pack beginning at the bottom of the concrete slab in the building. Hydrated bentonite was placed above the sand pack to seal the probes to the concrete and the probes were allowed to equilibrate over a weekend prior to sampling.

In 2010, an additional six sub-slab soil vapor samples were collected and analyzed by a mobile laboratory. Semi-permanent sub-slab soil vapor probes were installed using hand tools to cut through the concrete floor and bore a 2-3 inch hole just below the slab. Semi-permanent soil vapor probes were installed in these borings for sampling and allowed to equilibrate for several days prior to sampling.

Based on the purge testing results, approximately seven probe volumes were purged from the soil vapor probes prior to sampling in 2009. In 2010 the purge test indicated that the standard minimum of three probe volumes should be purged from the soil vapor probes prior to sampling. Samples were then collected and analyzed by a state certified mobile laboratory for VOCs by EPA Method 8260B. Duplicate samples for fixed laboratory analysis by EPA Method TO-15 were also collected at 10% of the sub-slab vapor sample locations. Following sampling, pneumatic testing was conducted at each location. Results of the pneumatic testing are included in Appendix E.

3.6 DPT Groundwater Sampling

Groundwater samples were collected at eight locations using direct-push technology (DPT) (Figures 10A through 11B). Direct-push rods were advanced to the desired sampling depth at each location. Sampling depths were chosen based on observations of soil cores at target depths of 20, 30, and 40 ft bgs. The actual depth of samples collected were within the nearest coarse grain strata that was in proximity to the aforementioned target depths.

Upon reaching the target depths, the rods were pulled back 4 to 5 feet to expose the screen interval. Two samples were collected from approximately 20 ft bgs at locations DPT-17 and DPT-19. The remaining locations were also screened near 20 ft bgs, but did not yield water. Groundwater samples were collected from approximately 30 ft bgs and 40 ft bgs at all eight locations. Samples were analyzed for 1,4-dioxane using pre-cleaned disposable tubing and check valve. Samples analyzed for VOCs were collected using a small disposable bailer. Groundwater samples were sent to a fixed laboratory for VOC and 1,4-dioxane analyses using EPA Methods 8260B and 8270C, respectively.

3.7 Well Destruction

Prior to sampling activities in 2010, wells MW-3 and MW-4 (Figure 5) were destroyed in accordance with standards described in the CDWR Bulletin 74-90, *California Well Standards* (CDWR, 1991). Well destruction permits were obtained prior destruction (Appendix F) from the Los Angeles County Department of Public Health (LACDPH).

Wells were sounded prior to destruction to confirm total depths. Wells were then overdrilled with a hollow-stem auger drill rig equipped with a bit designed to stay in the center of the casing. 10-inch diameter augers were used to create a borehole larger than the original boring and thereby remove the annular material. Overdrilling continued to approximately 2 feet beyond the original well depth (58 ft bgs in both wells).

The resultant borehole was backfilled with a neat cement grout placed by tremie pipe proceeding from the bottom of the boring up in one continuous operation. The volume of the borehole was calculated (249 gallons for MW-3 and MW-4) and compared to the actual volume of grout placed (325 gallons for MW-3 and 375 gallons for MW-4).

3.8 Groundwater Well Installation and Sampling

Seven additional groundwater monitoring wells were installed in five boreholes between March 16 and 19, 2010. Four new shallow zone wells (MW-4RS, MW-7S, MW-8S and MW-9S) and three new deep zone wells (MW-4D, MW-6D and MW-7D) were installed as indicated on Figure 5. Wells were continuously cored or sampled and the soils described in accordance with the USCS nomenclature (Appendix D). For each borehole, a sieve analysis was run in the field on coarse grained sediments targeted for the screen intervals of the wells (Appendix A).

Wells were constructed of nominal 2-inch diameter schedule 40 PVC casing. Shallow zone wells were constructed with a 15 ft screen interval of 0.010 inch slot size, with approximately 5 ft of the screen above the water table to allow for increases in water table elevation. Deep zone wells were constructed with a 10 ft screen constructed of 0.020 inch slot screen. Monitoring wells MW-7S/MW-7D and MW-4RS/4D are nested well completions. Well construction diagrams are included in Appendix D.

Monitoring wells were developed on March 23 and 24, 2010 following the procedures for monitoring well development described in the Work Plan. As development activities began in the deeper of the two wells at MW-4RS/MW-4D and MW-7S/MW-7D, the water level in the shallower well was monitored. Based on the lack of significant change in the shallow well water levels (maximum observed change was 0.05 ft), it is concluded that the seals were properly constructed in the borehole to mitigate potential communication between the two zones.

Existing and new groundwater monitoring wells were sounded and sampled in March and April 2010. The depth to static groundwater was measured in wells relative to each surveyed casing location prior to sampling. The water levels were measured to the nearest 0.01 foot using a Solinst water level indicator (Table 1). Potentiometric surface maps were constructed as shown on Figure 5. After the wells were sounded, they were sampled using low flow bladder pump sampling methodologies as described in the Work Plan (Geosyntec, 2008a). DPT and groundwater monitoring well locations are shown on Figures 10A through 11B.

4. RESULTS

4.1 Soil Sampling

As described in Section 3.4, soil samples were analyzed for VOCs, SVOCs, TPH, and metals. Detected analytes are summarized on Tables 2 and 3 and shown on Figures 7 and 8. Laboratory reports are included in Appendix G. Vertical distribution of analyte concentrations are shown on Figures 4A-4C. A summary of soil sampling results are as follows:

- The only organic or inorganic analyte detected at concentrations greater than the EPA Region 9 Residential and Industrial Regional Screening Levels (RSL) (EPA, 2011) was arsenic.

- Organic analytes detected in one or more samples were 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzne, 2-butanone (MEK), acetone, benzene, ethylbenzene, isopropylbenzene, xylenes, n-propylbenzene, tetrachloroethene, toluene, TPHd, TPHg and TPHoro.

- SVOCs were tested for but not detected above laboratory reporting limits.

- 14 inorganic analytes were detected in one or more samples.

4.2 Soil Vapor Sampling

As discussed in Section 3.5, soil vapor samples were analyzed for VOCs by a mobile laboratory and pneumatic testing was conducted at each of the probe locations. VOC detections are summarized in Table 4 and shown on Figure 9. Soil vapor laboratory reports are included Appendix G. A summary of pneumatic testing results are shown in Table 5a, while the associated field forms are included in Appendix E. A summary of soil vapor results are as follows:

- Detected concentrations were less than California EPA's CHHSLs (Cal EPA, 2005) for industrial/commercial soil vapor.

- Analytes detected by the mobile laboratory in shallow (0-6 ft bgs) probes included ethylbenzene, m,p-xylenes, o-xylene, PCE, toluene, and TCE.

- Analytes detected by the mobile laboratory in deep (> 6 ft bgs) probes included m,p-xylenes, PCE, and TCE. Acetone, PCE, and trichlorofluoromethane were detected in the sample collected for fixed laboratory analysis by EPA Method TO-15 from SV-29 at 5 feet bgs at concentrations below the reporting limits of the mobile laboratory.

- PCE was detected at higher concentrations in deep probes than in shallow probes.

- Calculated permeabilities ranged from 1.3E-08 square centimeters (cm^2) to 2.6E-06 cm^2.

4.3 Sub-Slab Soil Vapor Sampling

As discussed in Section 3.6, sub-slab soil vapor samples were analyzed for VOCs by a mobile laboratory and pneumatic testing was conducted at each of the probe locations. VOC detections are outlined in Table 6 and shown on Figure 9. Sub-slab soil vapor laboratory reports are included in Appendix G. Pneumatic testing results are shown on Table 5b, with the field forms included in Appendix E. Area average concentrations calculations are presented in Appendix H. Screening levels for sub-slab samples were derived by adjusting the commercial/industrial indoor air CHHSLs by the DTSC default attenuation factor (0.005) for commercial buildings with a concrete slab (Cal EPA, 2005). A summary of sub-slab soil vapor results are as follows:

- Analytes detected by the mobile laboratory included benzene, m,p-xylenes, PCE, and toluene.

- 2-Butanone (MEK), acetone, benzene, PCE, toluene, and vinyl acetate were detected in the sample collected for fixed laboratory analysis by EPA Method TO-15 from SV-41 at concentrations below the reporting limits of the mobile laboratory.

- Benzene and PCE were detected at concentrations greater than the screening levels (but within an order of magnitude) in four of the 15 sub-slab soil vapor probes.

- Area-weighted concentrations were found to be lower than the screening levels (Appendix H and Table 6).

- Permeabilities ranged from 5.2E-08 cm^2 to 2.4E-10 cm^2.

4.4 DPT and Monitoring Well Groundwater Sampling

Groundwater data was obtained from DPT sample locations and monitoring wells in 2009 and from the expanded well field during the March/April 2010 sampling event.

This section discusses the results of the DPT groundwater sampling and the most recent sampling of the groundwater monitoring well network. Although the events were not concurrent, the combined data set provides the most spatially comprehensive picture of groundwater conditions. Historical groundwater monitoring data, including the 2009 data are provided in Appendix I. Groundwater well sampling forms from the March/April 2010 event are included in Appendix I. Based on the potentiometric levels recorded during the March/April 2010 groundwater monitoring sampling event, shallow groundwater flow is estimated to be flowing to the north-northeast with a gradient magnitude ranging from 0.004 to 0.01 (Figure 5). Groundwater flow in the deeper zone is estimated to be towards the west-northwest with a gradient magnitude of 0.0002.

As discussed in Section 3.6, groundwater DPT samples were analyzed for VOCs and 1,4-dioxane. Detected VOC and 1,4-dioxane concentrations for DPT and monitoring well concentrations from March/April 2010 are shown in Table 7 and illustrated in Figures 11A and 11B. Groundwater monitoring wells sampled in March/April 2010 were also analyzed for inorganic compounds and detected compounds are shown in Table 8 and Figures 10A and 10B. Vertical distributions of contaminants in groundwater are shown on Figures 12A-C. Groundwater laboratory reports are included in Appendix G. A summary of the 2010 groundwater sampling results are as follows:

- Analytes detected at concentrations above Federal (40 CFR 141.61) and/or California (22 CCR 64435, 64444.5) Maximum Contaminant Levels (MCLs) include 1,1-dichloroethane (DCA), 1,1-dichloroethene (DCE), 1,4-dioxane, arsenic, cis-1,2-DCE, trans-1,2-DCE, PCE, TCE, sulfate, and vinyl chloride.

- Concentrations of analytes in groundwater were higher in the deeper coarse grained sediments than in the shallower coarse grained units, except for TCE, t-1,2-DCE, and c-1,2-DCE in sampling point DPT-1, c-1,2-DCE in sampling point DPT-7, and c-1,2-DCE in well MW-7S/D.

- One or more analytes were detected in DPT and monitoring well locations, except DPT-18.

- Organic analytes detected in one or more groundwater sample were 1,1-DCE, 1,1-DCA, benzene, cis-1,2-DCE, chloroform, MTBE, trans-1,2-DCE, TCE, and 1,4-dioxane, TPHd, TPHg, PCE, and vinyl chloride.

- Inorganic analytes detected in one or more groundwater sample were alkalinity, arsenic, barium, bicarbonate, calcium, chloride, copper, magnesium, molybdenum, nickel, nitrate, sodium, sulfate, vanadium, and zinc.

5. DISCUSSION

As discussed in Section 1, the goals of this Report are to:

1) Revise the Site-wide soil vapor survey to evaluate potential health risks to Site occupants; and

2) Evaluate the potential for, magnitude of, and nature of, Site impacts to groundwater contamination.

5.1 Vadose Zone Evaluation

5.1.1 Soil Data

Arsenic was the only analyte detected at concentrations that exceeded the residential RSLs in soil samples collected in the 2009 or 2010 sampling events. Arsenic was detected in concentrations that exceeded the RSLs in each of the soil borings analyzed. Arsenic in southern California is naturally occurring in soils at concentrations exceeding the EPA industrial use RSL of 1.6 mg/kg (EPA, 2011). The DTSC has concluded that the upper-bound 95% confidence limit of background concentration for arsenic in naturally occurring southern California soils is 12 milligrams per kilogram (mg/kg) (Chernoff, Bosan, and Oudiz, 2008). Of the 74 soil samples collected in the top 15 feet of soil and analyzed for arsenic, only two samples (3% of sample size) had arsenic concentrations above the background value of 12 mg/kg (29.1 mg/kg at SB-39 [5 ft bgs] and 15.4 mg/kg at SB-23 [1 ft bgs]).

A statistical analysis of the Site arsenic data was conducted to determine if arsenic is naturally occurring (i.e., present at "background" concentrations) and is presented in Appendix J. The background statistical analysis demonstrated that Site arsenic data is reasonably expected to be present at "background" concentrations. Only one soil sample out of 74 soil samples analyzed for arsenic in the top 15 ft of soil exceeds the statistically derived inflection point (see Appendix J). Sample SB-39 collected at 5 ft bgs contained an arsenic concentration of 29.1 mg/kg. The depth of this sample is considered inaccessible to workers and where direct contact exposures are unlikely to occur. Additionally, the Site will likely remain paved or under a building footprint (i.e., workers will not have direct contact with soils) with a land use restriction to remain used for industrial purposes. Even if in the future, the Site were to ever be redeveloped, the likelihood of a worker being continuously exposed to the maximum detected arsenic concentration (to a single sample point at location SB-39) over a considerable length of time is highly remote.

5.1.2 Soil Vapor Data

In order to evaluate whether any potential health risks to Site occupants exist, analytes detected in soil vapor were compared to screening levels. Outdoor soil vapor survey results were compared to soil vapor CHHSLs for industrial/commercial use and sub-slab soil vapor survey results were compared to indoor air industrial/commercial CHHSLs with an attenuation factor to account for the concrete slab. Detected concentrations of analytes in outdoor soil vapor were less than industrial/commercial CHHSLs (Table 4).

Benzene and PCE were sporadically detected in sub-slab soil vapor samples at concentrations greater than screening levels calculated assuming a 10^{-6} target risk level; however, the area-weighted average concentrations are below their respective adjusted indoor air CHHSLs. Area-weighted average concentrations were calculated for each analyte detected in sub-slab soil vapor samples (Table 6 and Appendix H). A description of the methodology used in the area-weighted average calculation is presented in Appendix H. The area-weighted average soil vapor results were compared to adjusted industrial/commercial CHHSLs (Cal EPA, 2005). None of the chemicals detected had area-weighted average concentrations that exceeded their respective adjusted soil vapor CHHSL concentrations. Therefore, residual chemical concentrations at the Site are unlikely to pose an unacceptable health risk, and soil remediation is not necessary.

5.1.3 Vadose Zone Summary

Based on soil and soil vapor data collected during the 2009 and 2010 sampling events, there are no indications of significant organic or inorganic sources in the vadose zone. Additionally, the concentrations detected in soil and soil vapor do not appear to represent an unacceptable risk to human receptors or groundwater.

5.2 Groundwater Impact Source Evaluation

Based on previous sampling events, there have been impacts to groundwater either from the Site, from a source upgradient of the Site, or from both. If the Site impacted groundwater, one or more of the following conditions would likely be true:

1) Similar analytes (or breakdown products) would be detected in soils and in groundwater;

2) Similar analytes (or breakdown products) would be detected in soils closest to the groundwater table (we would not expect concentrations to decrease with depth);

3) It would be less likely to find the highest groundwater concentrations in wells located on the upgradient Site boundary;

4) Higher groundwater concentrations would be detected in shallow groundwater samples; and

5) Concentrations of analytes in soil vapor samples would be greater than or equal to the groundwater concentration adjusted by the Henry's Law Constant.

These criteria and their applicability to the Site are discussed below.

1) *Similar analytes (or breakdown products) would be detected in soils and in groundwater.*

Analytes detected in shallow groundwater were mostly chlorinated compounds (1,2-DCA, 1,2-DCE, cis-1,2-DCE, trans-1,2-DCE, etc). However, chlorinated solvents were rarely detected in soil and soil vapor samples. Only three of 95 soil samples collected had detected concentration of PCE and other chlorinated compounds were not detected. In the soil vapor locations, PCE and TCE were detected at low concentrations. Based on Henry's Law constants for PCE and TCE, and the concentrations in groundwater, the soil vapor detections are likely due to off-gassing from the groundwater. Therefore, the similarity of analytes/breakdown products detected in soils and in groundwater is minimal.

2) *Similar analytes (or breakdown products) would be detected in soils closest to the groundwater table (we would not expect concentrations to decrease with depth).*

As shown in Figures 4A-C, the majority of detected analytes in soil samples were detected in the 1 ft bgs samples. At 1 ft bgs, 14 organic analytes were detected. At 5 ft bgs, 10 organic analytes were detected. At 10 ft bgs, no organic analytes were detected, and at 15 ft bgs (5 feet above groundwater), the only organic analytes detected were benzene, ethylbenzene, PCE, and toluene were detected. Detected organic analytes are shown on Figures 4A-C. As previously stated, detected analytes in the groundwater primarily consist of chlorinated VOCs. Therefore, analytes detected in groundwater have not been detected in soils closest to the groundwater table.

3) *It would be less likely to find the highest groundwater concentrations in wells located on the upgradient Site boundary.*

The highest concentrations of analytes in shallow groundwater were detected in MW-6, MW-8S, and MW-4RS (Figures 11A and 11B). These locations are the southern-most sample locations at the Site. Given that the shallow groundwater flow direction is to the north-northeast the highest concentrations in groundwater are detected on the upgradient side of the Site[1]. As shown in Figures 11A through 11C, groundwater concentrations generally decrease along the groundwater flow path through the Site. The location of high-concentration sample locations is indicative that the source of elevated groundwater concentrations is likely somewhere to the south/southwest of the Site.

There are a number of sites listed on the Geotracker website which are located to the south/southwest of the Site (Figure 3). Among these sites is a case opened January 12, 2010 for LeFiell Manufacturing Company, located directly upgradient of the Site. The LeFiell Manufacturing site was identified by Caltrans as part of a regional soil and groundwater quality assessment (LeFiell, 2010). PCE and TCE have been identified in both groundwater and soil at the LeFiell Manufacturing site at concentrations orders of magnitude greater than those detected at 13711 Freeway Drive. During the Caltrans study, a PCE concentration of 3,600 micrograms per kilogram (µg/kg) was detected in soil at 25 ft bgs and TCE was detected at concentrations up to 220 µg/kg at the same depth. In groundwater approximately 20-30 ft bgs, PCE and TCE were detected at concentrations of 11,000 and 1,600 micrograms per liter (µg/L) (11 and 1.6 milligrams per liter (mg/L)) respectively. In comparison, the maximum PCE concentration detected in shallow groundwater at the Site during this round of sampling was 7.1 µg/L and the maximum detected concentration of TCE was 430 µg/L. The LeFiell Manufacturing site is in the preliminary stages of investigation with the DTSC and submitted a Site Investigation Work Plan in April 2010 (Appendix K).

4) *Higher groundwater concentrations would be detected in shallow groundwater samples.*

As shown in Figures 11A and 11B, VOC concentrations generally increase with depth. For instance, at MW-6, screened in shallow groundwater, cis-1,2-DCE and TCE were detected at concentrations of 130 and 85 ug/L, respectively, while at MW-6D, screened in deeper groundwater, cis-1,2-DCE and TCE were detected at concentrations of 460 and 430 ug/L, respectively. Similar trends are observed at MW-4RS/MW-4D and DPT-20. The exceptions to this trend are generally found downgradient, where VOC detections are more dilute in both shallow and deep groundwater, in the center and northern portions of the Site. The other exception to this trend is MW-7S/MW-7D. Based on the shallow flow direction to the northeast, MW-7S is located downgradient of elevated groundwater concentrations on the upgradient side of the Site. However,

[1] The AIP site located to the southwest of the Site also shows a northerly groundwater flow direction (LARWQCB, 2010).

MW-7D is located crossgradient from elevated concentrations based on a flow direction in the deeper groundwater to the northwest.

The highest concentration of every VOC detected in DPT samples was detected in a deep (approximately 40 ft bgs) groundwater sample, with the exception of MTBE. Similarly, the highest VOC concentrations detected during groundwater monitoring were from wells screened below 40 ft bgs, with the exception of several analytes detected in MW-8S, which has no corresponding deep well.

5) *Concentrations of analytes in soil vapor samples would be greater than or equal to the groundwater concentration adjusted by the Henry's Law Constant.*

VOCs detected in groundwater were used as the analytes of interest in the effort to assess whether the Site has contributed to groundwater impacts. This assessment was conducted assuming chemicals in groundwater would be present in the vadose zone at the Site. Using Henry's Law, the maximum potential concentration in groundwater was calculated from the maximum observed soil vapor concentrations (Table 9). An evaluation was then performed, comparing the highest observed concentrations of the same VOCs in groundwater (from any depth) and the highest potential concentrations of VOCs in groundwater based on concentrations in soil vapor (from any depth, including sub-slab).

It would be expected that if the source of the groundwater VOC contamination originated on Site, the concentrations of VOCs observed in groundwater would be less than or equal to the maximum concentration in soil vapor adjusted by the Henry's Law constant. For conservative purposes, it was assumed that neither dilution, nor attenuation occurred from the potential source of contamination to groundwater.

For each analyte, the observed maximum concentration in groundwater exceeded the concentration calculated by applying Henry's Law to the maximum concentration in soil vapor, generally by at least one order of magnitude. Thus, based on observed groundwater concentrations, the soil vapor concentrations observed on Site are significantly lower than what would be expected if a release at the Site was the source of the impacted groundwater.

6. CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

The purpose of this environmental Site assessment was to evaluate the potential health risks to Site occupants and evaluate the potential for Site impacts to groundwater under the Site.

Based on the soil vapor survey and the health risk screening evaluation, the soil vapor concentrations for each constituent did not exceed their respective commercial/industrial soil vapor CHHSLs (Table 4). Several sub-slab soil vapor samples collected beneath the building had detections of benzene and PCE that exceeded the adjusted commercial/industrial indoor air CHHSLs (Table 6)[2]. However, the area-weighted average sub-slab concentrations did not yield concentrations that exceeded the adjusted commercial/industrial indoor air CHHSLs.

The Site also does not appear to have impacted the groundwater at the Site. The conditions encountered at the Site during the environmental Site assessment do not correlate with conditions that would be expected if the Site impacted groundwater.

Based on the results of the environmental assessment:

1. Vadose zone soil concentrations are below the screening levels with the exception of arsenic;
2. Soil vapor concentrations are generally low across the Site;
3. The deeper coarse grained units have higher concentrations of VOCs in groundwater than shallower coarse grained units;
4. The highest concentrations of VOCs in groundwater are found in wells on the upgradient side of the Site;
5. The source of groundwater impacts appears to be located off-Site to the south/southwest of the Site.

There are a number of impacted sites located to the south/southwest of the Site listed in the GeoTracker database. One of these sites, the LeFiell Manufacturing site, is located in very close proximity, upgradient of the Site, with soil concentrations of both PCE and TCE in soil several orders of magnitude greater than RSLs. Concentrations of these and

[2] The adjusted commercial/industrial indoor air CHHSLs were obtained by applying an attenuation factor for the concrete slab.

other chlorinated compounds in groundwater are also numerous orders of magnitude greater than MCLs. In comparison, the maximum detected concentration of PCE in groundwater at the Site was 7.1 µg/L and at the LeFiell Manufacturing site, the maximum detected concentration in shallow groundwater was 11,000 µg/L. The maximum detected concentration of TCE in shallow groundwater from at the Site was 430 µg/L and at the LeFiell Manufacturing site the maximum concentration detected in groundwater was 1,600 µg/L. Based on local north/northeast groundwater flow identified in this investigation and in investigations at the nearby AIP site (LFR, 2007), the impacts at the LeFiell Manufacturing site are upgradient of the Site (Figure 3). The impacts at the LeFiell Manufacturing site have significantly higher concentrations than those found at the Site. The LeFiell Manufacturing site is in the preliminary stages of investigation with the DTSC and submitted a Site Investigation Work Plan in April 2010 (Appendix K). Although the investigation at the LeFiell Manufacturing site is ongoing, it appears to be a likely source of groundwater contamination at the Site.

6.2 Recommendations

Based on the results of the environmental and supplementary site assessments, the Site is not the source of contamination, and no further action is recommended for the Site.

Notes

ft bgs - feet below ground surface

mg/kg - milligrams per kilogram

NR - no screening level available

NA - no sample was taken

Shaded cells - concentration greater than the regional screening level

Regional Screening Level (EPA, 2011)

Analytes no listed were not detected above laboratory reporting limits in the samples analyzed

Geosyntec consultants

ug/L - micorgrams per liter

ft bgs - feet below ground surface

* Commercial/Industrial Shallow Gas California Human Health Screening Levels (CHHSLs)

[1] - detection from fixed laboratory TO-15 analysis, no compounds detected above their reporting limits in the primary sample analyzed by EPA Method 8260B

Note that TO-15 analysis detection limits are below detection limits of 8260B analysis.

CHHSL for Ethylbenzene not published, screening value calculated following methods presented in CHHSL documentation

NR - no screening level available

Probe depth shown is the center of the sand pack

L - liters
in H_2O - inches of water column

Estimated permeability from observed flow-vacuum response

Minimum permeability (kavg) for the Site 1.3E-08
Maximum permeability (kavg) for the Site 2.6E-06

$$k = \frac{Q}{H}\frac{\mu}{P_w \pi}\frac{\ln(R_w / R_I)}{\left[1-\left(P_{atm}/P_w\right)^2\right]}$$

	Definition	Units	Value	Conversion Factor / Comment
	- permeability	cm^2	calculated	$1\ m^2 = 1\text{x}10^4\ cm^2$
Parameter	- flow rate	cm^3/s	measured	$1\ cm^3/s$ = 1L/min x (1000 cm^3/L) / (60 s/min)
k	- screened interval soil vapor		30.0	sand pack length
Q	- gas viscosity	g/cm/s	0.000182	
H	- well pressure	$g/cm/s^2$	measured	Pw = (406.8 in H_2O - well vacuum[in H_2O]) x (1.01 x 10^6 $g/cm/s^2$) / (406.8 in H_2O)
μ	- atmospheric pressure	$g/cm/s^2$	1.01E+06	$1.01\text{x}10^6\ g/cm/s^2$ = 406.8 in H_2O
Pw	- well radius	cm	3.10	hole radius
Patm	- radius of influence	cm	100.0	permeability calculation is not sensitive to selected value for R_I

Notes

* Industrial/Commercial Indoor Air California Human Health Screening Level (CHHSL) divided by an attenuation factor of 0.005

Attenuation factor of 0.005 used in accordance with Guidance for the Evaluation and Mitigation of Suburface Vapor Intrusion to Indoor Air (DTSC, 2005), Table 3

[1] - detection from fixed laboratory TO-15 analysis, no detections in mobile laboratory 8260B analysis

[2] Calculations for Area Average Concentration are presented in Appendix H

Shaded cells - detected value is greater than screening value

J - laboratory estimated value

ug/L - micrograms per liter

NR - no screening level available

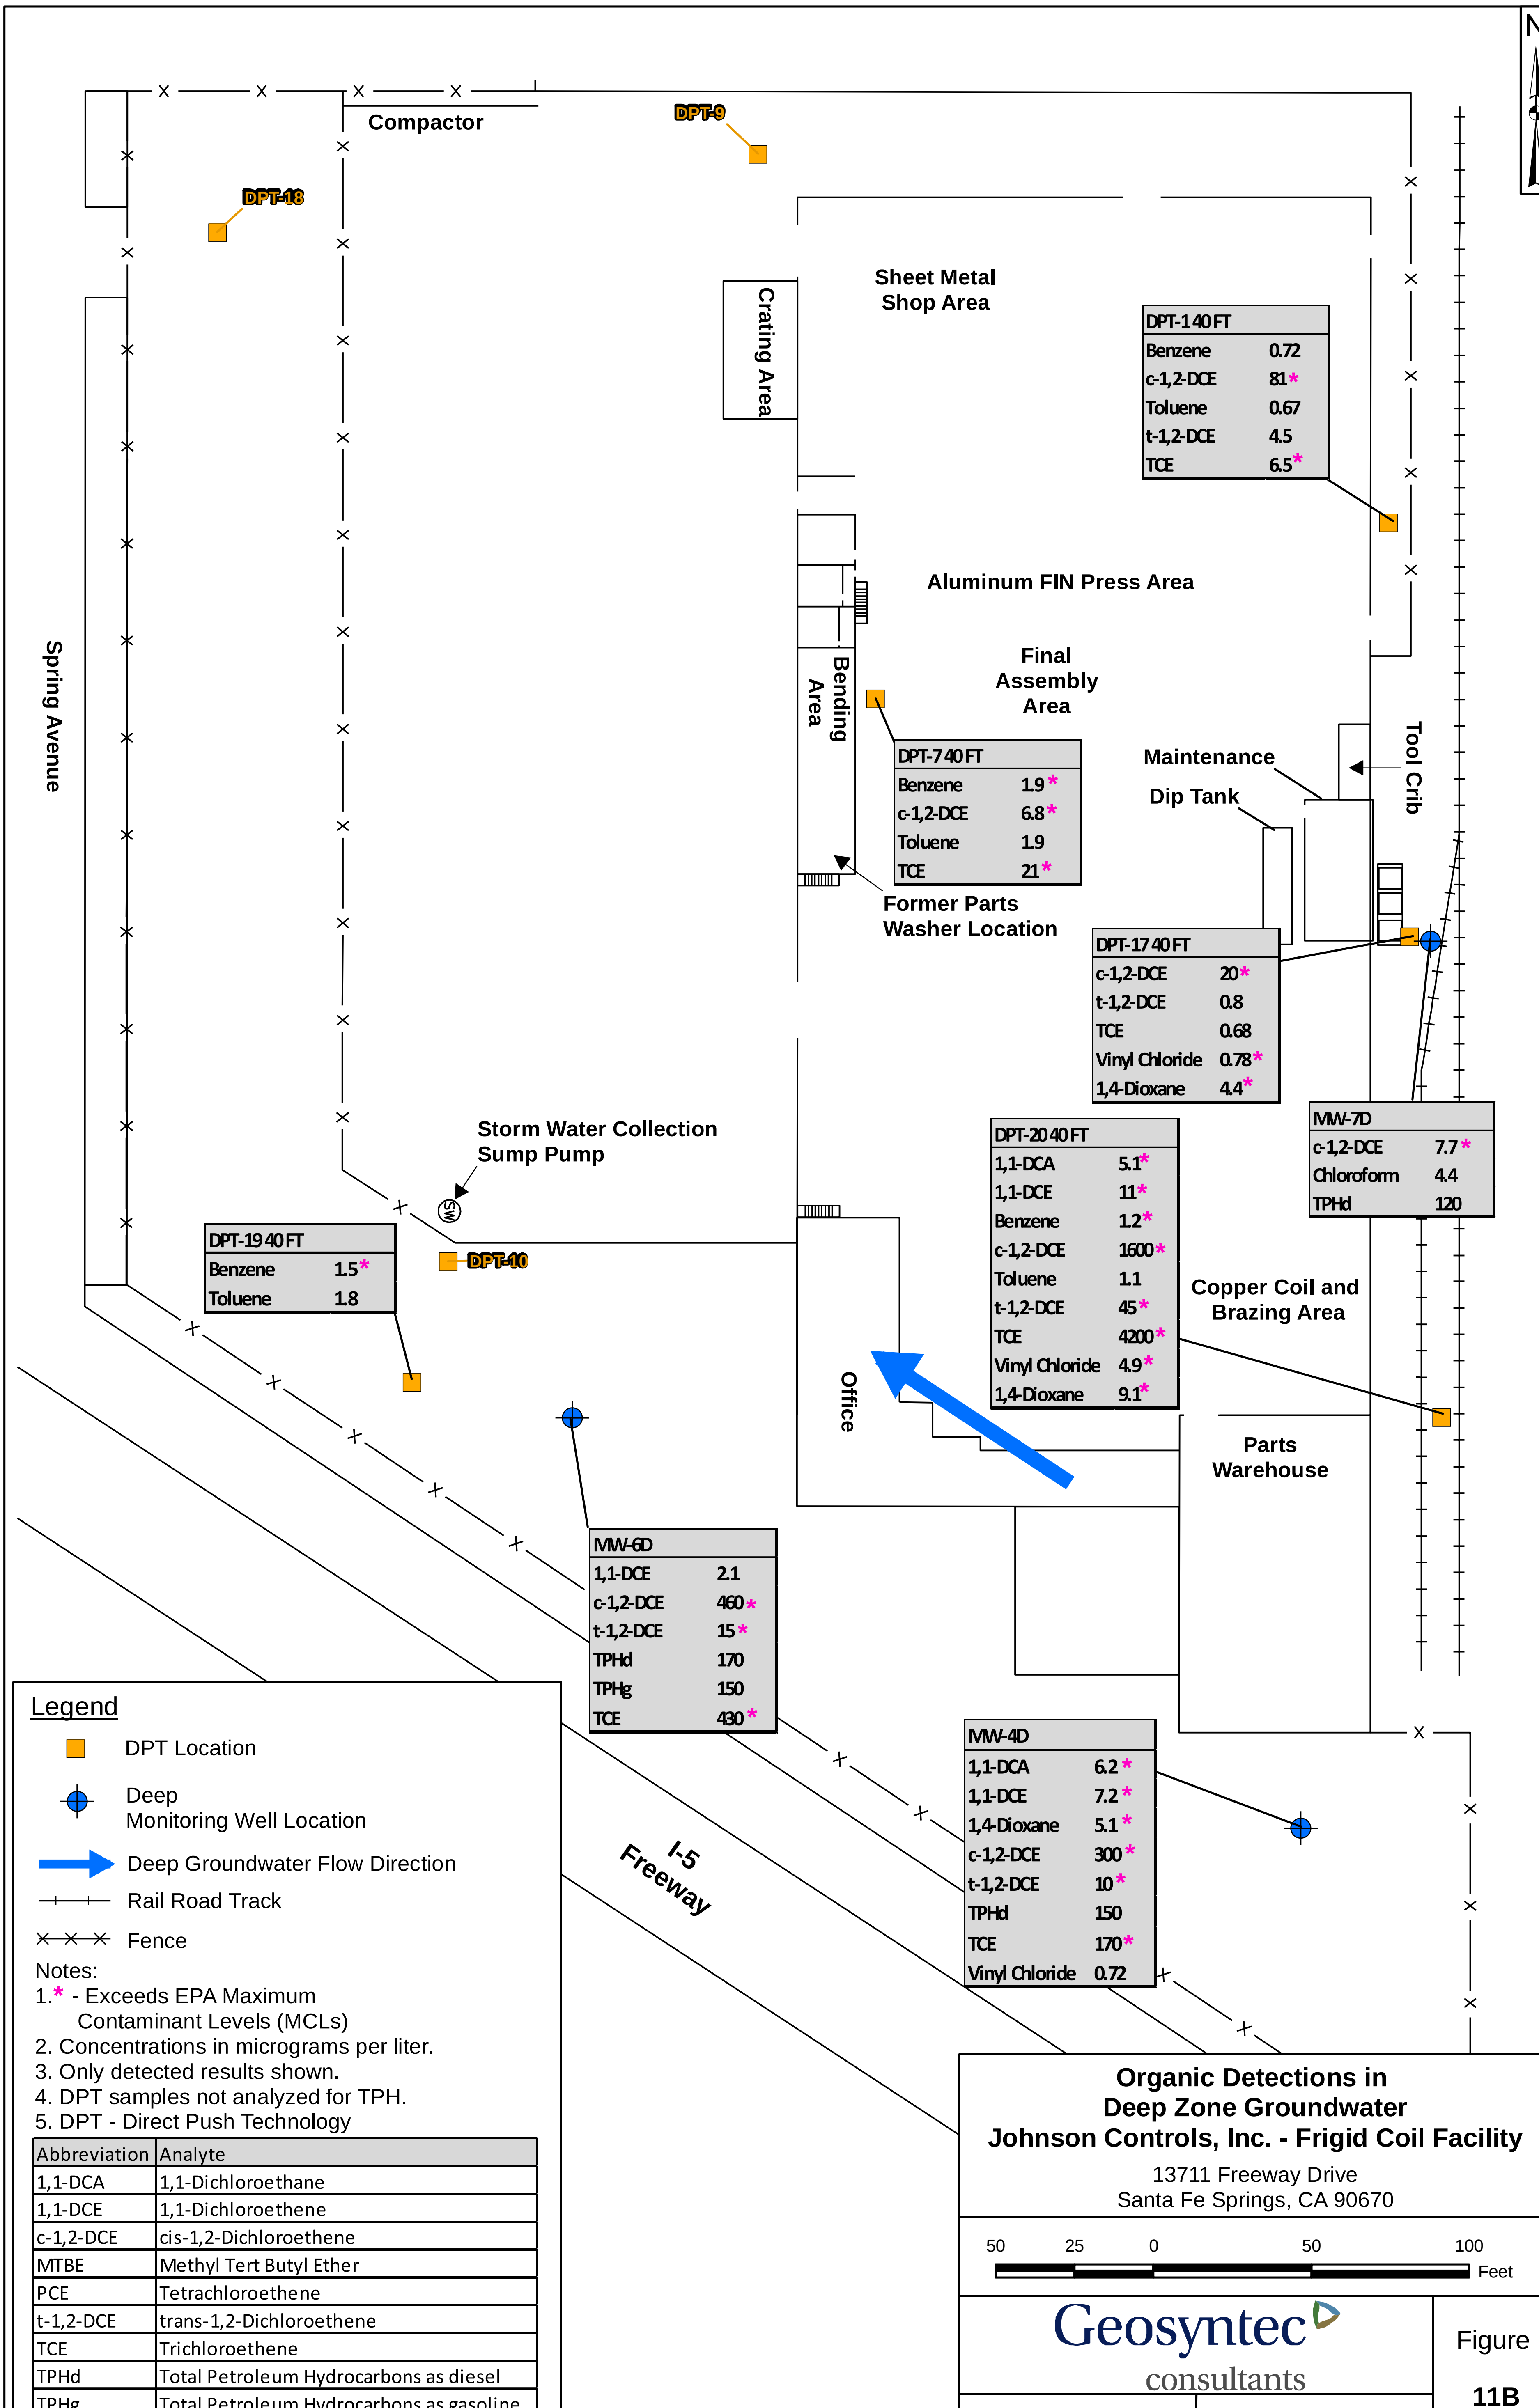
Abbreviation	Analyte
1,1-DCA	1,1-Dichloroethane
1,1-DCE	1,1-Dichloroethene
c-1,2-DCE	cis-1,2-Dichloroethene
MTBE	Methyl Tert Butyl Ether
PCE	Tetrachloroethene
t-1,2-DCE	trans-1,2-Dichloroethene
TCE	Trichloroethene
TPHd	Total Petroleum Hydrocarbons as diesel
TPHg	Total Petroleum Hydrocarbons as gasoline



Legend

- DPT Location
- Deep Monitoring Well Location
- Deep Groundwater Flow Direction
- Rail Road Track
- Fence

Notes:

1.* - Exceeds EPA Maximum Contaminant Levels (MCLs)
2. Concentrations in micrograms per liter.
3. Only detected results shown.
4. DPT samples not analyzed for TPH.
5. DPT - Direct Push Technology

Abbreviation	Analyte
1,1-DCA	1,1-Dichloroethane
1,1-DCE	1,1-Dichloroethene
c-1,2-DCE	cis-1,2-Dichloroethene
MTBE	Methyl Tert Butyl Ether
PCE	Tetrachloroethene
t-1,2-DCE	trans-1,2-Dichloroethene
TCE	Trichloroethene
TPHd	Total Petroleum Hydrocarbons as diesel
TPHg	Total Petroleum Hydrocarbons as gasoline

DAILY FIELD REPORT

PROJECT: JCI Frigid Coil
LOCATION: Santa Fe Springs, CA PROJECT NO.: HU1148 TASK NO.:
DESCRIPTION: Well destruction DATE: 15 day 03 month 2010 year
CONTRACTOR(S): ABC drilling
WEATHER, TEMPERATURE:

0540 depart Huntington Beach
0610 arrive on site
0630 tailgate meeting
0700 Walk site with James Alken and driller
While geophysics begins work driller assistant back to shop to get supplies
0710 tagged total depth of MW-4 50 ft bgs
0715 mobilize inside building with geophysics crew
0745 driller breaking up well box while waiting for augers
0817 driller's assistant Kyle returned preparing to drill out well to 50' bgs with 10" augers
0820 begin drilling out well casing
0828 Support truck arrives, health and safety tailgate with new helper
0850 receive call from James Alken still working on code for gate, need to check in warehouse for bathroom, he would like us to get two borings from inside building
0928 GeoVision departs site, they will email utility locations they have marked out
1000 gas company on site walk locations near railroad tracks with him, he clears all 4 locations marked
1120 depart site, Venessa will oversee next abandonment

DESCRIPTION: ~~Bore~~ [VF] Soil Sampling w/ Handauger DATE: 31 day 03 month 10 year

CONTRACTOR(S):

WEATHER, TEMPERATURE: cool, partly sunny, some clouds

0510 Left Oak Hills
0655 got ice
0700 Arrive on-site
0720 Safety tailgate
0800 Begin at SB-28
0810 SB-28-1 sample, silty, sandy, clay [VF] fill material
0818 Notice soil gets darker @ ~ 2'10", silty sand w/ slight coffee odor 1.6 ppm next to hole, 1.3 ppm in hole.
0820 Soil gets lighter @ ~ 3'11", silty sand.
0823 Sample SB-28-5, silty sand
0835 2.7 ppm in hole, 2.0 ppm in breathing zone
0842 Sample SB-28-10, sand w/ silt
0850 Poured Enviroplug med. Chips down hole to seal.
0900 Finish @ SB-28
0910 Start @ SB-27
0913 SB-27-1 sample, fill material, silty sandy clay.
0926 SB-27-5 sample,
0954 at ~ 8'4" hit a silty clay w/ high plasticity
0957 at ~9' ~~turns~~ soil is a silty sand.
0958 Sample SB-27-10, fine-grained sand
1026 SB-27 completed and filled w/ Enviroplug Med. Chips.
1045 Start at SV-41 probe (subslab) install.
[VF] 1105 Finish subslab probe @ SV-41, used a ~~st~~ [VF] zip tie to hold probe in place, then cemented
1138 start @ SB-35
1146 Sample SV-35-1, silty, sandy clay w/ low plasticity, fill material

CONTRACTOR(S):

WEATHER, TEMPERATURE: cool, cloudy

0530 Left Oak Hills
0653 Arrived on-site.
0735 MW-8S Depth to water 20.49 ft bgs
0737 Start pumping
0744 DTW 20.84 ft bgs.
0830 JMH Construction came on site to change the locks for the building. They shut & locked all the doors + gates to the building. They said they were here @0710 and did not see anyone (us) so they said All they saw was open doors & gates. Rachel and I have been here since before 0700. They may not have seen us because we were on the South side of the building @ MW-8S
0911 Re-opened building, noticed that guys from JMH construction did not lock the bottom 2 latches on the roll down door (main entrance to warehouse).
0943 Begin pumping @ MW-5
1110 Finish @ MW-5
1145 Begin pumping @ MW-6D
1215 took pump out of well to check because foam was coming out of top of well and were getting inconsistent DTW Readings. Checked all connected tubing and everything looked fine. ~~Redrse~~ Reduced pressure to 50 PSI from 60PSI to see if that would help.
1610 Start @ MW-2
1849 Left site

PROJECT: Frigid Coil Facility Johnson Controls

LOCATION: Inside Warehouse PROJECT NO. HW1148 TASK NO.:

DESCRIPTION: Soil gas and groundwater sampling DATE: 23 day 01 month 2009 year

CONTRACTOR(S): Interphase

WEATHER, TEMPERATURE: raining, cool, 50-60°

10:25 depart Huntington Beach
11:10 arrive on site, check in with Kyle regarding progress. PID lamp not working Ashread will send another
12:05 Kyle goes to collect ice for samples Marlene adding new tree way valves to soil gas probes per instructions from Kevin Coffman
1230 Robert from the mobile lab calls says that lab calibration has been unsuccesful and they will not be able to run samples today begin drilling DPT-7R-40
1255 Kyle departs site after dropping off ice Robert returns after checking with his office, they do not have enough summa cannisters to collect all indoor samples today, attempted to call James Allen and Andrew Barnes, left message for James, spoke with Robbie Ettinger, tedlar bags are not a good solution because they would need to be run today
1330 received call from James Allen, we do have access to the site on Monday, Robert departs site with soil samples from SB-7R
1335 terminate boring at 44 ft bgs DPT-7R-40 to be collected from 39-44 ft bgs
1340 begin drilling DPT-7-30 (screen 29-34')
1400 finished setting screen in DPT-7-30

DESCRIPTION: Soil Sampling, gw sampling DATE: 23 day 01 month 2009 year

CONTRACTOR(S): Interphase

WEATHER, TEMPERATURE: rainy, cool, 50s

1400 begin installation of DPT-7-20 (screen 19-23)
1410 finish setting screen, drillers break for lunch
1430 conversation with James regarding adding a crew of drillers on Monday, he will check with Andrew then get back to me
1515 drillers return from lunch, no water in DPT-7-20
1520 begin sampling DPT-7-40
1630 sampling complete at DPT-7-40 and DPT-7-30 no water in DPT-7-20, will leave screen in place over the weekend at DPT-7-20, drillers grouting and cleaning up DPT-7-40 and DPT-7-30 went to check water in DPT-19-20 there were 1.7 feet of water, checked water in DPT-18-20, boring was dry
1635 call with James Allen, I believe we can fill VOAs from DPT-19-20, but may not be able to fill an amber for 1,4-Dioxane; James wants to consult Andrew, we will leave DPT-19-20 and DPT-18-20 in place over the weekend as well as DPT-7-20 and soil vapor probes in building
1645 spoke with facilities manager El, he has no problem with leaving the trailer in the fenced area over the weekend and with us coming back to complete work inside the building Monday
1700 cleaning up, all workers depart

DESCRIPTION: Soil groundwater, soil vapor sampling DATE: 26 day 01 month 2009 year

CONTRACTOR(S): Interphase

WEATHER, TEMPERATURE: Clear, cool in morning

0650 depart Huntington Beach
0724 arrive on site
0755 phone call from James Allen with instructions to core and log the entire sample from DPT-18-30 then potentially readjust the sample interval for DPT-18-20; begin sampling DPT-19-20 for 1,4-Dioxane then attempt to sample for VOCs; and core and install soil vapor probes at each location first then later go back to sample for groundwater to avoid off gassing from groundwater
0800 Interphase on site Denny, Marco, Paul and Cesar
Health and Safety tailgate
0815 begin drilling/coring SV-16 with crew 2
crew 1 begins with installing probe with sand pack from 4' to 5' bgs at SV-15
0840 decide based on geology to set probe in SV-16 with sand packs from 3.5' to 4.5' and 8.5' to 9.5'
Rachel arrives on site
0905 Rachel goes to collect ice
0910 mobile lab arrives on site, checked DPT-7R-20, no water
0950 based on geology, setting screens at 12.5-13.5' and 9-10' in SV-14
1005 based on geology, setting first probe from 8.5' to 9.5' in SV-10R, shallow probe to be set from 4' to 5'
1050 begin drilling SV-1
1110 based on geology, decide to set probes at SV-1 at 9.5-10.5' & 4.5-5.5'

CONTRACTOR(S): Interphase

WEATHER, TEMPERATURE: Clear, cold

0608 depart Huntington Beach
0650 arrive at Site DPT-17 and DPT-20 location
track rig in place, waiting for Interphase
0700 Interphase arrives on site health and safety
tailgate, conversation with Danny regarding
best way to access DPT-17 and DPT-20
based on difficulties maneuvering, will try to
use truck instead of track
0800 began drilling at 0755, took maneuvering to position
rig over railroad tracks
0855 terminate SB-17, DPT-40 to be screened 39-44,
DPT-30 to be screened 28-32, DPT-17-20 to be
Screened 17-21
0900 mobile lab arrives on site, go to open gate
0915 gates open to fenced area
1035 sampling progressing slowly with DPT-17-20 and
DPT-17-40, going over with
1125 based on lithology, setting soil vapor probes
at 9-10' bgs and 5.5-6.5' sand pack in SV-2
1250 based on lithology, set screens from 34-44 and
28-32, formation near 20 does not yield much water after four hours;
based on core, not enough water in shallow boring
and deep boring at DPT-17 to complete sampling,
a second attempt will be made after DPT-20 is
complete

Instructions for Incident Reporting

If Serious and/or Life Threatening

If Serious and/or Life Threatening seek immediate medical attention at the hospital/facility that provides emergency care listed in the HASP, Office Preparedness Plan, or on the office bulletin board.

If Non-Life Threatening

Manager/Supervisor calls the EHS Department at **(804) 349-8067** or **(404) 435-4722**—to discuss appropriate medical attention (even if he/she thinks medical attention is not required.). If unable to contact the EHS Department within one (1) hour, a detailed voicemail with information about the incident must be provided and Gail Hapeman in Human Resources [(561) 922-1002] must also be contacted to obtain the name and address of nearest Workers' Compensation provider.

- Manager/Supervisor contacts Gail Hapeman in Human Resources —Office: (561) 922-1002, Mobile: (561) 789-6830 with additional details of the incident by the end of the work shift.
- Within 24 hours, the Manager/Supervisor completes a draft of the Manager's Report of Incident that is found on the EHS website and sends to Gail Hapeman at (561) 922-1101.
- Manager/Supervisor forwards the finalized paperwork within 48 hours to both EHS (dprokopchak@geosyntec.com); fax (804) 332-6732 and HR (ghapeman@geosyntec.com); fax (561) 922-1101 for review, documentation, and implementation into our case management program.
- Contractors are responsible for compliance with their internal safety procedures regarding Incident Reporting. Geosyntec will document the Contractor's incident in their Project Logbook.
- In the event of a vehicle accident that does not involve injuries, please follow the procedures outlined in EHS 105—Driver Safety.

TABLE OF CONTENTS

1. SIGNATURES

1.1 Preparers and Reviewers

This HASP, which must be maintained on site when field work is being performed, addresses the health and safety hazards of each phase of site operation, including the procedures and equipment required for worker protection. Only the Site Health and Safety Officer (SHSO) can change or amend this document, in agreement with the Environmental Health and Safety Coordinator (EHSC), and Project Manager. The SHSO must initial any change made to the HASP at the relevant section. Major amendments (e.g., changes in personal protective equipment, addition of tasks, etc.) must be documented in Section 3 and in Appendix A. This HASP must be reviewed and amended on an annual basis for projects lasting more than one year.

Prepared by:	James Allen SHSO	1/15/09 Date
Reviewed by:	Marlene Duffy EHSC	1/15/09 Date
Approved by:	Andrew Barnes Associate-in-Charge Manager	1/15/09 Date

Copy Cover Sheet to: EHSC

1.2 Site Workers

A pre-entry briefing conducted by the SHSO must be held prior to initiating the field work of this project. All sections of this HASP must be reviewed during this briefing. Any worker not in attendance at the initial meeting must be trained by the SHSO on the information covered in the pre-entry briefing. Tailgate meetings must be held at the beginning of each day by the SHSO to discuss important health and safety issues concerning tasks to be performed during that shift. Topics discussed in the tailgate meetings must be documented in a daily field log. Weekly site health and safety audits must be performed and documented by the SHSO for projects lasting more than one week. After reading the HASP and attending a pre-entry briefing, Geosyntec employees must sign the following acknowledgment statement.

"I have read, understand, and agree with the information set forth in this HASP. I have also attended a pre-entry briefing. I agree to perform my work in accordance with this HASP."

Signature	Printed Name	Date

2. DISCLAIMER

This HASP was prepared in accordance with Geosyntec Consultants' Health and Safety Procedures for use by Geosyntec project staff. This plan complies with Geosyntec internal review procedures. Geosyntec does not endorse the use of this HASP by others. This document and its contents should not be used by firms other than Geosyntec or by persons other than Geosyntec employees without a thorough peer review by their health and safety managers. Should the work outlined in this HASP be executed by contractors other than Geosyntec, the HASP should be modified and reviewed to comply with such company's corporate health and safety procedures. In the event that a contractor other than Geosyntec executes this work, the contractor should complete independent analyses of hazards and mitigation measures, and should update all HASP tables, text, figures, and appendices prior to commencing work. Geosyntec assumes no responsibility for the accuracy, content, or health and safety of non-Geosyntec personnel during the implementation of the work in this HASP by other parties.

3. HASP AMENDMENTS

Over the course of this project, it is possible that the project-specific details and working conditions will change. This HASP shall be reviewed and amended as necessary to effectively describe the changing working conditions and to mitigate the potential health and safety issues that may arise during the project. Amendments to the HASP should be briefly described in the following spaces provided. The full text of the amendments should be provided in Appendix A.

AMENDMENT 1:

Date: __________ Project Manager: ____________ EHSC: ___________________
Brief description of amendment:

____

____

AMENDMENT 2:

Date: __________ Project Manager: ____________ EHSC: ___________________
Brief description of amendment:

4. SITE/TASK DESCRIPTION

The following is a brief description of the site, including information as to the location, approximate size, previous usage, and current usage. A description of the tasks to be performed is also presented.

- Site Location: 13711 Freeway Drive, Santa Fe Springs, CA
- Approximate Size of Site: 4.9 acres
- Previous Site Usage: HVAC and refrigeration manufacturing
- Current Site Usage: Warehousing
- Tasks for this project include:

  Task 1: Soil Vapor Sampling

  Task 2: DPT Soil and Groundwater Sampling

  Task 3: Groundwater Monitoring

  Task 4:

  Task 5:

  Task 6:

  Task 7:

  Task 8:

- Description of Surrounding Property/Population:

North	Industrial-Warehouse	East	Industrial/Commercial
South	Freeway Drive and I-5	West	Spring Drive and Industrial

5. KEY PERSONNEL AND HEALTH AND SAFETY RESPONSIBILITIES

Table 1 lists project personnel and their responsibilities in regard to health and safety concerns on this project.

6. WORKER TRAINING

Table 2 presents the training and medical monitoring that project personnel have received in accordance with the company Environmental, Health, and Safety (EH&S) Training Program. Pre-entry briefings and daily tailgate meetings shall also be conducted to facilitate site-specific training.

7. MAPS AND SITE CONTROL

7.1 Routes to Hospital and Urgent Care Facility

A hospital and an urgent care facility near the site have been identified. Figure 1A presents the route to the hospital, for emergency care. Figure 1B presents the route to an urgent care facility, for non-emergency care. Both figures also include the facility name, phone number, and written directions from the site. The figures are included after the cover page of this HASP.

7.2 Site Map

A site map is presented on Figure 2, located inside the cover of this HASP. The site map is intended to show the location of the work zone(s), to provide on-site orientation, and to delineate evacuation routes. Changes may be made to the site map by the SHSO based on changing site conditions. The site map should be accessible in the work area.

7.3 Buddy System

The buddy system is required for all tasks. The buddy system includes maintaining regular contact with onsite Geosyntec personnel, clients, and/or contractors to periodically check on the condition of site workers. In situations when only one employee is performing field work, on-site personnel must have appropriate communication devices on his/her persons at all times and shall maintain contact with off-site personnel. The field worker must communicate with off-site personnel, at a minimum, of three times daily: (1) upon arriving at the site; (2) midway through the work day; and (3) upon departing from site.

7.4 Controlled Work Zones

APPLIES TO TASK: ☒① ☒② ☒③ ☐④ ☐⑤ ☐⑥ ☐⑦ ☐⑧ ☐ Not Applicable

The area(s) where work is to be performed shall be called the Work Zone. The boundaries of Work Zone shall be marked using the following methods:

- ☐ Warning tape
- ☒ Traffic cones
- ☐ Signs
- ☐ Fence
- ☐ Other: ______________________

7.5 Site Access

Access to the site must be controlled using the following method:

- ☐ Sign in/Sign out log
- ☐ Guard
- ☐ Identification badges
- ☒ Check in with SHSO
- ☒ Other: Check with Babloo Swahny inside warehouse office

7.6 Visitors

Visitors to the site may need to be continually escorted for safety purposes. Geosyntec employees must not be allowed into the Work Zone until they have received the proper personal protective equipment (PPE) and they have read, understand, and meet the requirements outlined in this HASP. Other visitors under Geosyntec's direction (subcontractors, etc.) may review this HASP for site familiarity, but they are ultimately responsible for their own health and safety (see disclaimer in Section 1).

7.7 Safe Work Practices

General Safe Work Practices that must be implemented during work activities at this site are listed in Table 3.

7.8 Inspections

For projects lasting longer than one week, the SHSO must conduct weekly health and safety inspections. The inspections must be documented using the Weekly Health & Safety Inspection Checklist included in Appendix B. The Weekly Health & Safety Inspection Checklist should be kept on file at the project site.

8. HAZARD ANALYSIS AND MITIGATORS

Site specific hazards have been identified through hazard analysis. Hazard analysis included a review of chemical, physical, and biological hazards. The analysis also identified health and safety hazard mitigators needed to protect workers, which are presented in Appendix C.

8.1 Chemical Hazards

Chemical hazards (e.g., fire, explosion, high/low pH water) due to the tasks to be performed were analyzed. Hazard mitigators for each chemical hazard identified are presented in Appendix C. These hazard mitigators must be implemented for each task in which they are applicable, as summarized in the table in Appendix C.

Potential exposure pathways to chemical health hazard agents include inhalation, dermal exposure, and/or ingestion. To effectively manage risk to exposure, constituents of concern (COCs) have been identified. Potential exposure to these COCs will be mitigated through engineering, administrative, and/or PPE controls. The COCs are documented and/or suspected materials present based on previous operations/activities. The identified COCs for this project are listed in Appendix D with appropriate hazard information, including signs of exposure. Hazard Mitigators, which include control measures and methods to minimize exposure, are presented in Appendix C. Also, airborne levels of COCs may be estimated or measured to evaluate levels of PPE that will be required for individual tasks. The type(s) of air monitoring to be performed are discussed in Section 9.

8.2 Physical Hazards

Physical hazards (e.g., electrocution due to drilling, etc.) due to the tasks to be performed and due to the site setting and condition (e.g., slips, trips, or falls due to rocky terrain, etc.) were analyzed. Hazard mitigators for each physical hazard identified are presented in Appendix C. These hazard mitigators must be implemented for each task in which they are applicable, as summarized in the table in Appendix C.

8.3 Biological Hazards

Biological hazards (e.g., allergic reactions to poisonous plants or insects indigenous to the area, etc.) associated with tasks to be performed were analyzed. Hazard mitigators for each biological hazard identified are presented in Appendix C. These hazard

mitigators must be implemented for each task in which they are applicable, as summarized in the table in Appendix C.

9. AIR MONITORING

APPLIES TO TASK: ☒① ☒② ☐③ ☐④ ☐⑤ ☐⑥ ☐⑦ ☐⑧ ☐ Not Applicable

Air monitoring will be performed to evaluate airborne exposure levels associated with the COCs on site. Hazardous conditions may include concentrations that may cause acute or chronic illness, potential oxygen deficient environments, or potential explosive environments. Air monitoring may also be performed to evaluate the adequacy of engineering, administrative, and/or PPE controls. Air monitoring may be "real-time" (e.g., the instrument provides immediate results at the project), using multi-gas meters, photoionization detectors (PIDs), or colorimetric tubes. "Non-real-time" monitoring may also be performed by collecting samples and forwarding to a laboratory for analysis and quantification.

The type(s) of air monitoring equipment required to evaluate COCs is outlined in Appendix E. Monitoring equipment must be calibrated based on the manufacturer's requirements. Calibration results and air monitoring measurements must be documented. Based on the results noted and site activities or scope of work changes, the frequency of air monitoring may be adjusted on site by the SHSO with the consent of the Project Manager and communication with the EHSC.

10. PERSONAL PROTECTIVE EQUIPMENT

The PPE required for each task is presented in Appendix D. Required equipment and types of protective clothing materials, as well as an indication of the initial level of protection to be utilized, are listed. The level of protection may be upgraded or downgraded by the SHSO according to mitigation measures required in Appendix C or according to action guidelines provided in Appendix D. The PPE that is utilized must be documented in a daily field log.

11. DECONTAMINATION

The SHSO and Project Manager will determine the type and level of decontamination procedures for both personnel and equipment based on evaluation of specific work activities in the controlled work zones. In an emergency, the primary concern is to prevent the loss of life or serious injury to personnel. Medical treatment will take precedence over decontamination in the event of a life threatening and/or serious

injury/illness. Personnel will perform decontamination in designated and identified areas upon leaving “hot zones” where the potential exists for exposure to hazardous chemical, biological, or environmental conditions.

Decontamination of personnel in Level D (modified) will consist of closure and disposal of coveralls, disposable boots, and gloves, (if applicable).

Decontamination of personnel in Level C PPE, if applicable, will consist, at a minimum, of:

- Removal and cleaning/disposal of boot covers, coveralls, and outer gloves;
- Removal, cleaning, and storage of respiratory protection;
- Washing of boots or other non-disposable PPE (e.g., hard hat, safety glasses/goggles, etc.) suspected of being contaminated using a soap solution followed by a water rinse; and
- Removal and disposal of inner gloves.

Wash solutions and PPE may require disposal at a licensed waste facility. Hand tools and sampling equipment shall be decontaminated as needed by washing in decontamination basins with appropriate solutions, or, if possible, by dry decontamination.

12. EMERGENCY PREPAREDNESS AND RESPONSE

A table presenting a list of contacts and telephone numbers for the applicable local off-site emergency responders is provided inside the front cover of this HASP (after figures). If the nature of the site work and COCs requires that off-site responders be notified before work begins on this project, the date that the pre-notification was made is presented in the table.

The following emergency response equipment is required for this project:

☒ Fire Extinguisher (Type ABC)
☐ Eyewash bottle
☒ First Aid Kit
☐ Other: ______________________________

In the event that an on-site emergency develops, the procedures delineated in Table 4 are to be followed immediately. In addition, the instructions for reporting the incident presented in Appendix E shall be followed. Appendix E also includes forms that must be provided to the physician(s) giving care to a potentially injured or ill employee.

13. CONFINED SPACE ENTRY

☐ APPLICABLE ☒ NOT APPLICABLE

The task(s) for this project involve confined-space entry. Workers must abide by the company's Confined Space Entry Program [29 CFR §1910.120(j)].

14. SPILL CONTAINMENT

☒ APPLICABLE ☐ NOT APPLICABLE

The task(s) for this project involve handling of drums and/or containers that contain stored chemicals and/or wastes associated with sampling, excavation, transportation, etc. Workers must implement the hazard mitigating procedures for drum/container handling presented in Appendix C.

15. CHEMICAL HAZARD COMMUNICATION LABELING

☒ APPLICABLE ☐ NOT APPLICABLE

The following procedures must be followed for chemicals brought onto the site by Geosyntec personnel (i.e., decontamination solution, sampling preservatives, KB-1 solution, sodium permanganate, etc.) while performing the tasks of this project:

- Labels on primary chemical containers must not be defaced.
- Chemical containers must be stored in appropriate storage containers.
- Secondary containers and storage cabinets must be correctly and clearly labeled using the Hazardous Materials Identification System (HMIS).
- Chemicals incompatible with each other must not be stored together.
- Workers must receive training on the chemical hazards.
- Material Safety Data Sheets (MSDSs) for the chemical must be included in Appendix F.

When chemicals are used on site, workers must abide by Geosyntec's Hazard Communication Program.

Table 1

Key Personnel and Health & Safety Responsibilities

Principal-in-Charge or Associate-in-Charge Andrew Barnes	*Project Manager (PM)* James Allen	*Site Health & Safety Officer (SHSO)* James Allen	*Project Personnel* Refer to Table 2	*Environmental, Health & Safety Coordinator (EHSC)* Marlene Duffy
• Approve this HASP and amendments, if any. • Verify that elements of this HASP are implemented.	• Approve this HASP and amendments, if any. • Monitor the field logbooks for health and safety work practices employed. • Coordinate with SHSO so that emergency response procedures are implemented. • Verify that corrective actions are implemented. • Verify and document that personnel receive this plan and are aware of its provisions and potential hazards associated with site operations, and that they are instructed in safe work practices and familiar with emergency response procedures. • Provide for appropriate monitoring, personal protective equipment, and decontamination materials.	• Prepare and implement project HASP and amendments, if any, and report to the Project Manager for action if any deviations from the anticipated conditions exist and authorize the cessation of work if necessary. • Verify that site personnel meet the training and medical requirements. • Conduct pre-entry briefing and daily tailgate safety meetings. • Verify that all monitoring equipment and personal protective equipment is operating correctly according to manufacturer's instructions and such equipment is utilized by on-site personnel. Calibrate or verify calibration of all monitoring equipment and record results. • Verify that decontamination procedures are being implemented. • Implement site emergency response and follow-up procedures. • Notify the EHSC in the event an emergency occurs. • Perform weekly inspections.	• Provide verification of required health and safety training and medical surveillance prior to arriving at the site. • Notify the SHSO of any special medical conditions (e.g., allergies). • Attend pre-entry briefings and daily tailgate safety meetings. • Immediately report any accidents and/or unsafe conditions to the SHSO. • Be familiar with and abide by the HASP. • Be ultimately responsible for his or her own safety.	• Review and audit HASP and amendments. • Maintain a copy of the cover sheet of each completed HASP. • Notify Director of Environment, Health & Safety in the event an emergency occurs. • Assist with the implementation of the corporate health and safety program. • Consult on health and safety issues.

SIMONS, ANDREW	I	10/7/2004		5/15/2008	2/5/2007	11/1/2006	6/30/2005	10/5/2007	12/8/2006	

Footnotes:
1 CPR Refresher: every year; First Aid Refresher: every three years.
2 Annual Medical Surveillance for EH&S Category I, Biannual Medical Surveillance for EH&S Categories II & III.
3 For EH&S Categories I & II Only.
4 Could Include task-specific training, project-specific training, or project-specific medial surveillance.

Table 3

General Safe Work Practices

- Minimize contact with impacted materials. Do not place equipment on the ground. Do not sit or kneel on potentially contaminated surfaces.
- Employees who are suspected of being under the influence of illegal drugs or alcohol will be removed from the site. Workers taking prescribed medication that may cause drowsiness shall not operate heavy equipment.
- Practice good housekeeping. Keep everything orderly and out of potentially harmful situations.
- Use of contact lenses may not be allowed under certain hazardous working conditions.
- The following conditions must be observed when operating a motor vehicle.
  - Wearing of seat belts is mandatory
  - The use of headlights is mandatory during periods of rain, fog, or other adverse weather conditions
  - A backup warning system or use of vehicle horn is mandatory when the vehicle is engaged in a backward motion
  - All posted traffic signs and directions from flagmen must be observed
  - Equipment and/or samples transported in vehicles must be secured from movement
  - The use of vehicles acquired by Geosyntec by non-Geosyntec personnel is prohibited
- In an unknown situation, always assume the worst reasonable conditions
- Be observant of your immediate surroundings and the surroundings of others. It is a team effort to notice and warn of dangerous situations. Withdrawal from a hazardous situation to reassess procedures is the preferred course of action.
- Conflicting situations may arise concerning safety requirements and working conditions. These must be addressed and resolved rapidly by the SHSO and PM to relieve any motivations or pressures to circumvent established safety policies.
- Unauthorized breaches of specified safety protocol must not be allowed. Workers unwilling or unable to comply with the established procedures must be discharged.

Table 4

Emergency Response Procedures

- The SHSO (or alternate) should be immediately notified via the on-site communication system. The SHSO assumes control of the emergency response.
- If applicable, the SHSO must notify off-site emergency responders (i.e., fire department, hospital, police department, etc.) and must inform the response team of the nature and location of the emergency on site.
- If applicable, the SHSO calls for evacuation of the site. Site workers should move to their respective refuge stations using the evacuation routes provided on the Site Map.
- For small fires, flames should be extinguished using the fire extinguisher. Large fires should be handled by the local fire department.
- If chemicals are accidentally splashed into eyes or onto skin, use eyewash and/or shower.
- If a worker is injured, first aid shall be administered by workers certified in first aid.
- After an incident has occurred, the instruction for incident reporting presented in Appendix E must be followed.

Note that EMERGENCY RESPONSE PROCEDURES are separate from instructions for injury response and reporting, located elsewhere in this HASP.

Appendix A

HASP Amendments

Discuss details of amendments to this HASP here. Include amendment number, date, and details of amendments.

Appendix B

Weekly Health & Safety Inspection Checklist

Project: Frigid Coil Facility Environmental Investigation Date: ______________________
Inspected by: ____

Category	*Observations/Corrective Actions (N/A, if Not Applicable)*
Pre-entry briefing records are current	
Tailgate meeting records are current	
Training/medical surveillance/respiratory protection records are current	
Site map is posted	
Buddy system is implemented	
Work zones are identified	
Site access is controlled	
Visitors are being escorted	
On-site/off-site communications are in working order	
Safe work practices are being implemented	
Any additional hazards incurred?	
Air monitoring equipment is in working condition	
Air monitoring records are being recorded in field logbook	
Air monitoring calibration records are being recorded in field logbook	
PPE storage area is neat and organized	
Standard operating procedures are being implemented	
Housekeeping at decontamination zone is appropriate	
Decontamination procedures are being implemented	
Emergency response equipment is in working condition	
Route to hospital is posted	
Confined space entry program is being implemented	
Spill containment equipment is available	
Chemical inventory is up to date	
Material safety data sheets are available	
Primary and secondary containers are properly labeled	
Housekeeping at the chemical storage area is appropriate

Medical Waste								
Mountain Lions								
Stinging Insects								
Other:								

An X in a box indicates that the listed hazard is applicable to the respective task. The appropriate Hazard Mitigators are presented in this Appendix.

COMPRESSED GAS CYLINDER

- Keep cylinder valve caps screwed on at all times when regulators and gauges are not attached to the cylinder and when the cylinder is being moved.
- Do not use force to remove valve cap if stuck.
- Protect cylinders from cuts and abrasions.
- Use extreme care not to drop cylinders.
- Secure cylinders in an upright position using chains or other approved restraints.
- Do not use cylinders for rollers or support.
- Do not tamper with cylinder valves or safety devices.
- Do not lift cylinders using the protective valve caps.
- Do not substitute oxygen for compressed air.
- Store all oxygen cylinders at least 20 feet from all fuel gas cylinders and gasoline or diesel storage tanks.
- Keep cylinders away from exposure to open flame.
- Do not use oil or grease on oxygen cylinders or regulator connections to avoid an explosion.
- All cylinders must be labeled and indicate when they have been emptied.
- Check all valves and fittings on a cylinder for leaks with each use. If leakage is found, place a tag on the cylinder indicting the defect, and report it to the SHSO.
- Leak test all connections using soap solution where possible.
- Be certain that the second stage of the regulator is closed, after attaching the regulator to the cylinder, but before opening the cylinder valve.
- Stand to one side of the regulator gauge while you slowly open the cylinder valve 1/4 of a turn.
- Keep wrench on the valve stem of an acetylene cylinder when in use.
- Close the cylinder valve and bleed the pressure off hoses on cylinders when not in use.
- Use a cylinder cart to transport cylinders distances greater than 2 feet.

DRILLING (Including Indoor)

- All members of the drilling crews shall be trained in the standard operating safety features and procedures to be utilized during operation, inspection, and maintenance of the equipment.
- Wear hard hats, steel toed boots, hearing protection and safety glasses at all times when performing drilling operations.
- Conduct a survey, prior to bringing drilling equipment to the job site, to identify overhead electrical hazards, potential subsurface hazards, and terrain hazard. Once on site, before drilling equipment is moved, the travel route shall again be visually surveyed for overhead and terrain hazards. Document possible hazards and communicate them to the drilling crew.
- Use only drilling equipment equipped with two easily-accessible emergency shutdown devices, one for the operator and one for the helper. Shutdown devices should be tested at the beginning of each day.
- Do not transport drilling equipment with the mast in the upward position.
- Extend outriggers per the manufacturer's specifications.
- Monitor weather conditions. Operations shall cease during electrical storms or when electrical storms are imminent.
- Wearing of loose clothing (e.g., open shirts, hooded sweatshirts, etc) is not permitted.
- When appropriate use auger guides on hard surfaces.
- Verbally alert employees and visually ensure employees are clear from dangerous parts of equipment prior to starting or engaging equipment.
- Channel the discharge of drilling fluids away from the work area to prevent the ponding of water.
- Use hoists only for their designed intent. Hoists shall not be loaded beyond their rated capacity. Steps shall be taken to prevent two-blocking of hoists (the condition when the lower load block or hook assembly comes in contact with the upper load block, or when the load block comes in contact with the boom tip).Follow the equipment manufacturer's procedures if ropes become caught in, or objects are pulled into a cathead.
- Do not run or rotate drill rods through rod slipping devices. No more than 5 feet of drill rod column shall be hoisted above the top of the drill mast. Drill rod tool joints shall not be made up, tightened, or loosened while the rod column is supported by a rod slipping device.
- Control dust using dust suppression techniques.
- Clean augers, drill casing, or drill rod only when the rotating mechanism is in neutral and the pipe is stationary is stopped.

- Cap and flag open boreholes; open excavations shall be barricaded.
- Keep all hand tools used during drilling operations clean and in good working condition.
- Check fire extinguishers and notify all onsite personnel to their whereabouts.
- Check cables for frays and hydraulic hoses for leaks daily.
- In situations where ambient water level may be above top of well screen, during well construction, ensure that well casing is vented to prevent air pressure build-up in blank casing above screen.

Indoor Drilling

- Conduct a survey, prior to bringing drilling equipment to the job site, to identify ceiling height, overhead hazards, potential subsurface hazards, terrain hazard, and building stability particularly during drilling activities. Identify sources of ventilation (including open doorways for cross ventilation and fans to assist in air flow). Once on site, before drilling equipment is moved, the travel route shall again be visually surveyed for overhead and terrain hazards and avenues of ventilation will be opened or turned on.
- Notify and/or evacuate all building occupants prior to start of drilling activities.
- All drilling rig exhaust will be redirected outdoors by tubing. The perimeter of the outdoor exhaust area shall be roped off a suitable distance to allow proper ventilation of exhaust.
- Monitor ambient oxygen percentage and carbon monoxide concentrations in the work zone, as well as entire indoor area, to prevent low oxygen or high carbon monoxide environments. Operations shall cease and the building will be evacuated if levels become dangerous.

DRUM AND CONTAINER HANDLING

- Only trained personnel should open drums containing unknown materials.
- Bulging drums or containers are an indication of pressure build-up. Open all drums or bungs extremely slowly to determine the presence of vapors or pressure inside the drum. If the possibility of fire or explosion exists, a protective shield should be used and/or remote opening devices. Employees not directly involved with opening a container shall be kept a safe distance away.
- Use only drums and containers that meet the appropriate DOT, OSHA, and EPA regulations.
- Utilize drum/container handling equipment whenever possible. The equipment should have a sufficiently rated load capacity and should be able to operate smoothly on the available surface.
- Label and identify drums and containers when moved to the staging areas to safely identify and classify their contents. Segregate incompatible drums.
- Inspect the integrity of the drum container before moving. Any drum or container lacking integrity shall be placed within an over pack container.
- Staging areas require adequate escape routes. Staging area should provide secondary containment for all moved drums.
- Employees must be warned of the potential hazards associated with the contents of containers or drums prior to moving said containers or drums.
- Organize site operation to minimize the amount of drum or container movement. Have a clear view of the available pathway when moving drums. If needed, an additional person should be available to provide guidance.
- Never stand on drums or containers.
- Use non-sparking tools and appropriate grounding and bonding equipment.
- Appropriate fire extinguishing equipment must be onsite at all times during drum handling.
- Spill control equipment shall be onsite in areas where spills ruptures or leaks may occur.

EYE INJURY

- Wear appropriate eye protection according to the task at hand.

HAZARD	TYPE OF PROTECTION
Impact	Safety glasses with side shield or vented safety goggles
Heat (Sparks)	Vented safety goggles or safety glasses with a face shield
Chemical	Hooded vented safety goggles or full-face respirator (if mild chemicals then safety glasses with side shield is acceptable)
Light Radiation	Tinted/reflective safety glasses or tinted/reflective face shield
Dust	Hooded vented safety goggles

- Apply anti-fog product to lens not previously treated.
- Minimize the amount of vapor or particulate matter generated, if possible.
- Avoid touching the face and eyes.
- Flush eyes with water for at least 15 minutes if chemicals do get into the eyes. If condition persists, seek medical attention.
- If dust or foreign objects are in your eyes, do not rub your eyes.
- If an object becomes embedded in the eye, do not attempt to remove. Lightly bandage your eyes, or both eyes, if possible and immediately seek medical attention.
- Do not wear contact lenses if chemical or dust hazard is present (e.g. decontamination or preservation chemicals used during sampling).
- Provide on-site training to workers before tasks at hand.
- If visitors enter area, stop work until they are properly protected.

HAND/FOOT INJURY

- Wear protective gloves as required in the Health and Safety Plan. Gloves should be chosen to suit the work being performed (e.g., chemical resistant gloves will be worn when handling chemicals or sampling for suspected chemicals).
- Steel-toed/steel-shanked safety boots must be worn whenever working around heavy objects (or as required by the HASP). Insulated and/or waterproof boots may also be warranted depending on weather conditions. Boots should be inspected periodically for signs of wear (e.g., cracks in rubber or along soles) and replaced as required.
- Durable footwear which provides adequate ankle support should be worn when working in rugged terrain.
- Use proper lifting techniques to avoid dropping heavy loads on hands and feet (refer to lifting heavy loads hazard mitigator)
- Be aware of moving machinery and heavy equipment in the work area and tuck away any loose clothing.

HEAT STRESS

Prevention:

- Drink plenty of hydrating fluids, such as Gatorade® or water. In high heat, a minimum of one gallon per day should be consumed. Fluid should be consumed frequently. Don't wait until thirsty.
- Provide cooling devices, when necessary, to aid natural body heat exchange during prolonged work or severe heat exposure. Devices include field showers, hose-down areas, shade umbrellas/tents, wide-brim hats, and cooling jackets, vests, or suits.
- If amenable to work conditions, wear light-colored, loose fitting, "breathable" clothing.
- Avoid prolonged periods of exposure. Take breaks as necessary. Higher heat exposure requires more frequent breaks.
- Be able to recognize the signs, symptoms and how to treat for heat stress. Signs, symptoms and treatment are listed below.

Signs and Symptoms:

- Mild heat stress - Decreased energy, slight loss of appetite, nausea, lightheadedness.
- Moderate heat stress - heavy sweating, thirst, faintness, headache, confusion.
- Severe heat stress (heat stroke) - Throbbing headache, confusion, irritability, rapid heartbeat, difficulty breathing, dry skin (no sweating), vomiting, diarrhea.

Treatment:

- Mild and Moderate heat stress - Take to cool place, drink cool (not cold) fluids, remove excess clothing, rest.
- Severe heat stress - Call 911 for an ambulance and get to a cool place, remove excess clothing and rest.
- Adjust work and rest schedules as needed. Establish a work regimen that will provide adequate rest periods for cooling down. This may require additional shifts of workers.
- Provide shelter or shaded areas (77o F is best) to protect personnel during rest periods.
- Maintain worker's body fluids at normal levels to ensure that the cardiovascular system functions adequately. Daily fluid intake must equal the approximate amount of water lost in sweat. Workers are encouraged to drink more than the amount required to satisfy thirst (recommend water and sport drinks, not coffee or soda), because thirst is not an adequate indicator of adequate salt and fluid replacement.
- Remove impermeable protective garments during rest periods.
- Do not assign other tasks to personnel during rest periods.

HEAVY EQUIPMENT

Working around Heavy Equipment

- Yield to heavy equipment.
- Listen for warning signals on heavy equipment.
- Perform a visual inspection and walk around parked heavy equipment before moving to assure that equipment is in good condition and that there are no personnel on the ground that could be injured or objects that could be damaged by vehicle movement.
- Wear hearing protection if required.
- Wear traffic vests for increased visibility.
- Maintain eye contact with the heavy equipment operator when working near equipment.
- Be aware of changes in sound of equipment which may indicate a change in direction.

Heavy Equipment Operators

- use hand rails and footholds when mounting and dismounting equipment,
- Brakes, steering, clutches and controls shall be tested.
- Pay attention to workers on the ground who may be in the path and provide warning prior to moving the equipment.
- Permit no one to ride on, or in, heavy equipment. This includes any portion of a backhoe, bulldozer, forklift or the back of a pickup truck, except in locations specifically designed for passenger use and approved by the SHSO.
- Keep haulage vehicles under positive control at all times while operating. Vehicles shall be kept in gear when descending grades.
- Do not use heavy equipment on slopes with steepness exceeding 3H: 1V unless operations are consistent with manufacturer's recommendations (if the Owner's Manual is not with the equipment or does not specify slope operating procedures, see the SHSO).
- Operate equipment with booms, blades, buckets, beds, etc., lowered or in a stable position while on slopes. Safety cables tethered to appropriate anchors shall be used for equipment working on steep slopes, where appropriate.
- Suspend in slings or support by hoists or jacks heavy equipment in need of repair. The equipment must also be blocked or cribbed before working underneath.
- Shut off motors, do not allow smoking, and use proper dispensing equipment when refueling gasoline-operated equipment to prevent fire hazards.
- Lower hydraulic systems (e.g., blades, etc.) to the ground, set brakes, and shut down equipment if malfunction occurs.
- Use rollover protection and seat belts.

KNIVES / BLADES

- Always wear proper protective equipment. This should include:

  - heavy-duty leather gloves,

  - steel-toed boots with non-slip soles, and

  - hardhat and eye protection.

- Check the work area and make sure that:

  - the ground is free of obstacles such as rocks, stumps, holes, and wet or otherwise slippery conditions.

  - you can get a firm footing on the ground.

- Route cords, hoses, and cables supplying power to portable power tools to prevent tripping hazards.
- Protect tools from corrosion damage.
- Keep tools free of accumulated dirt and unnecessary oil or grease.
- Worn, damaged or dull blades should be sharpened or replaced as necessary.

LIFTING HEAVY LOADS

- Proper lifting techniques include:
  - *Feet* - Feet should be parted, with one foot alongside the object being lifted and one behind. Feet should be comfortably spread to give greater stability. The rear foot should be in position for the upward thrust of the lift.
  - *Back* - Use the sit-down position and keep the back straight, but remember that "straight" does not mean "vertical". A straight back keeps the spine, back muscles, and organs of the body in correct alignment. It minimizes the compression of the abdomen that can cause a hernia.
  - *Arms and Elbows* - The load should be drawn close to the body, and the arms and elbows should be tucked in. When the arms are held away from the body, they lose much of their strength and power. Keeping the arms tucked in also helps keep body weight centered.
  - *Palm* - The palm grip is one of the most important elements of lifting. The fingers and the hand are extended around the object to be lifted. Use the full palm; fingers alone have very little power.
  - *Chin* - Tuck in the chin so the neck and head continue the straight back line. Keep the spine straight and firm.
  - *Body Weight* - Position the body so its weight is centered over the feet. This provides a more powerful line of thrust and assures better balance. Start the lift with a thrust of the rear foot. Shift hand positions so the object can be boosted after knees are bent. Straighten knees as object is lifted or shifted to the shoulders. To change direction, lift the object to a carrying position, and turn the entire body, including the feet. Do not twist your body. In repetitive work, both the person and the material should be positioned so that the worker will not have to twist his body when moving the material. If the object is too heavy to be handled by one person, get help.

- Limit continuous lifting of weights to 50 pounds or the maximum allowed by the client whichever is less. Lifts of heavier weights are permitted on an interim basis. Help shall be obtained for lifting of loads greater than 50 pounds or the maximum allowed by the client whichever is less. Mechanical equipment should be used on heavy materials when possible. If mechanical assistance is not available, adequate manpower to maintain the 50-pound limit per employee will be required.
- Do not lift more weight than can be handled comfortably, regardless of load weight. If necessary, help should be requested to lift a load so that the lifting is comfortable.
- Use drum dollies when moving drums or barrels.

- Inspect objects for grease or slippery substances before they are lifted to ensure that the object will not slip.
- Do not carry long, bulky or heavy objects without first verifying that the way is clear and that vision is unobstructed. This ensures that other persons or objects will not be struck by the load.
- Do not carry loads that cannot be seen over or around.
- Exercise caution when lifting above the chest level.
- Make sure workers are physically suited for the job before assigning jobs requiring heavy and/or frequent lifting. A person's lifting ability is not necessarily indicated by his height or weight.
- Before lifting an object, consideration should be given to how the object will be set down without pinching or crushing hands or fingers. For example, to place an object on a bench or table, the object should be set on the edge and pushed far enough onto the support so it will not fall. The object can then be released gradually as it is set down, and pushed in place with the hands and body from in front of the object.
- When two or more people are handling the same object, one should "call the signals". All the persons on the lift should know who this person is and should warn him if anyone in the crew is about to relax his grip.

LOUD NOISE

- Wear hearing protection in areas with constant or loud noise.
- Know the effects of noise, including:
  - Workers being startled, annoyed, or distracted.
  - Physical damage to the ear, pain, and temporary and/or permanent hearing loss.
  - Communication interference that may increase potential hazards due to the inability to warn of danger and proper safety precautions to be taken.
- Implement the company Hearing Conservation Program when noise exposures equal or exceed an 8-hour, time-weighed average (TWA) sound level of 85 decibels on the A-weighed scale (dB).
- Utilize feasible administrative or engineering controls if workers are subjected to noise exceeding an 8-hour TWA sound level of 90 dB.

PORTABLE POWER/HAND TOOL

- Read instruction manual for the safe operation of any portable power tool.
- Route cords, hoses, and cables to prevent tripping hazards or contact with equipment.
- Avoid abusing the power supply lines of portable equipment. Excessive scraping, kicking, stretching, and exposure to grease and oils will damage lines or cause them to fail prematurely, and possibly injure the operator or fellow workers.
- Inspect cords, hoses, and cables for wear or deterioration.
- Do not use electrically powered tools near flammable materials or explosive atmosphere, unless they are of the explosion-proof type meeting the National Electrical Code for potentially explosive work areas. Employees operating the equipment should be aware of sparks and or metal fragments when using this equipment.
- Ground-check portable electric power tools with metal cases initially and quarterly. At no time will electrical power equipment be operated without proper grounding. All electrical cords and cables, including extension cords, shall include a third wire ground.
- Prohibit operations of electric tools in wet or damp areas.
- Size cords adequately for length and the electrical demand of the tool. Otherwise, they may cause a fire hazard.
- Limit use of tools to the purpose for which the tool is intended (e.g., wrenches will not be used as hammers). Defective tools (e.g., with mushroomed heads or split or defective handles) shall not be used.
- Keep tools free of accumulated dirt and unnecessary oil or grease. Moving and adjustable parts shall be lubricated frequently to prevent wear and misalignment.
- Replace or repair damaged or worn tools promptly. Temporary or makeshift repairs are prohibited. At the discretion of the supervisor, discard all tools that cannot be repaired safely. Supervisors shall decide when to discard a tool.
- Store tools in suitable boxes or containers. Loose tools shall not be stored on ledges or where they might fall. Tools shall be picked up when a job is completed and not be allowed to accumulate in the work area. Store all tools in a safe place.
- Do not use conducting (i.e., metal) tools around electrical facilities. Insulated tools, approved for electrical work, shall be tested frequently for proper insulation.
- Select the correct size and type of wrench for each job. Wrench handles shall not be extended with a pipe or cheater because the jaws will spread.
- Repair mushroomed punch, drift and chisel heads. Mushroomed heads represent crystallized metal that will break and fly off when struck.
- Wear eye protection at all times.
-

SLIPS, TRIPS, AND FALLS

- Wear the proper foot wear and clothing for the task at hand.
- Pay attention to the work environment and become aware of all equipment and vehicles active onsite and use caution when moving about.
- Use caution when walking on sloped areas (especially geosynthetics), particularly when moisture is present. Use caution when walking on soft or uneven surfaces; e.g., marsh areas. Watch for icy conditions in cold weather.
- Follow the established designated safe paths for travel and keep these areas free from debris. Avoid steep or slippery slopes and paths near operation vehicles and equipment.
- Follow good housekeeping procedures. Never assume that someone else will clean up a spill or put away an object.
- Remove or clearly mark objects that pose tripping hazards.
- Prevent water accumulation where practicable.
- Cables and/or wiring should be taped down, when possible. Locate cables and/or wiring out of the commonly used areas.
- Mark or repair any opening or hole in the floor.
- Carry objects in a manner that allows you to see in the area you are moving in. Do not carry objects that are too large or bulky. Do not carry more weight than you can balance and keep stable. Understand that PPE can reduce or limit your field of vision and mobility.
- Use the proper ladder for the task at hand and do not exceed the recommended height. Do not use the top two rungs of a ladder. Ensure a flat and stable footing for the placement of a ladder. Utilize the buddy system to help secure the ladder. When working over 6 ft., utilize fall prevention measures. Obey height and weight guidelines and/or rules.
- Use the handrail when using stairs. Be aware of stairway blockages.
- If conditions even slightly resemble an unsafe environment, do not make any assumptions that the integrity of a workplace is intact.
- Never jump over or into a trench or excavation.
- Walk, do not run.
- Maintain proper lighting so obstacles are clearly visible

THOROUGHFARES

- Obtain necessary permits to use/block public thoroughfares.
- All care should be taken to ensure the integrity of walking and working surfaces, including the use of barriers, toe-kicks, etc. to warn personnel and the public of the potential fall and tripping hazards. Guardrails or barrier walls should be constructed surrounding open pits and trenches as appropriate.
- Traffic control plans will be produced and followed when required by the permitting agency or when working on or adjacent to a highway or a busy street. The traffic control plan shall be brought to the site and shall delineate the locations of applicable signs, signals and barricades; describe the necessity for flaggers; and provide other traffic control information.
- Signaling equipment and directions by flaggers shall conform to the latest edition of the U.S. Department of Transportation – Federal Highway Administration, Manual on Uniform Traffic Control Devices for Streets and Highways (http://mutcd.fhwa.dot.gov).
- Flaggers shall be provided with and shall wear fluorescent orange-red or fluorescent yellow-green garments while flagging. Warning garments worn at night shall be made of reflective material. The garments should meet the requirements of ISEA, American National Standard for High-Visibility Apparel.
- Barricades for protection of employees shall conform to the portions of the latest edition of the U.S. Department of Transportation – Federal Highway Administration,, Manual on Uniform Traffic Control Devices for Street and Highways (http://mutcd.fhwa.dot.gov), relating to barricades.

INSECT / VERMIN / SNAKES

- Be able to recognize insects/vermin/snakes indigenous to the site location and habitats. Learn the indigenous dangerous species (e.g., spiders, snakes, and ticks) prior to entering the field and know the first aid treatments.
- Poisonous venomous snakes swim on top of the water, non-poisonous venomous snakes swim with only their heads above water.
- Advise the SHSO if you have allergies to any insects prior to engaging in any field activities.
- Include the following preventative measures as necessary: wear light-colored clothing, keep clothing buttoned, tuck pant legs into socks, and keep shirt tails tucked in, boots, hoods, netting, gloves, masks, insect repellants or other personal protection.
- Snake bite kits are commercially available and should be carried by field personnel when working where poisonous snakes exist. In the case of a snake bite, keep the patient calm, restrict activity and immobilize the bite area (do not elevate), and immediately obtain medical attention.
- Report any bites or stings to the SHSO and seek medical attention immediately.

The task(s) for which these Hazard Mitigators apply are presented in the Appendix C Directory

Appendix D

Personal Protective Equipment per Task

① D ② D ③ ④ ⑤ ⑥ ⑦ ⑧

☒ ***Modified Level D****

Appendix E

Post-Incident Response Procedures and Forms

- **Instructions for Incident Reporting**
- **Letter to Medical Provider**
- **Physician Return-to-Work Authorization**

Instructions for Incident Reporting

If Serious and/or Life Threatening seek immediate medical attention at the hospital/facility that provides emergency care listed in the HASP, Office Preparedness Plan, or on the office bulletin board.

If Non-Life Threatening

Manager/Supervisor calls the EHS Department at **(804) 349-8067** or **(404) 435-4722**—to discuss appropriate medical attention (even if he/she thinks medical attention is not required.). If unable to contact the EHS Department within one (1) hour, a detailed voicemail with information about the incident must be provided and Gail Hapeman in Human Resources [(561) 922-1002] must also be contacted to obtain the name and address of nearest Workers' Compensation provider.

- Manager/Supervisor contacts Gail Hapeman in Human Resources —Office: (561) 922-1002, Mobile: (561) 789-6830 with additional details of the incident by the end of the work shift.
- Within 24 hours, the Manager/Supervisor completes a draft of the Manager's Report of Incident that is found on the EHS website and sends to Gail Hapeman at (561) 922-1101.
- Manager/Supervisor forwards the finalized paperwork within 48 hours to both EHS (dprokopchak@geosyntec.com); fax (804) 332-6732 and HR (ghapeman@geosyntec.com); fax (561) 922-1101 for review, documentation, and implementation into our case management program.
- Contractors are responsible for compliance with their internal safety procedures regarding Incident Reporting. Geosyntec will document the Contractor's incident in their Project Logbook.
- In the event of a vehicle accident that does not involve injuries, please follow the procedures outlined in EHS 105—Driver Safety.

Dear Medical Provider:

On behalf of Geosyntec Consultants/MMI Engineering, you are authorized to evaluate and treat the above Geosyntec/MMI employee today for an alleged work-related injury or illness.

Employee Name: ________________________________
Alleged Injury: ________________________________
Date of Alleged Injury: ____________________________
Date of Medical Evaluation: _________________________

Geosyntec/MMI strives to reduce OSHA recordables; therefore, ***please do not prescribe or dispense prescription medications if OTC medications if non-prescription strength can be used*.** It is our primary interest to ensure this employee returns to work full duty. If a full duty release is not possible, Geosyntec/MMI may be able to find light duty for the **employee**; ***unless it is unavoidable, please do not prescribe lost time.*** We would appreciate it if you would complete the attached form "Physical Status for Return to Work", or a similar form, to assist us in evaluating this employee's work capabilities.

- Please fax a copy of all medical paperwork and "Physical Status for Return to Work Form" to Dale Prokopchak at (804) 332-6732.
- Invoices and supporting medical records should be mailed to:

  Denise Emmanuelli
  Senior HR Representative
  Geosyntec Consultants
  5901 Broken Sound Parkway, NW, Suite 300
  Boca Raton, FL 33487
  Phone: 561.922.1112
  Fax: 561.922.1101

Thank you for your assistance.

Very truly yours,

Dale Prokopchak, CIH, CSP
Director of Environmental Health and Safety

Geosyntec consultants

PHYSICAL STATUS FOR RETURN TO WORK
PLEASE FAX COMPLETED FORM TO DALE PROKOPCHAK AT (804) 332-6732

Employee Name ___________________________ Date of Injury/Illness _______________

TO BE COMPLETED BY TREATING PHYSICIAN

Diagnosis ____

I saw and treated this patient on (date) _______________ and:

__ Release the patient to full duty with no limitations on (date) _______________

__ Patient may return to work with the following limitation on (date) _______________ and may work an 8 hr. shift unless specified otherwise.

LIFTING CAPACITY

__ Occasional lifting (10 lbs. max.) and lifting and carrying occasionally. Walking and standing occasionally.

__ Occasional lifting (20 lbs. max.). Significant walking, standing; or sitting with pushing and pulling with arms or legs.

__ Occasional lifting (50 lbs. max.) with frequent lifting and/or carrying up to 25 pounds.

OTHER ACTIVITIES

SINGLE DURATION							IN AN 8 HOUR DAY PATIENT MAY DO				
LIMITATION	NO LIMITATION	< 1/2 hr	1/2-1 hr	1-2 hr	2-4 hr	4-6 hr	1/2-1 hr	1-2 hr	2-4 hr	4-6 hr	6-8 hr
SIT											
STAND											
WALK											
USE RIGHT HAND											
USE LEFT HAND											

	NO LIMITATION	FREQUENTLY (31%-60%)	OCCASIONALLY (1%.-30%)	NEVER
BEND				
SQUAT				
CLIMB				
REACH OVERHEAD		WEIGHT LIMIT	WEIGHT LIMIT	
REACH SHOULDER		WEIGHT LIMIT	WEIGHT LIMIT	
PUSHING/PULLING		WEIGHT LIMIT	WEIGHT LIMIT	

Other instructions or limitations:

____

____

Estimated length of time of modified duty: ____

__ These restrictions are in effect until (date) ______________ or until patient is reevaluated on (date) _______________

__ Patient is totally incapacitated at this time. Patient will be reevaluated on (date) ________________
