AGENDA

FOR THE REGULAR MEETING OF THE
PLANNING COMMISSION
April 13, 2020
6:00 p.m.

VIA TELECONFERENCE
Council Chambers
11710 Telegraph Road
Santa Fe Springs, CA 90670

Frank Ybarra, Chairperson
Ken Arnold, Vice Chairperson
Ralph Aranda, Commissioner
Francis Carbajal, Commissioner
Gabriel Jimenez, Commissioner

*****GOVERNOR'S EXECUTIVE ORDER N-29-20*****
****REGARDING CORNOVIRUS COVID-19****

On March 4, 2020, Governor Newsom proclaimed a State of Emergency to exist in California as a result of the threat of COVID-19. The Governor has issued Executive Orders that temporarily suspend requirements of the Brown Act, including allowing the Planning Commission to hold public meetings via teleconferencing and to make public meetings accessible telephonically or otherwise electronically to all members of the public.

You may attend the Planning Commission meeting telephonically or electronically using the following means:

Electronically using Zoom
Go to Zoom.us and click on "Join A Meeting" or use the following link:
https://zoom.us/j/558333944?pwd=b0FqbkV2aDZneVRnQ3BjYU12SmJlQT09

Zoom Meeting ID: 558 333 944
Password: 554545

Telephonically
Dial: 888-475-4499
Meeting ID: 558 333 944

PUBLIC COMMENTS may be submitted in writing to the Planning Secretary at teresacavallo@santafesprings.org. Please submit your written comments by 4:00 p.m. on the day of the Planning Commission meeting. You may also contact the Planning Department at (562) 868-0511 ext. 7550.

1. CALL TO ORDER

2. PLEDGE OF ALLEGIANCE

3. ROLL CALL
Commissioners Aranda, Arnold, Carbajal, Jimenez, and Ybarra.

4. ORAL COMMUNICATIONS
This is the time for public comment on any matter that is not on today's agenda. Anyone wishing to speak on an agenda item is asked to please comment at the time the item is considered by the Planning Commission.

5. MINUTES
Approval of the minutes for the March 9, 2020 Planning Commission meeting

6. PUBLIC HEARING – Continued from the March 9, 2020 Planning Commission Meeting
Categorical Exempt – CEQA Guidelines Section 15301, Class 1
Development Plan Approval (DPA) Case No. 969
Modification Permit (MOD) Case No. 1321
Modification Permit (MOD) Case No. 1322
DPA Case No 969: A request for approval to construct 19 new steel tanks, a new pipe bridge, and a new utility; and

MOD Case No. 1321: A request to replace a portion of the required front yard landscape strip with 8 new standard parking stalls; and

MOD Case No. 1322: A request to not provide full screening of the proposed tanks from the public right-of-way (Emmens Way).

The project site is located at 10747 Patterson Place (APN: 8011-017-054), within the M-2, Heavy Manufacturing, Zone. (Brenntag Pacific, Inc.)

7. PUBLIC HEARING
Categorically Exempt - CEQA Guidelines Class 1 and Class 3
Amendment of Conditional Use Permit (CUP) Case No. 781
A request for approval to modify the number of clients, hours of operation, and to allow occasional tournaments for an existing soccer training facility located at 13045 Los Nietos Road (APN: 8167-005-026), within the M-2, Heavy Manufacturing, Zone. (Ballmaster Elite Soccer Academy)

8. PUBLIC HEARING
Adoption of Mitigated Negative Declaration
Development Plan Approval Case No. 971
Amendment of Conditional Use Permit Case No. 780

Modification Permit Case No. 1325
Development Plan Approval Case No. 971: A request to demolish nine (9) existing single-story mini-warehouse buildings and replace them with a three-story, 97,503 sq. ft. mini-warehouse building.
Amendment of Conditional Use Permit Case No. 780: A request to amend the November 13, 2017 approval to increase the mini-warehouse facility use from 90,410 sq. ft. to 102,454 sq. ft.
Modification Permit Case No. 1325: A request to allow a 3'-5" projection into the required setbacks.

The project site is located at 13020 Telegraph Road (APN: 8011-014-017), within the M-2, Heavy Manufacturing Zone and within the Telegraph Road Corridor.
(Ojai Oil Company dba Golden State Storage)

9. PUBLIC HEARING

Exemption – CEQA Guidelines §15061(b)(3) - *Activities Covered by General Rule*
General Plan Amendment No. 29
A request for approval to amend the Land Use Element of the City's General Plan, to correct a typographical error related to the maximum building coverage for all properties designated as Business Park. (City of Santa Fe Springs)

10. PUBLIC HEARING

Adoption of Mitigated Negative Declaration
Tentative Parcel Map (TPM) No. 82433
Development Plan Approval (DPA) Case Nos. 947-949
TPM No. 82433: A request for approval to subdivide the subject ±9.06-acres gross (±8.34-acres net) parcel at 9920 Pioneer Boulevard (APN: 8055-010-011) into two separate parcels measuring 5.08-acres and 3.26-acres, respectively;

DPA Case Nos. 947-949: DPA Case No. 947 - a request for approval to allow the construction of an approximately 103,950 sq. ft. concrete tilt-up industrial building (Building 1), DPA Case No. 947 - a request for approval to allow the construction of an approximately 28,146 sq. ft. concrete tilt-up industrial building (Building 2); and DPA Case No. 947 - a request for approval to allow the construction of a 31,422 sq. ft. concrete tilt-up industrial building (Building 3) on property located at 9920 Pioneer Boulevard (APN: 8055-010-011), within the M-L (Limited Manufacturing) Zone;
(The Brookhollow Group)

11. CONSENT ITEMS

Consent Agenda items are considered routine matters which may be enacted by one motion and roll call vote. Any item may be removed from the Consent Agenda and considered separately by the Planning Commission.

A. CONSENT ITEM

Development Plan Approval Case Nos. 930, 931, 932, and 933

A request for a time extension of Development Plan Approval (DPA) Case Nos 930 - 933 to allow the construction of four (4) new concrete tilt-up industrial buildings, ranging from 58,463 sq. ft. to 121, 124 sq. ft., located on the northwest corner of Telegraph Road and Santa Fe Springs Road.

B. CONSENT ITEM

Alcohol Sales Conditional Use Permit Case No. 14

Compliance review of Alcohol Sales Conditional Use Permit Case No. 14 to allow the continued operation and maintenance of an alcoholic beverage sales use for off-site consumption by El Super, Inc. located at 10531 Carmenita Road and within the Gateway Plaza shopping center. (El Super)

C. CONSENT ITEM

Alcohol Sales Conditional Use Permit Case No. 43

Compliance review of Alcohol Sales Conditional Use Permit Case No. 43 to allow the continued operation and maintenance of an alcoholic beverage sales use for on-site consumption by Mariscos Sol Y Mar Restaurant located at 8021 Norwalk Boulevard, within the Cefalia Center in the Community Commercial (C-4) Zone. (Ramona Valdez, Mariscos Sol Y Mar Restaurant)

D. CONSENT ITEM

Alcohol Sales Conditional Use Permit Case No. 76

Compliance Review Report for Alcohol Sales Conditional Use Permit Case No. 76 to allow the continued operation and maintenance of an alcoholic beverage use involving the warehousing and distribution of alcoholic beverages at Harbor Distributing located at 11204 Norwalk Boulevard within the Heavy Manufacturing (M-2). (Harbor Distributing, LLC)

12. ANNOUNCEMENTS

- Commissioners
- Staff

13. ADJOURNMENT

I hereby certify under penalty of perjury under the laws of the State of California, that the foregoing agenda has been posted at the following locations; 1) City Hall, 11710 Telegraph Road; 2) City Library, 11700 Telegraph Road; and 3) Town Center Plaza (Kiosk), 11740 Telegraph Road, not less than 72 hours prior to the meeting.

Teresa Cavallo

Planning Secretary

April 8, 2020

Date

APPROVED:

MINUTES OF THE REGULAR MEETING OF THE SANTA FE SPRINGS PLANNING COMMISSION

March 9, 2020

1. CALL TO ORDER

Chair Ybarra called the meeting to order at 6:01 p.m.

2. PLEDGE OF ALLEGIANCE

Chair Ybarra called upon Commissioner Carbajal to lead everyone in the Pledge of Allegiance.

3. ROLL CALL

Members present: Chairperson Ybarra
Vice Chairperson Arnold
Commissioner Aranda
Commissioner Carbajal
Commissioner Jimenez

Staff: Richard L. Adams II, City Attorney
Wayne Morrell, Director of Planning
Cuong Nguyen, Senior Planner
Vince Velasco, Associate Planner
Jimmy Wong, Associate Planner
Teresa Cavallo, Planning Secretary

Council: None

Members absent: None

4. ORAL COMMUNICATIONS

None

5. MINUTES

Approval of the minutes for the February 12, 2020 Planning Commission meeting

It was moved by Vice-Chair Arnold, seconded by Commissioner Aranda to approve the minutes as submitted, with the following vote:

Ayes: Arnold, Aranda, Carbajal, Jimenez, and Ybarra
Nays: None
Absent: None

PUBLIC HEARING

6. PUBLIC HEARING

Categorical Exempt – CEQA Guidelines Section 15321, Class 21
Revocation of Conditional Use Permit Case No. 724

Recommendation: That the Planning Commission:

- Open the Public Hearing and receive any comments from the public regarding the Revocation of Conditional Use Permit Case No. 724 and, thereafter, close the Public Hearing; and
- Find that pursuant to Section 15321, Class 21 (Enforcement Actions), of the California Environmental Quality Act (CEQA), this project is Categorically Exempt; and
- Find that the aluminum foundry facility, for which Conditional Use Permit Case No. 724 was granted, is being exercised contrary to the conditions of approval.
- Determine one (1) of the following actions:
  a. Revoke and nullify Conditional Use Permit Case No. 724;
  b. Revoke and nullify Conditional Use Permit Case No. 724, stay enforcement for a period of 60 days from the date of revocation;
  c. Revoke and nullify Conditional Use Permit Case No. 724, stay enforcement for a period of ____ days from the date of revocation.
- Adopt Resolution No. 156-2020, which incorporates the Commission's findings and actions regarding this matter, should the Planning Commission decide to move forward with revoking the subject Conditional Use Permit.

Chair Ybarra called upon Associate Planner Vince Velasco to present Item No. 6 before the Planning Commission. Present in the audience was Mr. Peter Lake.

Chair Ybarra called upon the Commissioners for questions and/or comments.

There being no questions, Chair Ybarra opened the Public Hearing at 6:08 p.m. and asked if the Applicant would like to approach the podium to address the Planning Commission. The Applicant Mr. Peter Lake approached the podium and addressed the Planning Commission. Mr. Lake stated his reasons why the Planning Commission should vote against the recommendation of revocation.

A discussion ensued regarding recommendations, upcoming General Plan changes, and CUP compliance.

Chair Ybarra asked if anyone from the audience wished to speak on Item 6. There being no one wishing to speak, Chair Ybarra closed the Public Hearing at 6:45 p.m. and requested a motion and second on Item No. 6:

It was moved by Commissioner Aranda, seconded by Commissioner Carbajal to revoke and nullify Conditional Use Permit 724, with a stay of enforcement for a period of 270 days from the date of revocation, and the recommendations regarding this matter, which passed by the following roll call vote:

Ayes: Arnold, Aranda, Carbajal, Jimenez, and Ybarra
Nays: None
Absent: None

City Attorney Richard Adams II read the City's appeal process to inform the Planning Commission and public.

7. PUBLIC HEARING

Categorical Exempt – CEQA Guidelines Section 15301, Class 1
Development Plan Approval (DPA) Case No. 969
Modification Permit (MOD) Case No. 1321
Modification Permit (MOD) Case No. 1322

Recommendation: That the Planning Commission:

- Continue Development Plan Approval Case No. 969, Modification Permit Case No. 1321, and Modification Permit Case No. 1322 to the Planning Commission meeting of April 13, 2020.

Chair Ybarra called upon the Commissioners for questions and/or comments. There being none, Chair Ybarra opened the Public Hearing at 6:45 p.m.

There being no one from the audience wishing to speak and the Planning Commissioners having no further questions, Chair Ybarra kept the Public Hearing open and requested a motion and second for Item No. 7.

It was moved by Commissioner Jimenez, seconded by Commissioner Carbajal to continue Development Plan Approval (DPA) Case No. 969, Modification Permit (MOD) Case No. 1321, and Modification Permit (MOD) Case No. 1322 to the April 13, 2020 Planning Commission meeting, which passed by the following roll call vote:

Ayes: Arnold, Aranda, Carbajal, Jimenez, and Ybarra
Nays: None
Absent: None

8. PUBLIC HEARING – Continued from the February 12, 2020 Planning Commission Meeting

Categorically Exempt – CEQA Guidelines Section 15282(h)
Zoning Text Amendment – Accessory Dwelling Unit

Recommendation: That the Planning Commission:

- Continue Zoning Text Amendment – Accessory Dwelling Unit to the Planning Commission meeting of May 11, 2020.

Chair Ybarra called upon the Commissioners for questions and/or comments. There being none, Chair Ybarra opened the Public Hearing at 6:48 p.m.

There being no one from the audience wishing to speak and the Planning Commissioners having no further questions, Chair Ybarra kept the Public Hearing open and requested a motion and second for Item No. 8.

It was moved by Vice-Chair Arnold, seconded by Commissioner Aranda to continue

Zoning Text Amendment – Accessory Dwelling Unit to the May 11, 2020 Planning Commission meeting, which passed by the following roll call vote:

Ayes: Arnold, Aranda, Carbajal, Jimenez, and Ybarra
Nays: None
Absent: None

CONSENT ITEMS

9. CONSENT ITEMS

Consent Agenda items are considered routine matters which may be enacted by one motion and roll call vote. Any item may be removed from the Consent Agenda and considered separately by the Planning Commission.

A. CONSENT ITEM

Conditional Use Permit Case No. 643-3

Recommendation: That the Planning Commission:

- Find that the continued operation and maintenance of a meat processing facility, if conducted in strict compliance with the conditions of approval, will be harmonious with adjoining properties and surrounding uses in the area and will be in conformance with the overall purposes and objectives of the Zoning Ordinance and consistent with the goals, policies, and programs of the City's General Plan.
- Require that Conditional Use Permit Case No. 643-3 be subject to a compliance review in ten (10) years, on or before March 9, 2030, to ensure the use is still operating in strict compliance with the conditions of approval as contained within this staff report.

B. CONSENT ITEM

Tentative Parcel Map No. 82031-1
Development Plan Approval Case No. 936-1
Conditional Use Permit Case No. 787-1

Recommendation: That the Planning Commission:

- Find and determine that granting an one (1) year time extension of Tentative Parcel Map Case No. 82031-1, Development Plan Approval No. 936-1, and Conditional Use Permit Case No. 787-1 will not be detrimental to persons or properties in the surrounding area or to the City in general, and will be in conformance with the overall purpose and objective of the Zoning Regulations and consistent with the goals, polies, and programs of the City's General Plan; and
- Approve an one (1) year time extension for Development Use Permit Case No. 936-1 (until March 11, 2021), subject to the original conditions of approval for Development Plan Approval 936; and
- Approve an one (1) year time extension for Tentative Parcel Map No.82031-1 (until March 11, 2021), subject to the original conditions of approval for Tentative Parcel Map No.82031; and
- Require that Conditional Use Permit Case No. 787-1 be subject to a compliance review in one (1) years, on or before, March 11, 2021, to ensure that the use is

still operating in strict compliance with the conditions of approval as contained within this staff report.

Chair Ybarra requested a motion regarding Item Nos. 10A-10C.

It was moved by Vice-Chair Arnold, seconded by Commissioner Jimenez to approve Consent Items No. 9A and 9B, and the recommendations regarding this matter, which passed by the following roll call vote:

Ayes: Arnold, Aranda, Carbajal, Jimenez, and Ybarra
Nays: None
Absent: None

10. PRESENTATION

A brief presentation on the 2020 Census

Senior Planner Cuong Nguyen presented the 2020 Census Presentation and invited everyone to be counted.

11. ANNOUNCEMENTS

Commissioners:
Commissioner Jimenez announced that his SFHS Freshman Baseball team is 6-0.

Staff:
Planning Secretary Teresa Cavallo announced that her youngest daughter Anissa will be 18 years old on March 11th.

Staff wished everyone a Happy St. Patrick's Day.

12. ADJOURNMENT

Chairperson Ybarra adjourned the meeting at 7:00 p.m. to the next regular Planning Commission meeting scheduled for April 13, 2020, at 6:00 p.m.

PUBLIC HEARING – Continued from the March 9, 2020 Planning Commission Meeting
Categorical Exempt – CEQA Guidelines Section 15301, Class 1
Development Plan Approval (DPA) Case No. 969
Modification Permit (MOD) Case No. 1321
Modification Permit (MOD) Case No. 1322
DPA Case No 969: A request for approval to construct 19 new steel tanks, a new pipe bridge, and a new utility; and

MOD Case No. 1321: A request to replace a portion of the required front yard landscape strip with 8 new standard parking stalls; and

MOD Case No. 1322: A request to not provide full screening of the proposed tanks from the public right-of-way (Emmens Way).

The project site is located at 10747 Patterson Place (APN: 8011-017-054), within the M-2, Heavy Manufacturing, Zone. (Brenntag Pacific, Inc.)

RECOMMENDATION

- Continue Development Plan Approval Case No. 969, Modification Permit Case No. 1321, and Modification Permit Case No. 1322 to the Planning Commission meeting of May 11, 2020.

Property owners within 500 feet of the subject property were notified via mail that the requested entitlements were being presented before the Planning Commission for consideration. Since neighbors received notification, it is recommended that if any members of the public participate in the teleconference meeting and wish to comment, the Planning Commission should receive public comments no later than 4:00 pm on the day of the meeting, and then take action to continue the project to the next meeting date on May 11, 2020. The continuance will provide additional time for the applicant to modify their proposal and submit revised plans for Modification Permit Case No. 1321.

Wayne M. Morrell
Director of Planning

Report Submitted By: Vince Velasco
Planning and Development Dept.

Date of Report: April 8, 2020

ITEM NO. 6

PUBLIC HEARING

Categorically Exempt - CEQA Guidelines Class 1 and Class 3

Amendment of Conditional Use Permit (CUP) Case No. 781

A request for approval to modify the number of clients, to modify the hours of operation, and to allow occasional tournaments for an existing soccer training facility located at 13045 Los Nietos Road (APN: 8167-005-026), within the M-2, Heavy Manufacturing, Zone. (Ballmaster Elite Soccer Academy)

RECOMMENDATIONS:

- Open the Public Hearing and receive any comments from the public regarding Amendment of Conditional Use Permit Case No. 781, and thereafter, close the Public Hearing; and
- Find and determine that the proposed project will not be detrimental to persons or properties in the surrounding area or to the City in general, and will be in conformance with the overall purpose and objective of the Zoning Ordinance and consistent with the goals, policies and program of the City's General Plan; and
- Find that the applicant's CUP request meets the criteria set forth in §155.716 of the City's Zoning Ordinance, for the granting of a Conditional Use Permit; and
- Find and determine that pursuant to Section 15301, Class 1 (Existing Facilities), and Section 15303, Class 3 (New Construction or Conversion of Small Structures) of the California Environmental Quality Act (CEQA), the project is Categorically Exempt; and
- Approve Amendment of Conditional Use Permit Case No. 781, subject to the conditions of approval as contained within Resolution No. 161-2020; and
- Adopt Resolution No. 161-2020, which incorporates the Planning Commission's findings and actions regarding this matter.

GENERAL INFORMATION

A. Applicant: Ballmaster Elite Soccer Academy

Report Submitted By: Vince Velasco
Planning and Development Department

Date of Report: April 8, 2020

ITEM NO. 7

C.	Location of Proposal:	13045 Los Nietos Road Santa Fe Springs, CA 90670
D.	Existing Zone:	M-2 (Heavy Manufacturing)
E.	General Plan:	Industrial
F.	CEQA Status:	Categorically Exempt (Class 1 and 3)
G.	Staff Contact:	Vince Velasco, Associate Planner vincevelasco@santafesprings.org

LOCATION / BACKGROUND

The subject property, comprised of a single parcel (APN: 8167-005-026) of approximately 1.09 acres, has an address of 13045 Los Nietos Road and is located on the north side of Los Nietos Road, within the M-2, Heavy Manufacturing, Zone. Industrial uses surround the subject site on all sides.

On December 11, 2017, the Planning Commission initially approved Conditional Use Permit Case No. 781, a request to establish, operate and maintain a youth soccer training use. The initial approval was granted for a period of one year. The Planning Commission concurrently approved Modification Permit Case No. 1283 to allow for a reduction of twenty-one (21) required parking stalls and Modification Permit Case No. 1284 to allow for a reduction of the overall landscape area. This would have been their first compliance review; however, Ballmaster Elite Soccer Academy (BESA) has yet to begin operations. Nevertheless, they are requesting to amend the existing conditions of approval to modify the number of clients, to modify the hours of operation, and to allow occasional tournaments.

Since the original approval, the applicant has hired a new manager to run the day-to-day operations. After reviewing the conditions of approval with the new team, it was determined that the age of the clients and hours of operation would limit the economic growth of the business. The proposed changes to the operating hours will allow BESA to allocate an adequate number of hours to service both youth and adult residents. The previously approved hours, from 4:00 pm to 11:00 pm, are not feasible for the facility's new business model, now that the facility is planning to service both youths and adults. The additional operation hours during the day will allow adult trainees to practice, while the youths will be able to practice during after school hours. It should be noted that although the ages of clients have changed, the number of clients have since decreased per hour/session. By providing more sessions throughout the day, they are able to slightly decrease the number of clients for each session. Lastly, hosting occasional tournaments will allow the athletes to further develop their skills without creating an impact to the existing

parking conditions.

AMENDMENT OF CONDITIONAL USE PERMIT (ACUP 781)

Ballmaster Elite Soccer Academy is proposing to extend their weekday hours and slightly reduce their weekend hours. As previously mentioned, they intend to accommodate athletes of all ages by allowing adults to train during the day and youths to train in the evening hours. The previous approval limited the maximum capacity to 34 players and 5 employees at any given time. As proposed, the new schedule will see a maximum of 26 people at any given hour with 20 players 3 trainers, and 3 employees. This includes weekday and weekend hours. On tournament days, the subject property will see a maximum of 29 people at any game (total of 6 games) with 10 players, 2 coaches, and 1 referee using Building 2, 10 players, 2 coaches, and 1 referee using the Outdoor Field, and 3 employees. Lastly, as described below, BESA is proposing to make minor improvements to both the interior of Buildings 1 and 2, as well as, to the exterior of the subject property.

Hours of Operation:

Existing		**Proposed**	
Days	Time	Days	Time
Mon. – Fri.	4:00 pm -11:00 pm	Mon. – Fri.	9:00 am – 11:00 pm
Sat. – Sun.	8:00 am – 9:00 pm	Sat. – Sun.	9:00 am – 5:00 pm

Proposed Tournaments	
Saturdays and Sundays (Not to conflict with training)	
First Round	7:30 am – 8:10 am
	8:50 am – 9:30 am
	10:10 am – 10:50 am
	11:30 am – 12:10 pm
Semi Final	12:50 pm – 1:30 pm
Final	2:10 pm – 2:50 pm

Building 1:

Tenant improvements are proposed to the existing 5,330 sq. ft. building. BESA is proposing to decrease the office and storage areas to increase the indoor soccer field. Necessary walking circulation and restrooms will remain. Although the size of the indoor field will increase, this will not increase the number of players or trainers.

Building 2:

The applicant is proposing to decrease the area of the futsal field to provide an appropriate area for walking circulation and access to a new electrical closet. It should be noted that the previously identified indoor field within Building 2 will now

be known as a futsal field. Futsal is a condensed, sped up form of soccer that is usually played indoors on a basketball like court with five players to a side, hockey-sized goals, and a smaller low-bouncing ball.

Outdoor Field:
The size of the outdoor field will remain unchanged. Since the original approval, the applicant has found difficulties keeping the design of the outdoor field safe, while not putting an economic burden on the business operations. Nevertheless, the applicant is continuing to work with the Building Department to ensure that all materials and structural features meet the Building Code.

Parking:
The original CUP approval obtained in December 2017 identified that the subject property would require a total of 65 parking stalls; however, MOD 1283 allowed a total of 44 parking stalls to be provided. As a result, the deficiency was 21 parking stalls or 32% of the required number of parking stalls.

As proposed, no additional building square footage will be constructed and thus will not intensify the parking requirements. In addition, the minor alterations to Buildings 1 and 2 decreased the number of required parking stalls by 1 stall. As a result, 64 parking spaces is now required for the subject use. Furthermore, the applicant is proposing to provide two additional on-site parking stalls, totaling 46 parking stalls provided. Therefore, the deficiency has decreased by 3 parking stalls and brings the total deficiency to 18 parking stalls or 28% of the required number of parking stalls. Since the subject property decreased the deficiency and will provide a total of 46 parking stalls, there is no need to amend MOD 1283.

Existing Parking Requirements		
Space	Parking Ratio	Parking Required
Indoor Studio #1	1/250 sq. ft.	10
Indoor Studio #2	1/250 sq. ft.	16
Outdoor Turf Field	1/250 sq. ft.	34
Office Area	1/300 sq. ft.	2
Storage Area in bldg. #1	1/500 sq. ft.	3
Total Parking Required	65	
Total Parking Provided	44	

Proposed Parking Requirements		
Space	Parking Ratio	Parking Required
Training Field	1/250 sq. ft.	14 (+4)
Futsal Field	1/250 sq. ft.	13 (-3)
Outdoor Field	1/250 sq. ft.	34

Office Area	1/300 sq. ft.	1 (-1)
Storage Area in bldg. #1	1/500 sq. ft.	2 (-1)
Total Parking Required	64 (-1)	
Total Parking Provided	46 (+2)	

Landscaping:
As previously approved, the subject property provided a total of 3,749 sq. ft. of landscaping. The proposed project does not result in the intensification of the building area and thus does not require additional landscaping. It should be noted that the applicant slightly modified the parking configuration and as a result, will now provide a total of 3,990 sq. ft. of landscaping. Since the subject property is now providing more landscaping than required (3,935 sq. ft.), MOD 1284 is no longer needed.

Existing Landscaping Requirements	
Lineal Feet of Frontage	122.14 ft.
Landscaping Required	122.14 ft. x 25 = 3,054 sq. ft.
Landscaping Provided	2,529 sq. ft.
Parking Area	14,832 sq. ft.
Landscaping Required	14,832 sq. ft. x 6% = 890 sq. ft.
Landscaping Provided	1,220 sq. ft.
Overall Landscaping Required	3,944 sq. ft.
Overall Landscaping Provided	3,749 sq. ft.

Proposed Landscaping Requirements	
Lineal Feet of Frontage	122.14 ft.
Landscaping Required	122.14 ft. x 25 = 3,054 sq. ft.
Landscaping Provided	2,161 sq. ft. (-368 sq. ft.)
Parking Area	14,832 sq. ft.
Landscaping Required	14,832 sq. ft. x 6% = 890 sq. ft.
Landscaping Provided	1,829 sq. ft. (+609 sq. ft.)
Overall Landscaping Required	3,944 sq. ft.
Overall Landscaping Provided	3,990 sq. ft. (+241)

STREETS AND HIGHWAYS
The subject site is located on the north side of Los Nietos Road. Los Nietos Road is designated as a "Secondary Arterial", within the Circulation Element of the City's

General Plan.

ZONING AND LAND USE

The subject property is zoned M-2 (Heavy Manufacturing). The property has a General Plan Land Use designation of Industrial. The zoning, General Plan and land use of the surrounding properties are listed on the following page:

Surrounding Zoning, General Plan Designation, Land Use			
Direction	**Zoning District**	**General Plan**	**Land Use (Address/Business Name)**
North	M-2, Heavy Manufacturing, Zone	Industrial	Safety Equipment Supplier (10051 Painter Ave/ABATIX)
South	M-2, Heavy Manufacturing, Zone	Industrial	Auto Repair Shop (13028 Los Nietos Rd./Star Auto Care)
East	M-2-BP, Heavy Manufacturing – Buffer Parking, Zone	Industrial	Warehouse/Distribution (10155 Painter Ave/Hong Chang)
West	M-2, Heavy Manufacturing, Zone	Industrial	Embroidery Service (13031 Los Nietos Rd/KTS Custom Embroidery)

LEGAL NOTICE OF PUBLIC HEARING

This matter was set for Public Hearing in accordance with the requirements of Sections 65090 through 65096 of the State Planning, Zoning and Development Laws and the requirements of Sections 155.860 through 155.864 of the City's Municipal Code.

Legal notice of the Public Hearing for the proposed project was sent by first class mail to all property owners whose names and addresses appear on the latest County Assessor's Roll within 500 feet of the exterior boundaries of the subject property on April 1, 2020. The legal notice was also posted at the City's Town Center kiosk on April 1, 2020, and published in a newspaper of general circulation (Whittier Daily News) April 2, 2020, as required by the State Zoning and Development Laws and by the City's Zoning Ordinance. As of the date of this report, staff has not received any comments and/or inquiries regarding the proposed project.

It should be noted that due to the recent Covid-19 (coronavirus) outbreak, Governor Newsome issued Executive Order N-25-20 on March 4, 2020 to temporarily suspend requirements of the Brown Act, which allows the City to hold public meetings via teleconferencing and to make public meetings accessible telephonically or otherwise electronically to all members of the public. All public hearing notices thus also clarified that the upcoming Planning Commission meeting will be held by teleconference since City Hall, including Council Chambers, is currently closed to the public.

The following ink to the Zoom meeting, along with the meeting ID, password, and dial in information was also provided:

Electronically using Zoom

Telephonically
Dial: 888-475-4499
Meeting ID: 558 333 944

ZONING REQUIREMENTS

The procedures set forth in Section 155.243 (L) of the City's Zoning Ordinance, states that public, private or quasi-public uses of an educational or recreation nature shall be allowed only after a valid conditional use permit has first been obtained.

Code Section:	Development Plan Approval
155.243 (L)	Section 155.243 (L) Public, private or quasi-public uses of an educational or recreation nature.

ENVIRONMENTAL DOCUMENTS

After staff review and analysis, staff intends to file a Notice of Exemption (NOE) with the Los Angeles County Clerk (if the Planning Commission agrees), finding that the proposed project is Categorically Exempt pursuant to Class 1, Section 15301 (Existing Facilities) and Class 3, Section 15303 (New Construction or Conversion of Small Structures) of the California Environmental Quality Act (CEQA). The proposed project involves a previously approved soccer facility. Although there will be minor interior and exterior improvements, the project will not create additional building square footage. Additionally, the project site is not listed on the Hazardous Waste and Substance Site List (Cortese List) as set forth in Government Code Section 65962.5.

AUTHORITY OF PLANNING COMMISSION

The Planning Commission may grant, conditionally grant or deny approval of a conditional use permit plan and/or modification request based on the evidence submitted and upon its own study and knowledge of the circumstances involved

and subject to such conditions as the Commission deems are warranted by the circumstances involved. These conditions may include the dedication and development of streets adjoining the property and other improvements. All conditions of approval shall be: binding upon the applicants, their successors and assigns; shall run with the land; shall limit and control the issuance and validity of certificates of occupancy; and shall restrict and limit the construction, location, use and maintenance of all land and structures within the development.

CRITERIA FOR GRANTING A DEVELOPMENT PLAN APPROVAL

The Commission should note that in accordance with Section 155.716 of the City's Zoning Ordinance, before granting a Conditional Use Permit, the Commission shall give consideration to the following:

A) *Satisfy itself that the proposed use will not be detrimental to persons or property in the immediate vicinity and will not adversely affect the city in general.*

B) *Give due consideration to the appearance of any proposed structure and may require revised architectural treatment if deemed necessary to preserve the general appearance and welfare of the community.*

STAFF REMARKS

Based on the findings set forth in the attached Resolution (161-2020), Staff finds that the applicant's request meets the criteria set forth in §155.716 of the City's Zoning Ordinance, for the granting of a Conditional Use Permit.

CONDITIONS OF APPROVAL

Conditions of approval for ACUP 781 are attached to Resolution 161-2020 as Exhibit A.

CITY OF SANTA FE SPRINGS
NOTICE OF PUBLIC HEARING
AMENDMENT OF CONDITIONAL USE PERMIT CASE NO. 781

NOTICE IS HEREBY GIVEN that the Planning Commission of the City of Santa Fe Springs will hold a Public Hearing to consider the following:

AMENDMENT OF CONDITIONAL USE PERMIT CASE NO. 781: A request for approval to modify the number of clients, hours of operation, and to allow tournaments for an existing soccer training facility, within the M-2, Heavy Manufacturing, Zone.

PROJECT SITE: 13045 Los Nietos Road, Santa Fe Springs, CA 90670 (Ballmaster Elite Soccer Academy)

THE HEARING will be held on **Monday, April 13, 2020 at 6:00 p.m.** Governor Newsom issued Executive Order N-25-20 on March 4, 2020 to temporarily suspend requirements of the Brown Act, which allows the City to hold public meetings via teleconferencing and to make public meetings accessible telephonically or otherwise electronically to all members of the public. Please be advised that until further notice, Planning Commission meetings will be held by teleconference. City Hall, including Council Chambers, is closed to the public.

You may attend the Planning Commission meeting telephonically or electronically using the following means:

Electronically using Zoom

CITY OF SANTA FE SPRINGS
RESOLUTION NO. 161-2020

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS REGARDING AMENDMENT OF CONDITIONAL USE PERMIT CASE NO. 781

WHEREAS, a request for approval to modify the number of clients, to modify the hours of operation, and to allow occasional tournaments for an existing soccer training facility located at 13045 Los Nietos Road, within the M-2, Heavy Manufacturing, Zone; and

WHEREAS, the subject property is located on the north side of Los Nietos Road, with Accessor's Parcel Number of 8167-005-026, as shown in the latest rolls of the Los Angeles County Office of the Assessor; and

WHEREAS, the property owner is Danny Samarin, 603 Reposado Drive, La Habra Heights, CA 90631; and

WHEREAS, the proposed use amendment which includes Conditional Use Permit Case No. 781 is considered a project as defined by the California Environmental Quality Act (CEQA), Article 20, Section 15378(a); and

WHEREAS, based on the information received from the applicant and the provided staff reports, the Planning Commission has found and determined that the proposed project meets the criteria for a Categorical Exemption, pursuant to the California Environmental Quality Act (CEQA), Section 15301-Class 1 and Section 15303-Class 3; and

WHEREAS, the City of Santa Fe Springs Planning and Development Department on April 2, 2020, published a legal notice in the *Whitter Daily News,* a local paper of general circulation, indicating the date and time of the public hearing, and also mailed said public hearing notice on April 1, 2020 to each property owner within a 500 foot radius of the project site in accordance with state law; and

WHEREAS, the City of Santa Fe Springs Planning Commission has considered the application, the written and oral staff report, the General Plan and zoning of the subject property, the testimony, written comments, or other materials presented at the Planning Commission Meeting on April 13, 2020 concerning the Amendment of Conditional Use Permit Case No. 781.

NOW, THEREFORE, be it RESOLVED that the PLANNING COMMISSION of the CITY OF SANTA FE SPRINGS does hereby RESOLVE, DETERMINE and ORDER AS FOLLOWS:

SECTION I. ENVIRONMENTAL FINDINGS AND DETERMINATION

Pursuant to Section 15301, Class 1 (Existing Facilities) and Section 15303, Class 3 (New Construction or Conversion of Small Structures), of the California Environmental Quality Act (CEQA), the Planning Commission hereby finds and determines that the proposed project involves a previously approved soccer facility. Although there will be minor interior and exterior improvements, the project will not create additional building square footage. Therefore, it has been determined that additional environmental analysis is not necessary to meet the requirements of CEQA.

SECTION II. CONDITIONAL USE PERMIT FINDINGS

Pursuant to Section 155.716 of the City's Zoning Ordinance, in studying any application for a Conditional Use Permit, the Commission shall give consideration to the following:

A) Satisfy itself that the proposed use will not be detrimental to persons or property in the immediate vicinity and will not adversely affect the city in general.

The subject site is located within the M-2, Heavy Manufacturing, Zone and also has a General Plan land use designation of Industrial. A soccer training use provided that a CUP is granted, would be consistent with the current zoning and land use designation.

The soccer training facility was originally approved by the Planning Commission in December of 2017. The applicant, Ballmaster Elite Soccer Academy, is requesting an amendment of their Conditional Use Permit to modify the number of clients, to modify the hours of operation, and to allow occasional tournaments.

The primary concern would be to ensure that there is sufficient parking to accommodate the players and staff. The subject site has an existing Modification Permit (MOD 1283), which allows for a reduction of required parking stalls. Since the number of clients has decreased per hour, the proposed soccer training activities will not create a greater burden on the overall parking demand. Moreover, the proposed tournaments will be scheduled only on the weekends with a minimum of 40 minutes between games to allow adequate circulation of inbound and outbound traffic. Training sessions have been conditioned to not occur on days in which tournaments will be held. It should be noted that seating will not be provided and thus, reduce the impact from spectators. Lastly, the maximum number of people during training sessions will be 26 and the maximum number of people during tournaments will be 29. The subject site will provide 46 parking stalls and therefore, provide an additional 17-20 parking stalls for players who arrive early.

Nevertheless, a condition has been added to require the applicant to work with the planning staff to mitigate any future parking issues, should the need arise. Mitigations

include but are not limited to modifying hours of operations, concurrent use of buildings, etc. Additionally, other typical concerns related to safety, noise, and loitering have been addressed through conditions of approval. The Planning Commission finds that if the applicant operates in strict compliance with the conditions of approval, the existing soccer training activities would be harmonious with adjoining properties and surrounding land uses.

B) Give due consideration to the appearance of any proposed structure and may require revised architectural treatment if deemed necessary to preserve the general appearance and welfare of the community.

The subject property is fully improved with two (2) buildings totaling 9,330 sq. ft. of building area. The applicant is planning to make interior modifications to the building to accommodate their proposed soccer training activities. In addition, the applicant is proposing to make minor exterior improvements to provide two (2) additional parking stalls and 241 sq. ft. of landscaping. It should be noted that the outdoor field will remain the same size and is comparable to fields found at other training facilities which include netting, lighting, and padding. Furthermore, the outdoor field will be required to meet all structural standards set forth in the Building Code. The Planning Commission, therefore, finds that the proposed use will preserve the general appearance and welfare of the community.

SECTION III. PLANNING COMMISSION ACTION

The Planning Commission hereby adopts Resolution No. 161-2020 to approve the Amendment of Conditional Use Permit Case No. 781 to modify the number of clients, to modify the hours of operation, and to allow occasional tournaments for an existing soccer training facility located at 13045 Los Nietos Road (APN: 8167-005-026), within the M-2, Heavy Manufacturing, Zone, subject to conditions attached hereto as Exhibit A.

ADOPTED and APPROVED this 13th day of April, 2020 BY THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS.

_____
Frank Ybarra, Chairperson

ATTEST:

_____
Teresa Cavallo, Planning Secretary

Exhibit A – Conditions of Approval

Amendment of Conditional Use Permit Case No. 781
13045 Los Nietos Road (APN: 8167-005-026)

CONDITIONS OF APPROVAL

ENGINEERING / PUBLIC WORKS DEPARTMENT:
(Contact: Robert Garcia 562.868-1511 x7545)

1. That a grading plan shall be submitted showing elevations and drainage pattern of the site. The improvements shall not impede, obstruct or pond water onsite. The grading plan shall be submitted for drainage approval to the City Engineer. The owner shall pay drainage review fees in conjunction with this submittal. **(on-going)**

POLICE SERVICES DEPARTMENT:
(Contact: Luis Collazo 562.409-1850 x3320)

2. That with the acceptance of these conditions of approval, the Applicant is now familiar with Section 155.718 of the Zoning Code which provides "that the Commission may grant a conditional use permit subject to such conditions as the Commission finds are warranted by the circumstances involved. . . All such conditions shall be binding upon the applicants, their successors and assigns; shall run with the land; shall limit and control the issuance and validity of certificates of occupancy; and shall restrict and limit the construction, location, use and maintenance of all land and structures within the development." As a result, any violation of the conditions of approval set forth within this report is a direct violation of Section 155.718 and subject to an Administrative Citation which carries fines of up to $500.00 each day that the violation continues to exist, or the revocation of this entitlement, or both. **(on-going)**

3. That the Applicant, his employees and/or his staff, shall not allow any type of outdoor activities within the required off-street parking area ~~or any satellite parking sites~~. This includes, but is not limited to, warm-ups, drilling exercises, team practices and/or team competitions. **(on-going)**

4. That on-site fund raisers and/or special events, if any, shall be conducted indoors at all times. Special events at the location ~~and/or satellite parking areas~~ are subject to a Permit obtained through the Department of Police Services. Applications for Special Events shall be submitted at least 30-days from the date of the event – no exceptions. **(on-going)**

5. That the applicant shall submit and obtain approval of a proposed lighting (photometric) plan for the property from the City's Department of Police Services. The photometric plan shall be designed to provide adequate

lighting (minimum of 1 foot candle power) throughout the subject property. Further, all exterior lighting shall be designed/installed in such a manner that light and glare are not transmitted onto adjoining properties in such concentration/quantity as to create a hardship to adjoining property owners or a public nuisance. The photometric plans shall be submitted to the Director of Police Services no later than sixty (60) day from the date of approval by the Planning Commission. **(on-going)**

6. That in order to facilitate the removal of unauthorized vehicles parked on the property ~~and any of the satellite parking sites~~, the applicant shall post, in plain view and at each entry to the property, a sign not less than 17" wide by 22" long. The sign shall prohibit the public parking of unauthorized vehicles and indicate that unauthorized vehicles will be removed at the owner's expense and also contain the California Vehicle Code that permits this action. The sign shall also contain the telephone number of the local law enforcement agency (Police Services Center (562) 409-1850). The lettering within the sign shall not be less than one inch in height. The applicant shall contact the Police Services Center for an inspection no later than 30 days after the project has been completed and prior to the occupancy permit being issued. **(on-going)**

7. That the proposed buildings, including any lighting, fences, walls, cabinets, and poles shall be maintained in good repair, free from trash, debris, litter and graffiti and other forms of vandalism. Any damage from any cause shall be repaired within 72 hours of occurrence, weather permitting, to minimize occurrences of dangerous conditions or visual blight. Paint utilized in covering graffiti shall be a color that matches, as closely possible, the color of the existing and/or adjacent surfaces. **(on-going)**

8. That advertising, banners, and other promotion devices shall be first approved by the Department of Planning and reviewed by the Department of Police Services. **(on-going)**

9. That it shall be the responsibility of the Applicant and his staff to maintain the site ~~and any satellite parking sites~~ in a clean and orderly manner. **(on-going)**

10. That porte-potties or equal, shall not be used on the site at any time, and that the Applicant shall provide adequate bathroom facilities and changing room facilities inside the buildings. **(on-going)**

11. That the sale of food and/or beverages, pre-packaged or otherwise, shall be first approved by the County Health Department. **(on-going)**

DEPARTMENT OF FIRE - RESCUE (FIRE PREVENTION DIVISION)
(Contact: Raul Diaz 562.868-0511 x3813)

12. That interior gates or fences are not permitted across required Fire Department access roadways unless otherwise granted prior approval by the City Fire Department. **(on-going)**

13. That all entry gates shall be equipped with Knox boxes or Knox key switches for power-activated gates. **(on-going)**

14. That signs and markings required by the Fire Department shall be installed along the required Fire Department access roadways. **(on-going)**

WASTE MANAGEMENT :
(Contact : Teresa Cavallo 562.868-0511 x7309)

15. That the applicant shall comply with Section 50.51 of the Municipal Code which prohibits any business or residents from contracting any solid waste disposal company that does not hold a current permit from the City. **(on-going)**

16. That all projects over $50,000 are subject to the requirements of Ordinance No. 914 to reuse or recycle 75% of the project waste. Contact the Recycling Coordinator, Teresa Cavallo at (562) 868-0511 x7309. **(on-going)**

PLANNING AND DEVELOPMENT DEPARTMENT:
(Contact: Vince Velasco 562.868-0511 x7353)

17. This approval is for the use of a ~~youth~~ soccer training facility, in the form of small-group (~~29 to 34~~ **21 to 36** players) sessions, with related activities only. A maximum of ~~34~~ **36** players and 5 staff members (including: administrative, trainers, coaches, and referees) shall be on the subject site per session. Any modification to the number of players or staff members shall be subject to prior review and approval by the Director of Planning or his/her designee. **(revised – on-going)**

18. That the Mitigation Monitoring and Reporting Program, which was prepared for the proposed project and adopted by the Planning Commission upon completion of the Initial Study/Mitigated Negative Declaration, shall be made part of the conditions of approval for Conditional Use Permit Case No. 781. The Mitigation Monitoring and Reporting Program is listed as an attachment to this staff report. **(on-going)**

19. Modification Permit Case No. 1283 allows for an ~~twenty-one (21)~~ **eighteen (18)** parking stall reduction to the minimum parking requirements associated with the subject ~~youth~~ soccer training use. A minimum of ~~44~~ **46**

parking stalls shall be continually provided and maintained at all times. All parking areas shall be legibly marked off on the pavement, showing the required parking stalls. **(revised – on-going)**

20. ~~Modification Permit Case No. 1284 allows for a 195 sq. ft. landscape reduction to the minimum landscaping requirements associated with the subject property. Said landscaping reduction is specific to the subject youth soccer training facility use~~. **(satisfied)**

21. Approval of Conditional Use Permit No. 781 is contingent upon approval of Modification Permit Case No. 1283 ~~and Modification Permit Case No. 1284~~. **(revised – on-going)**

22. The proposed ~~youth~~ soccer training facility use cannot be used for public assembly purposes until it has met the current requirements of the Los Angeles County Building Code and the Uniform Fire Code and an occupancy load has been determined by the Fire Department. The process requires permits to be obtained, plans to be submitted, reviewed, approved, and field inspected with a final approval granted by the City Fire Department and Building Division. The building shall not be occupied for such use until such time that this process has been completed. **(on-going)**

23. Wall-mounted methane gas detectors must be installed and maintained throughout the proposed project site in order to detect an intrusion of methane into the proposed project. The wall-mounted methane gas detectors must be installed and maintained in compliance with all requirements set by the City of Santa Fe Springs Department of Fire and Rescue. **(on-going)**

24. The exterior exit doors shall remain closed when not being used for ingress/egress purposes. Additionally, the applicant shall inform all staff members and players not to loiter or make loud noises outside of the building before or after each session. **(on-going)**

25. Vending machines shall be prohibited on the exterior of the property. **(on-going)**

26. In the event noise levels outside of the applicant's premises are found to exceed permissible levels per City Code, the applicant shall work with planning staff to come up with a solution to immediately mitigate noise issues. **(on-going)**

27. The days and hours of operation of the ~~youth~~ soccer training facility shall be Monday through Friday from ~~4:00 p.m.~~ **9:00 a.m.** to 11:00 p.m.; & Saturday and Sunday from ~~7:30 a.m. to 9:00 p.m.~~ **9:00 a.m. to 5:00 p.m.**

~~Specific training session times shall be limited to the following:~~

- ~~Monday – Friday:~~
  - ~~Office Use: 4:00pm – 5:00pm~~
  - ~~Session 1: 5:00pm – 6:00pm~~
  - ~~Session 2: 7:00pm – 8:00pm~~
  - ~~Session 3: 9:00pm – 10:00pm~~
  - ~~Office Use: 10:00pm – 11:00pm~~
- ~~Saturday – Sunday:~~
  - ~~Scrimmage 1: 8:00 a.m. – 9:00 a.m.~~
  - ~~Scrimmage 2: 11:00 a.m. – 12:00 p.m.~~
  - ~~Scrimmage 3: 2:00 p.m. – 3:00 p.m.~~
  - ~~Scrimmage 4: 5:00 p.m. – 6:00 p.m.~~
  - ~~Scrimmage 5: 8:00 p.m. – 9:00 p.m.~~

Any modification to the days and hours of operation, including session times, shall be subject to prior review and approval by the Director of Planning or his/her designee. **(revised – on-going)**

~~28. Activities related to the youth soccer training use within Building 1 shall not occur on Saturdays and Sundays. Scrimmages will be limited to Building 2 and the Outdoor Turf Field only.~~ **(removed)**

~~29. No tournaments shall occur on the subject property without prior approval by the Director or Planning or his/her designee.~~ **All tournaments shall be limited to Saturdays and Sundays only and subject to the tournament schedule on file for this case. The facility will not be open to the public on tournament days. Any modifications to the days and hours of tournaments shall be subject to prior review and approval by the Director of Planning or his/her designee. (revised – on-going)**

30. There shall be no on-site kitchen facilities or preparation of food and drinks without prior approval from the Director of Planning or his/her designee. **(on-going)**

31. The applicant shall provide water for all players during sessions, scrimmages, **and tournaments**. **(revised – on-going)**

32. The ~~youth~~ soccer training facility shall otherwise be substantially in accordance with the plot plan, floor plan, and operational narrative submitted by the applicant and on file with the case. Any modification shall be subject to prior review and approval by the Director of Planning or his/her designee. **(revised – on-going)**

33. The applicant shall notify, in writing, of any change in ownership within 30 days. The conditions of approval shall be binding to any successors. **(on-going)**

34. In the event the need arises for the additional required off-street parking spaces as determined by the Director of Planning, the applicant shall work with the planning staff to come up with a solution to immediately mitigate the parking issues, including but not limited to modifying hours of operations, concurrent use of buildings, etc. **(on-going)**

35. The Department of Planning and Development shall first review and approve all sign proposals for the ~~youth~~ soccer training facility. The sign proposal (plan) shall include a site plan, building elevation on which the sign will be located, size, style and color of the proposed sign. All drawings shall be properly dimensioned and drawn to scale on 11" x 17" size paper. All signs shall be installed in accordance with the sign standards of the Zoning Ordinance and the Sign Guidelines of the City. **(revised – on-going)**

36. Prior to occupancy, the applicant shall obtain a valid business license (AKA Business Operation Tax Certificate), and submit a Statement of Intended Use. Both forms, and other required accompanying forms, may be obtained at City Hall by contacting ~~Cecilia Martinez~~ **Finance Department** at (562) 868-0511, extension ~~7527~~ **7520**, or through the City's web site (www.santafesprings.org). **(revised – on-going)**

37. All other requirements of the City's Zoning Ordinance, Building Code, Property Maintenance Ordinance, State and City Fire Code and all other applicable County, State and Federal regulations and codes shall be complied with. **(on-going)**

38. Conditional Use Permit Case No. 781 shall be subject to a compliance review in one year, on or before ~~December 11, 2018~~ **April 13, 2021**, to ensure that the subject ~~youth~~ soccer training use is still operating in strict compliance with these conditions of approval. **(revised – on-going)**

39. ~~The applicant, Ballmaster Elite Soccer Academy, agrees to defend, indemnify and hold harmless the City of Santa Fe Springs, its agents, officers and employees from any claim, action or proceeding against the City or its agents, officers or employees to attack, set aside, void or annul an approval of the City or any of its councils, commissions, committees or boards arising from or in any way related to all entitlements and approvals issued by the City in connection with the youth soccer training use and from any CEQA challenges relating to the environmental review and determination for the project, or any actions or operations conducted pursuant thereto. Should the City, its agents, officers or employees receive notice of any such claim, action or proceeding, the City shall promptly notify the applicant of such claim, action or proceeding, and shall cooperate fully in the defense thereof.~~ **The applicant shall indemnify, protect, defend, and hold harmless, the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities**

thereof, from any and all claims, demands, law suits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative or adjudicatory in nature), and alternative dispute resolutions procedures (including, but not limited to arbitrations, mediations, and other such procedures), (collectively "Actions"), brought against the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul, the any action of, or any permit or approval issued by, the City and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the City), for or concerning the project, whether such Actions are brought under the California Environmental Quality Act, the Planning and Zoning Law, the Subdivisions Map Act, Code of Civil Procedure Section 1085 or 1094.5, or any other state, federal, or local statute, law, ordinance, rule, regulation, or any decision of a court of competent jurisdiction. In addition, the applicant shall reimburse the City, its officials, officers, employees, agents, departments, agencies, for any Court costs and attorney's fees which the City, its agents, officers, or employees may be required by a court to pay as a result of such action. It is expressly agreed that the City shall have the right to approve, which approval will not be unreasonably withheld, the legal counsel providing the City's defense, and that applicant shall reimburse City for any costs and expenses directly and necessarily incurred by the City in the course of the defense. City shall promptly notify the applicant of any such claim, action or proceeding, and shall cooperate fully in the defense thereof. (revised – on-going)

40. If there is evidence that conditions of approval have not been fulfilled or the use has or have resulted in a substantial adverse effect on the health, and/or general welfare of users of adjacent or proximate property, or have a substantial adverse impact on public facilities or services, the Director of Planning may refer the use permit to the Planning Commission for review. If upon such review, the Commission finds that any of the results above have occurred, the Commission may modify or revoke the use permit. Applicant shall be notified prior to any such action. **(on-going)**

41. It is hereby declared to be the intent that if any provision of this Approval is violated or held to be invalid, or if any law, statute or ordinance is violated, this Approval shall be void and privileges granted hereunder shall lapse. **(on-going)**

Project Address: 13045 Los Nietos Road, Santa Fe Springs, CA 90670
Date: 3/9/2020
Title: Conditional Use Permit Amendment

Dear Mr. Velasco,

Our firm has been hired by the applicant, Mr. Sam Diep, to represent Ballmaster Elite Soccer Academy (BESA) to amend the previously approved Condition Use Permit Case No. 781, Modification Permit Case No. 1283 and Modification Permit Case No. 1284 with the followings:

1. Applicant is seeking approval of extending the business hours previously approved. Please see Exhibit A for more information.

2. Applicant is seeking approval to remove the existing private offices in Building 1 in order to enlarge the indoor training field. Also, the applicant is seeking approval to enlarge the indoor "futsal" field in Building 2 as well as the change of design of the outdoor soccer field. Please see Exhibit B for more information.

3. Applicant is seeking approval to allow for soccer tournaments on the subject property. Please see Exhibit C for a sample tournament schedule.

Please review the information provided and feel free to reach out with any questions.

Sincerely,

Crystal Wong

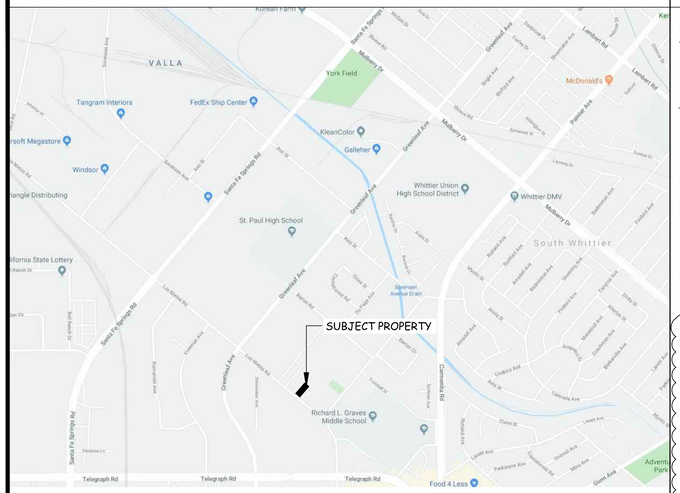
Justification Statement:

BESA will be a soccer training facility for youths and adults alike. It will focus on the aspects of training physically and mentally for the game of soccer. BESA will make this a fun environment for all and be part of the community in promoting health and fitness especially for soccer athletes. It will offer private and small group training for youths and adults at the facility. It will focus on programs from k-12 and become involved with elementary, middle and high school programs. It is also BESA's objective to further educate the youths regarding college and higher education and be able to provide services that will help them succeed.

The proposed change of operation hours will allow BESA to provide adequate number of hours to service its residents - both youths and adults. The previously approved hours, 4 pm - 11 pm, are not feasible for the existence of the facility as they would not benefit but hinder the operation of the training center in an economic sense. Provided that the facility is servicing both youths and adults, the additional operation hours during the day will allow adult trainees to practice while the youths will be able to practice during after school hours.



In addition, the proposed continuous hours of operation will not create an unreasonable demand for parking. The revised drawings show a less required amount of parking spaces. The previously requirement of 65 is changed to 64. They also show 2 additional parking spaces will be provided. There will be a total of 46 parking stalls on site. There will be enough overflow of parking spaces available during each training hour based on the number of players proposed. While sufficient parking is a concern, the proposed maximum of 26 cars at any given hour (20 trainees, 3 trainers, and 3 employees) comparing to the 46 parking stalls provided is proven to be feasible and manageable. The schedule above shows to be a benefit not only for the facility, but the City of Santa Fe Springs and its residents as well as neighboring businesses. Applicant will ensure the maximum number of people present at the facility will be fulfilled and will schedule accordingly to ensure there are no training sessions going on if there is a rental and vice versa as parking will not be sufficient and capacity will go over the maximum required.

The proposed soccer training facility is consistent with the General Plan developed by the City of Santa Fe Springs. An incubating business such as the proposed will not only provide recreational service to its residents but will also attract residences from the surrounding neighborhoods to come visit. This will create an economic revenue to the City of Santa Fe Springs favorably. The extended hours of operation will allow BESA to do the above.

Exhibit C

BESA is requesting approval of tournaments to allow the athletes to further develop their skills. The tournaments will occur on a quarterly basis on the weekends only. The facility will not be opened to the public during tournament day.

Following is a sample BESA Friends Tournament Schedule:

Game times are 40 minutes total (20 minutes halves) with 5 players against 5 players on each field.

Field 1: Building 2 futsal field
Field 2: Outdoor soccer field

Teams:
Slammer FC, Legends, Strikers, Pats, Beach, CDA Slammers, Rising, Surf

	Bracket 1 Field 1	Bracket 2 Field 2
7:30 am	Slammers FC vs Surf	Strikers vs Beach
8:50 am	Legends vs Rising	Pats vs CDA Slammers
10:10 am	Beach vs Slammers FC	Surf vs Strikers
11:30 am	Legends vs CDA Slammers	Rising vs Beach
	Semi Final	
12:50 am	Slammers FC vs Beach	Surf vs Rising
	Final	
2:10 pm	Slammers FC vs Surf	

Parking Summary:
There will be 10 players, 2 coaches and 1 referee on each field with 3 employees with a total of 29 stalls used during each game. Total number of stalls provided is 46, therefore total number of open stalls during each game is 17. There will be a minimum of 40 minutes in between games for teams to exit and make room for the next game.

PUBLIC HEARING
Adoption of Mitigated Negative Declaration
Development Plan Approval Case No. 971
Amendment of Conditional Use Permit Case No. 780
Modification Permit Case No. 1325

Development Plan Approval Case No. 971: A request to demolish nine (9) existing single-story mini-warehouse buildings and replace them with a three-story, 97,503 sq. ft. mini-warehouse building.
Amendment of Conditional Use Permit Case No. 780: A request to amend the November 13, 2017 approval to increase the mini-warehouse facility use from 90,410 sq. ft. to 102,454 sq. ft.
Modification Permit Case No. 1325: A request to allow a 3'-5" projection into the required setbacks.

The project site is located at 13020 Telegraph Road (APN: 8011-014-017), within the M-2, Heavy Manufacturing Zone and within the Telegraph Road Corridor. (Ojai Oil Company dba Golden State Storage)

RECOMMENDATIONS

- Open the Public Hearing and receive any comments from the public regarding Development Plan Approval Case No. 971, Amendment of Conditional Use Permit Case No. 780, Modification Permit Case No. 1325, and related Environmental Documents and thereafter close the Public Hearing; and
- Find and determine that the proposed project will not be detrimental to persons or properties in the surrounding area or to the City in general, and will be in conformance with the overall purpose and objective of the Zoning Ordinance and consistent with the goals, policies and program of the City's General Plan; and
- Find that the applicant's request meets the criteria set forth in §155.739 of the Zoning Ordinance for the granting of Development Plan Approval; and
- Find that the applicant's request meets the criteria set forth in §155.716 of the Zoning Ordinance for the granting of a Conditional Use Permit; and
- Find that the applicant's request meets the criteria set forth in §155.695 and §155.696 of the Zoning Ordinance for the granting of a Modification Permit; and

RECOMMENDATIONS (Cont.)

- Approve and adopt the proposed Mitigated Negative Declaration which, based on the findings of the Initial Study, indicates that there is no substantial evidence that the proposed project will have a significant adverse effect on the environment; and
- Approve the proposed Mitigation Monitoring and Reporting Program (MMRP) for the proposed project; and
- Adopt Resolution No. 160-2020, which incorporates the Planning Commission's findings and actions regarding this matter.

BACKGROUND

The subject site is comprised of a single parcel (APN: 8011-014-017) measuring approximately 1.59-acres and located on the southeast corner of Telegraph Road and Shoemaker Avenue. The subject site is within the Telegraph Road Corridor,

zoned M-2, Heavy Manufacturing and has been utilized as a mini-warehouse facility since 1974.

Prior to 1974, "mini-warehouse" was not defined in the City's Zoning Ordinance. In July 1974, the City Council adopted interim Ordinance No. 461 to temporarily prohibit the construction of mini-warehouse facilities and directed staff to develop site development standards for mini-warehouse facilities.

In October 1974, the City Council adopted Ordinance No. 468 which amended the text of the Zoning Ordinance to (1) add a new definition for mini-warehouse to distinguish a mini-warehouse use from a regular warehouse use; (2) require Conditional Use Permit approval prior to the establishment of a mini-warehouse within the M-1 or M-2 zones; and (3) add special provisions, § 155.637(B), to restrict the size, location, and function of mini-warehouses. One provision of Ordinance No. 468 restricted mini-warehouses from occupying frontage on a freeway, major or secondary highway.

The owners of the subject property had already applied for building permits to construct a mini-warehouse facility prior to the adoption of either ordinance. Even though Telegraph Road is a major highway and Shoemaker Avenue is a Secondary Highway, the city allowed the project to continue since the applicant had initiated the process to construct a mini-warehouse prior to the ordinances going into effect. In fact, Section 7 of Ordinance No. 461 conditionally "excepted" the ordinance from applying to the subject property provided that the development comply with certain development criteria, which were memorialized in a 1974 agreement between the owner of the property (Los Feliz Investment Co. and Ojai Company) and the City. Development criteria from that agreement included:

1. The setback on Telegraph Road for all buildings and structures shall be 20 feet.
2. There shall be no outdoor storage unless it is completely screened from view from adjoining streets and adjoining properties.
3. The development shall provide adequate internal security to reduce the likelihood of theft or pilferage.
4. Site plans shall meet the requirements of the City's Fire Department as to adequate fire protection.
5. The required access aisles shall not be used for storage purposes.

A copy of the entire Agreement can be found as Attachment #2.

On September 28, 2017, City Council adopted Ordinance No. 1089 to amend the Zoning Ordinance to allow for mini-warehouses on properties occupying frontage on a freeway, major or secondary highway.

The project applicant has proposed several upgrades to the property since it was

first constructed in 1974, including a proposal in 2009 to replace the center buildings with a three-story building. For various reasons, those plans were abandoned. In March 2011, the applicant was granted Modification Permit No. 1214 to remodel the office, caretaker's apartment, and facades. The modification allowed for architecturally articulated walls to encroach two feet into the 20' front-yard setback area along Telegraph Road and to encroach two feet into the 10' side-yard setback area along Shoemaker Avenue. Corresponding drought-tolerant landscaping upgrades were also completed at that time. Most recently, the applicant received approval in November 2017 to demolish five interior single-story mini-warehouse buildings and replace them with a three-story, 75,275 sq. ft. building. The project did not move forward because the applicant opted to redesign the site with a larger building.

PROJECT DESCRIPTION

The proposed project requires approval of the following entitlements:

Development Plan Approval Case No. 971: A request to demolish nine (9) existing single-story mini-warehouse buildings and replace them with a three-story, 97,503 sq. ft. mini-warehouse building.

Amendment of Conditional Use Permit Case No. 780: A request to amend the November 13, 2017 approval to increase the mini-warehouse facility use from 90,410 sq. ft. to 102,454 sq. ft.

Modification Permit Case No. 1325: A request to allow a 3'-5" projection into the required setbacks.

DEVELOPMENT PLAN APPROVAL CASE NO. 971

Site Plan

The current site is comprised of nine single-story mini-warehouse buildings and a two-story caretaker's facility. The applicant is proposing to demolish the nine mini-warehouse buildings and replace them with a three-story, 97,503 sq. ft. mini-warehouse building and a 2,547 single-story storage building with trash enclosure. The existing 2,404 sq. ft. caretaker's facility will remain, for a total building area of 102,454 sq. ft.

The building will be set back at least 35'-4" from Telegraph Road and Shoemaker Avenue. The entire setback area will be landscaped. Access to the site will be provided by an existing 25'-wide driveway along Telegraph Road and a relocated 30'-wide driveway along Shoemake Avenue. Rolling gates near each driveway will restrict building access to ensure only those with storage units will be able to enter the building, however guests will be able to visit the office. The site will have fourteen parking stalls.

Floor Plan

The building's main entrance will be located in the center of the building's east elevation. A 37'-2" wide loading zone just outside the main entrance will provide easy access to two elevators located directly inside the main entrance. Two smaller entry doors located along the building's east elevation and one along the south elevation will provide additional access to the first floor. The building will have three stairwells located on the northeast, southeast and southwest corners of the building to provide access to the second and third floors. The stairwells will not be accessible from the first floor.

The first floor of the new building will measure 31,774 sq. ft. and have 186 storage units varying in size from 5' x 5' to 10' x 25'. The storage unit breakdown of the first floor is as follows:

Size	Amount	Percentage
5' x 5'	25	14%
5' x 10'	38	20%
10' x 10'	21	11%
10' x 15'	31	17%
10' x 20'	65	34%
10' x 25'	6	3%
TOTAL:	186	

The second floor will measure 33,044 sq. ft. and have 229 storage units varying in size from 5' x 5' to 10' x 20'. The storage unit breakdown for the second floor is as follows:

Size	Amount	Percentage
5' x 5'	35	16%
5' x 10'	55	24%
10' x 10'	38	16%
10' x 15'	59	26%
10' x 20'	42	18%
TOTAL:	229	

The third floor will measure 32,685 sq. ft. and have 211 storage units varying in size from 5' x 5' to 10' x 25'. The storage unit breakdown for the second floor is as follows:

Size	Amount	Percentage
5' x 5'	38	18%
5' x 10'	46	22%
10' x 10'	42	20%
10' x 15'	21	12%
10' x 20'	41	17%

10' x 25'	23	11%
TOTAL:	211	

Building J, a single-story storage building, will have nine units measuring 10' x 20' in size and a 36'-8" x 20' trash enclosure.

Building I, the existing office and caretaker's unit, will remain unchanged.

Roof Plan

The roofline will extend to a height of 34'-9" and the southwest, northwest, and northeast corners of the building will have square architectural elements that extend up to 38'-9". A 38'-9" rectangular mechanical screen in the center of the building will shield the elevators and HVAC equipment from view.

Elevations

The new three-story storage building will have numerous architectural elements to break up the building mass. The three street-facing corners will have wrap around storefront windows, awnings and height variation. Additional pop-outs, storefront windows and metal trellises and awnings will be added to the street-facing elevations.

Landscaping

The entire setback area totaling 15,030 sq. ft. will be landscaped with a diverse and colorful plant palate. Thirty-three trees will be planted.

AMENDMENT TO CONDITIONAL USE PERMIT CASE NO. 780

Golden State Storage is owned and operated by the Ojai Oil Company, which has been in the mini-warehouse industry since 1974. Ojai Oil Company owns and manages 17 mini-warehouse facilities, including 12 in Southern California and five in the Las Vegas, Nevada area.

Golden State Storage rents mini-warehouse units by the month or year to individuals and businesses. They provide secure storage for people in transit, and families or small businesses that need more room. Units are cleaned and maintained by an on-site manager who lives at the property to provide 24/7 site security. Storage units will range in size from 5' x 5' up to 10' x 25'. Individuals can access their storage units between 7am to 6pm daily. Staff members will man the office from 8am to 5pm Monday through Saturday, and from 10am to 5pm on Sundays.

Golden State Storage in Santa Fe Springs has operated with two or three employees for the past 46 years. They currently employ two people at the site and will add a third staff member when the new building opens.

Conditional Use Permit Case No. 780 was approved on November 13, 2017 to allow a mini-warehouse use up to 90,410 sq. ft. in size. The proposed request would increase the mini-warehouse use to 102,454 sq. ft. in size.

MODIFICATION PERMIT CASE NO. 1325

Per §155.248 of the Zoning Ordinance, the required front yard setback is one foot for each foot of the building height. The proposed building is 38'-9" at its tallest point, but the smallest provided setback is 35'-4", a 3'-5" projection into the required setback. Although the project does not meet the overall one-to-one setback requirement, the applicant designed the building to provide a setback equal to a one-to-one ratio for all portions of the building that exceed the normal setback.

STREETS AND HIGHWAYS

The subject property is located at the southeast corner of Shoemaker Avenue and Telegraph Road. Shoemaker Avenue is designated as a Secondary Highway within the Circulation Element of on the City's General Plan. Telegraph Road is designated as a Major Highway.

ZONING, GENERAL PLAN AND LAND USE

Zoning on the subject property and all surrounding properties is M-2, Heavy Manufacturing with a General Plan Land Use designation of Industrial.

LEGAL NOTICE OF PUBLIC HEARING

This matter was set for Public Hearing in accordance with the requirements of Sections 65090 and 65091 of the State Planning, Zoning and Development Laws and the requirements of Sections 155.860 through 155.864 of the City's Municipal Code.

Legal notice of the Public Hearing for the proposed project was sent by first class mail to all property owners whose names and addresses appear on the latest County Assessor's Roll within 500 feet of the exterior boundaries of the subject property on March 30, 2020. The legal notice was also posted in Santa Fe Springs City Hall and the City's Town Center on March 30, 2020, and published in a newspaper of general circulation (Whittier Daily News) on April 2, 2020, as required by the State Zoning and Development Laws and by the City's Zoning Ordinance. As of the date of this report, staff has not received any comments and/or inquiries regarding the proposed project.

It should be noted that due to the COVID-19 outbreak, Governor Newsome issued Executive Order N-25-20 on March 4, 2020 to temporarily suspend requirements of the Brown Act, which allows the City to hold public meetings via teleconferencing and to make public meetings accessible telephonically or otherwise electronically to

all members of the public. All public hearing notices thus also clarified that the upcoming Planning Commission meeting will be held by teleconference since City Hall, including Council Chambers, is currently closed to the public.

The following link to the Zoom meeting, along with the meeting ID, password, and dial in information were also provided:

ENVIRONMENTAL DOCUMENTS

The environmental analysis provided in the Initial Study indicates that the proposed project will not result in any significant adverse immitigable impacts on the environment; therefore, the City caused to be prepared and proposes to adopt a Mitigated Negative Declaration (MND) for the proposed Project. The MND reflects the independent judgment of the City of Santa Fe Springs and the environmental consultant, Blodgett/Baylosis Environmental Planning, as to the potential environmental impacts of the proposed project on the environment.

The Draft Initial Study/Mitigated Negative Declaration was circulated for the required 20-day public review and comment period from March 6, 2020 to March 26, 2020. A Notice of Intent to Adopt a Mitigated Negative Declaration was posted with the Los Angeles County Clerk and a copy of the Initial Study/Mitigated Negative Declaration was also mailed to surrounding cities for their review and comment.

The draft Initial Study/Mitigated Negative Declaration identified several factors that may be potentially affected by the subject project which include: *Air Quality; Cultural Resources; Geology and Soils; Hazards and Hazardous Materials;* and *Hydrology and Water Quality.* These factors and their respective pertinent issues are discussed and analyzed within the Initial Study/Mitigated Negative Declaration. Mitigations, where necessary, were implemented to help ensure potential impacts are reduced to a less than significant level. A detailed analysis can be found in the Initial Study/Mitigated Negative Declaration.

The monitoring and reporting on the implementation of mitigation measures, including the monitoring action, monitoring agency, and the period for implementation, are identified in the Mitigation Monitoring and Reporting Program (Attachment #4). To date, staff has not received responses relating to the proposed Initial Study/Mitigated Negative Declaration.

AUTHORITY OF PLANNING COMMISSION:

Development Plan Approval

The Planning Commission has the authority, subject to the procedures set forth in the City's Zoning Ordinance, to grant a Development Plan Approval when it has been found that said approval is consistent with the requirements, intent and purpose of the City's Zoning Ordinance. The Commission may grant, conditionally grant or deny approval of a proposed development plan based on the evidence submitted and upon its own study and knowledge of the circumstances involved, or it may require submission of a revised development plan.

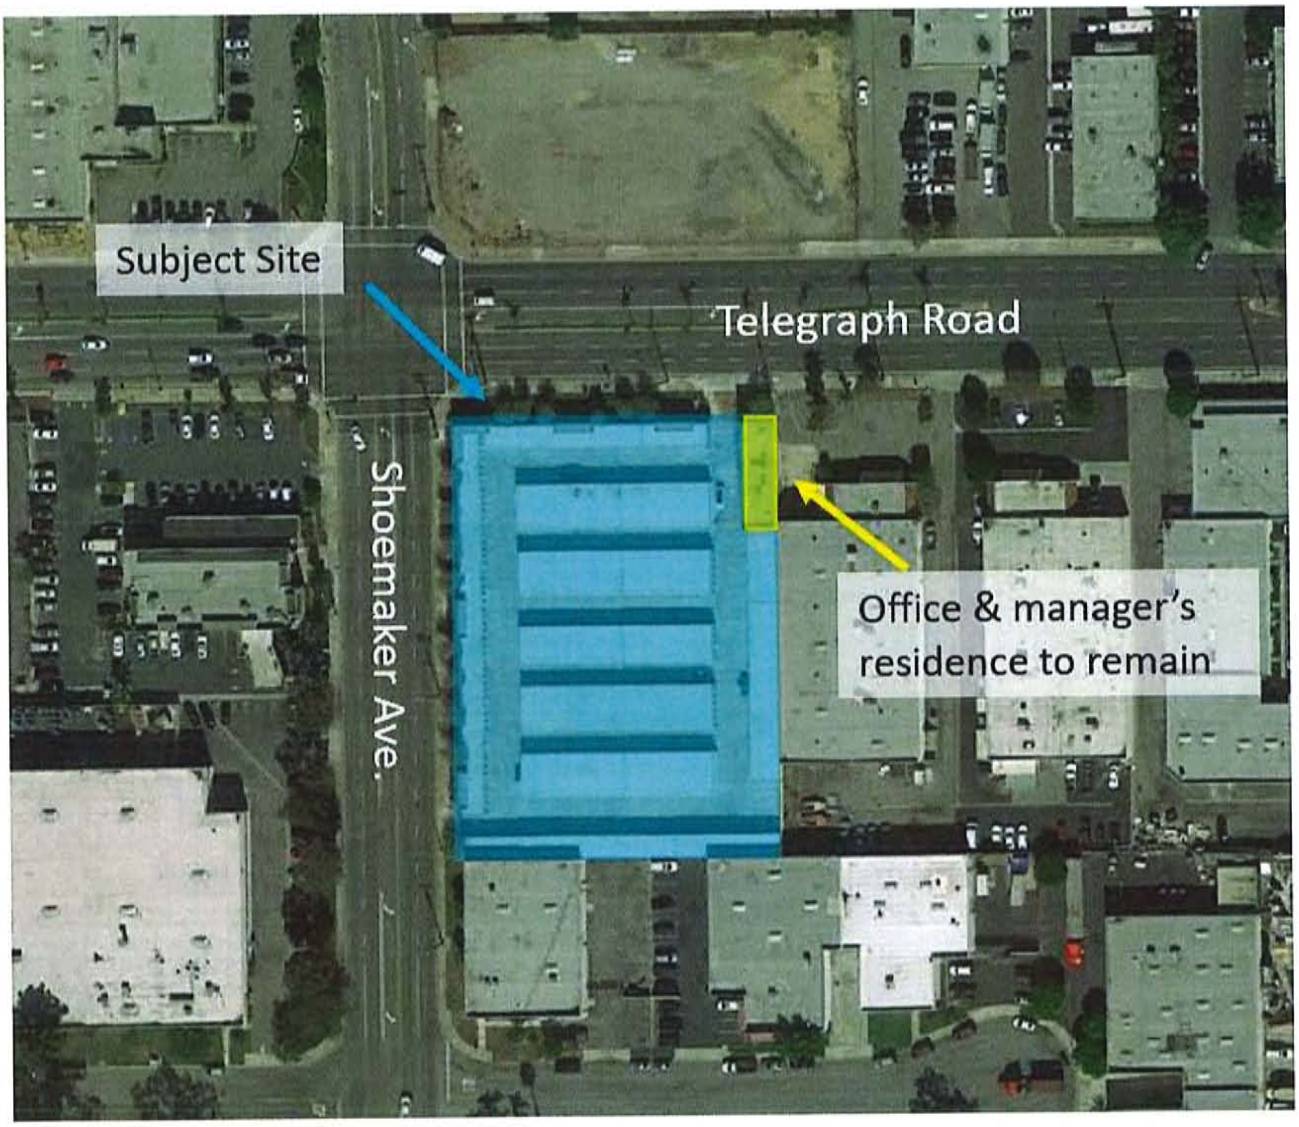
Conditional Use Permit

The Planning Commission has the authority, subject to the procedures set forth in the City's Zoning Ordinance, to grant a Conditional Use Permit whenever it finds that the granting of said permit is consistent with the requirements, intent and purpose of this chapter. The Commission may grant a Conditional Use Permit subject to such conditions as the Commission finds are warranted by the circumstances involved. This may include the dedication and development of streets adjoining the property and other improvements. All such conditions shall be binding upon the applicants, their successors and assigns; shall run with the land; shall limit and control the issuance and validity of certificates of occupancy; and shall restrict and limit the construction, location, use and maintenance of all land and structures within the development.

Modification Permit

The Planning Commission has the authority, subject to the procedures set forth in the City's Zoning Ordinance, to grant a modification from requirements of property development standards set forth in the City's Zoning Ordinance when it is found that the strict and literal interpretation of such provisions would cause undue difficulties and unnecessary hardships inconsistent with the intent and general purpose of the City's Zoning Ordinance. The Commission may grant, conditionally grant or deny a modification based on the evidence submitted and upon its own study and knowledge of the circumstances

STAFF REMARKS



Based on the findings set forth in attached Resolution 160-2020, Staff finds that the applicant's request meets the criteria set forth in §155.739, §155.716, and §155.695 and §155.696 of the City's Zoning Ordinance for the granting of a Development

Plan Approval, Conditional Use Permit, and Modification Permit, respectively. Therefore, staff recommends that the Planning Commission adopt Resolution 160-2020, which incorporates the findings and conditions of approval related to the subject proposal.

OCT 01 2008

CARSON ARCHITECTS

A G R E E M E N T

THIS AGREEMENT is made and entered into between LOS FELIZ INVESTMENT CO. and OJAI COMPANY, corporations hereinafter for convenience referred to in the singular as "Owner," and the CITY OF SANTA FE SPRINGS, a general law city, situated in the County of Los Angeles, State of California, hereinafter sometimes referred to as "City."

This Agreement is made with reference to the following facts:

A. Owner has applied for a building permit for mini-warehouses on a parcel of land identified as 13020 Telegraph Road and legally described as follows:

The West half of Lot or Block 22, of Bannister's Addition to Santa Fe Springs, in the City of Santa Fe Springs, in the County of Los Angeles, State of California, as per map recorded in Book 23, Page 23, page 60, of Miscellaneous Records, in the office of the County Recorder of said County.

B. City, on July 11, 1974 adopted Ordinance No. 461, an Ordinance temporarily prohibiting the construction of mini-warehouse facilities in the City. Section 7 of said Ordinance No. 461 conditionally excepted said Ordinance from applying to the parcel above described, provided that the development of said parcel complied with certain criteria.

NOW, THEREFORE, for and in consideration of the issuance of a building permit by City for a mini-warehouse on said parcel of land in furtherance of the provisions of Ordinance No. 461, the parties hereto do agree that any mini-warehouse facilities erected on said parcel of land, including any additions, alterations or rebuilding, shall comply with the following:

1. The setback on Telegraph Road for all buildings and structures shall be 20 feet.

2. All mini-warehouse facilities shall be constructed of masonry or concrete exterior walls.

3. There shall be no outdoor storage unless it is completely screened from view from adjoining streets and adjoining properties.

Attachment 2 – 1974 Agreement (Cont.)

4. The development shall provide adequate internal security to reduce the likelihood of theft or pilferage.

5. Site plans shall meet the requirements of the City's Fire Department as to adequate fire protection.

6. There shall be no storage of materials not permitted by the type of structure or classification of occupancy as specified in City's Building Code and Fire Code.

7. The required access aisles shall not be used for storage purposes.

8. No part of the facility shall be converted to other usage unless and until prior written approval has been granted by City's Planning Commission and City Council.

9. Off-street parking, either covered or open, shall be provided to meet the requirements of City's Zoning Ordinance. If any of said required off-street parking is used for the storage of vehicles or other material, a sufficient number of legal off-street parking spaces shall be kept available to meet the parking needs generated by the mini-warehouse use. In the event the property is used for purposes other than mini-warehouses, all of the required off-street parking shall be made available to serve the new use. It is understood and agreed that the off-street parking requirements of City's Zoning Ordinance are paramount and that City may require that Owner cease using required off-street parking for storage purposes if such storage use results in an actual shortage of off-street parking to meet the needs generated by the mini-warehouse use.

10. Owner warrants that he is the legal owner of all of the land legally described in "A" above.

11. The Agreement shall run with the land and be binding upon any future owners, encumbrances, successors, heirs, or assigns of Owner and shall continue in effect unless otherwise released by authority of the City.

MITIGATION MONITORING & REPORTING PROGRAM

INTRODUCTION & FINDINGS

The Initial Study determined that the proposed project is not expected to have any significant adverse environmental impacts. The following findings can be made regarding the Mandatory Findings of Significance set forth in Section 15065 of the CEQA Guidelines based on the results of this Initial Study:

- The proposed project *will not* have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of an endangered, rare or threatened species or eliminate important examples of the major periods of California history or prehistory.
- The proposed project *will not* have impacts that are individually limited, but cumulatively considerable.
- The proposed project *will not* have environmental effects which will cause substantially adverse effects on human beings, either directly or indirectly.

In addition, pursuant to Section 21081(a) of the Public Resources Code, findings must be adopted by the decision-maker coincidental to the approval of a Mitigated Negative Declaration, which relates to the Mitigation Monitoring Program. These findings shall be incorporated as part of the decision-maker's findings of fact, in response to AB-3180 and in compliance with the requirements of the Public Resources Code. In accordance with the requirements of Section 21081(a) and 21081.6 of the Public Resources Code, the City of Santa Fe Springs can make the following additional findings:

- A mitigation reporting or monitoring program will be required; and,
- An accountable enforcement agency or monitoring agency shall be identified for the mitigation measures adopted as part of the decision-maker's final determination.

A number of mitigation measures have been recommended as a means to reduce or eliminate potential adverse environmental impacts to insignificant levels. AB-3180 requires that a monitoring and reporting program be adopted for the recommended mitigation measures.

SUMMARY OF MITIGATION MEASURES

The following mitigation is required as part of this project to ensure that potential air quality impacts are mitigated:

> *Mitigation Measure No. 1 (Air Quality).* To ensure that odors from diesel equipment are kept to a minimum, the project contractors shall ensure that all diesel trucks and equipment are not left to idle for longer than five minutes.

The following mitigation is required due to the potential for disturbance of archaeological resources:

Mitigation Measure No. 2 (Cultural Resources). The project Applicant will be required to obtain the services of a qualified Native American Monitor(s) during construction-related ground disturbance activities. Ground disturbance is defined by the Tribal Representatives from the Gabrieleño Band of Mission Indians, Kizh Nation as activities that include, but are not limited to, pavement removal, pot-holing or auguring, boring, grading, excavation, and trenching, within the project area. The monitor(s) must be approved by the tribal representatives and will be present on-site during the construction phases that involve any ground-disturbing activities.

The following mitigation measure is required as a means to ensure the application of the geotechnical recommendations set forth by Gorian & Associates, Inc.:

Mitigation Measure No. 3 (Geology & Soils). All recommendations set forth by Gorian & Associates, Inc. within the *Geotechnical Site Evaluation and Report Update, Proposed Three-Story Structure, Golden State Storage, 13020 Telegraph Rd, Santa Fe Springs, California,* dated August 2017, must be enforced and followed by the project applicant and the project contractors. Specifications must be outlined within construction plans.

The following mitigation measure is required to further prevent foundation damage:

Mitigation Measure No. 4 (Geology & Soils). Prior to the commencement of construction related activities, the project structural engineer must determine the nature and extent of foundation and construction elements required to address potential expansive soil impacts. The project contractors will be required to comply with the structural engineer's recommendations.

The following mitigation is required to ensure that potential impacts are reduced to levels that are less than significant:

Mitigation Measure No. 5 (Hazards & Hazardous Materials). An ACM/LBP survey shall be completed prior to the building demolition to assess the occurrence of these hazardous materials. Pursuant to Federal and State regulations, all suspect ACMs should either be presumed to contain asbestos or adequate rebuttal sampling should be conducted by an accredited Building Inspector prior to renovation, including maintenance, or demolition if these activities will disturb these material(s). In addition, an *Asbestos Operations and Maintenance Program* should be implemented by the owner to manage the suspect ACMs in-place, and required notices should be provided to tenants, employees and contractors.

Mitigation Measure No. 6 (Hazards & Hazardous Materials). The Applicant and the contractors must adhere to all requirements governing the handling, removal, and disposal of asbestos-containing materials, lead paint, underground septic tanks, and other hazardous substances and materials that may be encountered during demolition and land clearance activities. Documentation as to the amount, type, and evidence of disposal of materials at an appropriate hazardous material landfill site shall be provided to the Chief Building Official prior to the issuance of any building permits. Any contamination encountered during the demolition, grading, and/or site preparation activities must also be removed and disposed in accordance with applicable laws prior to the issuance of any building permit.

The following mitigation is required as part of the proposed project's implementation to ensure potential water quality impacts are mitigated:

> *Mitigation Measure No. 7 (Hydrology and Water Quality).* The Applicant shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall be submitted to the Chief Building Official and City Engineer prior to the issuance of a grading permit. The Applicant shall register their SWPPP with the State of California. A copy of the current SWPPP shall be kept at the project sites and be available for review on request.

MITIGATION MONITORING MATRIX

The monitoring and reporting for the mitigation measures, including the period for implementation, monitoring agency, and the monitoring action, are identified below in Table 1.

Table 1
Mitigation Monitoring Program

Measure	Enforcement Agency	Monitoring Phase	Verification
Mitigation Measure No. 1 (Air Quality). To ensure that odors from diesel equipment are kept to a minimum, the project contractors shall ensure that all diesel trucks and equipment are not left to idle for longer than five minutes.	City of Santa Fe Springs Planning and Development Department and the SCAQMD ● *(The Applicant is responsible for implementation)*	*During the project's construction phase.* ● Mitigation ends when construction is completed.	Date: Name & Title:
Mitigation Measure No. 2 (Cultural Resources). The project Applicant will be required to obtain the services of a qualified Native American Monitor(s) during construction-related ground disturbance activities. Ground disturbance is defined by the Tribal Representatives from the Gabrieleño Band of Mission Indians, Kizh Nation as activities that include, but are not limited to, pavement removal, pot-holing or auguring, boring, grading, excavation, and trenching, within the project area. The monitor(s) must be approved by the tribal representatives and will be present on-site during the construction phases that involve any ground-disturbing activities.	City of Santa Fe Springs Planning and Development Department and the Los Angeles County Natural History Museum (LACNHM) ● *(The Applicant is responsible for implementation)*	*Prior to the start of any construction related activities.* ● Mitigation ends when ground disturbance is completed or otherwise noted by the appointed Native American Monitor(s).	Date: Name & Title:
Mitigation Measure No. 3 (Geology & Soils). All recommendations set forth by Gorian & Associates, Inc. within the *Geotechnical Site Evaluation and Report Update, Proposed Three-Story Structure, Golden State Storage, 13020 Telegraph Rd, Santa Fe Springs, California,* dated August 2017, must be enforced and followed by the project applicant and the project contractors. Specifications must be outlined within construction plans.	City of Santa Fe Springs Planning and Development Department and the City Engineer ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of any Building Permits* ● Mitigation ends at the completion of the construction phase.	Date: Name & Title:

Table 1
Mitigation Monitoring Program

Measure	Enforcement Agency	Monitoring Phase	Verification
Mitigation Measure No. 4 (Geology & Soils). Prior to the commencement of construction related activities, the project structural engineer must determine the nature and extent of foundation and construction elements required to address potential expansive soil impacts. The project contractors will be required to comply with the structural engineer's recommendations.	City of Santa Fe Springs Planning and Development Department and the City Engineer ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of any Building Permits* ● Mitigation ends at the completion of the construction phase.	Date: Name & Title:
Mitigation Measure No. 5 (Hazards & Hazardous Materials). An ACM/LBP survey shall be completed prior to the building demolition to assess the occurrence of these hazardous materials. Pursuant to Federal and State regulations, all suspect ACMs should either be presumed to contain asbestos or adequate rebuttal sampling should be conducted by an accredited Building Inspector prior to renovation, including maintenance, or demolition if these activities will disturb these material(s). In addition, an *Asbestos Operations and Maintenance Program* should be implemented by the owner to manage the suspect ACMs in-place, and required notices should be provided to tenants, employees and contractors.	City of Santa Fe Springs Planning and Development Department ● *(The Applicant is responsible for implementation)*	*Prior to demolition of existing buildings.* ● Mitigation ends when surveys are complete.	Date: Name & Title:
Mitigation Measure No. 6 (Hazards & Hazardous Materials). The Applicant and the contractors must adhere to all requirements governing the handling, removal, and disposal of asbestos-containing materials, lead paint, underground septic tanks, and other hazardous substances and materials that may be encountered during demolition and land clearance activities. Documentation as to the amount, type, and evidence of disposal of materials at an appropriate hazardous material landfill site shall be provided to the Chief Building Official prior to the issuance of any building permits. Any contamination encountered during the demolition, grading, and/or site preparation activities must also be removed and disposed in accordance with applicable laws prior to the issuance of any building permit.	City of Santa Fe Springs Planning and Development Department and Chief Building Official ● *(The Applicant is responsible for implementation)*	*Prior to the issuance of any building permits* ● Mitigation ends at the completion of the construction phase.	Date: Name & Title:
Mitigation Measure No. 7 (Hydrology & Water Quality). The Applicant shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall be submitted to the Chief Building Official and City Engineer prior to the issuance of a grading permit. The Applicant shall register their SWPPP with the State of California. A copy of the current SWPPP shall be kept at the project sites and be available for review on request.	City of Santa Fe Springs Planning and Development Department, City Engineer, and Chief Building Official ● *(The Applicant is responsible for implementation)*	*Prior to issuance of a grading permit.* ● Mitigation ends upon the submittal and approval of the SWPP. Attachment 5 – Resolution 160-2020

CITY OF SANTA FE SPRINGS
RESOLUTION NO. 160-2020

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS REGARDING DEVELOPMENT PLAN APPROVAL CASE NO. 971, AMENDMENT TO CONDITIONAL USE PERMIT CASE NO. 780, AND MODIFICATION PERMIT CASE NO. 1325

WHEREAS, a request was filed for Development Plan Approval Case No. 971 to demolish nine (9) existing single-story mini-warehouse buildings and replace them with a three-story, 97,503 sq. ft. mini-warehouse building on property located within the M-2, Heavy Manufacturing, Zone; and

WHEREAS, a request was concurrently filed for Amendment to Conditional Use Permit Case No. 780 to amend the November 13, 2017 approval to increase the mini-warehouse facility use from 90,410 sq. ft. to 102,454 sq. ft.; and

WHEREAS, a request was concurrently filed for Modification Permit Case No. 1325 to allow a 3'-5" projection into the front yard setback; and

WHEREAS, the subject property is located at the southeast corner of Telegraph Road and Shoemaker Avenue, with Accessor's Parcel Number 8011-014-017, as shown in the latest rolls of the Los Angeles County Office of the Assessor; and

WHEREAS, the property owner is Ojai Oil Co. & TRO Co, 400 W. Ventura Blvd, Suite 100, Camarillo, CA 93010; and

WHEREAS, the proposed development which includes Development Plan Approval Case No. 971, Amendment to Conditional Use Permit Case No. 780, and Modification Permit Case No. 1325 is considered a project as defined by the California Environmental Quality Act (CEQA), Article 20, Section 15378(a); and

WHEREAS, based on the information received from the applicant and staff's assessment, it was found and determined that the proposed project will not have a significant adverse effect on the environmental following mitigation, therefore, the City caused to be prepared and proposed to adopt an Initial Study/Mitigated Negative Declaration for the proposed project; and

WHEREAS, the City of Santa Fe Springs Planning and Development Department on April 2, 2020 published a legal notice in the *Whitter Daily News,* a local paper of general circulation, indicating the date and time of the public hearing, and also mailed said public hearing notice on March 30, 2020 to each property owner within a 500-foot radius of the project site in accordance with state law; and

WHEREAS, the City of Santa Fe Springs Planning Commission has considered the application, the written and oral staff report, the General Plan and zoning of the subject property, the testimony, written comments, or other materials presented at the Planning

Commission Meeting on April 13, 2020 concerning Development Plan Approval Case No. 971, Amendment to Conditional Use Permit Case No. 780, and Modification Permit Case No. 1325.

NOW, THEREFORE, be it RESOLVED that the PLANNING COMMISSION of the CITY OF SANTA FE SPRINGS does hereby RESOLVE, DETERMINE and ORDER AS FOLLOWS:

SECTION I. ENVIRONMENTAL FINDINGS AND DETERMINATION

The proposed development is considered a project under the California Environmental Quality Act (CEQA) and as a result, the project is subject to the City's environmental review process. The environmental analysis provided in the Initial Study indicated that the proposed project will not result in any significant adverse immitigable impacts to the environment, therefore, the City required the preparation and adoption of a Mitigated Negative Declaration (MND) for the proposed Project. The MND reflects the independent judgment of the City of Santa Fe Springs, and the environmental consultant, Blodgett/Baylosis Environmental Planning.

The Initial Study determined that the proposed project is not expected to have any significant adverse environmental impacts. The following findings can be made regarding the Mandatory Findings of Significance set forth in Section 15065 of the CEQA Guidelines based on the results of this Initial Study:

- The proposed project *will not* have the potential to degrade the quality of the environment.
- The proposed project *will not* have the potential to achieve short-term goals to the disadvantage of long-term environmental goals.
- The proposed project *will not* have impacts that are individually limited, but cumulatively considerable, when considering planned or proposed development in the immediate vicinity.
- The proposed project *will not* have environmental effects that will adversely affect humans, either directly or indirectly.

In addition, pursuant to Section 21081(a) of the Public Resources Code, findings must be adopted by the decision-maker coincidental to the approval of a Mitigated Negative Declaration, which relates to the Mitigation Monitoring Program. These findings shall be incorporated as part of the decision-maker's findings of fact, in response to AB-3180 and in compliance with the requirements of the Public Resources Code. In accordance with the requirements of Section 21081(a) and 21081.6 of the Public Resources Code, the City of Santa Fe Springs can make the following additional findings:

- A mitigation reporting or monitoring program will be required; and,
- An accountable enforcement agency or monitoring agency shall be identified for the mitigation measures adopted as part of the decision-maker's final determination.

A number of mitigation measures have been recommended as a means to reduce or eliminate potential adverse environmental impacts to insignificant levels. AB-3180 requires that a monitoring and reporting program be adopted for the recommended mitigation measures.

SECTION II. DEVELOPMENT PLAN APPROVAL FINDINGS

Pursuant to Section 155.739 of the City of Santa Fe Springs Zoning Ordinance, the Planning Commission shall consider the following findings in their review and determination of the subject Development Plan Approval. Based on the available information, the City of Santa Fe Springs Planning Commission hereby make the following findings:

A) *That the proposed development is in conformance with the overall objectives of this chapter.*

The proposed project is located within the M-2, Heavy Manufacturing, Zone. Pursuant to Section 155.240 of the Zoning Ordinance, "The purpose of the M-2 Zone is to preserve the lands of the city appropriate for heavy industrial uses, to protect these lands from intrusion by dwellings and inharmonious commercial uses, to promote uniform and orderly industrial development, to create and protect property values, to foster an efficient, wholesome and aesthetically pleasant industrial district, to attract and encourage the location of desirable industrial plants, to provide an industrial environment which will be conducive to good employee relations and pride on the part of all citizens of the community and to provide proper safeguards and appropriate transition for surrounding land uses."

The proposed project is consistent with the purpose of the M-2 Zone in the following manner:

1. The land is appropriate for industrial uses based on its zoning, M-2, Heavy Manufacturing, and its General Plan Land Use designation of Industrial.
2. The subject site has been utilized as a mini-warehouse facility since 1974.
3. The proposed project complies with all development standards set forth in the M-2 Zone.
4. The project involves the construction of a modern, attractive building on a site that is currently developed with an outdated mini-warehouse facility. The assessed value of the property will improve after the project, thus leading to an increase in property values for both the subject property and neighboring properties.

B) *That the architectural design of the proposed structures is such that it will enhance the general appearance of the area and be in harmony with the intent of this chapter.*

The applicant is planning to build a new contemporary building to replace outdated buildings. The building will feature multiple variations in height, setback, materials

and color. The result is an attractive project with a contemporary building that is comparable to other high-quality projects in Santa Fe Springs.

In addition, as proposed, the project meets or exceeds all requirements of the City's Zoning Ordinance. The project's overall compliance validates that it is in harmony with the overall intent of the City's Zoning Ordinance.

C) *That the proposed structures be considered on the basis of their suitability for their intended purpose and on the appropriate use of materials and on the principles of proportion and harmony of the various elements of the buildings or structures.*

The design of the new building provides quality architectural design as demonstrated by glazing, pop-outs, and variations in height, materials, and color. These architectural design elements break up the mass of the building and present an attractive, distinctive façade to visitors. As designed, the new building is suitable for its intended mini-warehouse use, and the distinctive design of the building represents the architectural principles of proportion and harmony.

D) *That consideration be given to landscaping, fencing and other elements of the proposed development to ensure that the entire development is in harmony with the objectives of this chapter.*

Extensive consideration has been given to numerous elements of the proposed project to achieve harmony with the City's Zoning Ordinance. Extensive landscaping will be provided along the street frontages for maximum aesthetic value. The loading area is tucked under the building to minimize visibility from passing cars. Lastly, the proposed trash enclosure is not visible or easily accessible by the public and will have minimal impact on adjacent properties.

E) *That it is not the intent of this subchapter to require any particular style or type of architecture other than that necessary to harmonize with the general area.*

As stated previously, the proposed building is contemporary in design. The architect used variations in setback, materials, height and color. The style and architecture of the proposed building is consistent with other high-quality buildings in the general area.

F) *That it is not the intent of this subchapter to interfere with architectural design except to the extent necessary to achieve the overall objectives of this chapter.*

Pursuant to Section 155.736 of the Zoning Ordinance, "The purpose of the development plan approval is to assure compliance with the provisions of this chapter and to give proper attention to the siting of new structures or additions or alterations to existing structures, particularly in regard to unsightly and undesirable appearance, which would have an adverse effect on surrounding properties and the community in general." The proposed mini-warehouse building will replace nine outdated single-story buildings. The Planning Commission believes that proper attention has been given to the location, size, and design of the proposed

buildings. The Planning Commission, therefore, finds that the new contemporary mini-warehouse facility is well-designed and thus will be an enhancement to the overall area.

SECTION III. CONDITIONAL USE PERMIT FINDINGS

Pursuant to Section 155.716 of the Zoning Ordinance, in studying any application for conditional use permit, the Commission shall give consideration to the following:

A) *Satisfy itself that the proposed use will not be detrimental to persons or property in the immediate vicinity and will not adversely affect the city in general.*

The subject site is located within the M-2 (Heavy Manufacturing) Zone and has a General Plan land use designation of Industrial. A mini-warehouse facility use is consistent with the current zoning and land use designation. Additionally, the project site is generally surrounded by various industrial, office, and warehouse uses, which would be compatible with a mini-warehouse facility use. The subject site has also been utilized as a mini-warehouse facility since 1974 (over 46 years) without complaint.

If conducted in strict compliance with the conditions of approval and the City's municipal code, staff finds that the proposed expansion of the mini-warehouse facility use will be harmonious with adjoining properties and surrounding uses in the area and therefore will not be detrimental to persons or property in the immediate vicinity.

B) *Give due consideration to the appearance of any proposed structure and may require revised architectural treatment if deemed necessary to preserve the general appearance and welfare of the community.*

The proposed three-story mini-warehouse building has been designed with multiple variations in height, setback, materials and color. The style and architecture of the proposed building is consistent with other high-quality buildings in the general area. Staff, therefore, finds that the proposed improvements will preserve the general appearance and welfare of the community.

SECTION IV. MODIFICATION PERMIT FINDINGS

Pursuant to Section 155.695 of the City of Santa Fe Springs Zoning Ordinance, the Planning Commission shall consider the following findings in their review and determination of the subject Modification Permit. Based on the available information, the City of Santa Fe Springs Planning Commission hereby make the following findings:

A) *That the granting of the modification would not grant special privileges to the applicant not enjoyed by other property owners in the area.*

The Planning Commission would not be granting special privileges to the applicant since similar requests have been granted in the past. The chart provided below

identifies similar Modification Permits granted for a setback reduction to a corner property.

Previous Setback Modifications

Case No.	Site Address	Request	Date
MOD 1293-1296	SW corner of Dice & Burke	Setback Reduction	October 2018
MOD 1263	9211 Sorensen Av	Setback Reduction	August 2016
MOD 1270	12636 Los Nietos Rd	Setback Reduction	July 2016
MOD 1266	9102 & 9046 Dice Rd	Setback Reduction	May 2016

B) *That the subject property cannot be used in a reasonable manner under the existing regulations.*

Although the building height for the proposed building could technically be reduced to align with the provided setback, doing so would make the building less visually attractive since the elements of the building that extend beyond 35'-4" are simply architectural features used to enhance the buildings design and curb appeal.

C) *That the hardship involved is due to unusual or unique circumstances.*

The unusual or unique circumstance related to the subject property is the fact that it is located on a corner. Having two frontages means the building requires a substantially greater setback compared to a standard interior lot that has only one street frontage. The building envelope, or otherwise developable area, for a corner lot is generally much smaller than a typical interior lot.

D) *That the modifications, if granted, would not be detrimental to other persons or properties in the area nor be detrimental to the community in general.*

The modification permit, if granted, would not be detrimental to other persons or properties in the area. The proposed project will provide a much larger setback than what currently existing on site. Additionally, although the proposed building does not provide the required setback at a one-to-one ratio of the overall building height, the applicant does provide a setback equal to a one-to-one ratio for the portions of the subject building that exceeds the normal setback.

In addition, pursuant to Section 155.696 of the City's Zoning Ordinance, the Commission shall also take into consideration the following factors in making a determination as to whether or not there are practical difficulties or hardships involved:

A) That there are particular physical circumstances due to the shape or condition of the property which result in a hardship under the existing regulations, as distinguished from a mere inconvenience.

The unusual or unique circumstance related to the subject property is the fact that it is located on a corner. Having two frontages means the building requires a substantially greater setback compared to a standard interior lot that has only one

street frontage. The building envelope, or otherwise developable area, for a corner lot is generally much smaller than a typical interior lot, which makes it challenging to design a project that is marketable and meets all requirements of the Zoning Ordinance. The hardships mentioned are therefore directly related to the property's physical circumstance and not just a mere inconvenience.

B) That the purpose of the modification is not based exclusively on the financial advantage to the owner.

As mentioned previously, elements that extend beyond 35'-4" are simply architectural features used to enhance the buildings design and curb appeal. Specifically, the taller building height allows for height variations which provide for a more attractive project. If the applicant eliminated the architectural features that extend above 35'-4" to meet the City's Zoning Ordinance, the proposed building would lack height variation and, as a result, would appear very box-like and thus less attractive.

C) That the alleged difficulties were not created by any person presently having an interest in the property.

As mentioned previously, because the subject property is located on a corner lot, it is more difficult to develop a project that meets all required development standards when compared to a standard interior lot. The circumstance is directly related to the property's physical circumstance and was not created by the applicant or any person having an interest in the property.

D) That the conditions involved are not generally applicable to most of the surrounding properties.

Most of the surrounding properties are interior lots or properties that have already been developed with buildings that do not conform with setback requirements. The northwest and southwest corners adjacent to the site utilize the setback area for parking, and the northeast corner is vacant.

E) That the requested modification would not diminish property values in the neighborhood

The requested modification, if approved, will allow for additional architectural features and height variations that will result in a more attractive building than if the building height were restricted to 35'-4". As such, allowing minor deviations to the setback regulations would not diminish property values in the neighborhood, rather it would result in a more attractive project that would be an enhancement to the both the undeveloped site and overall area.

F) That the requested modification will not increase congestion or endanger the public safety.

The proposed modification will not increase congestion or endanger the public safety. The facility is currently utilized as a mini-warehouse and traffic generated from a mini-warehouse use is minimal, as detailed in the Mitigated Negative Declaration that was prepared for the project.

It should be noted that the project will be in fully compliance with all parking requirements and it provides well-designed circulation that includes adequate fire department access throughout the site, therefore, ensuring the overall safety of future visitors and/or employees of the site.

SECTION V. PLANNING COMMISSION ACTION

The Planning Commission hereby adopts Resolution No. 160-2020 to approve Development Plan Approval Case No. 971 to demolish nine (9) existing single-story mini-warehouse buildings and replace them with a three-story, 97,503 sq. ft. mini-warehouse building; and approve Amendment to Conditional Use Permit Case No. 780 to amend the November 13, 2017 approval to increase the mini-warehouse facility use from 90,410 sq. ft. to 102,454 sq. ft.; and approve Modification Permit Case No. 1325 to allow a 3'-5" projection into the front yard setback; and also to approve and adopt the proposed Initial Study/Mitigated Negative Declaration, and Mitigation Monitoring and Reporting Program for the subject property located 13020 Telegraph Road, subject to conditions attached hereto as Exhibit A.

ADOPTED and APPROVED this 13th day of April, 2020 BY THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS.

Exhibit A
CONDITIONS OF APPROVAL
Development Plan Approval Case No. 971
Amendment to Conditional Use Permit Case No. 780
Modification Permit Case No. 1325

POLICE SERVICES DEPARTMENT:
(Contact: Luis Collazo at 562-409-1850 x3320)

1. The applicant shall submit and obtain approval of a proposed lighting (photometric) plan for the property from the City's Department of Police Services. The photometric plan shall be designed to provide adequate lighting (minimum of 1 foot candle power) throughout the subject property. Further, all exterior lighting shall be designed/installed in such a manner that light and glare are not transmitted onto adjoining properties in such concentration/quantity as to create a hardship to adjoining property owners or a public nuisance. The photometric plans shall be submitted to the Director of Police Services no later than sixty (60) day from the date of approval by the Planning Commission.

2. The applicant shall provide an emergency phone number and a contact person of the person or persons involved in the supervision of the construction to the Department of Police Services. The name, telephone number, fax number and e-mail address of that person shall be provided to the Director of Police Services no later than 60 days from the date of approval by the Planning Commission. Emergency information shall allow emergency service to reach the applicant or their representative any time, 24 hours a day.

3. In order to facilitate the removal of unauthorized vehicles parked on the property, the applicant shall post, in plain view and at each entry to the property, a sign not less than 17" wide by 22" long. The sign shall prohibit the public parking of unauthorized vehicles and indicate that unauthorized vehicles will be removed at the owner's expense and also contain the California Vehicle Code that permits this action. The sign shall also contain the telephone number of the local law enforcement agency (Police Services Center (562) 409-1850). The lettering within the sign shall not be less than one inch in height. The applicant shall contact the Police Services Center for an inspection no later than 30 days after the project has been completed and prior to the occupancy permit being issued.

4. The proposed buildings, including any lighting, fences, walls, cabinets, and poles shall be maintained in good repair, free from trash, debris, litter and graffiti and other forms of vandalism. Any damage from any cause shall be repaired within 72 hours of occurrence, weather permitting, to minimize occurrences of dangerous conditions or visual blight. Paint utilized in covering graffiti shall be a color that matches, as closely possible, the color of the existing and/or adjacent surfaces.

5. It shall be the responsibility of the job-supervisor to maintain the job site in a clean and orderly manner. Dirt and debris that has migrated to the street or neighboring properties shall be immediately cleaned. Porte-potties, or equal, shall not be visible from the public street and maintained in a regular basis.

ENGINEERING / PUBLIC WORKS DEPARTMENT:
(Contact: Robert Garcia 562-868-0511 x7545)

6. That the applicant shall pay a flat fee of $ 59,731 to reconstruct/resurface the existing street frontage to centerline of Telegraph Road and Shoemaker Avenue.

7. The applicant shall pay $5,000 of the costs associated with the installation of an Emergency Vehicle Preemption System (OPTICOM) at the intersection of Telegraph Road and Shoemaker Avenue as determined by the City Engineer and Fire Chief.

8. That the applicant shall design and construct a 5-foot wide meandering sidewalk and dedicate an easement along the Telegraph Road and Shoemaker Avenue street frontages. If applicable, the dedicated easement shall be shown on the Parcel/Tract Map or Easement Deed to the City of Santa Fe Springs. Furthermore, said meandering sidewalk shall be shown on both the civil and landscape plans.

9. That the applicant shall design and construct (1) new drive approach along Shoemaker Avenue per City Standard Plan No. R-6.4C.

10. That the applicant shall design and construct new type “A2” Curb and Gutter along Telegraph Road and Shoemaker Avenue per City Standard Plan No. R- 7.

11. That the applicant shall remove existing Box Type Parkway Drain along Telegraph Road.

12. A.D.A. compliant access ramp and associated sidewalk improvements with black truncated domes to be constructed at south east corner of Telegraph Road and Shoemaker Avenue. Construction shall be paid for by the owner/ developer.

13. That adequate “on-site” parking shall be provided per City requirements, and all streets abutting the development shall be posted “No Stopping Any Time.” The City will install new offsite signs and the applicant shall pay the actual cost of sign installation.

14. That the applicant shall pay to the City, $15,000 for the entire cost of design, engineering, relocation and inspection of (1) street light on Shoemaker Avenue. The City will design and cause construction of said street light(s).

15. Proposed driveways shall be located to clear existing fire hydrants, street lights, water meters, etc.

CITY UTILITIES

16. Storm drains, catch basins, connector pipes, retention basin and appurtenances built for this project shall be constructed in accordance with City specifications in Telegraph Road and Shoemaker Avenue. Storm drain plans shall be approved by the City Engineer.

17. Fire hydrants shall be installed as required by the Fire Department. Existing public fire hydrants adjacent to the site, if any, shall be upgraded if required by the City Engineer. That the applicant shall pay to the City the entire cost of design, engineering, installation and inspection of Fire hydrants**.**

18. That sanitary sewers shall be constructed in accordance with City specifications to serve the subject development. The plans for the sanitary sewers shall be approved by the City Engineer. A sewer study (including a sewer flow test) shall be submitted along with the sanitary sewer plans.

19. All buildings shall be connected to the sanitary sewers.

20. That the fire sprinkler plans, which show the proposed double-check valve detector assembly location, shall have a stamp approval from the Planning Department and Public Works Department prior to the Fire Department's review for approval. Disinfection, pressure and bacteriological testing on the line between the street and detector assembly shall be performed in the presence of personnel from the City Water Department. The valve on the water main line shall be operated only by the City and only upon the City's approval of the test results.

21. That the applicant shall obtain a Storm Drain Connection Permit for any connection to the storm drain system.

22. The applicant shall have an overall site utility master plan prepared by a Registered Civil Engineer showing proposed location of all public water mains, reclaimed water mains, sanitary sewers and storm drains. This plan shall be approved by the City Engineer prior to the preparation of any construction plans for the aforementioned improvements.

TRAFFIC

23. The applicant shall submit a traffic study prepared by a Professional Engineer. The traffic study shall show the present traffic in the area and projected traffic after the development of the property. Any improvements or mitigation measures including installation of traffic signals and/or modifications, the installation of additional left turn lanes or deceleration lanes, the lengthening of left turn lanes or other median modifications, etc. that are warranted based on the study, the applicant and/or developer shall pay to the City the full cost of design engineering, installation and

inspection of the improvements. The City will design and cause construction of the improvements.

24. That all point of access to the proposed development shall be reviewed and approved by the City Engineer. Left turns may be prohibited as designated by the City Engineer.

FEES

25. That the applicant shall comply with Congestion Management Program (CMP) requirements and provide mitigation of trips generated by the development. The applicant and/or developer will receive credit for the demolition of any buildings that formerly occupied the site. For new developments, the applicant and/or developer cannot meet the mitigation requirements, the applicant and/or developer shall pay a mitigation fee to be determined by the City Engineer for off-site transportation improvements.

26. That the applicant shall comply with all requirements of the County Sanitation District, make application for and pay the sewer maintenance fee.

27. That the applicant shall pay the water trunkline connection fee of $3,700 per acre upon application for water service connection or if utilizing any existing water service.

MISCELLANEOUS

28. That a grading plan shall be submitted for drainage approval to the City Engineer. The applicant shall pay drainage review fees in conjunction with this submittal. A professional civil engineer registered in the State of California shall prepare the grading plan.

29. That the applicant shall submit a hydrology study to the City Engineer. The study shall be prepared by a Professional Civil Engineer.

30. That upon completion of public improvements constructed by developers, the developer's civil engineer shall submit mylar record drawings and an electronic file (AutoCAD Version 2004 or higher) to the office of the City Engineer.

31. That the applicant shall comply with the National Pollutant Discharge Elimination System (NPDES) program and shall require the general contractor to implement storm water/urban runoff pollution prevention controls and Best Management Practices (BMPs) on all construction sites in accordance with the current MS4 Permit. The applicant will also be required to submit a Certification for the project and will be required to prepare a Storm Water Pollution Prevention Plan (SWPPP).

DEPARTMENT OF FIRE - RESCUE (FIRE PREVENTION DIVISION)
(Contact: Raul Diaz 562-906-3813)

32. All buildings over 5,000 sq. ft. shall be protected by an approved automatic sprinkler system per Section 93.11 of the Santa Fe Springs Municipal Code.

33. The applicant shall comply with the requirements of Section 117.129 of the Santa Fe Springs Municipal Code, Requirements Prior to New Construction, in accordance with Ordinance No. 1104, prior to issuance of building permits.

34. The applicant shall comply with the requirements of Section 117.131 of the Santa Fe Springs Municipal Code, Requirement for a Soil Gas Study, in accordance with Ordinance No. 955, prior to issuance of building permits.

35. When applicable, abandoned oil wells must be exposed and inspected under the oversight of a registered petroleum engineer. The wells must be monitored for methane leaks and the precise location of each abandoned well shall be surveyed. A report of findings along with a description of any recommended remedial actions needed to comply with the Division of Oil, Gas, and Geothermal Resources, signed by a registered petroleum engineer, must be provided to the Fire Department.

36. Interior gates or fences are not permitted across required Fire Department access roadways unless otherwise granted prior approval by the City Fire Department.

37. If on-site fire hydrants are required by the Fire Department, a minimum flow must be provided at 2,500 gpm with 1,500 gpm flowing from the most remote hydrant. In addition, on-site hydrants must have current testing, inspection and maintenance per California Title 19 and NFPA 25.

38. The standard aisle width for onsite emergency vehicle maneuvering shall be 26 feet with a minimum clear height of 13 feet 6 inches. Internal driveways shall have a turning radius of not less than 52 feet. The final location and design of this 26 feet shall be subject to the approval of the City's Fire Chief as established by the Uniform Fire Code. A request to provide emergency vehicle aisle width less than 26 feet shall be considered upon the installation/provision of mitigation improvements approved by the City's Fire Chief.

39. Prior to submitting plans to the Building Department, a preliminary site plan shall be approved by the Fire Department for required access roadways and on-site fire hydrant locations. The site plan shall be drawn at a scale between 20 to 40 feet per inch. Include on plan all entrance gates that will be installed.

40. Knox boxes are required on all new construction. All entry gates shall also be equipped with Knox boxes or Knox key switches for power-activated gates.

41. Signs and markings required by the Fire Department shall be installed along the required Fire Department access roadways.

DEPARTMENT OF FIRE - RESCUE (ENVIRONMENTAL DIVISION)
(Contact: Tom Hall 562-906-3815)

42. Prior to issuance of building permits, the applicant shall comply with the applicable conditions below and obtain notification in writing from the Santa Fe Springs Department of Fire-Rescue (SFSDFR) that all applicable conditions have been met:

    a. At a minimum, the applicant must conduct an All Appropriate Inquiries (AAI) Investigation (formerly called a Phase I Environmental Site Assessment) in accordance with ASTM Standard E1527-05. The applicant shall provide the SFSDFR Environmental Protection Division (EPD) with a copy of the AAI investigation report for review and approval. If the AAI investigation identifies a release, or potential release at the site, the applicant must comply with part b.
    b. An environmental site assessment may be required based on the information presented in the AAI investigation report. The environmental site assessment report must be reviewed and approved by the EPD in writing. Should the report indicate that contaminate levels exceed the City's remediation standards or other regulatory agency guidelines, remedial action will be required. A remedial action work plan must be approved by the EPD and/or another authorized oversight agency before implementation. Once remedial action is complete, a final remedial action report must be submitted and approved by the oversight agency.
    c. Soil Management Plan & Report. A Soils Management Plan (SMP) which addresses site monitoring and a contingency plan for addressing previously unidentified contamination discovered during site development activities may be required. If required, the SMP shall be submitted to the EPD for review and approval before grading activities begin. Once grading is complete, a SMP report must be submitted to the EPD for final written approval. Building plans will not be approved until the SMP report has been approved by the EPD in writing.

43. Permits and approvals. The applicant shall, at its own expense, secure or cause to be secured any and all permits or other approvals which may be required by the City and any other governmental agency prior to conducting environmental assessment or remediation on the property. Permits shall be secured prior to beginning work related to the permitted activity.

44. All abandoned pipelines, tanks and related facilities shall be removed unless approved by the City Engineer and Fire Chief. Appropriate permits for such work shall be secured before abandonment work begins

45. The applicant shall submit plumbing plans to the Fire Department Environmental Protection Division (EPD) and, if necessary, obtain an Industrial Wastewater Discharge Permit Application for generating, storing, treating or discharging any industrial wastewater to the sanitary sewer.

WASTE MANAGEMENT:
(Contact: Teresa Cavallo 562-868-0511 x7309)

46. The applicant shall comply with Section 50.51 of the Municipal Code which prohibits any business or residents from contracting any solid waste disposal company that does not hold a current permit from the City.

47. All projects over $50,000 are subject to the requirements of Ordinance No. 914 to reuse or recycle 75% of the project waste. Contact the Recycling Coordinator, Teresa Cavallo at (562) 868-0511 x7309.

48. The applicant shall comply with Public Resource Code, Section 42900 et seq. (California Solid Waste Reuse and Recycling Access Act of 1991) as amended, which requires each development project to provide adequate storage area for the collection/storage and removal of recyclable and green waste materials.

PLANNING AND DEVELOPMENT DEPARTMENT:
(Contact: Laurel Reimer 562-868-0511 x7354)

49. The development shall be constructed substantially in accordance with the plot plan, floor plan, and elevations submitted by the applicant and on file.

50. The proposed building and façade enhancements shall be constructed of quality materials. Any material shall be replaced when and if the material becomes deteriorated, warped, discolored or rusted.

51. Applicant shall submit for approval a detailed landscape and automatic irrigation plan pursuant to the Landscaping Guidelines of the City. Said landscape plan shall indicate the location and type of all plant materials, existing and proposed, to be used and shall include 2 to 3 foot high berms (as measured from the parking lot grade elevation), shrubs designed to fully screen the interior yard and parking areas from public view and 24" box trees along the street frontage. Said plans shall be consistent with AB 1881 (Model Water Efficient Landscape Ordinance).

52. The landscaped areas shall be provided with a suitable, fixed, permanent and automatically controlled method for watering and sprinkling of plants. This operating sprinkler system shall consist of an electrical time clock, control valves, and piped water lines terminating in an appropriate number of sprinklers to insure proper watering periods and to provide water for all plants within the landscaped area. Sprinklers used to satisfy the requirements of this section shall be spaced to

assure complete coverage of all landscaped areas. Said plan shall be consistent with AB 1881 (Model Water Efficient Landscape Ordinance).

53. Upon completion of the new landscaping and landscape upgrade, the required landscaped areas shall be maintained in a neat, clean, orderly and healthful condition. This is meant to include proper pruning, mowing of lawns, weeding, removal of litter, fertilizing, and replacement of plants when necessary and the regular watering of all plantings.

54. A sufficient number of approved trash enclosures shall be provided for the development subject to the approval of the Director of Planning or designee. The calculation to determine the required storage area is: 1% of the first 20,000 sq. ft. of floor area + ½% of floor area exceeding 20,000 sq. ft., but not less than 4 ½ feet in width nor than 6 feet in height. *(Calculations are subject to change)*.

55. All activities shall occur inside the building(s). No portion of the property shall be used for outdoor storage of any type, or for special-event activities, unless prior written approval is obtained from the Director of Planning, Director of Police Services and the Fire Marshall.

56. Areas designated for off-street parking shall not be used for storage of vehicles or other materials.

57. All parking stalls shall be legibly marked off on the pavement, showing the required parking spaces. Additionally, all compact spaces shall be further identified by having the words “Compact” or comparable wording legibly written on the pavement, wheel stop or on a clearly visible sign.

58. The applicant shall not allow commercial vehicles, trucks and/or truck tractors to queue on Telegraph Road or Shoemaker Ave, use streets as a staging area, or to back up onto the street from the subject property.

59. The Planning Department shall review and approve all sign proposals for the development. The sign proposal (plan) shall include a site plan, building elevation on which the sign will be located, size, style and color of the proposed sign. All drawings shall be properly dimensioned and drawn to scale on a minimum 11” x 17” size paper. All signs shall be installed in accordance with the sign standards of the Zoning Ordinance and the Sign Guidelines of the City.

60. Approved suite numbers/letters or address numbers shall be placed on the proposed building in such a position as to be plainly visible and legible from the street fronting the property. Said numbers shall contrast with their background. The size recommendation shall be 12’’ minimum.

61. The applicant shall clarify on the construction drawings that all roof drains (facing the street), shall be provided along the interior walls and not along the exterior of the building.

62. The applicant or the owner/developer shall be responsible for reviewing and/or providing copies of the required conditions of approval to his/her architect, engineer, contractor, tenants, etc. Additionally, the conditions of approval contained herein, shall be made part of the construction drawings for the proposed development. ***Construction drawings shall not be accepted for Plan Check without the conditions of approval incorporated into the construction drawings.***

63. The Mitigation Monitoring and Reporting Program, which was prepared for the proposed project and adopted by the Planning Commission upon completion of the Mitigated Negative Declaration, shall be made part of the conditions of approval for Development Plan Approval Case No. 971, Amendment to Conditional Use Permit Case No. 780 and Modification Permit Case No. 1325. The Mitigation Monitoring and Reporting Program is listed as an attachment to this staff report.

64. The owner/developer shall submit a lighting program that is integrated into the overall site, landscape design and building design. Lighting shall be used to highlight prominent building features such as entries and other focal points. Up-lighting can also be used as a way to enhance the texture of plants and structures, to create a sense of height in a landscape design.

65. The applicant shall apply for a Well Review Report (report) through the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR). A copy of this report shall be provide to the Planning Department. If historic oil wells are identified on-site, well abandoned to current DOGGR standards may be required before a building permit can be issued.

66. The applicant shall apply for an Oilfield Site Plan Review through the Planning Department.

67. *Prior* to submitting plans to the Building Division for plan check, the applicant shall submit mechanical plans that include a roof plan showing the location of all roof-mounted equipment. All roof-mounted mechanical equipment and/or duct work which project above the roof or roof parapet of the proposed development and is visible from adjacent property or a public street shall be screened by an enclosure which is consistent with the architecture of the building and approved by the Director of Planning or designee.
    a. To illustrate the visibility of equipment and/or duct work, the following shall be submitted along with the Mechanical Plans:
        i. A roof plan showing the location of all roof-mounted equipment;
        ii. Elevations of all existing and proposed mechanical equipment; and
        iii. A building cross-section drawing which shows the roof-mounted equipment and its relation to the roof and parapet lines.

NOTE: line-of-sight drawing and/or building cross section must be scaled.

68. The Department of Planning and Development requires that the double-check detector assembly be screened by shrubs or other materials. All shrubs shall be planted a minimum distance of two (2) feet surrounding the detector assembly; *however, the area in front of the OS and Y valves shall not be screened.* The screening shall also only be applicable to the double-check detector assembly and *shall not* include the fire department connector (FDC). Notwithstanding, the Deputy Fire Marshall shall have discretionary authority to require the FDC to be located a minimum distance from the double-check detector assembly.

69. The electrical plans, which show the location of electrical transformer(s), shall be subject to the approval of the Planning Department. Transformers shall not be located within the front yard setback area. The location of the transformer(s) shall be subject to the *prior approval* of the Director of Planning or designee. The electrical transformer shall be screened with shrubs. (Three (3) foot clearance on sides and back of the equipment. Eight (8) foot clearance in front of the equipment. Landscaping irrigation system shall be installed so that they do not spray on equipment.) A copy of the Guideline is available at the Planning Department).

70. To prevent the travel of combustible methane gas into any structure, all slab or foundation penetrations, including plumbing, communication and electrical penetrations, must be sealed with an appropriate material. In addition, underground electrical conduits penetrating the slab or foundation of the structure, shall comply with the National Electrical Code (NEC), replete with a seal-off device normally required for classified electrical installations, so as to prevent the travel of combustible methane gas into the structure through conduit runs. *Refer to California Electrical Code, Chapter 5, Sections 500 and 501.*

71. Prior to issuance of building permits, the applicant or owner/developer shall comply with the following conditions to the satisfaction of the City of Santa Fe Springs:
    a. Covenants.
        1. Applicant or owner/developer shall provide a written covenant to the Planning Department that, except as may be revealed by the environmental remediation described above and except as applicant may have otherwise disclosed to the City, Commission, Planning Commission or their employees, in writing, applicant has investigated the environmental condition of the property and does not know, or have reasonable cause to believe, that (a) any crude oil, hazardous substances or hazardous wastes, as defined in state and federal law, have been released, as that term is defined in 42 U.S.C. Section 9601 (22), on, under or about the Property, or that (b) any material has been discharged on, under or about the Property that could affect the quality of ground or surface water on the Property within the meaning of the California Porter-Cologne Water Quality Act, as amended, Water Code Section 13000, et seq.

2. Applicant or owner/developer shall provide a written covenant to the City that, based on reasonable investigation and inquiry, to the best of their knowledge, it does not know or have reasonable cause to believe that it is in violation of any notification, remediation or other requirements of any federal, state or local agency having jurisdiction concerning the environmental conditions of the Property.

b. Applicant and owner/developer understand and agrees that it is the responsibility of the applicant to investigate and remedy, pursuant to applicable federal, state and local law, any and all contamination on or under any land or structure affected by this approval and issuance of related building permits. The City, Commission, Planning Commission or their employees, by this approval and by issuing related building permits, in no way warrants that said land or structures are free from contamination or health hazards.

c. Applicant and owner/developer understand and agrees that any representations, actions or approvals by the City, Commission, Planning Commission or their employees do not indicate any representation that regulatory permits, approvals or requirements of any other federal, state or local agency have been obtained or satisfied by the applicant and, therefore, the City, Commission, Planning Commission or their employees do not release or waive any obligations the applicant may have to obtain all necessary regulatory permits and comply with all other federal, state or other local agency regulatory requirements. Applicant, not the City, Commission, Planning Commission or their employees will be responsible for any and all penalties, liabilities, response costs and expenses arising from any failure of the applicant to comply with such regulatory requirements.

72. The owner/developer shall require and verify that all contractors and sub-contractors have successfully obtained a Business License with the City of Santa Fe Springs prior to beginning any work associated with the subject project. A late fee and penalty will be accessed to any contractor or sub-contractor that fails to obtain a Business License and a Building Permit final or Certificate of Occupancy will not be issued until all fees and penalties are paid in full. Please contact the Finance Department at (562) 868-0511, extension 7520 for additional information. A business license application can also be downloaded at www.santafesprings.org.

73. During construction, the following information shall be made available on a sign posted at the main entrance(s) to the site:
    a. Name of the development/project.
    b. Name of the development company.
    c. Address or Address range for the subject site.
    d. 24-hour telephone number where someone can leave a message on a particular complaint (dust, noise, odor, etc.)

74. The owner/developer understands and agrees that if changes to the original plans (submitted and on file with the subject case) are required during construction, revised plans must be provided to the Planning Department for review and approval prior to the implementation of such changes. Please note that certain changes may also require approvals from other departments.

75. Any damaged asphalt and swale (ribbon gutter) shall be repaired within ninety (90) days from the date of issuance of a Certificate of Occupancy by the Building Inspector for the proposed building addition.

76. The owner/developer shall comply with the City's "Heritage Artwork in Public Places Program" in conformance with City Ordinance No. 1054.

77. The applicant shall comply with all parts of Zoning Code Section 155.637 Mini-Warehouses at all times.

78. On-site loading activities shall only be permitted within the designated loading area shown on the submitted site plan.

79. The exterior exit doors shall remain closed when not being used for ingress/egress purposes. Additionally, the applicant shall inform all staff members and clients not to loiter or make loud noises outside of the building.

80. The applicant shall maintain the property in a clean and orderly manner at all times.

81. All other requirements of the City's Zoning Ordinance, Building Code, Property Maintenance Ordinance, State and City Fire Code and all other applicable County, State and Federal regulations and codes shall be complied with. Section 155.637

82. The applicant and owner/developer agree to defend, indemnify and hold harmless the City of Santa Fe Springs, its agents, officers and employees from any claim, action or proceeding against the City or its agents, officers or employees to attack, set aside, void or annul an approval of the City or any of its councils, commissions, committees or boards arising from or in any way related to all entitlements and approvals issued by the City in connection with the Project and from any CEQA challenges relating to the environmental review and determination for the Project, or any actions or operations conducted pursuant thereto. Should the City, its agents, officers or employees receive notice of any such claim, action or proceeding, the City shall promptly notify the applicant of such claim, action or proceeding, and shall cooperate fully in the defense thereof.

83. Amendment to Conditional Use Permit Case No. 780 shall be subject to a compliance review in 2 years, on April 13, 2022. Approximately three (3) months before April 3, 2022, the applicant shall request, in writing, an extension of the privileges granted herein, provided that the use has been continuously maintained in strict compliance with these conditions of approval.

84. Unless otherwise specified in the action granting Development Plan Approval Case No. 971, said approval which has not been utilized within a period of 12 consecutive months from the effective date shall become null and void. Also, the abandonment or nonuse for a period of 12 consecutive months shall terminate Development Plan Approval Case No. 971 and any privileges granted thereunder shall become null and void. However, an extension of time may be granted by Planning Commission or City Council action.

85. Unless otherwise specified in the action granting Amendment to Conditional Use Permit Case No. 780, said approval which has not been utilized within a period of 12 consecutive months from the effective date shall become null and void. Also the abandonment or nonuse for a period of 12 consecutive months shall terminate Amendment to Conditional Use Permit Case No. 780 and any privileges granted thereunder shall become null and void. However, an extension of time may be granted by Planning Commission or City Council action.

86. If there is evidence that conditions of approval have not been fulfilled or the use has resulted in a substantial adverse effect on the health, and/or general welfare of users of adjacent or proximate property, or has a substantial adverse impact on public facilities or services, the Director of Planning may refer the use permit to the Planning Commission for review. If upon such review, the Commission finds that any of the results above have occurred, the Commission may modify or revoke the use permit.

87. It is hereby declared to be the intent that if any provision of this Approval is violated or held to be invalid, or if any law, statute or ordinance is violated, this Approval shall be void and the privileges granted hereunder shall lapse.

PUBLIC HEARING

Exemption – CEQA Guidelines §15061(b)(3) - *Activities Covered by General Rule*

General Plan Amendment No. 29

A request for approval to amend the Land Use Element of the City's General Plan, to correct a typographical error related to the maximum building coverage for all properties designated as Business Park. (City of Santa Fe Springs)

RECOMMENDATIONS:

- Open the Public Hearing and receive any comments from the public regarding General Plan Amendment Case No. 29 and, after receiving all public comments, close the Public Hearing; and
- Find and determine the an action to amend the Land Use Element of the City's General Plan, to correct a typographical error related to the maximum building coverage for all properties designated as Business Park, is exempt from the California Environmental Quality Act (CEQA), pursuant to CEQA Guidelines section 15061(b)(3)-Activities Covered by General Rule; and
- Recommend to the City Council, approval of General Plan Amendment Case No. 29, request for approval to amend the Land Use Element of the City's General Plan, to correct a typographical error related to the maximum building coverage for all properties designated as Business Park; and
- Adopt Resolution No. 158-2020, which incorporates the Planning Commission's findings and recommendation regarding this matter.

PROJECT SITE

The affected parcels include all properties within the City of Santa Fe Springs city boundary that is currently designated as Business Park on the City's General Plan map. According to the general plan land use element, said parcels total roughly 104-acres overall.

BACKGROUND / PROJECT DESCRIPTION

The project involves a General Plan Amendment (GPA) that would correct a typographical error relating to the maximum building coverage for properties designated as Business Park on the City's general plan map. The error was recently discovered by staff while reviewing a proposed development project at 9920 Pioneer Boulevard (APN: 8055-010-011). As standard practice when reviewing new development projects, staff reviewed the project for both conformance with the overall purpose and objective of the Zoning Regulations and consistency with the goals, policies and program of the City's General Plan. In doing so, staff discovered that although the M-L, Limited Manufacturing, zone provides for a maximum lot coverage of 50%, the General Plan stated that properties designated as Business Parks were limited to a maximum lot coverage of 25%.

CITY OF SANTA FE SPRINGS – GENERAL PLAN LAND USE ELEMENT

1) Business Parks: A high standard of design control, landscaping, setbacks, etc., should be required in order to create a park-like atmosphere. Offices of all types, particularly company headquarters and research and development activities, are to be encouraged. Industrial uses in this area should be restricted to limited manufacturing, research and light assembly operations. Restaurants and other commercial services catering to industries and their employees and customers are allowed. Oil production, storage or refining should be avoided or should be an intermediate land use. The minimum lot size in the 104 acres of land zoned ML is 25,000 square feet with a maximum building coverage of twenty-five (25) percent.

CITY OF SANTA FE SPRINGS –

Part 7. ML Limited Manufacturing Administration and Research Zone District

155.180 Purpose
155.181 Principal permitted uses
155.182 Accessory uses
155.183 Conditional uses
155.184 Property development standards
155.185 Lot area, width and depth
155.186 Population density
155.187 Building height
155.188 Front yard
155.189 Side yard
155.190 Rear yard
155.191 Permitted encroachments in required yards
155.192 Distance between buildings
155.193 Minimum size of buildings
155.194 Lot coverage

§ 155.194 LOT COVERAGE.

The maximum building coverage shall not exceed 50% of the total lot area.

('64 Code, § 45.17) Penalty, see § 10.97

The proposed project at 9920 Pioneer Boulevard complies with the City's Zoning Ordinance, but the project would not comply with the 25% lot coverage it currently stated in the City's General Plan. Therefore, upon discovering this significant inconsistency, staff began a more thorough investigation of the General Plan files, the various M-L (Limited Manufacturing) Zone Text Amendment files, and past development projects within the surrounding area was completed.

While researching said documents and files, staff discovered the following:

1. Table 1 - Land Use Summary, within the General Plan EIR identifies Mixed Use Industrial/Business Parks as having a 50% density.

TABLE 1
SANTA FE SPRINGS GENERAL PLAN LAND USE SUMMARY

Land Use	Density/ Intensity	Existing Gross Acres	Existing DU/Sq. Ft.[2]	Existing Population[1]	Proposed Gross Acres	Proposed DU/Sq. Ft.[2]	Projected Population[1]	Acres of Change

Santa Fe Springs General Plan Draft EIR
Page 46

2. The Project Description, within the General Plan EIR, identifies a 50% maximum building coverage for properties designated as Business Parks.

PROJECT DESCRIPTION

1. Business Parks

This land use category is subject to a high standard of design control, landscaping and setbacks to create a park-like atmosphere. The area proposed for business parks is located between the Santa Fe Springs residential community and the Southern Pacific Railroad and extends down Telegraph Road and Bloomfield Avenue. Examples of this use include the Heritage Corporate Center and the Town Center Business Park. Offices of all types, particularly company headquarters and research and development activities are to be encouraged. Industrial uses in this area should be restricted to limited manufacturing, research and light assembly operations. Restaurants and other commercial services catering to industries, their employees and customers are permitted. Oil production, storage or refining should be avoided or should be an intermediate land use. Currently, 104 acres of land is zoned ML. The minimum lot size for the business park category is 25,000 square feet with a maximum building coverage of 50%.

Santa Fe Springs General Plan Draft EIR
Page 63

3. An analysis of nearby properties reveal that all adjacent properties designated as Business Park are currently developed with a lot coverage of no less than 38.3%. In fact, the average lot coverage for said properties was 45.9%. This would mean that every single property would be considered non-conforming and could not be developed unless the owner was willing to reduce the coverage to 25% as currently stated within the General Plan.

	Site Address	Acreage	Parcel Sq. Ft.	Building Sq. Ft.	Lot Coverage
	Subject Property at: 9920 Pioneer Blvd	*8.34*	*363,290*	*+/- 158,000*	*43.4%*
1	11909 Telegraph Rd	3.33	+/- 145,054	+/- 57,350	39.5%
2	11949 Telegraph Rd	2.28	+/- 99,366	+/- 40,925	41.1%
3	11755 Telegraph Rd	4.88	+/- 212,572	+/- 81,600	38.3%
4	11738 Willake St	0.71	+/- 31,087	+/- 14,600	46.3%
5	11724 Willake St	0.57	+/- 24,829	+/- 11,900	47.9%
6	11704 Willake St	0.73	+/- 31,714	+/- 16,100	50.8%

				AVERAGE LOT COVERAGE:	*45.9%*

Report Submitted By: Cuong Nguyen
Planning and Development Department

Date of Report: April 8, 2020

4. An analysis of Zone 12 – An area of study within the General Plan TIA (Traffic Impact Analysis) revealed that the average development within Zone 12 has a building coverage of 34.9%. Once again, confirming that development in and around the area is well above the 25% currently stated within the General Plan.

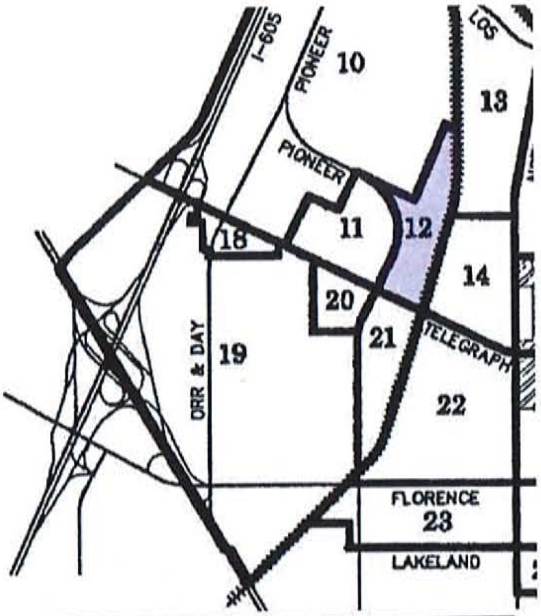

Figure A-1
SFSTM TRAFFIC ANALYSIS ZONE SYSTEM

PARCEL SF	1,323,675 SF
BUILDING SF	463,085 SF
BUILIND COVERAGE	34.9%

5. An analysis of the proposed development project at 9920 Pioneer Blvd, even with an additional 5,849 square feet more than the current development on the subject property, would still fall under the average AM, PM, and Daily trip generation rates compared to the average rate identified for Zone 12 within the General Plan TIA. In the AM, the trip rate for Zone 12 is 14.6% higher. In the PM, the trip rate for the Zone 12 is 24.0% higher. And the daily trip rate is 20.1% higher.

		Trips Analyzed			Trip Rate per 1,000 Square Feet		
	Square Feet	AM	PM	Daily	AM	PM	Daily
General Plan TIA (Zone 12)	460,090	378	381	2859	0.82	0.83	6.21
Proposed Project	163,518	114	103	811	0.70	0.63	4.96

Below is the Derivation of Trip Generation Rates from Appendix A of the General Plan EIR which details the AM and PM peak periods. According to the Traffic Impact Analysis (TIA), the AM trip rate was based on both the In-Bound (IB) and Out-Bound (OB) rates of 1.38 and .24, respectively. The PM trip rate was based on the In-Bound (IB) and Out-Bound (OB) rates of .33 and 1.15, respectively

APPENDIX A

DERIVATION OF TRIP GENERATION RATES

39. Business Park

Business parks consist of a group of one- or two-story buildings served by a common roadway system and may include a mix of offices, retail and wholesale sales, restaurants, recreation, warehousing, manufacturing, light industrial or scientific research functions.

ADT trip generation rate of 14.37 trips per TSF and the corresponding peak hour rates were taken from the ITE rates for Business Park (ITE Code 770). AM peak hour IB and OB rates are 1.38 and .24, respectively, and PM peak hour IB and OB rates are .33 and 1.15, respectively.

STAFF REMARKS

For the reasons provided herein, staff firmly believes that there is more than sufficient evidence to conclude that the 25% maximum building coverage for properties designated as Business Park is clearly a typographical error. Staff is, therefore, seeking to revise the current business park description within the Land Use Element of the City's general plan and correct the inconsistency between the existing general plan document and City's Zoning Ordinance, adopted EIR and TIA, as well as the current built environment of parcels designated as Business Park.

Finding is support for the proposed change and evidence that the subject General Plan Amendment meets the criteria set forth in Sections 65353-65356 of the State Planning, Zoning and Development Laws set forth the procedures for amending the City's General Plan is set forth in the attached Resolution (158-2020).

LEGAL NOTICE OF PUBLIC HEARING

This matter was set for Public Hearing in accordance with the requirements of Sections 65090 et seq. and 65854 of the State Planning, Zoning and Development Laws and the requirements of Sections 155.860 through 155.866 of the City's Municipal Code. Legal notice of the Public Hearing was posted at Santa Fe Springs City Hall and the City's Town Center kiosk. The legal notice was also published in a newspaper of general circulation (Whittier Daily News) on April 2, 2020, as required by the State Zoning and Development Laws and by the City's Zoning Ordinance.

It should be noted that due to the recent Covid-19 (coronavirus) outbreak, Governor Newsome issued Executive Order N-25-20 on March 4, 2020 to temporarily suspend requirements of the Brown Act, which allows the City to hold public meetings via teleconferencing and to make public meetings accessible telephonically or otherwise

electronically to all members of the public. All public hearing notices thus also clarified that the upcoming Planning Commission meeting will be held by teleconference since City Hall, including Council Chambers, is currently closed to the public.

The following ink to the Zoom meeting, along with the meeting ID, password, and dial in information was also provided:

Electronically using Zoom
Go to Zoom.us and click on "Join A Meeting" or use the following link:
https://zoom.us/j/558333944?pwd=b0FqbkV2aDZneVRnQ3BjYU12SmJlQT09

Telephonically
Dial: 888-475-4499
Meeting ID: 558 333 944

ENVIRONMENTAL DOCUMENT

Following preliminary evaluation of the proposed action, it has determined that an action to amend the Land Use Element of the City's General Plan, to correct a typographical error related to the maximum building coverage for all properties designated as Business Park, is exempt from the California Environmental Quality Act (CEQA), pursuant to CEQA Guidelines section 15061(b)(3). According to Guidelines §15061(b)(3):

> *"An activity is covered by the general rule that CEQA applies only to projects which have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA."*

The determination that the project is exempt is based on the following:

- The proposed action is merely a paper change to correct a typographical error within the Land Use Element.
- The change is consistent with the existing limitations already set forth in the City's Zoning Ordinance.
- The change is consistent with text and analysis that was provided within the EIR which was prepared and adopted for the last General Plan Update in 1994.
- The change does not automatically allow for new developments to occur. All future development project would still need to obtain the necessary entitlements beforehand.

Staff intends to file a Notice of Exemption (NOE) with the Los Angeles County Clerk,

within five (5) days of project approval, if the Planning Commission is in agreement with said determination.

AUTHORITY OF PLANNING COMMISSION

The Planning Commission has the authority, subject to the procedures set forth in the Government Code, to make a written recommendation on the adoption or amendment of a general plan to the City Council. A recommendation for approval shall be made by the affirmative vote of not less than a majority of the total membership of the commission.

Wayne M. Morrell
Director of Planning

CITY OF SANTA FE SPRINGS
NOTICE OF PUBLIC HEARING
GENERAL PLAN AMENDMENT NO. 29

NOTICE IS HEREBY GIVEN: that the Planning Commission of the City of Santa Fe Springs will hold a Public Hearing to consider the following:

GENERAL PLAN AMENDMENT NO. 29: A request for approval to amend the Land Use Element of the City's General Plan, to correct a typographical error related to the maximum building coverage for all properties designated as Business Park.

PROJECT SITE: The affected parcels include all properties within the City of Santa Fe Springs city boundary that is currently designated as Business Park on the City's General Plan map.

APPLICANT: City of Santa Fe Springs

THE HEARING will be held on **Monday, April 13, 2020 at 6:00 p.m.** Governor Newsome issued Executive Order N-25-20 on March 4, 2020 to temporarily suspend requirements of the Brown Act, which allows the City to hold public meetings via teleconferencing and to make public meetings accessible telephonically or otherwise electronically to all members of the public. Please be advised that until further notice, Planning Commission meetings will be held by teleconference. City Hall, including Council Chambers, is closed to the public.

You may attend the meeting telephonically or electronically using the following means:

Electronically using Zoom
Go to Zoom.us and click on "Join A Meeting" or use the following link:

Password: 554545

Telephonically
Dial: 888-475-4499
Meeting ID: 558 333 944

CEQA STATUS: After review and analysis, staff intends to file a Notice of Exemption (if the Planning Commission agrees), for a "General Rule" exemption as described and otherwise provided by Section 15061 (b)(3) of the California Environmental Quality Act (CEQA) Guidelines.

ALL INTERESTED PERSONS are invited to participate in the Planning Commission hearing and express their opinion on the item listed above. Please note that if you challenge the afore-mentioned item in court, you may be limited to raising only those issues you or someone else raised at the Public Hearing, or in written correspondence received prior to the Public Hearing.

PUBLIC COMMENTS may be submitted in writing by sending them to the Planning Program Assistant at teresacavallo@santafesprings.org. To ensure that they are received for the meeting, please submit your written comments prior to 4:00 p.m. on the day of the Planning Commission meeting. You may also contact the Planning Department at (562) 868-0511 ext. 7550.

FURTHER INFORMATION on this item may be obtained by e-mail: cuongnguyen@santafesprings.org.

Attachment 4 - Resolution No. 158-2020

CITY OF SANTA FE SPRINGS
RESOULTION NO. 158-2020

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS REGARDING GENERAL PLAN AMENDMENT CASE NO. 29.

WHEREAS, this project is a city-initiated General Plan Amendment (GPA Case No. 29) to amend the Land Use Element of the City's General Plan, to correct a typographical error related to the maximum building coverage for all properties designated as Business Park; and

WHEREAS, the affected parcels include all properties within the City of Santa Fe Springs city boundary that is currently designated as Business Park on the City's General Plan map.

WHEREAS, according to the general plan land use element, the affected parcels total roughly 104-acres overall; and

WHEREAS, the proposed General Plan Amendment Case No. 29 is considered a project as defined by the California Environmental Quality Act (CEQA), Article 20, Section 15378(a); and

WHEREAS, based on information received, the Planning Commission finds that the proposed project meets the criteria for an exemption, pursuant to California Environmental Quality Act (CEQA), Section 15061(b)(3) (Common Sense Rule); and

WHEREAS, the City of Santa Fe Springs Planning and Development Department on April 2, 2020, published a legal notice in the *Whitter Daily News,* a local paper of general circulation, indicating the date and time of the public hearing. Said notice was also posted at the Santa Fe Springs City Hall and the City's Town Center kiosk; and

WHEREAS, the City of Santa Fe Springs Planning Commission has the written and oral staff report, the testimony, written comments, and other materials presented at the public hearing; and

WHEREAS, the City of Santa Fe Springs Planning Commission conducted a duly noticed public hearing, by teleconference, on April 13, 2020. At which time it received and considered public testimony concerning General Plan Amendment Case No. 29.

NOW, THEREFORE, be it RESOLVED that the PLANNING COMMISSION of the CITY OF SANTA FE SPRINGS does hereby RESOLVE, DETERMINE and ORDER AS FOLLOWS:

SECTION I. ENVIRONMENTAL FINDINGS AND DETERMINATION

Pursuant to Section 15061(b)(3) (Common Sense Rule) of the California Environmental Quality Act (CEQA), the Planning Commission hereby finds and determines that the project is exempt. The Common Sense Exemption affirms that CEQA applies only to projects which have the potential for causing a significant effect on the environment. If it can be seen with certainty that there is no possibility that the activity in question will have a significant effect on the environment than additional environmental analysis is not necessary to meet the requirements of CEQA. Based on the information received, the Planning Commission finds that a determination to correct a typographical error related to the maximum building coverage for all properties designated as Business Park would not have any significant effect on the environment. The Planning Commission's determination for said exemption is based on the following:

1. The proposed action is merely a paper change to correct a typographical error within the Land Use Element; and
2. The change is consistent with the existing limitations already set forth in the City's Zoning Ordinance; and
3. The change is consistent with text and analysis that was provided within the EIR which was prepared and adopted for the last General Plan Update in 1994; and
4. The change does not automatically allow for new developments to occur. All future development project would still need to obtain the necessary entitlements beforehand.

SECTION II. GENERAL PLAN AMENDMENT FINDINGS

Sections 65353-65356 of the State Planning, Zoning and Development Laws set forth the procedures for amending the City's General Plan. Specifically, the State Planning Laws dictate that at least one public hearing shall be conducted on the proposed General Plan Amendment, the Commission shall make a written recommendation on the adoption or amendment of the general plan, a recommendation for approval shall be made by affirmative vote of not less than a majority of the total membership of the Commission; and the Planning Commission shall send its recommendation to the legislative body. Other than the aforementioned requirements, there are no mandatory findings that the Planning Commission must make before recommending approval or denial of a request to amend the City's General Plan. However, in previous considerations of proposed General Plan Amendments, the Planning Commission has reviewed the request based on the following criteria:

A) *That the Amendment will not distort or disturb the harmonious relationships of land use designations shown on the General Plan Map and would not disturb the relationship of the various elements of the General Plan.*

An action to correct a typographical error related to the maximum building coverage for all properties designated as Business Park will not distort or disturb the relationship of land use designations shown on the General Plan Map and would not disturb the relationship of the various elements of the General Plan. The proposed change is a change to the existing text within the Land Use element of the General Plan. It will not change or otherwise alter the existing General Plan Map or designation of any properties on the existing map.

Additionally, the proposed change only involves the Land Use element does not involve changes to any other elements of the General Plan thus there is no evidence to suggest that the proposed General Plan Amendment will disturb the relationship between other elements of the General Plan.

B) *That the property involved in the requested Amendment is suitable for the uses permitted in the proposed land use designation.*

The project involves a General Plan Amendment (GPA) that would correct a typographical error relating to the maximum building coverage for properties designated as Business Park on the City's general plan map. There are no proposed changes to the zoning or land use designation of any particular parcel or area within the City. All properties designated as Business Park on the City's General Plan map will still need to comply with the existing regulations set forth in the City's Zoning Ordinance and General Plan. Since land use of all properties involve will remain unchanged as a result of the proposed GPA, its suitability thus also remains unchanged.

C) *That the proposed land use designation would not be detrimental to persons or properties in the surrounding area nor to the community in general.*

The General Plan Amendment does not involve any changes to the list of land uses currently identified within the City's General Plan nor does it change the designation of any particular parcel within the City. As mentioned previously, the proposed change is to correct a typographical error relating to the maximum building coverage for properties designated as Business Park on the City's general plan map.

Prior to initiating the General Plan Amendment, a thorough investigation of the General Plan files, the various M-L (Limited Manufacturing) Zone Text Amendment files, and past development projects within the surrounding area was completed. The research of said documents and files, revealed the following:

1. Table 1 - Land Use Summary, within the General Plan EIR identifies Mixed Use Industrial/Business Parks as having a 50% density; and

2. The Project Description, within the General Plan EIR, identifies a 50% maximum building coverage for properties designated as Business Parks; and
3. An analysis of nearby properties reveal that all adjacent properties designated as Business Park are currently developed with a lot coverage of no less than 38.3%. In fact, the average lot coverage for said properties was 45.9%. This would mean that every single property would be considered non-conforming and could not be developed unless the owner was willing to reduce the coverage to 25% as currently stated within the General Plan; and
4. An analysis of Zone 12 – An area of study within the General Plan TIA (Traffic Impact Analysis) revealed that the average development within Zone 12 has a building coverage of 34.9%. Once again, confirming that development in and around the area is well above the 25% currently stated within the General Plan; and
5. An analysis of the proposed development project at 9920 Pioneer Blvd, even with an additional 5,849 square feet more than the current development on the subject property, would still fall under the average AM, PM, and Daily trip generation rates compared to the average rate identified for Zone 12 within the General Plan TIA. In the AM, the trip rate for Zone 12 is 14.6% higher. In the PM, the trip rate for the Zone 12 is 24.0% higher. And the daily trip rate is 20.1% higher.

This evidence and conclusions, therefore, clearly suggests that the 25% maximum building coverage for properties designated as Business Park is clearly a typographical error. Therefore, the proposed revision of the current business park description within the Land Use Element of the City's general plan is simply to correct the inconsistency between the existing general plan document and City's Zoning Ordinance, adopted EIR and TIA, as well as the current built environment of parcels designated as Business Park. The proposed General Plan Amendment, therefore, would not be detrimental to persons or properties in the surrounding area nor to the community in general.

SECTION III. PLANNING COMMISSION ACTION

The Planning Commission hereby adopts Resolution No. 158-2020 to determine that the that the proposed project meets the criteria for an exemption, pursuant to California Environmental Quality Act (CEQA), Section 15061(b)(3) (Common Sense Rule) and to recommend approval of General Plan Amendment Case No. 29 to amend the Land Use Element of the City's General Plan and correct a typographical error related to the maximum building coverage for all properties designated as Business Park, to the City Council.

ADOPTED and APPROVED this 13th day of April, 2020 BY THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS.

_____
Frank Ybarra, Chairperson

ATTEST:

_____
Teresa Cavallo, Planning Secretary

PUBLIC HEARING

Adoption of Mitigated Negative Declaration
Tentative Parcel Map (TPM) No. 82433
Development Plan Approval (DPA) Case Nos. 947-949

TPM No. 82433: A request for approval to subdivide the subject ±9.06-acres gross (±8.34-acres net) parcel at 9920 Pioneer Boulevard (APN: 8055-010-011) into two separate parcels measuring 5.08-acres and 3.26-acres, respectively;

DPA Case Nos. 947-949: DPA Case No. 947 - a request for approval to allow the construction of an approximately 103,950 sq. ft. concrete tilt-up industrial building (Building 1), DPA Case No. 947 - a request for approval to allow the construction of an approximately 28,146 sq. ft. concrete tilt-up industrial building (Building 2); and DPA Case No. 947 - a request for approval to allow the construction of a 31,422 sq. ft. concrete tilt-up industrial building (Building 3) on property located at 9920 Pioneer Boulevard (APN: 8055-010-011), within the M-L (Limited Manufacturing) Zone; (The Brookhollow Group)

RECOMMENDATIONS:

- Open the Public Hearing and receive any comments from the public regarding Tentative Parcel Map No. 82433, Development Plan Approval Case Nos. 947-949, and related Environmental Documents, and thereafter, close the Public Hearing; and
- Find and determine that the proposed project will not be detrimental to persons or properties in the surrounding area or to the City in general, and will be in conformance with the overall purpose and objective of the Zoning Regulations and consistent with the goals, policies and program of the City's General Plan; and
- Find that Tentative Parcel Map No. 82433 meets the standards set forth in Sections 66474 and 66474.6 of the Subdivision Map Act for the granting of a tentative or final map; and
- Find that the applicant's DPA requests meet the criteria set forth in §155.739 of the City's Zoning Ordinance, for the granting of a Development Plan Approval; and
- Approve and adopt the proposed Mitigated Negative Declaration which, based on the findings of the initial study, indicates that although potential significant effects on the environment have been identified, revisions in the project plan or proposal made by, or agreed to by, the applicant, would avoid the effects or mitigate the effects to a point where clearly no significant effects on the environment would occur, and there is no substantial evidence in light of the whole record that the project, as revised, may have a significant effect on the environment; and

Report Submitted By: Cuong Nguyen
Planning and Development Department

Date of Report: April 8, 2020

ITEM NO. 10

RECOMMENDATIONS (Cont.)

- Approve the proposed Mitigation Monitoring and Reporting Program (MMRP) for the proposed project; and
- Approve Tentative Parcel Map No. 8256 and Development Plan Approval Case Nos. 947-949, subject to the conditions of approval as contained with Resolution No. 159-2020; and
- Adopt Resolution No. 159-2020, which incorporates the Planning Commission's findings and actions regarding this matter.

GENERAL INFORMATION

C.	Subject Property:	9920 Pioneer Boulevard APN: 8055-010-011 Santa Fe Springs, CA 90670
D.	Existing Zone:	M-L (Limited Manufacturing)
E.	General Plan:	Business Park
F.	CEQA Recommendation:	Mitigated Negative Declaration
H.	Staff Contact:	Cuong Nguyen, Senior Planner cuongnguyen@santafesprings.org Phone: (562)-868-0511 Ext 7359

LOCATION / BACKGROUND

The subject property, at 9920 Pioneer Boulevard, is located on the east side of Pioneer Boulevard approximately 250 feet north of Telegraph Road and 140 feet south of Hamden Place. The subject property is comprised of a single parcel (APN: 8055-010-011) measuring approximately ±9.06-acres gross (±8.34-acres net). The property is zoned M-L (Limited Manufacturing) and is currently developed with seven buildings (totaling approximately 158,000 square feet) and their associated surface parking and landscape areas.

The applicant, The Brookhollow Group, is proposing to clear the site and thereafter construct three (3) new concrete tilt-up industrial buildings on the subject property. In accordance with the City's Zoning Regulations, a Development Plan Approval is required for the proposed development. The applicant is also concurrently requesting consideration and approval for a Tentative Parcel Map to subdivide the existing ±9.06-acres gross (±8.34-acres net) site into two separate parcels measuring 5.08-acres and 3.26-acres, respectively. The gross square footage includes a street and utility easement recorded in 1972 in favor of the City of Santa Fe Springs.

PROJECT DESCRIPTION

The proposed project requires approval of the following entitlement:

Tentative Parcel Map (TPM 82433) – A request for approval to subdivide the subject ±9.06-acres gross (±8.34-acres net) parcel (APN: 8055-010-011) into two separate parcels measuring 5.08-acres and 3.26-acres, respectively

Development Plan Approvals (DPA Nos. 947–949) – DPA Case No. 947 - a request for approval to allow the construction of an approximately 103,950 sq. ft. concrete tilt-up industrial building (Building 1), DPA Case No. 947 - a request for approval to allow the construction of an approximately 28,146 sq. ft. concrete tilt-up industrial building (Building 2); and DPA Case No. 947 - a request for approval to allow the construction of a 31,422 sq. ft. concrete tilt-up industrial building (Building 3).

TENTATIVE PARCEL MAP (TPM 82433)

The proposed Tentative Parcel Map (TPM) will effectively subdivide the subject site, which is currently comprised of a single parcel measuring approximately ±9.06-acres gross (±8.32-acres net), into two separate parcels measuring 5.08-acres (Parcel 1) and 3.26-acres (Parcel 2), respectively.

As shown in the attached TPM, the project will involve a condo map for parcel 2. The condo map effectively creates industrial condominiums for the two buildings that are proposed on Parcel 2. This would allow each building to be separately owned but the potential owners would also have equal ownership of the remaining common areas that make up Parcel 2. The condo map avoided placement of Building 3 on a land-locked parcel or otherwise a need to create a flag-shaped lot for Building 3, and neither alternatives would have been supported by staff.

DEVELOPMENT PLAN APPROVALS (DPA Nos. 947–949)

Site Plan

The applicant is planning to demolish the seven (7) existing buildings, totaling approximately 158,000 square feet, and thereafter proposing to construct three (3) new concrete tilt-up industrial buildings, ranging from 28,146 sq. ft. to 103,950 sq. ft. in size.

The building sizes are as follows:
Building 1 – 103,950 sq. ft.
Building 2 – 28,146 sq. ft.
Building 3 – 31,422 sq. ft.

Overall Proposed Development is:
163,518 sq. ft.

The street facing buildings will be setback a minimum 36' from the front property line along Pioneer Boulevard: Building A will be setback 82.325' while Building B will be setback 36'. The proposed development will provide three (3) driveways along Pioneer Boulevard for ingress and egress: a 26' wide driveway along the north end, a 35' wide driveway in the center, and a 30' wide driveway along the south end. Parking will be provided and individually met for both Parcel 1 and 2.

Floor Plan
The floor plans indicate that the proposed industrial buildings will provide the following:

	Warehouse	1st Floor	2nd Floor Office	Total
Building 1	99,950 sq. ft.	4,500 sq. ft.	4,500 sq. ft.	103,950 sq. ft.
Building 2	23,146 sq. ft.	2,500 sq. ft.	2,500 sq. ft.	28,146 sq. ft.
Building 3	26,422 sq. ft.	2,500 sq. ft.	2,500 sq. ft.	31,422 sq. ft.

Elevations
The elevations indicate that the proposed industrial buildings will have a contemporary design. The primary street facing elevations are all provided with extensive glazing, color variation, height variation, recessed walls, and materials used. The remaining elevations have also been provided with a combination of the aforementioned architectural treatments, resulting in aesthetically pleasing contemporary industrial buildings throughout the proposed development.

Landscape Requirement
For maximum value, majority of the landscaping will be provided along the setback areas that adjoins the street (Pioneer Boulevard). Additionally, as required by the Code, the applicant will landscape at least 6% of the parking area.

For Parcel 1, the minimum landscape requirement, based on the overall street frontage of 388', and 25,945 sq. ft. of parking area, is an overall total of 11,257 sq. ft. and at least 1,557 sq. ft. of landscape within the parking area. The applicant is providing an overall total of 22,420 sq. ft. of landscaping and 13,224 sq. ft. within the parking area, thus Parcel 1 exceeds the minimum requirements set forth in the City's Zoning Ordinance.

LANDSCAPE REQUIRED:	
FRONTAGE: 25' X 388' = 9,700 SF	9,700 SF
6% OF PARKING AREA) = 25,945 SF X .06	1,557 SF
TOTAL LANDSCAPE REQUIRED:	11,257 SF
LANDSCAPE PROVIDED: (13,224 SF PARKING LANDSCAPE)	22,420 SF

For Parcel 2, the minimum landscape requirement, based on the overall street frontage of 254', and 35,683 sq. ft. of parking area, is an overall total of 8,491 sq. ft. and at least 2,141 sq. ft. of landscape within the parking area. The applicant is providing an overall total of 16,673 sq. ft. of landscaping, and 10,913 sq. ft. within the parking area, thus Parcel 2 exceeds the minimum requirements set forth in the City's Zoning Ordinance

LANDSCAPE REQUIRED:	
FRONTAGE: 25' X 254' = 6,350 SF	6,350 SF
6% OF PARKING AREA) = 35,683 SF X .06	2,141 SF
TOTAL LANDSCAPE REQUIRED:	8,491 SF
LANDSCAPE PROVIDED: (10,913 SF PARKING LANDSCAPE)	16,673 SF

Parking Requirements

Building 1 (on Parcel 1) is required to provide a total of 151 parking stalls. A total of 162 parking stalls are being provided for Building 1. It should be noted that since Building 1 exceeds 100,000 sq. ft., truck parking at a ratio of one 12' x 53' truck stall for every four truck doors must be provided in addition to the standard parking requirements. Building 1 is designed with 11 truck doors, thus three truck stalls must also be provided. The three required truck stalls are provided within the southerly truck yard area.

PARKING REQUIRED:	
0 - 20,000 SF (1/500 SF)	40 STALLS
20,001 SF - 100,000 SF (1/750 SF)	107 STALLS
100,001 SF - 200,000 SF (1/1,000 SF)	4 STALLS
200,001 SF AND ABOVE (1/2,000 SF)	00 STALLS
TOTAL STALLS	151 STALLS
PARKING PROVIDED:	
ACCESSIBLE STALLS	6 STALLS
STANDARDS STALLS	118 STALLS
COMPACT STALLS (25% MAX)	38 STALLS
TOTAL STALLS	162 STALLS

Buildings 2 and 3 (on Parcel 2) are required to provide a total of 106 parking stalls. A total of 109 parking stalls are being provided for Buildings 2 and 3. Since neither building exceeds 100,000 sq. ft., there is no additional requirement to provide truck stalls.

PARKING REQUIRED:	
0 - 40,000 SF (1/500 SF)	80 STALLS
40,001 SF - 100,000 SF (1/750 SF)	26 STALLS
100,001 SF - 200,000 SF (1/1,000 SF)	00 STALLS
200,001 SF AND ABOVE (1/2,000 SF)	00 STALLS
TOTAL STALLS	106 STALLS

PARKING PROVIDED:	
ACCESSIBLE STALLS	6 STALLS
STANDARDS STALLS	95 STALLS
COMPACT STALLS (25% MAX)	8 STALLS
TOTAL STALLS	109 STALLS

Loading/ Roll Up Doors

According to the plans, the three proposed buildings will be designed with a total of 19 dock doors (Bldg. 1: 11, Bldg. 2: 4, and Bldg. 3: 4) and 4 roll-up doors (Bldg. 1: 2, Bldg. 2: 1, and Bldg. 3: 1). It should be noted that all dock and roll-up doors are strategically placed so that they will not be directly visible from the street. Additionally, per the City's Zoning Ordinance, all off-street truck loading areas, zones, ramps, doors, wells, or docks shall be designed to provide and maintain a minimum unobstructed area of 120' to allow for proper truck maneuvering on-site. The proposed development has been designed to provide the required unobstructed area in all necessary locations.

Trash Enclosures

According to the site plan, four (4) trash enclosures will be located throughout the subject project. A total of two 358 sq. ft. trash enclosures will be provided for Parcel 1 (Building 1) and two 283 sq. ft. trash enclosures will be provided for Parcel 2 (Building 2 and 3). All trash enclosures are strategically placed in areas that will not be immediately visible or otherwise easily accessible to the public

GENERAL PLAN AMENDMENT NO. 29

Although it is not a part of the subject entitlements, the outcome of the city-initiated General Plan Amendment (GPA Case No. 29) will have a direct affect on the subject property and development. Although the proposed project does fully comply with the City's Zoning Ordinance, the development does not comply with the General Plan as it is currently stated. Until the GPA is approved by the City Council, the project is in conflict with the 25% maximum building coverage currently listed for properties designated as Business Park on the City's general plan map. As proposed, the lot coverage for the proposed development is 43.4%. Because the outcome of the GPA is still unknown, yet the applicant is anxious to move forward, staff has place a condition to acknowledge that the approval of the subject Tentative Parcel Map (TPM Case No. 82433) and Development Plan Approvals (DPA Case Nos. 947-949) is contingent upon the approval of GPA Case No. 29 by the City Council.

STREETS AND HIGHWAYS

The subject site is located on the east side of Pioneer Boulevard between Telegraph Road and Hamden Place. Both Telegraph Road and Pioneer Boulevard are designated as a "Major" arterial, within the Circulation Element of the City's General Plan. Hamden Place is a local industrial street.

ZONING, GENERAL PLAN AND LAND USE

The subject property is currently zoned M-L, Limited Manufacturing, with a general plan land use designation of "Business Park". The existing uses that occupy the subject property are as follows: Various offices, warehouse-type uses, light manufacturing uses, and a restaurant (sandwich shop).

The existing Zone, General Plan and Land Use of the adjacent properties are shown in "Table 1" below:

	Zone	General Plan	Land Use
North	ML, Limited Manufacturing	Business Park	9916 Pioneer Bl: Computer consultants. 11824-42 Hamden Pl: Audio/Visual consultants; Fire Protection consultants.
South	ML-D, Limited Manufacturing-Design Overlay	Business Park	11841-11909 Telegraph Rd: Professional IT service consultants; Water Filtration Dealer; Computer specialist.
East	M-2, Heavy Manufacturing	Industrial	10035-10261 Matern Pl: Sales and service or boilers and pumps; distributor of indirect industrial supplies.
West	ML, Limited Manufacturing	Business Park	11704-11739 Willake St: Party Rental warehouse; TV studio; Alternative power technology dealer; indoor landscape maintenance service provider. 11755 Telegraph Rd: Caster and wheel distributor; Volvo training facility; water systems consultants.

LEGAL NOTICE OF PUBLIC HEARING

This matter was set for Public Hearing in accordance with the requirements of Sections 65090 and 65091 of the State Planning, Zoning and Development Laws and the requirements of Sections 155.860 through 155.864 of the City's Municipal Code.

Legal notice of the Public Hearing for the proposed project was sent by first class mail to all property owners whose names and addresses appear on the latest County Assessor's Roll within 500 feet of the exterior boundaries of the subject property on April 1, 2020. The legal notice was also posted in Santa Fe Springs City Hall and the City's Town Center kiosk on April 1, 2019, and published in a newspaper of general circulation (Whittier Daily News) April 2, 2020, as required by

the State Zoning and Development Laws and by the City's Zoning Regulations. As of the date of this report, staff has not received any comments and/or inquiries regarding the proposed project.

It should be noted that due to the recent Covid-19 (coronavirus) outbreak, Governor Newsome issued Executive Order N-25-20 on March 4, 2020 to temporarily suspend requirements of the Brown Act, which allows the City to hold public meetings via teleconferencing and to make public meetings accessible telephonically or otherwise electronically to all members of the public. All public hearing notices thus also clarified that the upcoming Planning Commission meeting will be held by teleconference since City Hall, including Council Chambers, is currently closed to the public.

The following ink to the Zoom meeting, along with the meeting ID, password, and dial in information was also provided:

ENVIRONMENTAL DOCUMENTS

The environmental analysis provided in the Initial Study (IS) indicates that although the proposed project could have a significant effect on the environment, revisions have been made or mitigation measures have been included which will reduce potential impacts to less-than-significant effects. Therefore, the City caused to be prepared and proposes to adopt a Mitigated Negative Declaration (MND) for the proposed project. The draft IS/MND reflects the independent judgment of the City of Santa Fe Springs and the environmental consultant, E|P|D Solutions Inc. as to the potential environmental impacts of the proposed project on the environment.

Environmental Factors Requiring Mitigations:
The draft IS/MND has identified several factors that may have a potentially significant affect the subject project, if mitigations are not imposed. Such factors include: Biological Resources, Geology and Soils, Cultural Resources, Tribal Cultural Resources, and Hazardous & Hazardous Materials. These factors and their respective pertinent issues are discussed and analyzed within the provided IS/MND. Mitigations, where necessary, were implemented to help ensure potential

impacts are reduced to a less than significant level. A detailed analysis, including the monitoring action, monitoring agency, and the period for implementation, may be found in the Initial Study/Mitigated Negative Declaration and corresponding Mitigated Monitoring and Reporting Program (*Attachment #5 – Draft IS/MND*).

20-Day Public Review Period:
On March 18, 2020, initiated by the filing of the Notice of Intent (NOI) to adopt a Mitigated Negative Declaration with the Los Angeles County Clerk, the City released the Draft IS/MND, along with the technical appendices. These materials were made available to the public throughout the 20-day review and comment period which began on March 18, 2020 and ended on April 6, 2020. A copy of the Initial Study/Mitigated Negative Declaration was made available to the public and available at the Planning Counter and on the City's website at:

- https://www.santafesprings.org/cityhall/planning/planning/environmental_documents.asp

A copy of the NOI was also mailed to all responsible and trustee agencies as well as surrounding cities for their review and comment.

Responses to IS/MND Comments:
The public comment period for the Draft IS/MND ended April 6, 2020 and, to date, a total of three (3) comments were received. Comments were received from the following agencies:

1. City of Norwalk
2. Gabrieleno Band of Mission Indians - Kizh Nation
3. The Department of Transportation (DOT)

Details of the comments received and the provided responses may be found in the provided Response to Comments (*Attachment #7 – Response to Comments*).

AUTHORITY OF PLANNING COMMISSION

Tentative Parcel Map
The Planning Commission, after receiving and hearing the results of investigations and reports on the design and improvements of any proposed division of real property for which a tentative map is filed, shall have the authority to impose requirements and conditions upon such division of land and to approve, conditionally approve or disapprove such map and division of land.

Development Plan Approval
The Planning Commission has the authority, subject to the procedures set forth in the City's Zoning Regulations, to grant a Development Plan Approval when it has been found that said approval is consistent with the requirements, intent and purpose of the City's Zoning Regulations. The Commission may grant, conditionally

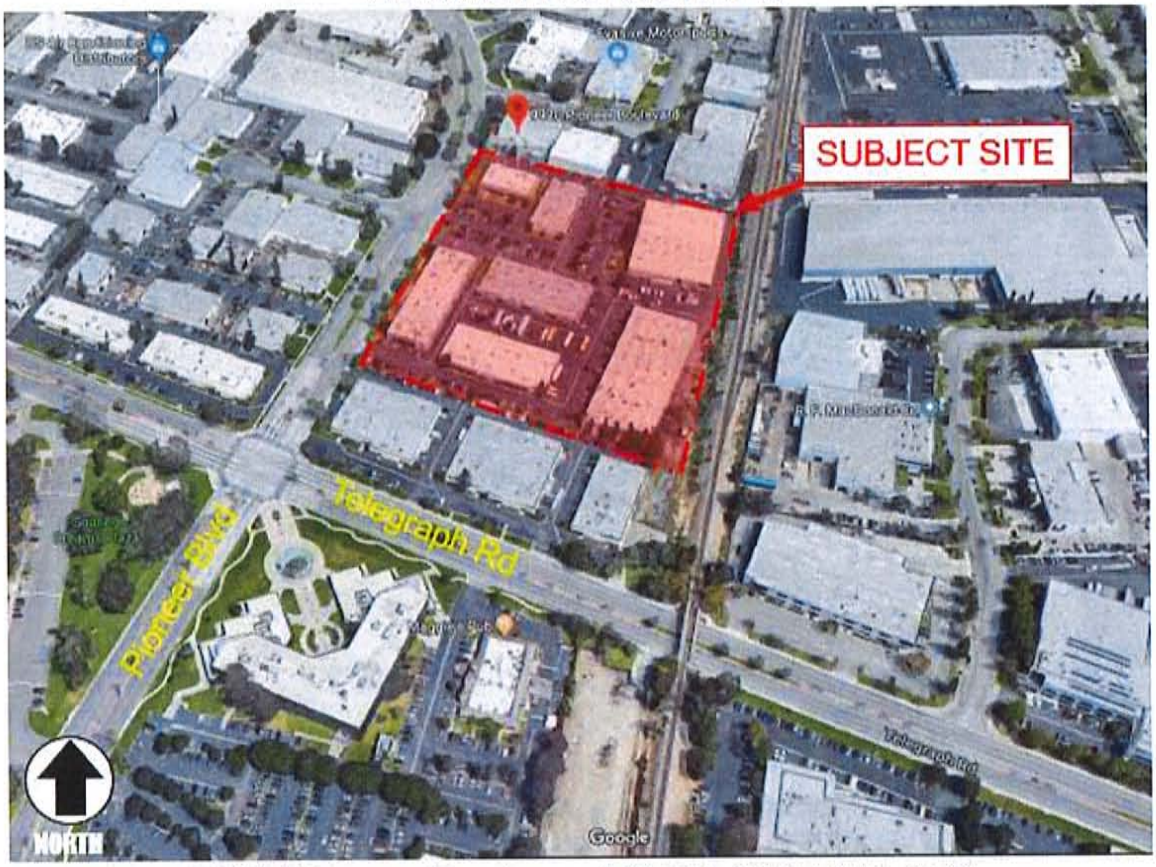
grant or deny approval of a proposed development plan based on the evidence submitted and upon its own study and knowledge of the circumstances involved, or it may require submission of a revised development plan.

STAFF REMARKS

Based on the findings set forth in the attached Resolution (159-2020), Staff finds that the applicant's request meets the criteria set forth in §155.739 of the City's Zoning Regulations, for the granting of a Development Plan Approval (DPA Case Nos. 947-949). Staff also finds that the applicants request meets the criteria set forth in Section 66412 of the State's Subdivision Map Act, for the granting of a Tentative Parcel Map (TPM No. 82433).

CONDITIONS OF APPROVAL

Conditions of approval for both TPM No. 82433 and DPA Case Nos. 947-949 are attached to Resolution 159-2020 as Exhibit A.



Wayne M. Morrell
Director of Planning

Attachment 2 - Public Hearing Notice

CITY OF SANTA FE SPRINGS
NOTICE OF PUBLIC HEARING
DEVELOPMENT PLAN APPROVAL CASE NOS. 947-949; AND
TENTATIVE PARCEL MAP NO. 82433

NOTICE IS HEREBY GIVEN: that the Planning Commission of the City of Santa Fe Springs will hold a Public Hearing to consider the following:

DEVELOPMENT PLAN APPROVAL CASE NOS. 947-949: DPA Case No. 947 - a request for approval to allow the construction of an approximately 103,950 sq. ft. concrete tilt-up industrial building (Building 1), DPA Case No. 947 - a request for approval to allow the construction of an approximately 28,146 sq. ft. concrete tilt-up industrial building (Building 2); and DPA Case No. 947 - a request for approval to allow the construction of a 31,422 sq. ft. concrete tilt-up industrial building (Building 3) on property located at 9920 Pioneer Boulevard (APN: 8055-010-011), within the M-L (Limited Manufacturing) Zone.

TENTATIVE PARCEL MAP NO. 82433: A request for approval to subdivide the subject ±9.06-acres gross (±8.34-acres net) parcel at 9920 Pioneer Boulevard (APN: 8055-010-011) into two separate parcels measuring 5.08-acres and 3.26-acres, respectively.

APPLICANT/PROJECT SITE: The Brookhollow Group / 9920 Pioneer Boulevard (APN: 8055-010-011), Santa Fe Springs, CA 90670

THE HEARING will be held on **Monday, April 13, 2020 at 6:00 p.m.** Governor Newsome issued Executive Order N-25-20 on March 4, 2020 to temporarily suspend requirements of the Brown Act, which allows the City to hold public meetings via teleconferencing and to make public meetings accessible telephonically or otherwise electronically to all members of the public. Please be advised that until further notice, Planning Commission meetings will be held by teleconference. City Hall, including Council Chambers, is closed to the public.

You may attend the meeting telephonically or electronically using the following means:

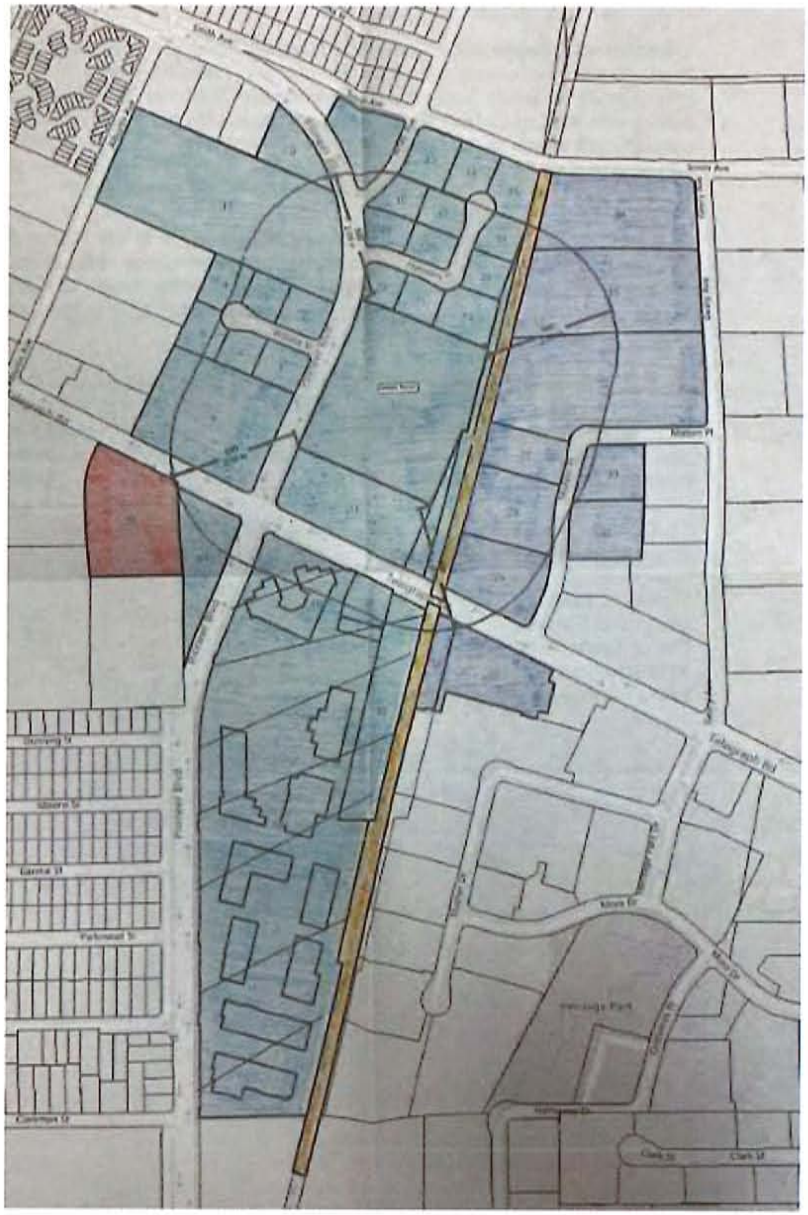
CEQA STATUS: Upon review of the proposed project, staff has determined that additional environmental analysis is required to meet the requirements of the California

Attachment 2 (Cont.) - Public Hearing Notice

Environmental Quality Act (CEQA). The applicant has since retained E|P|D Solutions Inc. to prepare the necessary CEQA documents and related technical studies. A Notice of Intent (NOI) to adopt the Initial Study/Mitigated Negative Declaration (IS/MND) was posted with the Los County Clerk's Office to initiate the mandatory 20-day public review period which began on March 19, 2020 and ends on April 6, 2020. Additionally, it should be noted that the project site is not listed on the Hazardous Waste and Substance Site List (Cortese List) as set forth in Government Code Section 65962.5



ALL INTERESTED PERSONS are invited to participate in the Planning Commission hearing and express their opinion on the item listed above. Please note that if you challenge the afore-mentioned item in court, you may be limited to raising only those issues you or someone else raised at the Public Hearing, or in written correspondence received prior to the Public Hearing.

PUBLIC COMMENTS may be submitted in writing by sending them to the Planning Program Assistant at teresacavallo@santafesprings.org. To ensure that they are received for the meeting, please submit your written comments prior to 4:00 p.m. on the day of the Planning Commission meeting. You may also contact the Planning Department at (562) 868-0511 ext. 7550.

FURTHER INFORMATION on this item may be obtained by e-mail: cuongnguyen@santafesprings.org.

NOTICE OF INTENT TO ADOPT A NEGATIVE DECLARATION

DATE: March 16, 2020

TO: Responsible Agencies, Interested Parties, and Organizations

SUBJECT: NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION FOR PIONEER BOULEVARD DEVELOPMENT PROJECT AT 9920 PIONEER BOULEVARD

The City of Santa Fe Springs (City) is the California Environmental Quality Act (CEQA) Lead Agency for the proposed Pioneer Boulevard Development Project (proposed project) located at 9920 Pioneer Boulevard. The City has directed the preparation of an Initial Study (IS) in compliance with CEQA. The purpose of the IS is to provide decision makers, public agencies, and the general public with an objective and informative document that facilitates a basic understanding of the proposed project and fully discloses the potential environmental effects associated with the proposed project, including direct, indirect, and cumulative environmental effects. Based on the studies performed and information contained in the IS, the City is proposing to adopt a Mitigated Negative Declaration (MND). The IS/MND will allow the project proponent to obtain permits, agreements, and approvals from necessary agencies to implement the project.

Project Location: The project site is located at 9920 Pioneer Boulevard, Santa Fe Springs, California 90670. The project site consists of one parcel with the Assessor's Parcel Number (APN): 8005-010-011. The project site is generally bound by Pioneer Boulevard to the west, Telegraph Road to the south, Hamden Place to the north, and the Southern Pacific railroad to the east.

Project Description: Currently, the project site is developed with seven industrial buildings that total approximately 158,000 square feet, which would be demolished as part of the proposed project. The project would redevelop the 9.06-acre project site with three concrete tilt-up industrial buildings totaling 163,518 gross square feet. Each proposed building would include a loading dock area, mezzanine office space, and automobile parking. The project requests the approval of the following entitlements: 1) a Tentative Parcel Map (TPM 82433) for condominium purposes; and 2) three Development Plan Approvals (DPAs 947-949) for consideration of the architectural design, conceptual landscaping, and overall compliance with the City's Zoning Regulations. The project is consistent the City's General Plan land use designation of Business Park and Limited Manufacturing Administration and Research Zone District (ML) zoning designation.

Potentially Significant Environmental Impacts: With implementation of mitigation measures, the IS identified there would be no potentially significant impacts resulting from project implementation.

Public Review Period March 18, 2020 through April 6, 2020: In compliance with CEQA, the City has established a 20-day public review period beginning March 18, 2020 to solicit comments and input on the Draft IS/MND. To ensure that all environmental issues are fully identified and adequately addressed, written comments are invited from all interested parties. Written comments

Juanita Trujillo, Mayor • William K. Rounds, Mayor Pro Tem
City Council
John M. Mora • Annette Rodriguez • Joe Angel Zamora
City Manager
Raymond R. Cruz

Attachment 4 (Cont.) – Notice of Intent

regarding the scope and content of information in the Draft IS/MND may be submitted electronically to Cuong Nguyen at cuongnguyen@santafesprings.org or mailed to:

City of Santa Fe Springs
Planning Department
Attn: Cuong Nguyen, Senior Planner
11710 E. Telegraph Road
Santa Fe Springs, Calif. 90670

Comments should be submitted no later than 5:00 pm on **Monday April 6, 2020.**

The IS/MND is available for public review at the following web address:
https://www.santafesprings.org/cityhall/planning/planning/environmental_documents.asp

Public Hearing: The Santa Fe Springs Planning Commission will consider the proposed project and recommendation to adopt a Mitigated Negative Declaration at a public hearing tentatively scheduled on **Monday, April 13, 2020** at 6 p.m. at City Hall in the Council Chambers at 11710 E. Telegraph Road, Santa Fe Springs.

1 INTRODUCTION

1.1 PURPOSE OF THE INITIAL STUDY

This Initial Study has been prepared in accordance with the following:

- California Environmental Quality Act (CEQA) of 1970 (Public Resources Code Sections 21000 et seq.); and
- California Code of Regulations, Title 14, Division 6, Chapter 3 (State CEQA Guidelines, Sections 15000 et seq.).

Pursuant to CEQA, this Initial Study has been prepared to analyze the potential for significant impacts on the environment resulting from implementation of the proposed project. As required by State CEQA Guidelines Section 15063, this Initial Study is a preliminary analysis prepared by the Lead Agency, the City of Santa Fe Springs, in consultation with other jurisdictional agencies, to determine if a Mitigated Negative Declaration (MND) or an Environmental Impact Report (EIR) is required for the project.

This Initial Study informs City of Santa Fe Springs decision-makers, affected agencies, and the public of potentially significant environmental impacts associated with the implementation of the project. A "significant effect" or "significant impact" on the environment means "*a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project*" (Guidelines §15382). As such, the MND's intent is to adhere to the following CEQA principles:

- Provide meaningful early evaluation of site planning constraints, service and infrastructure requirements, and other local and regional environmental considerations. (Pub. Res. Code §21003.1)
- Encourage the applicant to incorporate environmental considerations into project conceptualization, design, and planning at the earliest feasible time. (State CEQA Guidelines §15004[b][3])
- Specify mitigation measures for reasonably foreseeable significant environmental effects and commit Moreno Valley and the applicant to future measures containing performance standards to ensure their adequacy when detailed development plans and applications are submitted. (State CEQA Guidelines §15126.4)

Existing Plans, Programs, or Policies (PPPs)

Throughout the impact analysis in this Initial Study, reference is made to requirements that are applied to all development on the basis of federal, state, or local law, and Existing Plans, Programs, or Policies currently in place which effectively reduce environmental impacts. Existing Plans, Programs, or Policies are collectively identified in this document as PPPs. Where applicable, PPPs are listed to show their effect in reducing potential environmental impacts. Where the application of these measures does not reduce an impact to below a level of significance, a project-specific mitigation measure is introduced.

1.2 DOCUMENT ORGANIZATION

This IS/MND includes the flowing sections:

Section 1.0 Introduction

Provides information about CEQA and its requirements for environmental review and explains that an Initial Study/MND was prepared by the City of Santa Fe Springs to evaluate the proposed project's potential to impact the physical environment.

Section 2.0 Project Setting

Provides information about the proposed project's location.

Section 3.0 Project Description

Includes a description of the proposed project's physical features and construction and operational characteristics.

Section 4.0 Discretionary Approvals

Includes a list of the discretionary approvals that would be required by the proposed project.

Section 5.0 Environmental Checklist

Includes the Environmental Checklist and evaluates the proposed project's potential to result in significant adverse effects to the physical environment.

Section 6.0 Document Preparers and Contributors

Includes a list of the persons that prepared this IS/MND.

2 PROJECT SETTING

2.1 PROJECT LOCATION

The project site is located in southeastern Los Angeles County within the City of Santa Fe Springs. The site is within the United States Geological Survey (USGS) Whittier 7.5-Minute Series Quadrangle and can be identified within Section 31, Township 2 South, Range 11 West, San Bernardino Base and Meridian. The City of Santa Fe Springs is approximately 12 miles southeast of downtown Los Angeles and 18 miles northwest of downtown Santa Ana.

Regional access to the project site is available through Interstate 605 (I-605) to the west via Telegraph Road and Interstate 5 (I-5) via Pioneer Boulevard or Florence Avenue. The regional location of the project site is shown in Figure 1, *Regional Location*.

The project site is located at 9920 Pioneer Boulevard, Santa Fe Springs, California 90670. The project site consists of one parcel with the Assessor's Parcel Number (APN): 8005-010-011. The project site is generally bound by Pioneer Boulevard to the west, Telegraph Road to the south, Hamden Place to the north, and the Southern Pacific railroad to the east. The project site and the surrounding area is shown in Figure 2, *Local Vicinity*.

2.2 EXISTING LAND USES

The 9.06-acre project site is currently developed as a business park referred to as the Santa Fe Springs Commerce Center and has existing tenants. The site contains seven structures (totaling approximately 158,000 square feet) with associated surface parking lots adjacent to each building. Existing tenants conduct businesses that include: laboratory, office, and various limited industrial and services-type uses. Table 1, *Existing Uses Tabulation*, details the seven structures onsite with their existing use and building size.

Table 1: Existing Uses Tabulation

#	Address	Building Size (square feet)	Land Use
1	10016 Pioneer Blvd	27,894	Office/Restaurant/Warehouse
2	10020 Pioneer Blvd	19,000	Office/Light Manufacturing/Warehouse
3	10002 Pioneer Blvd	20,200	Office/Warehouse
4	10010 Pioneer Blvd	36,421	Warehouse
5	9930 Pioneer Blvd	32,360	Warehouse
6	9926 Pioneer Blvd	13,730	Office/Warehouse
7	9930 Pioneer Blvd	8,064	Office
Total Warehouse		148,745	
Total Office		8,064	
Total Restaurant		860	
TOTAL		157,669	

Site landscaping currently includes trees, turf grass, and other ornamental vegetation. The topography of the site is generally flat. East of the project site is an approximately 2-foot high block wall with trees, weeds, and debris in between the project site and the adjacent railroad tracks. Existing conditions of the project site and adjacent uses is shown in Figure 3, *Aerial Photograph*.

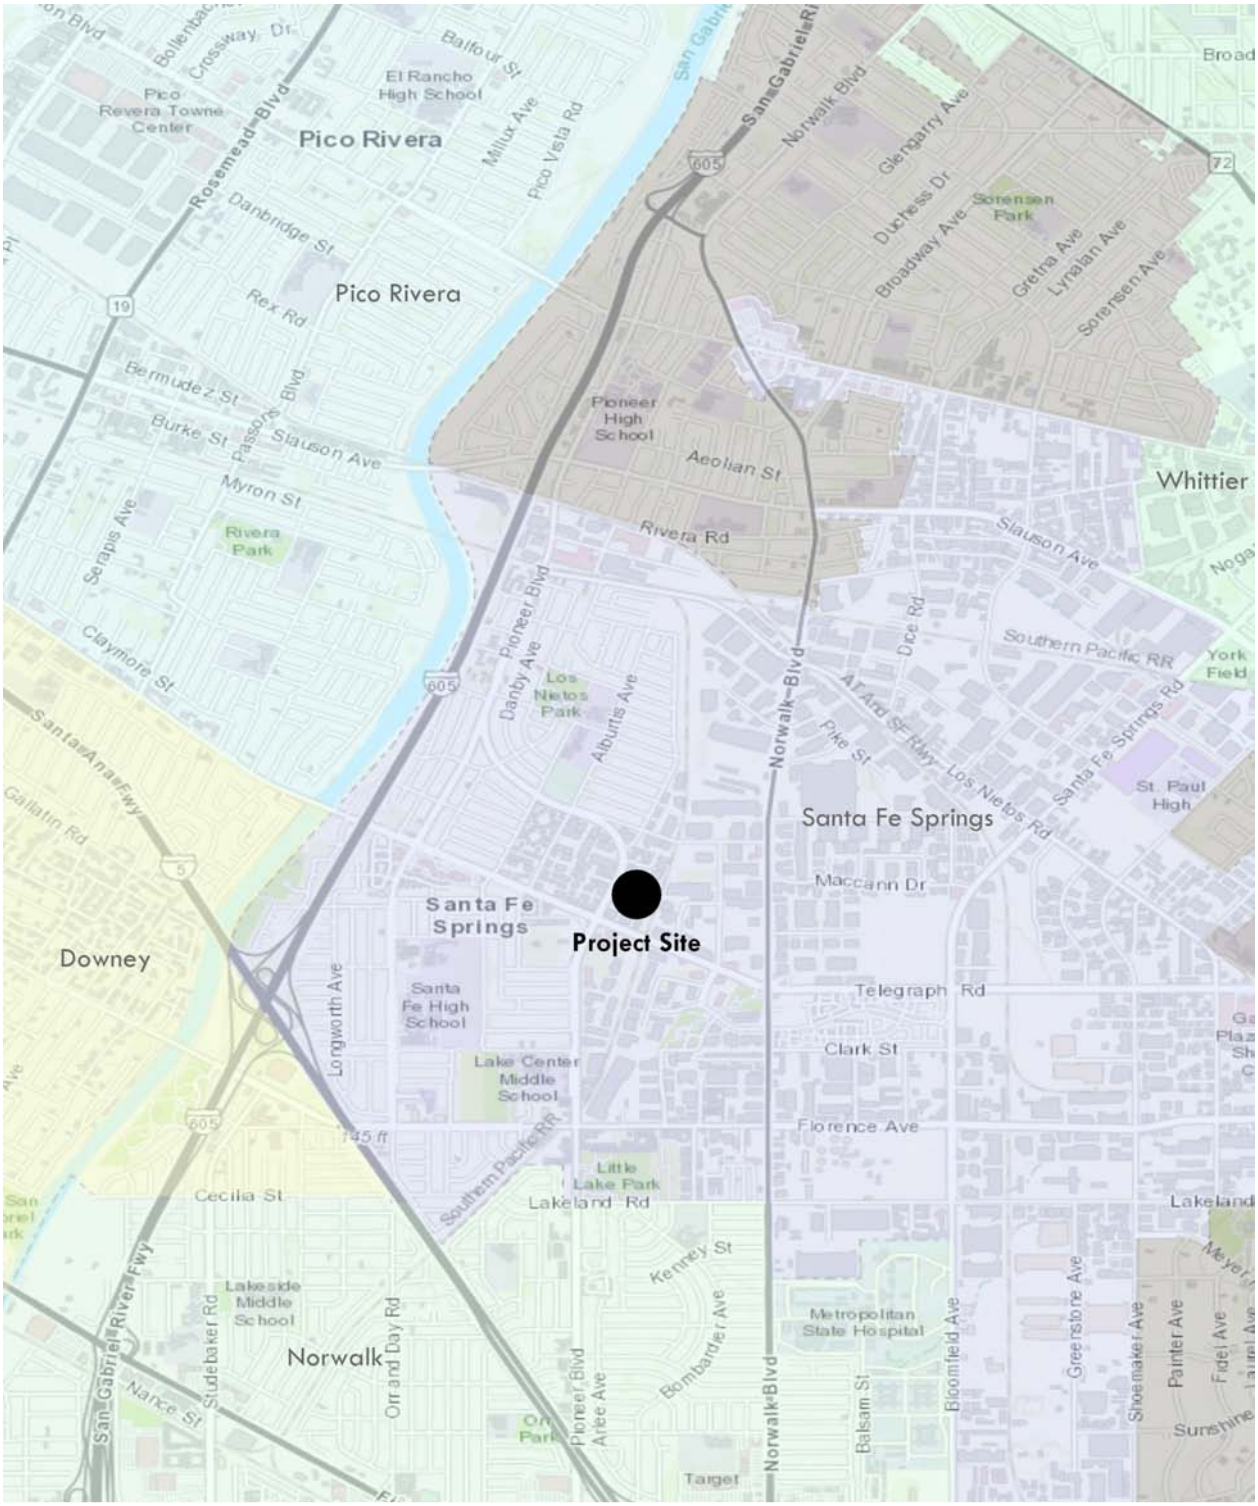
2.3 EXISTING GENERAL PLAN AND ZONING DESIGNATIONS

The Santa Fe Springs General Plan designates the project site as Business Park. The General Plan's Land Use Element allows for the following uses under the Business Park land use designation: offices of all types; industrial uses restricted to limited manufacturing, research and light assembly operations; restaurants and other commercial and service-type uses; oil production, storage or refining should be avoided or should be an intermediate land use.

The project site is zoned "ML", or Limited Manufacturing Administration and Research Zone District, defined within Section 155.180 of the Zoning Code. The minimum lot size of land zoned ML is 25,000 square feet. As described in the zoning code, the following uses are intended for this zone: administrative offices of business and industrial concerns, scientific research offices and laboratories, restricted manufacturing and appurtenant uses compatible to the development of an industrial park, and to provide for special needs housing in the form of emergency shelters.

2.4 SURROUNDING LAND USE, GENERAL PLAN AND ZONING DESIGNATIONS

The project site is located within a developed, urbanized area within the City of Santa Fe Springs as described below:



North: Immediately north of the project site are business park uses, designated as Business Park in the General Plan and zoned Limited Manufacturing (ML). A single-family residential neighborhood is approximately 640 feet to the northwest of the project site, designated as Single Family Residential in the General Plan and zoned Single Family (R-1).

West: Adjacent to the project site are business park uses, designated as Business Park in the General Plan and zoned Limited Manufacturing (ML). Beyond the business park (approximately 0.20 miles) is a multi-family development designated as Multiple Family Residential and zoned Multiple Family – Planned Development Overlay Zone (R-3-PD).

South: Immediately south of the project site are similar land use and zoning designations as the project site: Business Park, Railroad Right-of-Way land use designations and Limited Manufacturing – Design Overlay Zone (ML-D). Across Telegraph Road, zoning designations include Limited Manufacturing – Planning Development Overlay Zone (ML-PD) and Heavy Manufacturing (M-2). The City of Santa Fe Springs Civic Center is located approximately 345 feet southwest of the project site and is designated as Public Facilities by the General Plan and has a zoning designation of Community Commercial (C-4), Public Facilities (PF), and Limited Manufacturing (ML) with a Design Overlay.

East: The Southern Pacific railroad tracks are adjacent to the site, which are followed by industrial uses. The General Plan designation of the area is Industrial, and the zoning designation is Heavy Manufacturing (M-2).

3 PROJECT DESCRIPTION

3.1 PROJECT OVERVIEW

The project would redevelop the 9.06-acre project site with three concrete tilt-up industrial buildings. Currently, the project site is developed with seven industrial buildings that total approximately 158,000 square feet, which would be demolished as part of the proposed project. Each proposed building would include a loading dock area, mezzanine office space, and automobile parking. The project requests the approval of the following entitlements: 1) a Tentative Parcel Map (TPM 82433) for condominium purposes; and 2) three Development Plan Approvals (DPAs 947-949) for consideration of the architectural design, conceptual landscaping, and overall compliance with the City's Zoning Regulations. Figure 4, *Conceptual Site Plan* and Figure 5, *Tentative Parcel Map for Condominium Purposes* illustrates the project as proposed.

3.2 PROJECT FEATURES

Development Summary
The proposed project would construct three painted concrete tilt-up industrial buildings totaling 163,518 gross square feet. The project includes 9,000 square feet of office space, mezzanine space, parking, and surrounded by landscaping. Table 2 details each building breakdown.

Table 2: Building Breakdown

Building Components	Building 1	Building 2	Building 3	Project Totals
Warehouse	95,950 sf	23,146 sf	26,422 sf	149,518 sf
First Floor Office	4,000 sf	2,500 sf	2,500 sf	9,000 sf
Mezzanine Office	4,000 sf	2,500 sf	2,500 sf	9,000 sf
Total Building Area (Gross)	103,950 sf	28,146 sf	31,422 sf	163,518 sf
Building Footprint	99,950 sf	25,646 sf	28,922 sf	154,518 sf

Each building would be painted with a three-tone paint scheme of shades of blue, white, and gray. Building 1's maximum height would be at 40 feet 6 inches and Buildings 2 and 3 would both have a maximum height of 37 feet 6 inches. Future tenant signage, which will be reviewed and approved separately, would be featured on each side of Building 1 at its highest point and only on the south and west sides of Buildings 2 and 3. Office windows would be made of blue reflective glass with aluminum storefront canopies providing shade to the office entrance. The warehouse portions of each building would also have blue reflective glass clerestory windows. Figures 6A-6C, *Building 1-3 Elevations* illustrate building height and materials.

Building 1
Building 1 would be located on the south side of the project site. The 103,950-square-foot building would include 4,000 square feet of office space and 4,000 square feet of mezzanine at the southwest corner of the building. A loading dock and trash collection area would be located on the south side of the building. Within the loading area would be space for trailer parking, two ramps into the facility, and screened by a 14-foot concrete high wall with a 10-foot high tube steel sliding gate.

Building 2

Building 2 would be 28,146 square feet in size, with 2,500 square feet of primary office space and 2,500 square feet of mezzanine. The building's primary entrance, as well as access to the office space, would be located at the southwest corner of the building. A loading area would be on the northeast corner of the building and will be provided with a 42-inch high concrete guardrails to the north. The building's trash area would be to the north of the building, adjacent to automobile parking.

Building 3
Building 3 would be located on the northeast corner of the project site. The 31,422-square-foot building would also have 2,500 square feet of office space and 2,500 square feet of mezzanine on the southwest corner of the building. A loading dock would be located on the northwest corner of the building, mirroring the loading area for Building 2 and will be provided with a 42-inch concrete guardrail. A trash collection area would be located north of the building.

Parking and Circulation
The proposed project includes accessible, standard, compact and bicycle stalls that would be located around each building and along an onsite roadway. The project plans to provide 14 more parking spaces than what is required under Chapter 155.481 of the City's Municipal Code. Table3, details the proposed parking.

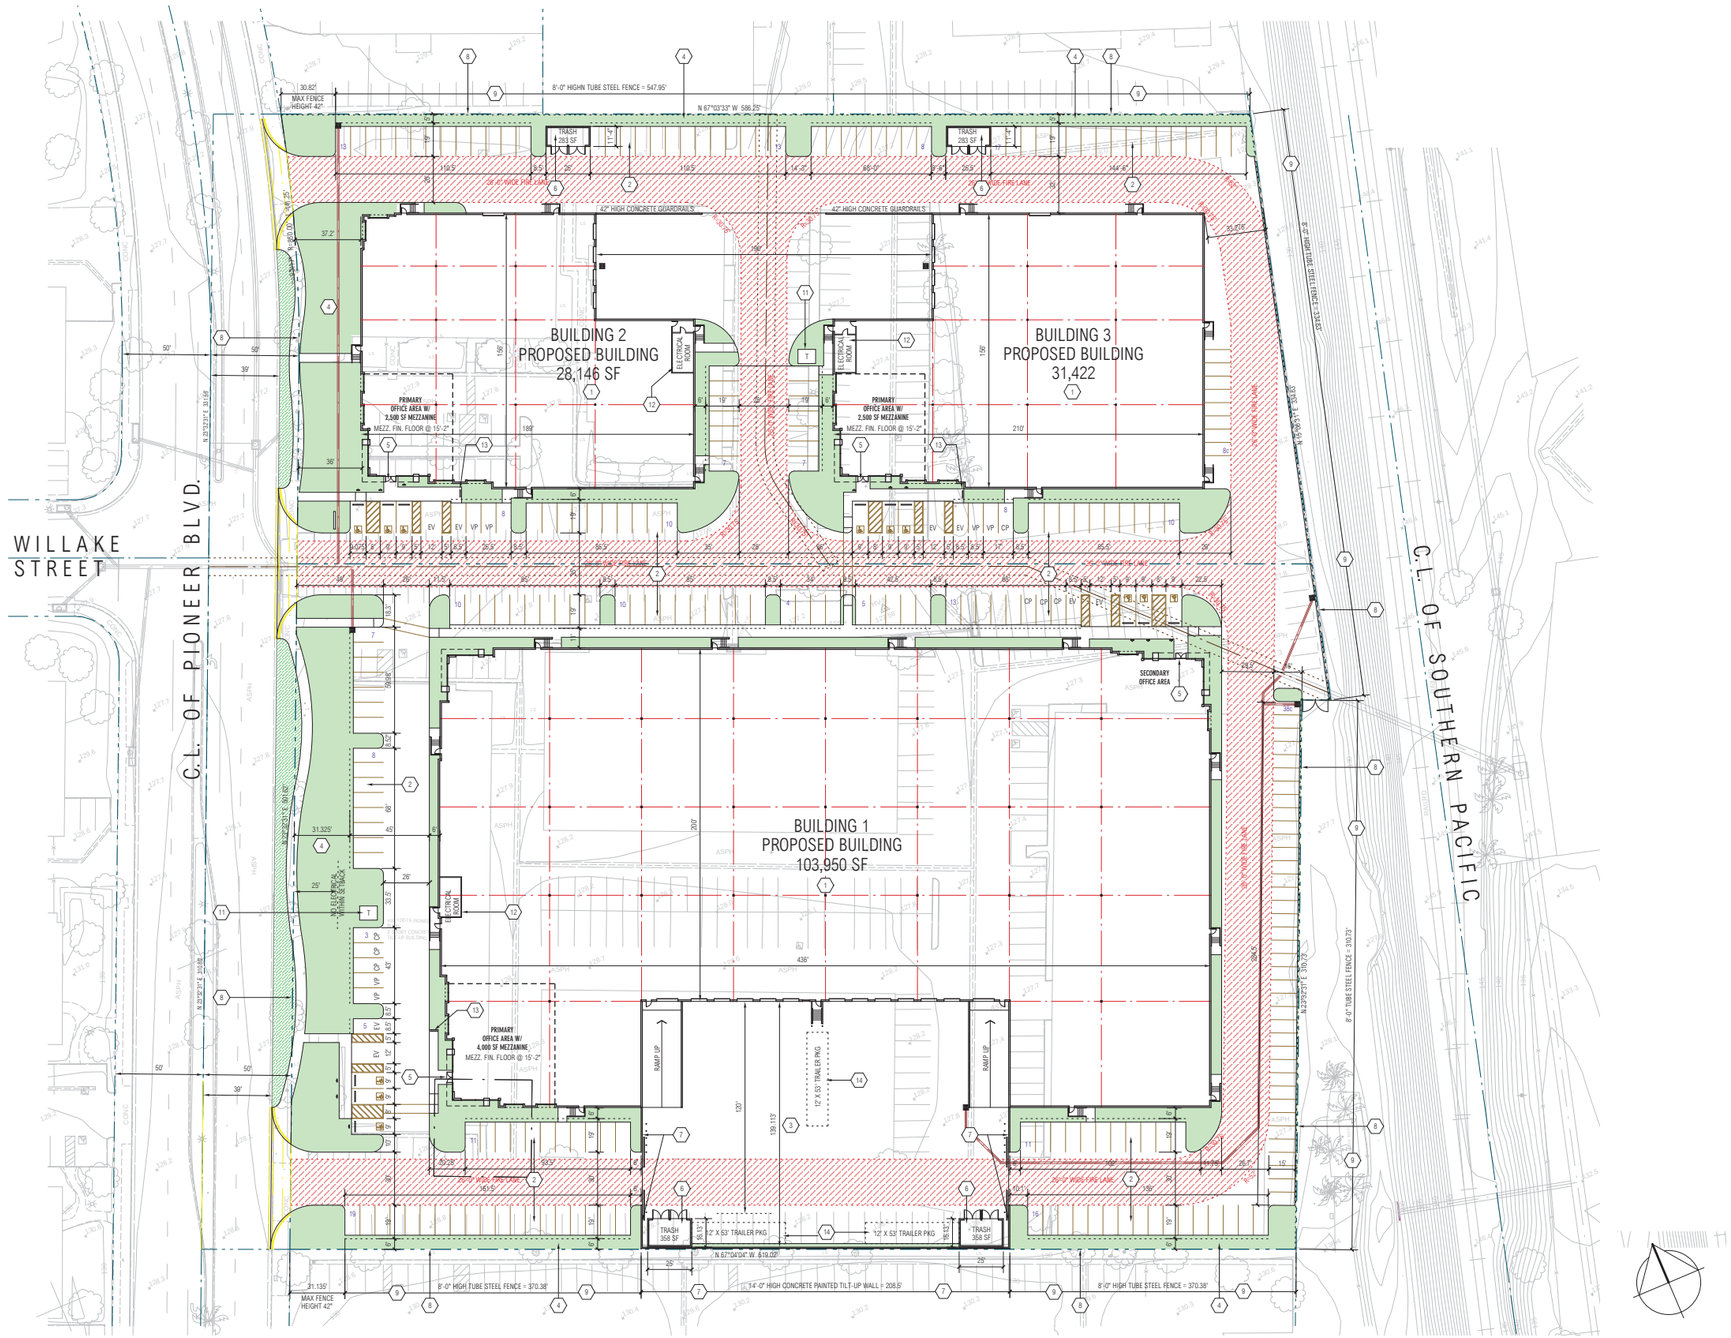

Table 3: Proposed Parking Breakdown

	Building 1	Buildings 2 & 3	Totals
Parking Required(1)	**151**	**106**	**257**
Parking Provided			
Accessible Stalls	6	6	12
Standard Stalls	118	95	213
Compact Stalls	38	8	46
TOTAL	**162**	**109**	**271**
Bicycle Stalls	9	6	15

Notes:
(1) Required off-street parking for industrial uses between 100,001 and 200,000 square feet is one parking space per 1,000 square feet [City of Santa Fe Springs Municipal Code Chapter 155.481(D)]

Access to the project site would be available via three driveways from Pioneer Boulevard: one on the north end, center, and southern portions of the site. The center access point would be the largest entrance onto the site, aligning with Willake Street, an east-west roadway, directly across Pioneer Boulevard. Internal circulation would be provided around Building 1, between Building 2 and 3, as well as along the eastern edge of Building 3.

Landscaping

Landscaping onsite would surround all buildings with the exception of the north and eastern edges of Building 3. A north-south concrete sidewalk would be to the west of the proposed buildings, parallel to Pioneer Boulevard, with 24-inch and 36-inch box trees to enhance to the overall curb appeal from the public right-of-way. The proposed project would provide greater landscaping than what is required by the City's Municipal Code, as detailed in Table 4. The conceptual landscape plan includes low water use shrubs, trees, and ground cover. Figure 7, *Conceptual Landscape Plan* shows the proposed landscaping for the project.

Table 4: Proposed Landscaping Breakdown

	Building 1	Buildings 2 & 3	Total
Landscaping Required	11,257 sf	8,491 sf	19,748 sf
Landscaping Provided	22,420 sf	16,673 sf	39,093 sf

Infrastructure Improvements

Water and Sewer
The proposed Project would install new onsite water and sewer lines that would connect to the existing water and sewer infrastructure within Pioneer Boulevard.

Drainage
During operation, drainage would generally flow to the east starting from an existing east-west 24-inch line within Pioneer Boulevard to an existing east-west 42-inch line that bisects the site to finally connect a north-south 84-inch storm drain line offsite. Storm drain lines would be installed to serve each building and connect to biofiltration basins along the western side of the site or biofiltration chambers along the eastern side of the site. Figure 8, *Preliminary Grading Plan* and Figure 9, *Preliminary Wet Utility Plan* shows existing infrastructure and proposed improvements onsite.

Conceptual Landscape Plan

PLANT SCHEDULE

TREES	BOTANICAL NAME / COMMON NAME	CONT	WUCOL	QTY
	Koelreuteria bipinnata / Chinese Flame Tree Multi-Trunk	36"box	Med	14
	Melaleuca quinquenervia / Cajeput Tree Standard	24"box	Med	25
	Pinus canariensis / Canary Island Pine	24"box	Low	10
	Podocarpus gracilior / Fern Pine	24"box		15
	Quercus virginiana / Southern Live Oak	24"box	Low	18
	Rhus lancea / African Sumac	24"box	Low	4
	Tristania conferta / Brisbane Box	24"box	Med	47

CONCEPT PLANT SCHEDULE

FOUNDATION PLANTING / HEDGE SCREEN - 5 GAL - MED WATER
Buxus microphylla japonica 'Green Beauty' / Green Beauty Boxwood - Space 30" o.c.
Ligustrum texanum / Texas Privet - Space 3'-6" o.c.
Nandina domestica / Heavenly Bamboo
Rhaphiolepis indica 'Jack Evans' / Indian Hawthorn

LARGE SCALE FOUNDATION SHRUB - 5 GAL - LOW WATER
Callistemon citrinus / Lemon Bottlebrush Shrub
Dodonaea viscosa 'Purpurea' / Purple Leafed Hopseed Bush
Elaeagnus pungens 'Frustlandi' / Silverberry
Heteromeles arbutifolia / Toyon - Space 6' o.c.
Nerium oleander 'White' / White Oleander

SMALL SCALE FOUNDATION PLANTING - 5 GAL - LOW WATER
Arbutus unedo / Strawberry Tree Shrub - Space 5' o.c.
Leucophyllum frutescens 'Green Cloud' TM / Green Cloud Texas Ranger
Nerium oleander 'Pink' / Pink Oleander
Nerium oleander 'Red' / Red Oleander
Westringia fruticosa / Coast Rosemary - Space 4' o.c.
Xylosma congestum 'Compacta' / Compact Xylosma

VINES FOR SCREENING - 5 GAL - LOW WATER
Bougainvillea x 'San Diego Red' / Bougainvillea
Macfadyena unguis-cati / Yellow Trumpet Vine spaced @ 10' o.c.

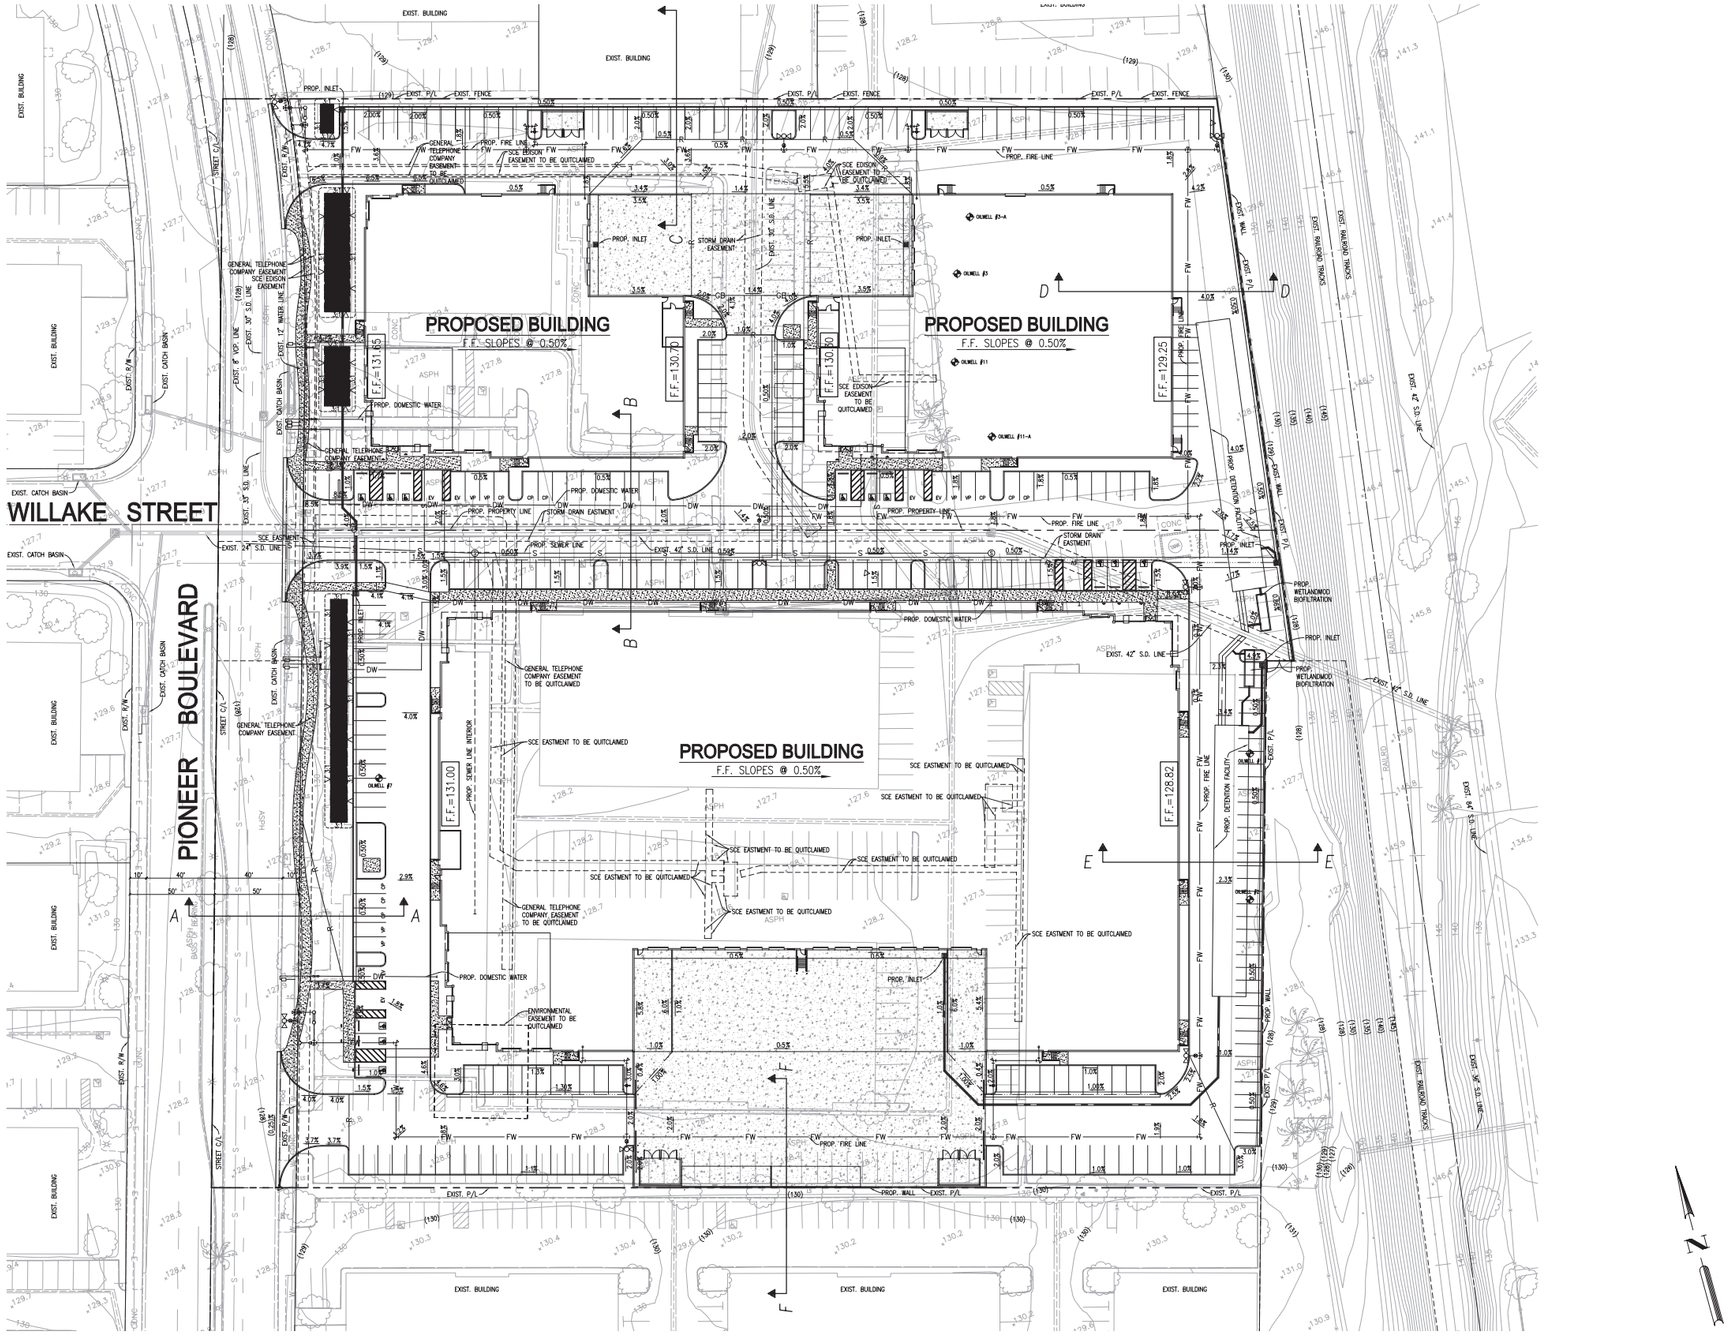
SHRUB PALETTE - LOW WATER USE
Shrubs
Agave americana / Century Plant - Space 6' o.c.
Aloe striata / Coral Aloe
Arbutus unedo / Strawberry Tree Shrub - Space 5' o.c.
Bougainvillea x 'Raspberry' / Bougainvillea
Callistemon citrinus / Lemon Bottlebrush Shrub- Space 5' o.c.
Callistemon citrinus 'Little John' / Dwarf Bottle Brush- Space 3' o.c.
Dodonaea viscosa 'Purpurea' / Purple Leafed Hopseed Bush
Elaeagnus pungens 'Frustlandi' / Silverberry
Leucophyllum frutescens 'Green Cloud' TM / Green Cloud Texas Ranger
Macfadyena unguis-cati / Yellow Trumpet Vine spaced @ 10' o.c.
Muhlenbergia capillaris / Pink Muhly
Muhlenbergia capillaris 'Autumn Blush' / Pink Muhly
Muhlenbergia lindheimeri 'Autumn Glow' TM / Lindheimer's Muhly Space 4' o.c.
Nerium oleander 'Petite Pink' / Petite Pink Oleander - Space 4' o.c.
Nerium oleander 'Pink' / Pink Oleander
Nerium oleander 'Red' / Red Oleander
Nerium oleander 'White' / White Oleander
Pennisetum x 'Fairy Tails' / Evergreen Fountain Grass
Salvia greggii 'Furmans Red' / Furman's Red Salvia
Westringia fruticosa / Coast Rosemary - Space 4' o.c.
Xylosma congestum 'Compacta' / Compact Xylosma

SHRUB PALETTE - MEDIUM WATER USE
Buxus microphylla japonica 'Green Beauty' / Green Beauty Boxwood - Space 30" o.c.
Ligustrum texanum / Texas Privet - Space 3'-6" o.c.
Nandina domestica / Heavenly Bamboo
Phormium tenax 'Amazing Red' / Dwarf Red Flax
Rhaphiolepis indica 'Jack Evans' / Indian Hawthorn
Rosa floribunda 'Iceberg' / Iceberg Rose

GROUND COVER PALETTE - LOW WATER USE - 1 GAL
Acacia redolens 'Desert Carpet' TM / Bank Catclaw Space 4' o.c.
Lantana montevidensis 'New Gold' / Trailing Lantana Space 3' o.c.
Lonicera japonica 'Halliana' / Halls Honeysuckle Flowering Vine
Rosmarinus officinalis 'Huntington Carpet' / Huntington Carpet Rosemary - Space 3' o.c.

GROUND COVER PALETTE - MEDIUM WATER USE - 1 GAL
Dianella tasmanica 'Casa Blue' / Flax Lily
Hemerocallis x 'Stella de Oro' / Stella de Oro Daylily
Pennisetum spathiolatum / Rye Puffs
Rosa x 'Noare' Flower Carpet Red / Rose
Trachelospermum jasminoides / Chinese Star Jasmine

NOTES



1. ALL TREES WITHIN 6' OF HARDSCAPE SHALL BE IN A SHAWTOWN LINEAR (WRAP AROUND NOT ALLOWED) ROOT BARRIER 24" HIGH LINEAR ROOT BARRIER SHALL BE CENTERED ON TREE AND EXTEND 5' IN BOTH DIRECTIONS FOR A TOTAL OF 10'

3.3 CONSTRUCTION

Construction activities for the project would occur over one phase lasting approximately 14 months or less and in the following stages: (1) demolition and removal of existing structures, foundations, asphalt/pavement, utilities, and other subsurface improvements; (2) grading and excavation; (3) site preparation, which includes clearing any remaining infrastructure, utilities, and trenching for the new utilities and services; (4) building construction; and (5) landscape installation, paving, and application of architectural coatings. Project construction is anticipated to start in 2020 and be completed in 2021. Table 5 details total working days for each phase of construction for analytical purposes. Construction activities would be limited to the hours between 7:00 a.m. and 7:00 p.m. pursuant to the City's Municipal Code Chapter 155.425.

Table 5: Construction Schedule

Construction Phase	Work Days
Demolition	20
Site Preparation	10
Grading	20
Building Construction	230
Paving	20
Architectural Coating	40

The project would require the import of approximately 9,500 cubic yards of material. Construction activities include removal and re-compaction of soils to a minimum depth of 8 feet below existing grade or 3 feet beneath the base of the building foundations, whichever is deeper. Other areas onsite would require removal and re-compaction at least 5 feet beneath the existing grade or 2 feet beneath the finished subgrade within pavement areas, pursuant to California Building Code (CBC) requirements.

4 ENVIRONMENTAL CHECKLIST

This section includes the completed environmental checklist form. The checklist form is used to assist in evaluating the potential environmental impacts of the proposed project. The checklist form identifies potential project effects as follows: 1) Potentially Significant Impact; 2) Less Than Significant with Mitigation Incorporated; 3) Less Than Significant Impact; and, 4) No Impact. Substantiation and clarification for each checklist response is provided in Section 5 (Environmental Evaluation). Included in the discussion for each topic are standard condition/regulations and mitigation measures, if necessary, that are recommended for implementation as part of the proposed project.

4.1 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below (☒) would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

Environmental Factors Potentially Affected

☐	Aesthetics	☐	Agriculture and Forest Resources	☐	Air Quality
☒	Biological Resources	☒	Cultural Resources	☐	Energy
☒	Geology/Soils	☐	Greenhouse Gas Emissions	☒	Hazards and Hazardous Materials
☐	Hydrology/Water Quality	☐	Land Use/Planning	☐	Mineral Resources
☐	Noise	☐	Population/Housing	☐	Public Services
☐	Recreation	☐	Transportation	☒	Tribal Cultural Resources
☐	Utilities/Service Systems	☐	Wildfire	☐	Mandatory Findings of Significance

4.2 DETERMINATION

(To be completed by the Lead Agency) on the basis of this initial evaluation

☐	I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
☒	I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
☐	I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
☐	I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
☐	I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

EVALUATION OF ENVIRONMENTAL IMPACTS

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than

significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Potentially Significant Unless Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analysis," as described in (5) below, may be cross-referenced).

5) Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063 (c)(3)(d). In this case, a brief discussion should identify the following:

   (a) Earlier Analysis Used. Identify and state where they are available for review.

   (b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   (c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The analysis of each issue should identify: (a) the significance criteria or threshold used to evaluate each question; and (b) the mitigation measure identified, if any, to reduce the impact to less than significance.

4.3 ENVIRONMENTAL CHECKLIST QUESTIONS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
1. AESTHETICS. Except as provided in Public Resources Code Section 21099 would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway	☐	☐	☐	☒
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a) Have a substantial adverse effect on a scenic vista?

No Impact. Scenic vistas consist of expansive, panoramic views of important, unique, or highly valued visual features that are seen from public viewing areas. This definition combines visual quality with information about view exposure to describe the level of interest or concern that viewers may have for the quality of a particular view of visual setting.

The project site is within an urbanized developed area of the City of Santa Fe Springs. The site is surrounded by business park uses to the north, south, and west. Southern Pacific railroad tracks border the site to the east, and industrial uses exist beyond. Existing public vantage points exist along roadways that surround the project site, which do not contain expansive scenic vistas. The project would redevelop the site and construct three new structures that would be similar to the height of the existing onsite buildings. Because there are no existing scenic vistas and the project would result in similar onsite development, implementation of the proposed project would not result in an impact on a scenic vista. No impact would occur.

b) Substantially damage scenic resources, including, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. The nearest Officially Designated State Scenic Highway is a portion of State Route 57 (SR-57), which runs north-south starting north of the City of Brea to the State Route 60 interexchange (Caltrans 2019). This portion of SR-57 is located 11.5 miles east of the Project site and is not visible

from the project site. Therefore, no impacts to scenic resources within a state scenic highway would occur.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less than Significant Impact. The project site is located within an urbanized area of the City of Santa Fe Springs, surrounded by business park and industrial land uses. The proposed project would redevelop the site and construct three new concrete tilt-up industrial buildings, which would be an upgrade to the existing development on the site. Development of the site would be consistent with the General Plan and the City's Zoning Code. This includes site design requirements including but not limited to setbacks, building heights, parking, and landscaping, which would not substantially degrade the existing visual character or quality of public views of the site and its surroundings. The project's compliance with building code requirements would be verified during the City's plan check and permitting process. As a result, impacts related to scenic quality within the urbanized environment would be less than significant.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less than Significant Impact. The project site is located within a developed urban area. Existing sources of light in the vicinity of the project site includes: street lights, parking lot lighting, building illumination, security lighting, landscape lighting, and lighting from building interiors that passthrough windows. The exterior lighting on the project site includes exterior building mounted lighting and lighting at building entrances.

Construction. Although construction activities would occur primarily during daylight hours, construction activities could extend into the evening hours, as permitted by the City's Municipal Code Chapter 155.425 (permitted construction activities from 7:00 a.m. to 7:00 p.m.). Lighting required during construction of the project would be shielded and directed toward work activity areas, in compliance with Municipal Code Chapters 155.432 and 155.496 (included as PPP AES-1) that provides for directing lighting away from adjacent uses and intensity of security lighting. In addition, construction may include nighttime security lighting; however, this would be similar to the existing security lighting on the site, adjacent sites, and streetlights. Also, any construction related lighting would be temporary (approximately 14 months). Therefore, construction of the project would not create a new source of substantial light that would adversely affect day or nighttime views in the area, and light impacts associated with construction would be less than significant.

Operation. The project would include the provision of nighttime lighting for security purposes around the building and in the parking areas. Implementation of the project could contribute additional sources to the overall ambient nighttime lighting conditions. However, the project site is currently developed and emanates light from the existing buildings and parking areas, and the site is located within an urban area that includes various sources of nighttime lighting. Additionally, all outdoor lighting would be hooded or appropriately angled away from adjacent land uses and would comply with Municipal Code Chapters 155.432 and 155.496 (included as PPP AES-1) that provides for directing lighting away from adjacent uses and intensity of security lighting. Because the project area is within an already developed area with various sources of existing nighttime lighting, and because the project would be required to comply with the City's lighting regulations that would be verified by the City during the plan check and permitting process, any increase in lighting that

would be generated by the project would not adversely affect day or nighttime views in the area. Overall, lighting impacts would be less than significant.

Reflective light (glare) can be caused by sunlight or artificial light reflecting from finished surfaces such as window glass or other reflective materials. Generally, darker or mirrored glass would have a higher visible light reflectance than clear glass. Buildings constructed of highly reflective materials from which the sun reflects at a low angle can cause adverse glare. However, the project would not use highly reflective surfaces, or glass sided buildings. Although the building would contain windows, the windows would be comprised of blue reflective glazing, which reduces glare over other transparent surfaces and the windows would be separated by stucco that would limit the potential of glare. As described previously, onsite lighting would be angled down and be compliant with Municipal Code Chapter 155.432 and 155.496 (included as PPP AES-1), which would avoid the potential of onsite lighting generating offsite glare. Therefore, the project would not generate substantial sources of glare, and impacts would be less than significant.

Existing Plans, Programs, or Policies

PPP AES-1: Glare. Pursuant to Municipal Code Chapters 155.432 and 155.496, no activity shall be permitted which causes light or glare to be transmitted or reflected in such concentrated quantities as to be detrimental or harmful to the use of surrounding properties or streets.

Mitigation Measures

No mitigation measures related to aesthetics are required.

Sources

California Department of Transportation (Caltrans 2019). California Scenic Highway Mapping System, Los Angeles County and Orange County. Accessed June 2019. Available at: http://www.dot.ca.gov/hq/LandArch/16_livability/scenic_highways/

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
2. AGRICULTURE AND FORESTRY RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The project site is developed for urban uses and located in an area that is completely developed for urban uses. The project site and its vicinity are void of agricultural uses. The California Department of Conservation Farmland Mapping and Monitoring Program identifies the site as urban land and it is not identified as Prime, Unique, or Farmland of Statewide Importance (CDC 2019). Therefore, conversion of such farmland designations would not occur from implementation of the proposed project. No impact would occur.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The project site is currently zoned Limited Manufacturing (ML), which does not provide for agricultural uses. In addition, the site is not subject to a Williamson Act contract. Thus, the proposed project would not result in impacts related to conflict with an existing agricultural zone or Williamson contract, and impacts would not occur.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact. The project site currently includes business park and industrial land uses and is within an urbanized developed area. No forest land exists on or adjacent to the project site. The project site is currently zoned Limited Manufacturing (ML) and is not zoned for forest land or timberland uses. Thus, the proposed project would not result in impacts related to a conflict with existing forest land or timberland zoning, and impacts would not occur.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. The project site currently includes business park and industrial uses and is within an urbanized developed area. No forest land exists on or adjacent to the project site. Thus, the project would not result in the loss of forest land or conversion of forest land to a non-forest use, and impacts would not occur.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

No Impact. As described above, the project site currently includes business park and industrial land uses and is within an urbanized developed area. No forest land exists on or adjacent to the project site. Therefore, the implementation of the proposed project would not involve other changes in the existing environment which would result in the conversion of farmland to a non-agricultural use or the conversion of forest land to a non-forest use. Therefore, no impacts would occur.

Existing Plans, Programs, or Policies

There are no impacts reducing Plans, Programs, and Policies related to agriculture and forestry that are applicable to the project.

Mitigation Measure

No mitigation measures related to agriculture and forestry are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors) affecting a substantial number of people?	☐	☐	☒	☐

The discussion below is based on the Air Quality Impact Analysis (Urban 2019a) and the Mobile Source Health Risk Assessment (Urban 2019a), prepared by Urban Crossroads, included as Appendix A and B.

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less than Significant Impact. The project site is located in the South Coast Air Basin, which is under the jurisdictional boundaries of the South Coast Air Quality Management District (SCAQMD). The SCAQMD and Southern California Association of Governments (SCAG) are responsible for preparing the Air Quality Management Plan (AQMP), which addresses federal and state Clean Air Act (CAA) requirements. The AQMP details goals, policies, and programs for improving air quality in the Basin. In preparation of the AQMP, SCAQMD and SCAG use land use designations contained in General Plan documents to forecast, inventory, and allocate regional emissions from land use and development-related sources.

For purposes of analyzing consistency with the AQMP, if a proposed project would have a development density and vehicle trip generation that is substantially greater than what was anticipated in the General Plan, then the proposed project would conflict with the AQMP. On the other hand, if a project's density is consistent with the General Plan, its emissions would be consistent with the assumptions in the AQMP, and the project would not conflict with SCAQMD's attainment plans. In addition, the SCAQMD considers projects consistent with the AQMP if the project would not result in an increase in the frequency or severity of existing air quality violations or cause a new violation.

As detailed below, the proposed project would not result in exceedance of local or regional

significance thresholds. The project site is designated as Business Park in the City's General Plan, which allows for industrial uses such as limited manufacturing, research, and light assembly operations. The proposed project would develop three new concrete tilt-up industrial buildings, which would have new limited manufacturing uses that would replace the existing uses on the subject site.

In addition, emissions generated by construction and operation of the project would not exceed thresholds as described in the analysis below, which are based on the AQMP and are designed to bring the Basin into attainment for the criteria pollutants for which it is in nonattainment. Therefore, because the project does not exceed any of the thresholds it would not conflict with SCAQMD's goal of bringing the Basin into attainment for all criteria pollutants and, as such, is consistent with the AQMP. As a result, impacts related to conflict with the AQMP from the project would be less than significant.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less than Significant Impact. The South Coast Air Basin (SCAB) is in a non-attainment status for federal ozone standards, federal carbon monoxide standards, and state and federal particulate matter standards. Any development in the SCAB, including the proposed project, could cumulatively contribute to these pollutant violations. The methodologies from the SCAQMD CEQA Air Quality Handbook are used in evaluating project impacts. SCAQMD has established daily mass thresholds for regional pollutant emissions, which are shown in Table AQ-1. Should construction or operation of the proposed project exceed these thresholds a significant impact could occur; however, if estimated emissions are less than the thresholds, impacts would be considered less than significant.

Table AQ-1: SCAQMD Regional Daily Emissions Thresholds

Pollutant	Construction (lbs/day)	Operations (lbs/day)
NOx	100	55
VOC	75	55
PM10	150	150
PM2.5	55	55
SOx	150	150
CO	550	550
Lead	3	3

Source: Regional Thresholds presented in this table are based on the SCAQMD Air Quality Significance Thresholds, March 2015 (Urban Crossroads, 2019a).

Construction

Construction activities associated with the proposed project would generate pollutant emissions from the following construction activities: demolition, site preparation, grading, building construction, paving, architectural coating. The amount of emissions generated on a daily basis would vary, depending on the intensity and types of construction activities occurring. Construction activities would generate emissions from the demolition of 157,669 square feet of existing building space. In addition, the project would require 9,500 cubic yards of import and generate a need for construction worker vehicle trips to and from the project site during the estimated 14 months of construction.

It is mandatory for all construction projects to comply with several SCAQMD Rules, including Rule 403 for controlling fugitive dust, PM_{10}, and $PM_{2.5}$ emissions from construction activities. Rule 403

requirements include, but are not limited to, applying water in sufficient quantities to prevent the generation of visible dust plumes, applying soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system to remove bulk material from tires and vehicle undercarriages before vehicles exit the proposed project site, covering all trucks hauling soil with a fabric cover and maintaining a freeboard height of 12-inches, and maintaining effective cover over exposed areas. Compliance with Rule 403 was accounted for in the construction emissions modeling and is included as PPP AQ-1.

In addition, implementation of SCAQMD Rule 1113 that governs the VOC content in architectural coating, paint, thinners, and solvents, was accounted for in the construction emissions modeling, and is included as PPP AQ-2. As shown in Table AQ-2, CalEEMod results show that construction emissions generated by the proposed project would not exceed SCAQMD regional thresholds. Therefore, construction activities would result in a less than significant impact.

Table AQ-2: Overall Construction Emissions Summary

Activity	Emissions (lbs/day)					
	VOC	NOx	CO	SOx	PM_{10}	$PM_{2.5}$
2020	4.17	43.13	25.27	0.07	10.07	6.02

SOx = sulfur oxides

Source: Urban Crossroads, 2019a

Operation

Implementation of the proposed project would result in long-term regional emissions of criteria air pollutants and ozone precursors associated with area sources, such as natural gas consumption, landscaping, applications of architectural coatings, and consumer products. However, operational vehicular emissions would generate a majority of the emissions generated from the project.

Operational emissions associated with the proposed project were modeled using CalEEMod and are presented in Table AQ-3. As shown, the proposed project would result in long-term regional emissions of the criteria pollutants that would be below the SCAQMD's applicable thresholds. Therefore, the project's operational emissions would not exceed the NAAQS and CAAQS, would not result in a cumulatively considerable net increase of any criteria pollutant impacts, and would be less than significant.

Table AQ-3: Summary of Operational Emissions

c) Expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. The SCAQMD recommends the evaluation of localized NO_2, CO, PM_{10}, and $PM_{2.5}$ construction-related impacts to sensitive receptors in the immediate vicinity of the project site. Such an evaluation is referred to as a localized significance threshold (LST) analysis. The impacts were analyzed pursuant to the SCAQMD's Final Localized Significance Threshold Methodology. According to the LST Methodology, "off-site mobile emissions from the project should not be included in the emissions compared to the LSTs" (Urban 2019a). SCAQMD has developed LSTs that represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standards, and thus would not cause or contribute to localized air quality impacts. LSTs are developed based on the ambient concentrations of NOx, CO, PM_{10}, and $PM_{2.5}$ pollutants for each of the 38 source receptor areas (SRAs) in the SCAB. The project site is located in SRA 5, Southeast Los Angeles County.

Sensitive receptors can include uses such as long-term health care facilities, rehabilitation centers, and retirement homes. Residences, schools, playgrounds, childcare centers, and athletic facilities can also be considered sensitive receptors. The nearest LST sensitive receptor to the project site is an existing residence located 1,000 feet northwest of the project site on Arlee Avenue.

Construction

The localized thresholds from the mass rate look-up tables in SCAQMD's Final Localized Significance Threshold Methodology document, were developed for use on projects that are less than or equal to 5-acres in size or have a disturbance of less than or equal to 5 acres daily and were used to evaluate LSTs. As shown in Table AQ-4, with implementation of SCAQMD Rules 403 and 1113

(included as PPP AQ-1 and PPP AQ-2), the maximum daily construction emissions from the proposed project would not exceed the applicable SCAQMD LST thresholds.

Table AQ-4: Localized Significance Summary of Construction

Activity	Emissions (lbs/day)			
	NOx	CO	PM10(1)	PM2.5(1)
On-Site Demolition				
Maximum Daily Emissions	**33.20**	**21.75**	**4.69**	**2.00**

Source: Urban Crossroads, 2019a

Operation

Localized Significance Analysis

For operational LSTs, on-site passenger car and truck travel emissions were modeled. As shown on Table AQ-5, operational emissions would not exceed the SCAQMD's LST thresholds for any criteria pollutant at the nearest sensitive receptor. Therefore, the project would result in a less than significant impact related to localized emissions from operational activities.

Table AQ-5: Localized Significance Summary of Operations

Operational Activity	Emissions (lbs/day)			
	NOx	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	**4.34**	**3.28**	**0.84**	**0.32**
SCAQMD Significance Threshold	172	1,480	32	14
Threshold Exceeded?	**No**	**No**	**No**	**No**

Notes: PM_{10} and $PM_{2.5}$ = particular matter; VOC = volatile organic compounds; SOx = sulfur oxides

Source: Urban Crossroads, 2019a

CO "Hot Spot" Analysis

Regarding potential "hot spots" of CO that could result from the project, Appendix A of this IS/MND describes that a daily traffic volume of 400,000 vehicles per day would not exceed the most stringent 1-hour CO standard (20 ppm).

The proposed project would not produce the volume of traffic required to generate a CO "hot spot" either in the context of the 2003 Los Angeles hot spot study or based on representative BAAQMD CO threshold considerations (Urban 2019a). Therefore, CO "hot spots" are not an environmental impact of concern for the proposed project. Localized air quality impacts related to mobile-source emissions would therefore be less than significant.

Diesel Mobile Source Health Risk Analysis

A Diesel Mobile Source Health Risk Assessment, included as Appendix B, was prepared for the project to evaluate the health risk impacts as a result of exposure to diesel particulate matter (DPM)

as a result of heavy-duty diesel trucks entering and leaving the site during operation of the proposed project.

On-site truck idling was estimated to occur as trucks wait to park or maneuver through the facility. Although the proposed uses are required to comply with CARB's idling limit of 5 minutes, SCAQMD recommends that the on-site idling emissions should be estimated for 15 minutes of truck idling, which takes into account on-site idling that occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc. As such, this analysis estimated truck idling at 15 minutes, consistent with SCAQMD's recommendation.

The SCAQMD recommends using a 10 in one million is used as the cancer risk threshold. A risk level of 10 in one million implies a likelihood that up to 10 people, out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the levels of toxic air contaminants over a specified duration of time.

Residential: The residential land uses with the greatest potential exposure to Project DPM source emissions are those along the primary truck routs that would be used for Project construction and Project operations. Thus, closest sensitive receptors potentially impacted by Project DPM source emissions would be homes at the southwest corner of Telegraph Road and Alburtis Avenue, approximately 1,300 feet west of the project site. At this location, the maximum incremental cancer risk attributable to Project DPM source emissions is calculated at 0.68 in one million, which is less than the SCAQMD threshold of 10 in one million. Additionally, non-cancer risks were calculated to be 0.0002, which would not exceed the applicable threshold of 1.0 (Urban 2019b). As such, the Project would not cause a significant human health or cancer risk to nearby residences, and impacts would be less than significant.

Workers: The workers with the greatest potential exposure to Project DPM source emissions are located approximately 65 feet south of the project site at existing industrial land uses. At the maximally exposed worker (MEIW), the maximum incremental cancer risk impact at this location is 0.53 in one million which is less than the threshold of 10 in one million. Also, the non-cancer risks were calculated to be 0.002, which would not exceed the applicable threshold of 1.0 (Urban 2019b). As such, the project would not cause a significant human health or cancer risk to nearby workers, and impacts would be less than significant.

School Children: The school site with the greatest potential exposure to Project DPM source emissions is Lake Center Junior High School, located approximately 0.5 mile south of the project site. This school is anticipated to have the greatest potential exposure to DPM emissions due to its location near the project site, truck travel patterns, and meteorological conditions. At the maximally exposed individual school child (MEISC), the maximum incremental cancer risk impact would be 0.10 in one million which is less than the threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be 0.0002, which would not exceed the applicable threshold of 1.0 (Urban 2019b). As such, the Project would not cause a significant human health or cancer risk to any school children, and impacts would be less than significant.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. The proposed project would not generate other emissions, not described previously. Also, typical land uses generally associated with odor complaints includes agricultural uses (livestock and farming), wastewater treatment plants, food processing plants,

chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities.

The project site is zoned ML (Limited Manufacturing) which does not allow land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The proposed project would also be required to comply with SCAQMD Rule 402 (included as PPP AQ-3) to prevent odor nuisances on sensitive land uses. Based on the potential future use of the site as various limited manufacturing businesses, and with compliance with SCAQMD Rule 402, impacts related to odors would be less than significant.

Existing Plans, Programs, or Policies

PPP AQ-1: The project is required to comply with the provisions of South Coast Air Quality Management District (SCAQMD) Rule 403, which includes the following:

- All clearing, grading, earth-moving, or excavation activities shall cease when winds exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.
- The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the project are watered, with complete coverage of disturbed areas, at least 3 times daily during dry weather; preferably in the mid-morning, afternoon, and after work is done for the day.
- The contractor shall ensure that traffic speeds on unpaved roads and project site areas are reduced to 15 miles per hour or less.

PPP AQ-2: The project is required to comply with the provisions of South Coast Air Quality Management District Rule (SCAQMD) Rule 1113. Only "Low-Volatile Organic Compounds" paints (no more than 50 gram/liter of VOC) and/or High Pressure Low Volume (HPLV) applications shall be used.

PPP AQ-3: The project is required to comply with the provisions of South Coast Air Quality Management District (SCAQMD) Rule 402. The project shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

Mitigation Measures

No mitigation measures related to air quality are required.

Mobile Source Health Risk Assessment, prepared by Urban Crossroads, 2019 (Urban 2019b) (Appendix B).

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
4. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☒	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

No Impact. The project site is developed with an existing business park consisting of 7 buildings surrounded by paved parking lots and landscaping. A small strip of land between the railroad tracks and the parking lot contains exposed soil with areas of grass, weeds, trees, and debris. In addition, the project site is surrounded by similar developed business park uses with paved parking

and ornamental landscaping. No candidate, sensitive, or special status species (or associated habitats) exist on the site or adjacent area.

The project would redevelop the site and provide new landscaping that would include a variety of ornamental trees, shrubs, and groundcover. As no sensitive species or habitat exists onsite, implementation of the project would not result in an adverse effect, either directly or through habitat modifications, on any sensitive species, and impacts would not occur.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?

No Impact. Riparian habitats occur along the banks of rivers, streams, or wetland areas. Sensitive natural communities are natural communities that are considered rare in the region by regulatory agencies or are known to provide habitat for sensitive animal or plant species. As described in the previous response, the project site is within an urban area, developed, and does not contain any natural habitats, including riparian habitat or sensitive natural community. Additionally, the project site is bound by developed areas that include buildings, pavement, roadways, railroad tracks, and small areas of ornamental landscaping that do not contain sensitive natural habitat areas. Thus, no impacts related to riparian habitat or other sensitive natural communities identified in local or regional plans would result from project implementation.

c) Have a substantial adverse effect on state or federally protected wetlands (including but not limited to, marsh, vernal, pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. Wetlands are defined under the federal Clean Water Act as land that is flooded or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that normally does support, a prevalence of vegetation adapted to life in saturated soils. Wetlands include areas such as swamps, marshes, and bogs. The project site and adjacent areas are located within a developed urban area and do not contain natural wetlands. Therefore, the project would not result in impacts to wetlands.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less than Significant with Mitigation Incorporated. Wildlife corridors are areas where wildlife movement is concentrated due to natural or anthropogenic constraints and corridors provide access to resources such as food, water, and shelter. Animals use these corridors to move between different habitats and provide avenues for wildlife dispersal, migration, and contact between other populations. The project site does not support conditions of migratory wildlife corridors or linkages. The project site is completely developed and surrounded by roadways and rail lines. The site and surrounding areas do not provide function for wildlife movement. Additionally, the surrounding area is developed and urban. There are no rivers, creeks, or open drainages near the site that could function as a wildlife corridor. Thus, implementation of the project would not result in impacts related to wildlife movement or wildlife corridors.

However, the project site contains existing ornamental trees that could be used for nesting by common bird species that are protected by the federal Migratory Bird Treaty Act (MBTA) and the

California Fish and Game Code Sections 3503.5, 3511, and 3515 during the avian nesting and breeding season that occurs between February 1 and September 15. The provisions of the MBTA prohibits disturbing or destroying active nests. Therefore, Mitigation Measure BIO-1 has been included to require that if commencement of demolition, construction, or vegetation clearing occurs between February 1 and September 15, a qualified biologist shall conduct a nesting bird survey no more than 3 days prior to commencement of activities to confirm the absence of nesting birds. With implementation of Mitigation Measure BIO-1, potential impacts to nesting birds would be less than significant.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact. There are no local biological related policies or ordinances, such as a tree preservation policy or ordinance that is applicable to the project. Trees in the public right-of-way in the City are protected under the City's Municipal Code Sections 96.130 through 96.140, which regulates the planting, maintenance, and removal of trees in public locations in the City. The project would install new 24-inch and 36-inch box trees along Pioneer Boulevard, which would be new public street trees. Installation of the trees would be completed in compliance with the City's requirements, as included by PPP BIO-1. Therefore, implementation of the project would not conflict with local polices or ordinances protecting trees and no impact would occur. No mitigation measures are required.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The project site is developed and in an urban area. The project site does not contain any natural lands that are subject to an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Therefore, the project would not result in impacts to biological habitat plans. No mitigation measures are required.

Existing Plans, Programs, or Policies

PPP BIO-1: Street Trees. Installation of street trees shall occur in compliance with the City of Santa Fe Springs Municipal Code Chapters 96.130 through 96.140, also known as the "Tree Ordinance".

Mitigation Measures

Mitigation Measure BIO-1: Migratory Bird Treaty Act. Prior to commencement of grading activities, the City Building Department, shall verify that in the event that vegetation and tree removal activities occur within the active breeding season for birds (February 1–September 15), the project applicant (or their Construction Contractor) shall retain a qualified biologist (meaning a professional biologist that is familiar with local birds and their nesting behaviors) to conduct a nesting bird survey no more than 3 days prior to commencement of construction activities.

The nesting survey shall include the project site and areas immediately adjacent to the site that could potentially be affected by project-related construction activities, such as noise, human activity, and dust, etc. If active nesting of birds is observed within 100 feet of the designated construction area prior to construction, the qualified biologist shall establish an appropriate buffer around the active nests (e.g., as much as 500 feet for raptors and 300 feet for non-raptors [subject to the

recommendations of the qualified biologist]), and the buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
5. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to in § 15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☒	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?

No Impact. According to the *State CEQA Guidelines*, a historical resource is defined as something that meets one or more of the following criteria: (1) listed in, or determined eligible for listing in, the California Register of Historical Resources; (2) listed in a local register of historical resources as defined in Public Resources Code (PRC) Section 5020.1(k); (3) identified as significant in a historical resources survey meeting the requirements of PRC Section 5024.1(g); or (4) determined to be a historical resource by the project's Lead Agency.

The California Register of Historical Resources defines a "historical resource" as a resource that meets one or more of the following criteria: (1) associated with events that have made a significant contribution to the broad patterns or local or regional history of the cultural heritage of California or the United States; (2) associated with the lives of persons important to local, California, or national history; (3) embodies the distinctive characteristics of a type, period, region, or method of construction or represents the work of a master or possesses high artistic values; or (4) has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

The Phase I Environmental Site Assessment (ESA) prepared for the project site, includes aerial photographs describing the transition of the site from an oil field to existing use. The Phase I ESA described that the existing buildings on the site were constructed in 1977 (HMC 2019a). Thus, the buildings onsite were constructed less than 50 years ago and are modern buildings. In addition, the project site is not listed on any register of resources and does not meet the CEQA criteria related to a historical resource (Dice and Burke 2018). Therefore, the project site does not contain any historical resources, and the project would not result in impacts to historical resources.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Less than Significant Impact with Mitigation Incorporated. The project site has been disturbed from previous development activities that include oil production fields, agriculture, and industrial

uses. Project construction would include removal and re-compaction to a minimum depth of 8 feet below existing grade or 3 feet beneath the base of the foundations, whichever is deeper. The excavation is possible to encroach into native soils that have not been previously disturbed and could contain archaeological resources. As a result, Mitigation Measure CUL-1 has been included to provide procedures to be followed in the event that potential archaeological resources are discovered during grading, excavation, or construction activities. Mitigation Measure CUL-1 requires that work in the vicinity of a find be halted until the find can be assessed for significance by a qualified archaeologist to determine the appropriate treatment and documentation of the discovery (California Code of Regulations [CCR], Title 14, Chapter 3, Section 15064.5(f). Mitigation Measure CUL-1 would reduce potential impacts to undiscovered archaeological resources to a less than significant level.

c) Disturb any human remains, including those interred outside of formal cemeteries?

Less than Significant Impact. The project site has been previously disturbed, as described above, and has not been previously used as a cemetery. It is not anticipated that implementation of the proposed project would result in the disturbance of human remains. Existing regulation under the California Health and Safety Code, included as PPP CUL-1, outlines the procedures to undertake if human remains are found on the project site. Compliance with existing regulations would ensure impacts related to potential disturbance of human remains are less than significant.

Existing Plans, Programs, or Policies

PPP CUL-1: Human Remains. Should human remains be discovered during project construction, the project will be required to comply with State Health and Safety Code Section 7050.5, which states that no further disturbance may occur in the vicinity of the body until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine the identity of and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD must complete the inspection within 48 hours of notification by the NAHC.

Mitigation Measures

Mitigation Measure CUL-1: Inadvertent Discoveries. Prior to commencement of grading activities, the City of Santa Fe Springs Building Department shall verify that all project grading and construction plans and specifications state that in the event that potential archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified archaeologist from the City or County List of Qualified Archaeologists has evaluated the find to determine whether the find constitutes a "unique archaeological resource," as defined in Section 21083.2(g) of the California Public Resources Code. Any resources identified shall be treated in accordance with California Public Resources Code Section 21083.2(g). If the discovered resource(s) appears Native American in origin, a Native American Monitor shall be contacted to evaluate any potential tribal cultural resource(s) and shall have the opportunity to consult on appropriate treatment and curation of these resources.

6. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☒

The discussion below is based on the Energy Tables, prepared by Urban Crossroads, 2019 (Urban 2019c) (Appendix C).

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact.

Construction

During construction of the proposed project, energy would be consumed in three general forms:

1. Petroleum-based fuels used to power off-road construction vehicles and equipment on the project sites, construction worker travel to and from the project sites, as well as delivery truck trips;
2. Electricity associated with providing temporary power for lighting and electric equipment; and
3. Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction activities related to the proposed building and the associated infrastructure would not be expected to result in demand for fuel greater on a per-unit-of-development basis than other development projects in southern California. In addition, the extent of construction activities that would occur are limited to an approximate 14-month period, and the demand for construction-related electricity and fuels would be limited to that time frame. The Energy Tables (included as Appendix C) details that the total project construction electricity usage over the estimated 14-month construction period would be approximately 66,388 kWh, which is summarized in Table E-1.

Table E-1: Estimated Construction Electricity Usage

Land Use	Proposed Building Square Footage (1,000 SF)	Construction Duration (months)	Electricity Usage (kWh)
Light Industrial	163.518	14	66,388
Total Construction Electricity Usage (kWh)			**66,388**

Source: Urban Crossroads, 2019c.

Also, as shown in Table E-2, construction of the proposed project is estimated to result in the need for 42,513 gallons of diesel fuel.

Table E-2: Estimated Construction Fuel Consumption

Activity/Duration	Equipment	HP Rating	Quantity	Usage Hours	Load Factor	HP-hrs/day	Total Fuel Consumption (gal. diesel fuel)
Demolition (20 days)	Concrete/Industrial Saws	81	1	8	0.73	473	511
	Excavators	158	3	8	0.38	1,441	1,558

Total Construction Fuel Demand							**42,513**

Source: Urban Crossroads, 2019c.

Table E-3 shows that construction workers would use approximately 17,992 gallons of fuel to travel to and from the project site. Tables E-4 and E-5 show that approximately 5,330 gallons of fuel would be used by medium high duty trucks, and 13,437 gallons of fuel would be used for hauling by heavy high duty trucks during construction of the proposed project.

Table E-3: Estimated Construction Worker Fuel Consumption

Construction Activity	Worker Trips / Day	Trip Length (miles)	Vehicle Miles Traveled	Average Vehicle Fuel Economy (mpg)	Estimated Fuel Consumption (gallons)
Demolition (20 days)	15	14.7	4,410	30.65	144
Site Preparation (10 days)	18	14.7	2,646	30.65	86
Grading (20 days)	15	14.7	4,410	30.65	144
Building Construction (230 days)	153	14.7	517,293	30.65	16,880

Table E-5: Estimated Construction Hauling Fuel Consumption (Heavy High Duty Trucks)

Construction Activity	Vendor/ Hauling Trips/ Day	Trip Length (miles)	Vehicle Miles Traveled	Average Vehicle Fuel Economy (mpg)	Estimated Fuel Consumption (gallons)
Building Construction (230 days)	30	6.9	47,610	6.38	7,464
Demolition (20 days)	717	20	14,340	6.38	2,248
Grading (20 days)	1,188	20	23,760	6.38	3,725
Total Construction Hauling Fuel Consumption					**13,437**

Source: Urban Crossroads, 2019c.

In addition, construction contractors are required to demonstrate compliance with applicable California Air Resources Board (CARB) regulations governing the accelerated retrofitting, repowering, or replacement of heavy-duty diesel on- and off-road equipment. In addition, compliance with existing CARB idling restrictions and the use of newer engines and equipment would reduce fuel combustion and energy consumption. Overall, construction activities would require limited energy consumption, would comply with all existing regulations, and would therefore not be expected to use large amounts of energy or fuel in a wasteful manner. Thus, impacts related to construction energy usage would be less than significant.

Operation

Once operational, the project would generate demand for electricity, natural gas, as well as gasoline for motor vehicle trips. Operational use of energy includes the heating, cooling, and

lighting of the building, water heating, operation of electrical systems and plug-in appliances, parking lot and outdoor lighting, and the transport of electricity, natural gas, and water to the areas where they would be consumed. This use of energy is typical for urban development, and no operational activities or land uses would occur that would result in extraordinary energy consumption.

As detailed in Table E-6, operation of the proposed project is estimated to result in the annual use of 437,667 gallons of fuel. In addition, the project would adhere to CCR Title 13, Motor Vehicles, section 2449(d)(3) Idling, that limits idling times to no more than 5 minutes, which would preclude unnecessary and wasteful consumption of fuel due to unproductive idling of trucks.

Table E-6: Estimated Annual Operational Automobile Fuel Consumption

Vehicle Type	Annual Miles Traveled	Average Vehicle Fuel Economy (mpg)	Estimated Annual Fuel Consumption (gallons)
Light Duty Autos	2,247,531	30.65	73,338
Light Duty Trucks 1	176,856	25.95	6,815
Light Duty Trucks 2	821,839	24.03	34,203
Medium Duty Trucks	492,804	19.58	25,170
Light Heavy Duty Trucks	942,843	13.26	71,118
Medium Heavy Duty Trucks	464,103	8.93	51,954
Heavy Heavy Duty Trucks	1,116,724	6.38	175,069
Total (All Vehicles)	**6,262,701**	**--**	**437,667**

Source: Urban Crossroads, 2019c.
1 Vehicles under the LDT1 category have a gross vehicle weight rating (GVWR) of less than 6,000 lbs. and equivalent test weight (ETW) of less than or equal to 3,750 lbs.
2 Vehicles under the LDT2 category have a GVWR of less than 6,000 lbs. and ETW between 3,751 lbs. and 5,750 lbs.

In addition, Table E-7 details that operation of the proposed project would use approximately 2,290,070 thousand British thermal units (kBTU) per year of natural gas, and approximately 1,561,048 kilowatt-hour (kWh) per year of electricity for operation.

Table E-7: Estimated Annual Natural Gas and Electricity Consumption

Natural Gas Demand	kBTU/year
Light Industrial	2,290,070
Total Natural Gas Demand	**2,290,070**
Electricity Demand	**kWh/year**
Light Industrial	1,552,600
Parking Lot	8,448
Total Electricity Demand	**1,561,048**

Source: Urban Crossroads, 2019c.

The proposed project would be required to meet the current Title 24 energy efficiency standards (as provided in Chapter 150.001 of the City's Municipal Code and included as PPP ENG-1). Thus, operation of the project would not use large amounts of energy or fuel in a wasteful manner, and impacts would be less than significant.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

No Impact. The State of California has established a comprehensive framework for the use of efficient energy. This occurs through the implementation of the Clean Energy and Pollution Reduction Act of 2015 (SB 350), Title 24 Energy Efficiency Standards, and the California Green (CalGreen) Building Standards (included as PPP ENG-1). The proposed project would comply with existing

regulations as ensured through the City's plan check and permitting process. Thus, construction and operation of the proposed project would not conflict with or obstruct State or local plans for energy efficiency or renewable energy.

Existing Plans, Programs, or Policies

PPP ENG-1: CalGreen Compliance. The project is required to comply with the CalGreen Building Code as included in the City's Municipal Code (Chapter 150.001) to ensure efficient use of energy. CalGreen specifications are required to be incorporated into building plans as a condition of building permit approval.

Mitigation Measures

No mitigation measures related to energy are required.

b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

The discussion below is based on the Preliminary Geotechnical Evaluation and Design Recommendations, prepared by LGC Geotechnical, Inc., 2019 (LGC 2019) (Appendix D).

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

No Impact. The project site is not located within a designated Alquist-Priolo Earthquake Fault Zone and no faults were identified on the site (LGC 2019). The closet known active faults are associated with the Whittier section of the Elsinore Fault Zone, located approximately 6.2 miles northeast of the project site; the East Montebello Fault Zone, approximately 6.7 miles north of the project site; the Unnamed West Coyote Hills Fault, approximately 7.4 miles east of the project site; and the Newport Inglewood Fault Zone, approximately 10.7 miles southwest of the project site. Therefore, the project would not directly or indirectly cause potential risk of loss, injury, or death involving the rupture of a known earthquake fault. No impact would occur.

ii. Strong seismic ground shaking?

Less than Significant Impact. The project site is located within a seismically active region of Southern California. As mentioned previously, the Whittier section of the Elsinore Fault Zone is located approximately 6.2 miles northeast of the project site (LGC 2019). The amount of motion expected at the project site can vary from none to forceful depending upon the distance to the fault and the magnitude of the earthquake. Greater movement can be expected at sites located closer to an earthquake epicenter, that consists of poorly consolidated material such as alluvium, and in response to an earthquake of great magnitude.

Structures built in the City of Santa Fe Springs are required to be built in compliance with CBC, which regulates all building and construction projects within the City and implements a minimum standard for building design and construction that includes specific requirements for seismic safety, excavation, foundations, retaining walls, and site demolition. Compliance with the CBC would include the incorporation of: 1) seismic safety features to minimize the potential for significant effects as a result of earthquakes; 2) proper building footings and foundations; and 3) construction of the building structures so that it would withstand the effects of strong ground shaking. Implementation of CBC standards would be verified by the City during the plan check and permitting process. Because the proposed project would be constructed in compliance with the CBC, the proposed project would result in a less than significant impact related to strong seismic ground shaking.

iii. Seismic-related ground failure, including liquefaction?

Less than Significant Impact. Soil liquefaction is a phenomenon in which saturated, cohesionless soils layers, located within approximately 50 feet of the ground surface, lose strength due to cyclic pore water pressure generation from seismic shaking or other large cyclic loading. During the loss of stress, the soil acquires "mobility" sufficient to permit both horizontal and vertical movements. Soil properties and soil conditions such as type, age, texture, color, and consistency, along with historical depths to ground water are used to identify, characterize, and correlate liquefaction susceptible soils.

According to the Preliminary Geotechnical Evaluation, the project site is located within a liquefaction hazard zone (LGC 2019). Site soils, in general, are dense and not susceptible to liquefaction, but isolated loose and medium dense sand layers are present and considered susceptible. Although,

groundwater was detected at an elevation of greater than 50 feet below existing grade, a historic high groundwater elevation of 10 feet below existing grade has been recorded (LGC 2019). The Geotechnical Evaluation describes that to reduce the potential effects of liquefaction construction of the project includes removal and re-compaction of onsite soils as detailed in the Project Description. In addition, the proposed project would be required to be constructed in compliance with the CBC and the City's Municipal Code, included as PPP GEO-1, which would be verified through the City's plan check and permitting process. With compliance with existing regulations, impacts related to seismically related ground failure and liquefaction would be less than significant.

iv. Landslides?

No Impact. Landslides and other slope failures are secondary seismic effects that occur during or soon after earthquakes. Areas that are most susceptible to earthquakes induced landslides are steep slopes underlain by loose, weak soils, and areas on or adjacent to existing landslide deposits.

The site is relatively flat with elevations ranging from approximately 127 to 129 feet above mean sea level (LGC 2019). There is an approximately 15 to 20-foot tall slope ascending up to the Southern Pacific railroad lines east of the project site (LGC 2019). As described above, the project site is located in a seismically active region subject to strong ground shaking. However, the Geotechnical Evaluation states that the site is not within an area identified to have a potential for seismic slope instability (LGC 2019). Therefore, the project would not cause potential substantial adverse effects related to slope instability or seismically induced landslides.

b) Result in soil erosion or the loss of topsoil?

Less than Significant Impact. Construction of the proposed project has the potential to contribute to soil erosion and the loss of topsoil. Excavations and grading activities that would be required for the project would expose and loosen topsoil, which could be eroded by wind or water.

The City's Municipal Code Chapter 52, Stormwater Management and Discharge Control, implements the requirements of the Los Angeles County Regional Water Quality Control Board (RWQCB) National Pollutant Discharge Elimination System (NPDES) Storm Water Permit Order No. R4-2012-0175, as amended, (MS4 Permit) establishes minimum stormwater management requirements and controls that are required to be implemented for construction activities for the project.

To reduce the potential for soil erosion and the loss of topsoil, a Stormwater Pollution Prevention Plan (SWPPP) is required by these City and RWQCB regulations to be developed by a QSD (Qualified SWPPP Developer), which would be implemented by PPP WQ-1. The SWPPP is required to address site-specific conditions related to specific grading and construction activities that could cause erosion and the loss of topsoil and provide erosion control BMPs to reduce or eliminate the erosion and loss of topsoil. Erosion control BMPs include use of: silt fencing, fiber rolls, or gravel bags, stabilized construction entrance/exit, hydroseeding, etc. With compliance with the City's Municipal Code stormwater management requirements, RWQCB SWPPP requirements, and installation of BMPs, which would be implemented by the City's project review by the Department of Public Works, construction impacts related to erosion and loss of topsoil would be less than significant.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?

Less than Significant Impact. Landslides and other forms of mass wasting, including mud flows, debris flows, and soil slips, occur as soil moves downslope under the influence of gravity. Landslides are frequently triggered by intense rainfall or seismic shaking. As described in Response a) iv., the project site is located in a relatively flat developed urban area that does not contain or adjacent to large slopes, and the project would not generate large slopes. Therefore, impacts related to landslides would not occur.

Lateral spreading is a type of liquefaction-induced ground failure associated with the lateral displacement of surficial blocks of sediment resulting from liquefaction in a subsurface layer. Once liquefaction transforms the subsurface layer into a fluid mass, gravity plus the earthquake inertial forces may cause the mass to move downslope towards a free face (such as a river channel or an embankment). Lateral spreading may cause large horizontal displacements and such movement typically damages pipelines, utilities, bridges, and structures. According to the Geotechnical Evaluation, the project site has a low potential for lateral spreading, which would be reduced with implementation of the excavation and recompaction of onsite soils and compliance with the CBC. Thus, impacts related to lateral spreading would be less than significant.

Subsidence is a general lowering of the ground surface over a large area that is generally attributed to lowering of the ground water levels within a groundwater basin. Localized or focal subsidence or settlement of the ground can occur as a result of an earthquake motion in an area where groundwater in basin is lowered. As described previously, the depth of groundwater was detected at an elevation of greater than 50 feet below existing grade; however, a historic high groundwater elevation of 10 feet below existing grade has been recorded (LGC 2019). The project would not pump water from the project area, thus impacts related to subsidence would not occur from implementation of the project.

Also, as described in Response a) iii., the project site is within a potential liquefaction area. Therefore, construction would include removal and re-compaction of onsite soils in compliance with the CBC which would reduce the potential of liquefaction, settlement, and subsidence to a less than significant level. As described previously, the project would be required to be constructed in compliance with the CBC and the City's Municipal Code, which would be verified through the City's plan check and permitting process. Thus, potential impacts related to liquefaction, settlement, and subsidence would be less than significant.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less than Significant Impact. Expansive soils contain certain types of clay minerals that shrink or swell as the moisture content changes; the shrinking or swelling can shift, crack, or break structures built on such soils. Arid or semiarid areas with seasonal changes of soil moisture experience, such as southern California, have a higher potential of expansive soils than areas with higher rainfall and more constant soil moisture.

The Geotechnical Evaluation determined that the site soils are anticipated to have a "very low" to "low" expansion potential based on soils testing. In addition, as described in the previous responses, the project would be required to be constructed in compliance with the CBC and the City's Municipal Code, that require appropriate back fill, compaction of soils, and foundation design to ensure stable soils, which would be verified through the City's plan check and permitting process. Thus, impacts related to expansive soils would be less than significant.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. No septic tanks or alternative wastewater disposal systems are proposed. The project would install onsite sewers that would connect to the existing infrastructure that is adjacent to the site. Therefore, no impacts related to the use of such facilities would occur from implementation of the project.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less than Significant with Mitigation Incorporated. Paleontological resources, or fossils, are the remains of ancient plants and animals that can provide scientifically significant information about the history of life on Earth. Paleontological "sensitivity" is defined as the potential for a geologic unit to produce scientifically significant fossils. This sensitivity is determined by rock type, past history of the rock unit in producing significant fossils, and fossil localities that are recorded from that unit. Paleontological sensitivity is assigned based on fossil data collected from the entire geologic unit, not just a specific site.

The site is located on a laterally extensive young alluvial fan deposits that are Holocene and late Pleistocene age sediments (LGC 2019). These sediments are sensitive for paleontological resources. As described previously, the project site has been disturbed from previous development activities that include oil production fields, agriculture, and industrial uses, which reduces the potential of existing resources onsite. However, project construction would involve the removal and re-compaction of soil onsite to a depth of at least 8 feet (LGC 2019), which may include native undisturbed soils. Therefore, Mitigation Measure PAL-1 has been included to provide procedures to be followed in the unlikely event that potential paleontological resources are discovered during grading or excavation activities. Mitigation Measure PAL-1 requires that work shall cease within 50 feet of a find until a qualified paleontologist has evaluated the find in accordance with federal and state regulations. Mitigation Measure PAL-1 would reduce potential impacts to undiscovered paleontological resources to a less than significant level.

Existing Plans, Programs, or Policies

PPP GEO-1: California Building Code. The project is required to comply with the California Building Code as included in the City's Municipal Code Section 150.001 to preclude significant adverse effects associated with seismic hazards. California Building Code related and geologist and/or civil engineer specifications for the project are required to be incorporated into grading plans and specifications as a condition of project approval.

PPP WQ-1: SWPPP. Prior to grading permit issuance, the project developer shall have a Stormwater Pollution Prevention Plan (SWPPP) prepared by a QSD (Qualified SWPPP Developer) in accordance with the City's Municipal Code Chapter 52 Stormwater Management and Discharge Control and the Los Angeles County RWQCB NPDES Storm Water Permit Order No. R4-2012-0175. The SWPPP shall incorporate all necessary Best Management Practices (BMPs) and other NPDES regulations to limit the potential of erosion and polluted runoff during construction activities. Project contractors shall be required to ensure compliance with the SWPPP and permit periodic inspection of the construction site by City of Santa Fe Springs staff or its designee to confirm compliance.

Mitigation Measures

Mitigation Measure PAL-1: Paleontological Resources. Prior to issuance of a grading permit, the City of Santa Fe Springs Building Department shall verify that all project grading and construction plans and specifications state that in the event that potential paleontological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified paleontologist (i.e., a practicing paleontologist that is recognized in the paleontological community and is proficient in vertebrate paleontology) from the City or County List of Qualified Paleontologists has evaluated the find in accordance with federal and state regulations. Construction personnel shall not collect or move any paleontological materials and associated materials. If any fossil remains are discovered, the paleontologist shall make a recommendation if monitoring shall be required for the continuance of earth moving activities.

8. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

The discussion below is based on the Greenhouse Gas Analysis, prepared by Urban Crossroads, 2019 (Urban 2019d) (Appendix E).

Explanation

Constituent gases of the Earth's atmosphere, called atmospheric greenhouse gases (GHGs), play a critical role in the Earth's radiation amount by trapping infrared radiation from the Earth's surface, which otherwise would have escaped to space. Prominent greenhouse gases contributing to this process include carbon dioxide (CO_2), methane (CH_4), ozone (O_3), water vapor, nitrous oxide (N_2O), and chlorofluorocarbons (CFCs). This phenomenon, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. Anthropogenic (caused or produced by humans) emissions of these greenhouse gases in excess of natural ambient concentrations are responsible for the enhancement of the Greenhouse Effect and have led to a trend of unnatural warming of the Earth's natural climate, known as global warming or climate change. Emissions of gases that induce global warming are attributable to human activities associated with industrial/manufacturing, agriculture, utilities, transportation, and residential land uses.

Section 15364.5 of the California Code of Regulations defines GHGs to include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride. Transportation is responsible for 37 percent of the state's greenhouse gas emissions, followed by electricity generation. Emissions of CO_2 and N_2O are byproducts of fossil fuel combustion. Methane, a potent greenhouse gas, results from off-gassing associated with agricultural practices and landfills. Sinks of CO_2, where CO_2 is stored outside of the atmosphere, include uptake by vegetation and dissolution into the ocean.

California has passed several bills and the Governor has signed at least three executive orders regarding greenhouse gases. GHG statues and executive orders (EO) include AB 32, SB 1368, EO S-03-05, EO S-20-06 and EO S-01-07. These regulations require the use of alternative energy, such as solar power. Solar projects produce electricity with no GHG emissions and assist in offsetting GHG emissions produced by fossil-fuel-fired power plants.

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than Significant Impact. Global climate change (GCC) describes alterations in weather features (e.g., temperature, wind patterns, precipitation, and storms) that occur across the Earth as a whole. GCC is not confined to a particular project area and is generally accepted as the consequence of global industrialization over the last 200 years. A typical project, even a very large one, does not generate enough GHG emissions on its own to influence global climate change significantly; hence, the issue of global climate change is, by definition, a cumulative environmental impact.

The principal GHGs of concern contributing to the greenhouse effect are CO2, CH4, N2O, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. GHGs are produced by both direct and indirect emissions sources. Direct emissions include consumption of natural gas, heating and cooling of buildings, landscaping activities and other equipment used directly by land uses. Indirect emissions include the consumption of fossil fuels for vehicle trips, electricity generation, water usage, and solid waste disposal. The large majority of GHG emissions generated from residential projects are related to vehicle trips.

The City has not established local CEQA significance thresholds for GHG emissions; however, the SCAQMD has proposed interim numeric GHG significance thresholds that are based on capture of approximately 90 percent of emissions from development, which is 3,000 metric tons carbon dioxide equivalent (MTCO2e) per year (SCAQMD 2008). This approach is widely used by cities in the South Coast Air Basin, including the City of Santa Fe Springs. As such, this threshold is utilized herein to determine if GHG emissions from this project would be significant.

Construction

During construction, temporary sources of GHG emissions include construction equipment and workers' commutes to and from the site. The combustion of fossil-based fuels creates GHGs such as CO2, CH4, and N2O. As shown on Table GHG-1, the project has the potential to generate a total of approximately 27.16 MTCO2e per year from construction emissions amortized over 30 years per SCAQMD methodology.

Table GHG-1: Amortized Annual Construction Emissions

Year	Emissions (metric tons per year)			
	CO2	CH4	N20	Total CO2E
2020	436.87	0.07	0.00	438.57
2021	374.97	0.05	0.00	376.32
Total Annual Construction Emissions	811.84	0.12	0.00	814.89
Amortized Construction Emissions (MTCO2e)	**27.06**	**0.00**	**0.00**	**27.16**

Source: Urban Crossroads, 2019d

Operation

During operations, the project would generate long-term GHG emissions from vehicular trips; water, natural gas, and electricity consumption; and solid waste generation. Natural gas use results in the emission of 2 GHGs: CH4 (the major component of natural gas) and CO2 (from the combustion of natural gas). Electricity use can result in GHG production if the electricity is generated by combusting fossil fuel.

The project site is currently developed with 149,605 square feet of business park and 8,064 square feet of general office building uses. The estimated GHG emissions from the existing development are summarized in Table GHG-2, below.

Table GHG-2: Existing GHG Emissions

Emission Source	Existing Emissions (MT/year)			
	CO2	CH4	N20	Total CO2E
Area Source	3.91e-03	1.00e-05	0.00	4.17e-03
Energy Source	790.51	0.03	7.56e-03	793.53
Mobile Source	1,942.99	0.13	0.00	1,946.23
Waste	29.76	1.76	0.00	73.74
Water Usage	185.94	0.92	0.02	215.83
Total CO2E (All Sources)		**3,029.33**		

Source: Urban Crossroads, 2019d

The project would construct three buildings that would provide in 5,849gross square feet more space than currently exists onsite. Table GHG-3 shows the increase in operational GHG emissions that would result from operation of the additional building space. The large majority of GHG emissions generated from the industrial, manufacturing, warehousing/distribution uses on site are, and would continue to be, from truck trips. As shown in Table GHG-3, the project would generate an increase of approximately 1,986.98 MTCO2e per year, which is less than the SCAQMD threshold of 3,000 MTCO2e. Therefore, impacts would be less than significant.

Table GHG-3: Project GHG Emissions

Year	Emissions (metric tons per year)			
	CO2	CH4	N20	Total CO2E
Annual construction-related emissions amortized over 30 years	27.06	0.00	0.00	27.16
Area Source	0.02	4.00e-05	0.00	0.02
Energy Source	619.55	0.02	6.49e-03	622.05
Mobile Source (Passenger Car)	1,184.50	0.03	0.00	1,185.26
Mobile Source (Truck)	2,817.19	0.10	0.00	51.25
On-site Equipment	50.84	0.02	0.00	51.25
Waste	41.16	2.43	0.00	101.97
Total CO2e (All Sources)		**5,016.31**		
Existing Emissions		***-3,029.33***		
Net Emissions (Project – Emissions)		**1,986.98**		

Source: Urban Crossroads, 2019d

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less than Significant Impact. The project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases. As described in the previous response, the project would not exceed thresholds related to GHG emissions. In addition, the project would comply with regulations imposed by the state and the SCAQMD that reduce GHG emissions, as described below:

- Global Warming Solutions Act of 2006 (AB 32) is applicable to the project because many of the GHG reduction measures outlined in AB 32 (e.g., low carbon fuel standard, advanced clean car standards, and cap-and-trade) have been adopted over the last 5 years and implementation activities are ongoing. The proposed building would not conflict with fuel and car standards or cap-and-trade.

- Pavley Fuel Efficiency Standards (AB 1493) establishes fuel efficiency ratings for new (model year 2009-2016) passenger cars and light trucks. The project would develop a new building that would not conflict with fuel efficiency standards for vehicles.
- Title 24 California Code of Regulations (Title 24) establishes energy efficiency requirements for new construction that address the energy efficiency of new (and altered) buildings. The project is required to comply with Title 24, which would be verified by the City during the plan check and permitting process.
- Title 17 California Code of Regulations (Low Carbon Fuel Standard [LCFS]) requires carbon content of fuel sold in California to be 10 percent less by 2020. Because the LCFS applies to any transportation fuel that is sold or supplied in California, all vehicles trips generated by the project would comply with LCFS.
- California Water Conservation in Landscaping Act of 2006 (AB 1881) provides requirements to ensure water efficient landscapes in new development and reduced water waste in existing landscapes. The project is required to comply with AB 1881 landscaping requirements, which would be verified by the City during the plan check and permitting process.
- Emissions from vehicles, which are a main source of operational GHG emissions, would be reduced through implementation of federal and state fuel and air quality emissions requirements that are implemented by CARB. In addition, as described in the previous response, the project would not result in an exceedance of an air quality standard.

The City currently does not have an adopted Climate Action Plan to reduce GHG emissions, and as described in the previous response, emissions would not exceed the thresholds. Therefore, implementation of the project would not conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

Existing Plans, Programs, or Policies

See (b) above for applicable regulations.

Mitigation Measures

No mitigation measures related to greenhouse gas emissions are required.

Greenhouse Gas Analysis, prepared by Urban Crossroads, 2019 (Urban 2019d) (Appendix E).

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
9. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☒	☐	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒

The discussion below is based on the Phase I Environmental Site Assessment, prepared by Hazard Management Consulting, Inc. (HMC 2019a) (Appendix G); Phase II Environmental Site Assessment, prepared by Hazard Management Consulting, Inc. (HMC 2019b) (Appendix H); and a Technical Memorandum on Abandoned Oil Wells on the Pioneer Boulevard Development Project, prepared by WZI, Inc., 2019 (WZI 2019) (Appendix I).

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact. A hazardous material is defined as any material that, due to its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to environment if released into the environment. Hazardous materials include, but are not limited to, hazardous substances, hazardous wastes, and any material that regulatory agencies have a reasonable basis for believing would be injuries to the health and safety of persons or harmful to the environment if released into the home, workplace, or environment. Hazardous wastes require special handling and disposal because of their potential to damage public health and the environment.

Construction
The proposed construction activities would involve the transport, use, and disposal of hazardous materials such as paints, solvents, oils, grease, and caulking. In addition, hazardous materials would be needed for fueling and servicing construction equipment on the site. These types of materials are not acutely hazardous, and all storage, handling, use, and disposal of these materials are regulated by federal and state requirements, which the project construction activities are required to strictly adhere to. These regulations include: the federal Occupational Safety and Health Act and Hazardous Materials Transportation Act; Title 8 of the California Code of Regulations (CalOSHA), and the state Unified Hazardous Waste and Hazardous Materials Management Regulatory Program. As a result, routine transport and use of hazardous materials during construction would be less than significant.

Operation
Potential future operations of the proposed project would include a combination of office, manufacturing, warehouse and distribution, assembly, and food production and distribution uses (excluding meat or fish products, sauerkraut, vinegar, and the rendering or refining of fats and oils), which generally use limited hazardous materials, such as: cleaning agents, paints, pesticides, batteries, and aerosol cans. Normal routine use of these products would not result in a significant hazard to residents or workers in the vicinity of the project.

In addition, should any future business that occupies one of the proposed buildings handle acutely hazardous materials (as defined in Section 25500 of California Health and Safety Code, Division 20, Chapter 6.95), the business would require a permit from the Los Angeles County Health Hazardous Materials Division. If the volume of hazardous materials handled or stored at the site is greater than 500 pounds of solid, 55 gallons of liquid, or 200 cubic feet of gaseous hazardous material, it is required by AB 2185, to also file a Hazardous Materials Business Emergency Plan with the County Health Hazardous Materials Division. A Hazardous Materials Business Emergency Plan is a written set of procedures and information created to help minimize the effects and extent of a release or threatened release of a hazardous material. The intent of the Hazardous Materials Business Emergency Plan is to satisfy federal and state right-to-know laws and to provide detailed information for use by emergency responders. Such businesses are also required to comply with California's Hazardous Materials Release Response Plans and Inventory Law, which requires immediate reporting to the County Hazardous Materials Division and the State Office of Emergency Services regarding any release or threatened release of a hazardous material, regardless of the amount handled by the business.

Therefore, if future businesses that use or store hazardous materials occupy the proposed buildings, the business owners and operators would be required to comply with all applicable federal, state, and local regulations, as permitted by the County Health Hazardous Materials Division to ensure proper use, storage, and disposal of hazardous substances. Overall, operation of the proposed

project would result in a less than significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less than Significant Impact with Mitigation Incorporated.

Construction

Contaminated Soils. The Phase I Environmental Site Assessment (Phase I ESA) describes that the project site was a former oilfield that contained seven oil wells, oil field sumps, and related piping until the 1970s when the site was redeveloped into the existing conditions. Previous investigations were conducted at the project site to assess the presence of petroleum hydrocarbons and related materials and were submitted to the City of Santa Fe Springs Fire Department. Detectable concentrations of hydrocarbons were found, which the City determined were acceptable to remain in place under a commercial land scenario. A letter of no further action was issued by DTSC for the project site but has not yet been presented to the City. Due to these historic uses of the site and amount of time that has transpired since the previous investigations, a new soil and soil gas investigation was completed, which documented the continued concentrations of petroleum hydrocarbons and methane gas present in the soil onsite (HMC 2019a). Several of the soil samples indicated elevated concentrations of petroleum hydrocarbons and odorous soil in sporadic areas of the site, which are typical of oil field locations. If the applicant cannot present the prior no further action letter, in order to reduce potential risks to future industrial/commercial uses from petroleum hydrocarbons in soil vapor and to ensure concentrations are at acceptable levels, mitigation and administrative measures, as well as long-term Operation and Maintenance (O&M) activities would be required by DTSC (or other oversight agency with jurisdiction) and the City. Prior to grading, the DTSC would require preparation of a Soil Management Plan (SMP) to provide guidance concerning the proper monitoring, handling, segregation, stockpiling, dust control, testing, transport and disposal of potentially impacted soils, which may be encountered during development activities. The DTSC may also require recording of a land use covenant (LUC) as an institutional control to require that any changes in conditions (i.e., modifications of building slabs, new construction, etc.) be communicated to the DTSC, and that mitigation measures and subsurface conditions be communicated to future buyers and occupants.

The details of the items described above will be presented to DTSC in a Removal Action Workplan (RAW). DTSC will review and provide comments to the RAW and once these are satisfactorily addressed, the RAW will be considered Draft Final. The Draft Final RAW will be circulated for a 30-day public review and comment period. After the public comment period ends and any public questions and concerns are addressed, the RAW will be considered Final. The Final RAW can then be implemented by the developer once City permits and entitlements are secured. During grading and earthmoving activities, any potentially impacted soils handled per the protocols and procedures of the SMP will be reported and discussed with DTSC. Upon completion of soil removal and grading activities, a Removal Action Completion Report (RACR) will be submitted to the DTSC for review and approval. The RACR will certify that soil mitigation beneath the subject building(s) has(have) been implemented as per the requirements of the RAW. DTSC will review the RACR and upon approval, certify that the conditions of the RAW have been met. The project applicant/developer will be required to submit a copy of the Final RAW to the City prior to issuance of grading permits and the evidence of site certification per the RACR prior to issuance of building permits, per Mitigation Measure HAZ-1.

In addition, elevated concentrations of arsenic have been detected in sporadic locations throughout the site that appear to be from naturally occurring granitic lithology of Southern California soils (HMC 2019a). The concentrations found are below what was previously reported to the City of Santa Fe Springs Fire Department and allowed to remain in place. In response, the SMP required by Mitigation Measure HAZ-1 requires proper soil management and handling procedures. With implementation of Mitigation Measure HAZ-1 and SCAQMD Rules 1466 and 1166 (included as PPP HAZ-1 and PPP HAZ-2) impacts related to contaminated soils would be less than significant.

Methane Gas. Methane gas testing was also completed, which identified only low concentrations of methane (up to 0.4 percent by volume of ambient air or 4,000 ppm) at some testing locations (HMC 2019a). Because the site was previously used for oil production and is located within the City of Santa Fe Springs Methane Zone, the City Ordinance No. 955 requires new buildings to be constructed with a methane gas mitigation system (e.g. passive vapor barrier). In addition, Ordinance No. 955 requires an initial methane gas survey and quarterly monitoring for one year. Based on the results, annual monitoring may be required pursuant to Ordinance No. 955. With inclusion of the methane gas mitigation system and the required monitoring, pursuant to Ordinance No. 955, which is included as PPP HAZ-3, impacts related to methane gas would be less than significant.

Asbestos. Asbestos is a naturally occurring fibrous material that was used as a fireproofing and insulating agent in building construction before such uses were banned by the USEPA. The presence of asbestos can be found in materials such as ducting insulation, wallboard, shingles, ceiling tiles, floor tiles, insulation, plaster, floor backing, and many other building materials. Asbestos and asbestos-containing materials (ACMs) are both a hazardous air pollutant and a human health hazard. The risk to human health is from inhalation of airborne asbestos, which commonly occurs when ACMs are disturbed during such activities as demolition and renovation.

The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are “presumed asbestos-containing material”.

The buildings within the project site were constructed prior to 1981 when asbestos containing materials were commonly used and the Phase I identified suspected asbestos containing material throughout the existing structures on the site.

As a result, asbestos abatement contractors must follow state regulations contained in California Code of Regulations Sections 1529, and 341.6 through 341.14 as implemented by SCAQMD Rule 1403 to ensure that asbestos removed during demolition of the existing buildings is transported and disposed of at an appropriate facility. The contractor and hauler of the material is required to file a Hazardous Waste Manifest which details the hauling of the material from the site and the disposal of it. Section 19827.5 of the California Health and Safety Code requires that local agencies not issue demolition permit until an applicant has demonstrated compliance with notification requirements under applicable federal regulations regarding hazardous air pollutants, including asbestos. These requirements are included as PPP HAZ-4 to ensure that the project applicant submits verification to the City that the appropriate activities related to asbestos have occurred, which would reduce the potential of impacts related to asbestos to a less than significant level.

Lead. Lead-based materials may also be located within existing structures on the project site. The lead exposure guidelines provided by the U.S. Department of Housing and Urban Development provide regulations related to the handling and disposal of lead-based products. Federal regulations to manage and control exposure to lead-based paint are described in Code of Federal Regulations Title 29, Section 1926.62, and state regulations related to lead are provided in the California Code of Regulations Title 8 Section 1532.1, as implemented by Cal-OSHA. These regulations cover the demolition, removal, cleanup, transportation, storage and disposal of lead-containing material. The regulations outline the permissible exposure limit, protective measures, monitoring and compliance to ensure the safety of construction workers exposed to lead-based materials. Cal/OSHA's Lead in Construction Standard requires project applicants to develop and implement a lead compliance plan when lead-based paint would be disturbed during construction or demolition activities. The plan must describe activities that could emit lead, methods for complying with the standard, safe work practices, and a plan to protect workers from exposure to lead during construction activities. In addition, Cal/OSHA requires 24-hour notification if more than 100 square feet of lead-based paint would be disturbed. These requirements are included as PPP HAZ-5 to ensure that the project applicant submits verification to the City that the appropriate activities related to lead have occurred, which would reduce the potential of impacts related to lead-based materials to a less than significant level.

Oil Well Abandonment. As discussed, the project site was a former oilfield that contained seven oil wells, oil field sumps, and related piping until the 1970s when the site was redeveloped into the existing conditions. Mitigation Measure HAZ-2 ensures that any unabandoned oil well(s) will be abandoned prior to development, per the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) for Construction Site Plan review. Documentation of compliance shall be in accordance with Ordinance 1104 and the provisions outlined in Chapter 117 of the Santa Fe Springs Municipal Code for approval. With implementation of Mitigation Measure HAZ-2, impacts related to oil well abandonment would be less than significant

Operation

As described above, the risks related to upset or accident conditions involving the release of hazardous materials into the environment would be adequately addressed through compliance with existing federal, state, and local regulations. Development of the proposed Project would result in various limited manufacturing and office uses that would use and store common hazardous materials such as paints, solvents, and cleaning products. Also, building mechanical systems and grounds and landscape maintenance could also use a variety of products formulated with hazardous materials, including fuels, cleaners, lubricants, adhesives, sealers, and pesticides/herbicides.

The environmental and health effects of different chemicals are unique to each chemical and depend on the extent to which an individual is exposed. The extent and exposure of individuals to hazardous materials would be limited by the relatively small quantities of these materials that would be stored, used, and handled. Additionally, any business or facility which uses, generates, processes, produces, packages, treats, stores, emits, discharges, or disposes of hazardous material (or waste) would require a hazardous materials handler permit from the Los Angeles County Health Hazardous Materials Division, as described previously.

Through existing City and County Health Hazardous Materials Division permitting and occupancy procedures, hazardous materials would be used and stored in accordance with applicable regulations and such uses would be required to comply with federal and state laws to reduce the potential consequences of hazardous materials accidents. In addition, a Water Quality Management Plan (WQMP) is required to be implemented for the Project (as further discussed in

Section 10, *Hydrology and Water Quality*, and included as PPP WQ-2). The BMPs that would be implemented as part of the WQMP would protect human health and the environment should any accidental spills or releases of hazardous materials occur during operation of the project.

As a result, implementation of the proposed project would not result in a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and operational impacts would be less than significant.

c) Emit hazardous emissions or handle hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less than Significant Impact. There are no existing or proposed schools within 0.25 mile of the project site. The following schools are near the project site: - Jersey Avenue Elementary School (0.35 mile); Lakeview Elementary School (0.44 mile); Rancho Santa Gertrudes Elementary School (0.48 mile); Santa Fe High School (0.51 mile).

Furthermore, construction and operation of the project would involve the use, storage and disposal of small amounts of hazardous materials on the project site. These hazardous materials would be limited and used and disposed of in compliance with federal, state, and local regulations, which would reduce the potential for accidental release into the environment near a school. The emissions that would be generated from construction and operation of the project were evaluated in the air quality analysis discussed above, and the emissions generated from the project would not cause or contribute to an exceedance of the federal or state air quality standards. Thus, the project would not emit hazardous or handle acutely hazardous materials, substances, or waste near a school, and impacts would be less than significant.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. According to the California Department of Toxic Substances Control EnviroStor listing, and the Phase I Environmental Site Assessment prepared for the site (HMC 2019a) the project site is not located on or nearby any hazardous material sites listed, pursuant to Government Code Section 65962.5. As a result, impacts related to hazards from being located on or adjacent to a hazardous materials site would not occur from implementation of the proposed project.

e) For a project within an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The project site is not within two miles of an airport. The closest airport is the Fullerton Municipal Airport, which is 7.4 miles southeast of the project site. The project site is not located within any land use compatibility zone for the nearest airport, nor is it within an airport safety zone. Therefore, the project would not result in a safety hazard for people residing or working in the project areas, and no impacts would occur.

f) Impair implementation of an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact.

Construction

The proposed construction activities, including equipment and supply staging and storage, would occur within the project site and would not restrict access of emergency vehicles to the project site or adjacent areas. During construction of the project driveways, Pioneer Boulevard would remain open to ensure adequate emergency access to the project area and vicinity. Impacts related to interference with an adopted emergency response or evacuation plan during construction activities would be less than significant.

Operation

Operation of the proposed project would not result in a physical interference with an emergency response evacuation. Direct access to the project site would be provided from Pioneer Boulevard, which is adjacent to the project site. The project is also required to design and construct internal access and provide fire suppression facilities (e.g., hydrants and sprinklers) in conformance with the City Municipal Code and the Fire Department prior to approval to ensure adequate emergency access pursuant to the requirements in Section 503 of the California Fire Code (Title 24, California Code of Regulations, Part 9) and the Fire Code included per Municipal Code Chapter 93.01. As a result, the proposed project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan, and impacts would be less than significant.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

No Impact. The project site is located within an urbanized area and therefore not identified as a wildland fire hazard area, as defined by the CalFire Fire Hazard Severity Zone Maps (CalFire). Thus, the project would not result in impacts related to the exposure of people or structures to loss, injury, or death involving wildland fires.

Existing Plans, Programs, or Policies

PPP HAZ-1: SCAQMD Rule 1166, Volatile Organic Compounds. The project is required to comply with the provisions of South Coast Air Quality Management District Rule (SCAQMD) Rule 1166, which provides handling requirements to control the emission of Volatile Organic Compounds (VOC) from excavating, grading, handling and treating VOC contaminated soils. The requirements include segregating VOC contaminated stockpiles, spraying the stockpiles with water or vapor suppressant, cover stockpiles with plastic sheeting, and treat or remove contaminated soil from an excavation or grading site within 30 days from the time of excavation

PPP HAZ-2: SCAQMD Rule 1466, Soils with Toxic Air Contaminants. The project is required to comply with the provisions of South Coast Air Quality Management District Rule (SCAQMD) Rule 1466 related to fugitive dust emissions containing toxic air contaminants. Rule 1466 requires ambient monitoring of PM_{10} concentrations during earth moving activities, activities to minimize fugitive dust, segregate stabilize and cover contaminated stockpiles with plastic sheeting and label with "SCAQMD Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminant(s) Applicable Soil".

PPP HAZ-3: Ordinance No. 955, Methane Gas. Pursuant to City Ordinance No. 955 the project shall install methane gas mitigation systems in the new building (e.g. ventilation system or a passive

barrier system) and quarterly methane gas monitoring shall be conducted for one year. If concentrations are below 25 percent of the Lower Explosive Limit (LEL) (i.e. 1.25 percent by volume of air or 12,500 ppm/v), during the first year, the system shall be required to be monitored on an annual basis.

PPP HAZ-4: SCAQMD Rule 1403, Asbestos. Prior to issuance of demolition permits, the project applicant shall submit verification to the City Building Department that an asbestos survey has been conducted at all existing buildings located on the project site. If asbestos is found, the project applicant shall follow all procedural requirements and regulations of South Coast Air Quality Management District Rule 1403. Rule 1403 regulations require that the following actions be taken: notification of SCAQMD prior to construction activity, asbestos removal in accordance with prescribed procedures, placement of collected asbestos in leak-tight containers or wrapping, and proper disposal.

PPP HAZ-5: Lead Based Paint. Prior to issuance of demolition permits, the project applicant shall submit verification to the City Building Department that a lead-based paint survey has been conducted at all existing buildings located on the project site. If lead-based paint is found, the project applicant shall follow all procedural requirements and regulations for proper removal and disposal of the lead-based paint. Cal-OSHA has established limits of exposure to lead contained in dusts and fumes. Specifically, CCR Title 8, Section 1532.1 provides for exposure limits, exposure monitoring, and respiratory protection, and mandates good working practices by workers exposed to lead.

PPP HAZ-6: Ordinance No. 1104. Criteria for Well Abandonment. The project shall comply with criteria related to abandonment of oil wells.

Mitigation Measures

Mitigation Measure HAZ-1: Petroleum Hydrocarbons and Arsenic. In order to reduce potential risks to future industrial/commercial uses from petroleum hydrocarbons in soil vapor and arsenic in soils that could be considered hazardous waste if disposed improperly, mitigation and administrative measures, as well as long-term Operation and Maintenance (O&M) activities, shall be required by DTSC (or other agency with regulatory oversight and jurisdiction) and the City of Santa Fe Springs through the preparation and approval of a Removal Action Workplan (RAW) (or equivalent plan and review process under other agency with regulatory oversight and jurisdiction) which will include:

1. **Preparation of a Soil Management Plan (SMP)** to provide guidance concerning the proper monitoring, handling, segregation, stockpiling, dust control, testing, transport and disposal of potentially impacted soils, which may be encountered during development activities and at a minimum shall ensure that:
    - The SMP shall be implemented during grading activities onsite to ensure that soils containing residual levels of hydrocarbons or arsenic are properly identified, monitored, and managed onsite, and include the following:
    - A certified hazardous waste hauler shall remove all potentially hazardous soils. In addition, sampling of soil shall be conducted during excavation to ensure that all petroleum hydrocarbon and arsenic impacted soils are removed, and that Environmental Screening Levels (ESLs) for non-residential uses are not exceeded.

Excavated materials shall be transported per California Hazardous Waste Regulations to a landfill permitted by the state to accept hazardous materials.

- Any subsurface materials exposed during construction activities that appear suspect of contamination, either from visual staining or suspect odors, shall require immediate cessation of excavation activities. Soils suspected of contamination shall be tested for potential contamination. If contamination is found to be present per the Department of Toxic Substances Control Screening Levels for industrial/commercial land use (DTSC-SLi) and the EPA Regional Screening Levels for industrial/commercial land use (EPA-RSLi), it shall be transported and disposed of per state regulations to an appropriately permitted landfill.
- The SMP shall include a Health and Safety Plan (HSP) addresses potential safety and health hazards and includes the requirements and procedures for employee protection; each contractor will be required to have their own HSP tailored to their particular trade that addresses the general project safety requirements. The HSP shall also outline proper soil handling procedures and health and safety requirements to minimize worker and public exposure to hazardous materials during construction.

2. **Recording of a land use covenant (LUC)** as an institutional control to require that any changes in conditions (i.e., modifications of building slabs, new construction, etc.) be communicated to the DTSC, and that mitigation measures and subsurface conditions be communicated to future buyers and occupants.

Prior to issuance of grading permits, the project applicant/developer shall submit the Final RAW, which includes the SMP, to the City. During grading and earthmoving activities, any potentially impacted soils handled per the protocols and procedures of the SMP will be reported to and discussed with DTSC.

Upon completion of soil removal and grading activities, the project applicant/developer shall obtain a Site Certification from DTSC through a *Removal Action Completion Report* (RACR) certifying that soil mitigation beneath the subject building(s) has(have) been implemented as per the requirements of the RAW. Evidence of site certification shall be provided to the City of Santa Fe Springs prior to issuance of building permits.

Concurrent with the development of the RAW, the developer will engage DTSC to negotiate the LUC and thereafter record it with the County of Los Angeles.

Mitigation Measure HAZ-2: Oil Well Abandonment. Prior to issuance of grading permits, the Property Owner/Developer shall submit site development plans to the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) for Construction Site Plan review. Property Owner/Developer shall implement any actions recommended by DOGGR, including but not limited to, well abandonment to current standards, venting, leak testing and setbacks. Documentation of compliance shall be in accordance with Ordinance 1104 and the provisions outlined in Chapter 117 of the Santa Fe Springs Municipal Code for approval.

ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☒	☐
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) impede or redirect flood flows?	☐	☐	☒	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less Than Significant Impact.
Construction

Construction of the project would require grading and excavation of soils, which would loosen sediment, and then have the potential to mix with surface water runoff and degrade water quality. Additionally, construction would require the use of heavy equipment and construction-related chemicals, such as concrete, cement, asphalt, fuels, oils, antifreeze, transmission fluid, grease, solvents and paints. These potentially harmful materials could be accidentally spilled or improperly disposed of during construction and, if mixed with surface water runoff, could wash into and pollute waters.

These types of water quality impacts during construction of the project would be prevented through implementation of a stormwater pollution prevention plan (SWPPP). Construction of the project would disturb more than one acre of soil; therefore, the proposed project would be required to obtain coverage under the NPDES General Permit for Discharges of Storm Water Associated with Construction Activity. Construction activity subject to this permit includes clearing, grading, and ground disturbances such as trenching, stockpiling, or excavation. The Construction General Permit requires implementation of a SWPPP that is required to identify all potential sources of pollution that are reasonably expected to affect the quality of storm water discharges from the construction site. The SWPPP would generally contain a site map showing the construction perimeter, proposed buildings, stormwater collection and discharge points, general pre- and post-construction topography, drainage patterns across the site, and adjacent roadways. The SWPPP would also include construction BMPs.

Adherence to the existing requirements and implementation of the appropriate BMPs as ensured through the City's plan check and permitting process are included as PPP WQ-1, which would ensure that the project would not violate any water quality standards or waste discharge requirements, potential water quality degradation associated with construction activities would be minimized, and impacts would be less than significant.

Operation

The project would operate three new concrete tilt-up industrial buildings, which would introduce the potential for pollutants such as, chemicals from household cleaners, nutrients from fertilizer, pesticides and sediments from landscaping, trash and debris, and oil and grease from vehicles. These pollutants could potentially discharge into surface waters and result in degradation of water quality. Thus, the project would be required to comply with existing regulations that limit the potential for pollutants to discharge from the site.

Chapter 52 of the City's Municipal Code (and PPP WQ-2) requires implementation of Water Quality Management Plan (WQMP) based on the anticipated pollutants that could result from the project. The BMP would include pollutant source control features and pollutant treatment control features. In addition, the City requires the project to infiltrate, evapotranspire, or biotreat/biofilter the 85th percentile 24-hour storm event. Project drainage on the site would include two drainage subareas (one on the eastside and one on the westside), where runoff would drain to the bio-filtration systems via underground storm drain pipes. The biotreatment would remove pollutants (i.e., sediments, nutrients, heavy metals, oxygen demanding substances, oil and grease, bacteria, and pesticides) prior to discharge into the existing storm drain system that is adjacent to the site.

With implementation of the WQMP, pursuant to the City Municipal Code, (included as PPP WQ-2); which would be verified during the plan check and permitting process for the proposed project, potential pollutants would be reduced to the maximum extent feasible, and development of the proposed project would not violate any water quality standards or waste discharge requirements, and impacts would be less than significant.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less Than Significant Impact. The project currently receives water from the Central Basin Municipal Water District that operates several groundwater wells within the Central Basin. The Basin is managed by the Water District, which regulates the amount of groundwater pumped from the Basin and sets the Basin Production Percentage for all pumpers. In addition, the project would not extract groundwater. Thus, the proposed project would not result in the lowering of the local groundwater table, and impacts would be less than significant.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. Result in substantial erosion or siltation on- or off-site;

Less Than Significant Impact. The project site does not contain, nor is adjacent to, a stream, river, creek, or other flowing water body. Thus, impacts related to alteration of the course of a stream or river would not occur. The project site is relatively flat and would drain into the internal stormwater system proposed.

Construction
Construction of the project would require grading and excavation of soils, which would loosen sediment and could result in erosion or siltation. However, as described previously, construction of the proposed project requires City approval of a SWPPP prepared by a Qualified SWPPP Developer, as included by PPP WQ-1. The SWPPP is required during the City's plan check and permitting process and would include construction BMPs to reduce erosion or siltation. Typical BMPs for erosion or siltation, include use of silt fencing, fiber rolls, gravel bags, stabilized construction driveway, and stockpile management (as described in the previous above). Adherence to the existing requirements and implementation of the required BMPs per the plan check and permitting process would ensure that erosion and siltation associated with construction activities would be minimized, and impacts would be less than significant.

Operation
The project site is currently developed with seven structures and paved with impervious surfaces. After development of the project, the site would have a total of 154,518 square feet of impervious surfaces. Pervious areas onsite would be landscaped and would not generate soils that could erode. In addition, the proposed drainage infrastructure would slow and retain stormwater, which would also limit the potential for erosion or siltation. Also, as described previously, the City requires the project to implement a WQMP (as included by PPP WQ-2) that would implement BMPs, which reduce erosion and siltation. As a result, stormwater runoff and the potential for erosion and siltation would not increase with implementation of the proposed project. Therefore, the proposed project would not alter the existing drainage pattern in the project area and would not result in substantial erosion or siltation on- or off-site. Impacts would be less than significant.

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;

Less Than Significant Impact. As described in the previous response, the project site does not contain, nor is adjacent to, a stream, river, creek, or other flowing water body. Thus, impacts related to alteration of the course of a stream or river would not occur. In addition, the proposed project would be required to implement a SWPPP (included as PPP WQ-1) during construction that would implement BMPs, such as the use of silt fencing, fiber rolls, and gravel bags, that would ensure that runoff would not substantially increase during construction, and flooding on or off-site would not occur.

Also, as described above, the project would implement an operational WQMP (as included by PPP WQ-2) that would install an onsite storm drain system and biotreatment devices such as catch basin planters and tree box filters that would infiltrate, evapotranspire, or biotreat/biofilter the 85th percentile 24-hour storm event. Thus, operation of the proposed project would not substantially increase stormwater runoff, and flooding on or off-site would not occur.

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

Less Than Significant Impact. As described in the previous responses, the proposed project would be required to implement a SWPPP (included as PPP WQ-1) during construction that would implement BMPs, such as the use of silt fencing, fiber rolls, and gravel bags, that would ensure that runoff would not substantially increase during construction, and that pollutants would not discharge from the project site, which would reduce potential impacts to drainage systems and water quality to a less than significant level.

Also, the project would implement an operational WQMP (included as PPP WQ-2) that would install an onsite storm drain system and biotreatment devices such as biofiltration planters as part of the project, that would infiltrate, evapotranspire, or biotreat/biofilter the 85th percentile 24-hour storm event. Thus, operation of the proposed project would not substantially increase stormwater runoff, and pollutants would be filtered onsite. Impacts related to drainage systems and polluted runoff would be less than significant with implementation of the existing requirements, which would be verified during the plan check and permitting process.

iv. Impede or redirect flood flows?

Less Than Significant Impact. The project site is located in Zone X per the Federal Emergency Management Administration (FEMA) Flood Insurance Rate Map (FIRM) panel 06037C1829F (FEMA 2019). The site is identified as Zone X because it is located in an area with reduced flood risk due to a levee. Thus, the proposed project would not impede or redirect flood flows, and impacts would not occur.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

No Impact. A seiche is a surface wave created when an inland body of water is shaken, usually by earthquake activity. The site also is not subject to flooding hazards associated with a seiche because there are no large body of surface water located near the project site to result in effects related to a seiche, which could result in release in pollutants due to inundation of the site.

The Pacific Ocean is located approximately 15 miles southwest of the project site; consequently, there is no potential for the project site to be inundated by a tsunami that could release pollutants. In addition, the project site is flat and not located near any steep hillsides; therefore, there is no potential for the site to be adversely affected by mudflow. Thus, implementation of the proposed project would not expose people or structures to a significant risk of loss, injury, or death involving inundation by seiche, tsunami, or mudflow that could release pollutants due to inundation of the project site. No impact would occur.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

No Impact. As described previously, the project would be required to have an approved SWPPP, which would include construction BMPs to minimize the potential for construction related sources of pollution. For operations, the proposed project would be required to implement source control BMPs to minimize the introduction of pollutants; and treatment control BMPs to treat runoff. With implementation of the operational source and treatment control BMPs that would be required by the City during the project permitting and approval process (pursuant to PPP WQ-1 and PPP WQ-2), potential pollutants would be reduced to the maximum extent feasible, and implementation of the proposed project would not obstruct implementation of a water quality control plan.

As described previously, water supplies are provided by the Central Basin Municipal Water District that extracts water from the Central Basin. Groundwater pumping is regulated through a Basin Production Percentage to ensure the groundwater supply is sustainable. In addition, the project would not extract groundwater. Thus, the proposed project would not result in the lowering of the local groundwater table, and impacts would be less than significant.

Existing Plans, Programs, or Policies

PPP WQ-1: Stormwater Pollution Prevention Plan. Prior to grading permit issuance, the project developer shall have a Stormwater Pollution Prevention Plan (SWPPP) prepared by a Qualified SWPPP Developer (QSD) in accordance with the City's Municipal Code Chapter 52 and the Los Angeles Regional Water Quality Control Board National Pollution Discharge Elimination System (NPDES) Storm Water Permit Order No. R4-2012-0175 (MS4 Permit). The SWPPP shall incorporate all necessary Best Management Practices (BMPs) and other NPDES regulations to limit the potential of erosion and polluted runoff during construction activities. Project contractors shall be required to ensure compliance with the SWPPP and permit periodic inspection of the construction site by the City of Santa Fe Springs staff or its designee to confirm compliance.

PPP WQ-2: Water Quality Management Plan. Prior to grading permit issuance, the project applicant shall have a Water Quality Management Plan (WQMP) approved by the City for implementation. The project shall comply with the City's Municipal Chapter 52 and the Municipal Separate Storm Sewer System (MS4) permit requirements in effect for the Regional Water Quality

Control Board (RWQCB) at the time of grading permit to control discharges of sediments and other pollutants during operations of the project.

Mitigation Measures

No mitigation measures related to hydrology and water quality are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
11. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

a) Physically divide an established community?

No Impact. The physical division of an established community could occur if a major road were built through an established community or neighborhood, or if a major development was built which was inconsistent with the land uses in the community such that it divided the community. The environmental effects caused by such could include lack of a, or disruption of, access to services, schools, or shopping areas. It could also include the creation of blighted buildings or areas due to the division of the community.

The proposed project would redevelop an existing business park with three new concrete tilt-up industrial buildings within an already urbanized area that is surrounded by industrial, business park, and commercial uses. The project does not include the construction of a new road or the implementation of an inconsistent land use into the project's vicinity. Therefore, no impact would occur.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact. The project site has a General Plan designation of Business Park and is zoned Limited Manufacturing (ML). The proposed project would redevelop an existing site that is currently developed with seven office and warehouse buildings with three new concrete tilt-up industrial buildings whose tenants will need to be consistent with the ML zone land uses. Additionally, the City's plan check and permitting process would ensure that the project complies with the applicable zoning and Municipal Code requirements. Thus, impacts related to conflict with a policy adopted for the purpose of avoiding or mitigating an environmental effect would not occur.

Existing Plans, Programs, or Policies

There are no impact reducing Plans, Programs, or Policies related to land use and planning that are applicable to the project.

Mitigation Measures

No mitigation measures related to land use and planning are required.

12. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. According to the Special Report 209 from the California Geological Survey, the City of Santa Fe Springs is not included in a list of lead agencies in the San Gabriel Valley P-C Region with active mine operations, designated lands, or lands classified as Mineral Resource Zone 2 (MRZ-2) within its jurisdiction (CGS 2010). Therefore, development of the site would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. No impact would occur.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on the general plan, specific plan or other land use plan?

No Impact. As described above, the project site is not located within a region of known mineral significance. The site has a General Plan designation of Business Park and does not support mineral extraction activities onsite. Therefore, implementation of the Project would not result in the loss of locally important mineral resources, and impacts would not occur.

Existing Plans, Programs, or Policies

There are no impact reducing Plans, Programs, or Policies related to mineral resources that are applicable to the Project.

Mitigation Measures

No mitigation measures related to mineral resources are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
13. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

The discussion below is based on the Noise Impact Analysis for 9920 Pioneer Boulevard, City of Santa Fe Springs, California, prepared by Giroux & Associates (Giroux 2019) (Appendix F).

Exterior Noise Level Standards

The City's General Plan Noise Element, Table 1: Noise/Land Use Compatibility Matrix illustrates that exterior noise levels for industrial land uses are normally acceptable below 70 dBA CNEL and conditionally acceptable with noise levels below 75 dBA CNEL.

Municipal Code Chapter 155.424 regulates noise level to not exceed levels set forth in Table N-1, below.

Table N-1: Permitted Noise Levels

A-Weighted Sound Level in Decibels (dB(A))										
	Daytime (7:00 a.m. to 10:00 p.m.)					Nighttime (10:00 p.m. to 7:00 a.m.)				
	Maximum Cumulative Minutes Duration in Any 1-Hour Period				Absolute Maximum	Maximum Cumulative Minutes Duration in Any 1-Hour Period				Absolute Maximum
Receiving Area	30	15	5	1		30	15	5	1	
In the ML, PF, or BP zone	60	65	70	75	80	60	65	70	75	80
Source: City of Santa Fe Springs, General Plan Noise Element, Table 1 Noise/Land Use Compatibility Matrix										

Sensitive Receptor Noise Levels

The City's Noise Element details that noise-sensitive residential land uses are considered normally acceptable with the exterior noise levels below 60 dBA CNEL, and conditionally acceptable with noise levels below 65 dBA CNEL. The closest noise sensitive receptors to the site are 850 feet from the nearest property line.

Existing Ambient Noise Levels

Noise measurements were taken in order to document existing baseline levels in the area. Short-term (15 minutes) noise measurements were conducted on Friday, June 7, 2019, at four locations from 2:20 p.m. to 3:50 p.m. (Giroux 2019). Measurements locations are shown in Table N-2 and Figure 10, *Noise Measurement Locations*.

Table N-2: Measured Noise Levels (dBA) and Meter Location

Meter	Location	Leq	Lmax	Lmin
1	Intersection of Pioneer Blvd and Alaree by Site	61.9	72.4	40.3
2	Corner Arlee Ave and Smith Ave	61.2	70.0	41.5
3	Pioneer and Alburtis Ave by Athletic Field	68.4	86.1	50.5
4	Alburtis Ave in front of Townhomes II Borgo	63.5	77.9	49.5

Source: Giroux & Associates, 2019

Figure 10: Noise Measurement Locations

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less than Significant Impact.

Construction

The construction activities for the proposed project are anticipated to include demolition, site preparation, grading, building construction, paving, and architectural coating. Construction of the proposed project would occur over a 14-month period. Noise impacts from construction activities

associated with the proposed project would be a function of the noise generated by construction equipment, equipment location, sensitivity of nearby land uses, and the timing and duration of the construction activities. Noise levels generated by heavy construction equipment have the potential to range from approximately 78 dBA to 89 dBA, as shown on Table N-3.

Table N-3: Construction Activity Noise Level

Construction Activity	Noise Level (dBA)
Ground Clearing	84
Excavation	89
Foundations	78
Erection	85
Finishing	89

Source: Giroux & Associates, 2019

Temporary construction noise impacts would vary because the noise strength of construction equipment ranges widely as a function of the equipment used and its activity level. The demolition and earth-moving sources are the noisiest, with equipment noise typically ranging from 75 to 89 dBA at 50 feet from the source (Giroux 2019).

Point sources of noise emissions are attenuated by a factor of 6 dB per doubling of distance through geometrical (spherical) spreading of sound waves. The quieter noise sources will drop to a 65 dBA exterior/45 dBA interior noise level by about 200 feet from the source while the loudest may require 800 feet from the source to reduce an 89-90 dBA source strength to a generally acceptable 65 dBA exterior exposure level. This estimate assumes a clear line of-sight from the source to the receiver. Any partially or completed development will act as a noise barrier that will interrupt equipment noise propagation.

The closest noise sensitive receptors to the project site are 850 feet to the northeast (Giroux 2019). This distance provides more than -25 dBA of reduction due to distance alone, which would result in construction noise ranging between 50 to 64 dBA. However, there are numerous intervening structures between the project site and the nearby sensitive receptors that would further reduce construction noise. Thus, due to distance and shielding from existing structures, project construction would not result in noise that would exceed the City's standards.

In addition, Section 155.425 of the Santa Fe Springs Municipal Code, states that construction related activities are exempt from noise regulations provided the activities take place during the hours of 7:00 a.m. to 7:00 p.m. which the project would comply with and is included as PPP NOI-1. Therefore, project construction would be compliant with the City's noise related standards and impacts would be less than significant.

Operation

The proposed project would result in the operation of three concrete tilt-up industrial buildings. Operation of the proposed buildings would generate noise from idling trucks, delivery truck activities, backup alarms, as well as loading and unloading of dry goods, refrigerated containers or reefers, roof-top air conditioning units, and parking lot vehicle movements. The primary noise source would be from the buildings' loading docks. The proposed loading docks are generally located on the northern portion of the Buildings 2 and 3 and the southern side of Building 1. With the exception of a 14-foot high wall around the truck yard area for Building 1, the project includes the installation of 8-foot high tube steel fence along the property lines of the project site.

The Noise Impact Analysis detailed that noise level for a forklift with a back-up alarm is 75 dBA. A flat-bed truck has a noise level of 74 dBA Lmax. Together with a forklift this could create a combined noise level of 76 dBA at 50 feet. As mentioned previously, the distance to the closest sensitive noise receptor is 850 feet from the project site. Unlike the 14-foot wall around the truck yard area for Building 1, potential noise impacts from Buildings 2 and 3 are not reduced from the 8-foot high tube steel fence. However, distance and intervening structures would provide 3 dBA of attenuation. Therefore, the resultant noise level of 48 dBA Leq would be lower than the measured noise level at the closest off-site use and would not result in an exceedance of the City's noise standards.

Vehicular Noise

Vehicular noise would result from operation of the proposed project. As discussed in the Trip Generation and Level of Service Analysis (Appendix J) and detailed in Table T-1, the proposed project is forecast to generate 910 fewer daily trips than the existing use on the project site. However, it would generate 76 more a.m. peak hour and 69 more p.m. peak hour trips. Table N-4 details the existing traffic volumes and the projected project traffic for both a.m. and p.m. peak hours.

Table N-4: Peak Hour Area Traffic with and without Project

AM Peak Hour	(vehicles per hour)		Project Noise
Roadway Segment	Peak Hour Traffic	Project Traffic	Increase (dBA)
Pioneer/ N of Willake	617	29	+0.2
Pioneer/ S of Willake	660	87	+0.5
Pioneer N of Telegraph	679	145	+0.8
Pioneer S of Telegraph	863	43	+0.2
Telegraph/ E of Pioneer	3,337	67	+0.1
Telegraph/ W of Pioneer	3,279	35	+0.1
PM Peak Hour	**(vehicles per hour)**		**Project Noise**
Roadway Segment	**Peak Hour Traffic**	**Project Traffic**	**Increase (dBA)**
Pioneer/ N of Willake	834	26	+0.1
Pioneer/ S of Willake	859	78	+0.4
Pioneer N of Telegraph	881	130	+0.6
Pioneer S of Telegraph	1,258	39	+0.1
Telegraph/ E of Pioneer	3,213	31	+0.1
Telegraph/ W of Pioneer	3,308	60	+0.1

Source: EPD, 2019

The increase from 679 to 824 vehicles in the a.m. peak hour would result in a 0.8 dBA increase in noise levels. Generally, a 3 dBA increase and above is considered a significant impact. Therefore, the project would result in a less than significant increase in vehicular noise.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Less than Significant Impact. There are no city vibration standards applicable to the proposed project. However, the Caltrans *Transportation and Construction Vibration Guidance Manual* (2013) provides guidelines for assessing the potential for adverse vibration effects related to structural damage and human perception. The vibration guidelines established by Caltrans for assessing structural damage and human perception are shown in Tables N-5 and N-6, respectively.

Table N-5: Caltrans Vibration Damage Potential Threshold Criteria

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

Source: Caltrans, 2013

Table N-6: Caltrans Vibration Annoyance Potential Criteria

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Barely perceptible	0.35	0.01
Distinctly perceptible	0.24	0.035
Strongly perceptible	0.90	0.10
Severe	2.0	0.40

Source: Caltrans, 2013

The project includes temporary and intermittent use of construction equipment for various construction activities that can result in the generation of groundborne vibration levels. Groundborne vibration is a concern when sensitive receptors, such as residences, are in proximity to the vibration sources. The nearest sensitive receptor that could be exposed to vibration levels from project construction are 850 feet to the northeast (Giroux 2019). No pile driving or blasting, which are considered to be major sources of vibration levels, would be required for the proposed project; however, construction would utilize jackhammers, bulldozers, and loaded trucks.

The various PPV vibration velocities for this construction equipment, along with their corresponding RMS velocities (in VdB), that can generate perceptible vibration levels are identified in Table N-7. As shown, vibration velocities could range from approximately 0.003 to 0.089 inch-per-second PPV at 25 feet from the source activity, depending on the type of construction equipment in use.

Table N-7: Vibration Source Levels for Construction Equipment at 25 Feet

Equipment	PPV (in/sec)
Large Bulldozer	0.089
Loaded Trucks	0.076
Jackhammer	0.035
Small Bulldozer	0.003

Source: Caltrans, 2013

As the vibration level for a large bulldozer would be 0.089 at 25 feet, and the closest sensitive receptor is 850 feet from the site, the vibration at the sensitive receptor would be much lower, and would not be exposed to PPV groundborne vibration levels that exceed the 0.3 in/sec PPV threshold for continuous/frequent intermittent vibration sources, and vibration impacts associated with building damage would be less than significant. Additionally, based on Caltrans criteria for human annoyance, the vibration levels experienced at the closest sensitive receptor would not be distinctly or strongly perceptible. In addition, project construction would occur in accordance with the permissible construction hours established by the City. Thus, vibration impacts associated with human annoyance would be less than significant.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. There are no airports within two miles of the project site. The closest airport is the Fullerton Municipal Airport that is located 7.5 miles southeast of the project site. Similarly, the project site is not located within the vicinity of a private airstrip and would not expose people residing or working in the project area to excessive noise levels related to an airstrip. No impacts related to airport or airstrip noise would occur from implementation of the project.

Existing Plans, Programs, or Policies

PPP NOI-1: Construction Hours: Pursuant to Section 155.425 of the Santa Fe Springs Municipal Code, states that construction type devices, provided it is not within 500 feet from a residential zone, may be utilized between the hours of 7:00 a.m. to 7:00 p.m., and provided that the operation or use of such devices do not exceed the permitted noise levels identified in Section 155.424.

Mitigation Measures

No mitigation measures related to noise are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
14. POPULATION AND HOUSING. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a) Induce substantial unplanned population growth in an area, either directly or indirectly?

No Impact. The proposed project would redevelop an existing business park and construct three new concrete tilt-up industrial buildings. The proposed development is consistent with the City's General Plan and zoning designations for the project site. The Southern California Association of Governments (SCAG) projects regional population growth and forecasts their projections based on planned land use. The project is not anticipated to change the existing land use of the project site. Thus, the development of the project for the proposed uses have been planned for and would not result in substantial unplanned population growth. Similarly, during construction, workers are anticipated to come from the local region and travel from job site to job site, and do not typically relocate. As described in the Project Description, construction of the proposed project is anticipated to occur over 14 months. The temporary need for construction workers on the project site would not induce substantial unplanned population area in the Santa Fe Springs area.

In addition, the proposed project does not include the extension of roads or other infrastructure. The project would be served by the existing adjacent roadway system, and utilities would be provided by the existing infrastructure that is located with the adjacent roadways. Therefore, the proposed project would not extend roads or other infrastructure that could indirectly induce unplanned population growth. Overall, no direct and indirect impacts related to unplanned population growth would occur.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The project site currently consists of approximately 158,000 square feet of business park uses and does not contain any housing. The project would redevelop the site to construct three new concrete tilt-up industrial buildings. No housing would be displaced by implementation of the proposed project, and no impact would occur.

Existing Plans, Programs, or Policies

There are no impact reducing Plans, Programs, or Policies related to population and housing are applicable to the project.

Mitigation Measures

No mitigation measures related to population and housing are required.

Sources

None.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
15. PUBLIC SERVICES.				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire protection?	☐	☐	☒	☐
Police protection?	☐	☐	☒	☐
Schools?	☐	☐	☒	☐
Parks?	☐	☐	☒	☐
Other public facilities?	☐	☐	☒	☐

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for:

Fire protection?
Police protection?
Schools?
Parks?
Other public facilities?

***Fire Protection* – Less than Significant Impact.** The Santa Fe Springs Department of Fire – Rescue fire provides services the resident community and business population in an area of approximately 9 square miles. The Fire Department provides services including fire prevention and suppression, emergency medical services, technical rescue, and hazardous materials response. The Fire Department has four fire stations. The closest fire station is Fire Station 4, located at 11736 Telegraph Road, which is located 850 feet west of the project site. Redevelopment of the project site would result in an increased number of employees onsite. However, the project would include new fire prevention infrastructure pursuant to current code requirements. The City has adopted the California Fire Code (Title 24, Part 9 of the California Code of Regulations) in Chapter 93.01 of the City Municipal Code, which regulates new structures related to safety provisions, emergency planning, fire-resistant construction, fire protection system, and appropriate emergency access throughout the site.

Since the site is already served by the existing fire station that is across the street from the site, and the project would be constructed pursuant to existing California Fire Code regulations, the project would not result in the need for new or physically altered fire department facilities that could cause significant environmental impacts. Therefore, the project would result in less than significant impacts related to fire protection services.

***Police Protection* - Less than Significant Impact.** The City of Whittier Police Department provides policing services for the City of Santa Fe Springs under contract. The Police Services Center is located at 11576 Telegraph Road, approximately 1,900 feet west of the project site. As described in the previous response, the project would result in an increased number of employees onsite site. Crime and safety issues during project construction may include: theft of building materials and construction equipment, malicious mischief, graffiti, and vandalism.

During operation, the project is anticipated to generate a typical range of police service calls, such as vehicle break-ins, residential thefts and disturbances, and vandalism. Security concerns would be addressed by providing low-intensity security lighting. Also, pursuant to the City's existing plan check and permitting process, the Police Department would review the project's site plan and photometric plan to ensure that design measures are incorporated appropriately to provide a safe environment. Because the project would generate a slight increase in employees on the project site, it would result in an incremental increase in demands on law enforcement services. However, due to the redevelopment nature of the project site that is within an area that is already served, the increase would not be significant when compared to the current demand levels. Due to the location of the Police Department facility in relation to the project site, law enforcement personnel are anticipated to be able to respond in a timely manner to emergency calls from the project site. In addition, the response to calls for law enforcement services from the project site would not require construction or expansion of the Police Department headquarters facilities. Therefore, the project would not result in the need for, new or physically altered police protection facilities, and impacts related to police protection services would be less than significant.

***Schools* – Less than Significant Impact.** The project is a light industrial project that would not directly generate students. As described previously, the proposed project is not anticipated to generate a new population. During construction of the project, workers are anticipated to come from the local region and travel from job site to job site. Construction of the project is anticipated to occur over 14 months. Thus, construction workers and their student aged children are not anticipated to move to the project area in response to the project. Therefore, the number of students from construction of the project is not anticipated to increase. Similarly, employees needed to operate the proposed uses are anticipated to come from within the project region due to the unemployment rate and limited number of employees needed for the project. Thus, substantial in-migration of employees that could generate new students is not anticipated to occur. As required by all projects within the City, the proposed project is required to pay School Mitigation Impact fees, as included by PPP PS-1. Overall, impacts related to schools would be less than significant.

***Parks* – Less than Significant Impact.** The proposed project would develop three new concrete tilt-up industrial buildings and does not include development of park facilities. In addition, as described previously, the proposed project is not anticipated to result in an influx of new residents, as the employees needed to operate the proposed buildings are primarily anticipated to come from the unemployed labor force in the region. Thus, the proposed project would not generate a substantial population that would require construction or expansion of park facilities, and impacts would be less than significant.

***Other Public Facilities* – Less than Significant Impact.** Refer to the previous responses. The proposed project would not result in an increased resident population or a significant increase in the local workforce. Based on these factors, the proposed project would not result in any long-term impacts to other public facilities.

Existing Plans, Programs, or Policies

PPP PS-1: School Fees: Prior to the issuance of either a certificate of occupancy or prior to building permit final inspection, the applicant shall provide payment of the appropriate fees set forth by the applicable school districts related to the funding of school facilities pursuant to Government Code Section 65995 et seq.

Mitigation Measures

No mitigation measures related to public services are required.

16. RECREATION.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that physical deterioration of the facility would be accelerated?

Less than Significant Impact. As described previously, the proposed project would re-develop the site with three new concrete tilt-up industrial buildings, which would not result in an influx of new residents, as the employees needed to operate the project are primarily anticipated to come from the unemployed labor force in the region. Thus, the proposed project would not generate a substantial population that would generate significant use of existing neighborhood or regional parks and recreation facilities, such that substantial physical deterioration would occur or be accelerated, and impacts would be less than significant.

b) Include or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Less than Significant Impact. The proposed project would not result in an influx of new residents. Thus, the proposed project would not generate a substantial population that would generate significant use of existing recreational facilities, and construction of new or expansion of existing recreational facilities is not anticipated to be required. Thus, impacts related to recreation would be less than significant.

Existing Plans, Programs, or Policies

There are no impact reducing Plans, Programs, or Policies related to recreation are applicable to the project.

Mitigation Measures

No mitigation measures related to recreation are required.

None.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
17. TRANSPORTATION. Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☐	☒
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☐	☒

The discussion below is based on the Trip Generation and Level of Service Analysis, prepared by EPD Solutions, Inc. (EPD 2019) (Appendix J).

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less than Significant Impact.

Construction
Construction activities associated with the project would generate vehicular trips from construction workers traveling to and from the project site, delivery of construction supplies and import materials to, and export of debris from, the project site. However, these activities would only occur for an estimated time period of 14 months. The increase of trips during construction activities would be limited and are not anticipated to exceed the number of operational trips described below. The short-term vehicle trips from construction of the project would generate less than significant traffic related impacts.

Operation
As detailed in the project description, the project site is currently developed with seven structures of business and office uses for a total of 157,669 square feet. A total of 149,605 square feet is used for business park uses, while 8,064 square feet is office space. The project would redevelop the existing site with three new speculative concrete tilt-up industrial buildings totaling 163,518 square feet, or an increase of 5,849 square feet beyond the existing square footage.

Table T-1 shows that during operation the proposed project would generate 145 vehicle trips during the a.m. peak hour, 131 vehicle trips during the p.m. peak hour, and 1,029 daily vehicle trips. The trip generation analysis for the project was prepared using trip rates from the Institute of

Transportation Engineers (ITE) Trip Generation, 10th Edition (2017). The trip generation for the project is based on the ITE rates for the "General Light Industrial" land use. The rate is based on more than 40 surveys of General Light Industrial developments throughout the country. The ITE description of General Light Industrial notes that there is a small amount of office space associated with this type of land use, and it would by typical for a General Light Industrial building to include office space to accommodate the administrative functions of the business. Therefore, the office space included in the project description (approximately 5 percent of the project) would be supportive of the light industrial activities and is accounted for in the trip rate.

The analysis accounts for trips generated by the existing business park and forecasts the net new trip generation of the project. The trip generation also provides an estimate of the heavy vehicle trips and applies a passenger car equivalent (PCE) factor to heavy vehicle trips. Table T-1 presents the PCE trip generation estimate for the project. As shown, the project would generate 910 fewer daily trips; but, 76 more a.m. peak hour and 59 more p.m. peak hour trips compared to the existing uses.

[5] Passenger Car Equivalent (PCE) factors from San Bernardino County CMP, Appendix B - Guidelines for CMP Traffic Impact Analysis Reports in San Bernardino County, 2016

Traffic traveling to and from the project site would mostly be traveling to and from the I-605 and I-5 freeways, and the intersections of Pioneer Boulevard/Telegraph Road and Pioneer Boulevard/Willake Street would receive most of the project traffic

The following trip distribution assumptions were applied to the project trip generation:

- 20% traveling to the north on I-605 via Telegraph Road
- 10% traveling to the south on I-605 via Telegraph Road
- 10% traveling to the north on I-5 via Telegraph Road and Lakewood Blvd ramps
- 20% traveling to the south on I-5 via Pioneer Boulevard and Florence Avenue
- 20% traveling east on Telegraph Road (non-freeway trips)
- 10% traveling west on Telegraph Road (non-freeway trips)

Traffic counts at Pioneer Boulevard/Telegraph Road and Pioneer Boulevard/Willake Street were collected on Tuesday, July 9, 2019 and were used to calculate the existing level of service (LOS). Traffic counts at the remaining intersections were collected on Thursday, January 16, 2019. Future Opening Year traffic volumes were forecast by adding a 2 percent per year growth rate to the existing traffic counts and by adding trips generated by other approved projects in the area. Two projects were identified: 1) Breitburn Industrial which proposes 318,121 square feet of industrial use at the northwest corner of Santa Fe Springs road/Telegraph Road and; 2) Rexford Industrial, which proposes 201,467 square feet of industrial use at 9615 Norwalk Boulevard. The trip generation of the two cumulative projects is shown in Table T-2.

Table T-2: Cumulative Projects Trip Generation

LOS were calculated using the Intersection Capacity Utilization methodology for signalized intersections and the Highway Capacity Manual 6th Edition methodology for unsignalized and Caltrans intersections. The LOS was calculated for existing and existing plus project conditions and is shown in Table T-3. It should be noted that the LOS analysis evaluated the new project trips without taking credit for the exiting land uses. For this reason, the actual with-project LOS is expected to be lower than shown in the table. Project impacts were determined using the significant impact thresholds provided in the Los Angeles County Department of Public Works Traffic Impact Analysis Report Guidelines which state that a significant impact would occur if the project related increase in the volume to capacity (v/c) ratio equals or exceeds the following thresholds:

Pre-project LOS	Pre-project V/C	Project V/C Increase
C	0.71 to 0.80	0.04 or more
D	0.81 to 0.90	0.02 or more
E/F	0.91 or more	0.01 or more

[1] Level of Service

[2] Volume-to-capacity ratio for signalized intersection, delay for unsignalized intersections

Based on this analysis, the project would not create any significant traffic impacts in the existing plus project or opening year plus project conditions.

In addition, the project area is currently served with transit service from the Los Angeles County Metropolitan Transportation Authority (LA Metro) and Norwalk Transit System (NTS). There is an existing bus stop with LA Metro's Local Route 62 line located at the northwest corner of the intersection of Telegraph Road and Pioneer Boulevard, which, starting on Telegraph Road, runs east-west from Boyle Heights in the City of Los Angeles to the City of Hawaiian Gardens. Another bus stop at the southwest corner of the same intersection serves Norwalk Transit System Line 1 and 3. Operation of the project would not affect the operation of the bus routes. Thus, no impacts would occur.

There are no existing bicycle infrastructure such as bicycle trails/lanes on the surrounding streets. Therefore, the project would not alter existing bicycle facilities. In addition, an existing sidewalk runs along the western edge of the project site. Implementation of the project would remove and replace the existing sidewalk along the western edge of the project site. These improvements would result in a less than significant impact.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

No Impact. CEQA Guidelines section 15064.3 subdivision (b) discusses the use of vehicle miles traveled (VMT) for the impact analysis. The requirement of this section takes effect in June 2020 or where an agency has adopted thresholds for VMT. The City of Santa Fe Springs has not adopted any thresholds regarding VMT. Therefore, the project would not be inconsistent with CEQA Guidelines section 15064.3, subdivision (b), and impacts would not occur.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less than Significant Impact. The project would develop and operate three concrete tilt-up industrial buildings onsite. None of the proposed structures would include incompatible uses such as farm equipment. The project's design would be reviewed by the City during the plan check and permitting process; thus, the geometric design features of the project site would not result in increased hazards. Access to the project site would be via three driveways along Pioneer Boulevard, each ranging between 25 to 35 feet in width, and would be designed in compliance with the City's design standards to provide for adequate turning for passenger cars, fire trucks, and delivery trucks.

Additionally, the project site does not include any visual obstructions that would block sight distance at the driveways or that would prohibit full access in, and out of, the project area. Thus, motorists entering and exiting the project site would be able to do so comfortably, safely, and without undue congestion. As such, project access and circulation would be adequate, and project impacts related to hazardous design features would be less than significant.

d) Result in inadequate emergency access?

No Impact. The proposed project would develop and operate three concrete tilt-up industrial buildings that would be permitted and approved in compliance with existing safety regulations,

such as the California Building Code and Fire Code (as integrated into the City's Municipal Code) to ensure that it would not result in inadequate emergency access.

The proposed construction activities, including equipment and supply staging and storage, would occur within the project site and would not restrict access of emergency vehicles to the project site or adjacent areas. During construction, Pioneer Boulevard would remain open to ensure adequate emergency access to the project area and vicinity. Thus, impacts related to inadequate emergency access during construction activities would not occur.

As described above, operation of the proposed project would also not result in inadequate emergency access. Direct access to the project site would be provided from Pioneer Boulevard. The driveways and on-site circulation constructed by the project would be evaluated through the City's permitting procedures to meet the City's design standards that provides adequate turning space for passenger cars, fire trucks, and delivery trucks. The project is also required to provide fire suppression facilities (e.g., hydrants and sprinklers). The Santa Fe Springs Fire Department would review the development plans as part of the plan check and permitting procedures to ensure adequate emergency access pursuant to the requirements in Section 503 of the California Fire Code (Title 24, California Code of Regulations, Part 9). As a result, impacts related to inadequate emergency access would not occur.

Existing Plans, Programs, or Policies

There are no impact reducing Plans, Programs, or Policies related to transportation that are applicable to the project.

Mitigation Measure

No mitigation measures related to transportation are required.

Trip Generation and Level of Service Analysis, prepared by EPD Solutions, Inc. (EPD 2019) (Appendix J).

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
18. TRIBAL CULTURAL RESOURCES.				
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?	☐	☐	☐	☒
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	☐	☒	☐	☐

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

No Impact. The project site was historically used for oil extraction and is currently developed with modern structures and does not contain any historical resources. In addition, substantial ground disturbance has occurred on the project site from previous uses such as oil fields and the construction of the existing uses. The project site is not eligible for listing in the California Register of Historical Resources, or in a local register of historical resources. The proposed project would not result in an impact to a historical resource.

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Less than Significant Impact with Mitigation Incorporated.

Assembly Bill 52

Chapter 532, Statutes of 2014 (Assembly Bill [AB] 52), requires that Lead Agencies evaluate a project's potential to impact "tribal cultural resources." Such resources include "[s]ites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are eligible for inclusion in the California Register of Historical Resources or included in a local register of historical resources." AB 52 also gives lead agencies the discretion to determine, supported by substantial evidence, whether a resource qualifies as a "tribal cultural resource." Also, per AB 52 (specifically PRC 21080.3.1), Native American consultation is required upon request by a California Native American tribe that has previously requested that the City provide it with notice of such projects.

A search of the Sacred Lands File (SLF) was requested for the project by the Native American Heritage Commission (NAHC). The NAHC responded on July 24, 2019 stating that there are no known/known sacred lands within 0.5 mile of the project site. Pursuant to the requirements of AB 52, the City sent informational letters about the proposed project and requests for consultation to each tribe on the City's list of tribes requesting consultation on July 8, 2019. These tribes include the following: Gabrielino-Tongva Tribe, Gabrielino Band of Mission Indians – Kizh Nation, Gabrielino Tongva – San Gabriel Band of Mission Indians, Gabrielino Tongva – San Gabriel California Tribal Council, and Gabrielino/Tongva Nation.

On July 15, 2019, the City received an e-mailed response to the City's AB 52 outreach letters, which was from the Gabrieleno Band of Mission Indians stating that the subject site is within their Ancestral Tribal Territory and thus had requested that a consultation be scheduled to go over the project and surrounding location in further detail. Said consultation occurred over-the-phone on September 4, 2019, and information was presented that the project site is within an area believed to occupy the ancient Santa Fe trail and given the 1970's era development, concluded with the understanding that the tribe Chairman, Andy Salas, would provide the lead agency (City of Santa Fe Springs) with suggested mitigation measures. On October 1, 2019, the City received mitigations measures from the tribe Chairman and Mitigation Measure TCR-1 has been included tribal monitoring of initial site clearing (such as pavement removal, grubbing, tree removals) ground-disturbing activities that cause excavation to depths greater than artificial fill into previously undisturbed soils.

As described above, the project does not contain any historic structures and project area has a low sensitivity for the presence of prehistoric or historical archaeological resources. In addition, the entire parcel has been disturbed from previous oil extraction and development uses. Furthermore, the NAHC has not identified any known sacred lands within 0.5 mile of the project area. Additionally, as described previously (and included as PPP CUL-1), California Health and Safety Code, Section 7050.5 requires that if human remains are discovered in the project site, disturbance of the site shall halt and remain halted until the coroner has conducted an investigation. If the coroner determines that the remains are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission. However, as described previously, Mitigation Measure CUL-1 has been included to provide procedures to be followed in the event that potential resources are discovered during grading, excavation, or construction activities. As detailed previously, if the discovered resource(s) appears Native American in origin, a Native American Monitor shall be contacted to evaluate any potential tribal cultural resource(s) and shall have the opportunity to consult on appropriate treatment and curation of these resources. Thus, impacts related to California Native American tribes would be less than significant with implementation of Mitigation Measure CUL-1 and TCR-1.

Existing Plans, Programs, or Policies

PPP CUL-1: Human Remains. Listed previously in Section 5, Cultural Resources.

Mitigation Measures

Mitigation Measure CUL-1: Inadvertent Discoveries. Listed previously in Section 5, Cultural Resources.

Mitigation Measure TCR-1: Native American Monitor. Prior to the issuance of any permits for initial site clearing (such as pavement removal, grubbing, tree removals) or issuance of permits allowing ground-disturbing activities that cause excavation to depths greater than artificial fill (including as boring, grading, excavation, drilling, potholing or auguring, and trenching), the City of Santa Fe Springs shall ensure that the project applicant/developer retain qualified Native American Monitor(s) during construction-related ground disturbance activities. The monitor(s) shall be approved by the tribal representatives of the Gabrieleño Band of Mission Indians - Kizh Nation and be present on-site during construction that involve ground disturbing activities identified herein. The Native American monitor(s) shall be responsible for the following activities during the monitoring, as appropriate:

- Complete monitoring logs on a daily basis, providing descriptions of the daily activities, including construction activities, locations, soil, and any cultural materials identified.
- The on-site monitoring shall end when the project site grading and excavation activities are completed, or when the tribal representatives and monitor have indicated that the site has a low potential for tribal cultural resources.
- Upon discovery, the tribal and/or archaeological monitor/consultant/consultant shall immediately divert work a minimum of 150 feet and place an exclusion zone around the burial. The monitor/consultant(s) shall then notify the tribe, the qualified lead archaeologist, and the construction manager who shall call the coroner.
- Work will continue to be diverted while the coroner determines whether the remains are Native American. The discovery is to be kept confidential and secure to prevent any further disturbance. If the finds are determined to be Native American, the coroner will notify the NAHC, as mandated by state law, who will then appoint a Most Likely Descendent (MLD).
- If the Gabrieleño Band of Mission Indians - Kizh Nation is designated MLD, the following treatment measures shall be implemented.
- Prior to the continuation of ground-disturbing activities, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.
- In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains shall be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours.
- The tribe shall make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that the burials will be removed. The tribe will work closely with the qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully.
- If data recovery is approved by the tribe, documentation shall be taken that includes, at a minimum, detailed descriptive notes and sketches. Additional types of documentation shall be approved by the tribe for data recovery purposes.
- Cremations will either be removed in bulk or by means as necessary to ensure completely recovery of all material. If the discovery of human remains includes

- Each occurrence of human remains and associated funerary objects shall be stored using opaque cloth bags. All human remains, funerary objects, sacred objects, and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the Project Site but at a location agreed upon between the tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
19. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards or in excess of the capacity of local infrastructure or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒

a) Require or result in the relocation or construction of new or expanded water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less than Significant Impact.

Water Infrastructure

The proposed project is within an urbanized, developed area of Santa Fe Springs. An existing 12-inch water line runs north-south along Pioneer Boulevard, which is adjacent to the project site. The project would install new onsite domestic water and fire service lines that would connect to the existing line in Pioneer Boulevard. Because the site has been planned for operation of industrial uses, the water line has been planned to accommodate development of the project site and would not require expansion to serve the proposed project.

Therefore, although construction of the onsite water lines would be required to support the new development, no extensions or expansions to the water pipelines supplying the project site would be required. The necessary installation of the onsite water supply line is included as part of the proposed project and would not result in any physical environmental effects beyond those identified in other sections of this IS/MND. Thus, the proposed project would not result in the construction of

new water facilities or expansion of existing facilities that serve the project area, the construction of which could cause significant environmental effects, and impacts would be less than significant.

Wastewater Treatment
The project would install onsite sewer lines that would connect to an existing 8-inch sewer line located in Pioneer Boulevard, which is adjacent to the project site. Because the site has been planned for operation of industrial uses, the water line has been planned to accommodate development of the project site and would not require expansion to serve the proposed project. The necessary installation of the onsite sewer line is included as part of the proposed project and would not result in any physical environmental effects beyond those identified in other sections of this IS/MND.

Stormwater Drainage
The project would maintain the existing stormwater flow pattern. The project would install new onsite storm drains that would convey runoff to biofiltration basins along the western side of the site or biofiltration chambers along the eastern side of the site. After biofiltration runoff would drain into the existing offsite 42-inch storm drain line.

Because the site is currently developed with impervious surfaces, and the biofiltration basins and chambers have been sized to accommodate required flows, the proposed project would not result in a substantial increase stormwater runoff. Thus, the project would not require or result in the construction of new offsite stormwater drainage facilities or expansion of existing offsite facilities, the construction of which could cause significant environmental effects. The required installation of onsite drainage features is included as part of the proposed project and would not result in any physical environmental effects beyond those identified in other sections of this IS/MND. Overall, impacts related to stormwater drainage facilities would be less than significant.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less than Significant Impact. According to the City of Santa Fe Springs 2015 Urban Water Management Plan (UWMP), the City receives water supplies from local groundwater pumped from city wells, treated groundwater through the Central Basin Water Quality Protection Program (CBWQPP), treated imported water purchased from the Metropolitan Water District (MWD) through the Central Basin Municipal Water District (CBMWD), and recycled water supplies (UWMP 2017). In 2015, the City utilized a total of 6,369 acre-feet per year (afy) of water, which included: 2,716 afy of groundwater treated by CBWQPP, 2,714 afy of imported water from MWD, and 939 afy of recycled water from CBMWD.

The UWMP projects that the water supply mix will remain similar through 2040, with an increase in recycled water and groundwater to cover the incremental increased demand for water related to anticipated growth within the City. The City's water demand in 2015 was 6,369 acre-feet and is projected to increase to 7,351 AFY by 2040 (UWMP 2017).

The proposed project would be consistent with existing land use and growth projections that are included in the UWMP projections; and thus, is included in the UWMP projections and EMWD would be able to meet all of the anticipated water supply needs. Therefore, the proposed project would have sufficient water supplies available to serve the project, and impacts would be less than significant.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less than Significant Impact. The proposed building would generate wastewater flows, which would be conveyed through existing sewer facilities to the Los Coyotes Water Reclamation Plant (WRP). The Los Coyotes WRP provides primary, secondary, and tertiary treatment and has a capacity to treat up to 37.5 million gallons per day (UWMP 2017). The UWMP determines capacity of existing wastewater facilities within the Los Angeles County Sanitation District based on land use designations and generation rates thereof. The proposed project would not result in change of land use. Therefore, the Los Coyotes WRP would be able to accommodate the wastewater flow from the project, and impacts related to the wastewater treatment system would be less than significant.

d) Generate solid waste in excess of State or local standards or in excess of the capacity of local infrastructure or otherwise impair the attainment of solid waste reduction goals?

Less than Significant Impact. In 2018, most of the solid waste from the City, which was disposed of in landfills, went to either the Olinda Alpha Sanitary Landfill, El Sobrante Landfill, or Sunshine Canyon Landfill (CalRecycle 2019a).

The Olinda Alpha Sanitary Landfill is permitted to accept 8,000 tons per day of solid waste and is permitted to operate through 2021. The El Sobrante Landfill is permitted to accept 16,054 tons per day of solid waste and is permitted to operate through 2051. In June 2019, a maximum of 13,796 tons in a day was disposed at the El Sobrante Landfill, which provides for a remaining capacity of 2,258 tons per day. The Sunshine Canyon Landfill is permitted to accept 12,100 tons per day of solid waste and is permitted to operate through 2037, and the CalRecycle monthly reports indicate that it is operating within the permitting capacity limits (CalRecycle 2019b).

The proposed project would include the demolition of 157,669 square feet of existing building space that would result debris. In addition, solid waste would be generated from construction materials and packaging used on the site. However, construction would only occur over an estimated 14-month period and a large volume of the waste would be recycled. The project would be required to comply with the City Municipal Code Chapter 50.64, Compliance with Waste Management Plan, (included as PPP UT-1) which states that 75 percent of construction and demolition debris must be diverted via reuse or recycling. The landfills described previously have the permitted capacity to accommodate the projected amount of debris estimated to be generated by the project during demolition and construction.

Based on a solid waste generation of 1.42 pounds per 100 square feet per day, identified in the CalRecycle Solid Waste Information System Database, operation of 163,518 square feet of light industrial building space would generate approximately 2,321 pounds per day, or 11,605 pounds (5.80 tons) of solid waste per week (based on a five-day work week) (CalRecycle 2019c).

However, based on the current recycling requirements, which require diversion of 50 percent of solid waste away from landfills, the project would result in an increase of 1,160.5 pounds of solid waste per day being disposed of in landfills. In 2020, state regulations per AB 341 will become effective, which will require diversion of 75 percent of solid waste from landfills. Thus, it is anticipated that the increase of solid waste landfill disposal from operation of the project in 2020 would be approximately 580.25 pounds per day. As described above, the El Sobrante Landfill has an average daily additional capacity of 2,258 tons per day and the Sunshine Canyon Landfill

is permitted to accept 12,100 tons per day of solid waste (CalRecycle 2019b). Therefore, the existing landfills have sufficient permitted capacity to accommodate the additional solid waste disposal needs that would result from the project, and impacts related to landfill capacity would be less than significant.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

No Impact. The project would comply with all federal, state, and local statutes and regulation related to solid waste. The project would consist of short-term construction activities (with short-term waste generation limited to minor quantities of construction debris). Solid wastes produced during operation of the project would be disposed of in accordance with all applicable statutes and regulations. Accordingly, anticipated impacts from the proposed project related to landfill capacity and compliance with applicable regulations would be less than significant.

Existing Plans, Programs, or Policies

PPP UT-1: Solid Waste. As required by Municipal Code Chapter 50.64, prior to the completion of any covered project, the applicant shall submit to the Waste Management Plan Compliance Official documentation that the diversion requirement has been met. The diversion requirement shall be that the applicant has diverted at least 75 percent of the total construction and demolition debris generated by the project via reuse or recycling.

Mitigation Measures

No mitigation measures related to utilities and service systems are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
20. WILDFIRES. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

No Impact. According to Figure 12.5, *Fire Hazard Severity Zones Policy Map*, of the Los Angeles County General Plan, the City of Santa Fe Springs (including the project site) is not within a Very High Fire Hazard zone (Los Angeles County 2015). Direct access to the project site would be provided from three separate driveways along Pioneer Boulevard. The project is required to design and construct internal access and provide fire suppression facilities (e.g., hydrants and sprinklers) in conformance with the City's Municipal Code, and the Fire Department would review the development plans prior to approval to ensure adequate emergency access pursuant to the requirements in Section 503 of the California Fire Code (Title 24, California Code of Regulations, Part 9, included in the City's Municipal Code (Chapter 93.01, Adoption of California Fire Code and Other Recognized Standards). As a result, the proposed project would not impair an adopted emergency response plan or emergency evacuation plan, and impacts would be less than significant.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. As described in the previous response, the project site is not located within a Very High Fire Hazard Severity Zone. The areas within the project's vicinity also do not contain hillsides or other factors that could exacerbate wildfire risks. Therefore, no impact would occur.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No Impact. As described in the previous responses, the project site is not within a Very High Fire Hazard Severity Zone. The project site is located within an urbanized area within the City of Santa Fe Springs. The project does not involve any new infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risks or result in other impacts to the environment. Therefore, no impacts would occur.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No Impact. As described in the previous responses, the project site is not within a Very High Fire Hazard Severity Zone. In addition, adjacent areas to the project site are relatively flat urban sites and do not contain hillsides or other factors that would expose people or structures to flooding or landslides as a result of runoff, post-fire slope instability, or drainage changes. In addition, the project would not generate large slopes and would connect to existing drainage facilities. Thus, the project would not result in risks related to wildfires or risks related to downslope or downstream flooding or landslides after wildfires. Therefore, impacts would not occur.

Existing Plans, Programs, or Policies

There are no impact reducing Plans, Programs, or Policies related to wildfires that are applicable to the Project.

Mitigation Measures

No mitigation measures related to wildfires are required.

Sources

Los Angeles County Department of Regional Planning (Los Angeles County 2015). General Plan 2035. Figure 12.5, Fire Hazard Severity Zones Policy Map. Adopted October 6, 2015. 21. MANDATORY FINDINGS OF SIGNIFICANCE.	**Potentially Significant Impact**	**Less Than Significant with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☐	☒	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less than Significant with Mitigation Incorporated. As discussed in previous sections of this IS/MND, the project site is currently developed with 149,605 square feet of business park and 8,064 square feet of general office building uses. There are no special status vegetation types or wildlife species, nor suitable habitat located on or adjacent to the project site. However, the project site contains ornamental trees that could be used for nesting by common bird species that are protected by the federal MBTA and the California Fish and Game Code Sections 3503.5, 3511, and 3515. These bird species are protected during the avian nesting and breeding season, which occurs between February 1 and September 15. Therefore, Mitigation Measure BIO-1 has been included to require a nesting bird survey if construction commences during nesting season. Mitigation Measure BIO-1 would reduce potential impacts to a less than significant level.

The site does not contain any historic resources, and the potential for the project site to contain any archaeological resources is low. However, Mitigation Measure CUL-1 has been included to provide procedures to be followed in the event that potential archaeological resources are discovered during grading, excavation, or construction activities. With implementation of Mitigation Measure CUL-1, impacts related to important examples of the major periods of California history or prehistory would be less than significant.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Less than Significant Impact. The project would redevelop an existing business park and office complex with three new concrete tilt-up industrial buildings. As described above, all of the potential impacts related to implementation of the project would be less than significant or reduced to a less than significant level with implementation of mitigation measures and existing plans, programs, or policies that are imposed by the City and effectively reduce environmental impacts.

The cumulative effect of the proposed project taken into consideration with these other development projects in the area would be limited, because the project would is consistent with the City's General Plan and Municipal Code and would not result in substantial effects to any environmental resource topic, as described throughout this document. Thus, impacts to environmental resources or issue areas would not be cumulatively considerable; and cumulative impacts would be less than significant.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than Significant with Mitigation Incorporated. The project consists of redevelopment of an existing developed site. The project would not consist of any use or any activities that would result in a substantial negative effect on any persons in the vicinity. All resource topics associated with the project have been analyzed in accordance with CEQA and the CEQA Guidelines and were found to pose no impacts, less than significant impacts, or less than significant impacts with mitigation, as previously detailed. Consequently, the project would not result in any environmental effects that would cause substantial adverse effects on human beings directly or indirectly, with implementation of the mitigation measures that have been previously detailed.

5 MITIGATION MONITORING AND REPORTING PROGRAM

5.1 INTRODUCTION

The California Environmental Quality Act (CEQA) requires a lead or public agency that approves or carries out a project for which a Mitigated Negative Declaration has been certified which identifies one or more significant adverse environmental effects and where findings with respect to changes or alterations in the project have been made, to adopt a "…reporting or monitoring program for the changes to the project which it has adopted or made a condition of project approval in order to mitigate or avoid significant effects on the environment" (CEQA, Public Resources Code Sections 21081, 21081.6).

A Mitigation Monitoring and Reporting Program (MMRP) is required to ensure that adopted mitigation measures are successfully implemented for the Pioneer Boulevard Development Project (project). The City of Santa Fe Springs is the Lead Agency for the project and is responsible for implementation of the MMRP. This MMRP identifies the parties that will be responsible for monitoring implementation of the individual mitigation measures.

5.2 MITIGATION MONITORING AND REPORTING PROGRAM

The mitigation monitoring and reporting program has been prepared in compliance with Public Resource Code Section 21081.6. It describes the requirements and procedures to be followed by the City to ensure that all mitigation measures adopted as part of the proposed Project would be carried out as described in the IS/MND. This MMRP for the project will be active through all phases of the project, including design, construction, and operation.

Table 5-1 identifies project specific mitigation measures required by the City to mitigate or avoid significant adverse impacts associated with the implementation of the project, the timing of implementation, and the responsible party or parties for monitoring compliance. This MMRP also includes a column that will be used by the compliance monitor (individual responsible for monitoring compliance) to document when implementation of the measure is completed.

TABLE 5-1
MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Measure Number	Measure	Timing	Responsibility for Oversight of Compliance/ Verification	Completion
BIO-1	**Migratory Bird Treaty Act.** Prior to commencement of grading activities and issuance of any building permits, the City Building Department shall verify that in the event that vegetation and tree removal activities occur within the active breeding season for birds (February 1–September 15), the project applicant (or their Construction Contractor) shall retain a qualified biologist (meaning a professional biologist that is familiar with local birds and their nesting behaviors) to conduct a nesting bird survey no more than 3 days prior to commencement of construction activities. The nesting survey shall include the project site and areas immediately adjacent to the site that could potentially be affected by project-related construction activities, such as noise, human activity, and dust, etc. If active nesting of birds is observed within 100 feet of the designated construction area prior to construction, the qualified biologist shall establish an appropriate buffer around the active nests (e.g., as much as 500 feet for raptors and 300 feet for non-raptors [subject to the recommendations of the qualified biologist]), and the buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.	Prior to commencement of grading activities	City Building Department	
CUL-1	**Inadvertent Discoveries.** Prior to commencement of grading activities, the City of Santa Fe Springs Building Department shall verify that all project grading and construction plans and specifications state that in the event that potential archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified archaeologist from the City or County List of Qualified Archaeologists has evaluated the find to determine whether the find constitutes a "unique archaeological resource," as defined in Section 21083.2(g) of the California Public Resources Code. Any resources identified shall be treated in accordance with California Public Resources Code Section 21083.2(g). If the discovered resource(s) appears Native American in origin, a Native American Monitor shall be contacted to evaluate any potential tribal cultural resource(s) and shall have the opportunity to consult on appropriate treatment and curation of these resources.	Prior to commencement of grading activities	City Planning/Building Department	

TABLE 5-1
MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Measure Number	Measure	Timing	Responsibility for Oversight of Compliance/ Verification	Completion
PAL-1	**Paleontological Resources.** Prior to issuance of a grading permit, the City of Santa Fe Springs Building Department shall verify that all project grading and construction plans and specifications state that in the event that potential paleontological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet of the find until a qualified paleontologist (i.e., a practicing paleontologist that is recognized in the paleontological community and is proficient in vertebrate paleontology) from the City or County List of Qualified Paleontologists has evaluated the find in accordance with federal and state regulations. Construction personnel shall not collect or move any paleontological materials and associated materials. If any fossil remains are discovered, the paleontologist shall make a recommendation if monitoring shall be required for the continuance of earth moving activities.	Prior to issuance of a grading permit	City Planning/Building Department	
HAZ-1	**Soil Management Plan.** The Applicant shall retain a qualified environmental consultant to prepare a Soil Management Plan (SMP) prior to issuance of a grading permit that shall detail procedures and protocols for onsite management of soils containing potentially hazardous materials. The SMP would be implemented during grading activities onsite to ensure that soils containing residual levels of hydrocarbons or arsenic are properly identified, monitored, and managed onsite, and include the following: • A certified hazardous waste hauler shall remove all potentially hazardous soils. In addition, sampling of soil shall be conducted during excavation to ensure that all petroleum hydrocarbon and arsenic impacted soils are removed, and that Environmental Screening Levels (ESLs) for non-residential uses are not exceeded. Excavated materials shall be transported per California Hazardous Waste Regulations to a landfill permitted by the state to accept hazardous materials. • Any subsurface materials exposed during construction activities that appear suspect of contamination, either from visual staining or suspect odors, shall require immediate cessation of excavation activities. Soils suspected of contamination shall be tested for potential contamination. If contamination is found to be present per the Department of Toxic Substances Control	Prior to issuance of a grading permit	City Building Department	

TABLE 5-1
MITIGATION MONITORING AND REPORTING PROGRAM

	Screening Levels for industrial/commercial land use (DTSC-SLi) and the EPA Regional Screening Levels for industrial/commercial land use (EPA-RSLi), it shall be transported and disposed of per state regulations to an appropriately permitted landfill. • The SMP shall include a Health and Safety Plan (HSP) addresses potential safety and health hazards and includes the requirements and procedures for employee protection; each contractor will be required to have their own HSP tailored to their particular trade that addresses the general project safety requirements. The HSP shall also outline proper soil handling procedures and health and safety requirements to minimize worker and public exposure to hazardous materials during construction. • The SMP shall be prepared and executed in accordance with South Coast Air Quality Management District (SCAQMD) Rule 1166, Volatile Organic Compound Emissions from Decontamination of Soil. The SMP shall require the timely testing and sampling of soils so that contaminated soils can be separated from inert soils for proper disposal. The SMP shall specify the testing parameters and sampling frequency. Anticipated testing includes total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). During excavation, Rule 1166 requires that soils identified as contaminated shall be sprayed with water or another approved vapor suppressant, or covered with sheeting during periods of inactivity of greater than an hour, to prevent contaminated soils become airborne. Under Rule 1166, contaminated soils shall be transported from the project site by a licensed transporter and disposed of at a licensed storage/treatment facility to prevent contaminated soils from becoming airborne or otherwise released into the environment. • All SMP measures shall be printed on the construction documents, contracts, and project plans prior to issuance of grading permits.			
TCR-1	**Native American Monitor**. Prior to the issuance of any permits for initial site clearing (such as pavement removal, grubbing, tree removals) or issuance of permits allowing

	ground-disturbing activities that cause excavation to depths greater than artificial fill (including as boring, grading, excavation, drilling, potholing or auguring, and trenching), the City of Santa Fe Springs shall ensure that the project applicant/developer retain qualified Native American Monitor(s) during construction-related ground disturbance activities. The monitor(s) shall be approved by the tribal representatives of the Gabrieleno Band of Mission Indians - Kizh Nation and be present on-site during construction that involve ground disturbing activities identified herein. The Native American monitor(s) shall be responsible for the following activities during the monitoring, as appropriate: • Complete monitoring logs on a daily basis, providing descriptions of the daily activities, including construction activities, locations, soil, and any cultural materials identified. • The on-site monitoring shall end when the project site grading and excavation activities are completed, or when the tribal representatives and monitor have indicated that the site has a low potential for tribal cultural resources. • Upon discovery, the tribal and/or archaeological monitor/consultant/consultant shall immediately divert work a minimum of 150 feet and place an exclusion zone around the burial. The monitor/consultant(s) shall then notify the tribe, the qualified lead archaeologist, and the construction manager who shall call the coroner. • Work will continue to be diverted while the coroner determines whether the remains are Native American. The discovery is to be kept confidential and secure to prevent any further disturbance. If the finds are determined to be Native American, the coroner will notify the NAHC, as mandated by state law, who will then appoint a Most Likely Descendent (MLD). • If the Gabrieleno Band of Mission Indians - Kizh Nation is designated MLD, the following treatment measures shall be implemented. • Prior to the continuation of ground-disturbing activities, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. • In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains shall be covered with muslin cloth and

	a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. • The tribe shall make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that the burials will be removed. The tribe will work closely with the qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. • If data recovery is approved by the tribe, documentation shall be taken that includes, at a minimum, detailed descriptive notes and sketches. Additional types of documentation shall be approved by the tribe for data recovery purposes. • Cremations will either be removed in bulk or by means as necessary to ensure completely recovery of all material. If the discovery of human remains includes Each occurrence of human remains and associated funerary objects shall be stored using opaque cloth bags. All human remains, funerary objects, sacred objects, and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the Project Site but at a location agreed upon between the tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered

EXECUTIVE SUMMARY

ES.1 SUMMARY OF FINDINGS

The results of this *Pioneer Boulevard Development Air Quality Impact Analysis* are summarized below based on the significance criteria in Section 3 of this report consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines (1). Table ES-1 shows the findings of significance for each potential air quality impact under CEQA before and after any required mitigation measures described below.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Regional Construction Emissions	3.4	*Less Than Significant*	*n/a*
Localized Construction Emissions	3.6	*Less Than Significant*	*n/a*
Regional Operational Emissions	3.5	*Less Than Significant*	*n/a*
Localized Operational Emissions	3.7	*Less Than Significant*	*n/a*

Cumulative Impacts	3.12	*Less Than Significant*	*n/a*

ES.2 STANDARD REGULATORY REQUIREMENTS/BEST AVAILABLE CONTROL MEASURES

Measures listed below (or equivalent language) shall appear on all Project grading plans, construction specifications and bid documents, and the City shall ensure such language is incorporated prior to issuance of any development permits. South Coast Air Quality Management District (SCAQMD) Rules that are currently applicable during construction activity for this Project include but are not limited to Rule 403 (Fugitive Dust) (2) and Rule 1113 (Architectural Coatings) (3). It should be noted that these Best Available Control Measures (BACMs) are not mitigation as

they are standard regulatory requirements. As such, credit for Rule 403 and Rule 1113 have been taken.

BACM AQ-1

The contractor shall adhere to applicable measures contained in Table 1 of Rule 403 including, but not limited to (2):

- All clearing, grading, earth-moving, or excavation activities shall cease when winds exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.
- The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the Project are watered at least three (3) times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.
- The contractor shall ensure that traffic speeds on unpaved roads and Project site areas are limited to 15 miles per hour or less.

BACM AQ-2

The following measures shall be incorporated into Project plans and specifications as implementation of SCAQMD Rule 1113 (3):

- Only "Low-Volatile Organic Compounds (VOC)" paints (no more than 50 gram/liter of VOC) consistent with SCAQMD Rule 1113 shall be used.

ES.3 CONSTRUCTION-SOURCE MITIGATION MEASURES

The Project would not result in an exceedance of any regional or localized construction-source emissions thresholds. As such, the Project would not result in any significant impacts and no mitigation measures are required.

ES.4 OPERATIONAL-SOURCE MITIGATION MEASURES

The Project would not result in an exceedance of any regional or localized operational-source emissions thresholds. As such, the Project would not result in any significant impacts and no mitigation measures are required.

This page intentionally left blank

1 INTRODUCTION

This report presents the results of the air quality impact analysis (AQIA) prepared by Urban Crossroads, Inc., for the proposed Pioneer Boulevard Development (Project). The purpose of this AQIA is to evaluate the potential impacts to air quality associated with construction and operation of the proposed Project and recommend measures to mitigate impacts considered potentially significant in comparison to thresholds established by the SCAQMD.

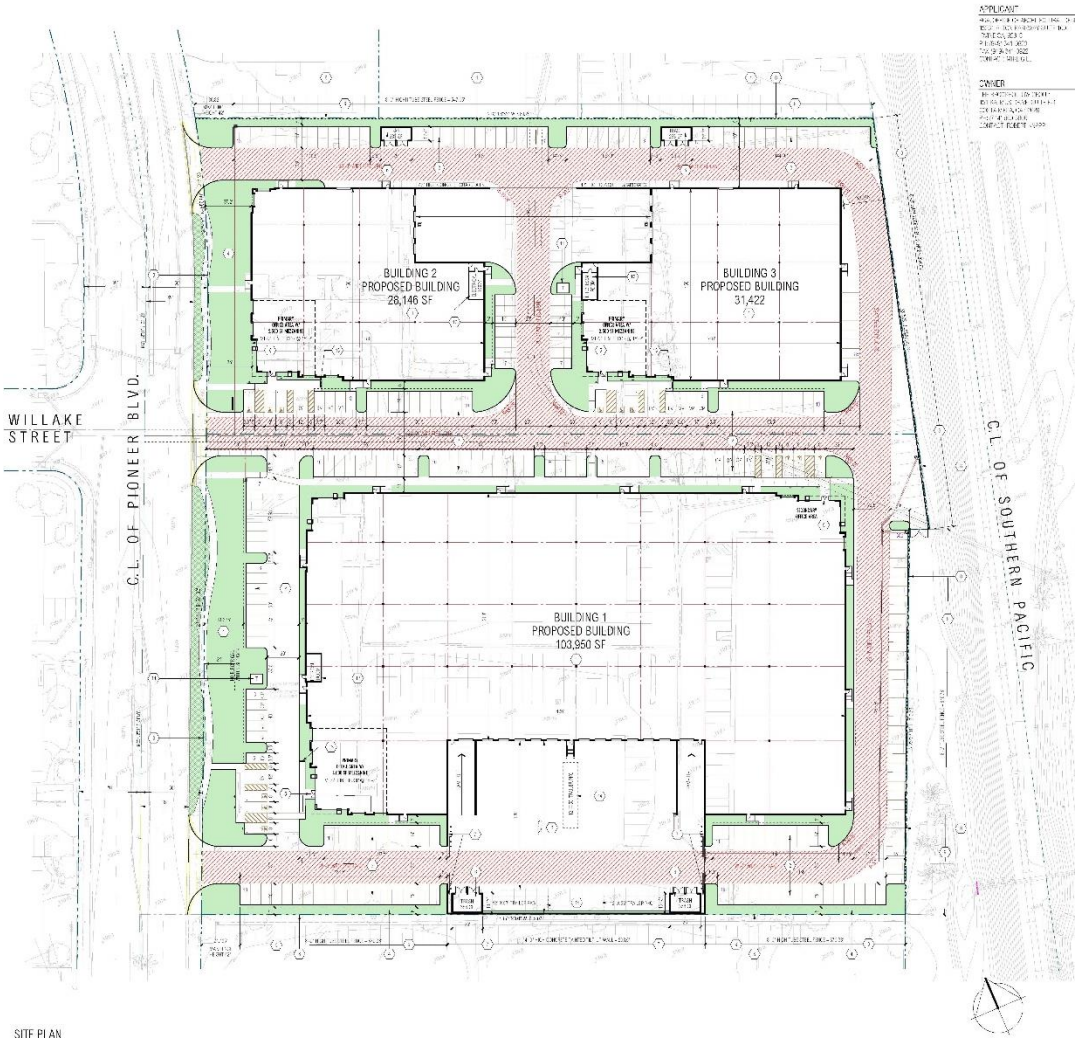
1.1 SITE LOCATION

The proposed Pioneer Boulevard Development is located at 9920 Pioneer Boulevard, in the City of Santa Fe Springs, as shown on Exhibit 1-A.

1.2 PROJECT STUDY AREA

The Project site is currently developed with 149,605 square feet (sf) business park and 8,064 sf general office building uses. The Project site is located within a developed and urban area with the City Santa Fe Springs. The surrounding land uses are described below.

- North: Immediately north of the project site are business park uses, designated as Business Park in the General Plan and zoned Limited Manufacturing (ML). A single-family residential neighborhood is to the northwest of the project site, designated as Single Family Residential in the General Plan and zoned Single Family (R-1).
- West: Adjacent to the project site are business park uses, designated as Business Park in the General Plan and zoned Limited Manufacturing (ML). Beyond the business park is a multi-family development designated as Multiple Family Residential and zoned Multiple Family – Planned Development Overlay Zone (R-3-PD).
- South: Immediately south of the project site are business park uses, designated and zoned with the same land uses as the project site: Business Park and Limited Manufacturing (ML). The City of Santa Fe Springs Civic Center is located southwest of the project site with a designation of Public Facilities by the General Plan and zoned a combination of Community Commercial (C-4), Public Facilities (PF), and Limited Manufacturing (ML) each with a Design Overlay zone.
- East: Across from the Southern Pacific railroad tracks are industrial uses, east of the project site. The General Plan designates this area as Industrial. The City zones the area as Heavy Manufacturing (M-2).



1.3 PROJECT DESCRIPTION

Exhibit 1-B illustrates the preliminary site plan. As indicated on Exhibit 1-B, the Project is proposed to consist 163,518 sf of general light industrial use within 3 buildings. The Project is anticipated to be constructed in a single phase by the year 2021. At the time this air quality analysis was prepared, the future tenants of the proposed Project were unknown. This air study is intended to describe emission impacts associated with the expected typical 24-hour, seven days per week operational activities at the Project site.

EXHIBIT 1-A: LOCATION MAP

EXHIBIT 1-B: SITE PLAN

This page intentionally left blank

2 AIR QUALITY SETTING

This section provides an overview of the existing air quality conditions in the Project area and region.

2.1 SOUTH COAST AIR BASIN

The Project site is located in the SCAB within the jurisdiction of SCAQMD (4). The SCAQMD was created by the 1977 Lewis-Presley Air Quality Management Act, which merged four county air pollution control bodies into one regional district. Under the Act, the SCAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards. As previously stated, the Project site is located within the SCAB, a 6,745-square mile subregion of the SCAQMD, which includes portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County.

The SCAB is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Los Angeles County portion of the Mojave Desert Air Basin is bounded by the San Gabriel Mountains to the south and west, the Los Angeles / Kern County border to the north, and the Los Angeles / San Bernardino County border to the east. The Riverside County portion of the Salton Sea Air Basin is bounded by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley.

2.2 REGIONAL CLIMATE

The regional climate has a substantial influence on air quality in the SCAB. In addition, the temperature, wind, humidity, precipitation, and amount of sunshine influence the air quality.

The annual average temperatures throughout the SCAB vary from the low to middle 60s (degrees Fahrenheit). Due to a decreased marine influence, the eastern portion of the SCAB shows greater variability in average annual minimum and maximum temperatures. January is the coldest month throughout the SCAB, with average minimum temperatures of 47°F in downtown Los Angeles and 36°F in San Bernardino. All portions of the SCAB have recorded maximum temperatures above 100°F.

Although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB, and the conversion of sulfur dioxide to sulfates is heightened in air with high relative humidity. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is 71 percent along the coast and 59 percent inland. Since the ocean effect is dominant, periods of heavy early morning fog are frequent and low stratus clouds are a characteristic feature. These effects decrease with distance from the coast.

More than 90 percent of the SCAB's rainfall occurs from November through April. The annual average rainfall varies from approximately nine inches in Riverside to fourteen inches in

downtown Los Angeles. Monthly and yearly rainfall totals are extremely variable. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the SCAB with frequency being higher near the coast.

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year there are approximately 10 hours of possible sunshine, and on the longest day of the year there are approximately 14½ hours of possible sunshine.

The importance of wind to air pollution is considerable. The direction and speed of the wind determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the "Catalina Eddy," a low level cyclonic (counterclockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections.

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level.

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter, when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as NO_X and CO from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline.

2.3 WIND PATTERNS AND PROJECT LOCATION

The distinctive climate of the Project area and the SCAB is determined by its terrain and geographical location. The SCAB is located in a coastal plain with connecting broad valleys and

low hills, bounded by the Pacific Ocean in the southwest quadrant with high mountains forming the remainder of the perimeter.

Wind patterns across the south coastal region are characterized by westerly and southwesterly onshore winds during the day and easterly or northeasterly breezes at night. Winds are characteristically light although the speed is somewhat greater during the dry summer months than during the rainy winter season.

2.4 CRITERIA POLLUTANTS

Criteria pollutants are pollutants that are regulated through the development of human health based and/or environmentally based criteria for setting permissible levels. Criteria pollutants, their typical sources, and health effects are identified below (5):

TABLE 2-1: CRITERIA POLLUTANTS

Criteria Pollutant	Description	Sources	Health Effects
CO	CO is a colorless, odorless gas produced by the incomplete combustion of carbon-containing fuels, such as gasoline or wood. CO concentrations tend to be the highest during the winter morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion engines, unlike ozone, motor vehicles operating at slow speeds are the primary source of CO in the SCAB. The highest ambient CO concentrations are generally found near congested transportation corridors and intersections.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Individuals with a deficient blood supply to the heart are the most susceptible to the adverse effects of CO exposure. The effects observed include earlier onset of chest pain with exercise, and electrocardiograph changes indicative of decreased oxygen supply to the heart. Inhaled CO has no direct toxic effect on the lungs but exerts its effect on tissues by interfering with oxygen transport and competing with oxygen to combine with hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, conditions with an increased demand for oxygen supply can be adversely affected by exposure to CO. Individuals most at risk include fetuses, patients with diseases involving heart and blood vessels, and patients with chronic hypoxemia (oxygen deficiency) as seen at high altitudes.

Criteria Pollutant	Description	Sources	Health Effects
Sulfur Dioxide (SO_2)	SO_2 is a colorless, extremely irritating gas or liquid. It enters the atmosphere as a pollutant mainly as a result of burning high sulfur-content fuel oils and coal and from chemical processes occurring at chemical plants and refineries. When SO_2 oxidizes in the atmosphere, it forms sulfates (SO_4). Collectively, these pollutants are referred to as sulfur oxides (SO_X)	Coal or oil burning power plants and industries, refineries, diesel engines	A few minutes of exposure to low levels of SO_2 can result in airway constriction in some asthmatics, all of whom are sensitive to its effects. In asthmatics, increase in resistance to air flow, as well as reduction in breathing capacity leading to severe breathing difficulties, are observed after acute exposure to SO_2. In contrast, healthy individuals do not exhibit similar acute responses even after exposure to higher concentrations of SO_2. Animal studies suggest that despite SO_2 being a respiratory irritant, it does not cause substantial lung injury at ambient concentrations. However, very high levels of exposure can cause lung edema (fluid accumulation), lung tissue damage, and sloughing off of cells lining the respiratory tract. Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient SO_2 levels. In these studies, efforts to separate the effects of SO_2 from those of fine particles have not been successful. It is not clear whether the two pollutants act synergistically, or one pollutant alone is the predominant factor.

Criteria Pollutant	Description	Sources	Health Effects
NO_X	NO_X consist of nitric oxide (NO), nitrogen dioxide (NO_2) and nitrous oxide (N_2O) and are formed when nitrogen (N_2) combines with oxygen (O_2). Their lifespan in the atmosphere ranges from one to seven days for nitric oxide and nitrogen dioxide, to 170 years for nitrous oxide. Nitrogen oxides are typically created during combustion processes and are major contributors to smog formation and acid deposition. NO_2 is a criteria air pollutant and may result in numerous adverse health effects; it absorbs blue light, resulting in a brownish-red cast to the atmosphere and reduced visibility. Of the seven types of nitrogen oxide compounds, NO_2 is the most abundant in the atmosphere. As ambient concentrations of NO_2 are related to traffic density, commuters in heavy traffic may be exposed to higher concentrations of NO_2 than those indicated by regional monitoring station.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Population-based studies suggest that an increase in acute respiratory illness, including infections and respiratory symptoms in children (not infants), is associated with long-term exposure to NO_2 at levels found in homes with gas stoves, which are higher than ambient levels found in Southern California. Increase in resistance to air flow and airway contraction is observed after short-term exposure to NO_2 in healthy subjects. Larger decreases in lung functions are observed in individuals with asthma or chronic obstructive pulmonary disease (e.g., chronic bronchitis, emphysema) than in healthy individuals, indicating a greater susceptibility of these sub-groups. In animals, exposure to levels of NO_2 considerably higher than ambient concentrations result in increased susceptibility to infections, possibly due to the observed changes in cells involved in maintaining immune functions. The severity of lung tissue damage associated with high levels of ozone exposure increases when animals are exposed to a combination of ozone and NO_2.
Ozone (O_3)	O_3 is a highly reactive and unstable gas that is formed when VOCs and NO_X, both byproducts of internal combustion engine exhaust, undergo slow photochemical reactions in the presence of sunlight. Ozone concentrations are generally	Formed when reactive organic gases (ROG) and nitrogen oxides react in the presence of sunlight. ROG sources	Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the most susceptible sub-groups for ozone effects.

Criteria Pollutant	Description	Sources	Health Effects
	highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable to the formation of this pollutant.	include any source that burns fuels, (e.g., gasoline, natural gas, wood, oil) solvents, petroleum processing and storage and pesticides.	Short-term exposure (lasting for a few hours) to ozone at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. Elevated ozone levels are associated with increased school absences. In recent years, a correlation between elevated ambient ozone levels and increases in daily hospital admission rates, as well as mortality, has also been reported. An increased risk for asthma has been found in children who participate in multiple outdoor sports and live in communities with high ozone levels. Ozone exposure under exercising conditions is known to increase the severity of the responses described above. Animal studies suggest that exposure to a combination of pollutants that includes ozone may be more toxic than exposure to ozone alone. Although lung volume and resistance changes observed after a single exposure diminish with repeated exposures, biochemical and cellular changes appear to persist, which can lead to subsequent lung structural changes.
Particulate Matter	PM_{10} (Particulate Matter less than 10 microns): A major air pollutant consisting of tiny solid or liquid particles of soot, dust,	Sources of PM_{10} include road dust, windblown dust and construction. Also	A consistent correlation between elevated ambient fine particulate matter (PM_{10} and $PM_{2.5}$) levels and an

Criteria Pollutant	Description	Sources	Health Effects
	smoke, fumes, and aerosols. Particulate matter pollution is a major cause of reduce visibility (haze) which is caused by the scattering of light and consequently the significant reduction air clarity. The size of the particles (10 microns or smaller, about 0.0004 inches or less) allows them to easily enter the lungs where they may be deposited, resulting in adverse health effects. Additionally, it should be noted that PM_{10} is considered a criteria air pollutant. $PM_{2.5}$ (Particulate Matter less than 2.5 microns): A similar air pollutant to PM_{10} consisting of tiny solid or liquid particles which are 2.5 microns or smaller (which is often referred to as fine particles). These particles are formed in the atmosphere from primary gaseous emissions that include sulfates formed from SO_2 release from power plants and industrial facilities and nitrates that are formed from NO_X release from power plants, automobiles and other types of combustion sources. The chemical composition of fine particles highly depends on location, time of year, and weather conditions. $PM_{2.5}$ is a criteria air pollutant.	formed from other pollutants (acid rain, NO_X, SO_X, organics). Incomplete combustion of any fuel. $PM_{2.5}$ comes from fuel combustion in motor vehicles, equipment and industrial sources, residential and agricultural burning. Also formed from reaction of other pollutants (acid rain, NO_X, SO_X, organics).	increase in mortality rates, respiratory infections, number and severity of asthma attacks and the number of hospital admissions has been observed in different parts of the United States and various areas around the world. In recent years, some studies have reported an association between long-term exposure to air pollution dominated by fine particles and increased mortality, reduction in lifespan, and an increased mortality from lung cancer. Daily fluctuations in $PM_{2.5}$ concentration levels have also been related to hospital admissions for acute respiratory conditions in children, to school and kindergarten absences, to a decrease in respiratory lung volumes in normal children, and to increased medication use in children and adults with asthma. Recent studies show lung function growth in children is reduced with long term exposure to particulate matter. The elderly, people with pre-existing respiratory or cardiovascular disease, and children appear to be more susceptible to the effects of high levels of PM_{10} and $PM_{2.5}$.
Volatile Organic Compounds (VOC)	VOCs are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. VOCs contribute to the formation of smog through atmospheric photochemical reactions and/or may be toxic. Compounds of carbon (also known as organic	Organic chemicals are widely used as ingredients in household products. Paints, varnishes and wax all contain organic solvents, as do many cleaning, disinfecting,	Breathing VOCs can irritate the eyes, nose and throat, can cause difficulty breathing and nausea, and can damage the central nervous system as well as other organs. Some VOCs can cause cancer. Not all VOCs have all these health

Criteria Pollutant	Description	Sources	Health Effects
	compounds) have different levels of reactivity; that is, they do not react at the same speed or do not form ozone to the same extent when exposed to photochemical processes. VOCs often have an odor, and some examples include gasoline, alcohol, and the solvents used in paints. Exceptions to the VOC designation include carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. VOCs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms VOC and ROG (see below) interchangeably.	cosmetic, degreasing and hobby products. Fuels are made up of organic chemicals. All of these products can release organic compounds while you are using them, and, to some degree, when they are stored.	effects, though many have several.
ROG	Similar to VOC, ROGs are also precursors in forming ozone and consist of compounds containing methane, ethane, propane, butane, and longer chain hydrocarbons, which are typically the result of some type of combustion/decomposition process. Smog is formed when ROG and nitrogen oxides react in the presence of sunlight. ROGs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms ROG and VOC (see previous) interchangeably.	Sources similar to VOCs.	Health effects similar to VOCs.
Lead (Pb)	Lead is a heavy metal that is highly persistent in the environment and is considered a criteria pollutant. In the past, the primary source of lead in the air was emissions from vehicles burning leaded gasoline. The major sources of lead emissions are ore and metals processing, particularly lead smelters, and piston-engine aircraft operating on leaded aviation gasoline. Other stationary sources include	Metal smelters, resource recovery, leaded gasoline, deterioration of lead paint.	Fetuses, infants, and children are more sensitive than others to the adverse effects of Pb exposure. Exposure to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased Pb levels are

Criteria Pollutant	Description	Sources	Health Effects
	waste incinerators, utilities, and lead-acid battery manufacturers. It should be noted that the Project does not include operational activities such as metal processing or lead acid battery manufacturing. As such, the Project is not anticipated to generate a quantifiable amount of lead emissions.		associated with increased blood pressure. Pb poisoning can cause anemia, lethargy, seizures, and death; although it appears that there are no direct effects of Pb on the respiratory system. Pb can be stored in the bone from early age environmental exposure, and elevated blood Pb levels can occur due to breakdown of bone tissue during pregnancy, hyperthyroidism (increased secretion of hormones from the thyroid gland) and osteoporosis (breakdown of bony tissue). Fetuses and breast-fed babies can be exposed to higher levels of Pb because of previous environmental Pb exposure of their mothers.
Odor	Odor means the perception experienced by a person when one or more chemical substances in the air come into contact with the human olfactory nerves.	Odors can come from many sources including animals, human activities, industry, natures, and vehicles.	Offensive odors can potentially affect human health in several ways. First, odorant compounds can irritate the eye, nose, and throat, which can reduce respiratory volume. Second, studies have shown that the VOCs that cause odors can stimulate sensory nerves to cause neurochemical changes that might influence health, for instance, by compromising the immune system. Finally, unpleasant odors can trigger memories or attitudes linked to unpleasant odors, causing cognitive and emotional effects such as stress.

2.5 EXISTING AIR QUALITY

Existing air quality is measured at established SCAQMD air quality monitoring stations. Monitored air quality is evaluated in the context of ambient air quality standards. These standards are the levels of air quality that are considered safe, with an adequate margin of safety, to protect the public health and welfare. National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) currently in effect are shown in Table 2-2 (6).

The determination of whether a region's air quality is healthful or unhealthful is determined by comparing contaminant levels in ambient air samples to the state and federal standards. At the time of this AQIA, the most recent state and federal standards were updated by CARB on May ,4 2016 and are presented in Table 2-2. The air quality in a region is considered to be in attainment by the state if the measured ambient air pollutant levels for O_3, CO (except 8-hour Lake Tahoe), SO_2 (1 and 24 hour), NO_2, PM_{10}, and $PM_{2.5}$ are not to be exceeded. All others are not to be equaled or exceeded. It should be noted that the three-year period is presented for informational purposes and is not the basis for how the State assigns attainment status. Attainment status for a pollutant means that the Air District meets the standards set by the EPA or the California EPA. Conversely, nonattainment means that an area has monitored air quality that does not meet the NAAQS or CAAQS standards. In order to improve air quality in nonattainment areas, a State Implementation Plan (SIP) is drafted. The SIP outlines the measures that the state will take to improve air quality. Once nonattainment areas meet the standards and additional redesignation requirements, the EPA will designate the area as a maintenance area (7).

TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (1 OF 2)

Ambient Air Quality Standards						
Pollutant	**Averaging Time**	**California Standards** [1]		**National Standards** [2]		
		Concentration [3]	**Method** [4]	**Primary** [3,5]	**Secondary** [3,6]	**Method** [7]
Ozone (O_3)[8]	1 Hour	0.09 ppm (180 µg/m^3)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m^3)		0.070 ppm (137 µg/m^3)		
Respirable Particulate Matter (PM10)[9]	24 Hour	50 µg/m^3	Gravimetric or Beta Attenuation	150 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m^3		—		
Fine Particulate Matter (PM2.5)[9]	24 Hour	—	—	35 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m^3	Gravimetric or Beta Attenuation	12.0 µg/m^3	15 µg/m^3	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m^3)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m^3)		9 ppm (10 mg/m^3)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		—	—	
Nitrogen Dioxide (NO_2)[10]	1 Hour	0.18 ppm (339 µg/m^3)	Gas Phase Chemiluminescence	100 ppb (188 µg/m^3)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m^3)		0.053 ppm (100 µg/m^3)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1 Hour	0.25 ppm (655 µg/m^3)	Ultraviolet Fluorescence	75 ppb (196 µg/m^3)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m^3)	
	24 Hour	0.04 ppm (105 µg/m^3)		0.14 ppm (for certain areas)[11]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[11]	—	
Lead[12,13]	30 Day Average	1.5 µg/m^3	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m^3 (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m^3		
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	**No National Standards**		
Sulfates	24 Hour	25 µg/m^3	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24 Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

See footnotes on next page …

TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (2 OF 2)

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.

3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.

5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.

8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

12. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

14. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

For more information please call ARB-PIO at (916) 322-2990 **California Air Resources Board (5/4/16)**

2.6 REGIONAL AIR QUALITY

Air pollution contributes to a wide variety of adverse health effects. The EPA has established NAAQS for six of the most common air pollutants: O_3, PM_{10}, $PM_{2.5}$, CO, NO_2, SO_2 and Pb which are known as criteria pollutants. The SCAQMD monitors levels of various criteria pollutants at 37 permanent monitoring stations and 5 single-pollutant source Pb air monitoring sites throughout the air district (8). On February 20, 2019, CARB posted the 2018 amendments to the state and national area designations. See Table 2-3 for attainment designations for the SCAB (9). Appendix 2.1 provides geographic representation of the state and federal attainment status for applicable criteria pollutants within the SCAB.

TABLE 2-3: ATTAINMENT STATUS OF CRITERIA POLLUTANTS IN THE SCAB

Criteria Pollutant	State Designation	Federal Designation
O_3 – 1-hour standard	Nonattainment	--
O_3 – 8-hour standard	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Attainment
$PM_{2.5}$	Nonattainment	Nonattainment
CO	Attainment	Unclassifiable/Attainment
NO_2	Attainment	Unclassifiable/Attainment
SO_2	Unclassifiable/Attainment	Unclassifiable/Attainment
Pb[1]	Attainment	Unclassifiable/Attainment

Note: See Appendix 2.1 for a detailed map of State/National Area Designations within the SCAB
"-" = The national 1-hour O_3 standard was revoked effective June 15, 2005

2.7 LOCAL AIR QUALITY

The Project site is located within the Source Receptor Area (SRA) 5 (10). Relative to the Project site, the nearest long-term air quality monitoring site for O_3, CO, NO_2, and $PM_{2.5}$ is the SCAQMD South San Gabriel Valley monitoring station (within the neighboring SRA 11), located approximately 4.61 miles north of the Project site. The SCAQMD Central Los Angeles monitoring station (located in SRA 1) is the nearest monitoring station located approximately 11.84 miles northwest of the Project site that monitors PM_{10}. It should be noted that both the South San Gabriel Valley and Central Los Angeles monitoring stations were utilized as there are no monitoring stations located within SRA 5.

The most recent three (3) years of data available is shown on Table 2-4 and identifies the number of days ambient air quality standards were exceeded for the study area, which is considered to be representative of the local air quality at the Project site. Data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$ for 2016 through 2018 was obtained from the SCAQMD Air Quality Data Tables (11). Additionally,

[1] The Federal nonattainment designation for lead is only applicable towards the Los Angeles County portion of the SCAB.

data for SO_2 has been omitted as attainment is regularly met in the SCAB and few monitoring stations measure SO_2 concentrations.

TABLE 2-4: PROJECT AREA AIR QUALITY MONITORING SUMMARY 2016-2018

POLLUTANT	STANDARD	YEAR		
		2016	2017	2018
O_3				
Maximum Federal 1-Hour Concentration (ppm)		0.111	0.118	0.115
Maximum Federal 8-Hour Concentration (ppm)		0.081	0.086	0.082
Number of Days Exceeding Federal 1-Hour Standard	>0.07 ppm	0	0	0
Number of Days Exceeding State 1-Hour Standard	> 0.09 ppm	9	7	3
Number of Days Exceeding Federal 8-Hour Standard	> 0.070 ppm	6	9	5
Number of Days Exceeding State 8-Hour Standard	> 0.070 ppm	6	9	5
CO				
Maximum Federal 1-Hour Concentration	> 35 ppm	2.8	2.5	2
Maximum Federal 8-Hour Concentration	> 20 ppm	1.7	2.2	1.8
NO_2				
Maximum Federal 1-Hour Concentration	> 0.100 ppm	0.06	0.08	0.08
Annual Federal Standard Design Value		0.02	0.02	0.02
PM_{10}				
Maximum Federal 24-Hour Concentration ($\mu g/m^3$)	> 150 $\mu g/m^3$	67	96	81
Annual Federal Arithmetic Mean ($\mu g/m^3$)		32.4	34.4	34.1
Number of Days Exceeding Federal 24-Hour Standard	> 150 $\mu g/m^3$	0	0	0
Number of Days Exceeding State 24-Hour Standard	> 50 $\mu g/m^3$	18	41	31
$PM_{2.5}$				
Maximum Federal 24-Hour Concentration ($\mu g/m^3$)	> 35 $\mu g/m^3$	46.59	49.5	35.4
Annual Federal Arithmetic Mean ($\mu g/m^3$)	> 12 $\mu g/m^3$	11.75	12.23	12.31
Number of Days Exceeding Federal 24-Hour Standard	> 35 $\mu g/m^3$	2	1	0

Source: Data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$ was obtained from SCAQMD Air Quality Data Tables.

2.8 REGULATORY BACKGROUND

2.8.1 FEDERAL REGULATIONS

The EPA is responsible for setting and enforcing the NAAQS for O_3, CO, NO_x, SO_2, PM_{10}, and Pb (12). The EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of the CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (13). The CAA also mandates that states submit and implement SIPs for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions) (14) (15). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O_3, NO_2, SO_2, PM_{10}, CO, $PM_{2.5}$, and Pb. The NAAQS were amended in July 1997 to include an additional standard for O_3 and to adopt a NAAQS for $PM_{2.5}$. Table 2-3 (previously presented) provides the NAAQS within the SCAB.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and NO_X. NO_X is a collective term that includes all forms of nitrogen oxides (NO, NO_2, NO_3) which are emitted as byproducts of the combustion process.

2.7.2 CALIFORNIA REGULATIONS

California Air Resource Board. The CARB, which became part of the CalEPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. AB 2595 mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. The CARB established the CAAQS for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for sulfates, visibility, hydrogen sulfide, and vinyl chloride. However, at this time, hydrogen sulfide and vinyl chloride are not measured at any monitoring stations in the SCAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (16) (12).

Local air quality management districts, such as the SCAQMD, regulate air emissions from stationary sources such as commercial and industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare air quality management plans that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;

- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g. motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a five percent or more annual reduction in emissions or 15 percent or more in a period of three years for ROGs, NO_X, CO and PM_{10}. However, air basins may use alternative emission reduction strategy that achieves a reduction of less than five percent per year under certain circumstances.

Title 24 Energy Efficiency Standards and California Green Building Standards. California Code of Regulations Title 24 Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings, was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases greenhouse gas (GHG) emissions. The 2019 version of Title 24 was adopted by the California Energy Commission (CEC) and will become effective on January 1, 2020. As such, the analysis herein assumes compliance with the 2019 Title 24 Standards.

The CEC indicates that the 2019 Title 24 standards will require solar photovoltaic systems for new homes, establish requirements for newly constructed healthcare facilities, encourage demand responsive technologies for residential buildings, update indoor and outdoor lighting for nonresidential buildings. The CEC anticipates that single-family homes built with the 2019 standards will use approximately 7 percent less energy compared to the residential homes built under the 2016 standards. Additionally, after implementation of solar photovoltaic systems, homes built under the 2019 standards will about 53 percent less energy than homes built under the 2016 standards. Nonresidential buildings will use approximately 30 percent less energy due to lighting upgrades (17).

California Code of Regulations, Title 24, Part 11: California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect on January 1, 2011, and is administered by the California Building Standards Commission. CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2019 California Green Building Code Standards that will be effective January 1, 2020. Local jurisdictions are permitted to adopt more stringent requirements, as state law provides methods for local enhancements. CALGreen recognizes that many jurisdictions have developed existing construction and demolition ordinances and defers to them as the ruling guidance provided, they establish a minimum 65 percent diversion requirement. The code also provides exemptions for areas not served by construction and demolition recycling infrastructure. The State Building Code provides the minimum standard that buildings must meet in order to be certified for occupancy, which is generally enforced by the local building official. 2019 CALGreen standards are applicable to the Project and require (18):

- Short-term bicycle parking. If the new project or an additional alteration is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors' entrance, readily visible to passers-by, for 5 percent of new visitor motorized vehicle parking spaces being added, with a minimum of one two-bike capacity rack (5.106.4.1.1).
- Long-term bicycle parking. For new buildings with tenant spaces that have 10 or more tenant-occupants, provide secure bicycle parking for 5 percent of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility (5.106.4.1.2).
- Designated parking. In new projects or additions to alterations that add 10 or more vehicular parking spaces, provide designated parking for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles as shown in Table 5.106.5.2 (5.106.5.2).
- Construction waste management. Recycle and/or salvage for reuse a minimum of 65 percent of the nonhazardous construction and demolition waste in accordance with Section 5.408.1.1. 5.405.1.2, or 5.408.1.3; or meet a local construction and demolition waste management ordinance, whichever is more stringent (5.408.1).
- Excavated soil and land clearing debris. 100 percent of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reused or recycled. For a phase project, such material may be stockpiled on site until the storage site is developed (5.408.3).
- Recycling by Occupants. Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of non-hazardous materials for recycling, including (at a minimum) paper, corrugated cardboard, glass, plastics, organic waste, and metals or meet a lawfully enacted local recycling ordinance, if more restrictive (5.410.1).
- Water conserving plumbing fixtures and fittings. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with the following:
    - Water Closets. The effective flush volume of all water closets shall not exceed 1.28 gallons per flush (5.303.3.1)
    - Urinals. The effective flush volume of wall-mounted urinals shall not exceed 0.125 gallons per flush (5.303.3.2.1). The effective flush volume of floor-mounted or other urinals shall not exceed 0.5 gallons per flush (5.303.3.2.2).
    - Showerheads. Single showerheads shall have a minimum flow rate of not more than 1.8 gallons per minute and 80 psi (5.303.3.3.1). When a shower is served by more than one showerhead, the combine flow rate of all showerheads and/or other shower outlets controlled by a single valve shall not exceed 1.8 gallons per minute at 80 psi (5.303.3.3.2).
    - Faucets and fountains. Nonresidential lavatory faucets shall have a maximum flow rate of note more than 0.5 gallons per minute at 60 psi (5.303.3.4.1). Kitchen faucets shall have a maximum flow rate of not more than 1.8 gallons per minute of 60 psi (5.303.3.4.2). Wash fountains shall have a maximum flow rate of not more than 1.8 gallons per minute (5.303.3.4.3). Metering faucets shall not deliver more than 0.20 gallons per cycle (5.303.3.4.4). Metering faucets for wash fountains shall have a maximum flow rate not more than 0.20 gallons per cycle (5.303.3.4.5).
- Outdoor portable water use in landscaped areas. Nonresidential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient (MWELO), whichever is more stringent (5.304.1).
- Water meters. Separate submeters or metering devices shall be installed for new buildings or additions in excess of 50,000 sf or for excess consumption where any tenant within a new building

or within an addition that is project to consume more than 1,000 gal/day (5.303.1.1 and 5.303.1.2).

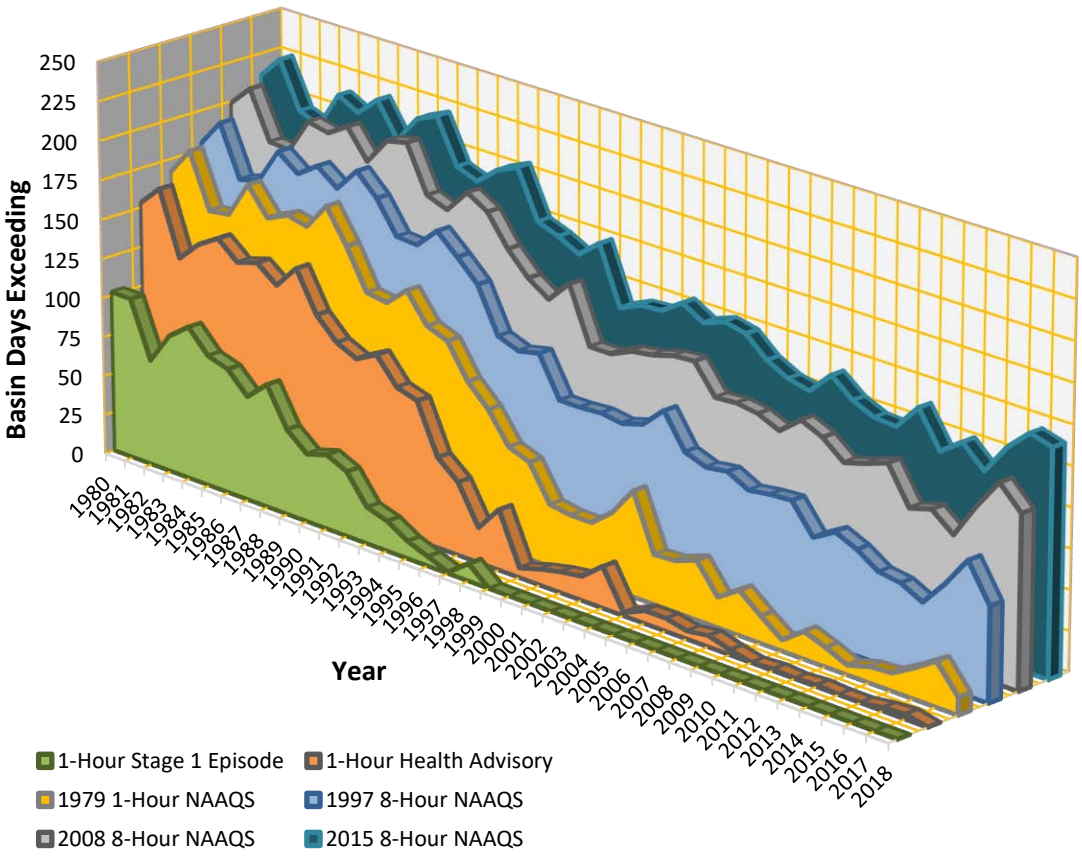
- Outdoor water use in rehabilitated landscape projects equal or greater than 2,500 sf. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 sf requiring a building or landscape permit (5.304.3).
- Commissioning. For new buildings 10,000 sf and over, building commissioning shall b included in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (5.410.2).

2.8.3 AIR QUALITY MANAGEMENT PLANNING

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the state and federal ambient air quality standards (19). AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. A detailed discussion on the AQMP and Project consistency with the AQMP is provided in Section 3.9.

2.9 REGIONAL AIR QUALITY IMPROVEMENT

The Project is within the jurisdiction of the SCAQMD. In 1976, California adopted the Lewis Air Quality Management Act which created SCAQMD from a voluntary association of air pollution control districts in Los Angeles, Orange, Riverside, and San Bernardino counties. The geographic area of which SCAQMD consists is known as the SCAB. SCAQMD develops comprehensive plans and regulatory programs for the region to attain federal standards by dates specified in federal law. The agency is also responsible for meeting state standards by the earliest date achievable, using reasonably available control measures.



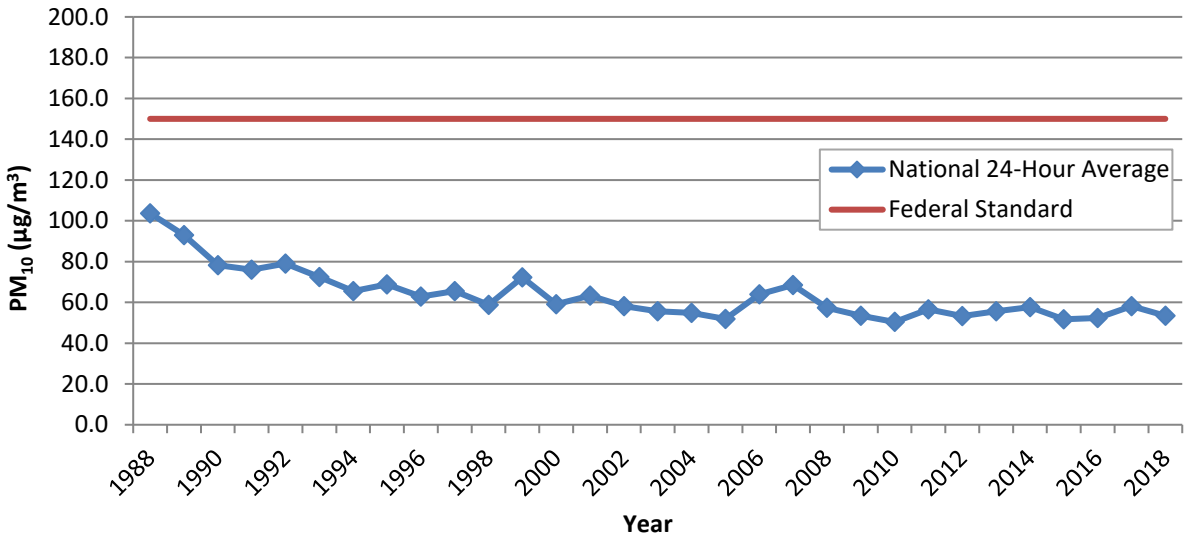
SCAQMD rule development through the 1970s and 1980s resulted in dramatic improvement in SCAB air quality. Nearly all control programs developed through the early 1990s relied on (i) the development and application of cleaner technology; (ii) add-on emission controls, and (iii) uniform CEQA review throughout the SCAB. Industrial emission sources have been significantly reduced by this approach and vehicular emissions have been reduced by technologies implemented at the state level by CARB.

As discussed above, the SCAQMD is the lead agency charged with regulating air quality emission reductions for the entire SCAB. SCAQMD created AQMPs which represent a regional blueprint for achieving healthful air on behalf of the 16 million residents of the SCAB. The 2012 AQMP states, "the remarkable historical improvement in air quality since the 1970's is the direct result of Southern California's comprehensive, multiyear strategy of reducing air pollution from all sources as outlined in its AQMPs," (20).

Emissions of O_3, NO_X, VOC, and CO have been decreasing in the SCAB since 1975 and are projected to continue to decrease through 2020 (21). These decreases result primarily from motor vehicle controls and reductions in evaporative emissions. Although vehicle miles traveled in the SCAB continue to increase, NO_X and VOC levels are decreasing because of the mandated controls on motor vehicles and the replacement of older polluting vehicles with lower-emitting

vehicles. NO_X emissions from electric utilities have also decreased due to use of cleaner fuels and renewable energy. O_3 contour maps show that the number of days exceeding the 8-hour NAAQS has decreased between 1997 and 2007. In the 2007 period, there was an overall decrease in exceedance days compared with the 1997 period. O_3 levels in the SCAB have decreased substantially over the last 30 years as shown in Table 2-5 (22). Today, the maximum measured concentrations are approximately one-third of concentrations within the late 70's.

TABLE 2-5: SCAB O_3 TREND



Source: SCAQMD

The overall trends of PM_{10} and $PM_{2.5}$ levels in the air (not emissions) show an overall improvement since 1975. Direct emissions of PM_{10} have remained somewhat constant in the SCAB and direct emissions of $PM_{2.5}$ have decreased slightly since 1975. Area wide sources (fugitive dust from roads, dust from construction and demolition, and other sources) contribute the greatest amount of direct particulate matter emissions.

As with other pollutants, the most recent PM_{10} statistics show an overall improvement as illustrated in Tables 2-6 and 2-7. During the period for which data are available, the 24-hour national annual average concentration for PM_{10} decreased by approximately 48 percent, from 103.7 µg/m³ in 1988 to 53.5 µg/m³ in 2018 (23). Although the values are below the federal

standard, it should be noted that there are days within the year where the concentrations will exceed the threshold. The 24-hour state annual average for emissions for PM_{10}, have decreased by approximately 53 percent since 1988 (23). Although data in the late 1990's show some variability, this is probably due to the advances in meteorological science rather than a change in emissions. Similar to the ambient concentrations, the calculated number of days above the 24-hour PM_{10} standards has also shown an overall drop.

[1] Some year have been omitted from the table as insufficient data (or no) data has been reported. Years with reported value of "0" have also been omitted.

Tables 2-8 and 2-9 shows the most recent 24-hour average $PM_{2.5}$ concentrations in the SCAB from 1999 through 2018. Overall, the national and state annual average concentrations have decreased by almost 52 percent and 33 percent respectively (23). It should be noted that the SCAB is currently designated as nonattainment for the state and federal $PM_{2.5}$ standards.

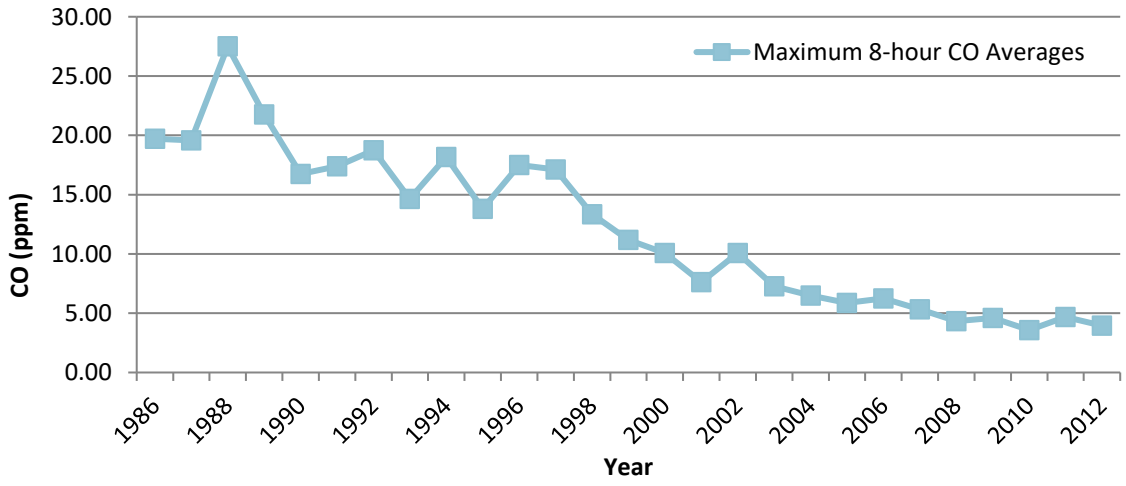
[1] Some year have been omitted from the table as insufficient data (or no) data has been reported. Years with reported value of "0" have also been omitted.

TABLE 2-9: SCAB ANNUAL AVERAGE CONCENTRATION $PM_{2.5}$ TREND (BASED ON STATE STANDARD)[1]

Source: CARB

[1] Some year have been omitted from the table as insufficient data (or no) data has been reported. Years with reported value of "0" have also been omitted.



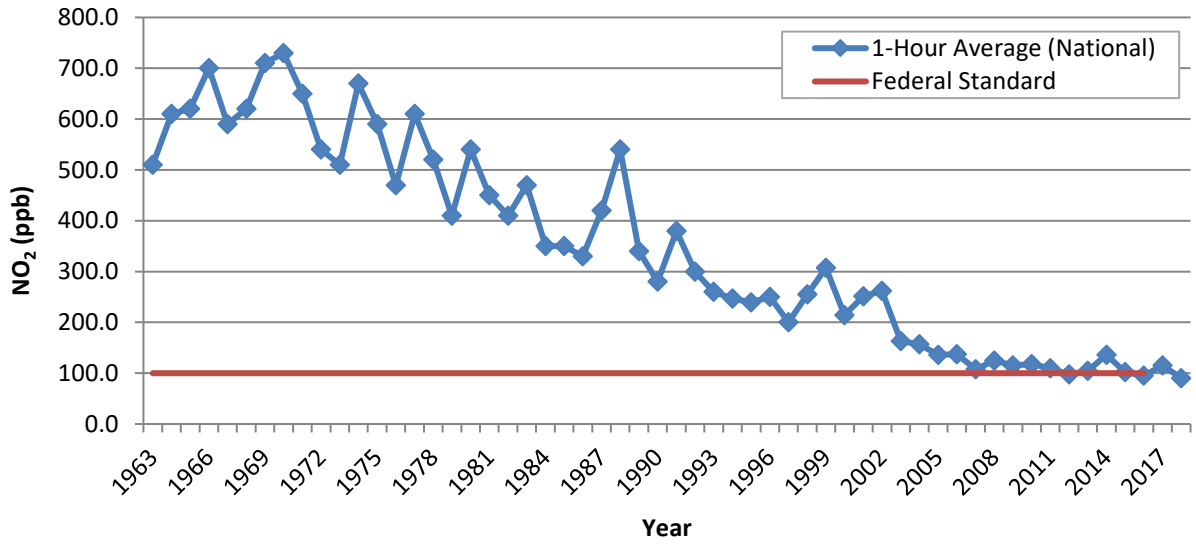
While the 2012 AQMP PM_{10} attainment demonstration and the 2015 associated supplemental SIP submission indicated that attainment of the 24-hour standard was predicted to occur by the end of 2015, it could not anticipate the effect of the ongoing drought on the measured $PM_{2.5}$.

The 2006 to 2010 base period used for the 2012 attainment demonstration had near-normal rainfall. While the trend of $PM_{2.5}$- equivalent emission reductions continued through 2015, the severe drought conditions contributed to the $PM_{2.5}$ increases observed after 2012. As a result of the disrupted progress toward attainment of the federal 24-hour $PM_{2.5}$ standard, SCAQMD submitted a request and the EPA approved, in January 2016, a "bump up" to the nonattainment classification from "moderate" to "serious," with a new attainment deadline as soon as practicable, but not beyond December 31, 2019.

In March 2017, the AQMD released the Final 2016 AQMP. The 2016 AQMP continues to evaluate current integrated strategies and control measures to meet the NAAQS, as well as, explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (24). Similar to the 2012 AQMP, the 2016 AQMP incorporates scientific and technological information and planning assumptions, including the 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) and updated emission inventory methodologies for various source categories (19).

The most recent CO concentrations in the SCAB are shown in Table 2-10 (23). CO concentrations in the SCAB have decreased markedly — a total decrease of more about 80 percent in the peak 8-hour concentration since 1986. It should be noted 2012 is the most recent year where 8-hour CO averages and related statistics are available in the SCAB. The number of exceedance days has also declined. The entire SCAB is now designated as attainment for both the state and national CO standards. Ongoing reductions from motor vehicle control programs should continue the downward trend in ambient CO concentrations.

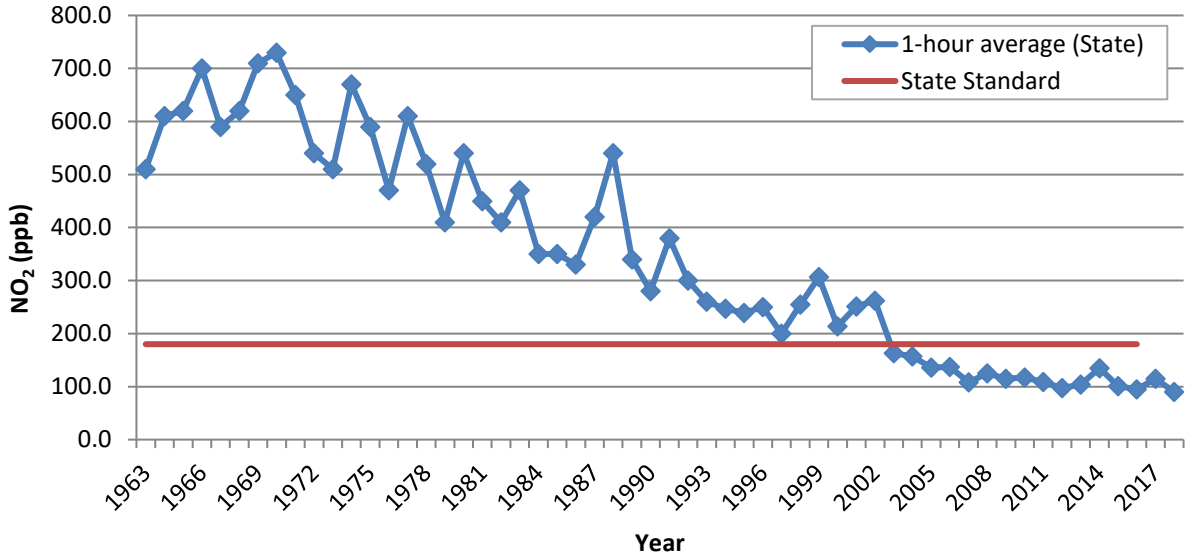
TABLE 2-10: SCAB 24-HOUR AVERAGE CONCENTRATION CO TREND[1]



Source: CARB

[1] The most recent year where 8-hour concentration data is available is 2012.

Part of the control process of the SCAQMD's duty to greatly improve the air quality in the SCAB is the uniform CEQA review procedures required by SCAQMD's CEQA Handbook (25). The single threshold of significance used to assess Project direct and cumulative impacts has in fact "worked" as evidenced by the track record of the air quality in the SCAB dramatically improving over the course of the past decades. As stated by the SCAQMD, the District's thresholds of significance are based on factual and scientific data and are therefore appropriate thresholds of significance to use for this Project.



The most recent NO_2 data for the SCAB is shown in Tables 2-11 and 2-12 (23). Over the last 50 years, NO_2 values have decreased significantly; the peak 1-hour national and state averages for 2018 is approximately 82 percent lower than what it was during 1963. The SCAB attained the State 1-hour NO_2 standard in 1994, bringing the entire state into attainment. A new state annual average standard of 0.030 parts per million was adopted by the ARB in February 2007 (26). The new standard is just barely exceeded in the SCAQMD. NO_2 is formed from NO_X emissions, which also contribute to O_3. As a result, the majority of the future emission control measures will be implemented as part of the overall ozone control strategy. Many of these control measures will target mobile sources, which account for more than three-quarters of California's NO_X emissions. These measures are expected to bring the SCAQMD into attainment of the state annual average standard.

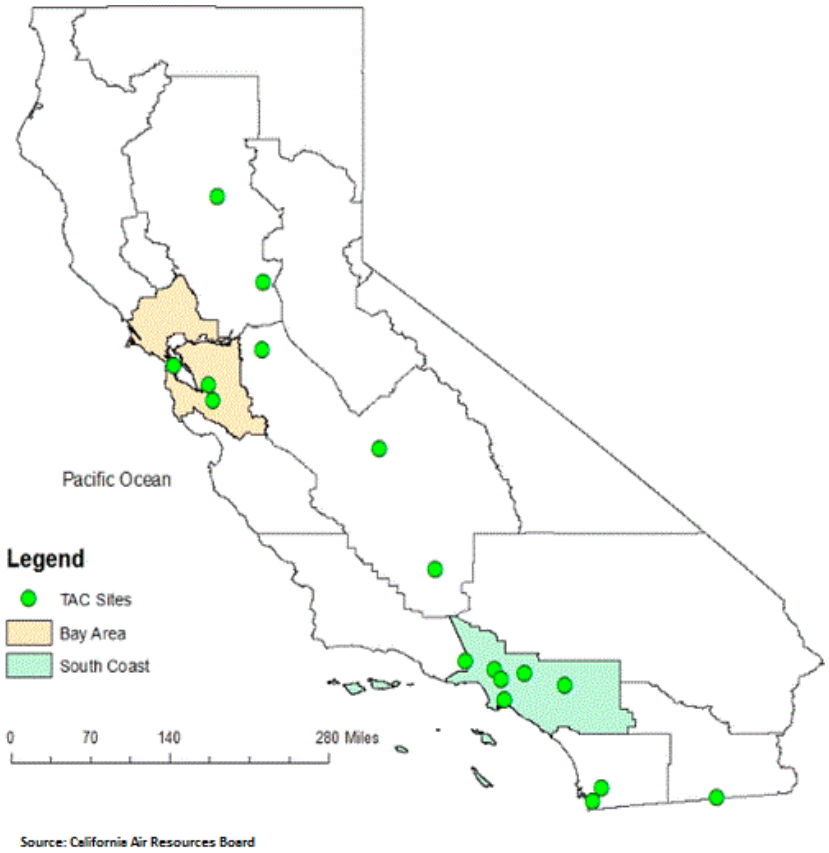
TABLE 2-12: SCAB 1-HOUR AVERAGE CONCENTRATION NO_2 TREND (BASED ON STATE STANDARD)

Source: CARB

The American Lung Association website includes data collected from state air quality monitors that are used to compile an annual State of the Air report. The latest State of the Air Report compiled for the SCAB was in 2018 (27). As noted in this report, air quality in the SCAB has significantly improved in terms of both pollution levels and high pollution days over the past three decades. The area's average number of high O_3 days dropped from 230 days in the initial 2000 State of the Air report (1996–1998) to 146 days in the 2018 report. The region has also seen dramatic reduction in particle pollution since the initial 2000 State of the Air report (27).



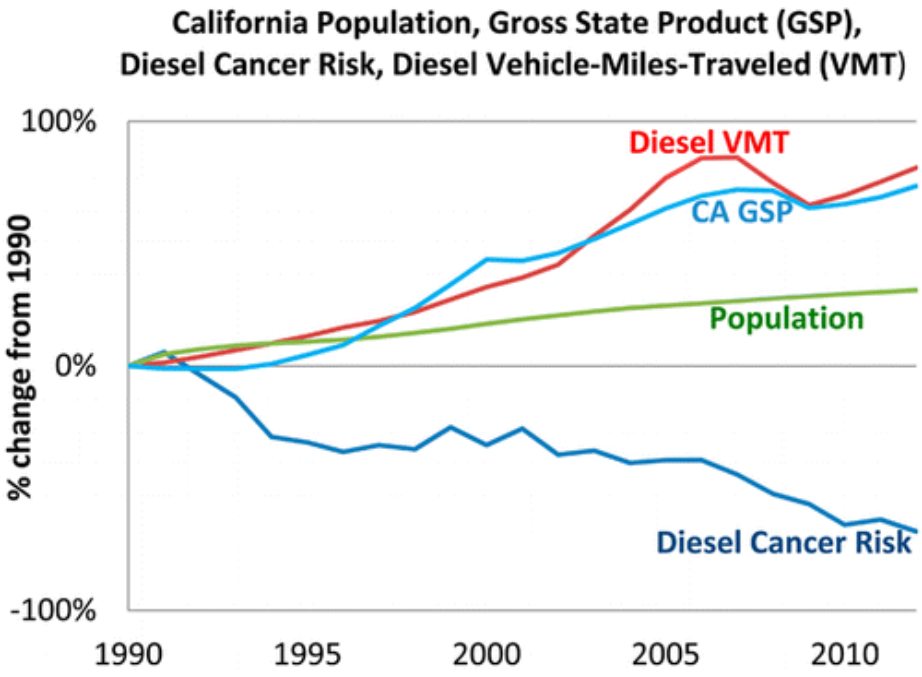
TOXIC AIR CONTAMINANTS (TACS) TRENDS

In 1984, as a result of public concern for exposure to airborne carcinogens, the CARB adopted regulations to reduce the amount of air toxic contaminant emissions resulting from mobile and area sources, such as cars, trucks, stationary products, and consumer products. According to the *Ambient and Emission Trends of Toxic Air Contaminants in California* journal article (28) which was prepared for CARB, results show that between 1990-2012, ambient concentration and emission trends for the seven TACs responsible for most of the known cancer risk associated with airborne exposure in California have declined significantly (between 1990 and 2012). The seven TACs studied include those that are derived from mobile sources: diesel particulate matter (DPM), benzene, and 1,3-butadiene; those that are derived from stationary sources: perchloroethylene and hexavalent chromium; and those derived from photochemical reactions of emitted VOCs: formaldehyde and acetaldehyde[2]. TACs data was gathered at monitoring sites from both the Bay Area and SCAB, as shown on Exhibit 2-A; Several of the sites in the SCAB include Reseda, Compton, Rubidoux, Burbank, and Fontana. The decline in ambient concentration and

[2] It should be noted that ambient DPM concentrations are not measured directly. Rather, a surrogate method using the coefficient of haze (COH) and elemental carbon (EC) is used to estimate DPM concentrations.

emission trends of these TACs are a result of various regulations CARB has implemented to address cancer risk.

EXHIBIT 2-A: CALIFORNIA TOXIC AIR CONTAMINANT SITES



Mobile Source TACs

CARB introduced two programs that aimed at reducing mobile emissions for light and medium duty vehicles through vehicle emissions controls and cleaner fuel. In California, light-duty vehicles sold after 1996 are equipped with California's second-generation On-Board Diagnostic (OBD-II) system. The OBD II system monitors virtually every component that can affect the emission performance of the vehicle to ensure that the vehicle remains as clean as possible over its entire life and assists repair technicians in diagnosing and fixing problems with the computerized engine controls. If a problem is detected, the OBD II system illuminates a warning lamp on the vehicle instrument panel to alert the driver. This warning lamp typically contains the phrase Check Engine or Service Engine Soon. The system will also store important information about the detected malfunction so that a repair technician can accurately find and fix the problem. ARB has recently developed similar OBD requirements for heavy-duty vehicles over 14,000 lbs. CARB's phase II Reformulated Gasoline (RFG-2) regulation, adopted in 1996, also led to a reduction of mobile source emissions. Through such regulations, benzene levels declined 88% from 1990-2012. 1,3-Butadiene concentrations also declined 85% from 1990-2012 as a result of the use of reformulated gasoline and motor vehicle regulations (28).

In 2000, CARB's Diesel Risk Reduction Plan (DRRP) recommended the replacement and retrofit of diesel-fueled engines and the use of ultra-low-sulfur (<15ppm) diesel fuel. As a result of these measures, DPM concentrations have declined 68% since 2000, even though the state's population increased 31% and the amount of diesel vehicles miles traveled increased 81%, as shown on Exhibit 2-B. With the implementation of these diesel-related control regulations, ARB expects a DPM decline of 71% for 2000-2020.

EXHIBIT 2-B: DIESEL PARTICULATE MATTER AND DIESEL VEHICLE MILES TREND

Source: California Air Resources Board

DIESEL REGULATIONS

The CARB and the Ports of Los Angeles and Long Beach (POLA and POLB) have adopted several iterations of regulations for diesel trucks that are aimed at reducing diesel particulate matter (DPM). More specifically, the CARB Drayage Truck Regulation (29), the CARB statewide On-road Truck and Bus Regulation (30), and the Ports of Los Angeles and Long Beach "Clean Truck Program" (CTP) require accelerated implementation of "clean trucks" into the statewide truck fleet (31). In other words, older more polluting trucks will be replaced with newer, cleaner trucks as a function of these regulatory requirements.

Moreover, the average statewide DPM emissions for Heavy Duty Trucks (HDT), in terms of grams of DPM generated per mile traveled, will dramatically be reduced due to the aforementioned regulatory requirements.

Diesel emissions identified in this analysis would therefore overstate future DPM emissions since not all the regulatory requirements are reflected in the modeling.

CANCER RISK TRENDS

Based on information available from CARB, overall cancer risk throughout the SCAB has had a declining trend since 1990. In 1998, following an exhaustive 10-year scientific assessment process, CARB identified particulate matter from diesel-fueled engines as a toxic air contaminant. The SCAQMD initiated a comprehensive urban toxic air pollution study, called MATES-II (for Multiple Air Toxics Exposure Study). Diesel particulate matter (DPM) accounts for more than 70 percent of the cancer risk.

In 2008 the SCAQMD prepared an update to the MATES-II study, referred to as MATES-III. MATES-III estimates the average excess cancer risk level from exposure to TACs is an approximately 17% decrease in comparison to the MATES-II study.

In 2015, the SCAQMD published an in-depth analysis of the toxic air contaminants and the resulting health risks for all of Southern California. The *Multiple Air Toxics Exposure Study in the SCAB, MATES IV,"* which shows that cancer risk has decreased less than 50% since MATES III (2005) (32).

MATES-IV study represents the baseline health risk for a cumulative analysis. MATES-IV calculated cancer risks based on monitoring data collected at ten fixed sites within the SCAB. None of the fixed monitoring sites are within the local area of the Project site. However, MATES-IV has extrapolated the excess cancer risk levels throughout the SCAB by modeling the specific grids. MATES-IV modeling predicted an excess cancer risk of 1,066.32 in one million for the Project area. DPM is included in this cancer risk along with all other TAC sources. DPM accounts for 68% of the total risk shown in MATES-IV. Cumulative Project generated TACs are limited to DPM.

In January 2018, as part of the overall effort to reduce air toxics exposure in the SCAB, SCAQMD began conducting the MATES V Program. MATES V field measurements will be conducted over a one-year period at ten fixed sites (the same sites selected for MATES III and IV) to assess trends in air toxics levels. MATES V will also include measurements of ultrafine particles (UFP) and black carbon (BC) concentrations, which can be compared to the UFP levels measured in MATES IV (33). The final report for the MATES V study is currently expected to be available in Fall 2019, however no definitive date has been provided.

2.10 EXISTING PROJECT SITE AIR QUALITY CONDITIONS

As previously stated, the Project site is currently developed with 149,605 sf business park and 8,064 sf general office building uses. The estimated operation-source emissions from the existing development are summarized on Table 2-5. Detailed operation model outputs are presented in Appendix 3.4.

TABLE 2-13: EMISSIONS FROM EXISTING DEVELOPMENT

Existing Development Operational Activities	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer Scenario						
Total Maximum Daily Emissions	**8.91**	**16.13**	**55.76**	**0.16**	**14.12**	**3.94**
Winter Scenario						
Total Maximum Daily Emissions	**8.94**	**16.72**	**52.34**	**0.15**	**14.11**	**3.91**

lbs/day – Pounds Per Day

3 PROJECT AIR QUALITY IMPACT

3.1 INTRODUCTION

The Project has been evaluated to determine if it will violate an air quality standard or contribute to an existing or projected air quality violation. Additionally, the Project has been evaluated to determine if it will result in a cumulatively considerable net increase of a criteria pollutant for which the SCAB is non-attainment under an applicable federal or state ambient air quality standard. The significance of these potential impacts is described in the following section.

3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the Initial Study Checklist in Appendix G of the State CEQA Guidelines (14 California Code of Regulations §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (1):

- Conflict with or obstruct implementation of the applicable air quality plan.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.
- Expose sensitive receptors to substantial pollutant concentrations.
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. affecting a substantial number of people.

The SCAQMD has also developed regional significance thresholds for other regulated pollutants, as summarized at Table 3-1 (34). The SCAQMD's CEQA Air Quality Significance Thresholds (March 2015) indicate that any projects in the SCAB with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 3-1: MAXIMUM DAILY REGIONAL EMISSIONS THRESHOLDS

Pollutant	Construction	Operations
Regional Thresholds		
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day

Source: Regional Thresholds presented in this table are based on the SCAQMD Air Quality Significance Thresholds, March 2015

3.3 CALIFORNIA EMISSIONS ESTIMATOR MODEL™ EMPLOYED TO ESTIMATE AQ EMISSIONS

Land uses such as the Project affect air quality through construction-source and operational-source emissions.

On October 17, 2017, the SCAQMD in conjunction with the CAPCOA and other California air districts, released the latest version of the California Emissions Estimator Model™ (CalEEMod™) v2016.3.2. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (35). Accordingly, the latest version of CalEEMod™ has been used for this Project to determine construction and operational air quality emissions. Output from the model runs for both construction and operational activity are provided in Appendices 3.1 through 3.4.

3.3.1 LAND USES MODELED IN CALEEMOD

The Project is located on 8.34 acres. As previously stated, the Project proposes to construct 163,518 sf of general light industrial use within 3 buildings.

CalEEMod does not provide an extensive selection of land use subtype categories, land uses that most closely fit the Project will be utilized. For purposes of analysis, the following land uses were modeled (36):

- 163.518 thousand square feet (TSF)/3.75 acres of General Light Industry
- 39.093 TSF/0.90 acres Other Non-Asphalt Surfaces[3]
- 136.533 TSF/3.13 acres Other Asphalt Surfaces[4]
- 271 Space Parking Lot[5] on 0.55 acres

3.3.2 EMISSION FACTORS MODEL

Vehicle emissions were estimated using information generated within the 2017 version of the Emission Factor model (EMFAC) developed by the CARB. EMFAC2017 is a mathematical model that was developed to calculate emission rates, fuel consumption, and VMT from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by the CARB to project changes in future emissions from on-road mobile sources (37). This AQIA utilizes summer, winter, and annual EMFAC2017 emission factors in order to derive vehicle emissions associated with Project operational activities, which vary by season.

[3] The User's Guide defines Other Non-Asphalt Surfaces as non-asphalt areas. As indicated on the site plan, the landscaped area for Building 1 is 22,420 sf and 16,673 sf for Buildings 2 and 3. For purposes of analysis, this category is used to model the 39,093 sf/0.90 acre of Landscaped areas.

[4] For purposes of analysis, the remaining 136,533 sf/3.13 acres will be modeled as Other Asphalt Surfaces. These surfaces are defined as an asphalt area not used as a parking lot.

[5] As indicated on the site plan, the parking landscaped area for Building 1 is 13,224 sf and 10,913 sf for Buildings 2 and 3. For purposes of analysis, this category is used to model the 24,137 sf/0.53 acre of parking landscape area for the 271 parking spaces.

3.4 CONSTRUCTION EMISSIONS

Construction activities associated with the Project will result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Construction related emissions are expected from the following construction activities:

- Demolition
- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

Dust is typically a major concern during demolition and grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called "fugitive emissions". Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). CalEEMod was utilized to calculate fugitive dust emissions resulting from this phase of activity.

Demolition

The Project site is currently developed with 149,605 square feet (sf) business park and 8,064 sf general office building uses. As such, and for purposes of analysis, the Project would demolish 157,669 sf of building.

Grading Activities

Based on information provided by the Project Applicant, the Project is expected require 9,500 cubic yards of import. For purposes of analysis the CalEEMod default trip length for hauling activities of 20 miles is has been used.

Construction Worker Vehicle Trips

Construction emissions for construction worker vehicles traveling to and from the Project site, as well as vendor trips (construction materials delivered to the Project site) were estimated based on information from CalEEMod defaults.

3.4.1 CONSTRUCTION DURATION

Construction is expected to commence in June 2020 and will last through August 2021. The construction schedule utilized in the analysis, shown in Table 3-2, represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission

regulations becoming more stringent.[6] The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per *CEQA Guidelines*. The duration of construction activity was based on the 2021 opening year and CalEEMod defaults.

TABLE 3-2: CONSTRUCTION DURATION

Phase Name	Start Date	End Date	Days
Demolition	6/1/2020	6/26/2020	20
Site Preparation	6/27/2020	7/10/2020	10
Grading	7/11/2020	8/7/2020	20
Building Construction	8/8/2020	6/25/2021	230
Paving	6/26/2021	7/23/2021	20
Architectural Coating	6/26/2021	8/20/2021	40

Source: Construction activity based the 2021 opening year and CalEEMod defaults.

3.4.2 CONSTRUCTION EQUIPMENT

Site specific construction fleet may vary due to specific project needs at the time of construction. The associated construction equipment was generally based on CalEEMod 2016.3.2 defaults. A detailed summary of construction equipment assumptions by phase is provided at Table 3-3.

TABLE 3-3: CONSTRUCTION EQUIPMENT ASSUMPTIONS (1 OF 2)

Activity	Equipment	Number	Hours Per Day
Demolition	Concrete/Industrial Saws	1	8
	Excavators	3	8
	Rubber Tired Dozers	2	8
Site Preparation	Rubber Tired Dozers	3	8
	Tractors/Loaders/Backhoes	4	8
Grading	Excavators	1	8
	Graders	1	8

3.4.3 CONSTRUCTION EMISSIONS SUMMARY

Impacts without Mitigation

The estimated maximum daily construction emissions without mitigation are summarized on Table 3-4. CalEEMod calculates maximum daily emissions for summer and winter periods. As a conservative measure, construction emissions presented in Table 3-4 are from the winter period as these emissions are higher than the summer emissions. Detailed construction model outputs are presented in Appendix 3.1. Under the assumed scenarios, emissions resulting from the Project construction will not exceed criteria pollutant thresholds established by the SCAQMD for emissions of any criteria pollutant.

TABLE 3-4: OVERALL CONSTRUCTION EMISSIONS SUMMARY (WITHOUT MITIGATION)

Year	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
2020	4.17	43.13	25.27	0.07	10.07	6.02
2021	21.88	24.91	24.37	0.06	3.14	1.55

3.5 OPERATIONAL EMISSIONS

Operational activities associated with the proposed Project will result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Operational emissions would be expected from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions

3.5.1 AREA SOURCE EMISSIONS

Architectural Coatings

Over a period of time, the buildings that are part of this Project will be subject to emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings as part of Project maintenance. The emissions associated with architectural coatings were calculated using the CalEEMod.

Consumer Products

Consumer products include, but are not limited to detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants. The emissions associated with use of consumer products were calculated based on defaults provided within CalEEMod.

Landscape Maintenance Equipment

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. The emissions associated with landscape maintenance equipment were calculated based on assumptions provided in CalEEMod.

3.5.2 ENERGY SOURCE EMISSIONS

Combustion Emissions Associated with Natural Gas and Electricity

Electricity and natural gas are used by almost every project. Criteria pollutant emissions are emitted through the generation of electricity and consumption of natural gas. However, because electrical generating facilities for the Project area are located either outside the region (state) or offset through the use of pollution credits (RECLAIM) for generation within the SCAB, criteria pollutant emissions from offsite generation of electricity is generally excluded from the evaluation of significance and only natural gas use is considered. The emissions associated with natural gas use were calculated using CalEEMod.

Title 24 Energy Efficiency Standards

California's Energy Efficiency Standards for Residential and Nonresidential Buildings was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity. The 2019 version of Title 24 was adopted by the CEC and will become effective on January 1, 2020. As such, the analysis herein assumes compliance with the 2019 Title 24 Standards.

3.5.3 MOBILE SOURCE EMISSIONS

Vehicles

Project mobile source air quality impacts are dependent on both overall daily vehicle trip generation and the effect of the Project on peak hour traffic volumes and traffic operations in the vicinity of the Project. The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the *Trip Generation Analysis for Pioneer Boulevard Development, Santa Fe Springs* (EPD Solutions, Inc.) were utilized in this analysis (38). As per information provided by EPD Solutions, Inc., the following Institute of Transportation Engineers (ITE) land use codes have been utilized:

- General Light Industrial (ITE 110): A light industrial facility is a free-standing facility devoted to a single use. The facility has an emphasis on activities other than manufacturing and typically has minimal office space.

3.5.3.1 Trip Length

SCAQMD Recommendation

In the last five years, the SCAQMD has provided numerous comments on the trip length for warehouse/distribution and industrial land use projects. The SCAQMD asserts that the model-default trip length in CalEEMod™ and the URBan EMISsions (URBEMIS) 2007 model (version 9.2.4) would underestimate emissions. It should be noted that for warehouse, distribution center, and industrial land use projects, most of the heavy-duty trucks would be hauling consumer goods, often from the POLA and POLB and/or to destinations outside of California. The SCAQMD states that for this reason, the CalEEMod™ and the URBEMIS model default trip length (approximately 12.6 miles) would not be representative of activities at like facilities. The average trip length for heavy trucks were based on the SCAQMD documents for the implementation of the Facility-Based Mobile Source Measures (FBMSMs) adopted in the 2016 AQMP. SCAQMD's "Preliminary Warehouse Emission Calculations" cites 39.9-mile trip length for heavy-heavy trucks (39).

Approach for Analysis of the Project

Two separate model runs were utilized in order to more accurately model emissions resulting from vehicle operations. The first run analyzed passenger car emissions, which incorporated a default trip length of 16.6 miles for passenger cars, an assumption of 100% primary trips, and a

fleet mix of 60.11% Light-Duty-Auto vehicles (LDA), 4.73% Light-Duty Trucks (LDT1)[7], 21.98% Light-Duty Trucks (LDT2)[8], and 13.18% Medium-Duty Vehicles (MDV). The second run analyzed truck emissions, which incorporated an average truck trip length of 40 miles, an assumption of 100% primary trips, and a fleet mix of 37.36% of Light-Heavy-Duty Trucks (LHDT), 18.39% of Medium-Heavy-Duty Trucks (MHDT), and 44.25% of Heavy-Heavy-Duty Trucks (HHDT).

Fugitive Dust Related to Vehicular Travel

Vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of break and tire wear particulates. The emissions estimates for travel on paved roads were calculated using CalEEMod (40).

3.5.4 ON-SITE EQUIPMENT EMISSIONS

It is common for industrial buildings to require cargo handling equipment to move empty containers and empty chassis to and from the various pieces of cargo handling equipment that receive and distribute containers. The most common type of cargo handling equipment is the yard truck which is designed for moving cargo containers. Yard trucks are also known as yard goats, utility tractors (UTRs), hustlers, yard hostlers, and yard tractors. The cargo handling equipment is assumed to have a horsepower (hp) range of approximately 175 hp to 200 hp. Based on the latest available information from SCAQMD (41); for example, high-cube warehouse projects typically have 3.6 yard trucks per million square feet of building space. For this particular Project, based on the maximum square footage of manufacturing use permitted by the proposed Project, on-site modeled operational equipment includes one (1) 200 hp, compressed natural gas-powered yard tractors operating at 4 hours a day for 365 days of the year**.**

3.5.5 OPERATIONAL EMISSIONS SUMMARY

As previously stated, CalEEMod utilizes summer and winter EMFAC2017 emission factors in order to derive vehicle emissions associated with Project operational activities, which vary by season. As such, operational activities for summer and winter scenarios are presented in Table 3-5.

Impacts without Mitigation

The estimated operational-source emissions are summarized on Tables 3-5. It should be noted that the existing development emissions (previously presented in Section 2.10 of this AQIA) were subtracted from the Project operational emissions to determine the new emissions from the proposed Project. Detailed operation model outputs for the Project are presented in Appendices 3.2 through 3.3. As shown on Table 3-5, the Project's daily regional emissions from on-going operations will not exceed any of the thresholds of significance.

[7] Vehicles under the LDT1 category have a gross vehicle weight rating (GVWR) of less than 6,000 lbs. and equivalent test weight (ETW) of less than or equal to 3,750 lbs.

[8] Vehicles under the LDT2 category have a GVWR of less than 6,000 lbs. and ETW between 3,751 lbs. and 5,750 lbs.

3.6 LOCALIZED SIGNIFICANCE - CONSTRUCTION ACTIVITY

BACKGROUND ON LOCALIZED SIGNIFICANCE THRESHOLD (LST) DEVELOPMENT

The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (42). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs).

The significance of localized emissions impacts depends on whether ambient levels in the vicinity of any given project are above or below State standards. In the case of CO and NO_2, if ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a state or federal standard, then project emissions are considered significant if they increase ambient concentrations by a measurable amount. This would apply to PM_{10} and $PM_{2.5}$; both of which are non-attainment pollutants.

The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4[9]. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

LSTs were developed in response to environmental justice and health concerns raised by the public regarding exposure of individuals to criteria pollutants in local communities. To address the issue of localized significance, the SCAQMD adopted LSTs that show whether a project would cause or contribute to localized air quality impacts and thereby cause or contribute to potential localized adverse health effects. The analysis makes use of methodology included in the *LST Methodology* (43).

APPLICABILITY OF LSTS FOR THE PROJECT

For this Project, the appropriate Source Receptor Area (SRA) for the LST analysis is the SCAQMD Southeast Los Angeles County monitoring station (SRA 5). LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size.

In order to determine the appropriate methodology for determining localized impacts that could occur as a result of Project-related construction, the following process is undertaken:

- CalEEMod is utilized to determine the maximum daily on-site emissions that will occur during construction activity.
- The SCAQMD's Fact Sheet for Applying CalEEMod to Localized Significance Thresholds (44) is used to determine the maximum site acreage that is actively disturbed based on the construction equipment fleet and equipment hours as estimated in CalEEMod.
- If the total acreage disturbed is less than or equal to five acres per day, then the SCAQMD's screening look-up tables are utilized to determine if a project has the potential to result in a significant impact. The look-up tables establish a maximum daily emissions threshold in pounds per day that can be compared to CalEEMod outputs.
- If the total acreage disturbed is greater than five acres per day, then LST impacts are appropriately evaluated through dispersion modeling.

[9] The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

EMISSIONS CONSIDERED

SCAQMD's *LST Methodology* clearly states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs (42)." Therefore, for purposes of the construction LST analysis, only emissions included in the CalEEMod "on-site" emissions outputs were considered.

MAXIMUM DAILY DISTURBED-ACREAGE

The "acres disturbed" for analytical purposes are based on specific equipment type for each subcategory of construction activity and the estimated maximum area a given piece of equipment can pass over in an 8-hour workday (as shown on Table 3-6). The equipment-specific disturbance rates were obtained from the CalEEMod user's guide, *Appendix A: Calculation Details for CalEEMod* (October 2017). It should be noted that the disturbed area per day is representative of a piece of equipment making multiple passes over the same land area. In other words, one Rubber Tired Dozer can make multiple passes over the same land area totaling 0.5 acres in a given 8-hour day. Based on Table 3-6, the proposed Project could actively disturb approximately 1.0 acre per day during demolition activities, 1.5 acres per day during site preparation activities, and 1.0 acre per day during grading activities.

TABLE 3-6 : MAXIMUM DAILY DISTURBED-ACREAGE

Construction Phase	Equipment Type	Equipment Quantity	Acres graded per 8-hour day	Operating Hours per Day	Acres graded per day
Demolition	Rubber Tired Dozers	2	0.5	8	1.0
Total acres disturbed per day during Demolition					1.0
Site Preparation	Rubber Tired Dozers	3	0.5	8	1.5
Total acres disturbed per day during Site Preparation					1.5
Grading	Graders	1	0.5	8	0.5
	Rubber Tired Dozers	1	0.5	8	0.5
Total acres disturbed per day during Grading					1.0

Source: Maximum daily disturbed acreage based on equipment list presented in Appendix 3.1.

SENSITIVE RECEPTORS

As previously stated, LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. Receptor locations are off-site locations where individuals may be exposed to emissions from Project activities. This AQIA analyzes localized construction and operational emissions impacts at the nearest sensitive receptors.

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, individuals with pre-existing respiratory or cardiovascular illness, and athletes and others who

engage in frequent exercise. Structures that house these persons or places where they gather to exercise are defined as "sensitive receptors". These structures typically include residences, hotels, hospitals, etc. as they are also known to be locations where an individual can remain for 24 hours. Consistent with the *LST Methodology*, the nearest land use where an individual could remain for 24 hours to the Project site (in this case the nearest residential land use) has been used to determine construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$, since PM_{10} and $PM_{2.5}$ thresholds are based on a 24 hour averaging time.

Commercial and industrial facilities are not included in the definition of sensitive receptor because employees and patrons do not typically remain onsite for a full 24 hours but are typically onsite for eight hours or less. The *LST Methodology* explicitly states that "*LSTs based on shorter averaging periods, such as the NO_2 and CO LSTs, could also be applied to receptors such as industrial or commercial facilities since it is reasonable to assume that a worker at these sites could be present for periods of one to eight hours* (42)." Consistent with the *LST Methodology*, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_2 and CO.

Project-related Receptors

Sensitive receptors in the Project study area include existing residential homes, business park uses, limited manufacturing, and industrial uses. The SCAQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual and cumulatively significant impact. As such, the nearest residential receptor to the Project site is located approximately 1,000 feet/305 meters northwest Project site on Arlee Avenue. The 305-meter distance will be used to evaluate construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$. For evaluation of localized NO_2 and CO impacts, the nearest non-residential receptor is an industrial building located 10 feet/3 meters south of the Project site on Telegraph Road. It should be noted that although the nearest non-sensitive receptor is 3-meters from the Project site, the *LST Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters* (42)." As such a 25-meter receptor distance will be used for NO_2 and CO.

LOCALIZED THRESHOLDS FOR CONSTRUCTION ACTIVITY

Since the total acreage disturbed is less than five acres per day for demolition, site preparation, and the grading phases, the SCAQMD's screening look-up tables are utilized in determining impacts. It should be noted that since the look-up tables identifies thresholds at only 1 acre, 2 acres, and 5 acres, linear regression has been utilized, consistent with SCAQMD guidance, in order to interpolate the threshold values for the other disturbed acreage and distances not identified in the look-up tables.

TABLE 3-7: MAXIMUM DAILY LOCALIZED EMISSIONS THRESHOLDS

Pollutant	Construction	Operations
Localized Thresholds		
NO_X	80 lbs/day (Demolition)	172 lbs/day
	97 lbs/day (Site Preparation)	
	80 lbs/day (Grading)	
CO	571 lbs/day (Demolition)	1,480 lbs/day
	716 lbs/day (Site Preparation)	
	571 lbs/day (Grading)	
PM_{10}	103 lbs/day (Demolition)	32 lbs/day
	112 lbs/day (Site Preparation)	
	103 lbs/day (Grading)	
$PM_{2.5}$	42 lbs/day (Demolition)	14 lbs/day
	47 lbs/day (Site Preparation)	
	42 lbs/day (Grading)	

Source: Localized Thresholds presented in this table are based on the SCAQMD Final Localized Significance Threshold Methodology, July 2008

CONSTRUCTION-SOURCE EMISSIONS LST ANALYSIS

Impacts without Mitigation

Table 3-8 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. Outputs from the model runs for construction LSTs are provided in Appendix 3.1. As shown, Project construction-source emissions would not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for Project-related construction-source emissions and no mitigation is required.

3.7 LOCALIZED SIGNIFICANCE – LONG-TERM OPERATIONAL ACTIVITY

The Project is located on an 8.34-acre parcel. As noted previously, the LST Methodology provides look-up tables for sites with an area with daily disturbance of 5 acres or less. For projects that exceed 5 acres, the 5-acre LST look-up tables can be used as a screening tool to determine which pollutants require additional detailed analysis. This approach is conservative as it assumes that all on-site emissions associated with the project would occur within a concentrated 5-acre area. This screening method would therefore over-predict potential localized impacts, because by assuming that on-site operational activities are occurring over a smaller area, the resulting concentrations of air pollutants are more highly concentrated once they reach the smaller site boundary than they would be for activities if they were spread out over a larger surface area. On a larger site, the same amount of air pollutants generated would disperse over a larger surface area and would result in a lower concentration once emissions reach the project-site boundary. As such, LSTs for a 5-acre site during operations are used as a screening tool to determine if further detailed analysis is required.

Table 3-9 shows the calculated emissions for the Project's operational activities compared with the applicable LSTs. The LST analysis includes on-site sources only; however, the CalEEMod™ model outputs do not separate on-site and off-site emissions from mobile sources. In an effort to establish a maximum potential impact scenario for analytic purposes, the emissions shown on Table 3-9 represent all on-site Project-related stationary (area) sources and five percent (5%) of the Project-related mobile sources. Considering that the trip length used in CalEEMod™ for the Project is approximately 16.6 miles for passenger cars and 40 miles for all trucks, 5% of this total would represent an on-site travel distance of approximately 0.83 miles/4,382.40 feet for passenger cars and 2 miles/10,560 feet for trucks.

It should be noted that the longest on-site distance from the entry to the exit is 0.25 mile for both trucks and passenger cars. As such, the 5% assumption is conservative and would tend to overstate the actual impact because it is not likely that a truck would drive 0.83 miles on the site

or that a passenger car would drive 2 miles on the site. Modeling based on these assumptions demonstrates that even within broad encompassing parameters, Project operational-source emissions would not exceed applicable LSTs.

OPERATIONAL-SOURCE EMISSIONS LST ANALYSIS

Impacts without Mitigation

As shown on Table 3-9 operational emissions will not exceed the LST thresholds for the nearest sensitive receptor. As shown, Project operational-source emissions would not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for Project-related operational-source emissions and no mitigation is required.

TABLE 3-9: LOCALIZED SIGNIFICANCE SUMMARY OF OPERATIONS

Operational Activity	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	**4.34**	**3.28**	**0.84**	**0.32**

Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

Source: CalEEMod localized operational-source emissions are presented in Appendices 3.2 and 3.3.

3.8 CO "HOT SPOT" ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific CO "hot spots" is not needed to reach this conclusion.

An adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur. At the time of the 1993 Handbook, the SCAB was designated nonattainment under the CAAQS and NAAQS for CO (45).

It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment, as previously noted in Table 2-3. Also, CO concentrations in the Project vicinity have steadily declined, as indicated by historical emissions data presented previously at Table 2-4. To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time

periods. This "hot spot" analysis did not predict any violation of CO standards, as shown on Table 3-10.

TABLE 3-10: CO MODEL RESULTS

Intersection Location	CO Concentrations (ppm)		
	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire Blvd./Veteran Ave.	4.6	3.5	3.7
Sunset Blvd./Highland Ave.	4	4.5	3.5
La Cienega Blvd./Century Blvd.	3.7	3.1	5.2
Long Beach Blvd./Imperial Hwy.	3	3.1	8.4

Source: 2003 AQMP
Notes: ppm: parts per million. Federal 1-hour standard is 35 ppm and the deferral 8-hour standard is 9.0 ppm.

Based on the SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of traffic volumes and congestion at a particular intersection. As evidence of this, for example, 9.3 ppm 8-hr CO concentration measured at the Long Beach Blvd. and Imperial Hwy. intersection (highest CO generating intersection within the "hot spot" analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 8.6 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared (46). In contrast, the ambient 8-hr CO concentration within the Project study area is estimated at 1.4 ppm—1.6 ppm (please refer to previous Table 2-3). Therefore, even if the traffic volumes for the proposed Project were double or even triple of the traffic volumes generated at the Long Beach Blvd. and Imperial Hwy. intersection, coupled with the on-going improvements in ambient air quality, the Project would not be capable of resulting in a CO "hot spot" at any study area intersections.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (47).

Traffic volumes generating the CO concentrations for the "hot spot" analysis, shown on Table 3-11. The busiest intersection evaluated was that at Wilshire Blvd. and Veteran Ave., which has a daily traffic volume of approximately 100,000 vehicles per day. The 2003 AQMP estimated that the 1-hour concentration for this intersection was 4.6 ppm; this indicates that, should the daily traffic volume increase four times to 400,000 vehicles per day, CO concentrations (4.6 ppm x 4= 18.4 ppm) would still not likely exceed the most stringent 1-hour CO standard (20.0 ppm).[10] At buildout of the Project, the highest daily traffic volumes generated at the roadways within the

10 Based on the ratio of the CO standard (20.0 ppm) and the modeled value (4.6 ppm).

vicinity of the Project are expected to generate less than the highest daily traffic volumes generated at the busiest intersection in the CO "hot spot" analysis. As such, the Project would not likely exceed the most stringent 1-hour CO standard.

The proposed Project considered herein would not produce the volume of traffic required to generate a CO "hot spot" either in the context of the 2003 Los Angeles hot spot study or based on representative BAAQMD CO threshold considerations. Therefore, CO "hot spots" are not an environmental impact of concern for the proposed Project. Localized air quality impacts related to mobile-source emissions would therefore be less than significant.

TABLE 3-11: TRAFFIC VOLUMES

Intersection Location	Peak Traffic Volumes (vph)				
	Eastbound (AM/PM)	Westbound (AM/PM)	Southbound (AM/PM)	Northbound (AM/PM)	Total (AM/PM)
Wilshire Blvd./Veteran Ave.	4,954/2,069	1,830/3,317	721/1,400	560/933	8,062/7,719
Sunset Blvd./Highland Ave.	1,417/1,764	1,342/1,540	2,304/1,832	1,551/2,238	6,614/5,374
La Cienega Blvd./Century Blvd.	2,540/2,243	1,890/2,728	1,384/2,029	821/1,674	6,634/8,674
Long Beach Blvd./Imperial Hwy.	1,217/2,020	1,760/1,400	479/944	756/1,150	4,212/5,514

3.9 AIR QUALITY MANAGEMENT PLANNING

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the SCAG, county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In March 2017, the AQMD released the Final 2016 AQMP. The 2016 AQMP continues to evaluate current integrated strategies and control measures to meet the NAAQS, as well as, explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (48). Similar to the 2012 AQMP, the 2016 AQMP incorporates scientific and technological information and planning assumptions, including the 2016 RTP/SCS, a planning document that supports the integration of land use and

transportation to help the region meet the federal Clean Air Act requirements (19). The Project's consistency with the AQMP will be determined using the 2016 AQMP as discussed below.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the SCAQMD's CEQA Air Quality Handbook (1993) (49). These indicators are discussed below:

Consistency Criterion No. 1: The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations that Consistency Criterion No. 1 refers to are the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded.

Construction Impacts – Consistency Criterion 1

Consistency Criterion No. 1 refers to violations of the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if LSTs or regional significance thresholds were exceeded. As evaluated, the Project's regional and localized construction-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected.

Operational Impacts – Consistency Criterion 1

As evaluated, the Project's regional and localized operational-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected.

On the basis of the preceding discussion, the Project would be consistent with the AQMP according to this criterion.

Consistency Criterion No. 2: The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The 2016 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Santa Fe Springs General Plan is considered to be consistent with the AQMP.

Construction Impacts

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities.

Operational Impacts

The City of Santa Fe Springs designates the Project site as Business Park. The Business Park designation allows for offices of all types, particularly company headquarters and research and development activities, are to be encouraged. Industrial uses in this area should be restricted to limited manufacturing, research and light assembly operations (50). As previously stated, the proposed Project consists of the development of 163,518 sf of general light industrial use which is generally consistent with the site's land use designation and intensity. Furthermore, the Project does not exceed any of the applicable air quality thresholds.

On the basis of the preceding discussion, the Project is determined to be consistent with the second criterion.

AQMP Consistency Conclusion

The Project would not result in or cause NAAQS or CAAQS violations. The proposed Project is consistent with the land use and growth intensities reflected in the adopted General Plan. Furthermore, the Project would not exceed any applicable regional or local thresholds. As such, the Project is therefore considered to be consistent with the AQMP.

3.10 POTENTIAL IMPACTS TO SENSITIVE RECEPTORS

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Sensitive receptors can include uses such as long-term health care facilities, rehabilitation centers, and retirement homes. Residences, schools, playgrounds, childcare centers, and athletic facilities can also be considered as sensitive receptors.

The proposed Project would not result in a CO "hotspot" as a result of Project related traffic during ongoing operations, nor would the Project result in a significant adverse health impact as discussed in Section 3.8. Thus, a less than significant impact to sensitive receptors during operational activity is expected.

3.11 ODORS

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required (51).

3.12 CUMULATIVE IMPACTS

As previously shown in Table 2-3, the Project area is designated as an non-attainment area for ozone, PM_{10}, and $PM_{2.5}$.

The AQMD has published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (52). In this report the AQMD clearly states (Page D-3):

> *…the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for toxic air contaminant (TAC) emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*
>
> *Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant.*

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related

construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable.

Construction Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, Project construction-source emissions would be considered less than significant on a project-specific and cumulative basis.

Operational Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that Project operational-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, Project operational-source emissions would be considered less than significant on a project-specific and cumulative basis.

APPENDIX 2.1:

STATE/FEDERAL ATTAINMENT STATUS OF CRITERIA POLLUTANTS

APPENDIX C

MAPS AND TABLES OF AREA DESIGNATIONS FOR STATE AND NATIONAL AMBIENT AIR QUALITY STANDARDS

[This page intentionally left blank]

APPENDIX C

MAPS AND TABLES OF AREA DESIGNATIONS FOR STATE AND NATIONAL AMBIENT AIR QUALITY STANDARDS

This attachment fulfills the requirement of Health and Safety Code section 40718 for CARB to publish maps that identify areas where one or more violations of any State ambient air quality standard (State standard) or national ambient air quality standard (national standard) have been measured. The national standards are those promulgated under section 109 of the federal Clean Air Act (42 U.S.C. 7409).

This attachment is divided into three parts. The first part comprises a table showing the levels, averaging times, and measurement methods for each of the State and national standards. This is followed by a section containing maps and tables showing the area designations for each pollutant for which there is a State standard in the California Code of Regulations, title 17, section 70200. The last section contains maps and tables showing the most current area designations for the national standards.

Ambient Air Quality Standards

(Updated 5/4/16)

Pollutant	Averaging Time	California Standards [1]		National Standards [2]		
		Concentration [3]	Method [4]	Primary [3,5]	Secondary [3,6]	Method [7]
Ozone (O_3)[8]	1 Hour	0.09 ppm (180 µg/m³)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m³)		0.070 ppm (137 µg/m³)		
Respirable Particulate Matter (PM10)[9]	24 Hour	50 µg/m³	Gravimetric or Beta Attenuation	150 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m³		—		
Fine Particulate Matter (PM2.5)[9]	24 Hour	—	—	35 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	12.0 µg/m³	15 µg/m³	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m³)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m³)		9 ppm (10 mg/m³)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m³)		—	—	
Nitrogen Dioxide (NO_2)[10]	1 Hour	0.18 ppm (339 µg/m³)	Gas Phase Chemiluminescence	100 ppb (188 µg/m³)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m³)		0.053 ppm (100 µg/m³)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1 Hour	0.25 ppm (655 µg/m³)	Ultraviolet Fluorescence	75 ppb (196 µg/m³)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m³)	
	24 Hour	0.04 ppm (105 µg/m³)		0.14 ppm (for certain areas)[11]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[11]	—	
Lead[12,13]	30 Day Average	1.5 µg/m³	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m³ (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m³		
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	**No National Standards**		
Sulfates	24 Hour	25 µg/m³	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m³)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24 Hour	0.01 ppm (26 µg/m³)	Gas Chromatography			

See footnotes on next page ...

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1- and 24-hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.

3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.

5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

7. Reference method as described by the U.S. EPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the U.S. EPA.

8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

12. The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

14. In 1989, the CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

[This page intentionally left blank]

Area Designations for the State Ambient Air Quality Standards

The following maps and tables show the area designations for each pollutant with a State standard set forth in the California Code of Regulations, title 17, section 60200. Each area is identified as attainment, nonattainment, nonattainment-transitional, or unclassified for each pollutant, as shown below:

Attainment	A
Nonattainment	N
Nonattainment-Transitional	NA-T
Unclassified	U

In general, CARB designates areas by air basin for pollutants with a regional impact and by county for pollutants with a more local impact. However, when there are areas within an air basin or county with distinctly different air quality deriving from sources and conditions not affecting the entire air basin or county, CARB may designate a smaller area. Generally, when boundaries of the designated area differ from the air basin or county boundaries, the description of the specific area is referenced at the bottom of the summary table.

(1) AB 3048 (Olberg) and AB 2525 (Miller) signed into law in 1996, made changes to Health and Safety Code, section 40925.5. One of the changes allows nonattainment districts to become nonattainment-transitional for ozone by operation of law.

Area Designations for the National Ambient Air Quality Standards

The following maps and tables show the area designations for each pollutant with a national ambient air quality standard. Additional information about the federal area designations is available on the U.S. EPA website:

https://www.epa.gov/green-book

Over the last several years, U.S. EPA has been reviewing the levels of the various national standards. The agency has already promulgated new standard levels for some pollutants and is considering revising the levels for others. Information about the status of these reviews is available on the U.S. EPA website:

https://www.epa.gov/criteria-air-pollutants

Designation Categories

Suspended Particulate Matter (PM_{10}). The U.S. EPA uses three categories to designate areas with respect to PM_{10}:

- Attainment
- Nonattainment
- Unclassifiable

Ozone, Fine Suspended Particulate Matter ($PM_{2.5}$), Carbon Monoxide (CO), and Nitrogen Dioxide (NO_2). The U.S. EPA uses two categories to designate areas with respect to these standards:

- Nonattainment
- Unclassifiable/Attainment

The national 1-hour ozone standard was revoked effective June 15, 2005, and the area designations map reflects the 2015 national 8-hour ozone standard of 0.070 ppm. Original designations were finalized on August 3, 2018.

On December 14, 2012, the U.S. EPA established a new national annual primary $PM_{2.5}$ standard of 12.0 $\mu g/m^3$. New area designations reflecting this revised standard became final in December 2014. The current designation map reflects the most recently revised (2012) annual average standard of 12.0 $\mu g/m^3$ as well as the 24-hour standard of 35 $\mu g/m^3$, revised in 2006.

On January 22, 2010, the U.S. EPA established a new national 1-hour NO_2 standard of 100 parts per billion (ppb) and retained the annual average standard of 53 ppb. Designations for the primary NO_2 standard became effective on February 29, 2012. All areas of California meet this standard.

Sulfur Dioxide (SO_2). The U.S. EPA uses three categories to designate areas with respect to the 24-hour and annual average sulfur dioxide standards. These designation categories are:

- Nonattainment,
- Unclassifiable, and
- Attainment/Unclassifiable.

On June 2, 2010, the U.S. EPA established a new primary 1-hour SO_2 standard of 75 parts per billion (ppb). At the same time, U.S. EPA revoked the 24-hour and annual

average standards. Area designations for the 1-hour SO_2 standard were finalized on December 21, 2017 and are reflected in the area designations map.

Lead (particulate). The U.S. EPA promulgated a new rolling 3-month average lead standard in October 2008 of 0.15 µg/m^3. Designations were made for this standard in November 2010.

Designation Areas

From time to time, the boundaries of the California air basins have been changed to facilitate the planning process. CARB generally initiates these changes, and they are not always reflected in the U.S. EPA's area designations. For purposes of consistency, the maps in this attachment reflect area designation boundaries and nomenclature as promulgated by the U.S. EPA. In some cases, these may not be the same as those adopted by CARB. For example, the national area designations reflect the former Southeast Desert Air Basin. In accordance with Health and Safety Code section 39606.1, CARB redefined this area in 1996 to be the Mojave Desert Air Basin and Salton Sea Air Basin. The definitions and boundaries for all areas designated for the national standards can be found in Title 40, Code of Federal Regulations (CFR), Chapter I, Subchapter C, Part 81.305. They are available on the web at:

https://ecfr.io/Title-40/se40.20.81_1305

(1) Air quality in Sacramento County meets the national PM10 standards. The request for redesignation to attainment was approved by U.S. EPA in September 2013.
(2) U.S. EPA designation puts the Sacramento Valley Air Basin portion of Placer County in the Mountain Counties Air Basin.
(3) Air quality in Coachella Valley meets the national PM10 standards. A request for redesignation to attainment has been submitted to U.S. EPA.

* Definitions and references for all areas can be found in 40 CFR, Chapter I, Part 81.305. This map reflects the 2006 24-hour PM2.5 standard as well as the 1997 and 2012 PM2.5 annual standards.

(1) For this purpose, Sacramento Metro Area comprises all of Sacramento and portions of El Dorado, Placer, Solano, and Yolo Counties. Air quality in this area meets the national PM2.5 standards. A Determination of Attainment for the 2006 24-hour PM2.5 standard was made by U.S. EPA in June 2017.

(2) Air quality in this area meets the national PM2.5 standards. A Determination of Attainment for the 2006 24-hour PM2.5 standard was made by U.S. EPA in June 2017.

(3) Those lands of the Santa Rosa Band of Cahulla Mission Indians in Riverside County are designated Unclassifiable/Attainment.

(4) That portion of Imperial County encompassing the urban and surrounding areas of Brawley, Calexico, El Centro, Heber, Holtville, Imperial, Seeley, and Westmorland. Air quality in this area meets the national PM2.5 standards. A Determination of Attainment for the 2006 24-hour PM2.5 standard was made by U.S. EPA in June 2017.

(1) South Central Coast Air Basin Channel Islands:

Santa Barbara County includes Santa Cruz, San Miguel, Santa Rosa, and Santa Barbara Islands.

Ventura County includes Anacapa and San Nicolas Islands.

Note that the San Clemente and Santa Catalina Islands are considered part of Los Angeles County, and therefore, are included as part of the South Coast Air Basin.

APPENDIX 3.1:

CALEEMOD CONSTRUCTION (UNMITIGATED) EMISSIONS MODEL OUTPUTS

Pioneer Boulevard Development (Construction - Unmitigated)

South Coast AQMD Air District, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	163.52	1000sqft	3.75	163,518.00	0
Other Asphalt Surfaces	136.53	1000sqft	3.13	136,533.00	0
Other Non-Asphalt Surfaces	39.09	1000sqft	0.90	39,093.00	0
Parking Lot	271.00	Space	0.55	24,137.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Pioneer Boulevard Development (Construction - Unmitigated) - South Coast AQMD Air District, Summer

Project Characteristics -

Land Use - Total Project Area is roughly 8.34 acres.

Construction Phase - Construction expected to being Summer 2020 and end Summer 2021.

Off-road Equipment - Hours are based on an 8-hour workday.

Off-road Equipment - Hours are based on an 8-hour workday.

Off-road Equipment -

Demolition -

Grading - Total Acres Graded based on Construction Schedule and Equipment List. Site Preparation will disturb 1.5 acres per day and Grading will disturb 1.0 acres per day.

Architectural Coating - Rule 1113

Vehicle Trips - Construction Run Only.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - Construction Run Only.

Water And Wastewater - Construction Run Only.

Solid Waste - Construction Run Only.

Construction Off-road Equipment Mitigation - Rule 403

3.0 Construction Detail

Construction Phase

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Demolition	Demolition	6/1/2020	6/26/2020	5	20	
2	Site Preparation	Site Preparation	6/27/2020	7/10/2020	5	10	
3	Grading	Grading	7/11/2020	8/7/2020	5	20	
4	Building Construction	Building Construction	8/8/2020	6/25/2021	5	230	
5	Paving	Paving	6/26/2021	7/23/2021	5	20	
6	Architectural Coating	Architectural Coating	6/26/2021	8/20/2021	5	40	

Acres of Grading (Site Preparation Phase): 15

Acres of Grading (Grading Phase): 20

Acres of Paving: 4.58

Residential Indoor: 0; Residential Outdoor: 0; Non-Residential Indoor: 245,277; Non-Residential Outdoor: 81,759; Striped Parking Area: 11,986 (Architectural Coating – sqft)

OffRoad Equipment

Pioneer Boulevard Development (Construction - Unmitigated) - South Coast AQMD Air District, Summer

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Excavators	3	8.00	158	0.38
Demolition	Rubber Tired Dozers	2	8.00	247	0.40
Site Preparation	Rubber Tired Dozers	3	8.00	247	0.40
Site Preparation	Tractors/Loaders/Backhoes	4	8.00	97	0.37
Grading	Excavators	1	8.00	158	0.38
Grading	Graders	1	8.00	187	0.41
Grading	Rubber Tired Dozers	1	8.00	247	0.40
Grading	Tractors/Loaders/Backhoes	3	8.00	97	0.37
Building Construction	Cranes	1	8.00	231	0.29
Building Construction	Forklifts	3	8.00	89	0.20
Building Construction	Generator Sets	1	8.00	84	0.74
Building Construction	Tractors/Loaders/Backhoes	3	8.00	97	0.37
Building Construction	Welders	1	8.00	46	0.45
Paving	Pavers	2	8.00	130	0.42
Paving	Paving Equipment	2	8.00	132	0.36
Paving	Rollers	2	8.00	80	0.38
Architectural Coating	Air Compressors	1	8.00	78	0.48

Parking Lot	271.00	Space	0.55	24,137.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project Area is roughly 8.34 acres.

Construction Phase - Construction expected to being Summer 2020 and end Summer 2021.

Off-road Equipment - Hours are based on an 8-hour workday.

Off-road Equipment - Hours are based on an 8-hour workday.

Off-road Equipment -

Demolition -

Grading - Total Acres Graded based on Construction Schedule and Equipment List. Site Preparation will disturb 1.5 acres per day and Grading will disturb 1.0 acres per day.

Architectural Coating - Rule 1113

Vehicle Trips - Construction Run Only.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - Construction Run Only.

Water And Wastewater - Construction Run Only.

Solid Waste - Construction Run Only.

Construction Off-road Equipment Mitigation - Rule 403

South Coast AQMD Air District, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	163.52	1000sqft	3.75	163,518.00	0
Other Asphalt Surfaces	136.53	1000sqft	3.13	136,533.00	0
Other Non-Asphalt Surfaces	39.09	1000sqft	0.90	39,093.00	0
Parking Lot	271.00	Space	0.55	24,137.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project Area is roughly 8.34 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on in ITE 10th Edition and Trip Generation Memo provided by Project Applicant.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

Fleet Mix - Passenger Car Fleet Mix broken down between LDA, LDT1, LDT2, and MDV vehicles.

Energy Use - The project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses due to lighting upgrades.

1.3 User Entered Comments & Non-Default Data

Pioneer Boulevard Development (Operations - Passenger Cars) - South Coast AQMD Air District, Winter

Project Characteristics -

Land Use - Total Project Area is roughly 8.34 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on in ITE 10th Edition and Trip Generation Memo provided by Project Applicant.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

Fleet Mix - Passenger Car Fleet Mix broken down between LDA, LDT1, LDT2, and MDV vehicles.

Energy Use - The project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses due to lighting upgrades.

APPENDIX 3.3:

CALEEMOD OPERATIONS (TRUCKS) EMISSIONS MODEL OUTPUTS

Pioneer Boulevard Development (Operations - Trucks)

South Coast AQMD Air District, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	163.52	1000sqft	3.75	163,518.00	0
Other Asphalt Surfaces	136.53	1000sqft	3.13	136,533.00	0
Other Non-Asphalt Surfaces	39.09	1000sqft	0.90	39,093.00	0
Parking Lot	271.00	Space	0.55	24,137.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project Area is roughly 8.34 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on in ITE 10th Edition and Trip Generation Memo provided by Project Applicant.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

Fleet Mix - Truck Fleet Mix broken down between LHD1, MHDT, and HHDT vehicles.

Energy Use - The project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses due to lighting upgrades.

1.3 User Entered Comments & Non-Default Data

Pioneer Boulevard Development (Operations - Trucks) - South Coast AQMD Air District, Winter

Project Characteristics -

Land Use - Total Project Area is roughly 8.34 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on in ITE 10th Edition and Trip Generation Memo provided by Project Applicant.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

Fleet Mix - Truck Fleet Mix broken down between LHD1, MHDT, and HHDT vehicles.

Energy Use - The project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses due to lighting upgrades.

Land Use -

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on in ITE 10th Edition and Trip Generation Memo provided by Project Applicant.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

EXECUTIVE SUMMARY

This report evaluates the potential mobile source health risk impacts to sensitive receptors (residents) and adjacent workers associated with the development of the proposed Project, more specifically, health risk impacts as a result of exposure to diesel particulate matter (DPM) as a result of heavy-duty diesel trucks accessing the site. This section summarizes the significance criteria and Project mobile source health risks.

The results of the health risk assessment of lifetime cancer risk from Project-generated DPM emissions are provided in Table ES-1 below for the Project.

Residential Exposure Scenario:

The residential land uses with the greatest potential exposure to Project DPM source emissions are located approximately 1,300 feet west of the Project site at the southwest corner of Telegraph Road and Alburtis Avenue. At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project DPM source emissions is estimated at 0.68 in one million, which is less than the threshold of 10 in one million. At this same location, non-cancer risks were estimated to be 0.0002, which would not exceed the applicable threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to adjacent residences.

Worker Exposure Scenario:

The worker receptor land use with the greatest potential exposure to Project DPM source emissions is located approximately 65 feet south of the Project site at existing industrial land uses. At the maximally exposed individual worker (MEIW), the maximum incremental cancer risk impact at this location is 0.53 in one million which is less than the threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be 0.002, which would not exceed the applicable threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to adjacent workers. All other modeled worker locations in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIW identified herein.

School Child Exposure Scenario:

The school site land use with the greatest potential exposure to Project DPM source emissions is located approximately ½ mile (2,640 feet) south of the Project site at Lake Center Junior High School. At the maximally exposed individual school child (MEISC), the maximum incremental cancer risk impact attributable to the Project at this location is calculated to be an estimated 0.10 in one million which is less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to the Project were calculated to be 0.0002, which would not exceed the applicable significance threshold of 1.0. Any other schools near the Project site would be exposed to less emissions and consequently less impacts than what is disclosed for the MEISC. As such, the Project will not cause a significant human health or cancer risk to nearby school children.

TABLE ES-1: SUMMARY OF CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
30 Year Exposure	Maximum Exposed Sensitive Receptor	0.68	10	NO
25 Year Exposure	Maximum Exposed Worker Receptor	0.53	10	NO
9 Year Exposure	Maximum Exposed School Child Receptor	0.10	10	NO
Time Period	**Location**	**Maximum Hazard Index**	**Significance Threshold**	**Exceeds Significance Threshold**
Annual Average	Maximum Exposed Sensitive Receptor	0.0002	1.0	NO
Annual Average	Maximum Exposed Worker Receptor	0.002	1.0	NO
Annual Average	Maximum Exposed School Child Receptor	0.0002	1.0	NO

1 INTRODUCTION

The purpose of this Health Risk Assessment (HRA) is to evaluate Project-related impacts to sensitive receptors (residential, schools) and adjacent workers as a result of heavy-duty diesel trucks accessing the site.

The South Coast Air Quality Management District (SCAQMD) requests that if a proposed Project is expected to generate/attract heavy-duty diesel trucks, which emit diesel particulate matter (DPM), preparation of a mobile source HRA is recommended. This document serves to meet the SCAQMD's request for preparation of a HRA. The mobile source HRA has been prepared in accordance with the document Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (1) and is comprised of all relevant and appropriate procedures presented by the U.S. EPA, California Environmental Protection Agency and SCAQMD. Cancer risk is expressed in terms of expected incremental incidence per million population. The SCAQMD has established an incidence rate of ten (10) persons per million as the maximum acceptable incremental cancer risk due to DPM exposure. This threshold serves to determine whether or not a given project has a potentially significant development-specific and cumulative impact.

The AQMD has published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (2). In this report the AQMD clearly states (Page D-3):

"…the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for toxic air contaminant (TAC) emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.

Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."

The SCAQMD has also established non-carcinogenic risk parameters for use in HRAs. Non-carcinogenic risks are quantified by calculating a "hazard index," expressed as the ratio between the ambient pollutant concentration and its toxicity or Reference Exposure Level (REL). An REL is a concentration at or below which health effects are not likely to occur. A hazard index less of than one (1.0) means that adverse health effects are not expected. Within this analysis, non-carcinogenic exposures of less than 1.0 are considered less-than-significant.

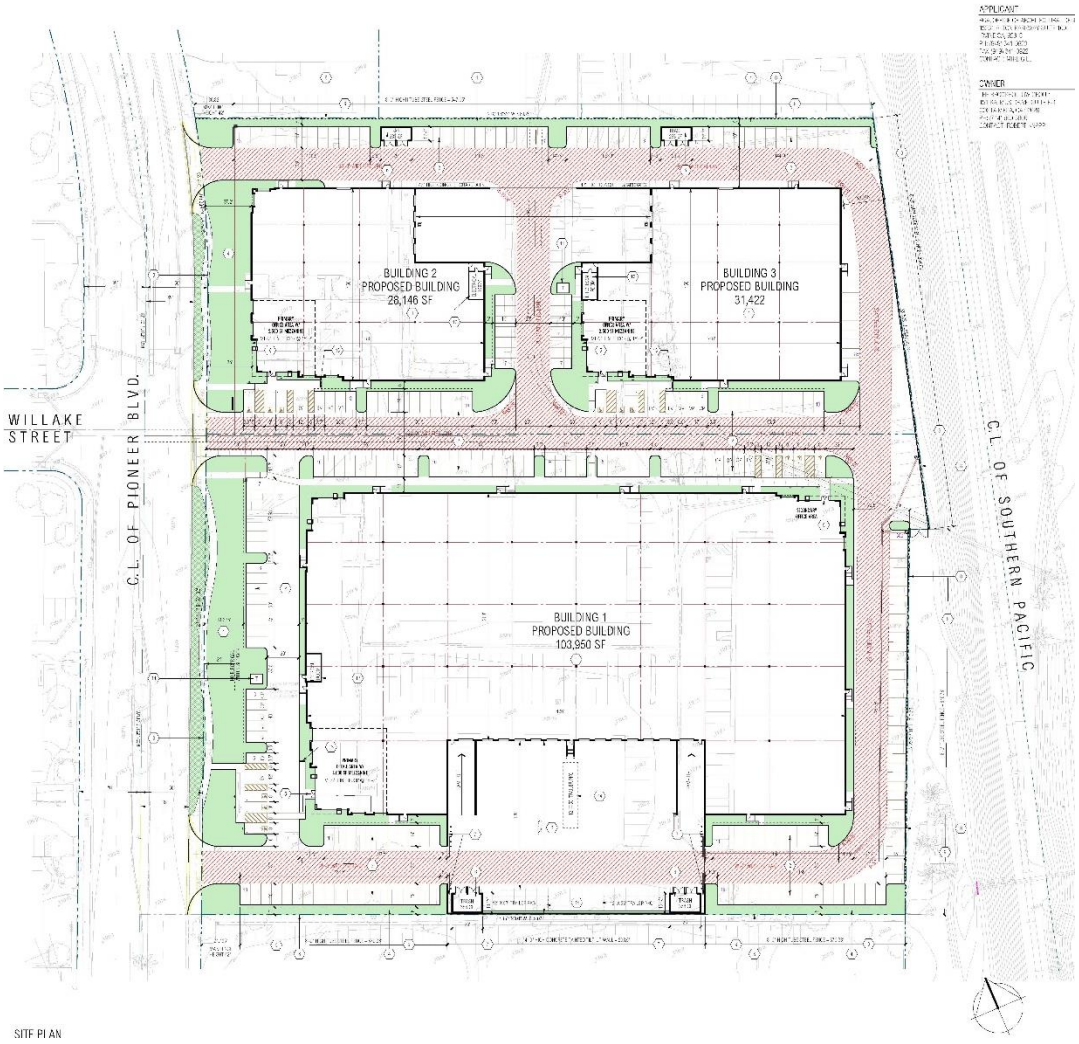
1.1 SITE LOCATION

The proposed Pioneer Boulevard Development is located at 9920 Pioneer Boulevard, in the City of Santa Fe Springs, as shown on Exhibit 1-A.

1.2 PROJECT STUDY AREA

The Project site is currently developed with 149,605 square feet (sf) business park and 8,064 sf general office building uses. The Project site is located within a developed and urban area with the City Santa Fe Springs. The surrounding land uses are described below.

- North: Immediately north of the project site are business park uses, designated as Business Park in the General Plan and zoned Limited Manufacturing (ML). A single-family residential neighborhood is to the northwest of the project site, designated as Single Family Residential in the General Plan and zoned Single Family (R-1).
- West: Adjacent to the project site are business park uses, designated as Business Park in the General Plan and zoned Limited Manufacturing (ML). Beyond the business park is a multi-family development designated as Multiple Family Residential and zoned Multiple Family – Planned Development Overlay Zone (R-3-PD).
- South: Immediately south of the project site are business park uses, designated and zoned with the same land uses as the project site: Business Park and Limited Manufacturing (ML). The City of Santa Fe Springs Civic Center is located southwest of the project site with a designation of Public Facilities by the General Plan and zoned a combination of Community Commercial (C-4), Public Facilities (PF), and Limited Manufacturing (ML) each with a Design Overlay zone.
- East: Across from the Southern Pacific railroad tracks are industrial uses, east of the project site. The General Plan designates this area as Industrial. The City zones the area as Heavy Manufacturing (M-2).



1.3 PROJECT DESCRIPTION

Exhibit 1-B illustrates the preliminary site plan. As indicated on Exhibit 1-B, the Project is proposed to consist 163,518 sf of general light industrial use within 3 buildings. The Project is anticipated to be constructed in a single phase by the year 2021. At the time this HRA was prepared, the future tenants of the proposed Project were unknown. This HRA study is intended to describe emission impacts associated with the expected typical 24-hour, seven days per week operational activities at the Project site.

EXHIBIT 1-A: LOCATION MAP

EXHIBIT 1-B: SITE PLAN

This page intentionally left blank

2 BACKGROUND

2.1 BACKGROUND ON RECOMMENDED METHODOLOGY

As noted above, this HRA is based on SCAQMD guidelines to produce conservative estimates of risk posed by exposure to DPM. The conservative nature of this analysis is due primarily to the following factors:

- The ARB-adopted diesel exhaust Unit Risk Factor (URF) of 300 in one million per µg/m3 is based upon the upper 95 percentile of estimated risk for each of the epidemiological studies utilized to develop the URF. Using the 95th percentile URF represents a very conservative (health-protective) risk posed by DPM.
- The risk estimates assume sensitive receptors will be subject to DPM for 24 hours a day, 350 days a year.
- The emissions derived assume that every truck accessing the project site will idle for 15 minutes under the unmitigated scenario, this is an overestimation of actual idling times and thus conservative.[1] It should be noted that ARB's anti-idling requirements impose a 5-minute maximum idling time and therefore the analysis conservatively overestimates DPM emissions from idling by a factor of 3.

2.2 EMISSIONS ESTIMATION

2.2.1 ON-SITE AND OFF-SITE TRUCK ACTIVITY

Vehicle DPM emissions were estimated using emission factors for particulate matter less than 10µm in diameter (PM_{10}) generated with the 2017 version of the Emission FACtor model (EMFAC) developed by the ARB. EMFAC 2017 is a mathematical model that was developed to calculate emission rates from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by the ARB to project changes in future emissions from on-road mobile sources (3). The most recent version of this model, EMFAC 2017, incorporates regional motor vehicle data, information and estimates regarding the distribution of vehicle miles traveled (VMT) by speed, and number of starts per day.

Several distinct emission processes are included in EMFAC 2017. Emission factors calculated using EMFAC 2017 are expressed in units of grams per vehicle miles traveled (g/VMT) or grams per idle-hour (g/idle-hr), depending on the emission process. The emission processes and corresponding emission factor units associated with diesel particulate exhaust for this Project are presented below.

For this Project, annual average PM_{10} emission factors were generated by running EMFAC 2017 in EMFAC Mode for vehicles in the SCAQMD jurisdiction. The EMFAC Mode generates emission factors in terms of grams of pollutant emitted per vehicle activity and can calculate a matrix of

[1] Although the Project is required to comply with ARB's idling limit of 5 minutes, staff at SCAQMD recommends that the on-site idling emissions should be estimated for 15 minutes of truck idling (personal communication, in person, with Jillian Wong, December 22, 2016), which would take into account on-site idling which occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc.

emission factors at specific values of temperature, relative humidity, and vehicle speed. The model was run for speeds traveled in the vicinity of the Project. The vehicle travel speeds for each segment modeled are summarized below.

- Idling – on-site loading/unloading and truck gate
- 5 miles per hour – on-site vehicle movement including driving and maneuvering
- 25 miles per hour – off-site vehicle movement including driving and maneuvering.

Calculated emission factors are shown at Table 2-1. As a conservative measure, a 2021 EMFAC 2017 run was conducted and a static 2021 emissions factor data set was used for the entire duration of analysis herein (e.g., 30 years). Use of 2021 emission factors would overstate potential impacts since this approach assumes that emission factors remain "static" and do not change over time due to fleet turnover or cleaner technology with lower emissions that would incorporated after 2021. Additionally, based on EMFAC2017, Light-Heavy-Duty Trucks comprise of 47.7% diesel, Medium-Heavy-Duty Trucks comprise of 88.3% diesel, and Heavy-Heavy-Duty Trucks comprise of 96.1% diesel trucks and have been accounted for accordingly in the emissions factor generation.

The vehicle DPM exhaust emissions were calculated for running exhaust emissions. The running exhaust emissions were calculated by applying the running exhaust PM10 emission factor (g/VMT) from EMFAC over the total distance traveled. The following equation was used to estimate off-site emissions for each of the different vehicle classes comprising the mobile sources (3):

$Emissions_{speedA}$ (g/s) = $EF_{RunExhaust}$ (g/VMT) * Distance (VMT/trip) * Number of Trips (trips/day) / seconds per day

Where:

$Emissions_{speedA}$ (g/s): Vehicle emissions at a given speed A;

$EF_{RunExhaust}$ (g/VMT): EMFAC running exhaust PM_{10} emission factor at speed A;

Distance (VMT/trip): Total distance traveled per trip.

Similar to off-site traffic, on-site vehicle running emissions were calculated by applying the running exhaust PM_{10} emission factor (g/VMT) from EMFAC and the total vehicle trip number over the length of the driving path using the same formula presented above for on-site emissions. In addition, on-site vehicle idling exhaust emissions were calculated by applying the idle exhaust PM_{10} emission factor (g/idle-hr) from EMFAC and the total truck trip over the total idle time (15 minutes). The following equation was used to estimate the on-site vehicle idling emissions for each of the different vehicle classes (3):

$Emissions_{idle}$ (g/s) = EF_{idle} (g/hr) * Number of Trips (trips/day) * Idling Time (min/trip) *

60 minutes per hour / seconds per day

Where:

$Emissions_{idle}$ (g/s): Vehicle emissions during idling;

EF_{idle}(g/s): EMFAC idle exhaust PM_{10} emission factor.

TABLE 2-1: 2021 WEIGHTED AVERAGE DPM EMISSIONS FACTORS

Speed	Weighted Average
0 (idling)	0.18756 (g/idle-hr)
5	0.07541 (g/s)
25	0.03070 (g/s)

Each roadway was modeled as a line source (made up of multiple adjacent volume sources). Due to the large number of volume sources modeled for this analysis, the corresponding coordinates of each volume source have not been included in this report but are included in Appendix "2.1". The DPM emission rate for each volume source was calculated by multiplying the emission factor (based on the average travel speed along the roadway) by the number of trips and the distance traveled along each roadway segment and dividing the result by the number of volume sources along that roadway, as illustrated on Table 2-2. The modeled emission sources are illustrated on Exhibit 2-A. The modeled truck travel routes included in the HRA are based on the anticipated truck trip distributions (inbound and outbound). The modeled truck route was modeled to determine the potential impacts to sensitive receptors along the primary truck routes. The modeling domain is limited to the Project's primary truck route and includes off-site sources in the study area for approximately 1 mile. This modeling domain is more conservative than using only a ¼ mile modeling domain which is supported by substantial evidence since several studies have shown that the greatest potential risks occur within a ¼ mile of the primary source of emissions (4) (in the case of the Project this is the on-site idling and travel).

On-site truck idling was estimated to occur as trucks enter and travel through the facility. Although the Project is required to comply with CARB's idling limit of 5 minutes, staff at SCAQMD recommends that the on-site idling emissions should be estimated for 15 minutes of truck idling (5), which would take into account on-site idling which occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc. As such, this analysis estimated truck idling at 15 minutes, consistent with SCAQMD's recommendation.

EXHIBIT 2-A: MODELED EMISSION SOURCES

TABLE 2-2: DPM EMISSIONS FROM PROJECT TRUCKS (2021 ANALYSIS YEAR)

Truck Emission Rates						
Source	Trucks Per Day	VMT [a] (miles/day)	Truck Emission Rate [b] (grams/mile)	Truck Emission Rate [b] (grams/idle-hour)	Daily Truck Emissions [c] (grams/day)	Modeled Emission Rates (g/second)
On-Site Idling Building 1	55			0.1876	2.59	3.002E-05
On-Site Idling Building 2	15			0.1876	0.70	8.127E-06
On-Site Idling Building 3	17			0.1876	0.78	9.073E-06
On-Site Travel Building 1	111	11.77	0.0754		0.89	1.028E-05
On-Site Travel Buildings 2 & 3	63	5.82	0.0754		0.44	5.078E-06
Off-Site Travel 100% Project to Telegraph Road	174	27.98	0.0307		0.86	9.943E-06
Off-Site Travel 30%	52	37.54	0.0307		1.15	1.334E-05
Off-Site Travel 50%	87	65.78	0.0307		2.02	2.338E-05
Off-Site Travel 20%	35	48.62	0.0307		1.49	1.728E-05

[a] Vehicle miles traveled are for modeled truck route only.

[b] Emission rates determined using EMFAC 2017. Idle emission rates are expressed in grams per idle hour rather than grams per mile.

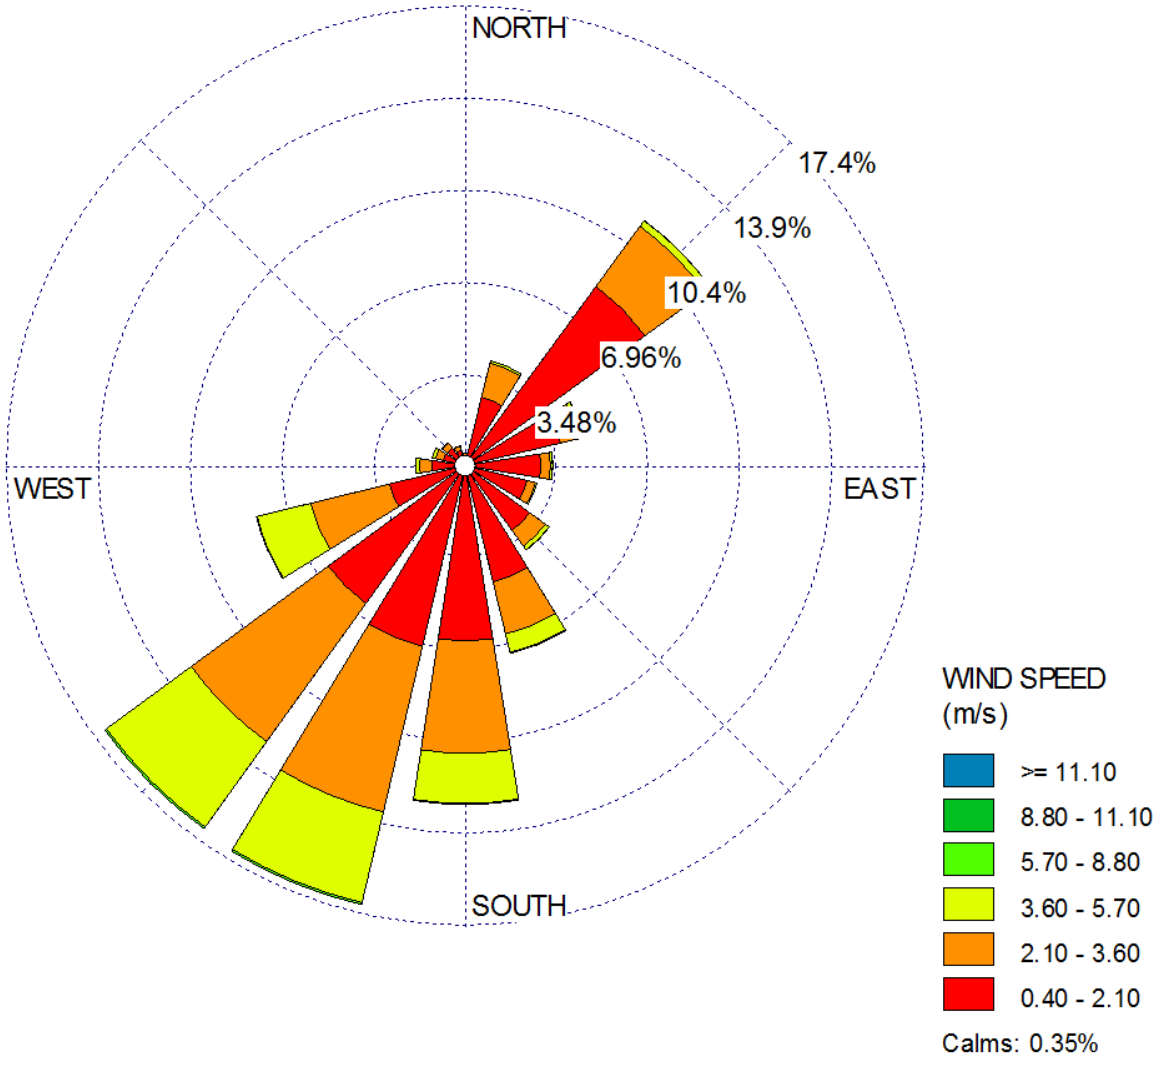
[c] This column includes the total truck travel and truck idle emissions. For idle emissions this column includes emissions based on the assumption that each truck idles for 15 minutes.

Per the *Pioneer Boulevard Development Trip Generation Analysis* prepared by EPD Solutions, Inc. the Project is expected to generate a total of approximately 811 two-way trips per day (actual vehicles) and includes 174 two-way truck trips per day, including 65 2-axle, 32 3-axle, and 77 4+-axle truck trips per day (6).

2.3 EXPOSURE QUANTIFICATION

The analysis herein has been conducted in accordance with the guidelines in the Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (1). SCAQMD recommends using the Environmental Protection Agency's (U.S. EPA's) AERMOD model. For purposes of this analysis, the Lakes AERMOD View (Version 9.6.5) was used to calculate annual average particulate concentrations associated with site operations.

The model offers additional flexibility by allowing the user to assign an initial release height and vertical dispersion parameters for mobile sources representative of a roadway. For this HRA, the roadways were modeled as adjacent volume sources. Roadways were modeled using the U.S. EPA's haul route methodology for modeling of on-site and off-site truck movement. More specifically, the Haul Road Volume Source Calculator in Lakes AERMOD View has been utilized to determine the release height parameters. Based on the US EPA methodology, the Project's modeled sources would result in a release height of 3.49 meters, and an initial lateral dimension of 4.0 meters, and an initial vertical dimension of 3.25 meters.



SCAQMD required model parameters are presented in Table 2-3 (7). The model requires additional input parameters including emission data and local meteorology. Meteorological data from the SCAQMD's Pico Rivera monitoring station (SRA 5) was used to represent local weather conditions and prevailing winds (8). A wind rose exhibit of the Peris monitoring station is provided at Exhibit 2-B.

TABLE 2-3: AERMOD MODEL PARAMETERS

Dispersion Coefficient	Urban
County Population	9,818,605
Terrain	Elevated (Regulatory Default)
Averaging Time	1 year (5-year Meteorological Data Set)
Receptor Height	0 meters (Regulatory Default)

Universal Transverse Mercator (UTM) coordinates for World Geodetic System (WGS) 84 were used to locate the project boundaries, each volume source location, and receptor locations in the project vicinity. The AERMOD dispersion model summary output files for the proposed facility are presented in Appendix "2.1". Modeled sensitive receptors were placed at discrete residential and non-residential locations.

EXHIBIT 2-B: WIND ROSE (SRA 5)

Receptors may be placed at applicable structure locations for residential and worker property and not necessarily the boundaries of these uses. It should be noted that the primary purpose of receptor placement is focused on long-term exposure. For example, the HRA evaluates the potential health risks to residential and worker over a period of 30 or 25 years of exposure, respectively. As such, even though it is unlikely to occur in practical terms (because the amount of time spent indoors), this study assumes that a resident or worker would be exposed over a long-period of time for 12 or 24-hours per day at the structure where they reside or work.

Furthermore, worker receptors immediately adjacent to the Project site have been evaluated in the HRA. Any impacts to workers located further away from the Project site than the modeled worker receptors would have a lesser impact than what has already been disclosed in the HRA at the MEIW.

Discrete variants for daily breathing rates, exposure frequency, and exposure duration were obtained from relevant distribution profiles presented in the 2015 OEHHA Guidelines. Tables 2-4 through 2-6 summarize the Exposure Parameters for Residents, Offsite Worker, and School exposure scenarios based on 2015 OEHHA Guidelines. Appendix 2.2 includes the detailed risk calculation.

2.4 CARCINOGENIC CHEMICAL RISK

Based on the South Coast AQMD Air Quality Significance Thresholds (9) (April 2019), emissions of toxic air contaminants (TACs) are considered significant if a HRA shows an increased risk of greater than 10 in one million. Based on guidance from the SCAQMD in the document Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (1), for purposes of this analysis, 10 in one million is used as the cancer risk threshold for the proposed Project.

Excess cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to potential carcinogens over a specified exposure duration. The estimated risk is expressed as a unitless probability. The cancer risk attributed to a chemical is calculated by multiplying the chemical intake or dose at the human exchange boundaries (e.g., lungs) by the chemical-specific cancer potency factor (CPF). A risk level of 10 in one million implies a likelihood that up to 10 people, out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the levels of toxic air contaminants over a specified duration of time. As an example, the risk of dying from accidental drowning is 1,000 in a million which is 100 times more than the SCAQMD's threshold of 10 in one million, the nearest comparison to 10 in one million is the 7 in one million lifetime chance that an individual would be struck by lightning.

Guidance from CARB and the California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA) recommends a refinement to the standard point estimate approach when alternate human body weights and breathing rates are utilized to assess risk for susceptible subpopulations such as children. For the inhalation pathway, the procedure requires the incorporation of several discrete variates to effectively quantify dose. Once determined, contaminant dose is multiplied by the cancer potency factor (CPF) in units of

TABLE 2-4: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (30 YEAR RESIDENTIAL)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Fraction of Time at Home	Exposure Frequency (days/year)	Exposure Time (hours/day)
-0.25 to 0	361	10	0.25	0.85	350	24
0 to 2	1090	10	2	0.85	350	24
2 to 16	572	3	14	0.72	350	24
16 to 30	261	1	14	0.73	350	24

TABLE 2-5: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (25 YEAR WORKER)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Exposure Frequency (days/year)	Exposure Time (hours/day)
16 to 41	230	1	25	250	12

TABLE 2-6: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (9 YEAR SCHOOL CHILD)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Exposure Frequency (days/year) [a]	Exposure Time (hours/day)
2-16	572	3	9	180	12

[a] To represent the unique characteristics of the school-based population, the assessment employed the U.S. Environmental Protection Agency's guidance to develop viable dose estimates based on reasonable maximum exposures (RME). RME's are defined as the "highest exposure that is reasonably expected to occur" for a given receptor population. As a result, lifetime risk values for the student population were adjusted to account for an exposure duration of 180 days per year for nine (9) years. The 9 year exposure duration is also consistent with OEHHA Recommendations and consistent with the exposure duration utilized in school-based risk assessments for various schools within the Los Angeles County Unified School District (LAUSD) that have been accepted by the SCAQMD.

inverse dose expressed in milligrams per kilogram per day (mg/kg/day)-1 to derive the cancer risk estimate. Therefore, to assess exposures, the following dose algorithm was utilized.

$$DOSEair = (Cair \times [BR/BW] \times A \times EF) \times (1 \times 10^{-6})$$

Where:

DOSEair = chronic daily intake (mg/kg/day)

Cair = concentration of contaminant in air (ug/m3)

[BR/BW] = daily breathing rate normalized to body weight (L/kg BW-day)

A = inhalation absorption factor

EF = exposure frequency (days/365 days)

BW = body weight (kg)

1 x 10 -6 = conversion factors (ug to mg, L to m3)

$$RISKair = DOSEair \times CPF \times ED/AT$$

Where:

DOSEair = chronic daily intake (mg/kg/day)

CPF = cancer potency factor

ED = number of years within particular age group

AT = averaging time

2.5 NON-CARCINOGENIC EXPOSURES

An evaluation of the potential noncarcinogenic effects of chronic exposures was also conducted. Adverse health effects are evaluated by comparing a compound's annual concentration with its toxicity factor or Reference Exposure Level (REL). The REL for diesel particulates was obtained from OEHHA for this analysis. The chronic reference exposure level (REL) for DPM was established by OEHHA as 5 $\mu g/m^3$ (OEHHA Toxicity Criteria Database, http://www.oehha.org/risk/chemicaldb/index.asp).

The non-cancer hazard index was calculated (consistent with SCAQMD methodology) as follows:

The relationship for the non-cancer health effects of DPM is given by the following equation:

$$HI_{DPM} = C_{DPM}/REL_{DPM}$$

Where:

HI_{DPM} = Hazard Index; an expression of the potential for non-cancer health

effects.

C_{DPM} = Annual average DPM concentration ($\mu g/m^3$).

REL_{DPM} = Reference exposure level (REL) for DPM; the DPM concentration at which no adverse health effects are anticipated.

For purposes of this analysis the hazard index for the respiratory endpoint totaled less than one for all receptors in the project vicinity, and thus is less than significant.

2.6 TOXIC AIR POLLUTANTS FROM PROJECT CONSTRUCTION ACTIVITIES

During short-term construction activity, the Project will also result in some diesel particulate matter (DPM) which is a listed carcinogen and toxic air contaminant (TAC) in the State of California. The 2015 Office of Environmental Health Hazard Assessment (OEHHA) revised risk assessment guidelines suggest that construction projects as short as 2-6 months may warrant evaluation. Notwithstanding, based on Urban Crossroad's professional opinion and experience in preparing health risk assessments for development projects, given the size of the Project and the relatively small amount of equipment and relative short duration of activity, any DPM generated from construction activity would be negligible and not result in any significant health risks and no further evaluation is required.

Furthermore, the SCAQMD has acknowledged that they are currently evaluating the applicability of age sensitivity factors and have not established CEQA guidance. More specifically in their response to comments received on SCAQMD Rules 1401 in June 2015 (see Board Meeting June 5, 2015), the SCAQMD explicitly states that (Page A-7 and A-8):

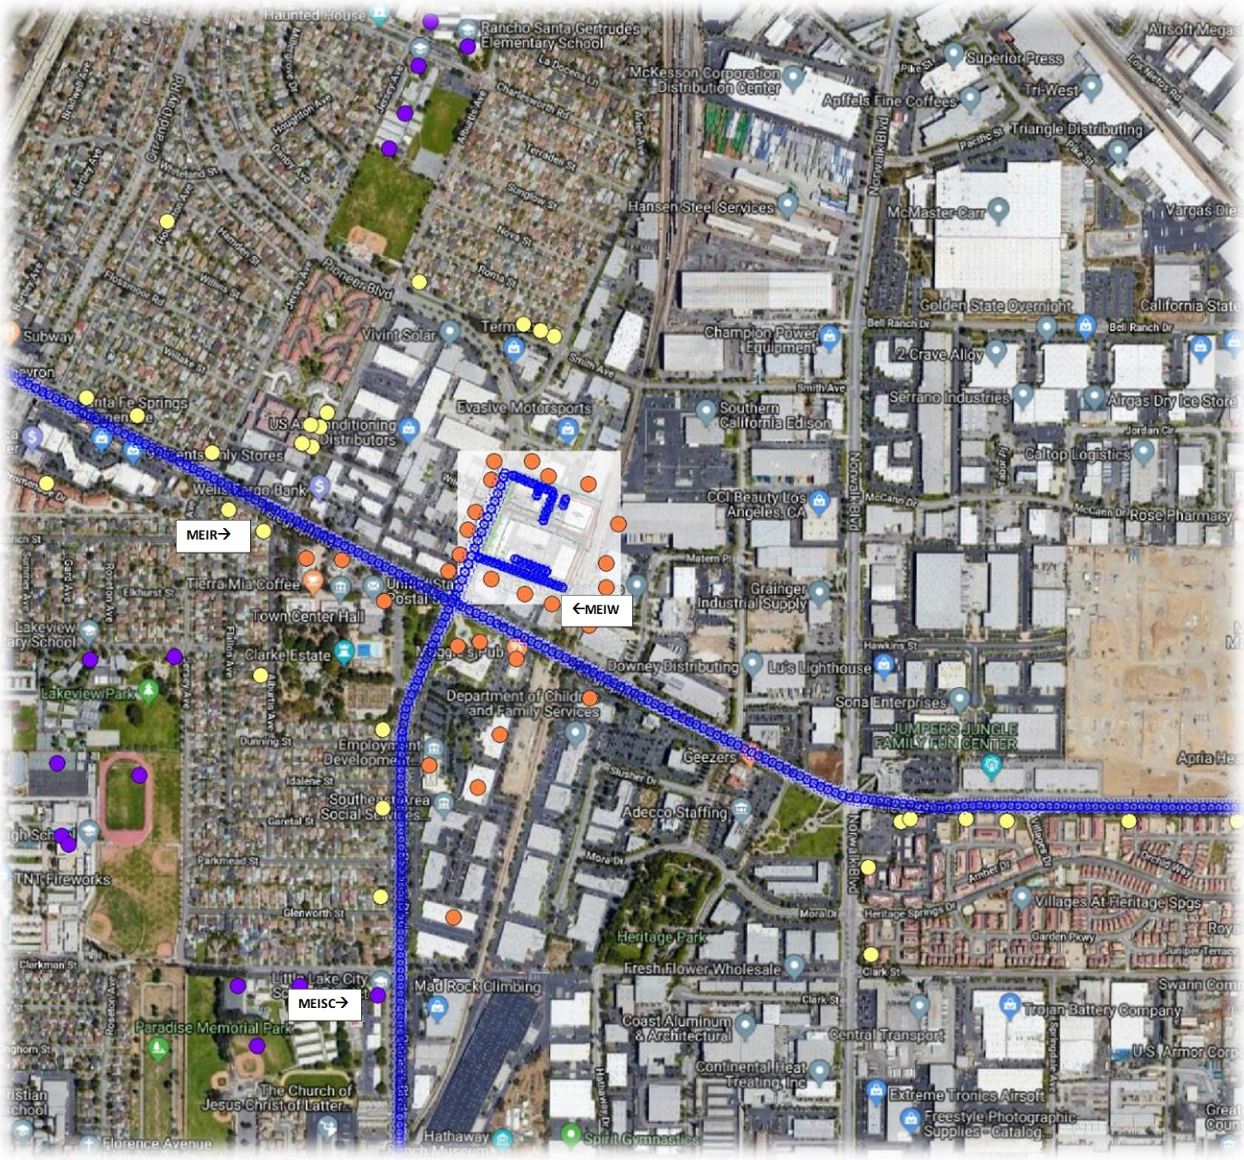
"The Proposed Amended Rules are separate from the CEQA significance thresholds. The SCAQMD staff is currently evaluating how to implement the Revised OEHHA Guidelines under CEQA. The SCAQMD staff will evaluate a variety of options on how to evaluate health risks under the Revised OEHHA Guidelines under CEQA. The SCAQMD staff will conduct public workshops to gather input before bringing recommendations to the Governing Board. In the interim, staff will continue to use the previous guidelines for CEQA determinations."

2.7 POTENTIAL PROJECT-RELATED DPM SOURCE CANCER AND NON-CANCER RISKS[2]

Residential Exposure Scenario:

The residential land uses with the greatest potential exposure to Project DPM source emissions are located approximately 1,300 feet west of the Project site at the southwest corner of Telegraph Road and Alburtis Avenue. At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project DPM source emissions is estimated at 0.68 in one million, which is less than the threshold of 10 in one million. At this same location, non-cancer risks were estimated to be 0.0002, which would not exceed the applicable threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to adjacent residences. The nearest modeled receptors are illustrated on Exhibit 2-C.

Worker Exposure Scenario:



The worker receptor land use with the greatest potential exposure to Project DPM source emissions is located approximately 65 feet south of the Project site at existing industrial land uses. At the maximally exposed individual worker (MEIW), the maximum incremental cancer risk impact at this location is 0.53 in one million which is less than the threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be 0.002, which would not exceed the applicable threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to adjacent workers. All other modeled worker locations in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIW identified herein. The nearest modeled receptors are illustrated on Exhibit 2-C.

School Child Exposure Scenario:

The school site land use with the greatest potential exposure to Project DPM source emissions is located approximately ½ mile (2,640 feet) south of the Project site at Lake Center Junior High School. At the maximally exposed individual school child (MEISC), the maximum incremental cancer risk impact attributable to the Project at this location is calculated to be an estimated 0.10 in one million which is less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to the Project were calculated to be 0.0002, which would not exceed the applicable significance threshold of 1.0. Any other schools near the Project site would be exposed to less emissions and consequently less impacts than what is disclosed for the MEISC. As such, the Project will not cause a significant human health or cancer risk to nearby school children. The nearest modeled receptors are illustrated on Exhibit 2-C.

2 SCAQMD guidance does not require assessment of the potential health risk to on-site workers. Excerpts from the document OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines—The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2003), also indicate that it is not necessary to examine the health effects to on-site workers unless required by RCRA (Resource Conservation and Recovery Act) / CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act) or the worker resides on-site.

- - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.
```

```
  --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for   384 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   9818605.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
         1. Stack-tip Downwash.
         2. Model Accounts for ELEVated Terrain Effects.
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.
         6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
         ADJ_U*   - Use ADJ_U* BETA option for SBL in AERMET
         TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  DPM

 **Model Calculates ANNUAL Averages Only

 **This Run Includes:    384 Source(s);       1 Source Group(s); and      72
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    384 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
```

Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing
Hours
b for Both Calm
and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 442.00 ; Decay
Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ;
Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.7 MB of RAM.

**Detailed Error/Message File: 12415 HRA.ERR

**File for Summary of Results: 12415 HRA.SUM

Off-Site Travel 20%	35	48.62	0.0307		1.49	1.728E-05

[a] Vehicle miles traveled are for modeled truck route only.

[b] Emission rates determined using EMFAC 2017. Idle emission rates are expressed in grams per idle hour rather than grams per mile.

[c] This column includes the total truck travel and truck idle emissions. For idle emissions this column includes emissions based on the assumption that each truck idles for 15 minutes.

Subject: ***Preliminary Geotechnical Evaluation and Design Recommendations for Proposed Pioneer Boulevard Industrial Development, Santa Fe Springs, California***

In accordance with your request and authorization, LGC Geotechnical, Inc. has performed a preliminary geotechnical evaluation for the proposed industrial development located on Pioneer Boulevard in the City of Santa Fe Springs, California. The purpose of our study was to evaluate the existing onsite geotechnical conditions and to provide preliminary geotechnical recommendations relative to the proposed industrial development.

Should you have any questions regarding this report, please do not hesitate to contact our office. We appreciate this opportunity to be of service.

Respectfully Submitted,

1.0 INTRODUCTION

1.1 Purpose and Scope of Services

This report presents the results of our preliminary geotechnical evaluation for the proposed approximately 8.3-acre industrial development located on Pioneer Boulevard in the City of Santa Fe Springs, California. Refer to the Site Location Map (Figure 1).

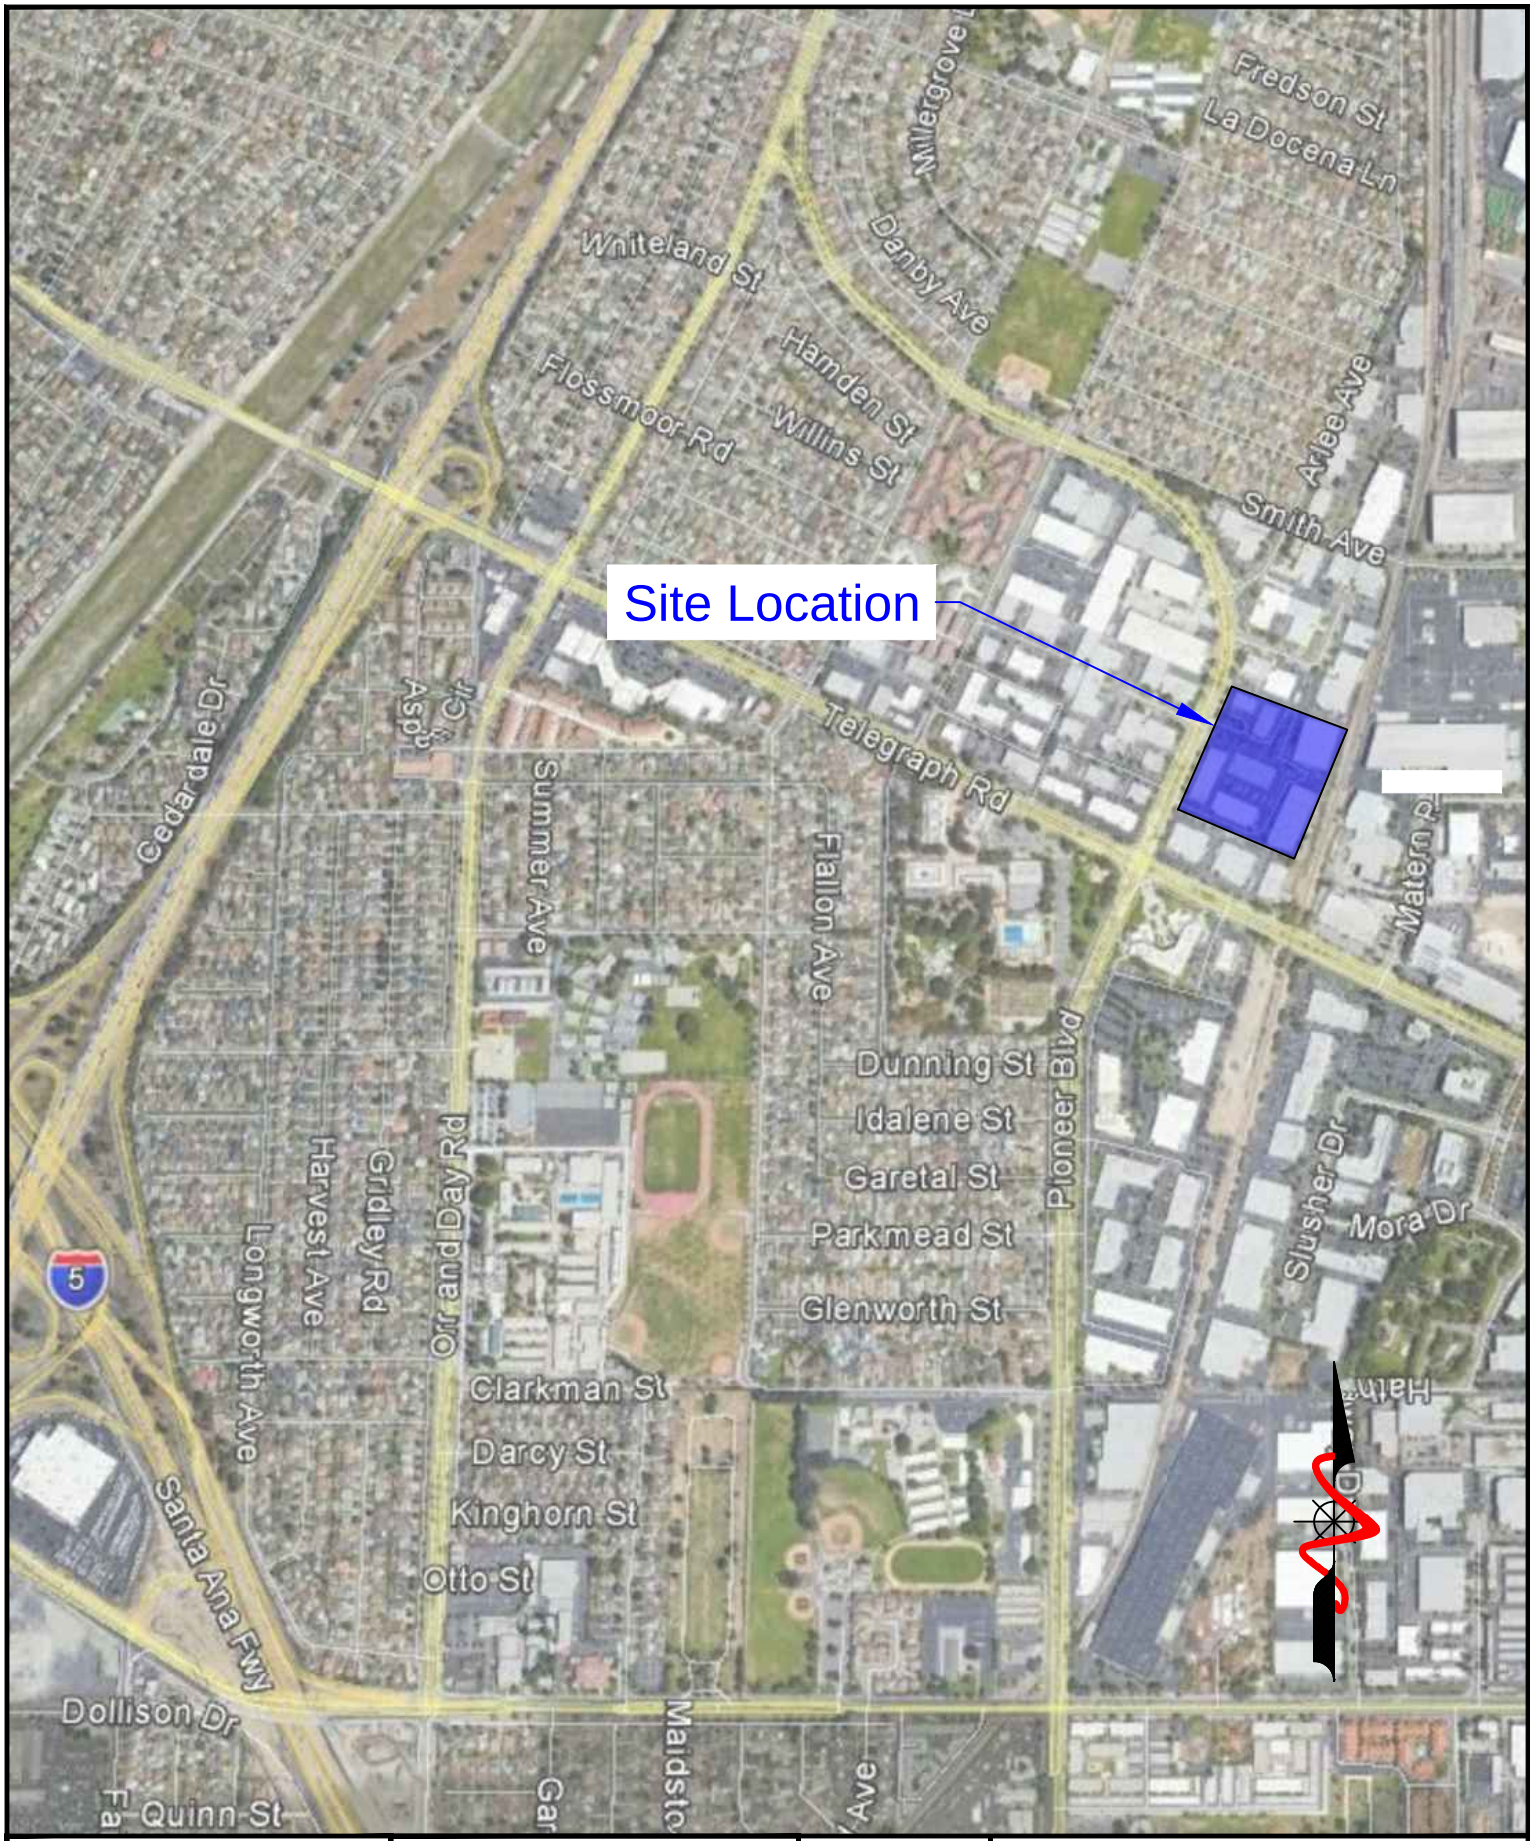
The purpose of our study was to provide a preliminary geotechnical evaluation relative to the proposed industrial development. As part of our scope of work, we have: 1) reviewed available geotechnical background information including in-house regional geologic maps and published geotechnical literature pertinent to the site (Appendix A); 2) performed a limited subsurface geotechnical evaluation of the site consisting of the excavation of seven small-diameter borings ranging in depth from approximately 10 to 50 feet below existing ground surface; 3) performed three field infiltration tests; 4) performed laboratory testing of select soil samples obtained during our subsurface evaluation; and 5) prepared this preliminary geotechnical summary report presenting our preliminary findings, conclusions and recommendations for the development of the proposed project.

1.2 Project Description

Based on the preliminary site plan (RGA, 2018), the proposed improvements include the construction of three industrial concrete tilt-up warehouse buildings ranging in size from approximately 28,146 to 103,939 square feet. The buildings are to be supported on conventional shallow foundations with concrete slab-on-grade floors. Drive ways, parking spaces, loading dock areas, trash enclosures and water quality basins/"wetland mods" are proposed throughout the site. Design cuts and fills (not including required remedial grading) are anticipated to be on the order of 2 to 4 feet. The proposed building structures are anticipated to be at-grade concrete tilt-up structures with maximum column and wall loads of approximately 100 kips and 5 kips per linear foot, respectively. Please note no structural loads were provided to us at the time of this report.

The recommendations given in this report are based upon the estimated structural loading, grading and layout information above. We understand that the project plans are currently being developed at this time; LGC Geotechnical should be provided with updated project plans and any changes to structural loads when they become available, in order to either confirm or modify the recommendations provided herein.

1.3 Existing Conditions



The approximately 8.3-acre rectangular-shaped site is bound to the north and south by existing commercial and industrial developments, to the east by Southern Pacific railroad lines and to the west by Pioneer Boulevard. The site is currently an existing commercial and industrial development consisting of seven industrial/commercial structures with surrounding asphalt concrete driveways and parking areas. Entry to the site is from Pioneer Boulevard along the

western edge of the development. The current topography consists of a relatively flat pad for the majority of the site.

The site is relatively flat with elevations ranging from approximately 127 to 129 feet above mean sea level. There is an approximately 15 to 20-foot tall slope ascending up to the Southern Pacific railroad lines east of the project site. This slope is part of the railroad truck crossing leading up to the raised railroad bridge abutment crossing to the south of the site.

1.4 Background

The history of the subject site, dating back to the late nineteenth century, was reviewed using available historical aerial photographs and topographic maps (Historic Aerials, 2019). In 1896, available topographic maps indicate that the subject site was comprised of a north south trending stream and marsh that drained into the historic Little Lake. The Whittier Branch of the Southern Pacific Rail Road existed along its present alignment east of the subject site. The 1923 topographic map indicates numerous oil wells dotted the subject site. An unnamed road along the present-day alignment of Pioneer Boulevard is shown west of the subject site. The 1951 topographic map indicates that roads associated with oil production are present on the subject site. The 1953 historic aerial photograph indicates that the railroad was under construction to change its alignment less than a mile north of the subject site. The 1953 aerial photograph also shows the site as mostly undeveloped land with a few man-made roads associated with oil production crossing the site. There are oil wells present on a graded pad in the northeastern portion of the subject site and oil tanks located just offsite, to the southwest and west. The land south of the subject site was being used for agriculture. The 1963 aerial photograph shows that the road along the western boundary of the subject site was paved, farming had ceased south of the subject site, and that the railroad was in use again. The 1972 aerial photograph indicates that oil related activities on the subject site had ceased. The oil tanks were removed and the man-made roads had faded from disuse. A 1975 historic aerial photograph shows the subject site had been graded to its present condition. Seven industrial buildings and associated improvements are visible and Pioneer Boulevard was graded to its present alignment.

PROJECT NAME	Pioneer - Santa Fe Springs
PROJECT NO.	18174-01
ENG. / GEOL.	RLD
SCALE	Not to Scale
DATE	February 2019

LGC Geotechnical, Inc.

FIGURE 1
Site Location Map

1.5 Subsurface Geotechnical Evaluation

LGC Geotechnical performed a limited subsurface geotechnical evaluation of the site consisting of the excavation of seven hollow-stem auger borings to evaluate onsite geotechnical conditions.

Seven hollow-stem borings (HS-1 through HS-4 & I-1 through I-3) were drilled to depths ranging from approximately 10 to 50 feet below existing grade. An LGC Geotechnical staff geologist observed the drilling operations, logged the borings, and collected soil samples for laboratory testing. The borings were excavated by Calpac Drilling under subcontract to LGC Geotechnical using a truck-mounted drill rig equipped with 8-inch-diameter hollow-stem augers. Driven soil samples were collected by means of the Standard Penetration Test (SPT) and Modified California Drive (MCD) sampler generally obtained at 2.5 to 5-foot vertical increments. The MCD is a split-barrel sampler with a tapered cutting tip and lined with a series of 1-inch-tall brass rings. The SPT sampler (1.4-inch ID) and MCD sampler (2.4-inch ID, 3.0-inch OD) were driven using a 140-pound automatic hammer falling 30 inches to advance the sampler a total depth of 18 inches. The raw blow counts for each 6-inch increment of penetration were recorded on the boring logs. Bulk samples of the near-surface soils were also collected and logged at select borings for laboratory testing. At the completion of drilling, the borings were backfilled with the native soil cuttings and tamped. Boring holes were patched with cold patch asphalt. Some settlement of the backfill soils may occur over time.

Infiltration testing was performed within three of the borings (I-1 through I-3) to depths of 10 feet below existing grade. An LGC Geotechnical staff geologist installed standpipes, backfilled the borings with crushed rock and pre-soaked the infiltration holes prior to testing. Infiltration testing was performed per the County of Los Angeles testing guidelines. The locations were subsequently backfilled with native soils at the completion of testing.

The approximate locations of our subsurface explorations are provided on the Geotechnical Exploration Location Map (Figure 2). The boring logs are provided in Appendix B.

1.6 Laboratory Testing

Representative bulk and driven (relatively undisturbed) samples were obtained for laboratory testing during our field evaluation. Laboratory testing included in-situ moisture content and in-situ dry density, Atterberg Limits, fines content, expansion index, consolidation, laboratory compaction, direct shear and corrosion (sulfate, chloride, pH and minimum resistivity).

The following is a summary of the laboratory test results:

- Dry density of the samples collected ranged from approximately 70 pounds per cubic foot (pcf) to 138 pcf, with an average of 97 pcf. Field moisture contents ranged from approximately 3 to 59 percent, with an average of 15 percent.
- Two fines content tests were performed and indicated a fines content (passing No. 200 sieve) of approximately 37 and 49 percent. Based on the Unified Soils Classification System (USCS), the tested samples would be classified as “coarse-grained.”
- One Atterberg Limit (liquid limit and plastic limit) test was performed. Results indicated a Plasticity Index (PI) value of 15.

- One direct shear test was performed. The plot is provided in Appendix C.
- Two consolidation tests were performed. The load versus deformation plots are provided in Appendix C.
- One swell/collapse test was performed. The plot is provided in Appendix C.
- One laboratory compaction test of a near surface sample indicated a maximum dry density of 115.5 pcf with an optimum moisture content of 14.0 percent.
- Expansion potential testing indicated an expansion index value of 14, corresponding to "Very Low" expansion potential.
- Corrosion testing indicated soluble sulfate contents of approximately 0.016 percent, a chloride content of 85 parts per million (ppm), pH of 8.2, and a minimum resistivity of 5,480 ohm-centimeters.

A summary of the laboratory test results is presented in Appendix C. The moisture and dry density results are presented on the boring logs in Appendix B.

2.0 GEOTECHNICAL CONDITIONS

2.1 Geologic Conditions

The site is located in a coastal, sedimentary basin called the Downey Plain, within the Peninsular Ranges Geomorphic Province. The site is located on a laterally extensive young alluvial fan deposits interpreted to be approximately Holocene and late Pleistocene age (CGS, 2016). The sediments in the Downy Plain are primarily derived from the Rio Hondo and San Gabriel River drainages that run south from the San Gabriel Valley through an area called the Whittier Narrows. The northwest trending Puente Hills, several miles to the north of the subject site, are dissected by the two rivers at the Whittier Narrows. The subject site is located just east of the San Gabriel River Channel. Both rivers have areas of percolation basins that seasonally recharge the local groundwater. The Puente Hills, located north of the subject site, were uplifted and deformed along the Whittier section of the Elsinore Fault Zone. The region has a complex geologic history influenced by periods of uplift, folding, faulting, and alluvial deposition; however, no faults are known to transect the site.

2.2 Generalized Subsurface Conditions

The subsurface evaluation indicated that site soils below a depth of recommended remedial grading will generally consist of medium dense to very dense sands, silty sands, and clayey sands with varying amounts of medium stiff to hard silts and clays to the maximum explored depth of approximately 50 feet below existing grade.

It should be noted that the borings are only representative of the location and time where/when they are performed and varying subsurface conditions may exist outside of the performed location. In addition, subsurface conditions can change over time. The soil descriptions provided above should not be construed to mean that the subsurface profile is uniform and that soil is homogeneous within the project area. For details on the stratigraphy at the exploration locations, refer to Appendix B.

2.3 Groundwater

Groundwater was not encountered in any of our borings to a maximum depth of approximately 50 feet below existing grade. Historic high groundwater is estimated to be about 10 feet below existing grade (CGS, 1998).

Seasonal fluctuations of groundwater elevations should be expected over time. In general, groundwater levels fluctuate with the seasons and local zones of perched groundwater may be present due to local seepage caused by irrigation and/or recent precipitation. Local perched groundwater conditions or surface seepage may develop once site development is completed.

2.4 Field Infiltration Testing

Three field percolation tests were performed in Borings I-1, I-2 and I-3 to approximate depths of 10 feet below existing grade. The approximate locations are shown on the Geotechnical Exploration Location Map (Figure 2). The borings for the infiltration tests were excavated using a drill rig equipped with 8-inch diameter hollow-stem augers. Estimation of infiltration rates was accomplished in general accordance with the guidelines set forth by the County of Los Angeles (2017). A 3-inch diameter perforated PVC pipe was placed in the borehole and the annulus was backfilled with gravel. The infiltration wells were pre-soaked prior to testing. During the pre-test, water was added to the borings and was observed for 10 and 30 minutes. Water remained in the borings after 30 minutes in each of the three percolation test borings; therefore, the procedure for fine-grained soils was followed. One reading was recorded every 30 minutes from a fixed reference point until 8 readings were recorded. At the completion of infiltration testing, the pipe was removed and backfilled with cuttings and tamped. Infiltration holes were patched with cold patch asphalt. Some settlement of the backfill should be expected.

Based on the County of Los Angeles testing guidelines, the raw infiltration is calculated by dividing the volume of water discharged by the surface area of the test section (including sidewalls plus the bottom of the boring), in a given amount of time. The average of the stabilized infiltration rate over the last three consecutive readings is the measured infiltration rate. The measured infiltration rates are provided in Table 1 below. Please note that the values provided in Table 1 do not include reduction factors for the test procedure, site variability and long-term siltation plugging that are required for the design infiltration rate, refer to Table 5 located in Section 4.7. Infiltration tests were performed using relatively clean water free of particulates, silt, etc. Refer to the infiltration test data provided in Appendix D.

TABLE 1

Summary of Field Percolation Testing

Infiltration Test Location	Measured Infiltration Rate* (inch/hr)
I-1	0.6
I-2	0.5
I-3	0.8

*Does Not Include Required Reduction Factors, refer to Table 4, Section 4.6.

2.5 Seismic Design Criteria

The site seismic characteristics were evaluated per the guidelines set forth in Chapter 16, Section 1613 of the 2016 California Building Code (CBC). Since the site contains soils that are susceptible to liquefaction (refer to above Section "Liquefaction and Dynamic Settlement"), ASCE 7 which has been adopted by the CBC requires that site soils be assigned Site Class "F" and a site-specific response spectrum be performed. However, in accordance with Section 20.3.1 of ASCE 7, if the fundamental periods of vibration of the planned structure are equal to or less than 0.5 second, a site-specific response spectrum is not required and ASCE 7/2016 CBC site class and seismic parameters may be used in lieu of a site-specific response spectrum. **It**

should be noted that the seismic parameters provided herein are not applicable for any structure having a fundamental period of vibration greater than 0.5 second. Representative site coordinates of latitude 33.9463 degrees north and longitude -118.0791 degrees west were utilized in our analyses. The maximum considered earthquake (MCE) spectral response accelerations (S_{MS} and S_{M1}) and adjusted design spectral response acceleration parameters (S_{DS} and S_{D1}) for Site Class D are provided in Table 2 below.

TABLE 2

Seismic Design Parameters for Structures with a Period of Vibration ≤ 0.5 Second

Selected Parameters from 2016 CBC, Section 1613 - Earthquake Loads	Seismic Design Values
Site Class per Chapter 20 of ASCE 7	D*
Risk-Targeted Spectral Acceleration for Short Periods (S_S)**	2.074g
Risk-Targeted Spectral Accelerations for 1-Second Periods (S_1)**	0.734g
Site Coefficient F_a per Table 1613.3.3(1)	1.0
Site Coefficient F_v per Table 1613.3.3(2)	1.5
Site Modified Spectral Acceleration for Short Periods (S_{MS}) for Site Class D [Note: $S_{MS} = F_aS_S$]	2.074g
Site Modified Spectral Acceleration for 1-Second Periods (S_{M1}) for Site Class D [Note: $S_{M1} = F_vS_1$]	1.101g
Design Spectral Acceleration for Short Periods (S_{DS}) for Site Class D [Note: $S_{DS} = (^2/_3)S_{MS}$]	1.382g
Design Spectral Acceleration for 1-Second Periods (S_{D1}) for Site Class D [Note: $S_{D1} = (^2/_3)S_{M1}$]	0.734g
Mapped Risk Coefficient at 0.2 sec Spectral Response Period, C_{RS} (per ASCE 7)	0.940
Mapped Risk Coefficient at 1 sec Spectral Response Period, C_{R1} (per ASCE 7)	0.966

* Site is Class F, seismic parameters provided herein are only applicable for structure period ≤ 0.5 second, refer to discussion above.

** From SEAOC, 2019

Section 1803.5.12 of the 2016 CBC (per Section 11.8.3 of ASCE 7) states that the maximum considered earthquake geometric mean (MCE_G) Peak Ground Acceleration (PGA) should be used for liquefaction potential. The PGA_M for the site is equal to 0.803g (SEAOC, 2019).

A deaggregation of the PGA based on a 2,475-year average return period indicates that an earthquake magnitude of 7.7 at a distance of approximately 8.6 km from the site would contribute the most to this ground motion (USGS, 2008).

2.6 Faulting

California is located on the boundary between the Pacific and North American Lithospheric Plates. The average motion along this boundary is on the order of 50-mm/yr in a right-lateral sense. The majority of the motion is expressed at the surface along the northwest trending San Andreas Fault Zone with lesser amounts of motion accommodated by sub-parallel faults located predominantly west of the San Andreas including the Elsinore, Newport-Inglewood, Rose Canyon, and Coronado Bank Faults. Within Southern California, a large bend in the San Andreas Fault north of the San Gabriel Mountains has resulted in a transfer of a portion of the right-lateral motion between the plates into left-lateral displacement and vertical uplift. Compression south and west of the bend has resulted in folding, left-lateral, reverse thrust faulting, and regional uplift creating the east-west trending Transverse Ranges and several east-west trending faults. Further south within the Los Angeles Basin, "blind thrust" faults are believed to have developed below the surface also as a result of this compression, which have resulted in earthquakes such as the 1994 Northridge event along faults with little to no surface expression.

Prompted by damaging earthquakes in Northern and Southern California, State legislation and policies concerning the classification and land-use criteria associated with faults have been developed. The Alquist-Priolo Earthquake Fault Zoning Act was implemented in 1972 to prevent the construction of urban developments across the trace of active faults. California Geologic Survey Special Publication 42 was created to provide guidance for following and implementing the law requirements. Special Publication 42 was most recently revised in 2018 (CGS, 2018). According to the State Geologist, an "active" fault is defined as one which has had surface displacement within Holocene time (roughly the last 11,700 years). Regulatory Earthquake Fault Zones have been delineated to encompass traces of known, Holocene-active faults to address hazards associated with surface fault rupture within California. Where developments for human occupation are proposed within these zones, the state requires detailed fault evaluations be performed so that engineering-geologists can identify the locations of active faults and recommend setbacks from locations of possible surface fault rupture.

The subject site is not located within an Alquist-Priolo Earthquake Fault Zone and no faults were identified on the site during our site evaluation. The possibility of damage due to ground rupture is considered low since no active faults are known to cross the site. The closest known active faults are associated with the Whittier section of the Elsinore Fault Zone, located approximately 6.2 miles northeast of the site; the East Montebello Fault Zone, approximately 6.7 miles north of the site; the Unnamed West Coyote Hills Fault, approximately 7.4 miles east of the site; and the Newport Inglewood Fault Zone, approximately 10.7 miles southwest of the site.

Secondary effects of seismic shaking resulting from large earthquakes on the major faults in the Southern California region, which may affect the site, include ground lurching and shallow ground rupture, soil liquefaction, and dynamic settlement. These secondary effects of seismic shaking are a possibility throughout the Southern California region and are dependent on the

distance between the site and causative fault and the onsite geology. A discussion of these secondary effects is provided in the following sections.

2.6.1 Liquefaction and Dynamic Settlement

Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to a fluid when subject to high-intensity ground shaking. Liquefaction occurs when three general conditions coexist: 1) shallow groundwater; 2) low density non-cohesive (granular) soils; and 3) high-intensity ground motion. Studies indicate that saturated, loose near-surface cohesionless soils exhibit the highest liquefaction potential, while dry, dense, cohesionless soils and cohesive soils exhibit low to negligible liquefaction potential. In general, cohesive soils are not considered susceptible to liquefaction, depending on their plasticity and moisture content (Bray & Sancio, 2006). Effects of liquefaction on level ground include settlement, sand boils, and bearing capacity failures below structures. Dynamic settlement of dry loose sands can occur as the sand particles tend to settle and densify as a result of a seismic event.

Based on our review of the State of California Seismic Hazard Zone for liquefaction potential (CGS, 1999), the site is located within a liquefaction hazard zone. In general, site soils are dense and not susceptible to liquefaction. However, isolated loose and medium dense sand layers are present and considered susceptible to liquefaction. The recent explored groundwater elevation of greater than 50 feet below existing grade and historic high groundwater elevation of 10 feet below existing grade were both used in the liquefaction analysis. The liquefaction evaluation was performed using data from boring HS-1. Liquefaction potential was evaluated using the procedures outlined by Special Publication 117A (SCEC, 1999 & CGS, 2008) and based on the seismic criteria of the 2016 California Building Code (CBC) and historic high groundwater depth. Liquefaction induced settlement was estimated using the PGA_M per the 2016 CBC and a moment magnitude of 7.7 (USGS, 2008).

Results indicate total seismic settlement on the order of 1-inch or less. Differential seismic settlement can be estimated as half of the total estimated settlement over a horizontal span of about 40 feet. Seismically induced settlements were estimated by the procedure outlined by Tokimatsu and Seed (1987). Liquefaction calculations are provided in Appendix E.

2.6.2 Lateral Spreading

Lateral spreading is a type of liquefaction-induced ground failure associated with the lateral displacement of surficial blocks of sediment resulting from liquefaction in a subsurface layer. Once liquefaction transforms the subsurface layer into a fluid mass, gravity plus the earthquake inertial forces may cause the mass to move downslope towards a free face (such as a river channel or an embankment). Lateral spreading may cause large horizontal displacements and such movement typically damages pipelines, utilities, bridges, and structures.

Due to the very gentle gradient across the site and lack of nearby "free face" conditions, the potential for lateral spreading is considered low.

2.7 Expansion Potential

Based on the results of our recent laboratory testing, site soils are anticipated to have a "Very Low" to "Low" expansion potential. Final expansion potential of site soils should be determined at the completion of grading. Results of expansion testing at finish grades will be utilized to confirm final foundation design.

2.8 Static Settlement and Hydro-Consolidation

After completion of grading, the subsurface conditions will consist of engineered fill placed over alluvial fan deposits. Static settlements will be induced by subjecting the finish grades to building loads. Anticipated static settlement for the proposed industrial concrete tilt-up warehouse buildings are presented in Section 4.2, "Preliminary Foundation Recommendations". Static settlement should occur relatively quickly.

In addition to static settlement, the presence of potentially collapsible soils was evaluated using data obtained from our recent exploratory borings and laboratory testing. The collapse potential (or hydro-collapse) of the tested samples was approximately 0.05 percent or less, which is considered to be negligible.

3.0 CONCLUSIONS

Based on the results of our geotechnical evaluation, it is our opinion that the proposed development is feasible from a geotechnical standpoint, provided the following conclusions and recommendations are implemented.

The following is a summary of the primary geotechnical factors that may affect future development of the site:

- In general, our borings and indicate that the site soils below a depth of recommended remedial grading will generally consist of medium dense to very dense sands, silty sands, and clayey sands with varying amounts of medium stiff to hard silts and clays to the maximum explored depth of approximately 50 feet below existing grade. The near-surface soils are generally collapsible and are not suitable for the planned improvements in their present condition (refer to Section 4.1).
- Groundwater was not encountered during our subsurface evaluation at a maximum explored depth of approximately 50 feet below existing ground surface. Historic high groundwater is estimated to be about 10 feet below existing grade (CGS, 1998).
- The subject site is not located within a State of California Earthquake Fault Zone (Alquist-Priolo). The main seismic hazard that may affect the site is ground shaking from one of the active regional faults. The subject site will likely experience strong seismic ground shaking during its design life.
- Site soils are considered susceptible to liquefaction. The site is located in a State of California Seismic Hazard Zone for liquefaction. Total dynamic settlement is estimated to be on the order of 1-inch or less. Differential dynamic settlement can be estimated at half of the total settlement over a horizontal span of 40 feet for design of foundations.
- Based on the results of preliminary laboratory testing, site soils are anticipated to have “Very Low” to “Low” expansion potential. Mitigation measures are required for foundations and site improvements like concrete flatwork to minimize the impacts of expansive site soils. Final design expansion potential must be determined at the completion of grading.
- From a geotechnical perspective, the existing onsite soils are suitable material for use as general fill (not retaining wall backfill), provided that they are relatively free from oversized material (larger than 8 inches in maximum dimension), construction debris, and significant organic material.
- Some portions of the onsite soils have high fines content and are not suitable for backfill of site retaining walls. Therefore, import and/or select grading and stockpiling of onsite sandy soils meeting project recommendations may be required.
- Excavations into the existing site soils should be feasible with heavy construction equipment in good working order.

4.0 PRELIMINARY RECOMMENDATIONS

The following recommendations are to be considered preliminary and should be confirmed upon completion of grading and earthwork operations. In addition, they should be considered minimal from a geotechnical viewpoint, as there may be more restrictive requirements from the architect, structural engineer, building codes, governing agencies, or the owner.

It should be noted that the following geotechnical recommendations are intended to provide sufficient information to develop the site in general accordance with the 2016 CBC requirements. With regard to the potential occurrence of potentially catastrophic geotechnical hazards such as fault rupture, earthquake-induced landslides, liquefaction, etc. the following geotechnical recommendations should provide adequate protection for the proposed development to the extent required to reduce seismic risk to an "acceptable level." The "acceptable level" of risk is defined by the California Code of Regulations as "that level that provides reasonable protection of the public safety, though it does not necessarily ensure continued structural integrity and functionality of the project" [Section 3721(a)]. Therefore, repair and remedial work of the proposed improvements may be required after a significant seismic event. With regards to the potential for less significant geologic hazards to the proposed development, the recommendations contained herein are intended as a reasonable protection against the potential damaging effects of geotechnical phenomena such as expansive soils, fill settlement, groundwater seepage, etc. It should be understood, however, that although our recommendations are intended to maintain the structural integrity of the proposed development and structures given the site geotechnical conditions, they cannot preclude the potential for some cosmetic distress or nuisance issues to develop as a result of the site geotechnical conditions.

The geotechnical recommendations contained herein must be confirmed to be suitable or modified based on the actual as-graded conditions.

4.1 Site Earthwork

We anticipate that earthwork at the site will consist of demolition of the existing site improvements, required earthwork removals, subgrade preparation, precise grading and construction of the proposed new improvements, including the industrial tilt-up buildings, parking areas, subsurface utilities, water quality basins/wetlands, etc.

We recommend that earthwork be performed in accordance with the following recommendations, future grading plan review report(s), the 2016 CBC/City of Santa Fe Springs grading requirements, and the General Earthwork and Grading Specifications included in Appendix F. In case of conflict, the following recommendations shall supersede those included in Appendix F. The following recommendations should be considered preliminary and may be revised based upon future evaluation and review of the project plans and/or based on the actual conditions encountered during site grading/construction.

4.1.1 Site Preparation

Prior to grading of areas to receive structural fill or engineered improvements, the areas should be cleared of existing building structures, asphalt, surface obstructions, and

demolition debris. Vegetation and debris should be removed and properly disposed of off-site. Holes resulting from the removal of buried obstructions, which extend below proposed finish grades, should be replaced with suitable compacted fill material. Any abandoned sewer or storm drain lines should be completely removed and replaced with properly placed compacted fill. Deeper demolition may be required in order to remove existing foundations. We recommend the trenches associated with demolition which extend below the remedial grading depth be backfilled and properly compacted prior to the demolition contractor leaving the site.

If cesspools or septic systems are encountered during earthwork, they should be removed in their entirety. The resulting excavation should be backfilled with properly compacted fill soils. As an alternative, cesspools can be backfilled with lean sand-cement slurry. Any encountered wells should be properly abandoned in accordance with regulatory requirements. At the conclusion of the clearing operations, a representative of LGC Geotechnical should observe and accept the site prior to further grading.

4.1.2 Removal and Recompaction Depths and Limits

In order to provide a relatively uniform bearing condition for the planned building structures and improvements, we recommend the site soils be removed and recompacted. All existing onsite artificial fill shall be fully removed to suitable, competent native materials prior to placement of fill to design grades. Subsurface site soils should be removed and recompacted according to the criteria outlined below. Updated recommendations may be required based on additional field evaluation, changes to building layouts and actual structural loads.

Industrial Buildings: We recommend that soils within the proposed building pads be temporarily removed and recompacted to a minimum depth of 8 feet below existing grade or 3 feet beneath the base of the foundations, whichever is deeper. Where adequate space is available, the base of removal and recompaction bottoms should extend laterally a minimum distance equal to the depth of removal and recompaction below finish grade or at a minimum distance of 8 feet beyond the edges of the proposed building foundations, whichever is larger.

Minor Site Structures: For minor site structures such as free-standing, screen walls, trash enclosures, etc., removal and recompaction should extend at least 5 feet beneath the existing grade or 2 feet beneath the base of foundations, whichever is deeper. In general, the envelope for removal and recompaction should extend laterally a minimum distance of 5 feet beyond the edges of the proposed improvements mentioned above, where space permits.

Pavement and Hardscape: Within pavement areas, removal and recompaction should extend to a depth of at least 5 feet below the existing grade or 2 feet beneath the finished subgrade (i.e., beneath planned aggregate base/asphalt concrete or PCC). Within hardscape areas, removal and recompaction should extend to a depth of at least 2 feet below the existing grade or 1-foot beneath the finished subgrade (i.e., beneath planned concrete).

Local conditions may be encountered during excavation that could require deep remedial grading beyond the above noted minimum in order to obtain an acceptable subgrade. The actual depths and lateral extents of grading will be determined by the geotechnical consultant, based on subsurface conditions encountered during grading. Removal and recompaction areas should be accurately staked in the field by the Project Surveyor.

4.1.3 Temporary Excavations

Temporary excavations should be performed in accordance with project plans, specifications, and all Occupational Safety and Health Administration (OSHA) requirements. Excavations should be laid back or shored in accordance with OSHA requirements before personnel or equipment are allowed to enter. Based on our field investigation, the majority of site soils are anticipated to be OSHA Type "B" soils (refer to the attached boring logs). Sandy soils are present and should be considered susceptible to caving. Raveling of the sandy soils should be anticipated for temporary slopes. Flatter slope inclinations should be considered if raveling cannot be tolerated. The exposed slope surface may be kept surficially moist (but not saturated) during construction to reduce (not eliminate) potential sloughing. Soil conditions should be regularly evaluated during construction to verify conditions are as anticipated. The contractor shall be responsible for providing the "competent person" required by OSHA standards to evaluate soil conditions. Close coordination with the geotechnical consultant should be maintained to facilitate construction while providing safe excavations. Excavation safety is the sole responsibility of the contractor.

Where proposed building structures or improvements will be adjacent to property lines, the potential for impacting existing offsite improvements may be reduced by performing "ABC" slot cuts while performing earthwork removal and recompaction. Slot cuts should be backfilled immediately with properly compacted fill to finish grade prior to excavation of the adjacent two slots. Please note sands susceptible to caving are present at the site. Recommendations for slot cut dimensions should be evaluated during grading. Protection of the existing offsite improvements during grading is the responsibility of the contractor.

Surcharge loads (vehicular traffic, soil stockpiles, construction equipment, etc.) should be set back from the perimeter of excavations a minimum distance equivalent to a 1:1 projection from the bottom of the excavation or 5 feet, whichever is greater, unless the cut is properly shored and designed for the applicable surcharge load. Once an excavation has been initiated, it should be backfilled as soon as practical. Prolonged exposure of temporary excavations may result in some localized instability. Excavations should be planned so that they are not initiated without sufficient time to shore/fill them prior to weekends, holidays, or forecasted rain.

It should be noted that any excavation that extends below a 1:1 (horizontal to vertical) projection of an existing foundation will remove existing support of the structure foundation. If requested, temporary shoring parameters will be provided.

4.1.4 Removal Bottoms and Subgrade Preparation

In general, removal bottoms and areas to receive compacted fill should be scarified to a minimum depth of 6 inches, brought to a near-optimum moisture condition (generally within optimum and 2 percent above optimum moisture content), and re-compacted per project recommendations.

Removal bottoms and areas to receive fill should be observed and accepted by the geotechnical consultant prior to subsequent fill placement. Soil subgrade for planned footings and improvements (e.g., slabs, etc.) should be firm and competent.

4.1.5 Material for Fill

From a geotechnical perspective, the onsite soils are generally considered suitable for use as general compacted fill, provided they are screened of significant organic materials, construction debris and oversized material (8 inches in greatest dimension).

From a geotechnical viewpoint, any required import soils for general fill (i.e., non-retaining wall backfill) should consist of soils of "Very Low" to "Low" expansion potential (expansion index 50 or less based on American Society for Testing and Materials [ASTM] D 4829), and free of significant organic materials, construction debris and any material greater than 3 inches in maximum dimension. Import for any required retaining wall backfill should meet the criteria outlined in the following paragraph. Source samples should be provided to the geotechnical consultant for laboratory testing a minimum of four working days prior to any planned importation.

Retaining wall backfill should consist of imported or onsite free draining, clean granular (sandy) soils with a maximum of 35 percent fines (passing the No. 200 sieve) per ASTM Test Method D1140 (or ASTM D6913/D422) and a "Very Low" expansion potential (EI of 20 or less per ASTM D4829). Soils should also be screened of significant organic materials, construction debris, and any material greater than 3 inches in maximum dimension. The site contains soils that are not suitable for retaining wall backfill due to their fines content; therefore, select grading and stockpiling and/or import of soils meeting the criteria outlined above will be required by the contractor for obtaining suitable retaining wall backfill soil. These preliminary findings should be confirmed during grading.

Aggregate base (crushed aggregate base or crushed miscellaneous base) should conform to the requirements of Section 200-2 of the most recent version of the Standard Specifications for Public Works Construction ("Greenbook") for untreated base materials (except processed miscellaneous base) and/or City of Santa Fe Springs requirements.

The placement of inert demolition materials in compacted fill is acceptable from a geotechnical viewpoint provided the demolition material is broken up into pieces not larger than typically used for aggregate base (approximately 1-inch in maximum dimension) and well blended into fill soils with essentially no resulting voids. Demolition material placed in fills must be free of construction debris (wood, organics, etc.) and reinforcing steel. If asphalt concrete fragments will be incorporated into the demolition materials, approval from an environmental viewpoint may be required and is not the

purview of the geotechnical consultant. From our previous experience, we recommend that asphalt concrete fragments be limited to fill areas within planned parking and drive aisle areas (i.e., not within building pad areas).

4.1.6 Placement and Compaction of Fills

Material to be placed as fill should be brought to near-optimum moisture content (generally within optimum and 2 percent above optimum moisture content) and recompacted to at least 90 percent relative compaction (per ASTM D1557). Moisture conditioning of site soils will be required in order to achieve adequate compaction. Drying and or mixing of very moist soils will be required prior to reusing the materials in compacted fills. Soils are also present that will require additional moisture in order to achieve the required compaction.

The optimum lift thickness to produce a uniformly compacted fill will depend on the type and size of compaction equipment used. In general, fill should be placed in uniform lifts not exceeding 8 inches in compacted thickness. Each lift should be thoroughly compacted and accepted prior to subsequent lifts. Generally, placement and compaction of fill should be performed in accordance with local grading ordinances and with observation and testing performed by the geotechnical consultant. Oversized material as previously defined should be removed from site fills.

During backfill of excavations, the fill should be properly benched into firm and competent soils of temporary backcut slopes as it is placed in lifts.

Aggregate base material should be compacted to at least 95 percent relative compaction at or slightly above optimum moisture content per ASTM D1557. Subgrade below aggregate base should be compacted to at least 90 percent relative compaction per ASTM D1557 at near-optimum moisture content (generally within optimum and 2 percent above optimum moisture content).

If gap-graded ¾-inch rock is used for backfill (around storm drain storage chambers, retaining wall backfill, etc.) it will require compaction. Rock shall be placed in thin lifts (typically not exceeding 6 inches) and mechanically compacted with observation by geotechnical consultant. Backfill rock shall meet the requirements of ASTM D2321. Gap-graded rock is required to be wrapped in filter fabric to prevent the migration of fines into the rock backfill.

4.1.7 Trench and Retaining Wall Backfill and Compaction

The onsite soils may generally be suitable as trench backfill, provided the soils are screened of rocks, construction debris, other material greater than 6 inches in diameter and significant organic matter. If trenches are shallow or the use of conventional equipment may result in damage to the utilities, sand having a sand equivalent (SE) of 30 or greater (per California Test Method [CTM] 217) may be used to bed and shade the pipes. Based on our field evaluation, onsite soils will not meet this sand equivalent requirement. Sand backfill within the pipe bedding zone may be densified by jetting or

flooding and then tamping to ensure adequate compaction. Subsequent trench backfill should be compacted in uniform lifts (as outlined above in section "Placement and Compaction of Fills") by mechanical means to at least 90 percent relative compaction (per ASTM D1557).

Utility trenches running parallel to footings should not be excavated within a 1:1 (horizontal to vertical) downward projection from adjacent footings ("footing influence zone") to avoid potential undermining. Depending on the utility line and structural loading of the footing, utility trenches running perpendicular to footings may require special provisions such as sand-cement slurry backfill of the utility trench in this zone or flexible sleeves through the footings. These conditions should be evaluated on a case-by-case basis.

Retaining wall backfill should consist of sandy soils as outlined in preceding Section 4.1.5. The limits of select sandy backfill should extend at minimum ½ the height of the retaining wall or the width of the heel (if applicable), whichever is greater (Figure 3). Retaining wall backfill soils should be compacted in relatively uniform thin lifts to at least 90 percent relative compaction (per ASTM D1557). Jetting or flooding of retaining wall backfill materials should not be permitted.

In backfill areas where mechanical compaction of soil backfill is impractical due to space constraints, typically sand-cement slurry may be substituted for compacted backfill. The slurry should contain about one sack of cement per cubic yard. When set, such a mix typically has the consistency of compacted soil. Sand cement slurry placed near the surface within landscape areas should be evaluated for potential impacts on planned improvements.

A representative from LGC Geotechnical should observe, probe, and test the backfill to verify compliance with the project recommendations.

4.1.8 Shrinkage and Subsidence

Allowance in the earthwork volumes budget should be made for an estimated 5 to 15 percent reduction in volume of near-surface (upper approximate 5 to 8 feet) soils. It should be stressed that these values are only estimates and that an actual shrinkage factor would be extremely difficult to predetermine. Subsidence, due to earthwork operations, is expected to be on the order of 0.1 feet. These values are estimates only and exclude losses due to removal of any vegetation or debris. The effective shrinkage of onsite soils will depend primarily on the type of compaction equipment and method of compaction used onsite by the contractor and accuracy of the topographic survey.

4.2 Preliminary Foundation Recommendations

The proposed structure may be supported on spread or continuous footings and a conventional slab, provided earthwork is performed in accordance with the recommendations presented in this report. All footings should be supported on properly compacted fill. Please note that the

following foundation recommendations are preliminary and must be confirmed by LGC Geotechnical at the completion of grading.

Preliminary foundation recommendations are provided in the following sections. The foundation design must be performed by the structural engineer based on the following geotechnical parameters and minimum values provided.

4.2.1 Slab Design and Construction

A minimum slab thickness of 6 inches and 4 inches is recommended for new slabs in the warehouse and office areas, respectively. Slabs are to be supported on compacted fill soils properly prepared in accordance with the recommendations provided in this report. Minimum slab reinforcement should be determined by the structural engineer based on the imposed loading, crack control, etc.

It is recommended that subgrade soils below slabs be moisture conditioned in order to maintain the recommended moisture content up to the time of concrete placement. The recommended moisture content of the slab subgrade soils should be approximately 0 to 4 percent above optimum moisture content to a minimum depth of 12 inches. The moisture content of the slab subgrade should be verified by the geotechnical engineer within 1 to 2 days prior to concrete placement. In addition, this moisture content should be maintained around the immediate perimeter of the slab during construction and up to occupancy of the building structures.

Some post-construction moisture migration should be expected below the foundation. The following recommendations should be applied for office areas and/or other portions of the proposed warehouse that may be sensitive to nuisance moisture migrating through the slab from the subgrade soils. The following recommendations are for informational purposes only, as they are unrelated to the geotechnical performance of the foundation. Post-construction soil moisture must be anticipated below the foundation. The following recommendations may be superseded by the foundation engineer and/or owner.

In general, interior floor slabs with moisture sensitive floor coverings should be underlain by a minimum 15 mil thick vapor retarder, which has a water vapor transmission rate (permeance) of less than 0.3 perms, as determined by ASTM E 96, and meets the applicable code requirements (ASTM E 1745).

It is the responsibility of the contractor to ensure that the moisture/vapor retarder systems are properly installed in accordance with the project plans and manufacturers specifications, and that the moisture/vapor retarder materials are free of tears and punctures prior to and as a result of concrete placement. Additional moisture reduction and/or prevention measures may be needed, depending on the performance requirements of future interior floor coverings.

The foundation/structural engineer should determine whether the use of a capillary break (sand or gravel layer) in conjunction with the vapor retarder is necessary or required by code. Sand layer thickness and location (above and/or below vapor

retarder) should also be determined by the foundation/structural engineer. Sand layers should be installed, where applicable, in accordance with ACI Publication 302 – "Guide for Concrete Floor and Slab Construction."

4.2.2 Foundation Design Parameters

Provided our earthwork recommendations are implemented, spread and continuous footings may be designed with an allowable soil bearing pressure of 2,500 pounds per square foot (psf) provided the minimum widths and embedments presented below are implemented into the foundation design. These allowable bearing pressures are applicable for level (ground slope equal to or flatter than 5H:1V) conditions only. Bearing values indicated are for total dead loads and frequently applied live loads and may be increased by ⅓ for short duration loading (i.e., wind or seismic loads).

Minimum wall and column footing widths are to be 12 and 24 inches, respectively. Minimum foundation embedment is to extend a minimum of 24 inches below the adjacent exterior grade. Interior column footings may be placed 12 inches beneath the floor slab.

In addition, it is recommended that the perimeter building foundations be continuous across all exterior doorways to reduce moisture migration beneath the slab.

In utilizing the above-mentioned allowable bearing capacity and provided our earthwork recommendations are implemented, foundation settlement due to structural loads is anticipated to be on the order of 1-inch or less. Differential static settlement may be taken as half of the static settlement (i.e., ½-inch over a horizontal span of 40 feet). Furthermore, seismic settlement is anticipated to be on the order of 1-inch or less. Differential seismic settlement may be taken as half of the seismic settlement (i.e., ½-inch over a horizontal span of 40 feet).

4.2.3 Foundation Construction

The foundation is to be excavated into competent compacted artificial fill placed during grading operations. It is recommended that the foundation subgrade soils be evaluated by the geotechnical engineer prior to steel and/or concrete placement.

The geotechnical parameters provided herein assume that if the areas adjacent to the foundation are planted and irrigated, these areas will be designed with proper drainage and adequately maintained so that ponding, which causes significant moisture changes below the foundation, does not occur. Our recommendations do not account for excessive irrigation and/or incorrect landscape design. Plants should only be provided with sufficient irrigation for life and not overwatered to saturate subgrade soils. Sunken planters placed adjacent to the foundation should either be designed with an efficient drainage system or liners to prevent moisture infiltration below the foundation.

4.2.4 Lateral Load Resistance

Resistance to lateral loads can be provided by friction acting at the base of foundations and by passive earth pressure. For concrete/soil frictional resistance, an allowable coefficient of friction of 0.3 may be assumed with dead-load forces. For slabs constructed over a moisture retarder, the allowable friction coefficient should be provided by the manufacturer. An allowable passive lateral earth pressure of 250 psf per foot of depth (or pcf) to a maximum of 2,500 psf may be used for the sides of footings poured against properly compacted fill. Allowable passive pressure may be increased to 340 pcf (maximum of 3,400 psf) for short duration seismic loading. This passive pressure is applicable for level (ground slope equal to or flatter than 5H:1V) conditions. Frictional resistance and passive pressure may be used in combination without reduction. We recommend that the upper foot of passive resistance be neglected if finished grade will not be covered with concrete or asphalt. The provided allowable passive pressures are based on a factor of safety of 1.5 and 1.1 for static and seismic loading conditions, respectively.

4.3 Lateral Earth Pressures for Retaining Walls (Including Truck Docks)

New retaining walls are expected to be required in the truck dock (court) areas. Additionally, the proposed development may require some small retaining walls to facilitate the new site grades. The following may be used for design of site retaining walls. Lateral earth pressures are provided as equivalent fluid unit weights, in psf per foot of depth (or pcf). These values do not contain an appreciable factor of safety, so the retaining wall designer should apply the applicable factors of safety and/or load factors during design. A soil unit weight of 120 pcf may be assumed for calculating the actual weight of soil over the wall footing.

The following lateral earth pressures are presented in Table 3 for approved import or onsite free draining, clean granular (sandy) soils with a maximum of 35 percent fines (passing the No. 200 sieve per ASTM D-421/422) and a "Very Low" expansion potential (EI of 20 or less per ASTM D4829). Portions of the onsite soils are not suitable for retaining wall backfill due to their fines content. Therefore, select grading and stockpiling and/or import of soils meeting the criteria outlined above will be required by the contractor for obtaining suitable retaining wall backfill soil. The wall designer should clearly indicate on the retaining wall plans the required select sandy soil backfill criteria. These preliminary findings should be confirmed during grading.

TABLE 3

Lateral Earth Pressures – Approved Sandy Soils

Conditions	**Equivalent Fluid Unit Weight (pcf)**	**Equivalent Fluid Unit Weight (pcf)**
	Level Backfill	**2:1 Sloped Backfill**
	Approved Sandy Soils	**Approved Sandy Soils**
Active	35	55
At-Rest	55	70

If the wall can yield enough to mobilize the full shear strength of the soil, it can be designed for "active" pressure. If the wall cannot yield under the applied load, the earth pressure will be higher. This would include 90-degree corners of retaining walls. Such walls should be designed for "at-rest." The equivalent fluid pressure values assume free-draining conditions and a drainage system will be installed and maintained to prevent the build-up of hydrostatic pressures. If conditions other than those assumed above are anticipated, the equivalent fluid pressure values should be provided on an individual-case basis by the geotechnical engineer.

Retaining wall structures should be provided with appropriate drainage and appropriately waterproofed. To reduce, but not eliminate, saturation of near-surface (upper approximate 1-foot) soils in front of the retaining walls, the perforated subdrain pipe should be located as low as possible behind the retaining wall. The outlet pipe should be sloped to drain to a suitable outlet. In general, we do not recommend retaining wall outlet pipes be connected to area drains. If subdrains are connected to area drains, special care should be taken to maintain these drains. Typical conventional retaining wall drainage is shown on Figure 3. It should be noted that the recommended subdrain does not provide protection against seepage through the face of the wall and/or efflorescence. Waterproofing and outlet systems are not the purview of the geotechnical consultant.

Surcharge loading effects from any adjacent structures should be evaluated by the retaining wall designer. In general, structural loads within a 1:1 (horizontal: vertical) upward projection from the bottom of the proposed retaining wall footing will surcharge the proposed retaining wall. In addition to the recommended earth pressure, retaining walls adjacent to streets should be designed to resist a uniform lateral pressure of 85 pounds per square foot (psf) due to normal street vehicle traffic, if applicable. Uniform lateral surcharges may be estimated using the applicable coefficient of lateral earth pressure using a rectangular distribution. A factor of 0.45 and 0.3 may be used for at-rest and active conditions, respectively. The retaining wall designer should contact the geotechnical consultant for any required geotechnical input in estimating surcharge loads.

If required, the retaining wall designer may use a seismic lateral earth pressure increment of 15 pcf for a level backfill condition. This increment should be applied in addition to the provided static lateral earth pressure using a triangular distribution with the resultant acting at H/3 in relation to the base of the retaining structure (where H is the retained height). Per Section 1803.5.12 of the 2016 CBC, the seismic lateral earth pressure is applicable to structures assigned to Seismic Design Category D through F for retaining wall structures supporting more than 6 feet of backfill height. The provided seismic lateral earth pressure should not be used for retaining walls exceeding 10 feet in height. If a retaining wall greater than 10 feet in height is proposed or a retaining wall with a sloping backfill condition, the retaining wall designer should contact the geotechnical engineer for specific seismic lateral earth pressure increments based on the configuration of the planned retaining wall structures. This seismic lateral earth pressure is estimated using the procedure outlined by the Structural Engineers Association of California (Lew, et al, 2010).

Soil bearing and lateral resistance (friction coefficient and passive resistance) are provided in Section 4.2. (Preliminary Foundation Recommendations) and the subsequent earthwork related sub-sections. Earthwork considerations (temporary backcuts, backfill, compaction, etc.) for retaining walls are provided in Section 4.1 (Site Earthwork) and the subsequent earthwork related sub-sections.

4.4 Soil Corrosivity

Although not corrosion engineers (LGC Geotechnical is not a corrosion consultant), several governing agencies in Southern California require the geotechnical consultant to determine the corrosion potential of soils to buried concrete and metal facilities. We therefore present the results of our testing with regard to corrosion for the use of the client and other consultants, as they determine necessary.

Corrosion testing of a near-surface bulk sample indicated a soluble sulfate content of approximately 0.016 percent, a chloride content of 85 parts per million (ppm), pH of 8.2, and a minimum resistivity of 5,480 ohm-centimeters. Based on Caltrans Corrosion Guidelines (Caltrans, 2015), soils are considered corrosive to structural elements if the pH is 5.5 or less, or the chloride concentration is 500 ppm or greater, or the sulfate concentration is 2,000 ppm (0.2 percent) or greater. Based on the preliminary test results, soils are not considered corrosive using Caltrans criteria.

Based on laboratory sulfate test results, the near surface soils have a severity categorization of "Not Applicable" and are designated to a class "S0" per ACI 318, Table 19.3.1.1 with respect to sulfates. Concrete in direct contact with the onsite soils can be designed according to ACI 318, Table 19.3.2.1 using the "S0" sulfate classification.

Laboratory testing may need to be performed at the completion of grading by the project corrosion engineer to further evaluate the as-graded soil corrosivity characteristics. Accordingly, revision of the corrosion potential may be needed, should future test results differ substantially from the conditions reported herein. The client and/or other members of the development team should consider this during the design and planning phase of the project and formulate an appropriate course of action.

4.5 Control of Surface Water and Drainage Control

From a geotechnical perspective, we recommend that compacted finished grade soils adjacent to the proposed warehouse structures be sloped away from the proposed structures towards an approved drainage device or unobstructed swale. Drainage swales, wherever feasible, should not be constructed within 5 feet of buildings. Where lot and building geometry necessitates that the drainage swales be routed closer than 5 feet to structural foundations, we recommend the use of area drains together with drainage swales. Drainage swales used in conjunction with area drains should be designed by the project civil engineer so that a properly constructed and maintained system will prevent ponding within 5 feet of the foundation. Code compliance of grades is not the purview of the geotechnical consultant.

Planters with open bottoms adjacent to buildings should be avoided. Planters should not be designed adjacent to buildings unless provisions for drainage, such as catch basins, liners, and/or area drains, are made. Overwatering must be avoided.

4.6 Subsurface Water Infiltration

Recent regulatory changes mandate that storm water be infiltrated rather than discharged via conventional storm drainage systems. Typically, a combination of methods are implemented to reduce surface water runoff and increase infiltration including; permeable pavements/pavers for roadways and walkways and directing surface water runoff to grass-lined swales, retention areas, and/or drywells. It should be noted that intentionally infiltrating storm water conflicts with the geotechnical engineering objective of directing surface water away from structures and improvements. The geotechnical stability and integrity of the project site is reliant upon appropriately handling all surface water. In general, the vast majority of geotechnical distress issues are directly related to improper drainage. In general, distress in the form of movement of improvements could occur as a result of soil saturation and loss of soil support, expansion, internal soil erosion, collapse and/or settlement.

Per the Los Angeles County testing guidelines (2017), the design infiltration rate is determined by dividing the measured infiltration rate by a series of reduction factors including; test procedure (RF_t), site variability (RF_v) and long-term siltation plugging and maintenance (RF_s). The reduction factor for long-term siltation plugging and maintenance (RF_s) is the purview of the infiltration system designer per the Los Angeles County testing guidelines (2017). The test procedure reduction factor and recommended site variability reduction factor applied to the measured infiltration rate are provided below in Table 4. The design infiltration rate is the measured percolation rate divided by the total reduction factor (RF_t x RF_v x RF_s).

TABLE 4

Reduction Factors Applied to Measured Infiltration Rate

Consideration	Reduction Factor
Test procedure, boring percolation, RF_t	2
Site variability, number of tests, etc., RF_v	2
Long-term siltation plugging and maintenance, RF_s	Per Infiltration Designer
Total Reduction Factor, RF = RF_t x RF_v x RF_s	**TBD**

Per the requirements of the Los Angeles County testing guidelines (2017), subsurface materials shall have a design infiltration rate equal to or greater than 0.3 inches per hour. Based on the minimum Reduction Factor of 4 calculated above (not including long-term siltation plugging and maintenance), the infiltration tests do not meet the minimum requirements of the County of Los Angeles testing guidelines; therefore, considering the results of the field infiltration test indicating unacceptable infiltration rates and that the onsite soils primarily consisting of mixed fine-grained and coarse-grained soils considered to have low permeability, we do not recommend that surface water be intentionally infiltrated into subsurface soils.

4.7 Preliminary Asphalt Concrete Pavement Sections

The following provisional minimum asphalt concrete (AC) street sections are provided in Table 5 for Traffic Indices (TI) of 5.5, 6.0 and 6.5 to be utilized in the design of the auto and truck parking/circulation areas. These sections are based on an assumed R-value of 30. These recommendations must be confirmed with R-value testing of representative near-surface soils at the completion of grading and after underground utilities have been installed and backfilled. Final pavement sections should be confirmed by the project civil engineer based upon the final design Traffic Index. If requested, LGC Geotechnical will provide sections for alternate TI values.

TABLE 5

Preliminary Asphalt Concrete Pavement Section Options

Assumed Traffic Index	5.5	6.0	6.5
R -Value Subgrade	30	30	30
AC Thickness	4.0 inches	4.0 inches	4.5 inches
Aggregate Base Thickness	5.0 inches	6.5 inches	7.0 inches

The pavement section thicknesses provided above are considered minimum thicknesses. Increasing the thickness of any or all of the above layers will reduce the likelihood of the pavement experiencing distress during its service life. The above recommendations are based on the assumption that proper maintenance and irrigation of the areas adjacent to the roadway will occur throughout the design life of the pavement. Failure to maintain a proper maintenance and/or irrigation program may jeopardize the integrity of the pavement.

Earthwork recommendations regarding aggregate base and subgrade are provided in the previous Section "Site Earthwork" and the related sub-sections of this report.

4.8 Preliminary Portland Cement Concrete Pavement Sections

Preliminary minimum Portland Cement Concrete (PCC) pavement street sections are provided below in Table 6 for Traffic Indices of 6.0, 7.0, and 8.0 to be utilized in the design of the truck parking/circulation areas or loading docks. These sections are based on an assumed R-value of 30. These recommendations must be confirmed with R-value testing of representative near-surface soils at the completion of grading and after underground utilities have been installed and backfilled. Final street sections should be confirmed by the project civil engineer based upon the projected design Traffic Index. If requested, LGC Geotechnical will provide sections for alternate TI values. The appropriate paving section must be selected by the project civil engineer/client based on design traffic indexes.

TABLE 6

Preliminary PCC Pavement Section Options

Provided Traffic Index	6.0	7.0	8.0
PCC Thickness	6.0 inches	7.0 inches	8.0 inches
95% Compacted Subgrade	12.0 inches	12.0 inches	12.0 inches

We recommend a PCC pavement section consisting of thicknesses presented above over 12 inches of compacted subgrade. The concrete should have a minimum compressive strength of 4,000 psi at the time the pavement is subjected to traffic. To reduce the potential (but not eliminate) for cracking, paving should provide control joints at regular intervals not exceeding 14 feet in each direction, depth of ⅓ the concrete thickness. Contraction and construction joints should include a joint filler/sealer to prevent migration of water into the subgrade soils. The type of joint sealer and filler material should be specified by the pavement designer and should be maintained throughout the life of the pavement. Dowels are recommended at joints to reduce potential offsets. The above section does not include steel reinforcement. Steel reinforcement (typically No. 3 rebars at 24 inches on-center each way) may be added to reduce the potential for cracking.

Subgrade below the PCC pavement should be compacted to a minimum of 95 percent relative compaction per ASTM D1557 near optimum moisture content (generally within optimum and 2 percent above optimum moisture content). Earthwork recommendations are provided in Section 4.1 "Site Earthwork" and the related sub-sections of this report.

The thicknesses shown are minimum thicknesses. Increasing the thickness of any or all of the above layers will reduce the likelihood of the pavement experiencing distress during its service life. The above recommendations are based on the assumption that proper maintenance and irrigation of the areas adjacent to the roadway will occur through the design life of the pavement. Failure to maintain a proper maintenance and/or irrigation program may jeopardize the integrity of the pavement.

4.9 Nonstructural Concrete Flatwork

Nonstructural concrete flatwork (such as walkways, patio slabs, etc.) has a potential for cracking due to changes in soil volume related to soil-moisture fluctuations. To reduce the potential for excessive cracking and lifting, concrete may be designed in accordance with the minimum guidelines outlined in Table 7. These guidelines will reduce the potential for irregular cracking and promote cracking along construction joints, but will not eliminate all cracking or lifting. Thickening the concrete and/or adding additional reinforcement will further reduce cosmetic distress.

TABLE 7

Preliminary Geotechnical Parameters for Nonstructural Concrete Flatwork Placed on Very Low to Low Expansion Potential Subgrade

	Sidewalks	**Patios/Entryways**	**City Sidewalk Curb and Gutters**
Minimum Thickness (in.)	4 (nominal)	4 (full)	City/Agency Standard
Presoaking	Wet down prior to placing	Wet down prior to placing	City/Agency Standard
Reinforcement	—	No. 3 at 24 inches on centers	City/Agency Standard
Thickened Edge (in.)	—	—	City/Agency Standard
Crack Control Joints	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	City/Agency Standard
Maximum Joint Spacing	5 feet	6 feet	City/Agency Standard
Aggregate Base Thickness (in.)	—	—	City/Agency Standard

To reduce the potential for driveways to separate from the loading dock or building slab, the builder may elect to install dowels to tie these two elements together.

4.10 Geotechnical Plan Review

When available, project plans (grading, foundation, retaining wall, etc.) should be reviewed by this office prior to construction to verify that our geotechnical recommendations have been incorporated. Additional field work and/or modified geotechnical recommendations may be necessary.

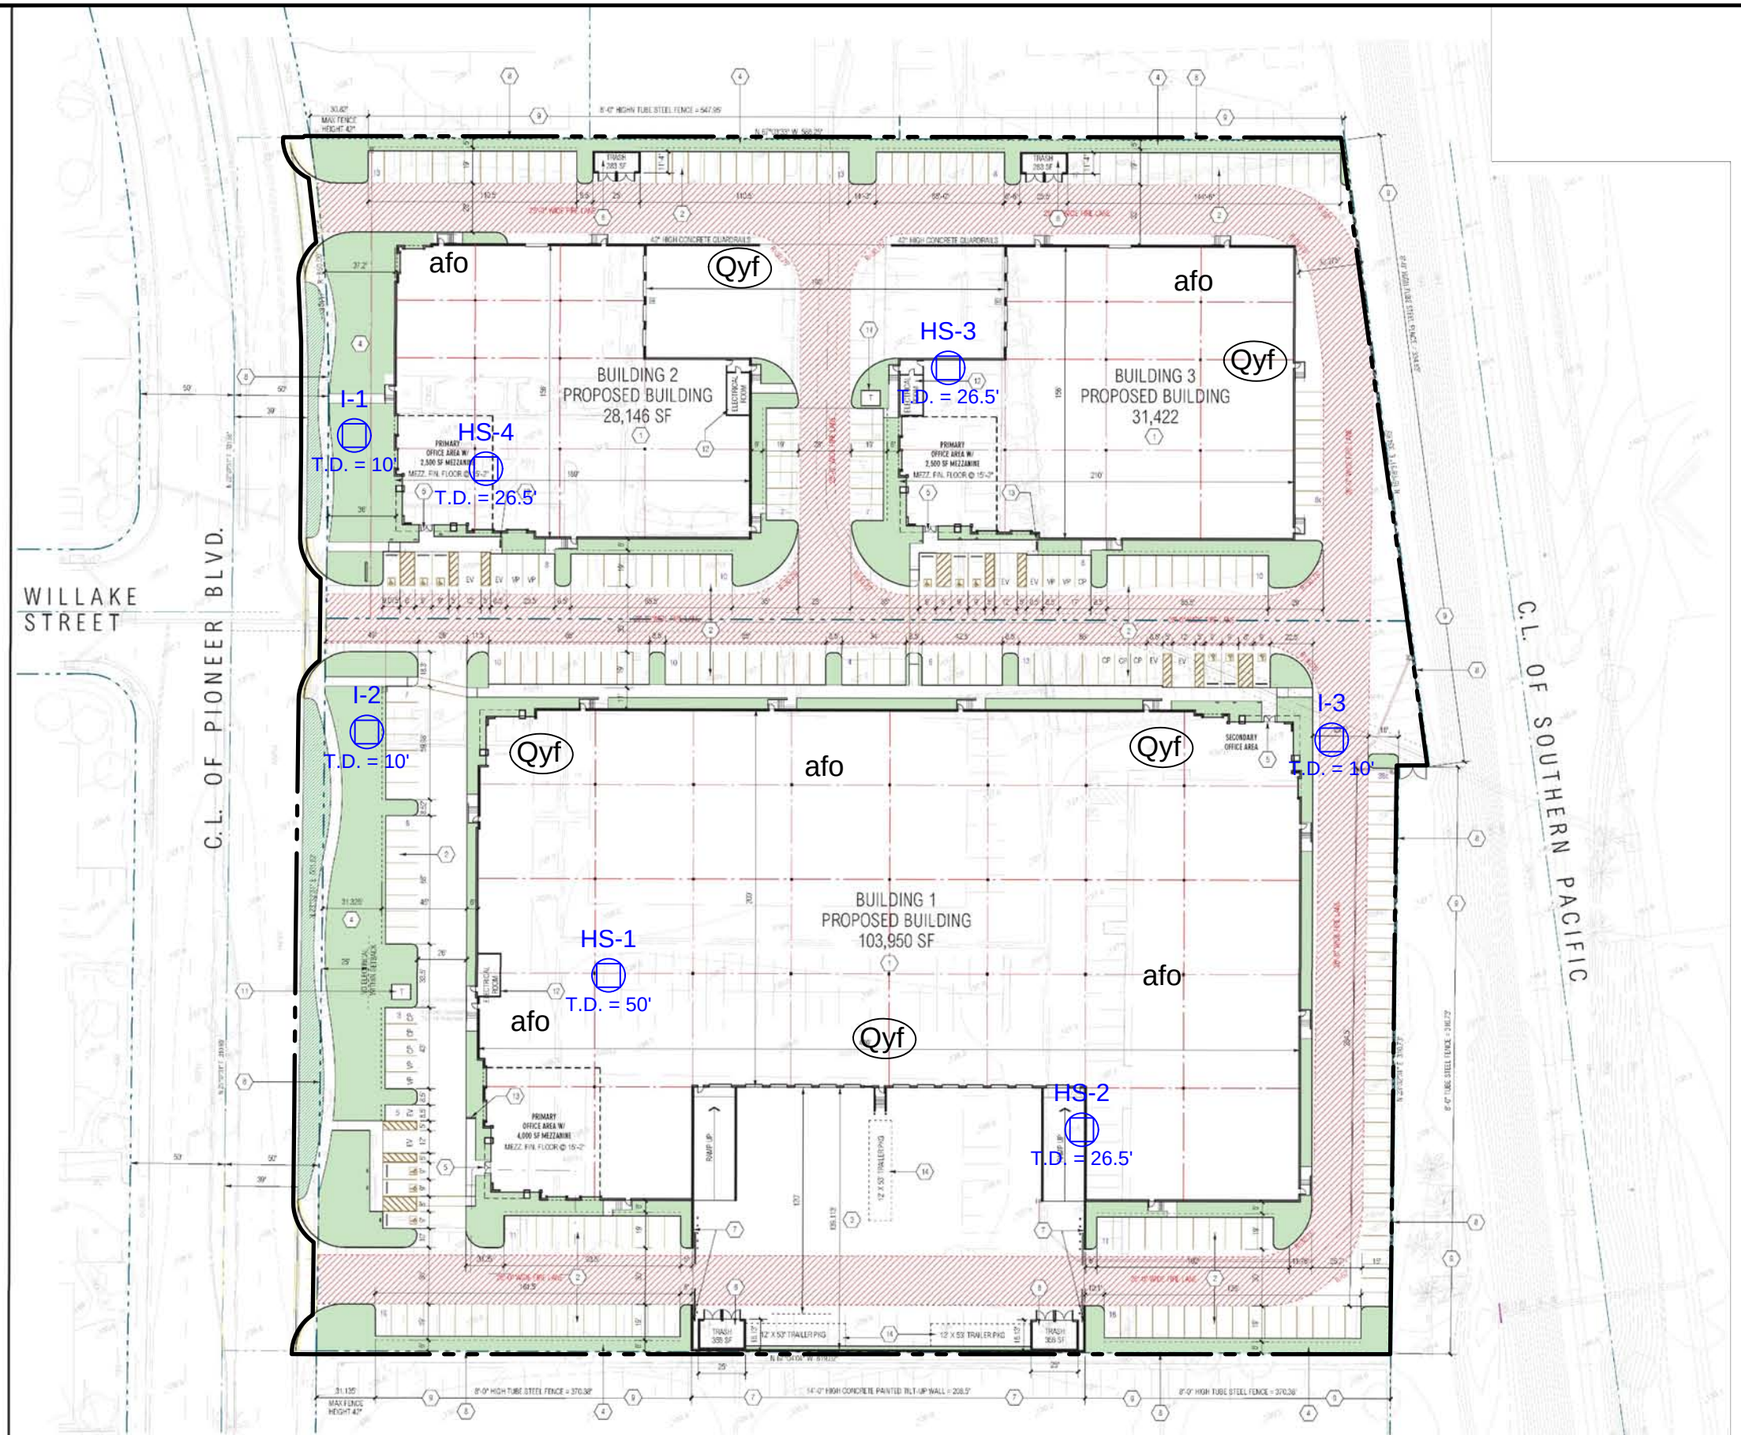
4.11 Geotechnical Observation and Testing During Construction

The recommendations provided in this report are based on limited subsurface observations and geotechnical analysis. The interpolated subsurface conditions should be checked in the field during construction by a representative of LGC Geotechnical. Geotechnical observation and testing is required per Section 1705 of the 2016 California Building Code (CBC).

Geotechnical observation and/or testing should be performed by LGC Geotechnical at the following stages:

- During grading (removal and recompaction bottoms, fill placement, etc.);
- During retaining wall backfill and compaction;
- During utility trench backfill and compaction;
- After moisture conditioning building pads and other concrete-flatwork subgrades, and prior to placement of aggregate base or concrete;
- Preparation of pavement subgrade and placement of aggregate base;
- After building and wall footing excavation and prior to placing steel reinforcement and/or concrete; and
- When any unusual soil conditions are encountered during any construction operation subsequent to issuance of this report.

5.0 LIMITATIONS



Our services were performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable soils engineers and geologists practicing in this or similar localities. No other warranty, expressed or implied, is made as to the conclusions and professional advice included in this report.

This report is based on data obtained from limited observations of the site, which have been extrapolated to characterize the site. While the scope of services performed is considered suitable to adequately characterize the site geotechnical conditions relative to the proposed development, no practical evaluation can completely eliminate uncertainty regarding the anticipated geotechnical conditions in connection with a subject site. Variations may exist and conditions not observed or described in this report may be encountered during grading and construction.

This report is issued with the understanding that it is the responsibility of the owner, or of his/her representative, to ensure that the information and recommendations contained herein are brought to the attention of the other consultants (at a minimum the civil engineer, structural engineer, landscape architect) and incorporated into their plans. The contractor should properly implement the recommendations during construction and notify the owner if they consider any of the recommendations presented herein to be unsafe, or unsuitable.

The findings of this report are valid as of the present date. However, changes in the conditions of a site can and do occur with the passage of time, whether they be due to natural processes or the works of man on this or adjacent properties. The findings, conclusions, and recommendations presented in this report can be relied upon only if LGC Geotechnical has the opportunity to observe the subsurface conditions during grading and construction of the project, in order to confirm that our preliminary findings are representative for the site. This report is intended exclusively for use by the client, any use of or reliance on this report by a third party shall be at such party's sole risk.

In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and modification.

Appendix C
Laboratory Test Results

APPENDIX C

Laboratory Test Results

The laboratory testing program was directed towards providing quantitative data relating to the relevant engineering properties of the soils. Samples considered representative of site conditions were tested in general accordance with American Society for Testing and Materials (ASTM) procedure and/or California Test Methods (CTM), where applicable. The following summary is a brief outline of the test type and a table summarizing the test results.

Moisture and Density Determination Tests: Moisture content (ASTM D2216) and dry density determinations (ASTM D2937) were performed on driven samples obtained from the test borings. The results of these tests are presented in the boring logs. Where applicable, only moisture content was determined from SPT or disturbed samples.

Grain Size Distribution/Fines Content: Representative samples were dried, weighed, and soaked in water until individual soil particles were separated (per ASTM D421) and then washed on a No. 200 sieve (ASTM D1140). Where applicable, the portion retained on the No. 200 sieve was dried and then sieved on a U.S. Standard brass sieve set in accordance with ASTM D6913 (sieve) or ASTM D422 (sieve and hydrometer).

Sample Location	Description	% Passing # 200 Sieve
HS-1 @ 10 ft	Silty Sand	37
HS-3 @ 7.5 ft	Silty Sand	49

Atterberg Limits: The liquid and plastic limits ("Atterberg Limits") were determined per ASTM D4318 for engineering classification of fine-grained material and presented in the table below. The USCS soil classification indicated in the table below is based on the portion of sample passing the No. 40 sieve and may not necessarily be representative of the entire sample. The plot is provided in this Appendix.

Sample Location	Liquid Limit (%)	Plastic Limit (%)	Plasticity Index (%)	USCS Soil Classification
HS-3 @ 5 ft	42	27	15	ML

Direct Shear: One direct shear test was performed on a sample remolded to 90 percent relative compaction. The ring samples were soaked for a minimum of 24 hours prior to testing. The samples were tested under various normal loads using a motor-driven, strain-controlled, direct-shear testing apparatus (ASTM D3080). The plot is provided in this Appendix.

Laboratory Test Results

Consolidation: Two consolidation tests were performed per ASTM D2435. A sample (2.4 inches in diameter and 1 inch in height) was placed in a consolidometer and increasing loads were applied. The sample was allowed to consolidate under "double drainage" and total deformation for each loading step was recorded. The percent consolidation for each load step was recorded as the ratio of the amount of vertical compression to the original sample height. The consolidation pressure curves are provided in this Appendix.

Collapse/Swell Potential: One collapse test was performed per ASTM D4546. A sample (2.4 inches in diameter and 1-inch in height) was placed in a consolidometer and loaded to its approximate in-situ effective stress. The curve is presented in this Appendix.

Laboratory Compaction: The maximum dry density and optimum moisture content of typical materials were determined in accordance with ASTM D1557. The results of this tests are presented in the table below.

Sample Location	Sample Description	Maximum Dry Density (pcf)	Optimum Moisture Content (%)
HS-1 @ 0-5 ft	Brown and reddish-brown silty sand	115.5	14.0

Expansion Index: The expansion potential of a selected representative sample was evaluated by the Expansion Index Test per ASTM D4829.

Sample Location	Expansion Index	Expansion Potential*
HS-1 @ 0-5 ft	14	Very Low

* Per ASTM D4829

Soluble Sulfates: The soluble sulfate contents of a selected sample was determined by standard geochemical methods (CTM 417). The test results are presented in the table below.

Sample Location	Sulfate Content (%)
HS-1 @ 0-5 ft	< 0.1

Laboratory Test Results

Chloride Content: Chloride content was tested per CTM 422. The results are presented below.

Sample Location	Chloride Content (ppm)
HS-1 @ 0-5 ft	85

Minimum Resistivity and pH Tests: Minimum resistivity and pH tests were performed in general accordance with CTM 643 and standard geochemical methods. The results are presented in the table below.

Sample Location	pH	Minimum Resistivity (ohms-cm)
HS-1 @ 0-5 ft	8.2	5,480

Appendix F
General Earthwork Specifications for Rough Grading

General Earthwork and Grading Specifications for Rough Grading

1.0 General

1.1 Intent

These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 The Geotechnical Consultant of Record

Prior to commencement of work, the owner shall employ a qualified Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultant shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to confirm that the attained level of compaction is being accomplished as specified. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.

1.3 The Earthwork Contractor

The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with the project plans and specifications. The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of “equipment” of work and the estimated quantities of daily earthwork

contemplated for the site prior to commencement of grading. The Contractor shall inform the owner and the
Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate personnel will be available for observation and testing. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified. It is the contractor's sole responsibility to provide proper fill compaction.

2.0 Preparation of Areas to be Filled

2.1 Clearing and Grubbing

Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed. The contractor is responsible for all hazardous waste relating to his work. The Geotechnical Consultant does not have expertise in this area. If hazardous waste is a concern, then the Client should acquire the services of a qualified environmental assessor.

2.2 Processing

Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be over-excavated as specified in the following section. Scarification shall continue until soils are broken down and free of oversize material and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.

2.3 Over-excavation

In addition to removals and over-excavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be over-excavated to competent ground as evaluated by the Geotechnical Consultant during grading.

2.4 Benching

Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. Please see the Standard Details for a graphic illustration. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise over-excavated to provide a flat subgrade for the fill.

2.5 Evaluation/Acceptance of Fill Areas

All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

3.0 Fill Material

3.1 General

Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 Oversize

Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.

3.3 Import

If importing of fill material is required for grading, proposed import material shall meet the requirements of the geotechnical consultant. The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

4.0 Fill Placement and Compaction

4.1 Fill Layers

Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 Fill Moisture Conditioning

Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557).

4.3 Compaction of Fill

After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.

4.4 Compaction of Fill Slopes

In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557.

4.5 Compaction Testing

Field tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.6 Frequency of Compaction Testing

Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soils embankment. In addition, as a guideline, at least one test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.7 Compaction Test Locations

The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than
5 feet apart from potential test locations shall be provided.

5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan, and the Standard Details. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

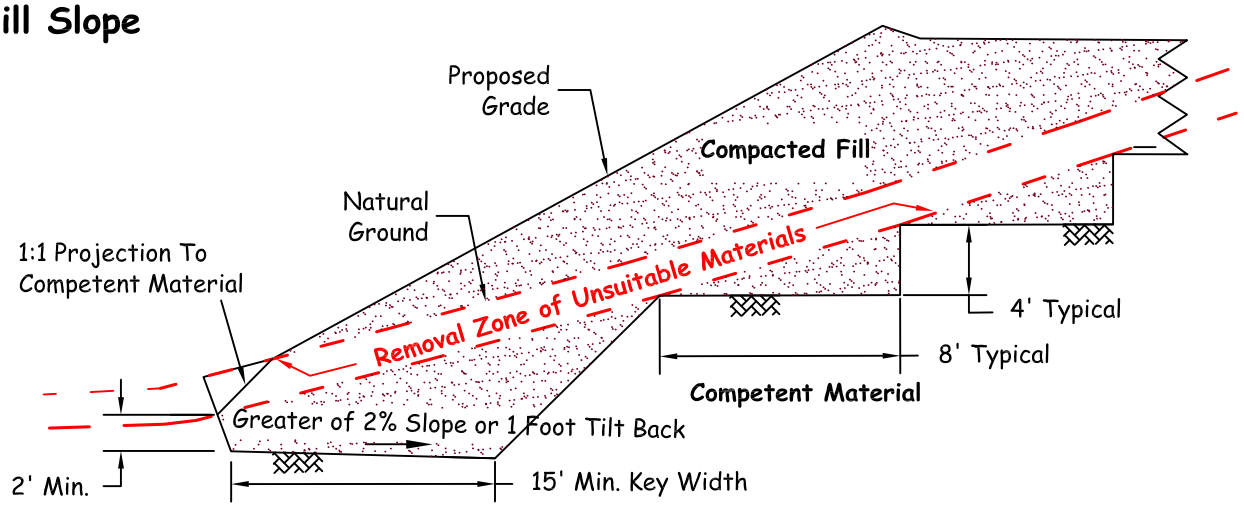
6.0 Excavation

Excavations, as well as over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical plans are estimates only. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 Trench Backfills

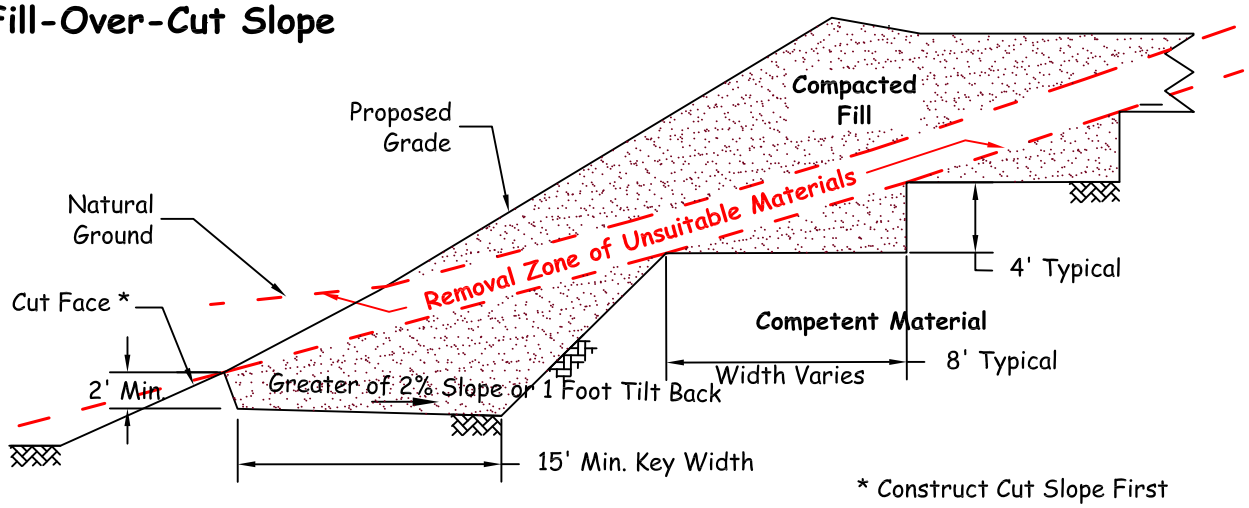
7.1 The Contractor shall follow all OHSA and Cal/OSHA requirements for safety of trench excavations.

7.2 All bedding and backfill of utility trenches shall be done in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over



the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum of 90 percent of maximum from 1 foot above the top of the conduit to the surface.

7.3 The jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.



7.4 The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill.

7.5 Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

EXECUTIVE SUMMARY

ES.1 SUMMARY OF FINDINGS

The results of this *Pioneer Boulevard Development Greenhouse Gas Analysis* is summarized below based on the significance criteria in Section 3 of this report consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines (1). Table ES-1 shows the findings of significance for potential greenhouse gas (GHG) impacts under CEQA.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
GHG Impact #1: The Project would not generate direct or indirect GHG emission that would result in a significant impact on the environment.	3.8	*Less Than Significant*	*n/a*
GHG Impact #2: The Project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.	3.8	*Less Than Significant*	*n/a*

ES.2 PROJECT REQUIREMENTS

The Project would be required to comply with regulations imposed by the State of California and the South Coast Air Quality Management District (SCAQMD) aimed at the reduction of air pollutant emissions. Those that are directly and indirectly applicable to the Project and that would assist in the reduction of GHG emissions include:

- Global Warming Solutions Act of 2006 (AB32) (2).
- Regional GHG Emissions Reduction Targets (2)/Sustainable Communities Strategies (SB 375) (3).
- Pavley Fuel Efficiency Standards (AB1493). Establishes fuel efficiency ratings for new vehicles (4).
- Title 24 California Code of Regulations (California Building Code). Establishes energy efficiency requirements for new construction (5).
- Title 20 California Code of Regulations (Appliance Energy Efficiency Standards). Establishes energy efficiency requirements for appliances (6).
- Title 17 California Code of Regulations (Low Carbon Fuel Standard). Requires carbon content of fuel sold in California to be 10% less by 2020 (7).
- California Water Conservation in Landscaping Act of 2006 (AB1881). Requires local agencies to adopt the Department of Water Resources updated Water Efficient Landscape Ordinance or equivalent by January 1, 2010 to ensure efficient landscapes in new development and reduced water waste in existing landscapes (8).

- Statewide Retail Provider Emissions Performance Standards (SB 1368). Requires energy generators to achieve performance standards for GHG emissions (9).
- Renewable Portfolio Standards (SB 1078). Requires electric corporations to increase the amount of energy obtained from eligible renewable energy resources to 20 percent by 2010 and 33 percent by 2020 (10).
- Senate Bill 32 (SB 32). Requires the state to reduce statewide GHG emissions to 40% below 1990 levels by 2030, a reduction target that was first introduced in Executive Order B-30-15 (11).

Promulgated regulations that will affect the Project's emissions are accounted for in the Project's GHG calculations provided in this report. In particular, the Pavley Standards, Low Carbon Fuel Standards, and Renewable Portfolio Standards (RPS) will be in effect for the AB 32 target year of 2020, and therefore are accounted for in the Project's emission calculations.

1 INTRODUCTION

This report presents the results of the greenhouse gas analysis (GHGA) prepared by Urban Crossroads, Inc., for Pioneer Boulevard Development (Project). The purpose of this GHGA is to evaluate Project-related construction and operational emissions and determine the level of GHG impacts as a result of constructing and operating the proposed Project.

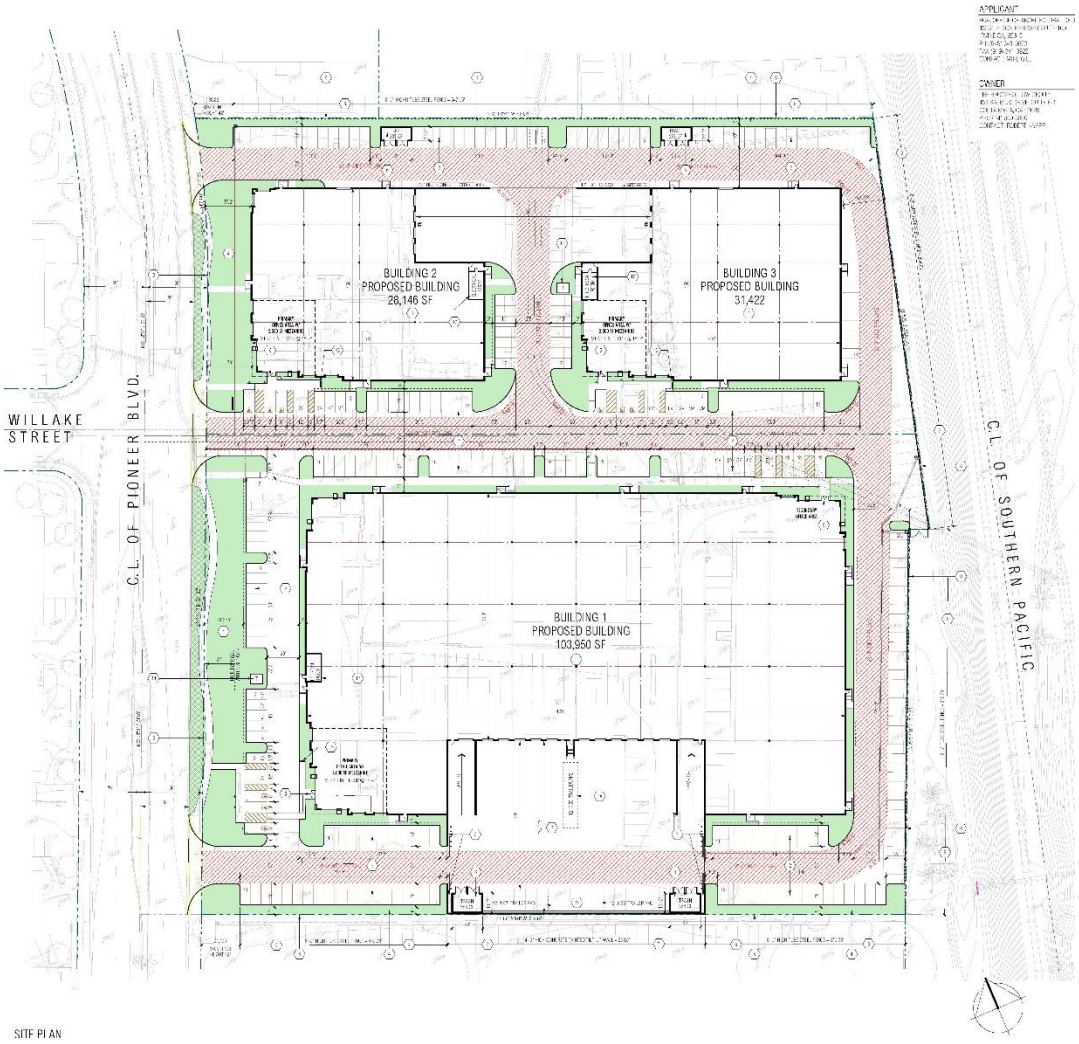
1.1 SITE LOCATION

The proposed Pioneer Boulevard Development is located at 9920 Pioneer Boulevard, in the City of Santa Fe Springs, as shown on Exhibit 1-A.

1.2 PROJECT STUDY AREA

The Project site is currently developed with 149,605 square feet (sf) business park and 8,064 sf general office building uses. The Project site is located within a developed and urban area with the City Santa Fe Springs. The surrounding land uses are described below.

- North: Immediately north of the project site are business park uses, designated as Business Park in the General Plan and zoned Limited Manufacturing (ML). A single-family residential neighborhood is to the northwest of the project site, designated as Single Family Residential in the General Plan and zoned Single Family (R-1).
- West: Adjacent to the project site are business park uses, designated as Business Park in the General Plan and zoned Limited Manufacturing (ML). Beyond the business park is a multi-family development designated as Multiple Family Residential and zoned Multiple Family – Planned Development Overlay Zone (R-3-PD).
- South: Immediately south of the project site are business park uses, designated and zoned with the same land uses as the project site: Business Park and Limited Manufacturing (ML). The City of Santa Fe Springs Civic Center is located southwest of the project site with a designation of Public Facilities by the General Plan and zoned a combination of Community Commercial (C-4), Public Facilities (PF), and Limited Manufacturing (ML) each with a Design Overlay zone.
- East: Across from the Southern Pacific railroad tracks are industrial uses, east of the project site. The General Plan designates this area as Industrial. The City zones the area as Heavy Manufacturing (M-2).



1.3 PROJECT DESCRIPTION

Exhibit 1-B illustrates the preliminary site plan. As indicated on Exhibit 1-B, the Project is proposed to consist 163,518 sf of general light industrial use within 3 buildings. The Project is anticipated to be constructed in a single phase by the year 2021. At the time this GHG analysis was prepared, the future tenants of the proposed Project were unknown. This GHG study is intended to describe emission impacts associated with the expected typical 24-hour, seven days per week operational activities at the Project site.

2 CLIMATE CHANGE SETTING

2.1 INTRODUCTION TO GLOBAL CLIMATE CHANGE

Global Climate Change (GCC) is defined as the change in average meteorological conditions on the earth with respect to temperature, precipitation, and storms. The majority of scientists believe that the climate shift taking place since the Industrial Revolution is occurring at a quicker rate and magnitude than in the past. Scientific evidence suggests that GCC is the result of increased concentrations of GHGs in the earth's atmosphere, including carbon dioxide, methane, nitrous oxide, and fluorinated gases. The majority of scientists believe that this increased rate of climate change is the result of GHGs resulting from human activity and industrialization over the past 200 years.

An individual project like the proposed Project evaluated in this GHGA cannot generate enough GHG emissions to affect a discernible change in global climate. However, the proposed Project may participate in the potential for GCC by its incremental contribution of GHGs combined with the cumulative increase of all other sources of GHGs, which when taken together constitute potential influences on GCC. Because these changes may have serious environmental consequences, Section 3.0 will evaluate the potential for the proposed Project to have a significant effect upon the environment as a result of its potential contribution to the greenhouse effect.

2.2 GLOBAL CLIMATE CHANGE DEFINED

GCC refers to the change in average meteorological conditions on the earth with respect to temperature, wind patterns, precipitation and storms. Global temperatures are regulated by naturally occurring atmospheric gases such as water vapor, CO_2 (carbon dioxide), N_2O (nitrous oxide), CH_4 (methane), hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride. These particular gases are important due to their residence time (duration they stay) in the atmosphere, which ranges from 10 years to more than 100 years. These gases allow solar radiation into the earth's atmosphere, but prevent radioactive heat from escaping, thus warming the earth's atmosphere. GCC can occur naturally as it has in the past with the previous ice ages.

Gases that trap heat in the atmosphere are often referred to as GHGs. GHGs are released into the atmosphere by both natural and anthropogenic (human) activity. Without the natural GHG effect, the earth's average temperature would be approximately 61° Fahrenheit cooler than it is currently. The cumulative accumulation of these gases in the earth's atmosphere is considered to be the cause for the observed increase in the earth's temperature.

2.3 GREENHOUSE GASES

GREENHOUSE GASES AND HEALTH EFFECTS

GHGs trap heat in the atmosphere, creating a GHG effect that results in global warming and climate change. Many gases demonstrate these properties and as discussed in Table 2-1. For the purposes of this analysis, emissions of CO_2, CH_4, and N_2O were evaluated (see Table 3-1 later in

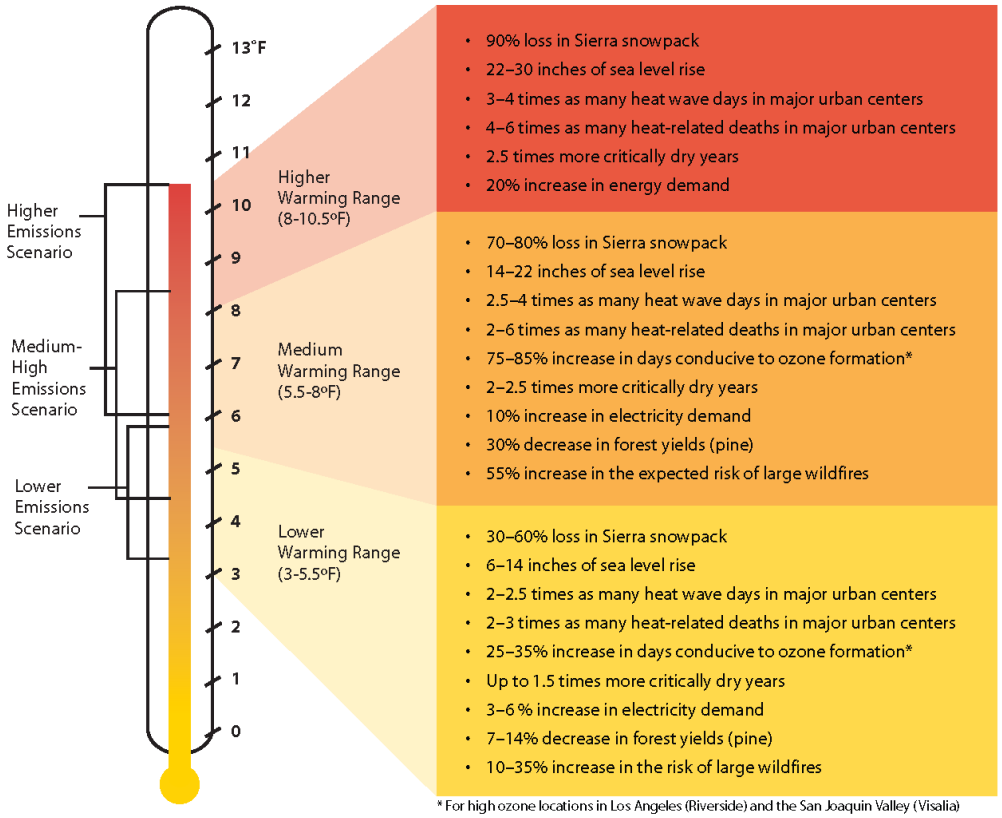
this report) because these gases are the primary contributors to GCC from development projects. Although there are other substances such as fluorinated gases that also contribute to GCC, these fluorinated gases were not evaluated as their sources are not well-defined and do not contain accepted emissions factors or methodology to accurately calculate these gases.

TABLE 2-1: GREENHOUSE GASES

Greenhouse Gases	Description	Sources	Health Effects
Water Vapor (H_2O)	H_20 is the most abundant, important, and variable GHG in the atmosphere. Water vapor is not considered a pollutant; in the atmosphere it maintains a climate necessary for life. Changes in its concentration are primarily considered to be a result of climate feedbacks related to the warming of the atmosphere rather than a direct result of industrialization. A climate feedback is an indirect, or secondary, change, either positive or negative, that occurs within the climate system in response to a forcing mechanism. The feedback loop in which water is involved is critically important to projecting future climate change. As the temperature of the atmosphere rises, more water is evaporated from ground storage (rivers, oceans, reservoirs, soil). Because the air is warmer, the relative humidity can be higher (in essence, the air is able to 'hold' more water when it is warmer), leading to more water vapor in the atmosphere. As a GHG, the higher concentration of water vapor is then able to absorb more thermal indirect energy radiated from the Earth, thus further warming the atmosphere. The warmer atmosphere can then hold more water vapor and so on and so on. This is referred to as a "positive feedback loop." The extent to which this positive	The main source of water vapor is evaporation from the oceans (approximately 85 percent). Other sources include evaporation from other water bodies, sublimation (change from solid to gas) from sea ice and snow, and transpiration from plant leaves.	There are no known direct health effects related to water vapor at this time. It should be noted however that when some pollutants react with water vapor, the reaction forms a transport mechanism for some of these pollutants to enter the human body through water vapor.

Greenhouse Gases	Description	Sources	Health Effects
	feedback loop will continue is unknown as there are also dynamics that hold the positive feedback loop in check. As an example, when water vapor increases in the atmosphere, more of it will eventually condense into clouds, which are more able to reflect incoming solar radiation (thus allowing less energy to reach the earth's surface and heat it up) (12).		
Carbon Dioxide (CO_2)	CO_2 is an odorless and colorless GHG. Since the industrial revolution began in the mid-1700s, the sort of human activity that increases GHG emissions has increased dramatically in scale and distribution. Data from the past 50 years suggests a corollary increase in levels and concentrations. As an example, prior to the industrial revolution, CO_2 concentrations were fairly stable at 280 parts per million (ppm). Today, they are around 370 ppm, an increase of more than 30 percent. Left unchecked, the concentration of carbon dioxide in the atmosphere is projected to increase to a minimum of 540 ppm by 2100 as a direct result of anthropogenic sources (13).	Carbon dioxide is emitted from natural and manmade sources. Natural sources include: the decomposition of dead organic matter; respiration of bacteria, plants, animals and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources include: the burning of coal, oil, natural gas, and wood. Carbon dioxide is naturally removed from the air by photosynthesis, dissolution into ocean water, transfer to soils and ice caps, and chemical weathering of carbonate rocks (14).	Outdoor levels of carbon dioxide are not high enough to result in negative health effects. According to the National Institute for Occupational Safety and Health (NIOSH) high concentrations of carbon dioxide can result in health effects such as: headaches, dizziness, restlessness, difficulty breathing, sweating, increased heart rate, increased cardiac output, increased blood pressure, coma, asphyxia, and/or convulsions. It should be noted that current concentrations of carbon dioxide in the earth's atmosphere are estimated to be approximately 370 ppm, the actual reference exposure level (level at which adverse health effects typically occur) is at exposure levels of 5,000 ppm averaged over 10 hours in a 40-hour workweek and short-term reference exposure levels of 30,000

Greenhouse Gases	Description	Sources	Health Effects
			ppm averaged over a 15 minute period (15).
Methane (CH_4)	CH_4 is an extremely effective absorber of radiation, although its atmospheric concentration is less than carbon dioxide and its lifetime in the atmosphere is brief (10-12 years), compared to other GHGs.	Methane has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of methane. Other anthropocentric sources include fossil-fuel combustion and biomass burning (16).	Methane is extremely reactive with oxidizers, halogens, and other halogen-containing compounds. Exposure to high levels of methane can cause asphyxiation, loss of consciousness, headache and dizziness, nausea and vomiting, weakness, loss of coordination, and an increased breathing rate.
Nitrous Oxide (N_2O)	N_2O, also known as laughing gas, is a colorless GHG. Concentrations of nitrous oxide also began to rise at the beginning of the industrial revolution. In 1998, the global concentration was 314 parts per billion (ppb).	Nitrous oxide is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions)	Nitrous oxide can cause dizziness, euphoria, and sometimes slight hallucinations. In small doses, it is considered harmless. However, in some cases, heavy and extended use can cause Olney's Lesions (brain damage) (17).



Greenhouse Gases	Description	Sources	Health Effects
		also contribute to its atmospheric load. It is used as an aerosol spray propellant, i.e., in whipped cream bottles. It is also used in potato chip bags to keep chips fresh. It is used in rocket engines and in race cars. Nitrous oxide can be transported into the stratosphere, be deposited on the earth's surface, and be converted to other compounds by chemical reaction (17).	
Chlorofluorocarbons (CFCs)	CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane (C_2H_6) with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble and chemically unreactive in the troposphere (the level of air at the earth's surface).	CFCs have no natural source but were first synthesized in 1928. They were used for refrigerants, aerosol propellants and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and was extremely successful, so much so that levels of the major CFCs are now remaining steady or declining. However, their long atmospheric lifetimes mean that some of the CFCs will remain in the atmosphere for over 100 years (18).	In confined indoor locations, working with CFC-113 or other CFCs is thought to result in death by cardiac arrhythmia (heart frequency too high or too low) or asphyxiation.

Greenhouse Gases	Description	Sources	Health Effects
Hydrofluorocarbons (HFCs)	HFCs are synthetic, man-made chemicals that are used as a substitute for CFCs. Out of all the GHGs, they are one of three groups with the highest global warming potential (GWP). The HFCs with the largest measured atmospheric abundances are (in order), HFC-23 (CHF_3), HFC-134a (CH_2FCF), and HFC-152a (CH_3CF_2). Prior to 1990, the only significant emissions were of HFC-23. HFC-134a emissions are increasing due to its use as a refrigerant.	HFCs are manmade for applications such as automobile air conditioners and refrigerants.	No health effects are known to result from exposure to HFCs.
Perfluorocarbons (PFCs)	PFCs have stable molecular structures and do not break down through chemical processes in the lower atmosphere. High-energy ultraviolet rays, which occur about 60 kilometers above earth's surface, are able to destroy the compounds. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF_4) and hexafluoroethane (C_2F_6). The EPA estimates that concentrations of CF_4 in the atmosphere are over 70 parts per trillion (ppt).	The two main sources of PFCs are primary aluminum production and semiconductor manufacture.	No health effects are known to result from exposure to PFCs.
Sulfur Hexafluoride (SF_6)	Sulfur hexafluoride (SF_6) is an inorganic, odorless, colorless, nontoxic, nonflammable gas. It also has the highest GWP of any gas evaluated (23,900) (19). The EPA indicates that concentrations in the 1990s were about 4 ppt.	Sulfur hexafluoride is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.	In high concentrations in confined areas, the gas presents the hazard of suffocation because it displaces the oxygen needed for breathing.

Greenhouse Gases	Description	Sources	Health Effects
Nitrogen Trifluoride (NF_3)	NF_3 is a colorless gas with a distinctly moldy odor. The World Resources Institute (WRI) indicates that NF_3 has a 100-year GWP of 17,200 (20).	NF_3 is used in industrial processes and is produced in the manufacturing of semiconductors, LCD (Liquid Crystal Display) panels, types of solar panels, and chemical lasers.	Long-term or repeated exposure may affect the liver and kidneys and may cause fluorosis (21).

The potential health effects related directly to the emissions of CO_2, CH_4, and N_2O as they relate to development projects such as the proposed Project are still being debated in the scientific community. Their cumulative effects to GCC have the potential to cause adverse effects to human health. Increases in Earth's ambient temperatures would result in more intense heat waves, causing more heat-related deaths. Scientists also purport that higher ambient temperatures would increase disease survival rates and result in more widespread disease. Climate change will likely cause shifts in weather patterns, potentially resulting in devastating droughts and food shortages in some areas (22). Exhibit 2-A presents the potential impacts of global warming (23).

EXHIBIT 2-A: SUMMARY OF PROJECTED GLOBAL WARMING IMPACT, 2070-2099 (AS COMPARED WITH 1961-1990)

2.4 GLOBAL WARMING POTENTIAL

GHGs have varying GWP values. GWP of a GHG indicates the amount of warming a gas causes over a given period of time and represents the potential of a gas to trap heat in the atmosphere. Carbon dioxide is utilized as the reference gas for GWP, and thus has a GWP of 1. Carbon dioxide equivalent (CO_2e) is a term used for describing the difference GHGs in a common unit. CO_2e signifies the amount of CO_2 which would have the equivalent GWP.

The atmospheric lifetime and GWP of selected GHGs are summarized at Table 2-2. As shown in the table below, GWP for the Second Assessment Report, the Intergovernmental Panel on Climate Change (IPCC)'s scientific and socio-economic assessment on climate change, range from 1 for carbon dioxide to 23,900 for sulfur hexafluoride and GWP for the IPCC's 5th Assessment Report range from 1 for CO_2 to 23,500 for SF_6 (24).

TABLE 2-2: GLOBAL WARMING POTENTIAL AND ATMOSPHERIC LIFETIME OF SELECT GHGS

Gas	Atmospheric Lifetime (years)	Global Warming Potential (100-year time horizon)	
		Second Assessment Report	5th Assessment Report
CO_2	See*	1	1
CH_4	12 .4	21	28
N_2O	121	310	265
HFC-23	222	11,700	12,400
HFC-134a	13.4	1,300	1,300
HFC-152a	1.5	140	138
SF_6	3,200	23,900	23,500

*As per Appendix 8.A. of IPCC's 5th Assessment Report, no single lifetime can be given.

2.5 GREENHOUSE GAS EMISSIONS INVENTORIES

Global

Worldwide anthropogenic (human) GHG emissions are tracked by the IPCC for industrialized nations (referred to as Annex I) and developing nations (referred to as Non-Annex I). Human GHG emissions data for Annex I nations are available through 2017. Based on the latest available data, the sum of these emissions totaled approximately 29,216,501 Gg CO_2e[1] (25) (26) as summarized on Table 2-3.

[1] The global emissions are the sum of Annex I and non-Annex I countries, without counting Land-Use, Land-Use Change and Forestry (LULUCF). For countries without 2017 data, the UNFCCC data for the most recent year were used. United Nations Framework Convention on Climate Change, "Annex I Parties – GHG total without LULUCF," The most recent GHG emissions for China and India are from 2014.

United States

As noted in Table 2-3, the United States, as a single country, was the number two producer of GHG emissions in 2017.

TABLE 2-3: TOP GHG PRODUCING COUNTRIES AND THE EUROPEAN UNION [2]

Emitting Countries	GHG Emissions (Gg CO_2e)
China	11,911,710
United States	6,456,718
European Union (28-member countries)	4,323,163
India	3,079,810
Russian Federation	2,155,470
Japan	1,289,630
Total	**29,216,501**

Note: Gg – gigagram

State of California

California has significantly slowed the rate of growth of GHG emissions due to the implementation of energy efficiency programs as well as adoption of strict emission controls, but is still a substantial contributor to the U.S. emissions inventory total (27). The California Air Resource Board (CARB) compiles GHG inventories for the State of California. Based upon the 2018 GHG inventory data (i.e., the latest year for which data are available) for the 2000-2016 GHG emissions period, California emitted an average 429.4 million metric tons of CO_2e ($MMTCO_2e$) per year including emissions resulting from imported electrical power in 2015 (28).

2.6 EFFECTS OF CLIMATE CHANGE IN CALIFORNIA

Public Health

Higher temperatures may increase the frequency, duration, and intensity of conditions conducive to air pollution formation. For example, days with weather conducive to ozone formation could increase from 25 to 35 percent under the lower warming range to 75 to 85 percent under the medium warming range. In addition, if global background ozone levels increase as predicted in some scenarios, it may become impossible to meet local air quality standards. Air quality could be further compromised by increases in wildfires, which emit fine particulate matter that can travel long distances, depending on wind conditions. The Climate Scenarios report indicates that large wildfires could become up to 55 percent more frequent if GHG emissions are not significantly reduced.

In addition, under the higher warming range scenario, there could be up to 100 more days per year with temperatures above 90°F in Los Angeles and 95°F in Sacramento by 2100. This is a large

[2] Used http://unfccc.int data for Annex I countries. Consulted the CAIT Climate Data Explorer in https://www.climatewatchdata.org site to reference Non-Annex I countries of China and India.

increase over historical patterns and approximately twice the increase projected if temperatures remain within or below the lower warming range. Rising temperatures could increase the risk of death from dehydration, heat stroke/exhaustion, heart attack, stroke, and respiratory distress caused by extreme heat.

Water Resources

A vast network of man-made reservoirs and aqueducts captures and transports water throughout the state from northern California rivers and the Colorado River. The current distribution system relies on Sierra Nevada snowpack to supply water during the dry spring and summer months. Rising temperatures, potentially compounded by decreases in precipitation, could severely reduce spring snowpack, increasing the risk of summer water shortages.

If temperatures continue to increase, more precipitation could fall as rain instead of snow, and the snow that does fall could melt earlier, reducing the Sierra Nevada spring snowpack by as much as 70 to 90 percent. Under the lower warming range scenario, snowpack losses could be only half as large as those possible if temperatures were to rise to the higher warming range. How much snowpack could be lost depends in part on future precipitation patterns, the projections for which remain uncertain. However, even under the wetter climate projections, the loss of snowpack could pose challenges to water managers and hamper hydropower generation. It could also adversely affect winter tourism. Under the lower warming range, the ski season at lower elevations could be reduced by as much as a month. If temperatures reach the higher warming range and precipitation declines, there might be many years with insufficient snow for skiing and snowboarding.

The State's water supplies are also at risk from rising sea levels. An influx of saltwater could degrade California's estuaries, wetlands, and groundwater aquifers. Saltwater intrusion caused by rising sea levels is a major threat to the quality and reliability of water within the southern edge of the Sacramento/San Joaquin River Delta – a major fresh water supply.

Agriculture

Increased temperatures could cause widespread changes to the agriculture industry reducing the quantity and quality of agricultural products statewide. First, California farmers could possibly lose as much as 25 percent of the water supply needed. Although higher CO_2 levels can stimulate plant production and increase plant water-use efficiency, California's farmers could face greater water demand for crops and a less reliable water supply as temperatures rise. Crop growth and development could change, as could the intensity and frequency of pest and disease outbreaks. Rising temperatures could aggravate ozone pollution, which makes plants more susceptible to disease and pests and interferes with plant growth.

Plant growth tends to be slow at low temperatures, increasing with rising temperatures up to a threshold. However, faster growth can result in less-than-optimal development for many crops, so rising temperatures could worsen the quantity and quality of yield for a number of California's agricultural products. Products likely to be most affected include wine grapes, fruits and nuts.

In addition, continued GCC could shift the ranges of existing invasive plants and weeds and alter competition patterns with native plants. Range expansion could occur in many species while range contractions may be less likely in rapidly evolving species with significant populations already established. Should range contractions occur, new or different weed species could fill the emerging gaps. Continued GCC could alter the abundance and types of many pests, lengthen pests' breeding season, and increase pathogen growth rates.

Forests and Landscapes

GCC has the potential to intensify the current threat to forests and landscapes by increasing the risk of wildfire and altering the distribution and character of natural vegetation. If temperatures rise into the medium warming range, the risk of large wildfires in California could increase by as much as 55 percent, which is almost twice the increase expected if temperatures stay in the lower warming range. However, since wildfire risk is determined by a combination of factors, including precipitation, winds, temperature, and landscape and vegetation conditions, future risks will not be uniform throughout the state. In contrast, wildfires in northern California could increase by up to 90 percent due to decreased precipitation.

Moreover, continued GCC has the potential to alter natural ecosystems and biological diversity within the state. For example, alpine and subalpine ecosystems could decline by as much as 60 to 80 percent by the end of the century as a result of increasing temperatures. The productivity of the state's forests has the potential to decrease as a result of GCC.

Rising Sea Levels

Rising sea levels, more intense coastal storms, and warmer water temperatures could increasingly threaten the state's coastal regions. Under the higher warming range scenario, sea level is anticipated to rise 22 to 35 inches by 2100. Elevations of this magnitude would inundate low-lying coastal areas with saltwater, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats. Under the lower warming range scenario, sea level could rise 12-14 inches.

2.7 REGULATORY SETTING

INTERNATIONAL

Climate change is a global issue involving GHG emissions from all around the world; therefore, countries such as the ones discussed below have made an effort to reduce GHGs.

Intergovernmental Panel on Climate Change. In 1988, the United Nations and the World Meteorological Organization established the IPCC to assess the scientific, technical and socioeconomic information relevant to understanding the scientific basis of risk of human-induced climate change, its potential impacts, and options for adaptation and mitigation.

United Nation's Framework Convention on Climate Change ("Convention"). On March 21, 1994, the U.S. joined a number of countries around the world in signing the Convention. Under the Convention, governments gather and share information on GHG emissions, national policies, and best practices; launch national strategies for addressing GHG emissions and adapting to

expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

International Climate Change Treaties. The Kyoto Protocol is an international agreement linked to the Convention. The major feature of the Kyoto Protocol is that it sets binding targets for 37 industrialized countries and the European community for reducing GHG emissions at an average of five percent against 1990 levels over the five-year period 2008–2012. The Convention (as discussed above) encouraged industrialized countries to stabilize emissions; however, the Protocol commits them to do so. Developed countries have contributed more emissions over the last 150 years; therefore, the Protocol places a heavier burden on developed nations under the principle of "common but differentiated responsibilities."

In 2001, President George W. Bush indicated that he would not submit the treaty to the U.S. Senate for ratification, which effectively ended American involvement in the Kyoto Protocol. In December 2009, international leaders met in Copenhagen to address the future of international climate change commitments post-Kyoto. No binding agreement was reached in Copenhagen; however, the Committee identified the long-term goal of limiting the maximum global average temperature increase to no more than 2° Celsius above pre-industrial levels, subject to a review in 2015. The UN Climate Change Committee held additional meetings in Durban, South Africa in November 2011; Doha, Qatar in November 2012; and Warsaw, Poland in November 2013. The meetings are gradually gaining consensus among participants on individual climate change issues.

On September 23, 2014 more than 100 Heads of State and Government and leaders from the private sector and civil society met at the Climate Summit in New York hosted by the United Nations. At the Summit, heads of government, business and civil society announced actions in areas that would have the greatest impact on reducing emissions, including climate finance, energy, transport, industry, agriculture, cities, forests, and building resilience.

Parties to the U.N. Framework Convention on Climate Change (UNFCCC) reached a landmark agreement on December 12, 2015 in Paris, charting a fundamentally new course in the two-decade-old global climate effort. Culminating a four-year negotiating round, the new treaty ends the strict differentiation between developed and developing countries that characterized earlier efforts, replacing it with a common framework that commits all countries to put forward their best efforts and to strengthen them in the years ahead. This includes, for the first time, requirements that all parties report regularly on their emissions and implementation efforts and undergo international review.

The agreement and a companion decision by parties were the key outcomes of the conference, known as the 21st session of the UNFCCC Conference of the Parties (COP) 21. Together, the Paris Agreement and the accompanying COP decision:

- Reaffirm the goal of limiting global temperature increase well below 2 degrees Celsius, while urging efforts to limit the increase to 1.5 degrees;
- Establish binding commitments by all parties to make "nationally determined contributions" (NDCs), and to pursue domestic measures aimed at achieving them;

- Commit all countries to report regularly on their emissions and "progress made in implementing and achieving" their NDCs, and to undergo international review;
- Commit all countries to submit new NDCs every five years, with the clear expectation that they will "represent a progression" beyond previous ones;
- Reaffirm the binding obligations of developed countries under the UNFCCC to support the efforts of developing countries, while for the first time encouraging voluntary contributions by developing countries too;
- Extend the current goal of mobilizing $100 billion a year in support by 2020 through 2025, with a new, higher goal to be set for the period after 2025;
- Extend a mechanism to address "loss and damage" resulting from climate change, which explicitly will not "involve or provide a basis for any liability or compensation;"
- Require parties engaging in international emissions trading to avoid "double counting;" and
- Call for a new mechanism, similar to the Clean Development Mechanism under the Kyoto Protocol, enabling emission reductions in one country to be counted toward another country's NDC (C2ES 2015a) (29).

On June 2, 2017 President Donald Trump announced his intention to withdraw from the Paris Agreement. It should be noted that under the terms of the agreement, the United Sates cannot formally announce its resignation until November 4, 2019. Subsequently, withdrawal would be effective one year after notification in 2020.

NATIONAL

Prior to the last decade, there have been no concrete federal regulations of GHGs or major planning for climate change adaptation. The following are actions regarding the federal government, GHGs, and fuel efficiency.

GHG Endangerment. In *Massachusetts v. Environmental Protection Agency* 549 U.S. 497 (2007), decided on April 2, 2007, the Supreme Court found that four GHGs, including carbon dioxide, are air pollutants subject to regulation under Section 202(a)(1) of the Clean Air Act (CAA). The Court held that the EPA Administrator must determine whether emissions of GHGs from new motor vehicles cause or contribute to air pollution, which may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. On December 7, 2009, the EPA Administrator signed two distinct findings regarding GHGs under section 202(a) of the CAA:

- Endangerment Finding: The Administrator finds that the current and projected concentrations of the six key well-mixed GHGs—carbon dioxide, methane, nitrous oxide, HFCs, PFCs, and sulfur hexafluoride—in the atmosphere threaten the public health and welfare of current and future generations.
- Cause or Contribute Finding: The Administrator finds that the combined emissions of these well-mixed GHGs from new motor vehicles and new motor vehicle engines contribute to the GHG pollution, which threatens public health and welfare.

These findings do not impose requirements on industry or other entities. However, this was a prerequisite for implementing GHG emissions standards for vehicles, as discussed in the section "Clean Vehicles" below. After a lengthy legal challenge, the U.S. Supreme Court declined to review an Appeals Court ruling that upheld the EPA Administrator's findings (30).

Clean Vehicles. Congress first passed the Corporate Average Fuel Economy law in 1975 to increase the fuel economy of cars and light duty trucks. The law has become more stringent over time. On May 19, 2009, President Obama put in motion a new national policy to increase fuel economy for all new cars and trucks sold in the U.S. On April 1, 2010, the EPA and the Department of Transportation's National Highway Traffic Safety Administration (NHTSA) announced a joint final rule establishing a national program that would reduce GHG emissions and improve fuel economy for new cars and trucks sold in the U.S.

The first phase of the national program applies to passenger cars, light-duty trucks, and medium-duty (MD) passenger vehicles, covering model years 2012 through 2016. They require these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide per mile, equivalent to 35.5 miles per gallon (mpg) if the automobile industry were to meet this carbon dioxide level solely through fuel economy improvements. Together, these standards would cut carbon dioxide emissions by an estimated 960 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2012–2016). The EPA and the NHTSA issued final rules on a second-phase joint rulemaking establishing national standards for light-duty vehicles for model years 2017 through 2025 in August 2012 (EPA 2012c). The new standards for model years 2017 through 2025 apply to passenger cars, light-duty trucks, and MD passenger vehicles. The final standards are projected to result in an average industry fleetwide level of 163 grams/mile of carbon dioxide (CO_2) in model year 2025, which is equivalent to 54.5 mpg if achieved exclusively through fuel economy improvements.

The EPA and the U.S. Department of Transportation issued final rules for the first national standards to reduce GHG emissions and improve fuel efficiency of heavy-duty (HD) trucks and buses on September 15, 2011, effective November 14, 2011. For combination tractors, the agencies are proposing engine and vehicle standards that begin in the 2014 model year and achieve up to a 20 percent reduction in carbon dioxide emissions and fuel consumption by the 2018 model year. For HD pickup trucks and vans, the agencies are proposing separate gasoline and diesel truck standards, which phase in starting in the 2014 model year and achieve up to a 10-percent reduction for gasoline vehicles and a 15 percent reduction for diesel vehicles by the 2018 model year (12 and 17 percent respectively if accounting for air conditioning leakage). Lastly, for vocational vehicles, the engine and vehicle standards would achieve up to a 10 percent reduction in fuel consumption and carbon dioxide emissions from the 2014 to 2018 model years.

On April 2, 2018, the EPA signed the Mid-term Evaluation Final Determination, which finds that the model year 2022-2025 GHG standards are not appropriate and should be revised (31). This Final Determination serves to initiate a notice to further consider appropriate standards for model year 2022-2025 light-duty vehicles. On August 24, 2018, the EPA and NHTSA published a proposal to freeze the model year 2020 standards through model year 2026 and to revoke California's waiver under the CAA to establish more stringent standards (32).

Mandatory Reporting of GHGs. The Consolidated Appropriations Act of 2008, passed in December 2007, requires the establishment of mandatory GHG reporting requirements. On September 22, 2009, the EPA issued the Final Mandatory Reporting of GHGs Rule, which became effective January 1, 2010. The rule requires reporting of GHG emissions from large sources and suppliers in the U.S. and is intended to collect accurate and timely emissions data to inform future policy decisions. Under the rule, suppliers of fossil fuels or industrial GHGs, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of GHG emissions are required to submit annual reports to the EPA.

New Source Review. The EPA issued a final rule on May 13, 2010, that establishes thresholds for GHGs that define when permits under the New Source Review Prevention of Significant Deterioration and Title V Operating Permit programs are required for new and existing industrial facilities. This final rule "tailors" the requirements of these CAA permitting programs to limit which facilities will be required to obtain Prevention of Significant Deterioration and Title V permits. In the preamble to the revisions to the Federal Code of Regulations, the EPA states:

> *This rulemaking is necessary because without it the Prevention of Significant Deterioration and Title V requirements would apply, as of January 2, 2011, at the 100 or 250 tons per year levels provided under the Clean Air Act, greatly increasing the number of required permits, imposing undue costs on small sources, overwhelming the resources of permitting authorities, and severely impairing the functioning of the programs. EPA is relieving these resource burdens by phasing in the applicability of these programs to GHG sources, starting with the largest GHG emitters. This rule establishes two initial steps of the phase-in. The rule also commits the agency to take certain actions on future steps addressing smaller sources but excludes certain smaller sources from Prevention of Significant Deterioration and Title V permitting for GHG emissions until at least April 30, 2016.*

The EPA estimates that facilities responsible for nearly 70 percent of the national GHG emissions from stationary sources will be subject to permitting requirements under this rule. This includes the nation's largest GHG emitters—power plants, refineries, and cement production facilities.

Standards of Performance for GHG Emissions for New Stationary Sources: Electric Utility Generating Units. As required by a settlement agreement, the EPA proposed new performance standards for emissions of carbon dioxide for new, affected, fossil fuel-fired electric utility generating units on March 27, 2012. New sources greater than 25 megawatts would be required to meet an output-based standard of 1,000 pounds of carbon dioxide per megawatt-hour, based on the performance of widely used natural gas combined cycle technology. It should be noted that on February 9, 2016 the U.S. Supreme Court issued a stay of this regulation pending litigation. Additionally, the current EPA Administrator has also signed a measure to repeal the Clean Power Plan, including the CO_2 standards.

Cap-and-Trade. Cap-and-trade refers to a policy tool where emissions are limited to a certain amount and can be traded or provides flexibility on how the emitter can comply. Successful examples in the U.S. include the Acid Rain Program and the Nitrous Oxide (NO_X) Budget Trading Program and Clean Air Interstate Rule in the northeast. There is no federal GHG cap-and-trade

program currently; however, some states have joined to create initiatives to provide a mechanism for cap-and-trade.

The Regional GHG Initiative is an effort to reduce GHGs among the states of Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New York, Rhode Island, and Vermont. Each state caps carbon dioxide emissions from power plants, auctions carbon dioxide emission allowances, and invests the proceeds in strategic energy programs that further reduce emissions, save consumers money, create jobs, and build a clean energy economy. The Initiative began in 2008.

The Western Climate Initiative partner jurisdictions have developed a comprehensive initiative to reduce regional GHG emissions to 15 percent below 2005 levels by 2020. The partners were originally California, British Columbia, Manitoba, Ontario, and Quebec. However, Manitoba and Ontario are not currently participating. California linked with Quebec's cap-and-trade system January 1, 2014, and joint offset auctions took place in 2015 (C2ES 2015).

SmartWay Program. The SmartWay Program is a public-private initiative between the EPA, large and small trucking companies, rail carriers, logistics companies, commercial manufacturers, retailers, and other federal and state agencies. Its purpose is to improve fuel efficiency and the environmental performance (reduction of both GHG emissions and air pollution) of the goods movement supply chains. SmartWay is comprised of four components (EPA 2014):

1. SmartWay Transport Partnership: A partnership in which freight carriers and shippers commit to benchmark operations, track fuel consumption, and improve performance annually.
2. SmartWay Technology Program: A testing, verification, and designation program to help freight companies identify equipment, technologies, and strategies that save fuel and lower emissions.
3. SmartWay Vehicles: A program that ranks light-duty cars and small trucks and identifies superior environmental performers with the SmartWay logo.
4. SmartWay International Interests: Guidance and resources for countries seeking to develop freight sustainability programs modeled after SmartWay.

SmartWay effectively refers to requirements geared towards reducing fuel consumption. Most large trucking fleets driving newer vehicles are compliant with SmartWay design requirements. Moreover, over time, all HD trucks will have to comply with the CARB GHG Regulation that is designed with the SmartWay Program in mind, to reduce GHG emissions by making them more fuel-efficient. For instance, in 2015, 53 foot or longer dry vans or refrigerated trailers equipped with a combination of SmartWay-verified low-rolling resistance tires and SmartWay-verified aerodynamic devices would obtain a total of 10 percent or more fuel savings over traditional trailers.

Through the SmartWay Technology Program, the EPA has evaluated the fuel saving benefits of various devices through grants, cooperative agreements, emissions and fuel economy testing, demonstration projects and technical literature review. As a result, the EPA has determined the following types of technologies provide fuel saving and/or emission reducing benefits when used properly in their designed applications, and has verified certain products:

- Idle reduction technologies – less idling of the engine when it is not needed would reduce fuel consumption.
- Aerodynamic technologies minimize drag and improve airflow over the entire tractor-trailer vehicle. Aerodynamic technologies include gap fairings that reduce turbulence between the tractor and trailer, side skirts that minimize wind under the trailer, and rear fairings that reduce turbulence and pressure drop at the rear of the trailer.
- Low rolling resistance tires can roll longer without slowing down, thereby reducing the amount of fuel used. Rolling resistance (or rolling friction or rolling drag) is the force resisting the motion when a tire rolls on a surface. The wheel will eventually slow down because of this resistance.
- Retrofit technologies include things such as diesel particulate filters, emissions upgrades (to a higher tier), etc., which would reduce emissions.
- Federal excise tax exemptions.

CALIFORNIA

Legislative Actions to Reduce GHGs

The State of California legislature has enacted a series of bills that constitute the most aggressive program to reduce GHGs of any state in the nation. Some legislation such as the landmark AB 32 was specifically enacted to address GHG emissions. Other legislation such as Title 24 and Title 20 energy standards were originally adopted for other purposes such as energy and water conservation, but also provide GHG reductions. This section describes the major provisions of the legislation.

AB 32. The California State Legislature enacted AB 32, which requires that GHGs emitted in California be reduced to 1990 levels by the year 2020. "GHGs" as defined under AB 32 include carbon dioxide, methane, N_2O, HFCs, PFCs, and sulfur hexafluoride. Since AB 32 was enacted, a seventh chemical, nitrogen trifluoride, has also been added to the list of GHGs. The CARB is the state agency charged with monitoring and regulating sources of GHGs. AB 32 states the following:

> *Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.*

CARB approved the 1990 GHG emissions level of 427 $MMTCO_2e$ on December 6, 2007 (CARB 2007). Therefore, emissions generated in California in 2020 are required to be equal to or less than 427 $MMTCO_2e$. Emissions in 2020 in a "business as usual" (BAU) scenario were estimated to be 596 $MMTCO_2e$, which do not account for reductions from AB 32 regulations (CARB 2008). At that level, a 28.4 percent reduction was required to achieve the 427 $MMTCO_2e$ 1990 inventory. In October 2010, CARB prepared an updated 2020 forecast to account for the recession and

slower forecasted growth. The forecasted inventory without the benefits of adopted regulation is now estimated at 545 $MMTCO_2e$. Therefore, under the updated forecast, a 21.7 percent reduction from BAU is required to achieve 1990 levels (CARB 2010).

Progress in Achieving AB 32 Targets and Remaining Reductions Required

The State has made steady progress in implementing AB 32 and achieving targets included in Executive Order S-3-05. The progress is shown in updated emission inventories prepared by CARB for 2000 through 2012 (CARB 2014a). The State has achieved the Executive Order S-3-05 target for 2010 of reducing GHG emissions to 2000 levels. As shown below, the 2010 emission inventory achieved this target.

- 1990: 427 $MMTCO_2e$ (AB 32 2020 target)
- 2000: 463 $MMTCO_2e$ (an average 8 percent reduction needed to achieve 1990 base)
- 2010: 450 $MMTCO_2e$ (an average 5 percent reduction needed to achieve 1990 base)

CARB has also made substantial progress in achieving its goal of achieving 1990 emissions levels by 2020. As described earlier in this section, CARB revised the 2020 BAU inventory forecast to account for new lower growth projections, which resulted in a new lower reduction from BAU to achieve the 1990 base. The previous reduction from 2020 BAU needed to achieve 1990 levels was 28.4 percent and the latest reduction from 2020 BAU is 21.7 percent.

- 2020: 545 $MMTCO_2e$ BAU (an average 21.7 percent reduction from BAU needed to achieve 1990 base)

CARB Scoping Plan. CARB's Climate Change Scoping Plan ("Scoping Plan") contains measures designed to reduce the State's emissions to 1990 levels by the year 2020 to comply with AB 32 (CARB 2008). The Scoping Plan identifies recommended measures for multiple GHG emission sectors and the associated emission reductions needed to achieve the year 2020 emissions target—each sector has a different emission reduction target. Most of the measures target the transportation and electricity sectors. As stated in the Scoping Plan, the key elements of the strategy for achieving the 2020 GHG target include:

- Expanding and strengthening existing energy efficiency programs as well as building and appliance standards;
- Achieving a statewide renewables energy mix of 33 percent;
- Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system;
- Establishing targets for transportation related GHG emissions for regions throughout California and pursuing policies and incentives to achieve those targets;
- Adopting and implementing measures pursuant to existing State laws and policies, including California's clean car standards, goods movement measures, and the Low Carbon Fuel Standard (LCFS); and
- Creating targeted fees, including a public goods charge on water use, fees on high GWP gases, and a fee to fund the administrative costs of the State's long-term commitment to AB 32 implementation.

The CARB approved the First Update to the Scoping Plan ("Update") on May 22, 2014. The Update identifies the next steps for California's climate change strategy. The Update shows how California continues on its path to meet the near-term 2020 GHG limit, but also sets a path toward long-term, deep GHG emission reductions. The report establishes a broad framework for continued emission reductions beyond 2020, on the path to 80 percent below 1990 levels by 2050. The Update identifies progress made to meet the near-term objectives of AB 32 and defines California's climate change priorities and activities for the next several years. The Update does not set new targets for the State but describes a path that would achieve the long term 2050 goal of Executive Order S-05-03 for emissions to decline to 80 percent below 1990 levels by 2050 (CARB 2014).

Forecasting the amount of emissions that would occur in 2020 if no actions are taken was necessary to assess the amount of reductions California must achieve to return to the 1990 emissions level by 2020 as required by AB 32. The no-action scenario is known as "business-as-usual" or BAU. The CARB originally defined the BAU scenario as emissions in the absence of any GHG emission reduction measures discussed in the Scoping Plan.

As part of CEQA compliance for the Scoping Plan, CARB prepared a Supplemental Functional Equivalent Document (FED) in 2011. The FED included an updated 2020 BAU emissions inventory projection based on current economic forecasts (i.e., as influenced by the economic downturn) and emission reduction measures already in place, replacing its prior 2020 BAU emissions inventory. CARB staff derived the updated emissions estimates by projecting emissions growth, by sector, from the state's average emissions from 2006–2008. The new BAU estimate includes emission reductions for the million-solar-roofs program, the AB 1493 (Pavley I) motor vehicle GHG emission standards, and the LCFS. In addition, CARB factored into the 2020 BAU inventory emissions reductions associated with 33 percent Renewables Portfolio Standard (RPS) for electricity generation. The updated BAU estimate of 507 $MMTCO_2e$ by 2020 requires a reduction of 80 $MMTCO_2e$, or a 16 percent reduction below the estimated BAU levels to return to 1990 levels (i.e., 427 $MMTCO_2e$) by 2020.

In order to provide a BAU reduction that is consistent with the original definition in the Scoping Plan and with threshold definitions used in thresholds adopted by lead agencies for CEQA purposes and many climate action plans, the updated inventory without regulations was also included in the Supplemental FED. The CARB 2020 BAU projection for GHG emissions in California was originally estimated to be 596 $MMTCO_2e$. The updated CARB 2020 BAU projection in the Supplemental FED is 545 $MMTCO_2e$. Considering the updated BAU estimate of 545 $MMTCO_2e$ by 2020, CARB estimates a 21.7 percent reduction below the estimated statewide BAU levels is necessary to return to 1990 emission levels (i.e., 427 $MMTCO_2e$) by 2020, instead of the approximate 28.4 percent BAU reduction previously reported under the original Climate Change Scoping Plan (2008).

2017 Climate Change Scoping Plan Update

In November 2017, CARB released the final 2017 Scoping Plan Update, which identifies the State's post-2020 reduction strategy. The 2017 Scoping Plan Update reflects the 2030 target of a 40 percent reduction below 1990 levels, set by Executive Order B-30-15 and codified by Senate Bill 32 (SB 32). Key programs that the proposed Second Update builds upon include the Cap-and-Trade Regulation, the LCFS, and much cleaner cars, trucks and freight movement, utilizing cleaner, renewable energy, and strategies to reduce methane emissions from agricultural and other wastes.

The 2017 Scoping Plan establishes a new emissions limit of 260 $MMTCO_2e$ for the year 2030, which corresponds to a 40 percent decrease in 1990 levels by 2030.

California's climate strategy will require contributions from all sectors of the economy, including the land base, and will include enhanced focus on zero- and near-zero-emission (ZE/NZE) vehicle technologies; continued investment in renewables, including solar roofs, wind, and other distributed generation; greater use of low carbon fuels; integrated land conservation and development strategies; coordinated efforts to reduce emissions of short-lived climate pollutants (methane, black carbon, and fluorinated gases); and an increased focus on integrated land use planning to support livable, transit-connected communities and conservation of agricultural and other lands. Requirements for direct GHG reductions at refineries will further support air quality co-benefits in neighborhoods, including in disadvantaged communities historically located adjacent to these large stationary sources, as well as efforts with California's local air pollution control and air quality management districts (air districts) to tighten emission limits on a broad spectrum of industrial sources. Major elements of the 2017 Scoping Plan framework include:

- Implementing and/or increasing the standards of the Mobile Source Strategy, which include increasing ZEV buses and trucks.
- LCFS, with an increased stringency (18 percent by 2030).
- Implementing SB 350, which expands the RPS to 50 percent RPS and doubles energy efficiency savings by 2030.
- California Sustainable Freight Action Plan, which improves freight system efficiency, utilizes near-zero emissions technology, and deployment of zero-emission vehicles (ZEV) trucks.
- Implementing the proposed Short-Lived Climate Pollutant Strategy (SLPS), which focuses on reducing methane and hydroflurocarbon emissions by 40 percent and anthropogenic black carbon emissions by 50 percent by year 2030.
- Continued implementation of SB 375.
- Post-2020 Cap-and-Trade Program that includes declining caps.
- 20 percent reduction in GHG emissions from refineries by 2030.
- Development of a Natural and Working Lands Action Plan to secure California's land base as a net carbon sink.

Note, however, that the 2017 Scoping Plan acknowledges that:

> *[a]chieving net zero increases in GHG emissions, resulting in no contribution to GHG impacts, may not be feasible or appropriate for every project, however, and the inability of a project to mitigate its GHG emissions to net zero does not imply the project results in a substantial contribution to the cumulatively significant environmental impact of climate change under CEQA.*

In addition to the statewide strategies listed above, the 2017 Scoping Plan also identifies local governments as essential partners in achieving the State's long-term GHG reduction goals and identifies local actions to reduce GHG emissions. As part of the recommended actions, CARB recommends that local governments achieve a community-wide goal to achieve emissions of no more than 6 metric tons of CO_2e ($MTCO_2e$) or less per capita by 2030 and 2 $MTCO_2e$ or less per capita by 2050. For CEQA projects, CARB states that lead agencies may develop evidenced-based bright-line numeric thresholds—consistent with the Scoping Plan and the State's long-term GHG goals—and projects with emissions over that amount may be required to incorporate on-site design features and mitigation measures that avoid or minimize project emissions to the degree feasible; or, a performance-based metric using a climate action plan or other plan to reduce GHG emissions is appropriate.

According to research conducted by the Lawrence Berkeley National Laboratory (LBNL) and supported by CARB, California, under its existing and proposed GHG reduction policies, is on track to meet the 2020 reduction targets under AB 32 and could achieve the 2030 goals under SB 32. The research utilized a new, validated model known as the California LBNL GHG Analysis of Policies Spreadsheet (CALGAPS), which simulates GHG and criteria pollutant emissions in California from 2010 to 2050 in accordance to existing and future GHG-reducing policies. The CALGAPS model showed that GHG emissions through 2020 could range from 317 to 415 $MTCO_2e$ per year, "indicating that existing state policies will likely allow California to meet its target [of 2020 levels under AB 32]." CALGAPS also showed that by 2030, emissions could range from 211 to 428 $MTCO_2e$ per year, indicating that "even if all modeled policies are not implemented, reductions could be sufficient to reduce emissions 40 percent below the 1990 level [of SB 32]." CALGAPS analyzed emissions through 2050 even though it did not generally account for policies that might be put in place after 2030. Although the research indicated that the emissions would not meet the State's 80 percent reduction goal by 2050, various combinations of policies could allow California's cumulative emissions to remain very low through 2050 (33) (34).

Senate Bill 32. On September 8, 2016, Governor Jerry Brown signed the Senate Bill (SB) 32 and its companion bill, Assembly Bill (AB) 197. SB 32 requires the state to reduce statewide GHG emissions to 40 percent below 1990 levels by 2030, a reduction target that was first introduced in Executive Order B-30-15. The new legislation builds upon the AB 32 goal of 1990 levels by 2020 and provides an intermediate goal to achieving S-3-05, which sets a statewide GHG reduction target of 80 percent below 1990 levels by 2050. AB 197 creates a legislative committee to oversee regulators to ensure that CARB not only responds to the Governor, but also the Legislature (11).

Cap-and-Trade Program. The Scoping Plan identifies a Cap-and-Trade Program as one of the key strategies for California to reduce GHG emissions. According to CARB, a cap-and-trade program will help put California on the path to meet its goal of reducing GHG emissions to 1990 levels by the year 2020 and ultimately achieving an 80 percent reduction from 1990 levels by 2050. Under

cap-and-trade, an overall limit on GHG emissions from capped sectors is established, and facilities subject to the cap will be able to trade permits to emit GHGs within the overall limit.

CARB adopted a California Cap-and-Trade Program pursuant to its authority under AB 32. See Title 17 of the California Code of Regulations (CCR) §§ 95800 to 96023). The Cap-and-Trade Program is designed to reduce GHG emissions from major sources (deemed "covered entities") by setting a firm cap on statewide GHG emissions and employing market mechanisms to achieve AB 32's emission-reduction mandate of returning to 1990 levels of emissions by 2020. The statewide cap for GHG emissions from the capped sectors (e.g., electricity generation, petroleum refining, and cement production) commenced in 2013 and will decline over time, achieving GHG emission reductions throughout the program's duration.

Covered entities that emit more than 25.000 $MTCO_2e$ per year must comply with the Cap-and-Trade Program. Triggering of the 25.000 $MTCO_2e$ per year "inclusion threshold" is measured against a subset of emissions reported and verified under the California Regulation for the Mandatory Reporting of GHG Emissions (Mandatory Reporting Rule or "MRR").

Under the Cap-and-Trade Program, CARB issues allowances equal to the total amount of allowable emissions over a given compliance period and distributes these to regulated entities. Covered entities are allocated free allowances in whole or part (if eligible), and may buy allowances at auction, purchase allowances from others, or purchase offset credits. Each covered entity with a compliance obligation is required to surrender "compliance instruments" (30) for each $MTCO_2e$ of GHG they emit. There also are requirements to surrender compliance instruments covering 30 percent of the prior year's compliance obligation by November of each year. For example, in November 2014, a covered entity was required to submit compliance instruments to cover 30 percent of its 2013 GHG emissions.

The Cap-and-Trade Program provides a firm cap, ensuring that the 2020 statewide emission limit will not be exceeded. An inherent feature of the Cap-and-Trade program is that it does not guarantee GHG emissions reductions in any discrete location or by any particular source. Rather, GHG emissions reductions are only guaranteed on an accumulative basis. As summarized by CARB in the First Update:

> *The Cap-and-Trade Regulation gives companies the flexibility to trade allowances with others or take steps to cost-effectively reduce emissions at their own facilities. Companies that emit more have to turn in more allowances or other compliance instruments. Companies that can cut their GHG emissions have to turn in fewer allowances. But as the cap declines, aggregate emissions must be reduced. In other words, a covered entity theoretically could increase its GHG emissions every year and still comply with the Cap-and-Trade Program if there is a reduction in GHG emissions from other covered entities. Such a focus on aggregate GHG emissions is considered appropriate because climate change is a global phenomenon, and the effects of GHG emissions are considered cumulative (CARB 2014).*

The Cap-and-Trade Program works with other direct regulatory measures and provides an economic incentive to reduce emissions. If California's direct regulatory measures reduce GHG

emissions more than expected, then the Cap-and-Trade Program will be responsible for relatively fewer emissions reductions. If California's direct regulatory measures reduce GHG emissions less than expected, then the Cap-and-Trade Program will be responsible for relatively more emissions reductions. Thus, the Cap-and-Trade Program assures that California will meet its 2020 GHG emissions reduction mandate:

> *The Cap-and-Trade Program establishes an overall limit on GHG emissions from most of the California economy—the "capped sectors." Within the capped sectors, some of the reductions are being accomplished through direct regulations, such as improved building and appliance efficiency standards, the [Low Carbon Fuel Standard] LCFS, and the 33 percent [Renewables Portfolio Standard] RPS. Whatever additional reductions are needed to bring emissions within the cap is accomplished through price incentives posed by emissions allowance prices. Together, direct regulation and price incentives assure that emissions are brought down cost-effectively to the level of the overall cap. The Cap-and-Trade Regulation provides assurance that California's 2020 limit will be met because the regulation sets a firm limit on 85 percent of California's GHG emissions. In sum, the Cap-and-Trade Program will achieve aggregate, rather than site specific or project-level, GHG emissions reductions. Also, due to the regulatory architecture adopted by CARB in AB 32, the reductions attributed to the Cap-and-Trade Program can change over time depending on the State's emissions forecasts and the effectiveness of direct regulatory measures (CARB 2014).*

As of January 1, 2015, the Cap-and-Trade Program covered approximately 85 percent of California's GHG emissions. The Cap-and-Trade Program covers the GHG emissions associated with electricity consumed in California, whether generated in-state or imported. Accordingly, GHG emissions associated with CEQA projects' electricity usage are covered by the Cap-and-Trade Program.

The Cap-and-Trade Program also covers fuel suppliers (natural gas and propane fuel providers and transportation fuel providers) to address emissions from such fuels and from combustion of other fossil fuels not directly covered at large sources in the Program's first compliance period. While the Cap-and-Trade Program technically covered fuel suppliers as early as 2012, they did not have a compliance obligation (i.e., they were not fully regulated) until 2015. The Cap-and-Trade Program covers the GHG emissions associated with the combustion of transportation fuels in California, whether refined in-state or imported. The point of regulation for transportation fuels is when they are "supplied" (i.e., delivered into commerce). Accordingly, as with stationary source GHG emissions and GHG emissions attributable to electricity use, virtually all, if not all, of GHG emissions from CEQA projects associated with VMT are covered by the Cap-and-Trade Program (CARB 2015) (35).

In addition, the Scoping Plan differentiates between "capped" and "uncapped" strategies. "Capped" strategies are subject to the proposed cap-and-trade program. The Scoping Plan states that the inclusion of these emissions within the Program will help ensure that the year 2020 emission targets are met despite some degree of uncertainty in the emission reduction estimates for any individual measure. Implementation of the capped strategies is calculated to achieve a

sufficient amount of reductions by 2020 to achieve the emission target contained in AB 32. "Uncapped" strategies that will not be subject to the cap-and-trade emissions caps and requirements are provided as a margin of safety by accounting for additional GHG emission reductions.[3]

SB 375 – the Sustainable Communities and Climate Protection Act of 2008. Passing the Senate on August 30, 2008, Senate Bill (SB) 375 was signed by the Governor on September 30, 2008. According to SB 375, the transportation sector is the largest contributor of GHG emissions, which emits over 40 percent of the total GHG emissions in California. SB 375 states, "Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32." SB 375 does the following: it (1) requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies.

Concerning CEQA, SB 375, as codified in Public Resources Code Section 21159.28, states that CEQA findings for certain projects are not required to reference, describe, or discuss (1) growth inducing impacts, or (2) any project-specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional transportation network, if the project:

1. Is in an area with an approved sustainable communities strategy or an alternative planning strategy that the CARB accepts as achieving the GHG emission reduction targets.
2. Is consistent with that strategy (in designation, density, building intensity, and applicable policies).
3. Incorporates the mitigation measures required by an applicable prior environmental document.

AB 1493 Pavley Regulations and Fuel Efficiency Standards. California AB 1493, enacted on July 22, 2002, required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. Implementation of the regulation was delayed by lawsuits filed by automakers and by the EPA's denial of an implementation waiver. The EPA subsequently granted the requested waiver in 2009, which was upheld by the U.S. District Court for the District of Columbia in 2011.

The standards phase in during the 2009 through 2016 model years. When fully phased in, the near-term (2009–2012) standards will result in about a 22 percent reduction compared with the 2002 fleet, and the mid-term (2013–2016) standards will result in about a 30 percent reduction. Several technologies stand out as providing significant reductions in emissions at favorable costs. These include discrete variable valve lift or camless valve actuation to optimize valve operation rather than relying on fixed valve timing and lift as has historically been done; turbocharging to

[3] On March 17, 2011, the San Francisco Superior Court issued a final decision in *Association of Irritated Residents v. California Air Resources Board* (Case No. CPF-09-509562). While the Court upheld the validity of the CARB Scoping Plan for the implementation of AB 32, the Court enjoined CARB from further rulemaking under AB 32 until CARB amends its CEQA environmental review of the Scoping Plan to address the flaws identified by the Court. On May 23, 2011, CARB filed an appeal. On June 24, 2011, the Court of Appeal granted CARB's petition staying the trail court's order pending consideration of the appeal. In the interest of informed decision-making, on June 13, 2011, CARB released the expanded alternatives analysis in a draft Supplement to the AB 32 Scoping Plan Functional Equivalent Document. The CARB Board approved the Scoping Plan and the CEQA document on August 24, 2011.

boost power and allow for engine downsizing; improved multi-speed transmissions; and improved air conditioning systems that operate optimally, leak less, and/or use an alternative refrigerant.

The second phase of the implementation for the Pavley bill was incorporated into Amendments to the Low-Emission Vehicle Program referred to as LEV III or the Advanced Clean Cars program. The Advanced Clean Car program combines the control of smog-causing pollutants and GHG emissions into a single coordinated package of requirements for model years 2017 through 2025. The regulation will reduce GHGs from new cars by 34 percent from 2016 levels by 2025. The new rules will clean up gasoline and diesel-powered cars, and deliver increasing numbers of zero-emission technologies, such as full battery electric cars, newly emerging plug-in hybrid electric vehicles and hydrogen fuel cell cars. The package will also ensure adequate fueling infrastructure is available for the increasing numbers of hydrogen fuel cell vehicles planned for deployment in California.

SB 350— Clean Energy and Pollution Reduction Act of 2015. In October 2015, the legislature approved, and the Governor signed SB 350, which reaffirms California's commitment to reducing its GHG emissions and addressing climate change. Key provisions include an increase in the RPS, higher energy efficiency requirements for buildings, initial strategies towards a regional electricity grid, and improved infrastructure for electric vehicle charging stations. Provisions for a 50 percent reduction in the use of petroleum statewide were removed from the Bill because of opposition and concern that it would prevent the Bill's passage. Specifically, SB 350 requires the following to reduce statewide GHG emissions:

- Increase the amount of electricity procured from renewable energy sources from 33 percent to 50 percent by 2030, with interim targets of 40 percent by 2024, and 25 percent by 2027.
- Double the energy efficiency in existing buildings by 2030. This target will be achieved through the California Public Utility Commission (CPUC), the California Energy Commission (CEC), and local publicly owned utilities.
- Reorganize the Independent System Operator to develop more regional electrify transmission markets and to improve accessibility in these markets, which will facilitate the growth of renewable energy markets in the western United States (California Leginfo 2015).

EXECUTIVE ORDERS RELATED TO GHG EMISSIONS

California's Executive Branch has taken several actions to reduce GHGs through the use of Executive Orders. Although not regulatory, they set the tone for the state and guide the actions of state agencies.

Executive Order B-55-18 and SB 100. Executive Order B-55-18 and SB 100. SB 100 and Executive Order B-55-18 were signed by Governor Brown on September 10, 2018. Under the existing RPS, 25 percent of retail sales are required to be from renewable sources by December 31, 2016, 33 percent by December 31, 2020, 40 percent by December 31, 2024, 45 percent by December 31, 2027, and 50 percent by December 31, 2030. SB 100 raises California's RPS requirement to 50 percent renewable resources target by December 31, 2026, and to achieve a 60 percent target by December 31, 2030. SB 100 also requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy

resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 44 percent of retail sales by December 31, 2024, 52 percent by December 31, 2027, and 60 percent by December 31, 2030. In addition to targets under AB 32 and SB 32, Executive Order B-55-18 establishes a carbon neutrality goal for the state of California by 2045; and sets a goal to maintain net negative emissions thereafter. The Executive Order directs the California Natural Resources Agency (CNRA), California Environmental Protection Agency (CalEPA), the Department of Food and Agriculture (CDFA), and CARB to include sequestration targets in the Natural and Working Lands Climate Change Implementation Plan consistent with the carbon neutrality goal.

Executive Order S-3-05. Former California Governor Arnold Schwarzenegger announced on June 1, 2005, through Executive Order S-3-05, the following reduction targets for GHG emissions:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

The 2050 reduction goal represents what some scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal was established to be a mid-term target. Because this is an executive order, the goals are not legally enforceable for local governments or the private sector.

Executive Order S-01-07 – Low Carbon Fuel Standard. The Governor signed Executive Order S-01-07 on January 18, 2007. The order mandates that a statewide goal shall be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. In particular, the Executive Order established a LCFS and directed the Secretary for Environmental Protection to coordinate the actions of the CEC, the CARB, the University of California, and other agencies to develop and propose protocols for measuring the "life-cycle carbon intensity" of transportation fuels. This analysis supporting development of the protocols was included in the State Implementation Plan for alternative fuels (State Alternative Fuels Plan adopted by CEC on December 24, 2007) and was submitted to CARB for consideration as an "early action" item under AB 32. The CARB adopted the LCFS on April 23, 2009.

The LCFS was challenged in the U.S. District Court in Fresno in 2011. The court's ruling issued on December 29, 2011, included a preliminary injunction against CARB's implementation of the rule. The Ninth Circuit Court of Appeals stayed the injunction on April 23, 2012, pending final ruling on appeal, allowing CARB to continue to implement and enforce the regulation. The Ninth Circuit Court's decision, filed September 18, 2013, vacated the preliminary injunction. In essence, the court held that LCFS adopted by CARB were not in conflict with federal law. On August 8, 2013, the Fifth District Court of Appeal (California) ruled CARB failed to comply with CEQA and the Administrative Procedure Act (APA) when adopting regulations for LCFS. In a partially published opinion, the Court of Appeal reversed the trial court's judgment and directed issuance of a writ of mandate setting aside Resolution 09-31 and two executive orders of CARB approving LCFS regulations promulgated to reduce GHG emissions. However, the court tailored its remedy to protect the public interest by allowing the LCFS regulations to remain operative while CARB complies with the procedural requirements it failed to satisfy.

To address the Court ruling, CARB was required to bring a new LCFS regulation to the Board for consideration in February 2015. The proposed LCFS regulation was required to contain revisions to the 2010 LCFS as well as new provisions designed to foster investments in the production of the low-carbon intensity fuels, offer additional flexibility to regulated parties, update critical technical information, simplify and streamline program operations, and enhance enforcement. On November 16, 2015 the Office of Administrative Law (OAL) approved the Final Rulemaking Package. The new LCFS regulation became effective on January 1, 2016.

Executive Order S-13-08. Executive Order S-13-08 states that "climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California's economy, to the health and welfare of its population and to its natural resources." Pursuant to the requirements in the Order, the 2009 California Climate Adaptation Strategy (CNRA 2009) was adopted, which is the ". . . first statewide, multi-sector, region-specific, and information-based climate change adaptation strategy in the United States." Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order B-30-15. On April 29, 2015, Governor Edmund G. Brown Jr. issued an executive order to establish a California GHG reduction target of 40 percent below 1990 levels by 2030. The Governor's executive order aligns California's GHG reduction targets with those of leading international governments ahead of the United Nations Climate Change Conference in Paris late 2015. The Order sets a new interim statewide GHG emission reduction target to reduce GHG emissions to 40 percent below 1990 levels by 2030 in order to ensure California meets its target of reducing GHG emissions to 80 percent below 1990 levels by 2050 and directs CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of $MMTCO_2e$. The Order also requires the state's climate adaptation plan to be updated every three years, and for the State to continue its climate change research program, among other provisions. As with Executive Order S-3-05, this Order is not legally enforceable for local governments and the private sector. Legislation that would update AB 32 to make post 2020 targets and requirements a mandate is in process in the State Legislature.

CALIFORNIA REGULATIONS AND BUILDING CODES

California has a long history of adopting regulations to improve energy efficiency in new and remodeled buildings. These regulations have kept California's energy consumption relatively flat even with rapid population growth.

Title 20 Appliance Efficiency Standards. CCR, Title 20: Division 2, Chapter 4, Article 4, Sections 1601-1608: Appliance Efficiency Regulations regulates the sale of appliances in California. The Appliance Efficiency Regulations include standards for both federally regulated appliances and non-federally regulated appliances. 23 categories of appliances are included in the scope of these regulations. The standards within these regulations apply to appliances that are sold or offered for sale in California, except those sold wholesale in California for final retail sale outside the state and those designed and sold exclusively for use in recreational vehicles or other mobile equipment (CEC 2012).

Title 24 Energy Efficiency Standards and California Green Building Standards. CCR Title 24 Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings, was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. The 2019 version of Title 24 was adopted by the CEC and will become effective on January 1, 2020. As such, the analysis herein assumes compliance with the 2019 Title 24 Standards.

The CEC indicates that the 2019 Title 24 standards will require solar photovoltaic systems for new homes, establish requirements for newly constructed healthcare facilities, encourage demand responsive technologies for residential buildings, update indoor and outdoor lighting for nonresidential buildings. The CEC anticipates that single-family homes built with the 2019 standards will use approximately 7 percent less energy compared to the residential homes built under the 2016 standards. Additionally, after implementation of solar photovoltaic systems, homes built under the 2019 standards will about 53 percent less energy than homes built under the 2016 standards. Nonresidential buildings will use approximately 30 percent less energy due to lighting upgrades (36).

CCR, Title 24, Part 11: California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect on January 1, 2011, and is administered by the California Building Standards Commission (BSC). CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2019 California Green Building Code Standards that will be effective January 1, 2020. Local jurisdictions are permitted to adopt more stringent requirements, as state law provides methods for local enhancements. CALGreen recognizes that many jurisdictions have developed existing construction and demolition ordinances and defers to them as the ruling guidance provided, they establish a minimum 65 percent diversion requirement. The code also provides exemptions for areas not served by construction and demolition recycling infrastructure. The State Building Code provides the minimum standard that buildings must meet in order to be certified for occupancy, which is generally enforced by the local building official. 2019 CALGreen standards are applicable to the Project and require (37):

- Short-term bicycle parking. If the new project or an additional alteration is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors' entrance, readily visible to passers-by, for 5 percent of new visitor motorized vehicle parking spaces being added, with a minimum of one two-bike capacity rack (5.106.4.1.1).
- Long-term bicycle parking. For new buildings with tenant spaces that have 10 or more tenant-occupants, provide secure bicycle parking for 5 percent of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility (5.106.4.1.2).
- Designated parking. In new projects or additions to alterations that add 10 or more vehicular parking spaces, provide designated parking for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles as shown in Table 5.106.5.2 (5.106.5.2).

- Construction waste management. Recycle and/or salvage for reuse a minimum of 65 percent of the nonhazardous construction and demolition waste in accordance with Section 5.408.1.1. 5.405.1.2, or 5.408.1.3; or meet a local construction and demolition waste management ordinance, whichever is more stringent (5.408.1).
- Excavated soil and land clearing debris. 100 percent of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reused or recycled. For a phase project, such material may be stockpiled on site until the storage site is developed (5.408.3).
- Recycling by Occupants. Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of non-hazardous materials for recycling, including (at a minimum) paper, corrugated cardboard, glass, plastics, organic waste, and metals or meet a lawfully enacted local recycling ordinance, if more restrictive (5.410.1).
- Water conserving plumbing fixtures and fittings. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with the following:
    - Water Closets. The effective flush volume of all water closets shall not exceed 1.28 gallons per flush (5.303.3.1)
    - Urinals. The effective flush volume of wall-mounted urinals shall not exceed 0.125 gallons per flush (5.303.3.2.1). The effective flush volume of floor-mounted or other urinals shall not exceed 0.5 gallons per flush (5.303.3.2.2).
    - Showerheads. Single showerheads shall have a minimum flow rate of not more than 1.8 gallons per minute and 80 psi (5.303.3.3.1). When a shower is served by more than one showerhead, the combine flow rate of all showerheads and/or other shower outlets controlled by a single valve shall not exceed 1.8 gallons per minute at 80 psi (5.303.3.3.2).
    - Faucets and fountains. Nonresidential lavatory faucets shall have a maximum flow rate of note more than 0.5 gallons per minute at 60 psi (5.303.3.4.1). Kitchen faucets shall have a maximum flow rate of not more than 1.8 gallons per minute of 60 psi (5.303.3.4.2). Wash fountains shall have a maximum flow rate of not more than 1.8 gallons per minute (5.303.3.4.3). Metering faucets shall not deliver more than 0.20 gallons per cycle (5.303.3.4.4). Metering faucets for wash fountains shall have a maximum flow rate not more than 0.20 gallons per cycle (5.303.3.4.5).
- Outdoor portable water use in landscaped areas. Nonresidential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient (MWELO), whichever is more stringent (5.304.1).
- Water meters. Separate submeters or metering devices shall be installed for new buildings or additions in excess of 50,000 square feet or for excess consumption where any tenant within a new building or within an addition that is project to consume more than 1,000 gal/day (5.303.1.1 and 5.303.1.2).
- Outdoor water use in rehabilitated landscape projects equal or greater than 2,500 square feet. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 square feet requiring a building or landscape permit (5.304.3).

Commissioning. For new buildings 10,000 square feet and over, building commissioning shall b included in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (5.410.2).

Model Water Efficient Landscape Ordinance. The Model Water Efficient Landscape Ordinance ("Ordinance") was required by AB 1881, the Water Conservation Act. The bill required local agencies to adopt a local landscape ordinance at least as effective in conserving water as the Model Ordinance by January 1, 2010. Reductions in water use of 20 percent consistent with (SBX-7-7) 2020 mandate are expected upon compliance with the ordinance. Governor Brown's Drought Executive Order of April 1, 2015 (EO B-29-15) directed Department of Water Resources (DWR) to update the Ordinance through expedited regulation. The California Water Commission approved the revised Ordinance on July 15, 2015 effective December 15, 2015. New development projects that include landscape areas of 500 sf or more are subject to the Ordinance. The update requires:

- More efficient irrigation systems;
- Incentives for graywater usage;
- Improvements in on-site stormwater capture;
- Limiting the portion of landscapes that can be planted with high water use plants; and
- Reporting requirements for local agencies.

CARB Refrigerant Management Program. CARB adopted a regulation in 2009 to reduce refrigerant GHG emissions from stationary sources through refrigerant leak detection and monitoring, leak repair, system retirement and retrofitting, reporting and recordkeeping, and proper refrigerant cylinder use, sale, and disposal. The regulation is set forth in sections 95380 to 95398 of Title 17, CCR. The rules implementing the regulation establish a limit on statewide GHG emissions from stationary facilities with refrigeration systems with more than 50 pounds of a high GWP refrigerant. The refrigerant management program is designed to (1) reduce emissions of high-GWP GHG refrigerants from leaky stationary, non-residential refrigeration equipment; (2) reduce emissions from the installation and servicing of refrigeration and air-conditioning appliances using high-GWP refrigerants; and (3) verify GHG emission reductions.

Tractor-Trailer GHG Regulation. The tractors and trailers subject to this regulation must either use EPA SmartWay certified tractors and trailers or retrofit their existing fleet with SmartWay verified technologies. The regulation applies primarily to owners of 53-foot or longer box-type trailers, including both dry-van and refrigerated-van trailers, and owners of the HD tractors that pull them on California highways. These owners are responsible for replacing or retrofitting their affected vehicles with compliant aerodynamic technologies and low rolling resistance tires. Sleeper cab tractors model year 2011 and later must be SmartWay certified. All other tractors must use SmartWay verified low rolling resistance tires. There are also requirements for trailers to have low rolling resistance tires and aerodynamic devices.

Phase I and 2 Heavy-Duty Vehicle GHG Standards. CARB has adopted a new regulation for GHG emissions from HD trucks and engines sold in California. It establishes GHG emission limits on truck and engine manufacturers and harmonizes with the EPA rule for new trucks and engines nationally. Existing HD vehicle regulations in California include engine criteria emission standards, tractor-trailer GHG requirements to implement SmartWay strategies (i.e., the Heavy-Duty Tractor-Trailer Greenhouse Gas Regulation), and in-use fleet retrofit requirements such as the Truck and Bus Regulation. In September 2011, the U.S. EPA adopted their new rule for HD

trucks and engines. The EPA rule has compliance requirements for new compression and spark ignition engines, as well as trucks from Class 2b through Class 8. Compliance requirements begin with model year (MY) 2014 with stringency levels increasing through MY 2018. The rule organizes truck compliance into three groupings, which include a) HD pickups and vans; b) vocational vehicles; and c) combination tractors. The EPA rule does not regulate trailers.

CARB staff has worked jointly with the EPA and the NHTSA on the next phase of federal GHG emission standards for MD and HD vehicles, called federal Phase 2. The federal Phase 2 standards were built on the improvements in engine and vehicle efficiency required by the Phase 1 emission standards and represent a significant opportunity to achieve further GHG reductions for 2018 and later model year HD vehicles, including trailers. But as discussed above, the EPA and NHTSA have proposed to roll back GHG and fuel economy standards for cars and light-duty trucks, which suggests a similar rollback of Phase 2 standards for MD and HD vehicles may be pursued.

SB 97 and the CEQA Guidelines Update. Passed in August 2007, SB 97 added Section 21083.05 to the Public Resources Code. The code states "(a) On or before July 1, 2009, the Office of Planning and Research shall prepare, develop, and transmit to the Resources Agency guidelines for the mitigation of GHG emissions or the effects of GHG emissions as required by this division, including, but not limited to, effects associated with transportation or energy consumption. (b) On or before January 1, 2010, the Resources Agency shall certify and adopt guidelines prepared and developed by the Office of Planning and Research pursuant to subdivision (a)." Section 21097 was also added to the Public Resources Code. It provided CEQA protection until January 1, 2010 for transportation projects funded by the Highway Safety, Traffic Reduction, Air Quality, and Port Security Bond Act of 2006 or projects funded by the Disaster Preparedness and Flood Prevention Bond Act of 2006, in stating that the failure to analyze adequately the effects of GHGs would not violate CEQA.

On December 28, 2018, the Natural Resources Agency announced the OAL approved the amendments to the CEQA Guidelines for implementing the CEQA. The CEQA Amendments provide guidance to public agencies regarding the analysis and mitigation of the effects of GHG emissions in CEQA documents. The CEQA Amendments fit within the existing CEQA framework by amending existing CEQA Guidelines to reference climate change.

Section 1506.4 was amended to state that in determining the significance of a project's GHG emissions, the lead agency should focus its analysis on the reasonably foreseeable incremental contribution of the project's emissions to the effects of climate change. A project's incremental contribution may be cumulatively considerable even if it appears relatively small compared to statewide, national or global emissions. The agency's analysis should consider a timeframe that is appropriate for the project. The agency's analysis also must reasonably reflect evolving scientific knowledge and state regulatory schemes. Additionally, a lead agency may use a model or methodology to estimate GHG emissions resulting from a project. The lead agency has discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change. The lead agency must support its selection of a model or methodology with substantial evidence. The lead agency should explain the limitations of the particular model or methodology selected for use (38).

REGIONAL

The project is within the South Coast Air Basin (SCAB), which is under the jurisdiction of the SCAQMD.

South Coast Air Quality Management District

SCAQMD is the agency responsible for air quality planning and regulation in the SCAB. The SCAQMD addresses the impacts to climate change of projects subject to SCAQMD permit as a lead agency if they are the only agency having discretionary approval for the project and acts as a responsible agency when a land use agency must also approve discretionary permits for the project. The SCAQMD acts as an expert commenting agency for impacts to air quality. This expertise carries over to GHG emissions, so the agency helps local land use agencies through the development of models and emission thresholds that can be used to address GHG emissions.

In 2008, SCAQMD formed a Working Group to identify GHG emissions thresholds for land use projects that could be used by local lead agencies in the SCAB. The Working Group developed several different options that are contained in the SCAQMD Draft Guidance Document – Interim CEQA GHG Significance Threshold, that could be applied by lead agencies. The working group has not provided additional guidance since release of the interim guidance in 2008. The SCAQMD Board has not approved the thresholds; however, the Guidance Document provides substantial evidence supporting the approaches to significance of GHG emissions that can be considered by the lead agency in adopting its own threshold. The current interim thresholds consist of the following tiered approach:

- Tier 1 consists of evaluating whether or not the project qualifies for any applicable exemption under CEQA.
- Tier 2 consists of determining whether the project is consistent with a GHG reduction plan. If a project is consistent with a qualifying local GHG reduction plan, it does not have significant GHG emissions.
- Tier 3 consists of screening values, which the lead agency can choose, but must be consistent with all projects within its jurisdiction. A project's construction emissions are averaged over 30 years and are added to the project's operational emissions. If a project's emissions are below one of the following screening thresholds, then the project is less than significant:
    - Residential and Commercial land use: 3,000 $MTCO_2e$ per year
    - Industrial land use: 10,000 $MTCO_2e$ per year
    - Based on land use type: residential: 3,500 $MTCO_2e$ per year; commercial: 1,400 $MTCO_2e$ per year; or mixed use: 3,000 $MTCO_2e$ per year
- Tier 4 has the following options:
    - Option 1: Reduce BAU emissions by a certain percentage; this percentage is currently undefined.
    - Option 2: Early implementation of applicable AB 32 Scoping Plan measures
    - Option 3, 2020 target for service populations (SP), which includes residents and employees: 4.8 $MTCO_2e$/SP/year for projects and 6.6 $MTCO_2e$/SP/year for plans;
    - Option 3, 2035 target: 3.0 $MTCO_2e$/SP/year for projects and 4.1 $MTCO_2e$/SP/year for plans

- Tier 5 involves mitigation offsets to achieve target significance threshold.

The SCAQMD's interim thresholds used the Executive Order S-3-05-year 2050 goal as the basis for the Tier 3 screening level. Achieving the Executive Order's objective would contribute to worldwide efforts to cap carbon dioxide concentrations at 450 ppm, thus stabilizing global climate.

SCAQMD only has authority over GHG emissions from development projects that include air quality permits. At this time, it is unknown if the project would include stationary sources of emissions subject to SCAQMD permits. Notwithstanding, if the Project requires a stationary permit, it would be subject to the applicable SCAQMD regulations.

SCAQMD Regulation XXVII, adopted in 2009 includes the following rules:

- Rule 2700 defines terms and post global warming potentials.
- Rule 2701, SoCal Climate Solutions Exchange, establishes a voluntary program to encourage, quantify, and certify voluntary, high quality certified GHG emission reductions in the SCAQMD.
- Rule 2702, GHG Reduction Program created a program to produce GHG emission reductions within the SCAQMD. The SCAQMD will fund projects through contracts in response to requests for proposals or purchase reductions from other parties.

2.8 THRESHOLDS OF SIGNIFICANCE

The City of Santa Fe Springs has not adopted its own numeric threshold of significance for determining impacts with respect to GHG emissions. The SCAQMD's adopted numerical threshold of 10,000 $MTCO_2e$ per year for industrial stationary source emissions is typically selected as the significance criterion. However, the City has determined that the SCAQMD's draft threshold of 3,000 $MTCO_2e$ per year is more conservative and appropriate for industrial and warehouse land use development projects. The 3,000 $MTCO_2e$ threshold is based on the SCAQMD staff's proposed GHG screening threshold for stationary source emissions for non-industrial projects, as described in the SCAQMD's Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans ("SCAQMD Interim GHG Threshold"). The SCAQMD Interim GHG Threshold identifies a screening threshold to determine whether additional analysis is required (1). This threshold is also consistent with the SCAQMD's draft interim threshold Tier 3.

3 PROJECT GREENHOUSE GAS IMPACT

3.1 INTRODUCTION

The Project has been evaluated to determine if it will result in a significant GHG impact. The significance of these potential impacts is described in the following section.

3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related GHG impacts are taken from the Initial Study Checklist in Appendix G of the State CEQA Guidelines (14 California Code of Regulations §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to GHG if it would (1):

- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?
- Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?

3.3 CALIFORNIA EMISSIONS ESTIMATOR MODEL™ EMPLOYED TO ANALYZE GHG EMISSIONS

On October 17, 2017, the SCAQMD, in conjunction with the California Air Pollution Control Officers Association (CAPCOA) and other California air districts, released the latest version of the California Emissions Estimator Model™ (CalEEMod) v2016.3.2. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (39). Accordingly, the latest version of CalEEMod™ has been used for this Project to determine GHG emissions. Output from the model runs for construction and operational activity are provided in Appendices 3.1 through 3.4. CalEEMod includes GHG emissions from the following source categories: construction, area, energy, mobile, waste, water.

3.3.1 LAND USES MODELED IN CALEEMOD

The Project is located on 8.34 acres. As previously stated, the Project proposes to construct 163,518 sf of general light industrial use within 3 buildings.

CalEEMod does not provide an extensive selection of land use subtype categories, land uses that most closely fit the Project will be utilized. For purposes of analysis, the following land uses were modeled (40):

- 163.518 thousand square feet (TSF)/3.75 acres of General Light Industry
- 39.093 TSF/0.90 acres Other Non-Asphalt Surfaces[4]

[4] The User's Guide defines Other Non-Asphalt Surfaces as non-asphalt areas. As indicated on the site plan, the landscaped area for Building 1 is 22,420 sf and 16,673 sf for Buildings 2 and 3. For purposes of analysis, this category is used to model the 39,093 sf/0.90 acre of Landscaped areas.

- 136.533 TSF/3.13 acres Other Asphalt Surfaces[5]
- 271 Space Parking Lot[6] on 0.53 acres

3.3.2 EMISSION FACTORS MODEL

Vehicle emissions were estimated using information generated within the 2017 version of the Emission Factor model (EMFAC) developed by the CARB. EMFAC2017 is a mathematical model that was developed to calculate emission rates, fuel consumption, and VMT from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by the CARB to project changes in future emissions from on-road mobile sources (41). This GHGA utilizes summer, winter, and annual EMFAC2017 emission factors in order to derive vehicle emissions associated with Project operational activities, which vary by season.

3.4 CONSTRUCTION AND OPERATIONAL LIFE-CYCLE ANALYSIS NOT REQUIRED

A full life-cycle analysis (LCA) for construction and operational activity is not included in this analysis due to the lack of consensus guidance on LCA methodology at this time (42). Life-cycle analysis (i.e., assessing economy-wide GHG emissions from the processes in manufacturing and transporting all raw materials used in the project development, infrastructure and on-going operations) depends on emission factors or econometric factors that are not well established for all processes. At this time, an LCA would be extremely speculative and thus has not been prepared.

Additionally, the SCAQMD recommends analyzing direct and indirect project GHG emissions generated within California and not life-cycle emissions because the life-cycle effects from a project could occur outside of California, might not be very well understood or documented, and would be challenging to mitigate (43). Additionally, the science to calculate life cycle emissions is not yet established or well defined; therefore, SCAQMD has not recommended, and is not requiring, life-cycle emissions analysis.

3.5 CONSTRUCTION EMISSIONS

Project construction actvities would generate CO_2 and CH_4 emissions The report *Pioneer Boulevard Development Air Quality Impact Analysis Report* (Urban Crossroads, Inc., 2019) contains detailed information regarding Project construction activities (44). As discussed in the AQIA, Construction related emissions are expected from the following construction activities:

- Demolition
- Site Preparation
- Grading
- Building Construction

[5] For purposes of analysis, the remaining 136,533 sf/3.13 acres will be modeled as Other Asphalt Surfaces. These surfaces are defined as an asphalt area not used as a parking lot.

[6] As indicated on the site plan, the parking landscaped area for Building 1 is 13,224 sf and 10,913 sf for Buildings 2 and 3. For purposes of analysis, this category is used to model the 24,137 sf/0.53 acre of parking landscape area for the 271 parking spaces.

- Paving
- Architectural Coating

3.5.1 CONSTRUCTION DURATION

Construction is expected to commence in June 2020 and will last through August 2021. The construction schedule utilized in the analysis, shown in Table 3-1, represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent.[7] The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per *CEQA Guidelines*. The duration of construction activity was based on the 2021 opening year and CalEEMod defaults.

TABLE 3-1: CONSTRUCTION DURATION

Phase Name	Start Date	End Date	Days
Demolition	6/1/2020	6/26/2020	20
Site Preparation	6/27/2020	7/10/2020	10
Grading	7/11/2020	8/7/2020	20
Building Construction	8/8/2020	6/25/2021	230
Paving	6/26/2021	7/23/2021	20
Architectural Coating	6/26/2021	8/20/2021	40

Source: Construction activity based the 2021 opening year and CalEEMod defaults.

3.5.2 CONSTRUCTION EQUIPMENT

Site specific construction fleet may vary due to specific project needs at the time of construction. The associated construction equipment was generally based on CalEEMod 2016.3.2 defaults. A detailed summary of construction equipment assumptions by phase is provided at Table 3-2. Please refer to specific detailed modeling inputs/outputs contained in Appendix 3.1 of this GHGA.

[7] As shown in the California Emissions Estimator Model (CalEEMod) User's Guide Version 2016.3.2, Section 4.3 "OFFROAD Equipment" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

TABLE 3-2: CONSTRUCTION EQUIPMENT ASSUMPTIONS

Activity	Equipment	Number	Hours Per Day
Demolition	Concrete/Industrial Saws	1	8
	Excavators	3	8
	Rubber Tired Dozers	2	8
Site Preparation	Rubber Tired Dozers	3	8
	Tractors/Loaders/Backhoes	4	8
Grading	Excavators	1	8
	Graders	1	8
	Rubber Tired Dozers	1	8
	Tractors/Loaders/Backhoes	3	8
Building Construction	Cranes	1	8
	Forklifts	3	8
	Generator Sets	1	8

3.5.3 CONSTRUCTION EMISSIONS SUMMARY

For construction phase Project emissions, GHGs are quantified and amortized over the life of the Project. To amortize the emissions over the life of the Project, the SCAQMD recommends calculating the total GHG emissions for the construction activities, dividing it by a 30-year project life then adding that number to the annual operational phase GHG emissions (45). As such, construction emissions were amortized over a 30-year period and added to the annual operational phase GHG emissions. The amortized construction emissions are presented in Table 3-3.

TABLE 3-3: AMORTIZED ANNUAL CONSTRUCTION EMISSIONS

Year	Emissions (metric tons per year)			
	CO_2	CH_4	N_2O	Total CO_2E
2020	436.87	0.07	0.00	438.57
2021	374.97	0.05	0.00	376.32
Total Annual Construction Emissions	811.84	0.12	0.00	814.89
Amortized Construction Emissions ($MTCO_2e$)	**27.06**	**0.00**	**0.00**	**27.16**

Source: CalEEMod™ model output, See Appendix 3.1 detailed model outputs.

3.6 OPERATIONAL EMISSIONS

Operational activities associated with the proposed Project will result in emissions of CO_2, CH_4, and N_2O from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions
- On-site Equipment Emissions
- Water Supply, Treatment, and Distribution
- Solid Waste

3.6.1 AREA SOURCE EMISSIONS

Landscape Maintenance Equipment

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. The emissions associated with landscape maintenance equipment were calculated based on assumptions provided in CalEEMod.

3.6.2 ENERGY SOURCE EMISSIONS

Combustion Emissions Associated with Natural Gas and Electricity

GHGs are emitted from buildings as a result of activities for which electricity and natural gas are typically used as energy sources. Combustion of any type of fuel emits CO_2 and other GHGs directly into the atmosphere; these emissions are considered direct emissions associated with a building; the building energy use emissions do not include street lighting[8]. GHGs are also emitted

[8] The CalEEMod emissions inventory model does not include indirect emission related to street lighting. Indirect emissions related to street lighting are expected to be negligible and cannot be accurately quantified at this time as there is insufficient information as to the number and type of street lighting that would occur.

during the generation of electricity from fossil fuels; these emissions are considered to be indirect emissions. Unless otherwise noted, CalEEMod default parameters were used.

Title 24 Energy Efficiency Standards

California's Energy Efficiency Standards for Residential and Nonresidential Buildings was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity. The 2019 version of Title 24 was adopted by the CEC and will become effective on January 1, 2020. As such, the analysis herein assumes compliance with the 2019 Title 24 Standards.

3.6.3 MOBILE SOURCE EMISSIONS

Vehicles

Project mobile source GHG impacts are dependent on both overall daily vehicle trip generation and the effect of the Project on peak hour traffic volumes and traffic operations in the vicinity of the Project. The Project related greenhouse gas impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the *Trip Generation Analysis for Pioneer Boulevard Development, Santa Fe Springs* (EPD Solutions, Inc.) were utilized in this analysis (46). As per information provided by EPD Solutions, Inc., the following Institute of Transportation Engineers (ITE) land use codes have been utilized:

- General Light Industrial (ITE 110): A light industrial facility is a free-standing facility devoted to a single use. The facility has an emphasis on activities other than manufacturing and typically has minimal office space.

3.6.3.1 Trip Length

SCAQMD Recommendation

In the last five years, the SCAQMD has provided numerous comments on the trip length for warehouse/distribution and industrial land use projects. The SCAQMD asserts that the model-default trip length in CalEEMod™ and the URBan EMISsions (URBEMIS) 2007 model (version 9.2.4) would underestimate emissions. It should be noted that for warehouse, distribution center, and industrial land use projects, most of the heavy-duty trucks would be hauling consumer goods, often from the POLA and POLB and/or to destinations outside of California. The SCAQMD states that for this reason, the CalEEMod™ and the URBEMIS model default trip length (approximately 12.6 miles) would not be representative of activities at like facilities. The average trip length for heavy trucks were based on the SCAQMD documents for the implementation of the Facility-Based Mobile Source Measures (FBMSMs) adopted in the 2016 AQMP. SCAQMD's "Preliminary Warehouse Emission Calculations" cites 39.9-mile trip length for heavy-heavy trucks (47).

Approach for Analysis of the Project

Two separate model runs were utilized in order to more accurately model emissions resulting from vehicle operations. The first run analyzed passenger car emissions, which incorporated a

default trip length of 16.6 miles for passenger cars, an assumption of 100% primary trips, and a fleet mix of 60.11% Light-Duty-Auto vehicles (LDA), 4.73% Light-Duty Trucks (LDT1)[9], 21.98% Light-Duty Trucks (LDT2)[10], and 13.18% Medium-Duty Vehicles (MDV). The second run analyzed truck emissions, which incorporated an average truck trip length of 40 miles, an assumption of 100% primary trips, and a fleet mix of 37.36% of Light-Heavy-Duty Trucks (LHDT), 18.39% of Medium-Heavy-Duty Trucks (MHDT), and 44.25% of Heavy-Heavy-Duty Trucks (HHDT).

3.6.4 On-Site Equipment Emissions

It is common for industrial buildings to require cargo handling equipment to move empty containers and empty chassis to and from the various pieces of cargo handling equipment that receive and distribute containers. The most common type of cargo handling equipment is the yard truck which is designed for moving cargo containers. Yard trucks are also known as yard goats, utility tractors (UTRs), hustlers, yard hostlers, and yard tractors. The cargo handling equipment is assumed to have a horsepower (hp) range of approximately 175 hp to 200 hp. Based on the latest available information from SCAQMD (48); for example, high-cube warehouse projects typically have 3.6 yard trucks per million square feet of building space. For this particular Project, based on the maximum square footage of manufacturing use permitted by the proposed Project, on-site modeled operational equipment includes one (1) 200 hp, compressed natural gas-powered yard tractors operating at 4 hours a day for 365 days of the year**.**

3.6.5 Water Supply, Treatment and Distribution

Indirect GHG emissions result from the production of electricity used to convey, treat and distribute water and wastewater. The amount of electricity required to convey, treat and distribute water depends on the volume of water as well as the sources of the water. CalEEMod default parameters were used to estimate GHG emissions associated with water supply, treatment and distribution for the Project scenario.

3.6.6 Solid Waste

Industrial land uses will result in the generation and disposal of solid waste. A large percentage of this waste will be diverted from landfills by a variety of means, such as reducing the amount of waste generated, recycling, and/or composting. The remainder of the waste not diverted will be disposed of at a landfill. GHG emissions from landfills are associated with the anaerobic breakdown of material. GHG emissions associated with the disposal of solid waste associated with the proposed Project were calculated by the CalEEMod™ model using default parameters.

[9] Vehicles under the LDT1 category have a gross vehicle weight rating (GVWR) of less than 6,000 lbs. and equivalent test weight (ETW) of less than or equal to 3,750 lbs.

[10] Vehicles under the LDT2 category have a GVWR of less than 6,000 lbs. and ETW between 3,751 lbs. and 5,750 lbs.

3.7 EMISSIONS SUMMARY

3.7.1 EXISTING GHG EMISSIONS

The Project site is currently developed with 149,605 sf business park and 8,064 sf general office building uses. The estimated GHG emissions from the existing development are summarized on Table 3-4. Detailed operation model outputs are presented in Appendix 3.4.

TABLE 3-4: EXISTING GHG EMISSIONS

Emission Source	Existing Emissions (MT/yr)			
	CO_2	CH_4	N_2O	Total CO_2E
Area Source	3.91e-03	1.00e-05	0.00	4.17e-03
Energy Source	790.51	0.03	7.56e-03	793.53
Mobile Source	1,942.99	0.13	0.00	1,946.23
Waste	29.76	1.76	0.00	73.74
Water Usage	185.94	0.92	0.02	215.83
Total CO_2E (All Sources)	**3,029.33**			

Source: CalEEMod™ model output, See Appendix 3.4 detailed model outputs.

3.7.2 PROJECT GHG EMISSIONS

The annual GHG emissions associated with the operation of the proposed Project are summarized in Table 3-5. It should be noted that the existing development emissions (previously presented in Table 3-4) were subtracted from the Project GHG emissions to determine the new emissions from the proposed Project. Detailed operation model outputs for the Project are presented in Appendices 3.2 through 3.3. As shown in Table 3-5, the Project would generate an incremental impact of approximately 1,986.98 $MTCO_2e$ per year.

TABLE 3-5: PROJECT GHG EMISSIONS

Emission Source	Emissions (MT/yr)			
	CO_2	CH_4	N_2O	Total CO_2E
Annual construction-related emissions amortized over 30 years	27.06	0.00	0.00	27.16
Area Source	0.02	4.00e-05	0.00	0.02
Energy Source	619.55	0.02	6.49e-03	622.05
Mobile Source (Passenger Car)	1,184.50	0.03	0.00	1,185.26
Mobile Source (Truck)	2,817.19	0.10	0.00	2,819.69
On-Site Equipment	50.84	0.02	0.00	51.25
Waste	41.16	2.43	0.00	101.97
Water Usage	168.88	1.24	0.03	208.91
Total CO_2E (All Sources)	**5,016.31**			
Existing Emissions	***-3,029.33***			
Net Emissions (Project – Existing)	**1,986.98**

3.8 GREENHOUSE GAS EMISSIONS FINDINGS AND RECOMMENDATIONS

GHG Impact #1: The Project would generate direct or indirect GHG emission that would result in a significant impact on the environment

A numerical threshold for determining the significance of GHG emissions in the SCAB has not been established by the SCAQMD for Projects where it is not the lead agency. As an interim threshold based on guidance provided in the CAPCOA *CEQA and Climate Change* handbook, the City has opted to use a non-zero threshold approach based on Approach 2 of the handbook. Threshold 2.5 (Unit-Based Thresholds Based on Market Capture) establishes a numerical threshold based on capture of approximately 90 percent of emissions from future development. The latest threshold developed by SCAQMD using this method is 3,000 $MTCO_2e$ per year for all projects (49).

As shown on Table 3-5, the Project would generate an incremental impact of approximately 1,986.98 $MTCO_2e$ per year. As such, the Project would not exceed the SCAQMD's recommended numeric threshold of 3,000 $MTCO_2e$ if it were applied. Thus, project-related emissions would not have a significant direct or indirect impact on GHG and climate change and no mitigation or further analysis is required.

GHG Impact #2: The Project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

The Project would comply with a number of regulations that would reduce GHG emissions as identified in Section 2.7 of this GHGA. It should be noted that a majority of the regulations are

subsets of AB 32 and SB 32. As such, the Project's consistency with AB 32 and SB 32 are discussed below.

2008 Scoping Plan Consistency

ARB's *Scoping Plan* identifies strategies to reduce California's GHG emissions in support of AB32 which requires the State to reduce its GHG emissions to 1990 levels by 2020. Many of the strategies identified in the Scoping Plan are not applicable at the project level, such as long-term technological improvements to reduce emissions from vehicles. Some measures are applicable and supported by the project, such as energy efficiency. Finally, while some measures are not directly applicable, the project would not conflict with their implementation. Reduction measures are grouped into 18 action categories, as follows:

1. **California Cap-and-Trade Program Linked to Western Climate Initiative Partner Jurisdictions.** Implement a broad-based California cap-and-trade program to provide a firm limit on emissions. Link the California cap–and-trade program with other Western Climate Initiative Partner programs to create a regional market system to achieve greater environmental and economic benefits for California.[11] Ensure California's program meets all applicable AB 32 requirements for market-based mechanisms.
2. **California Light-Duty Vehicle GHG Standards.** Implement adopted Pavley standards and planned second phase of the program. Align zero-emission vehicle, alternative and renewable fuel and vehicle technology programs with long-term climate change goals.
3. **Energy Efficiency.** Maximize energy efficiency building and appliance standards, and pursue additional efficiency efforts including new technologies, and new policy and implementation mechanisms. Pursue comparable investment in energy efficiency from all retail providers of electricity in California (including both investor-owned and publicly owned utilities).
4. **Renewables Portfolio Standards.** Achieve 33 percent renewable energy mix statewide.
5. **Low Carbon Fuel Standard.** Develop and adopt the Low Carbon Fuel Standard.
6. **Regional Transportation-Related GHG Targets.** Develop regional GHG emissions reduction targets for passenger vehicles.
7. **Vehicle Efficiency Measures.** Implement light-duty vehicle efficiency measures.
8. **Goods Movement.** Implement adopted regulations for the use of shore power for ships at berth. Improve efficiency in goods movement activities.
9. **Million Solar Roofs Program.** Install 3,000 megawatts of solar-electric capacity under California's existing solar programs.
10. **Medium- and Heavy-Duty Vehicles.** Adopt medium- (MD) and heavy-duty (HD) vehicle efficiencies. Aerodynamic efficiency measures for HD trucks pulling trailers 53-feet or longer that include improvements in trailer aerodynamics and use of rolling resistance tires were adopted in 2008 and went into effect in 2010.[12] Future, yet to be determined improvements, includes hybridization of MD and HD trucks.

[11] California Air Resources Board. California GHG Emissions – Forecast (2002-2020). October 2010
[12] California Air Resources Board. Scoping Plan Measures Implementation Timeline. October 2010

11. **Industrial Emissions.** Require assessment of large industrial sources to determine whether individual sources within a facility can cost-effectively reduce GHG emissions and provide other pollution reduction co-benefits. Reduce GHG emissions from fugitive emissions from oil and gas extraction and gas transmission. Adopt and implement regulations to control fugitive methane emissions and reduce flaring at refineries.
12. **High Speed Rail.** Support implementation of a high-speed rail system.
13. **Green Building Strategy.** Expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings.
14. **High Global Warming Potential Gases.** Adopt measures to reduce high warming global potential gases.
15. **Recycling and Waste.** Reduce methane emissions at landfills. Increase waste diversion, composting and other beneficial uses of organic materials, and mandate commercial recycling. Move toward zero-waste.
16. **Sustainable Forests.** Preserve forest sequestration and encourage the use of forest biomass for sustainable energy generation. The 2020 target for carbon sequestration is 5 million MTCO2E/YR.
17. **Water.** Continue efficiency programs and use cleaner energy sources to move and treat water.
18. **Agriculture.** In the near-term, encourage investment in manure digesters and at the five-year Scoping Plan update determine if the program should be made mandatory by 2020.

Table 3-6 summarizes the project's consistency with the State Scoping Plan. As summarized, the project will not conflict with any of the provisions of the Scoping Plan and in fact supports seven of the action categories through energy efficiency, water conservation, recycling, and landscaping.

TABLE 3-6: 2008 SCOPING PLAN CONSISTENCY SUMMARY

Action	Supporting Measures[13]	Consistency
Cap-and-Trade Program	--	Not applicable. These programs involve capping emissions from electricity generation, industrial facilities, and broad scoped fuels. Caps do not directly affect commercial projects.
Light-Duty Vehicle Standards	T-1	Not applicable. While these are CARB-enforced measures that are not directly applicable to the proposed Project, vehicles that access the Project are required to comply with the standards and will comply with this strategy.
Energy Efficiency	E-1	Consistent. The Project will include a variety of building, water, and solid waste efficiencies consistent with the most current CALGreen requirements.
	E-2	
	CR-1	
	CR-2	
Renewables Portfolio Standard	E-3	Not applicable. Establishes the minimum statewide renewable energy mix.

[13] Supporting measures can be found at the following link: http://www.arb.ca.gov/cc/scopingplan/2013_update/appendix_b.pdf

Action	Supporting Measures[13]	Consistency
Low Carbon Fuel Standard	T-2	Not applicable. Establishes reduced carbon intensity of transportation fuels.
Regional Transportation-Related GHG Targets	T-3	Not applicable. This is a statewide measure and is not within the purview of this Project.
Vehicle Efficiency Measures	T-4	Not applicable. Identifies measures such as minimum tire-fuel efficiency, lower friction oil, and reduction in air conditioning use.
Goods Movement	T-5	Not applicable. Identifies measures to improve goods movement efficiencies such as advanced combustion strategies, friction reduction, waste heat recovery, and electrification of accessories. While these measures are not directly applicable to the Project, any commercial activity associated with Goods Movement would be required to comply with these measures as adopted. As such, the proposed Project would not interfere with their implementation.
	T-6	
Million Solar Roofs (MSR) Program	E-4	Consistent. The MSR program sets a goal for use of solar systems throughout the state as a whole. While the Project currently does not include solar energy generation, the building roof structure will be designed to support solar panels in the future, consistent with Title 24 requirements.
Medium- & Heavy-Duty Vehicles	T-7	Not applicable. MD and HD trucks and trailers for industrial uses are be subject to aerodynamic and hybridization requirements as established by CARB; the proposed Project would interfere with implementation of these requirements and programs.
	T-8	
Industrial Emissions	I-1	Not applicable. These measures are applicable to large industrial facilities (> 500,000 $MTCO_2e$/yr) and other intensive uses such as refineries.
	I-2	
	I-3	
	I-4	
	I-5	
High Speed Rail	T-9	Not applicable. Supports increased mobility choice.
Green Building Strategy	GB-1	Consistent. The Project will include a variety of building, water, and solid waste efficiencies consistent with the current CALGreen requirements.

Action	Supporting Measures[13]	Consistency
High Global Warming Potential Gases	H-1	Not applicable. The proposed Project are not substantial sources of high GWP emissions and will comply with any future changes in air conditioning, fire protection suppressant, and other requirements.
	H-2	
	H-3	
	H-4	
	H-5	
	H-6	
	H-7	
Recycling and Waste	RW-1	Consistent. The Project will be required recycle a minimum of 65 percent from construction activities and Project operations per State and City requirements.
	RW-2	
	RW-3	
Sustainable Forests	F-1	Consistent. The Project will increase carbon sequestration by increasing on-site trees per the project landscaping plan.
Water	W-1	Consistent. The Project will include use of low-flow fixtures and efficient landscaping per State requirements.
	W-2	
	W-3	
	W-4	
	W-5	
	W-6	
Agriculture	A-1	Not applicable. The Project is not an agricultural use.

SB 32/2017 Scoping Plan Consistency

The 2017 Scoping Plan Update reflects the 2030 target of a 40 percent reduction below 1990 levels, set by Executive Order B-30-15 and codified by SB 32. Table 3-7 summarizes the project's consistency with the 2017 Scoping Plan. As summarized, the project will not conflict with any of the provisions of the Scoping Plan and in fact supports seven of the action categories.

TABLE 3-7: 2017 SCOPING PLAN CONSISTENCY SUMMARY[14]

Action	Responsible Parties	Consistency
Implement SB 350 by 2030		
Increase the Renewables Portfolio Standard to 50 percent of retail sales by 2030 and ensure grid reliability.	CPUC, CEC, CARB	Consistent. This measure is not directly applicable to development projects, but the proposed Project would use energy from Southern California Edison, which has committed to diversify its portfolio of energy sources by increasing energy from wind and solar sources.

[14] Measures can be found at the following link: https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf

Action	Responsible Parties	Consistency
Establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030.		Consistent. Although this measure is directed towards policymakers, the proposed Project would be designed and constructed to implement the energy efficiency measures for new commercial developments and would include several measures designed to reduce energy consumption.
Reduce GHG emissions in the electricity sector through the implementation of the above measures and other actions as modeled in Integrated Resource Planning (IRP) to meet GHG emissions reductions planning targets in the IRP process. Load-serving entities and publicly- owned utilities meet GHG emissions reductions planning targets through a combination of measures as described in IRPs.		Consistent. The proposed Project would be designed and constructed to implement the energy efficiency measures, where applicable by including several measures designed to reduce energy consumption. The proposed Project includes energy efficient field lighting and fixtures that meet the current Title 24 Standards throughout the Project Site and would be a modern development with energy efficient boilers, heaters, and air conditioning systems.
Implement Mobile Source Strategy (Cleaner Technology and Fuels)		
At least 1.5 million zero emission and plug-in hybrid light-duty electric vehicles by 2025.	CARB, California State Transportation Agency (CalSTA), Strategic Growth Council (SGC), California Department of Transportation (Caltrans), CEC, OPR, Local Agencies	Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
At least 4.2 million zero emission and plug-in hybrid light-duty electric vehicles by 2030.		Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Further increase GHG stringency on all light-duty vehicles beyond existing Advanced Clean cars regulations.		Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Medium- and Heavy-Duty GHG Phase 2.		Consistent. These are CARB enforced standards; vehicles that access the project that are required to comply with the standards will comply with the strategy.
Innovative Clean Transit: Transition to a suite of to-be-determined innovative clean transit options. Assumed 20 percent of new urban buses purchased beginning in 2018 will be zero emission buses with the penetration of zero-emission technology ramped up to 100 percent of new sales in 2030. Also, new natural gas buses, starting in 2018, and diesel buses, starting in 2020, meet the optional heavy-duty low-NO_X standard.		Not applicable. This measure is not within the purview of this Project.

Action	Responsible Parties	Consistency
Last Mile Delivery: New regulation that would result in the use of low NO_X or cleaner engines and the deployment of increasing numbers of zero-emission trucks primarily for class 3-7 last mile delivery trucks in California. This measure assumes ZEVs comprise 2.5 percent of new Class 3–7 truck sales in local fleets starting in 2020, increasing to 10 percent in 2025 and remaining flat through 2030.		Not applicable. This Project is not responsible for implementation of SB 375 and would therefore not conflict with this measure.
Further reduce VMT through continued implementation of SB 375 and regional Sustainable Communities Strategies; forthcoming statewide implementation of SB 743; and potential additional VMT reduction strategies not specified in the Mobile Source Strategy but included in the document "Potential VMT Reduction Strategies for Discussion."		Not applicable. This Project is not responsible for implementation of SB 375 and would therefore not conflict with this measure.
Increase stringency of SB 375 Sustainable Communities Strategy (2035 targets).	CARB	Not applicable. The Project is not within the purview of SB 375 and would therefore not conflict with this measure.
By 2019, adjust performance measures used to select and design transportation facilities		
Harmonize project performance with emissions reductions and increase competitiveness of transit and active transportation modes (e.g. via guideline documents, funding programs, project selection, etc.).	CalSTA, SGC, OPR, CARB, Governor's Office of Business and Economic Development (GO-Biz), California Infrastructure and Economic Development Bank (IBank), Department of Finance (DOF), California Transportation Commission (CTC), Caltrans	Not applicable. Although this is directed towards CARB and Caltrans, the proposed Project would be designed to promote and support pedestrian activity on-site and in the Project Site area. The Project Site is within proximity to residential neighborhoods.
By 2019, develop pricing policies to support low-GHG transportation (e.g. low-emission	CalSTA, Caltrans,	Not applicable. Although this measure is directed towards policymakers, the proposed Project would comply with AB

Action	Responsible Parties	Consistency
vehicle zones for heavy duty, road user, parking pricing, transit discounts).	CTC, OPR, SGC, CARB	939, which sets a statewide policy that not less than 65 percent of solid waste generated be source reduced, recycled, or composted. Additionally, the proposed Project would be required to have a recycling program and recycling collection. During construction, the proposed Project shall recycle and reuse construction and demolition waste per City Solid Waste procedures.
Implement California Sustainable Freight Action Plan		
Improve freight system efficiency.	CalSTA, CalEPA, CNRA, CARB, Caltrans, CEC, GO-Biz	When adopted, this measure would apply to all trucks accessing the Project site, this may include existing trucks or new trucks that are part of the statewide goods movement sector.
Deploy over 100,000 freight vehicles and equipment capable of zero emission operation and maximize both zero and near-zero emission freight vehicles and equipment powered by renewable energy by 2030.		Not applicable. This measure is not within the purview of this Project.
Adopt a Low Carbon Fuel Standard with a Carbon Intensity reduction of 18 percent.	CARB	LCFS, with an increased stringency (18 percent by 2030). When adopted, this measure would apply to all fuel purchased and used by the Project in the state.
Implement the Short-Lived Climate Pollutant Strategy by 2030		
40 percent reduction in methane and hydrofluorocarbon emissions below 2013 levels.	CARB, CalRecycle, CDFA, SWRCB, Local Air Districts	When adopted, the Project would be required to comply with this measure and reduce SLPS accordingly.
50 percent reduction in black carbon emissions below 2013 levels.		Not applicable. This measure is not within the purview of this Project.
By 2019, develop regulations and programs to support organic waste landfill reduction goals in the SLCP and SB 1383.	CARB, CalRecycle, CDFA SWRCB, Local Air Districts	Not applicable. This measure is not within the purview of this Project.

Action	Responsible Parties	Consistency
Implement the post-2020 Cap-and-Trade Program with declining annual caps.	CARB	When adopted, the Project would be required to comply with the Cap-and-Trade Program if it generates emissions from sectors covered by Cap-and-Trade.
By 2018, develop Integrated Natural and Working Lands Implementation Plan to secure California's land base as a net carbon sink		
Protect land from conversion through conservation easements and other incentives.	CNRA, Departments Within CDFA, CalEPA, CARB	Not applicable. This measure is not within the purview of this Project.
Increase the long-term resilience of carbon storage in the land base and enhance sequestration capacity		Not applicable. This measure is not within the purview of this Project.
Utilize wood and agricultural products to increase the amount of carbon stored in the natural and built environments		Not applicable. This measure is not within the purview of this Project.
Establish scenario projections to serve as the foundation for the Implementation Plan		Not applicable. This measure is not within the purview of this Project.
Establish a carbon accounting framework for natural and working lands as described in SB 859 by 2018	CARB	Not applicable. This measure is not within the purview of this Project.
Implement Forest Carbon Plan	CNRA, California Department of Forestry and Fire Protection (CAL FIRE), CalEPA and Departments Within	Not applicable. This measure is not within the purview of this Project.
Identify and expand funding and financing mechanisms to support GHG reductions across all sectors.	State Agencies & Local Agencies	Not applicable. This measure is not within the purview of this Project.

As shown above, the Project would not conflict with any of the 2017 Scoping Plan elements as any regulations adopted would apply directly or indirectly to the Project. Further, recent studies

show that the State's existing and proposed regulatory framework will allow the State to reduce its GHG emissions level to 40 percent below 1990 levels by 2030 (33).

According to research conducted by the LBNL and supported by the CARB, California, under its existing and proposed GHG reduction policies, is on track to meet the 2020 reduction targets under AB 32 and could achieve the 2030 goals under SB 32. CALGAPS simulates GHG and criteria pollutant emissions in California from 2010 to 2050 in accordance to existing and future GHG-reducing policies. This model showed that GHG emissions through 2020 could range from 317 to 415 $MTCO_2e$ per year, "indicating that existing state policies will likely allow California to meet its target [of 2020 levels under AB 32]." CALGAPS also showed that by 2030, emissions could range from 211 to 428 $MTCO_2e$ per year, indicating that "even if all modeled policies are not implemented, reductions could be sufficient to reduce emissions 40 percent below the 1990 level [of SB 32]." CALGAPS analyzed emissions through 2050 even though it did not generally account for policies that might be put in place after 2030. Though the research indicated that the emissions would not meet the state's 80 percent reduction goal by 2050, various combinations of policies could allow California's cumulative emissions to remain very low through 2050 (33) (34).

The project applicant would not actively interfere with any future City-mandated, state-mandated, or federally-mandated retrofit obligations enacted or promulgated to legally require development City-wide, state-wide, or nation-wide to assist in meeting state-adopted greenhouse gas emissions reduction targets, including that established under Executive Order S-3-05, Executive Order B-30-15, or SB 32.

The Project does not interfere with the state's implementation of (i) Executive Order B-30-15 and SB 32's target of reducing statewide GHG emissions to 40% below 1990 levels by 2030 or (ii) Executive Order S-3-05's target of reducing statewide GHG emissions to 80% below 1990 levels by 2050 because it does not interfere with the state's implementation of GHG reduction plans described in the CARB's Updated Scoping Plan, including the state providing for 12,000 MW of renewable distributed generation by 2020, the California Building Commission mandating net zero energy homes in the building code after 2020, or existing building retrofits under AB 758. Therefore, the project's impacts on greenhouse gas emissions in the 2030 and 2050 horizon years are less than significant.

5 CERTIFICATION

The contents of this GHG study report represent an accurate depiction of the GHG impacts associated with the proposed Pioneer Boulevard Development. The information contained in this GHG report is based on the best available data at the time of preparation. If you have any questions, please contact me directly at (949) 336-5987.

EDUCATION

Master of Science in Environmental Studies
California State University, Fullerton • May, 2010

Bachelor of Arts in Environmental Analysis and Design
University of California, Irvine • June, 2006

PROFESSIONAL AFFILIATIONS

AEP – Association of Environmental Planners
AWMA – Air and Waste Management Association
ASTM – American Society for Testing and Materials

PROFESSIONAL CERTIFICATIONS

Planned Communities and Urban Infill – Urban Land Institute • June, 2011
Indoor Air Quality and Industrial Hygiene – EMSL Analytical • April, 2008
Principles of Ambient Air Monitoring – California Air Resources Board • August, 2007
AB2588 Regulatory Standards – Trinity Consultants • November, 2006
Air Dispersion Modeling – Lakes Environmental • June, 2006

APPENDIX 3.1:

CALEEMOD ANNUAL CONSTRUCTION EMISSIONS MODEL OUTPUTS

Pioneer Boulevard Development (Construction - Unmitigated)

South Coast AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	163.52	1000sqft	3.75	163,518.00	0
Other Asphalt Surfaces	136.53	1000sqft	3.13	136,533.00	0
Other Non-Asphalt Surfaces	39.09	1000sqft	0.90	39,093.00	0
Parking Lot	271.00	Space	0.55	24,137.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project Area is roughly 8.34 acres.

Construction Phase - Construction expected to being Summer 2020 and end Summer 2021.

Off-road Equipment - Hours are based on an 8-hour workday.

Off-road Equipment - Hours are based on an 8-hour workday.

Off-road Equipment -

Demolition -

Grading - Total Acres Graded based on Construction Schedule and Equipment List. Site Preparation will disturb 1.5 acres per day and Grading will disturb 1.0 acres per day.

Architectural Coating - Rule 1113

Vehicle Trips - Construction Run Only.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Energy Use - Construction Run Only.

Water And Wastewater - Construction Run Only.

Solid Waste - Construction Run Only.

Construction Off-road Equipment Mitigation - Rule 403

APPENDIX 3.2:

CALEEMOD OPERATIONAL (PASSENGER CAR) EMISSIONS MODEL OUTPUTS

Pioneer Boulevard Development (Operations - Passenger Cars)

South Coast AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	163.52	1000sqft	3.75	163,518.00	0
Other Asphalt Surfaces	136.53	1000sqft	3.13	136,533.00	0
Other Non-Asphalt Surfaces	39.09	1000sqft	0.90	39,093.00	0
Parking Lot	271.00	Space	0.55	24,137.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Pioneer Boulevard Development (Operations - Passenger Cars) - South Coast AQMD Air District, Annual

Project Characteristics -

Land Use - Total Project Area is roughly 8.34 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on in ITE 10th Edition and Trip Generation Memo provided by Project Applicant.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

Fleet Mix - Passenger Car Fleet Mix broken down between LDA, LDT1, LDT2, and MDV vehicles.

Energy Use - The project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses due to lighting upgrades.

APPENDIX 3.3:

CALEEMOD OPERATIONAL (TRUCK) EMISSIONS MODEL OUTPUTS

Pioneer Boulevard Development (Operations - Trucks)

South Coast AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	163.52	1000sqft	3.75	163,518.00	0
Other Asphalt Surfaces	136.53	1000sqft	3.13	136,533.00	0
Other Non-Asphalt Surfaces	39.09	1000sqft	0.90	39,093.00	0
Parking Lot	271.00	Space	0.55	24,137.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Pioneer Boulevard Development (Operations - Trucks) - South Coast AQMD Air District, Annual

Project Characteristics -

Land Use - Total Project Area is roughly 8.34 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on in ITE 10th Edition and Trip Generation Memo provided by Project Applicant.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

Fleet Mix - Truck Fleet Mix broken down between LHD1, MHDT, and HHDT vehicles.

Energy Use - The project will design building shells and building components to meet 2019 Title 24 Standards which expects 30% less energy for nonresidential uses due to lighting upgrades.

APPENDIX 3.4:

CALEEMOD EXISTING DEVELOPMENT OPERATIONAL EMISSIONS MODEL OUTPUTS

Pioneer Boulevard Development (Existing Operations)

South Coast AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	8.06	1000sqft	0.19	8,064.00	0
Office Park	149.61	1000sqft	3.43	149,605.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	9			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Pioneer Boulevard Development (Existing Operations) - South Coast AQMD Air District, Annual

Project Characteristics -

Land Use -

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on in ITE 10th Edition and Trip Generation Memo provided by Project Applicant.

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Project No.: P19-028 N

NOISE SETTING

BACKGROUND

Sound is mechanical energy transmitted by pressure waves in a compressible medium such as air. Noise is generally defined as unwanted sound. Sound is characterized by various parameters that describe the physical properties of sound waves. These properties include the rate of oscillation (frequency), the distance between successive troughs or crests, the speed of propagation, and the pressure level or energy content of a given sound wave. In particular, the sound pressure level has become the most common descriptor used to characterize the loudness of an ambient sound level.

The unit of sound pressure ratioed to the faintest sound detectable to a young person with good acuity hearing is called a decibel (dB). Sound or noise can vary in intensity by over one million times within the range of human hearing. A logarithmic loudness scale similar to the Richter Scale for earthquake magnitude is therefore used to keep sound intensity numbers at a convenient and manageable level. The human ear is not equally sensitive to all sound frequencies within the entire spectrum. Noise levels at maximum human sensitivity from around 500 to 2,000 cycles per second are factored more heavily into sound descriptions in a process called "A-weighting," written as "dBA."

Leq is a time-averaged sound level; a single-number value that expresses the time-varying sound level for the specified period as though it were a constant sound level with the same total sound energy as the time-varying level. Its unit is the decibel (dB). The most common averaging period for Leq is hourly.

Because community receptors are more sensitive to unwanted noise intrusion during more sensitive evening and nighttime hours, state law requires that an artificial dBA increment be added to quiet time noise levels. The 24-hour noise descriptor with a specified evening and nocturnal penalty is called the Community Noise Equivalent Level (CNEL). CNEL's are a weighted average of hourly Leq's. The CNEL calculation adds a +5 dB "penalty" to Leq levels from 7 p.m. to 10 p.m., and +10 dB from 10 p.m. to 7 a.m. to account for the greater noise sensitivity during those hours.

NOISE STANDARDS

The State of California Office of Noise Control land provides land use compatibility recommendations that apply mainly to transportation activity noise impacts (vehicles, trains, planes, etc.) on adjacent land use. These guidelines are used in land use decisions because noise control from transportation is controlled by state or federal agencies and is not locally regulated.

An exterior noise exposure level of 65 dB CNEL is typically required for all noise sensitive uses such as residential use. Because office/commercial uses are not occupied on a 24-hour basis, the noise exposure recommendations for less sensitive land uses generally not stringent. There are typically no siting standards for industrial uses because they are not considered noise sensitive. State guidelines consider industrial uses to be "clearly compatible" with noise environments up to 75 dB(A) CNEL. The noise compatibility guidelines recommended 70 dB CNEL as "normally acceptable" for business commercial uses. Noise levels of up to 77.5 dB CNEL are considered "conditionally acceptable" and may be permitted if noise mitigation is included in the design.

Noise generated on one land use that impacts an adjacent use is generally regulated through the noise ordinance of the applicable jurisdiction. The City of Santa Fe Springs noise standards for stationary sources are presented in Table 1. Applicable noise standards must be met at the nearest property line. At a lot line separating receiving areas, the noise level is the calculated arithmetic mean of the two land uses. If the background already exceeds any of the specified levels in Table 1, the allowable thresholds are adjusted upward to equal the background.

The City's noise ordinance limits are stated in terms of a 30-minute limit with allowable deviations from this 50^{th} percentile standard. This noise level describes the noise that is exceeded during a certain percentage of the measurement period. For example, the L_{50} is the level exceeded 50% of the measurement period of thirty minutes in an hour. The larger the deviation, the shorter the allowed duration up to a never-to-exceed 20 dB increase above the 50^{th} percentile standard. For light industrial use, the property line noise standard is 70 dB L_{50} day time and night time.

In accordance with Section 155.425 of the Santa Fe Springs Municipal Code, construction related activities are exempt from noise regulations provided the activities take place during the hours of 7 a.m. to 7 p.m.

Regarding vibration the Municipal Code states that every use shall be so operated that the ground vibration generated by said use is not harmful or injurious to the use or development of surrounding properties.

Table 1

City of Santa Fe Springs Noise Standards

A-Weighted Sound Level in Decibels (dB(A))										
	Daytime (7:00 a.m. to 10:00 p.m.)					Nighttime (10:00 p.m. to 7:00 a.m.)				
	Maximum Cumulative Minutes Duration in Any 1-Hour Period				Absolute Maximum	Maximum Cumulative Minutes Duration in Any 1-Hour Period				Absolute Maximum
Receiving Area	30	15	5	1		30	15	5	1	
Outdoor Noise at Lot Line Of:										
Any school, church or hospital	45	50	55	60	65	45	50	55	60	65
Any other use										
In the A-1, R-1 or R-3 Zone	50	55	60	65	70	45	50	55	60	65
In the C-1 or C-4 Zone	60	65	70	75	80	55	60	65	70	75
In the ML, PF or BP Zone	60	65	70	75	80	60	65	70	75	80
In the M-1 or M-2 Zone	70	75	80	85	90	70	75	80	85	90
Residential Building Interior:										
In the A-1 or R-1 Zone	45	50	55	60	65	45	50	55	60	65
In the R-3 Zone	45	50	55	60	65	45	50	55	60	65
Sound levels at or above each decibel level given in the table shall not occur for a duration longer than that given in the corresponding column heading.										

- At a lot line separating receiving areas, the applicable permitted outdoor noise level shall be the arithmetic mean of the two receiving areas on opposite sides of said lot line.
- In the event the ambient noise level exceeds a permitted noise level, the permissible noise level shall be the ambient level.

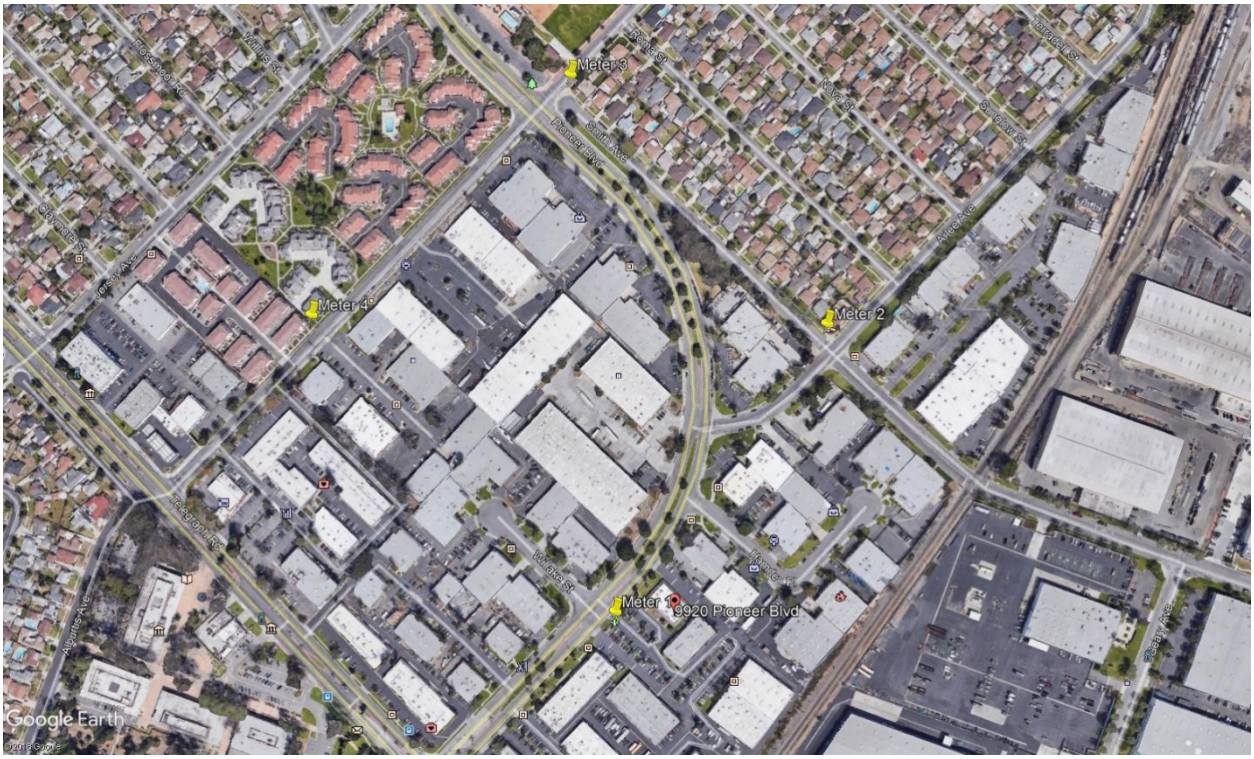
EXISTING CONDITIONS

The project is located at 9920 Pioneer Boulevard, Santa Fe Springs, California in an urban location within southeast of downtown Los Angeles. The dominant and most consistent on-site noise source derives from vehicular on-road traffic from Pioneer Boulevard and Telegraph Road. Traffic noise is discernable onsite and in the nearby environs. Regional access is provided by Interstate 605 (I-605) to the west via Telegraph Road; and I-5 via Pioneer Boulevard or Florence Avenue.

Noise measurements were made in order to document existing baseline levels in the area. These help to serve as a basis to determine noise exposure from ambient noise activities upon the proposed project and the projects impact on surrounding uses. Short term (15-minute) noise measurements were conducted on Friday, June 7, 2019, at four locations from 2:20 p.m. – 3:50 p.m. Measurement locations are shown in Figure 1 and the monitoring results are summarized below.

Measured Noise Levels (dBA) and Meter Location

Meter	Location	Leq	Lmax	Lmin
Meter 1	Intersection of Pioneer Blvd and Alaree Ave by Site	**61.9**	72.4	40.3
Meter 2	Corner Arlee Ave and Smith Ave	**61.2**	70.0	41.5
Meter 3	Pioneer and Alburtis Ave by Athletic Field	**68.4**	86.1	50.5
Meter 4	Alburtis Ave in front of Townhomes II Borgo	**63.5**	77.9	49.5



The observed Leq at the project site was almost 62 dBA. This would translate to a CNEL of 65-65 which is well within the appropriate business park use/light manufacturing compatibility guidelines.

Meters 2 and 3 were located north and northwest of the site at the closest residences. Meter 2, at the intersection of Smith Avenue and Arlee Avenue, is technically closer to the site than Meter 3, but has almost a 400-foot setback to the Pioneer Boulevard centerline. Meter 3 is also on Smith Avenue but closer to Pioneer Boulevard with an approximate 100-foot setback to the centerline. Meter 3 is also across the street from the Santa Fe Springs City Baseball Field.

As shown above, the observed noise level at Meter 2 was 61.2 dBA Leq, while closer to Pioneer Boulevard at Meter 3 the observed noise level was 68.4 dBA Leq.

Meter 4 was located along Alburtis Avenue near new housing, at the Il Borgo Townhomes approximately 450-500 feet north of the Telegraph Road centerline. The observed noise level at this location was 63.5 dBA Leq.

Figure 1
Noise Meter Locations

LAND USE NOISE IMPACTS

THRESHOLDS OF SIGNIFICANCE

According to the current CEQA Appendix G guidelines, noise impacts are considered potentially significant if they cause:

Noise impacts are considered significant if they result in:

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

b. Generation of excessive groundborne vibration or groundborne noise levels.

c. Excessive noise exposure for people residing or working in the project area if the is project is located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport.

There are no airports within any reasonable noise impact distance from the proposed project area.

A "substantial increase" is not defined by any responsible agency. The limits of perceptibility by ambient grade instrumentation (sound meters) or by humans in a laboratory environment is around 1.5 dB. Under ambient conditions, people generally do not perceive that noise has clearly changed until there is a 3 dB difference. A threshold of 3 dB is commonly used to define "substantial increase." An increase of +3 dBA CNEL in traffic noise would be consistent a potentially significant impact.

Two characteristic noise sources are typically identified with Project. Construction activities, especially heavy equipment, will create short-term noise increases near the project site. Such impacts may be important for possible nearby noise-sensitive receptors such as any existing residential uses. Upon completion, project-related traffic and operational noise may cause an incremental increase or decrease in area-wide noise levels throughout the project area. Because the proposed Project is not noise-sensitive and measured ambient noise is below 65 dBA CNEL, current noise environment is not an impediment for the siting the proposed use.

CONSTRUCTION NOISE IMPACTS

The US EPA has compiled data for outdoor noise levels for typical construction activities. These data are presented in Table 2. The noise levels shown in Table 2 represent composite noise levels associated with typical construction activities, which take into account both the number of pieces and spacing of heavy construction equipment that are typically used during each phase of construction. These noise levels would diminish rapidly with distance from the construction site at a rate of approximately 6 dBA per doubling of distance.

Table 2
Typical Outdoor Construction Noise Levels Construction Phase Noise Level (dBA, Leq)

Ground Clearing	84
Excavation	89
Foundations	78
Erection	85
Finishing	89

Source: EPA, 1971.

Temporary construction noise impacts will vary markedly because the noise strength of construction equipment ranges widely as a function of the equipment used and its activity level. The demolition and earth-moving sources are the noisiest, with equipment noise typically ranging from 75 to 89 dBA at 50 feet from the source.

Point sources of noise emissions are attenuated by a factor of 6 dB per doubling of distance through geometrical (spherical) spreading of sound waves. The quieter noise sources will drop to a 65 dBA exterior/45 dBA interior noise level by about 200 feet from the source while the loudest may require 800 feet from the source to reduce a 89-90 dBA source strength to a generally acceptable 65 dBA exterior exposure level. This estimate assumes a clear line-of-sight from the source to the receiver. Any partially or completed development will act as a noise barrier that will interrupt equipment noise propagation.

The closest sensitive uses to the site are 850 feet from the nearest property line. Distance attenuation will provide -25 dBA of mitigation, but there are also numerous intervening structures between the project site and any sensitive off-site uses. Therefore, due to distance separation and shielding from existing structures it is expected that project construction will be less than the ambient noise levels and less than the 65 dBA exterior and 45 dBA interior noise exposure levels.

Construction noise sources are not strictly relatable to a community noise standard because they occur only during selected times and the source strength varies sharply with time. The penalty associated with noise disturbance during quiet hours and the nuisance factor accompanying such disturbance usually leads to time limits on construction activities imposed as conditions on construction and use permits. The City of Santa Fe Springs Noise Code limits construction activity noise generation to the hours of 7 a.m. to 7 p.m. These hours are included as conditions on any project grading permits and these limits will serve to minimize any adverse construction noise impact potential.

VEHICULAR NOISE IMPACTS

The proposed project is forecast to generate 910 fewer daily trips than the existing uses, however peak hour traffic is predicted to be slightly higher. Therefore, the increase in noise due to peak hour project related impacts were calculated. Using data from the project traffic analysis the existing traffic volumes as well as the projected project traffic are shown in Table 3 for both the AM and PM peak hours.

Table 3
Peak Hour Area Traffic with and without Project

AM	**(vehicles per hour)**		**Project Noise Increase (dBA)**
Roadway Segment	Peak Hr Traffic	Proj Traffic	
Pioneer/ N of Willake	617	29	+0.2
Pioneer/ S of Willake	660	87	+0.5
Pioneer/N of Telegraph	679	145	+0.8
Pioneer/S of Telegraph	863	43	+0.2
Telegraph/ E of Pioneer	3,337	67	+0.1
Telegraph/W of Pioneer	3,279	35	+0.1
PM			**Project Noise Increase (dBA)**
Roadway Segment	Peak Hr Traffic	Proj Traffic	
Pioneer/ N of Willake	834	26	+0.1
Pioneer/ S of Willake	859	78	+0.4
Pioneer/N of Telegraph	881	130	+0.6
Pioneer/S of Telegraph	1,258	39	+0.1
Telegraph/ E of Pioneer	3,213	31	+0.1
Telegraph/W of Pioneer	3,308	60	+0.1

The largest possible project related increase is during the AM peak hour on Pioneer Boulevard north of Telegraph and is calculated to be +0.8 dBA. The increase from 679 to 824 (679+145) vehicles per peak hour could theoretically create a +0.8 dBA increase in noise levels (10 * log {824/679} = +0.8 dBA) which would be imperceptible to the human ear. Normally, a +3 dBA increase and above is considered significant. The next largest related traffic noise impact is less than +0.6 dBA. Therefore, the project will have minimal noise impact on area roadways.

SITE OPERATIONAL NOISE

The proposed use of light manufacturing could potentially generate more noise than a business park. The primary noise source would be at the loading dock. Buildings 2 and 3 are closest to the offsite sensitive uses. The proposed loading docks are located on the northern side of Buildings 2 and 3. With a distance separation of 850 feet as well as intervening structures (office park buildings between the two uses) it is unlikely that project operational noise will be perceptible at the closest off-site use.

The published noise maximal noise level for a forklift is 75 dBA but that assumes back up alarms. Results show that elimination of the tonal characteristic of the `beeper' would reduce forklift noise levels by around 3dBA.[1] A flat-bed truck has a noise level of 74 dBA Lmax. Together with a forklift this could create a combined noise level of 76 dBA at 50 feet. Distance would provide 25 dBA of noise attenuation, and the intervening structures would provide at least 3 dBA of attenuation. The

[1] https://www3.northamptonshire.gov.uk/councilservices/environment-and-planning/planning/planning-applications/documents/PDF%20Documents/Minerals%20and%20Waste%20Apps/14.00081.WASFUL-NoiseAssessment.pdf

resultant noise level of 48 dBA Leq would be lower than the measured noise level at the closest off-site use.

SUMMARY

Construction activities from project development is not expected to impact surrounding residential uses. Such impacts are mitigated by required compliance with grading/construction permits. These considerations include:

- The hours of construction operation shall be limited to be between the hours of 7 a.m. to 7 p.m.
- Staging areas shall be located away from existing residences.
- All construction equipment shall use properly operating mufflers.

The project noise impact study indicates a less-than-significant noise impact from project-related traffic on project vicinity receptors. Not only is peak hour project traffic small, but the number of vehicles currently operating on area roadways is very large compared to project traffic.

The new light manufacturing zoning could generate more noise than a business park. However, because of the distance separation to the nearest sensitive use, an 8-foot property line wall and intervening structures noise will not be perceptible at any off-site sensitive locations.

C – Previous Site Evaluations

Executive Summary

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the city of Santa Fe Springs, California (Site) (Figures 1 & 2). This ESA is intended to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present at the Site and was conducted as part of your proposed redevelopment of the Site. The Site is located on the east side of Pioneer Boulevard in Santa Fe Springs, CA and includes approximately 9.06 acres of land. The Site is a square shaped parcel and contains 7 concrete tilt up buildings with various tenants occupying office and warehouse space. The current uses of the Site by these tenants include adult care, office, industrial, and laboratory uses. The Site is located in the middle of an industrial and manufacturing district with nearby land uses including industrial, office, and residential. The Site is relatively flat with an elevation of approximately 130' feet above mean sea level (msl).

The Site is bound:

- on the north by an audio service company and a tire recycler;
- on the east by a rail road line across which are two industrial equipment supplies companies and a corrugated metals design facility;
- on the south by three industrial office and warehouses; and,
- on the west by Pioneer Blvd across which are industrial buildings in a business park type setting.

Key findings of this Phase I ESA are as follows:

- The Site was historically an oilfield until the 1970's when the Site was redeveloped into its current orientation and used as an industrial business park. The Site included 7 oil wells as well as several oil field sumps in addition to pipelines that would typically connect the wells to above ground storage tanks.
- The Site was redeveloped at a time that environmental regulations and control were not as stringent as are present today. There were requirements for abandonment of oil wells and geotechnical requirements for development that would have likely precluded leaving oil field sumps in place. Redevelopment of the Site would have likely included removal of more liquid material that may have been present while using impacted soil during the grading effort.
- The City of Santa Fe Springs Fire Department was involved and oversaw the oil field closure aspects as part of the redevelopment efforts at the Site. Soil sampling was conducted as part of the redevelopment and a report was submitted which documented

the concentrations of petroleum hydrocarbons present in soil at the Site. Methane gas sampling was also conducted which reported generally low concentrations. The Fire Department approved that the impacted soil could be left in place provided it remained capped by the paved parking lot and building foundations. A No Further Action status was approved for the Site by the Fire Department.

- There have been previous subsurface investigations conducted at the Site after the redevelopment as part of various due diligence investigations. The results of those investigations document the presence of soil in areas of the Site consistent with the previous closure determination of the Fire Department.
- In the Fire Department closure letter, they reference that changes in the Site conditions would need their further review. Redevelopment of the Site will entail movement of the residually impacted soil at the Site under potentially more stringent regulatory requirements. However, petroleum hydrocarbons do degrade with time so that the current concentrations may be less than what was documented in the previous subsurface investigations at the Site.
- The oil wells that were abandoned will need to be evaluated as part of any redevelopment to assess whether the Division of Oil and Gas will require that they be reabandoned to current standards. This will include an updated methane gas survey which will be important for both the oil well abandonment evaluation but also to assess whether a methane gas mitigation system will be necessary as part of the future development.
- The historical oil field uses of the Site and remedial actions taken represent a Historic and Controlled REC in our judgment.
- The buildings on Site are used for a variety of primarily office related uses with minimal chemical usage. The following facilities were noted exceptions:
- The 10016 building contains a roofing and construction company named Klondike Construction that stores chemicals such as roofing tar, elastic cement, asphaltic materials and unknown materials in drums in the warehouse. Two unmarked 55-gallon drums were noted in the warehouse as well as used automotive batteries. This company also stores tar laden gravel in piles in an open area behind building 10010 on property owned by the City of Santa Fe Springs. While there were no significant stains, all of their chemical waste should be removed prior to their vacating the premises.
- Several unlabeled 55-gallon drums were noted in the parking area north of the Bontek Inc. space at the 10020 Building. The drums did not appear associated with any specific tenant.
- What appeared to be methane vent pipes consistent with a methane mitigation system was noted along the 10020 Building wall. The owner was not aware and there were no plans or documentation of the construction of this feature found during this assessment.

- While there were chemicals used, there were no RECs noted from the current use of the Site.
- The Site is located in an area that has historically had light industrial and manufacturing uses. While chemicals were used and some releases occurred, none were close enough or in the correct orientation to be a threat to the Site with the exception of Omega Chemical Corporation. This facility contributed to a large groundwater chlorinated solvent plume that originates 2.6 miles to the northeast and heads southwest toward the Site before turning south. The western border of this plume may extend onto the Site. There has been no data to date to suggest that the Site may have contributed to the Omega Plume and as such, we would not consider it to be an REC to the Site.
- There were no RECs found from off Site sources.
- HMC previously reviewed the prior reports for the Site and prepared an environmental evaluation which included recommendations for actions to take with regards to future development of the Site. They included:
  - a "Site Plan Review" should be undertaken to assess whether re-abandonment to current standards for the plugged oil wells at the Site is necessary;
  - Prepare and implement a Soil Management Plan for the impacted soils at the Site as well as for possible surprises that could be found during grading; and,
  - Based on the results of the soil gas survey, a methane mitigation system may be necessary as part of future construction.
- There has been no new information to alter or change these overall recommendations for redevelopment. We do recommend that an updated Site assessment including a methane gas survey be conducted at the Site to aid in the development of the SMP as well as to assess whether a methane mitigation system will be needed at the Site.

Conclusions

HMC has conducted a Phase I ESA for the Site in accordance with the ASTM E1527-13 guidelines. Based on the results of our research and available data, there were no RECs noted at the Site.

However, the Site was part of an oil field and remedial actions were taken to close the oil wells and soil sampling confirmed the presence of elevated concentrations of hydrocarbons in soil that was allowed to remain in place by the City of Santa Fe Springs Fire Department. The historic oil field operations would be considered a HREC, and CREC in our judgment

While not an REC per the ASTM definition, given the age of the building, it is likely that asbestos containing materials are present at the Site.

Recommendation

Given the findings of this ESA, we recommend that:

- A subsurface investigation be conducted across Site to assess the current concentrations of hydrocarbons and arsenic that were previously reported at the Site as well as a soil gas survey to assess the potential for methane gas and volatile organic compounds that may be present.
- HMC has previously offered recommendations with regards to actions that will be necessary to allow development of the Site. They include:
  - a "Site Plan Review" should be undertaken to assess whether re-abandonment to current standards for the plugged oil wells at the Site is necessary;
  - Prepare and implement a Soil Management Plan for the impacted soils at the Site as well as for possible surprises that could be found during grading; and,
  - Based on the results of the soil gas survey, a methane mitigation system may be necessary as part of future construction.
- The two unmarked 55-gallon drums in the Klondike warehouse should be identified and stored properly. The batteries noted in the warehouse should be recycled or stored properly if still in use. The tar laden piles belonging to Klondike Construction should be properly stored.
- The four 55-gallon drums of paint in the parking lot north of the tire recycler should be removed from the Site by the owner of those drums.
- An asbestos survey should be conducted to assess potential asbestos containing materials that may be present at the Site that will need to be abated prior to demolition.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Santa Fe Springs Commerce Center
Santa Fe Springs, California 90670

1. INTRODUCTION

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the city of Santa Fe Springs, California (Site) (Figures 1 & 2). This ESA is intended to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your proposed acquisition of the Site. The Site is located on the east side of Pioneer Boulevard in Santa Fe Springs, CA and includes approximately 9.06 acres of land. The Site is a square shaped parcel and contains 7 concrete tilt up buildings with various tenants occupying office and warehouse space. The current uses of the Site by these tenants include adult care, office, industrial, and laboratory uses. The Site is located in the middle of an industrial and manufacturing district with nearby land uses including industrial, office, and residential. The Site is relatively flat with an elevation of approximately 130' feet above mean sea level (msl).

1.1. Objective

In accordance with the ASTM E 1527-13 Standard Practice for Environmental Site Assessments, the objective of the ESA is to assess, to the extent feasible under the standard, the likelihood that Recognized Environmental Conditions (RECs), as defined by ASTM, are present at the Site.

A Recognized Environmental Condition "means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (ASTM Standard Practice E1527-13). Performance of a Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions in connection with a property, within reasonable limits of time and cost.

All Appropriate Inquires (AAI) as defined in the Final Rule (40 CFR, Part 312), must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, is to identify releases and threatened releases of hazardous substances, which cause or threaten to cause the incurrence of response costs. The U.S. Environmental Protection Agency (EPA) has stated that ASTM Standard E-1527-13 is consistent with the Standards and Practices for AAI and is compliant with the statutory criteria for AAI.

1.2. Scope of Services, Methodology and Limitations

The findings of this ESA must be viewed in recognition of certain limiting conditions. The scope of work commissioned for this project does not represent an exhaustive study, but rather a reasonable inquiry, consistent with good commercial practice, in general accordance with ASTM Practice E-1527-13.

The scope of work for this ESA included the following activities:

- A site walk to document the current condition of the Site and neighboring facilities.
- Review of a regulatory database report.
- Interviews with the User of this report and submittal of a questionnaire to the Owner of the Site.
- Review of historical references including aerial photographs, city directories, Sanborn Maps and topographic maps.
- On-line research and file reviews concerning the Site and suspect off site sources at the Office of the City Clerk in the City of Santa Fe Springs, State of California Regional Water Quality Control Board (RWQCB), and Department of Toxic Substances Control (DTSC) websites.
- Review of hard copy files maintained by the City of Santa Fe Springs Fire Department.
- Preparation of this report of findings.

In the course of this assessment, HMC has relied on information provided by outside parties, such as regulatory agencies, previous reports and interview sources. For the purpose of this assessment, such third-party information is assumed to be accurate unless contradictory evidence

is noted, and HMC does not express or imply any warranty regarding information provided by third-party sources.

2. SITE DESCRIPTION

2.1. Site Setting

The Site is located on the east side of Pioneer Boulevard in Santa Fe Springs, CA and includes approximately 9.06 acres of land. The Site is a square shaped parcel and contains 7 concrete tilt up buildings with various tenants occupying office and warehouse space. The current uses of the Site by these tenants include adult care, office, industrial, and laboratory. The Site is located in the middle of an industrial and manufacturing district with nearby land uses including industrial, office, and residential. The Site is relatively flat with an elevation of approximately 130' feet above mean sea level (msl).

The Site is bound:

- on the north by an audio service company and a tire recycler;
- on the east by a rail road line across which are two industrial equipment supplies companies and a corrugated metals design facility;
- on the south by three industrial office and warehouses; and,
- on the west by Pioneer Blvd across which are industrial buildings in a business park type setting.

2.2. Regional Geology and Hydrogeology

The Site lies within the Central Basin of the Coastal Plain of the Los Angeles Groundwater Basin. Throughout the Central Basin, groundwater occurs in Holocene and Pleistocene age sediments at relatively shallow depths. The Central Basin is historically divided into the forebay and pressure areas. The Los Angeles forebay is located in the northern part of the Central Basin where the Los Angeles River enters the Central Basin through the Los Angeles Narrows from the San Fernando Groundwater Basin. The Montebello forebay extends southward from the Whittier Narrows where the San Gabriel River encounters the Central Basin and is the most important area of recharge in the subbasin. Both forebays have unconfined groundwater conditions and relatively interconnected aquifers that extend up to 1,600 feet deep to provide recharge to the aquifer system of this subbasin (DWR 1961). The Whittier area extends from the Puente Hills south and southwest to the axis of the Santa Fe Springs-Coyote Hills uplift and contains up to 1,000 feet of freshwater-bearing sediments. The Central Basin pressure area is the largest of the four divisions and contains many aquifers of permeable sands and gravels separated by semi-permeable to impermeable sandy clay to clay, that extend to about 2,200 feet below the surface (DWR 1961). The estimated average specific yield of these sediments is around 18 percent. Throughout much

of the subbasin, the aquifers are confined, but areas with semipermeable aquicludes allow some interaction between the aquifers (DWR 1961).

The main productive freshwater-bearing sediments are contained within Holocene alluvium and the Pleistocene Lakewood and San Pedro Formations (DWR 1961). Throughout most of the subbasin, the near surface Bellflower aquiclude restricts vertical percolation into the Holocene age Gaspur aquifer and other underlying aquifers and creates local semi-perched groundwater South Coast Hydrologic Region California's Groundwater Coastal Plain of Los Angeles Groundwater Basin Bulletin 118 Last update February 27, 2004 conditions. The main additional productive aquifers in the subbasin are the Gardena and Gage aquifers within the Lakewood Formation and the Silverado, Lynwood and Sunnyside aquifers within the San Pedro Formation (DWR 1961). Specific yield of deposits in this subbasin range up to 23 percent in the Montebello forebay, 29 percent in the Los Angeles forebay, and 37 percent in the Central Basin pressure area (DWR 1961). Historically, groundwater flow in the Central Basin has been from recharge areas in the northeast part of the subbasin, toward the Pacific Ocean on the southwest. However, pumping has lowered the water level in the Central Basin and water levels in some aquifers are about equal on both sides of the Newport-Inglewood uplift, decreasing subsurface outflow to the West Coast Subbasin (DWR 1961).

Groundwater enters the Central Basin through surface and subsurface flow and by direct percolation of precipitation, stream flow, and applied water; and replenishes the aquifers dominantly in the forebay areas where permeable sediments are exposed at ground surface (DWR 1961). Natural replenishment of the subbasin's groundwater supply is largely from surface inflow through Whittier Narrows (and some underflow) from the San Gabriel Valley. Percolation into the Los Angeles Forebay Area is restricted due to paving and development of the surface of the forebay. Imported water purchased from Metropolitan Water District and recycled water from Whittier and San Jose Treatment Plants are used for artificial recharge in the Montebello Forebay at the Rio Hondo and San Gabriel River spreading grounds (DWR 1999). Saltwater intrusion is a problem in areas where recent or active river systems have eroded through the Newport Inglewood uplift. A mound of water to form a barrier is formed by injection of water in wells along the Alamitos Gap (DWR 1999) (CDWR, 2004).

Water levels varied over a range of about 25 feet between 1961 and 1977 and have varied through a range of about 5 to 10 feet since 1996 (CDWR, 2004). A groundwater report from a facility cross gradient to the Site approximately 1,500' to the west-southwest indicated groundwater flows to the south (BGR, 2018).

3. USER PROVIDED INFORMATION

The User of this report is EPD Solutions, Inc. and the Brookhollow Group. We were able to interview Ms. Alice Kim, the property manager with The Brookhollow Group who also provided a tour of the facility and was able to address our questions. We were also provided historic title reports and documents that the Owner had available.

3.1. Title Records

A Preliminary Tile Report was prepared for The Brookhollow Group for the Site by the Chicago Title Company and was provided for our review as part of this investigation. Title is said to be vested in KOLL/PER Santa Fe Springs, LLC. The Title Report reflects the land use restriction put in place by the Santa Fe Springs Fire Department. No other information of an environmental nature was noted in this report.

3.2. Owner Knowledge

As part of our Site investigation, we were provided a completed Owner/ Operator Questionnaire from Ms. Alice Kim. Ms. Kim was unaware of any active environmental investigations or cleanups, areas of disposal or release on site or any ongoing remedial efforts. She also indicated that she was unaware of any Notice of Violations or potential environmental administrative or legal action pending.

3.3. Environmental Liens or Activity and Use Limitations

The soil at the Site has been assessed in previous subsurface investigations and results indicated elevated levels of petroleum hydrocarbons and arsenic. The Santa Fe Springs Fire Department granted a No Further Action letter under the condition that the soil at the Site remain capped by the existing paved parking lot and the building foundations and that Site uses are restricted from sensitive uses such as schools, hospitals and day care centers among others. A formal Land Use Covenants was recorded against the Title for the Site.

4. SITE USE AND HISTORY

Past usage of the subject site was assessed through a review of historical aerial photographs, topographic maps and an EDR search of city directories and prior reports. Review of the Sanborn Map collection indicates that Sanborn Maps were not produced for the Site.

4.1. Sanborn Maps

Sanborn maps are maps that were created for the insurance industry to document site activities in metropolitan areas of the country and were used in underwriting. They often times contain detailed information about a site. While they were prepared for insurance underwriting and were

not environmental maps per se, they often times contain information that is useful in evaluating the historical use of a Site. There was no reported Sanborn Coverage for the Site.

4.2. Aerial Photograph Review

Aerial photographs covering the Site were obtained from Environmental Data Resources, Inc. (EDR). Photographs were available from the period 1928 through 2016. Copies of the aerial photographs are included in Appendix B. A summary of the observations noted from the aerial photography is as follows:

1928 The Site was noted to be in use as part of an operating oil field. Two to three derricks are seen in the northeast and southwest corners of the Site as well as three sumps confined to the southwest corner. Oil field operations were present in all directions in the vicinity of the Site. A railroad feature was noted immediately to the east of the Site. The land immediately south of the Site was noted to have agricultural activity between two derricks.

1938 Three pump jacks were observed in the photograph from 1938 in the north, east, and western portions of the Site with three sumps located in the south. Oil production and agriculture continued in the Site vicinity. No other changes were noted.

1947 An oil derrick was present in the northeast corner of the Site. No other changes to the Site or the immediate vicinity were noted.

1953 An additional oil derrick was seen along the eastern border of the Site. Only one small sump was noted in the southwest corner of the Site. No other changes were noted to the Site or the immediate vicinity.

1963 Only one derrick was noted along the eastern border of the Site as well as the small sump in the southwest corner. Agricultural activity in the Site vicinity is no longer present. No other changes to the Site or the immediate vicinity were noted.

1970 Oil production activities at the Site are noted to no longer take place and the Site was noted to be vacant land. A refinery was noted to the east of the Site. The north and south properties were also noted to be vacant land. Oil

production equipment is still noted to the west of the Site. No other changes are noted at the Site or the immediate vicinity.

1977 Significant changes were noted at the Site including the addition of seven industrial structures which are present today. The parking area around the buildings appears to be asphalt paved and ribbon drainage features are seen in the photograph. Industrial buildings are noted on the property immediately to the north and south as well as across Pioneer Boulevard to the west. No other changes are noted to the Site or the immediate vicinity.

1983 No changes were noted to the Site in this photograph. The area where industrial buildings across Pioneer Boulevard to the west were previously noted has had a number of additional buildings added to a business park type environment. The property to the north is also noted to have several additional industrial buildings. The refinery to the east is no longer seen but five ASTs are still noted in the area it once occupied. No other changes were noted in the immediate vicinity of the Site.

1989 No changes to the Site were noted in this photograph. To the east, four industrial buildings are now seen in the orientation they currently occupy. Just beyond these buildings two of the five ASTs previously noted were still present. No other changes were noted in the immediate Site vicinity.

1994 No changes to the Site were noted in this photograph. The two remaining ASTs previously noted were no longer seen. No other changes were noted in the immediate Site vicinity.

2002-16 No changes to the Site or the immediate vicinity were seen in these photographs.

4.3. Topographic Maps

Historical topographic maps were also reviewed as part of this effort and aided in interpreting the overall site history. Topographic maps were produced for the Site with dates ranging from 1896 to 2012. The Site was noted to be undeveloped land in the immediate vicinity of a rail road feature in 1896. This feature is still present. The maps also documented the historic oil production field

at and near the Site over many years. No specific information was obtained beyond that seen in the aerial photographs for the Site.

4.4. EDR City Directory Review

EDR performed a search of the City Directory records for the Site address at approximately five-year intervals. The City Directory listings included the following information:

4.5. Summary

The Site and immediate Site vicinity were historically located in an oil field from the earliest aerial photograph in 1928 until the 1970's when the Site was developed into an industrial building complex. The Site was originally built into the current orientation in which it stands today. The Site was subsequently used by various tenants occupying offices and warehouses for operations including but not limited to adult care, medical device R&D, and construction offices. The past use as an oil field is considered a Historical Recognized Environmental Condition (HREC).

5. PRIOR INVESTIGATIONS

There have been various previous investigations conducted at the Site as follows.

5.1. Partner ESA, 2014

Partner prepared a Phase I ESA report for the Santa Fe Springs Commerce Center for US Bank dated February 14, 2014 consistent with ASTM standards. This included a review of the historical, then current and neighboring uses to assess whether there were RECs present at the Site. This report summarized the Site setting as similar to our findings and other previously prepared reports Partner also identified tenants that are discussed in the body of this report.

Partner identified several findings during their investigation, as follows:

- The seven oil wells that are currently abandoned on the Site as well as associated sumps where drilling material potentially contaminated with petroleum and drilling chemicals would have been kept. The possibility that these materials were stored on Site is noted. From review of the report, it appears Partner was unaware of the prior subsurface investigations nor the closure granted by the City of Santa Fe Springs,

- The former Omega Chemical Company is noted in the findings of this report. Partner describes this facility as having been responsible for creating a chlorinated solvent plume in groundwater and is being investigated under the Superfund laws and oversight of the Environmental Protection Agency. This facility was noted to be upgradient from the Site but due to clean-up actions, the responsible party identified, and the relative distance from the Site it was determined that this likely does not pose a concern to the Site.

- Partner identified the former Euro Industries as a historical recognized environmental condition. The report describes the sampling and removal of tanks and a clarifier that occurred as discussed in the body of this report as well as the No Further Action status obtained. No further assessment of this former facility was considered necessary.

- Partner discussed the use of chemicals associated with the commercial and light industrial tenants at the Site but concluded that due to the lack of evidence that these uses have affected the Site they do not expect these to pose an environmental concern.

- Suspect asbestos contain materials were observed on Site and the report recommended sampling to identify the content of ACMs if these materials were to be disturbed.

- Methane and hydrogen sulfide emissions were identified as a potential concern due to the presence of abandoned wells on site and in the vicinity of the Site. Methane vent pipes were observed at the 10020 Building and were noted to be used to assist with remediation at the Site. Partner did not consider this an environmental concern at the time but noted testing and additional remedial measures may be required if the Site was to be redeveloped.

Partner concluded with one recommendation to conduct subsurface sampling to assess the presence of soil contamination from historical uses of the Site. Again as noted, it appears Partner did not have any of the previous reports including the Environ report described below.

5.2. ENVIRON, 2004

A Phase I and Phase II ESA was prepared by ENVIRON International Corporation for the Koll Company for the Santa Fe Springs Commerce Center. Koll was noted to have acquired the Site in 1989. The report states that the Site was developed into its current configuration in 1974 and was previously used as farm or pasture land from 1947 until 1973 as well as oil production from at least 1923 until 1934.

The report identified two areas of concern at the Site, as follows:

- The seven abandoned oils wells adjacent or under the 9930, 10010, and 10016 Buildings, and
- A waste chemical storage room associated with the Harshaw Chemical Company.

Based on their findings the report noted that a methane gas survey would be required by the City. The survey was performed by Environ and the survey resulted in one probe to have tested positive for the presence of methane gas therefore requiring three quarterly monitoring events and annually thereafter.

Environ also performed a soil investigation near the southeastern corner of the 10016 Building where the waste chemical storage room was noted to be located. Elevated levels of arsenic and petroleum hydrocarbons were found. The report notes that previous investigations were performed by Levine Fricke who recommended a deed restriction be place upon this area of the Site. The deed restriction required this area remained capped was approved by the fire department.

The report also identified three non-ASTM conditions and recommendations at the Site, as follows:

- Asbestos containing materials were observed during their investigation. Noted renovations took place in 1989 and 1992 where ACMs were abated but additional observations were made by Environ. An O&M plan was recommended to be developed for the Site

- Lead based paint was assumed to be present at the Site and was noted to be in good condition. They concluded that abatement was not necessary at the time. The report did recommend sampling of this material to take place if renovations or remodeling were to take place.

- The report identified light ballast as possibly being PCB containing and recommending that replaced ballasts should be properly disposed of by a qualified contractor. This year of construction, 1974, was cited for this reasoning.

The report concluded that there were no concerns regarding the current tenants but those that are known to use and store chemicals should be closely monitored. Off Site facilities were not regarded as concerns to the Site.

5.3. HMC, 2014

In a report prepared for AEW, one of the members of the Owners group dated March 6, 2014, HMC evaluated the Phase I ESA prepared by Partner Environmental as noted above. This ESA raised concerns about the historic use of the Site as an oilfield. The evaluation notes that Partners concerns have been previously addressed during two subsurface investigations performed by

Environ and LFR. The subsurface reports indicated that elevated levels of petroleum hydrocarbons and arsenic exist in the soil near the 10020 building at the Site consistent with oilfield waste in sumps. Methane sampling was also included in the investigation and yielded low concentrations. These investigations were overseen by the City of Santa Fe Springs Fire Department. The Fire Department approve that the soil be left in place provided it remains capped by the paved parking lot and building foundations. A No Further Action status was approved for the Site by the Fire Department.

5.4. HMC, 2016

In a report dated March 6, 2014, HMC outlined several issues that would need to take place if the Site was to be redeveloped. They include:

- Potential re-abandonment of the abandoned oil wells to current standards;
- Preparation and implementation of a Soil Management Plan;
- Potential surprises that could be encountered during grading; and,
- Potential methane mitigation systems for future construction.

Potential re-abandonment of the abandoned oil wells to current standards

The report describes the potential for further oil well abandonment procedures and costs that may be necessary to redevelop the Site. This would include a "Site Review Plan" in accordance with regulatory requirements of the California Division of Oil and Gas. This plan requires a petroleum engineer to review abandonment records and recommend additional procedures if necessary. The report notes that there have been cases where a well cannot be built over and an approximately 15' set back in all directions from the well is required for possible future access to the well. Seven abandoned wells are reported to exist at the Site.

Preparation and implementation of a Soil Management Plan

The report reiterates the existence of elevated petroleum hydrocarbons and arsenic in the soil at the Site. The Fire Department's approval of the soil to be left in place was under the condition that the soil remains capped by the paved parking and the building foundations and that if the soil were to be disturbed, the Fire Department would need to review the proposed developmental action to decide if further investigation or remediation would be necessary. During a redevelopment project it’s very likely that soil disturbance would occur and the report recommended a Soil Management Plan (SMP) be developed and implemented for the Site during any project where soil disturbance would occur.

Potential surprises that could be encountered during grading

While the Site has been investigated in the past, there is always the risk of the discovery of unknown conditions such as localized pockets of hydrocarbons or sump material that may remain in place.

Potential methane mitigation systems for future construction

This section describes the potential for the City of Santa Fe Springs to require a methane barrier be installed underneath any new structures. This would be confirmed after a methane survey is conducted at the Site as part of the "Site Plan Review".

The impacted soil at the Site is considered both a Historic REC and a Controlled REC (CREC).

6. SITE RECONNAISSANCE.

Mr. Troy Taylor of HMC conducted a Site and Site vicinity reconnaissance on February 20, 2019 in order to identify visible evidence of RECs of concern at the Site and to assess possible conditions off Site that may impact the Site. HMC was able to interview the property manager, Ms. Alice Kim, of Brookhollow who was able to provide some insight to the current tenants. She was also available to tour the Site and provide access to the various suites and answer our questions.

The Site is noted to contain seven structures of concrete tilt up construction with textured finishes on several of them. The parking area at the Site is paved asphalt with surface drainage noted towards a storm drain by way of sloping, curbs and ribbon drains. The storm drain is noted as part of a curb island located near the east end of the 10002 Building. A large number of the spaces were vacant and most of the tenant were involved with office uses and no issues of concern were noted. The following list presents those tenants with issues of concern as noted during our Site walk:

9930 Pioneer Blvd.: This building is located in the northeast corner of the Site and contains office a warehousing spaces. This building is currently occupied by several tenants of note such as a medical supply distributor and an after-market automotive parts dealer.

The automotive parts distributor named Fast Undercar is noted to have chemicals relating to the automotive industry but are packaged for resale. This tenant also receives used batteries destined to be recycled. These batteries are picked up regularly and recycled off-Site. The area is noted to be clean with good housekeeping practices. These activities do not pose an REC to the Site.

The medical supply company named Apria Healthcare has offices and warehouse space where

inventory is kept. This facility stocks and distributes various medical items to customers including oxygen tanks. These tanks are stored at this facility but do not pose an REC to the Site.

10016 Pioneer Blvd.: This building is located in the southwest portion of the Site and is noted to contain office and warehouse spaces as well as a cafe. The owner of the cafe indicated that there are no clarifiers in use related to their operation. This building contains a roofing and construction company that stores chemicals in drums in the warehouse as well as an open area behind building 10010. Chemical storage at this unit consisted of several chemicals such as roofing tar, elastic cement, asphaltic materials, unknown materials in drums, and used batteries. The two unmarked 55-gallon drums were noted in the warehouse. No one at the facility was able to identify the contents of the drum. Only *de minimus* staining was noted in the warehouse. This company also stored what appeared to be roofing material waste in gravel piles with roofing tar dried in it. Several roll off waste bins with construction waste are also stored in this area. This storage of the tar containing gravel material on what is reportedly property that belongs to the City of Santa Fe Springs. The drums should be labeled and spills and stains cleaned but these conditions do not rise to the level of an REC in our judgment.

A transportation company named A and D Transportation is also located at this building. This business stores six buses in parking stalls north and south of the building. Moderate staining underneath and in the vicinity of buses was noted which should be cleaned but does not pose an REC to the Site in our opinion.

10020 Pioneer Blvd.: This building is located in the southern area of the Site and contains several tenants of note. A tire recycler name Bontek Incorporated is noted to operate at this building with offices and a warehouse. Three unlabeled 55-gallon drums were seen in the parking area to the north of this tenant's space. Upon questioning, an unidentified employee of the company indicated that these drums contained paint. The employee also indicated that he knew who they belonged to but that the owner was not a tenant at the Site. These drums were being stored in the middle of a parking area with no secondary containment. No releases in relation to these drums were noted at the time of our visit but we recommend these drums be removed from the Site.

A medical device research and development lab named Applied Biocode occupies several units in this building. This occupant uses chemicals and generates small amounts of chemical waste in their operations. The hazardous waste area was observed and was noted to be orderly and generally clean. Gasoline is also noted to be stored in a flammable cabinet in the same area. The fuel is stored in relation to a portable generator kept for backup in case of power failure. A biohazard waste stream is also noted in this area. A representative of the company, Mr. Steve

Parpono, was present with us during the tour of this facility and indicated that no violations in relation to these operations have been received. Reportedly this tenant has complained of odors believed to be stemming from methane below the Site. Three PVC pipe conduits labeled "methane vent" were observed to the be running up the west wall outside of this building. We have been unable to find any documentation related to the vent pipes either with the owner or City of Santa Fe Springs.

The units in the remaining buildings were noted to be vacant or access was not granted due to the absence of the tenant. Based on the names of the tenants and reported uses as described by Ms. Kim, we do not view the lack of access as a critical data gap. Three transformers were observed in the parking lot of the Site. This equipment belongs to Southern California Edison. No staining was observed in the vicinity of these transformers.

Selected photographs illustrating the Site and nearby off-site conditions are included in Appendix A. Summaries of the Site and observations are detailed below.

Description and Use of Site:	The Site is a multi-tenant business park with many of the tenant spaces vacant.
Underground and Aboveground Storage Tanks:	No USTs or ASTs were noted on Site.
Hazardous Materials, Hazardous Wastes or Petroleum Products:	Chemical use and storage was noted at the Site at the following operations: **9930:** Fast Undercar and Apria Healthcare; **10016:** Klondike Construction; and, **10020:** Applied Biocode.
Drains, Drain lines and Sumps:	Drainage at the Site is directed by sheet flow and ribbon drains towards a centrally located storm drain that empties into the regional water reclamation system.
Pits, Ponds, Lagoons	Historical petroleum sumps were noted at the Site in the footprints of the 10012, 10016, and 10020 buildings. These sumps were addressed during the investigation and remediation overseen by the Fire Department.
Industrial Wastewater:	Industrial wastewater was not noted as being generated on Site during our visit. Past tenants are noted as having generated wastewater during a

	review of records maintained by the City of Santa Fe Springs with no violations noted.
Stains:	*De minimus* staining was observed in several areas though no significant stains that would suggest subsurface impacts was noted.
Wells:	There are no groundwater wells on Site. Historical oil wells are noted on the Site in the areas occupied by and in the vicinity of the 9930, 10010, and 10016.
Transformers:	Three transformers were observed the Site. No staining was noted in the vicinity of these transformers.
Other Features:	Klondike Construction also has roll off bins and piles of tar laden gravel behind the 10010 Building.

6.1. Site Vicinity

The Site vicinity includes light manufacturing uses, office, laboratory, warehouse, and distribution centers.

The Site is bound:

- on the north by an audio service company and a tire recycler;
- on the east by a rail road line across which are two industrial equipment supplies companies and a corrugated metals design facility;
- on the south by three industrial office and warehouses; and,
- on the west by Pioneer Blvd across which are industrial buildings in a business park type setting.

No environmental concerns were observed in relation to neighboring facilities during the site investigation.

7. REGULATORY AGENCY DATABASE RESEARCH

Regulatory agency database information was obtained from a standard radius Site Assessment (ASTM) report by Environmental Data Resources, Inc. The center of the search was in the approximate center of the Site. Search distances for specific databases were one-quarter to one mile as specified in the ASTM 1527-13 standard. The database search includes over 70 federal, state, local, and proprietary records. A complete copy of this report is included in Appendix B.

7.1. Database Records Concerning the Target Property

Name	Address	Lists	REC	Rationale
Cigna Health Plan of CA Lab	9920 Pioneer Blvd.	RCRA NONGEN/ NLR FINDS ECHO HAZNET	NO	This tenant is noted to be a handler of hazardous wastes that has disposed of various solvent wastes. No records of releases or violations were found for this facility.
Colorcom	9930 Pioneer Blvd. Ste. 101	HAZNET	NO	This tenant is listed as having disposed of solvent wastes. No records of releases or violations were found for this facility.
Apria Healthcare Inc.	9930 Pioneer Blvd. Ste. 102	Finds	NO	This record exists due to their use and storage of oxygen and does not pose an REC to the Site.
