Cigna Hlthcare of Calif/So Cal	9930 Pioneer Blvd. Ste. 102	HAZNET	NO	This facility is listed as having disposed of aqueous solutions including solvents. No records of releases or violations were found for this facility.
Roll Properties International	9930 Pioneer Blvd. Ste. 101	HAZNET	NO	This facility is listed as having disposed of a solid inorganic waste. No records of releases or violations were found for this facility.
Roll Properties International Assocs III	10010 Pioneer Blvd.	HAZNET	NO	This facility is noted as having disposed of an oil containing waste and clarifier sludge. No record of releases or violations were found for this facility. This facility is likely the Euro Industries facility mentioned below in the review of fire department records. This record is noted to have been recorded in 2000 which is the same year the ASTs and above ground clarifier were noted to have been removed from the Site.
Graphic Technology Inc.	10010 Pioneer Blvd. Ste. 102	RCRA-SGQ FINDS ECHO HAZNET	NO	This facility is noted having generated and disposed of various solvent waste. No record of violations or releases were found.
Harshaw Chemical Co.	10016 S. Pioneer Blvd.	LOS ANGLES CO. HMS	NO	This facility is listed having used chemicals. No records of releases or violations were found.
White Laboratories Inc.	10016 S. Pioneer Blvd.	LOS ANGLES CO. HMS	NO	This facility is listed having used chemicals. No records of releases or violations were found.

Mepco Oil Inc.	10016 Pioneer Blvd.	EDR HIST AUTO	NO	This facility is listed as a historical automotive facility involved with fuel and oil from 1995 to 2000. This listing most likely exists due to the business operating an office at this address. No fuel or oil product manufacturing has been observed or disclosed at the Site.

The Site did not appear on any other databases.

7.2. Database Records Concerning the Site Vicinity

A review of the EDR Radius Map database search was conducted to assess potential off-Site facilities that could be contributing hazardous substances to the Site and represent an REC. In review of the many entries on the database, we reviewed the following factors that affect the ability of a facility to affect the Site:

- Distance from the Site,
- Location from the Site with regard to the direction of groundwater flow,
- Nature of the release and whether the release has affected soil, groundwater or both,
- Status of the investigation (e.g. open or closed).

As mentioned, groundwater is reported to flow to the south. Therefore, properties adjacent to the Site or in the northern direction were considered as potential concerns. Only those facilities judged using these factors are discussed below.

Name	Address	Dir/Dist.	Lists	REC	Rationale
Omega Chemical Corporation	12504 &12512 E. Whittier Boulevard Whittier, CA 90602	2.6 miles N	NPL SEMS CORRACTS RCRA-TSDF RCRA-LGQ US ENG. CONTROLS US INST. CONTROL SWEEPS UST HIST. UST ROD RAATS PRP EMI	NO	This facility is listed as a SUPERFUND Site and has contributed to a large TCE groundwater plume which extends southwest from the facility and south through Santa Fe Springs. The Site lies on the western border of this plume. Remediation of this facility and subsequent contamination is listed as Active on the ENVIROSTOR database. As there is no evidence that the Site has contributed to this release, we would not consider this to

					be an REC but rather, a feature of note.
Delta Magnetics	10039 S Pioneer	91' W	RCRA-SGQ FINDS ECHO	NO	This facility is listed as a small quantity generator of hazardous waste. No records of releases or violations were found for this facility.
SMW Systems	9828 S. Arlee	425’ N	RCRA-SGQ FINDS ECHO	NO	This facility is listed as a small quantity generator of hazardous waste. No records of releases or violations were found for this facility.
Ellison Machinery Co.	9890 S. Pioneer Blvd.	519’ NE	RCRA-SGQ FINDS ECHO	NO	This facility is listed as a small quantity generator of hazardous waste. No records of releases or violations were found for this facility.
Spider SC Safeworks LP	11801 E. Smith Ave.	760' N	RCRA-SGQ	NO	This facility is listed as a small quantity generator of benzene, PCE, and TCE. No records of releases or violations were found for this facility.
Rohback Cosasco Systems	11841 Smith	760’ NE	RCRA-SGQ FINDS ECHO EMI	NO	This facility is listed as a small quantity generator of hazardous waste. The facility is also listed as a historical large quantity generator of hazardous waste. No records of releases or violations were found for this facility.
Smith Avenue	11919 Smith Avenue	981’ NE	HIST UST NPDES CIWQS	NO	This facility is listed as having operated a UST. A storage container information record from 1988 was found indicating a 10,000-gallon diesel tank existed at the facility. No record of releases or violations were found. Given the lack of reported releases and distance to the Site, this facility would not be considered an REC in our judgment.
RJM Company	11919 Smith Dr.	981’ NE	SWEEPS UST	NO	This facility is listed as having operated a UST and is likely related to the previous listing.

Southern California Edison - Whittier	Smith Ave.	1,203' NW	CPS-SLIC	NO	Records on the GeoTracker database indicate a soil excavation project to remove soil and material in oil sumps. This site has a Closed status from the DTSC.

7.3. Orphan Sites

Orphan Sites are those properties that are included on various agency lists, but for which the records do not have sufficient address information for the database program to map the site. None of the facilities listed were appeared to be in the immediate site vicinity.

7.4. Summary of Off-Site Issues

The Site is located in an area that has historically had light industrial and manufacturing uses. While chemicals were used and some releases occurred, none were close enough or in the correct orientation to be a threat to the Site. No RECs were found from off Site sources. The Omega Chemical Corporation has created a large groundwater plume that extends across the City of Santa Fe Springs and may encroach onto the Site. However, there is no data to suggest that the Site has contributed to impacts in the Omega Plume and as such, we would not consider this to be an REC to the Site.

7.5. Tribal Records

The Site is not located in a tribal area so there were no tribal records to review.

7.6. Oil and Gas Wells

The State of California Department of Conservation, Division of Oil, Gas, and Geothermal Resources online mapping website was reviewed for the location of active, plugged, or abandoned oil wells in the vicinity of the Site. There is record of seven plugged oil wells at the Site with associated sumps. A map portraying the orientation of the plugged wells and former sumps is included in Figure 3.

7.7. State of California

The State of California Geotracker and EnviroStor websites were also reviewed for information on potential on or off-site facilities that are being investigated or remediated under either RWQCB or DTSC oversight. The Site was not listed nor were there any facilities listed in the search zone that were not already listed in the EDR Radius Report reviewed as part of this assessment.

7.8. City of Santa Fe Springs Fire Department

HMC also reviewed records from the SFSFR who provides regulatory oversight for facilities that use hazardous materials and generate hazardous waste as well as provides regulatory oversight for certain site investigatory and remedial action. Records review yielded the following notable findings:

Name	Address	REC	Activities/Violations
Marquez Cabinets/AA Brothers	9930 Pioneer Boulevard	NO	This facility was noted to have a violation for spraying adhesives without a spray booth. This issue was brought into compliance and does not pose an REC to the Site.
Cigna Healthplans of California	9930 Pioneer Boulevard	NO	In a letter from the DTSC it is noted that this facility would treat hydrochloric acid with a sodium hydroxide and dispose of it down a drain in the facility.
Ninos Latinos Unidos	9930 Pioneer Boulevard	NO	This facility was given a violation for disposing of hazardous waste in a garbage receptacle. This practice in our opinion does not pose an REC to the Site.
One Stop Printing	10002 Pioneer Blvd.	NO	This facility is noted to have been observed rinsing aluminum plates with an activator chemical and water outside of the building. No violation was given but the SFSFR representative recommended against this practice. This facility is noted to have stored a gallon of the activator chemical. This activity likely has not caused contamination at the Site and does not pose an REC.
Euro Industries	10010 Pioneer Blvd.	NO	This facility is noted as operating a fabric dyeing line. The waste was transferred through conduit in floor trenches to two ASTs and an above ground clarifier. The unused dye and water was noted to be discharge to the sewer system. These features were removed in 2000 and the sludge subsequently sampled for PH and metals. The results yielded non-hazardous levels for the materials sampled. No violations were noted and the facility was given a No Further Action letter from the SFSFR in 2001. Given the sample results and the NFA letter it is our judgment that the activities from this facility does not pose an REC to the Site.
White Laboratories	10016 Pioneer Blvd.	NO	This facility is noted as manufacturing a mildew removal product. The facility used hypochlorite, granular chlorine, and soda ash to make this product. The tank this was mixed in was washed daily and generated 50-gallons of waste water per day which was then disposed of in a drain leading to the sewer. This disposal method was noted to be a permitted method in the record. This practice likely does not pose an REC to the Site.

Harshaw Chemical Company	10016 Pioneer Blvd.	NO	This facility operated a laboratory that conducted analysis of metal finishing solutions. This facility generated up to 1.5 ounces of waste water containing analytical reagents and metal finishing solution noted in by the inspector on record. This waste was also noted in the record to be permitted to discharge to the sewer. This operation likely does not pose an REC to the Site.

7.9. South Coast Air Quality Control Management District

A review of the AQMD Website indicates that no records were found for the Site.

7.10. City of Santa Fe Springs

The City of Santa Fe Springs City Manager's Office maintains a records database of building permits. The file contained several permits for the addresses at the Site. These permits described construction projects that occurred at the Site. These records provided some insight into activities at the Site but none that were not previously discussed above. Some of these permits were also reviewable in the EDR Report.

7.11. Los Angeles Regional Water Quality Control Board

A request for review of files maintained for the Site were requested but a response has not been received as of this date. The Site was not listed in the RWQCB Geotracker website.

8. VAPOR INTRUSION, ASBESTOS AND OTHER MATERIALS

8.1. Vapor Intrusion

The historic use of the Site as an oilfield as well as the eastern portion of the Site potentially being located within a documented groundwater plume originating off Site pose a moderate vapor intrusion risk.

8.2. Asbestos

The Site was developed into its current configuration with the residential structure in the 1970's when asbestos-containing materials (ACM) were still found in building materials. While the scope of work did not include an asbestos survey, a visual assessment was conducted during our Site inspection. Suspect ACMs at the Site included but are not limited dry wall, vinyl flooring, roofing material, and mastic. The material was noted in good condition and no delaminating or damage was noted. If the material is to remain in place, an Operations and Management (O&M) Plan should be prepared to guide management of the building with ACMs until such time that all ACMs are removed from the Site. If the structures are intended to be demolished, all asbestos containing materials must be abated prior to any action that could disturb the asbestos, like

demolition, takes place.

8.3. Radon

Radon is a naturally occurring radioactive material that is discharged from rocks present in the subsurface. The Site is listed as being located in Zone 2 with regards to radon indicating that radon maybe present at concentrations less than 4 pico curies / liter.

8.4. Mold

No evidence of water damage or mold growth was observed.

9. SUMMARY OF FINDINGS

Key findings of this Phase I ESA are as follows:

- The Site was historically an oilfield until the 1970's when the Site was redeveloped into its current orientation and used as an industrial business park. The Site included 7 oil wells as well as several oil field sumps in addition to pipelines that would typically connect the wells to above ground storage tanks.
- The Site was redeveloped at a time that environmental regulations and control were not as stringent as are present today. There were requirements for abandonment of oil wells and geotechnical requirements for development that would have likely precluded leaving oil field sumps in place. Redevelopment of the Site would have likely included removal of more liquid material that may have been present while using impacted soil during the grading effort.
- The City of Santa Fe Springs Fire Department was involved and oversaw the oil field closure aspects as part of the redevelopment efforts at the Site. Soil sampling was conducted as part of the redevelopment and a report was submitted which documented the concentrations of petroleum hydrocarbons present in soil at the Site. Methane gas sampling was also conducted which reported generally low concentrations. The Fire Department approved that the impacted soil could be left in place provided it remained capped by the paved parking lot and building foundations. A No Further Action status was approved for the Site by the Fire Department.
- There have been previous subsurface investigations conducted at the Site after the redevelopment as part of various due diligence investigations. The results of those investigations document the presence of soil in areas of the Site consistent with the previous closure determination of the Fire Department.
- In the Fire Department closure letter, they reference that changes in the Site conditions would need their further review. Redevelopment of the Site will entail movement of the residually impacted soil at the Site under potentially more stringent regulatory requirements. However, petroleum hydrocarbons do degrade with time so that the

current concentrations may be less than what was documented in the previous subsurface investigations at the Site.

- The oil wells that were abandoned will need to be evaluated as part of any redevelopment to assess whether the Division of Oil and Gas will require that they be reabandoned to current standards. This will include an updated methane gas survey which will be important for both the oil well abandonment evaluation but also to assess whether a methane gas mitigation system will be necessary as part of the future development.
- The historical oil field uses of the Site and remedial actions taken represent a Historic and Controlled REC in our judgment.
- The buildings on Site are used for a variety of primarily office related uses with minimal chemical usage. The following facilities were noted exceptions:
- The 10016 building contains a roofing and construction company named Klondike Construction that stores chemicals such as roofing tar, elastic cement, asphaltic materials and unknown materials in drums in the warehouse. Two unmarked 55-gallon drums were noted in the warehouse as well as used automotive batteries. This company also stores tar laden gravel in piles in an open area behind building 10010 on property owned by the City of Santa Fe Springs. While there were no significant stains, all of their chemical waste should be removed prior to their vacating the premises.
- Several unlabeled 55-gallon drums were noted in the parking area north of the Bontek Inc. space at the 10020 building. The drums did not appear associated with any specific tenant.
- What appeared to be methane vent pipes consistent with a methane mitigation system was noted along the 10020 building wall. The owner was not aware and there were no plans or documentation of the construction of this feature found during this assessment.

- While there were chemicals used, there were no RECs noted from the current use of the Site.
- The Site is located in an area that has historically had light industrial and manufacturing uses. While chemicals were used and some releases occurred, none were close enough or in the correct orientation to be a threat to the Site with the exception of Omega Chemical Corporation. This facility contributed to a large groundwater chlorinated solvent plume that originates 2.6 miles to the northeast and heads southwest toward the Site before turning south. The western border of this plume may extend onto the Site. There has been no data to date to suggest that the Site may have contributed to the Omega Plume and as such, we would not consider it to be an REC to the Site.
- There were no RECs found from off Site sources.
- HMC previously reviewed the prior reports for the Site and prepared an environmental evaluation which included recommendations for actions to take with regards to future

development of the Site. They included:

- a "Site Plan Review" should be undertaken to assess whether re-abandonment to current standards for the plugged oil wells at the Site is necessary;
- Prepare and implement a Soil Management Plan for the impacted soils at the Site as well as for possible surprises that could be found during grading; and,
- Based on the results of the soil gas survey, a methane mitigation system may be necessary as part of future construction.

- There has been no new information to alter or change these overall recommendations for redevelopment. We do recommend that an updated Site assessment including a methane gas survey be conducted at the Site to aid in the development of the SMP as well as to assess whether a methane mitigation system will be needed at the Site.

10. DATA GAPS

Data gaps were not found during our investigation.

11. CONCLUSIONS

HMC has conducted a Phase I ESA for the Site in accordance with the ASTM E1527-13 guidelines. Based on the results of our research and available data, there were no RECs noted at the Site.

However, the Site was part of an oil field and remedial actions were taken to close the oil wells and soil sampling confirmed the presence of elevated concentrations of hydrocarbons in soil that was allowed to remain in place by the City of Santa Fe Springs Fire Department. The historic oil field operations would be considered a HREC, and CREC in our judgment

While not an REC per the ASTM definition, given the age of the building, it is likely that asbestos containing materials are present at the Site.

12. RECOMMENDATION

Given the findings of this ESA, we recommend that:

- A subsurface investigation be conducted across Site to assess the current concentrations of hydrocarbons and arsenic that were previously reported at the Site as well as a soil gas survey to assess the potential for methane gas and volatile organic compounds that may be present.
- HMC has previously offered recommendations with regards to actions that will be necessary to allow development of the Site. They include:

  - a "Site Plan Review" should be undertaken to assess whether re-abandonment to current standards for the plugged oil wells at the Site is necessary;
  - Prepare and implement a Soil Management Plan for the impacted soils at the Site as well as for possible surprises that could be found during grading; and,
  - Based on the results of the soil gas survey, a methane mitigation system may be necessary as part of future construction.
- The two unmarked 55-gallon drums in the Klondike warehouse should be identified and stored properly. The batteries noted in the warehouse should be recycled or stored properly if still in use. The tar laden piles belonging to Klondike Construction should be properly stored.
- The four 55-gallon drums of paint in the parking lot north of the tire recycler should be removed from the Site by the owner of those drums.
- An asbestos survey should be conducted to assess potential asbestos containing materials that may be present at the Site that will need to be abated prior to demolition.

13. QUALIFICATIONS

Mark S. Cousineau, NREP

Mr. Mark S. Cousineau, principal with HMC, has a diverse professional background in environmental management, which includes working as a generator, regulator, consultant, and corporate advisor in hazardous waste and other environmental issues.

Mr. Cousineau's technical background is focused in the area of overseeing large-scale environmental investigations and regulatory compliance management related to site assessments, subsurface investigations, facility surveys, and site remediation. To projects such as these, Mr. Cousineau brings expertise in evaluating complex sites and developing solutions to solve the technical, operational, regulatory, financial and timing issues. In addition, Mr. Cousineau routinely assists clients in developing environmental business plans for single assets and multi-site real estate portfolios and has designed and implemented several tenant audit programs involving the proactive management of environmental risk caused by on-site commercial and industrial tenant activities.

Mr. Cousineau has provided litigation support and has served, as a court-appointed expert on environmental issues, is a member of the National Registry of Environmental Professionals, holds a M.S. in Environmental Sciences from California State University Fullerton and a B.S. in Chemistry from University California San Diego.

As signatory to this report, I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of this part. I have the specific qualifications based on education, training, and experience to assess the property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Mark Cousineau, NREP
Principal

EDR PUR-IQ® Report

"the intelligent way to conduct historical research"

for
9920 Pioneer Blvd
9920 Pioneer Blvd
Santa Fe Springs, CA 90670
Lat./Long. 33.946351 / 118.079047
EDR Inquiry # 5552600.2s

The EDR PUR-IQ report facilitates historical research planning required to complete the Phase I ESA process. The report identifies the *likelihood* of prior use coverage by searching proprietary EDR-Prior Use Reports® comprising nationwide information on: city directories, fire insurance maps, aerial photographs, historical topographic maps, flood maps and National Wetland Inventory maps.

Potential for EDR Historical (Prior Use) Coverage - Coverage in the following historical information sources may be used as a guide to develop your historical research strategy:

1. Building Permits: Building Permits are available for 'SANTA FE SPRINGS', CA (1994 - 2017).

2. City Directory: Coverage exists for the TP address for 2006

3. Fire Insurance Map: When you order online any EDR Package or the EDR Radius Map with EDR Sanborn Map Search/Print, you receive site specific Sanborn Map coverage information at no charge.

4. Aerial Photograph: Coverage exists for portions of Los Angeles County for the following decades: 1920s, 1940s, 1950s, 1960s, 1990s, 1970s, 1980s Shipping time 3-5 business days.

5. Topographic Map: The USGS 7.5 min. quad topo sheet(s) associated with this site:

Historical: Coverage exists for LOS ANGELES County

Current: Target Property: TP | 2012 | 5633777 Whittier, CA

6. Flood Insurance Rate Maps (FEMA) : Coverage is available for LOS ANGELES county.

EDR's network of professional researchers, located throughout the United States, accesses the most extensive national collections of city directory, fire insurance maps, aerial photographs, flood maps and historical topographic map resources available for Santa Fe Springs, CA. These collections may be located in multiple libraries throughout the country. To ensure maximum coverage, EDR will often assign researchers at these multiple locations on your behalf. Please call or fax your EDR representative to authorize a search.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hazard Management Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # B350-48DE-9325

PO # NA

Project Pioneer Blvd Santa Fe Springs

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: B350-48DE-9325

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Hazard Management Consulting (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/12/2018 has revealed that there is 1 NPL

site within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/12/2018 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/13/2018 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 07/31/2018 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/29/2018 has revealed that there are 21 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

WMUDS/SWAT: The Waste Management Unit Database System is used for program tracking and inventory of waste management units. The source is the State Water Resources Control Board.

A review of the WMUDS/SWAT list, as provided by EDR, and dated 04/01/2000 has revealed that there are 3 WMUDS/SWAT sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 10 SWEEPS UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 11/15/2018 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

EMI: Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies

A review of the EMI list, as provided by EDR, and dated 12/31/2017 has revealed that there is 1 EMI site within approximately 0.001 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
OMEGA CHEMICAL CORPO Facility Id: 8107	***12504 AND 12512 E. W***	***0 - 1/8 (0.000 mi.)***	***0***	***12***

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there are 5 HAZNET sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110002712663

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Scoring: 2

Summary Details:

Conditions at Proposal September 29, 1998): The Omega Chemical Corporation Omega) site is a former ha ardous waste treatment and storage facility that operated from 1976 to 1991 on a 40,000-square foot property in Whittier, Los Angeles County,California. Omega conducted solvent recovery using an on-site fractionation and distillation process and operated as a storage and transfer facility for various ha ardous waste classifications. Ha ardous wastes stored on site contained mainly chlorinated and aromatic solvents. In June 1995, before removal activities, the Omega site consisted of thousands of drums of ha ardous waste, two roll-off bins of hardened resin material, hundreds of empty but contaminated drums, numerous cylinders with capacities ranging from 15 to 20,000 pounds, and various other smaller containers of waste and/or ha ardous waste. Inside the on-site warehouse there were hundreds more 55-gallon drums that Omega claimed to be product and assorted smaller containers of ha ardous material. Since 1991, the California Department of Toxic Substances Control DTSC) and EPA s Ha ardous Waste Management Division have been actively trying to get the owner/operator to remove the wastes and clean up the site.In March 1995, the site owner/operator plead guilty to two felony counts of illegal storage and disposal of ha ardous wastes. On May 9, 1995, EPA issued CERCLA Administrative Order No. 95-15 to the owner of Omega and to generators of ha ardous waste that had shipped major quantities of material to Omega. During 1995, EPA s Superfund Emergency Response Office oversaw Phase I removal activities, during which contractors to a responsible party group removed all ha ardous materials and wastes from the site. Phase II site activities began in November 1995 and included collection and analyses of subsurface soil and ground water at the site. Analytical results indicated that subsurface soil samples were mainly contaminated with tetrachloroethene PCE), with lesser amounts of trichloroethene, dichloroethene and other chlorinated hydrocarbons, Freons and metals. PCE contamination was detected in soil at concentrations ranging from 1.9 milligrams per kilogram mg/kg) to 510 mg/kg. Ground water samples collected at the site contained PCE up to 86,000 micrograms per liter as well as significant concentrations of other chlorinated hydrocarbons and Freons. Phase II activities documented the presence of PCE in shallow ground water ina plume that extends almost 1 mile downgradient of the site. Although the ground water samples were collected in the shallow regional aquifer of the Lakewood Formation and most of the municipal drinking water wells draw water from the San Pedro Formation, California Department of Water Resources hydrogeologic cross-sections of the Lakewood and Upper San Pedro Formations indicate that aquifers are interconnected within 2 miles of the

OMEGA CHEMICAL CORPORATION (Continued) **1000232419**

site. Eight water purveyors draw ground water from 35 wells within 4 miles of the site to supply drinking water to approximately 284,270 people. The nearest well to the site is 1.3 miles to the west. This and nearly two-thirds of the wells within 4 miles draw water from the Lakewood and Upper San Pedro formation aquifers. The San Gabriel River is the nearest surface water body at approximately 2.5 miles from the site. The site is located in a mixed industrial and residential community, with residences located across Whittier Boulevard tothe northeast. Status January 1999): EPA is considering various alternatives for the site. The description of the site release) is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

. Waste name: 1,1-DICHLOROETHYLENE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: D040
. Waste name: TRICHLOROETHYLENE

Historical Generators:
Date form received by agency: 02/20/2008
Site name: OMEGA CHEMICAL SITE PRP ORGANIZED GROUP
Classification: Large Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE

OMEGA CHEMICAL CORPORATION (Continued) **1000232419**

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste name: TRICHLOROETHYLENE

Historical Generators:
Date form received by agency: 02/20/2008
Site name: OMEGA CHEMICAL SITE PRP ORGANIZED GROUP
Classification: Large Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D028
. Waste name: 1,2-DICHLOROETHANE

. Waste code: D029
. Waste name: 1,1-DICHLOROETHYLENE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: D040
. Waste name: TRICHLOROETHYLENE

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

SANTA FE SPRINGS INDUSTRIAL PARK (Continued) **1007370148**

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

WHITTIER CSO (Continued) **1000904989**

. Waste code: 731
. Waste name: Liquids with polychlorinated biphenyls > 50 mg/l

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D008

FINDS:

Registry ID: 110002835326

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002956980

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002702175

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/15/1999
Comments: Completed a Preliminary Assessment for the site. Recommended referral to RWQCB-LA. Preliminary Assessment approved by USEPA. U.S. EPA approved PA which DTSC completed for this site. USEPA determined the site is eligible for an SI.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/23/1996
Comments: The PEA Equivalent documented characterization and cleanup conducted between 1991 and 1996. DTSC determined that based on the data presented, "no further action" is required on the "Boneyard" Mobile/Jalk Fee Site, and the hazardous materials remaining do not constitute a threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 10/28/1993
Comments: The Department received a notification from PRP alleged that the site’s soil contamination originated from an off-site source, Continental Heat Treating, Inc.. Soil at the site is contaminated with crude oil; heavy metals such as lead, mercury, and zinc; and chlorinated hydrocarbons such as PCE, TCE, and 1,2-DCE. Sample results indicate that the concentration of these contaminants exceeding regulatory limits. Due to the evidence of contamination onsite, the Department recommends a PEA.

MOBIL OIL/JALK FEE (Continued) **S106386948**

RB Case Number: 0203
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Dichloroethane (DCA), Dichloroethene (DCE), Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride
Site History: The Former ExxonMobil Jalk Fee Property (site) is approximately 9 acres in size and was used for oil production from the 1920s to the 1990s. All oil field facilities were removed in the late 1990s.
Initial investigations started in the early 1990s and soil impacted with volatile organic compounds (VOCs) and petroleum hydrocarbons was encountered. In 1998 and 2000, chlorinated and petroleum hydrocarbon impacted soil was excavated at the site and transported to offsite facilities for treatment. In 2001, the Los Angeles Regional Water Quality Control Board (Regional Board) issued a no further action requirement for soil. In 2003, the site was redeveloped as an industrial business park. Initial groundwater investigations started in 2000, with the installation of 3 shallow single-depth groundwater monitoring wells. VOCs, mostly tetrachloroethene (PCE) and trichloroethene (TCE) were detected in groundwater samples. To further assess groundwater conditions at the site, three additional multi-depth wells were installed at the site in April 2011. During this investigation, PCE was detected in soil at concentrations up to 6,600 micrograms per kilogram at approximately 15 feet below ground surface, in the southern part of the site. Groundwater samples from the newly installed wells are impacted with PCE at concentrations up to 1,800 micrograms per liter. Based on these results, the Regional Board is directing the Discharger to conduct additional soil and groundwater investigations; therefore, the 2001 no further action determination for soil is no longer applicable to the site.
Additional investigations (soil vapor, soil, groundwater) were conducted in 2012 and 2014. Off-site groundwater investigations were conducted in 2014 with the installation of multidepth groundwater monitoring wells. In 2017, indoor air investigations were conducted at two on-site (10607 Norwalk Boulevard and 10629 Norwalk Boulevard) and one off-site building (10701 Norwalk Boulevard). Indoor air sampling results were used to conduct an evaluation of vapor intrusion into indoor air.

FINDS:

Registry ID: 110002634454

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

ALL PURE CHEMICAL CO (Continued) **S100538588**

dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Registry ID: 110002643382

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Document Type:	Preliminary Endangerment Assessment Workplan
Completed Date:	06/26/2007
Comments:	The approved workplan outlines the proposed collection of additional soil, soil gas, and groundwater samples to fill site characterization data gaps identified during an October 4, 2006 meeting and a November 16, 2007 conference call. The tasks included the installation and sampling of multidepth soil gas probes for VOC analysis, soil sampling for VOC's, SVOC's, and metals analysis, and the installation and sampling of groundwater monitoring wells for VOC's and SVOC's analysis.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/12/2018

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/12/2018

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/21/2018

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/12/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

USGS TOPOGRAPHIC MAP

Target Property Map:	5633777 WHITTIER, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

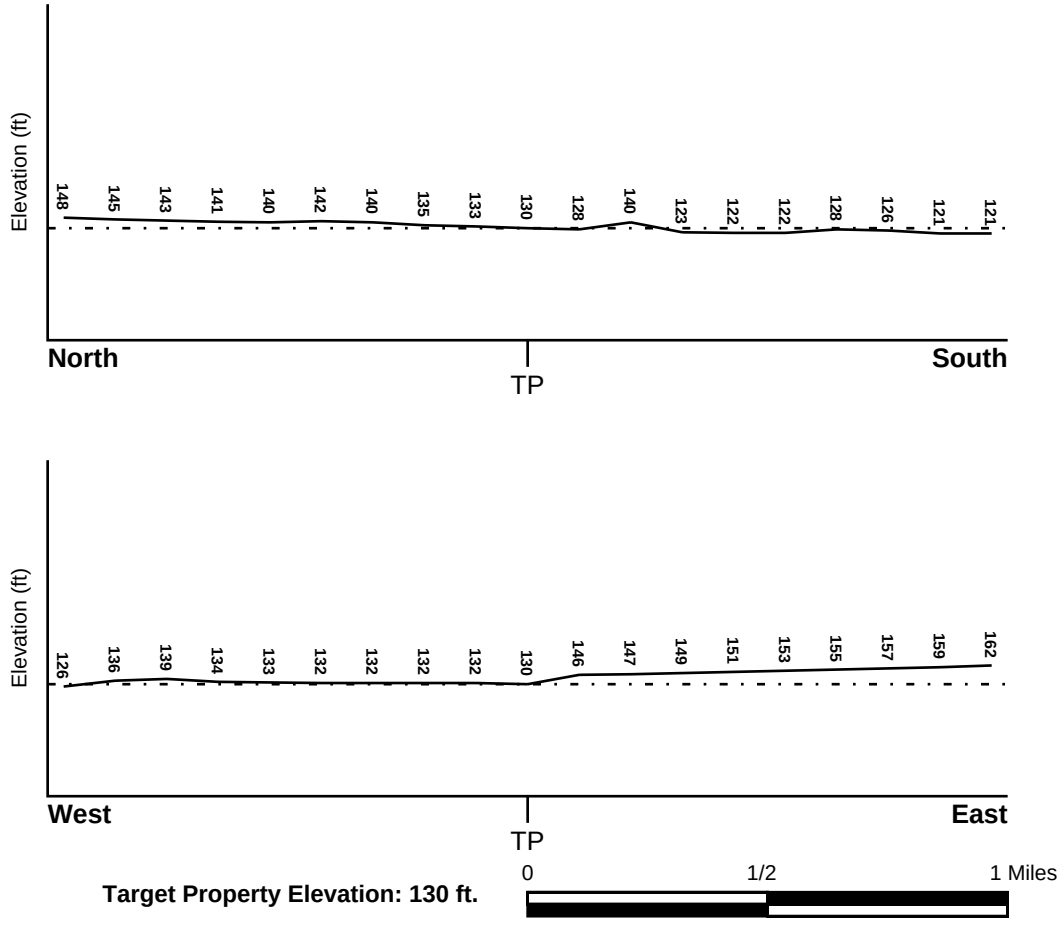
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 130 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1829F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1830F	FEMA FIRM Flood data

06037C1837F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITTIER	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles SSE
Site Name:	Powerine Oil Co
Site EPA ID Number:	CAD008383291
Groundwater Flow Direction:	South
Inferred Depth to Water:	70 to 110 feet in the shallow aquifer.
Hydraulic Connection:	The shallow and deeper aquifers are considered to be hydraulically connected in the site vicinity.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
17	1/2 - 1 Mile SSE	SSW
1G	1/2 - 1 Mile SSE	SSW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

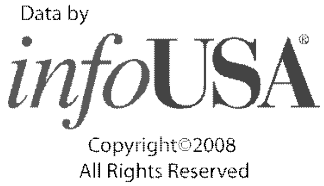
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Subject: Review of Prior Environmental Reports for the Santa Fe Springs Commerce Center 9920-10020 Pioneer Blvd Santa fe Springs California

Dear Scott,

Pursuant to your request, Hazard Management Consulting Inc. has reviewed historic environmental reports for the Site to evaluate the necessity for potential subsurface testing. It is our understanding that a prospective lender for the Site retained Partner Environmental Engineering and Science to prepare a Phase One Environmental Site Assessment as part of their due diligence activities. As part of their work, Partner reviewed the historic use of the Site consistent with the ASTM guidelines. Partner raised several issues as Recognized Environmental Conditions (RECs) with the Site regarding the historic use of the site as an oilfield. In response, Partner recommended that subsurface testing be conducted.

Issues of concern raised by Partner included the presence of seven abandoned oil wells and at least one oil field sump. We have reviewed the historic aerial photographs presented by Partner and note additional oil field sumps that were also present on Site. The oil wells were abandoned under the Division of Oil and Gas permits. When oil wells are drilled, it was common practice to excavate an area adjacent to the well, which was used for disposal of drilling fluids, mud, and petroleum products. These sumps were then typically covered with soil and left in place. Prior to construction of a building, these sumps would have to be excavated and removed as part of grading and foundation preparation. The sumps would not be geotechnically compacted to allow a building to be built.

It is our understanding that the on site buildings were constructed in the early 1970s. This was a time before stringent environmental regulations were in place but definitely when an awareness of geotechnical and foundation testing was in place. Sumps such as those found

211 W. Avenida Cordoba, Suite 200 San Clemente, CA 92672 tel 949/361/3902 fax 949/361/3697 www.hmcinc.biz
info@hmcinc.biz

on site would definitely need to be removed to allow buildings to be built. But, at that time, reuse of the soil from the sump on site was also very probably. The contents of the sump would be removed and the liquid material removed from the Site, as it would not allow for compaction. Soil containing petroleum would typically be worked into the fill for the project.

From our review of the Partner report, it appears that they were not provided reports from prior investigations that were conducted at the Site. Specifically, there were two prior subsurface investigations that were conducted under the oversight of the City of Santa Fe Springs Fire Department that investigated the historic oil field operations and a historic tenant that existed on Site. These reports were prepared by Environ and LFR for the former owners. The investigations were targeted in the area of the former wells and sumps and historic tenant activities. Environ reportedly advanced 9 borings and LFR drilled 27 borings with three borings advanced to groundwater. While borings were not placed in the exact location of one of the sumps adjacent to the 10020 Pioneer Building, that historic sump was in the general area of these investigations. As mentioned, it would have been common practice to remove the contents and then spread the soil with petroleum in the fill dirt for the project.

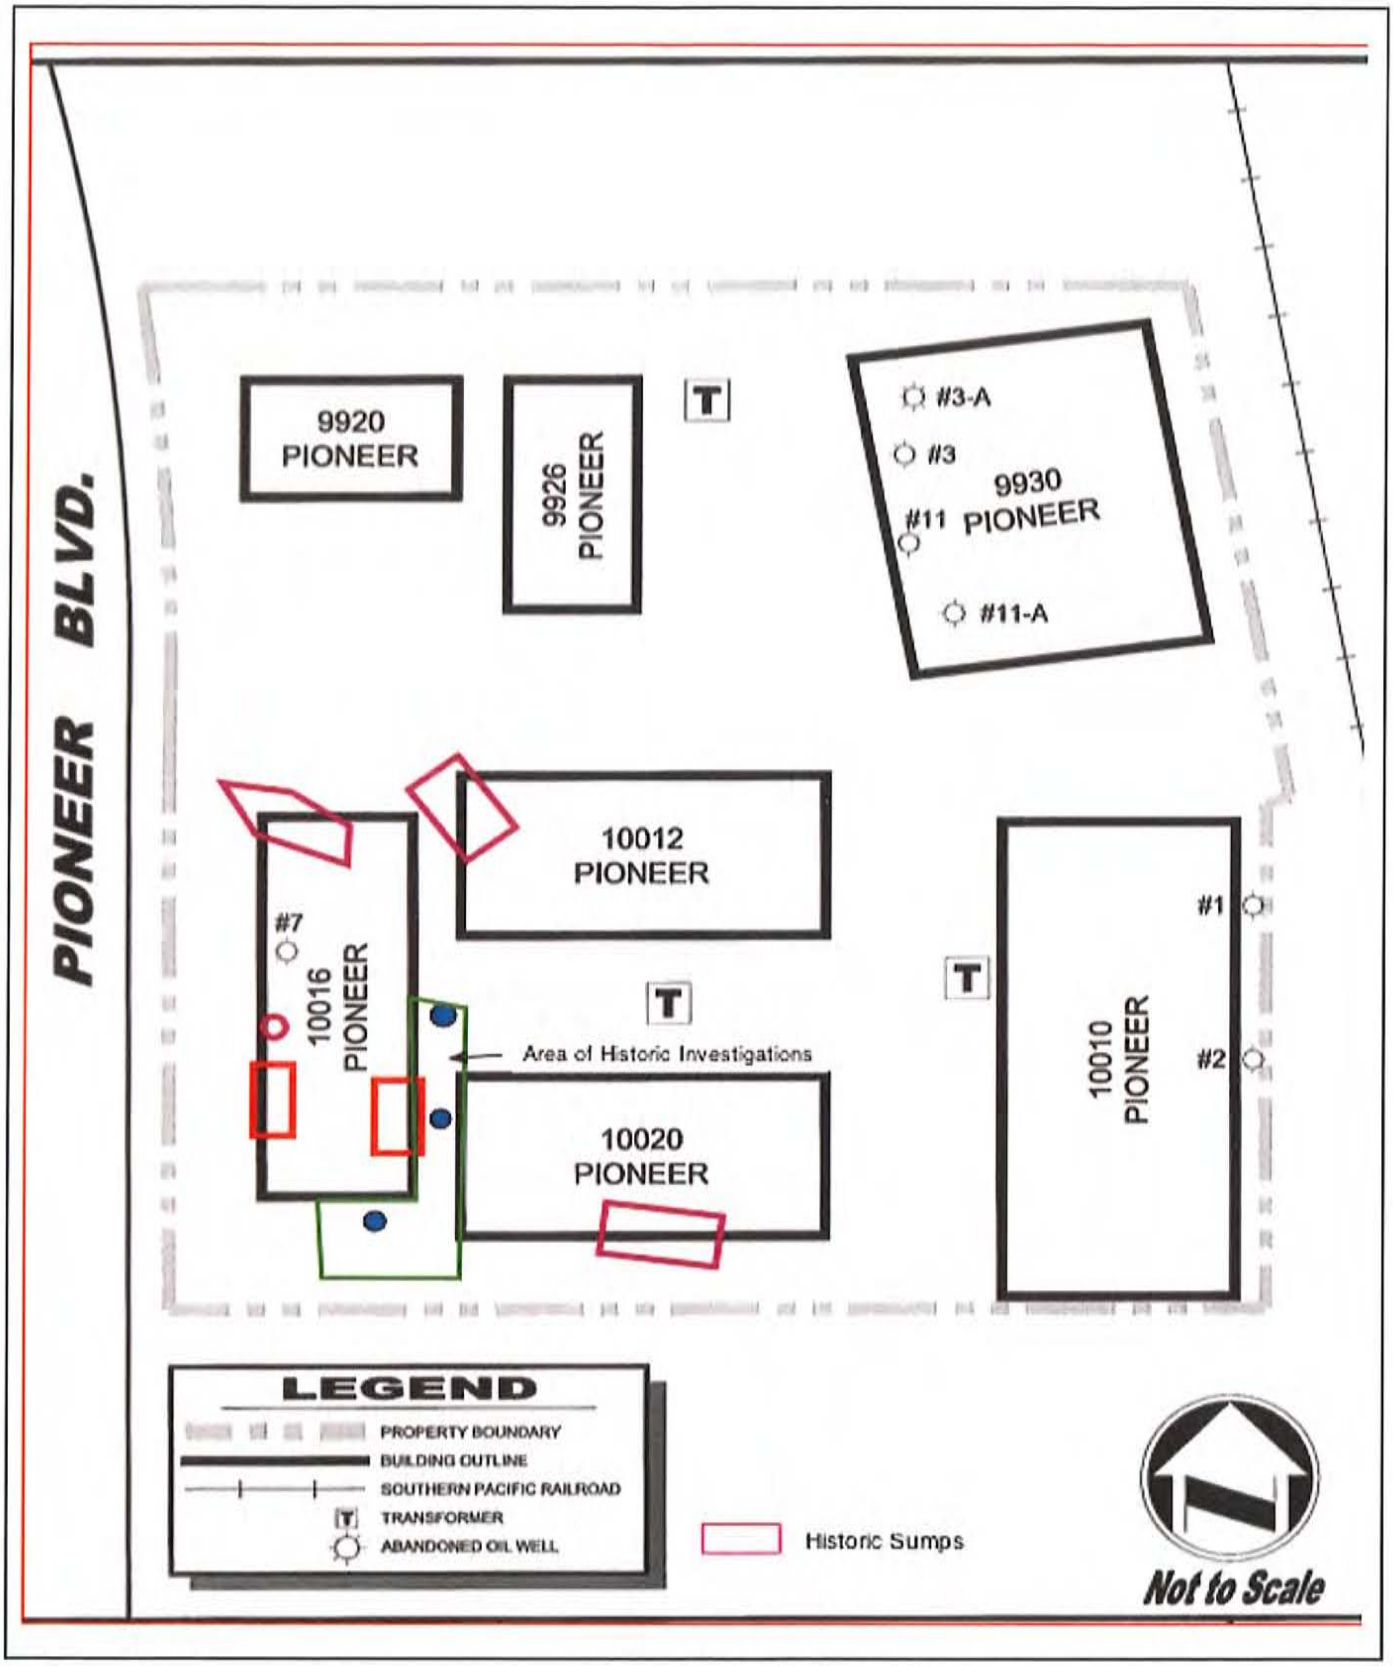
The results of the investigation conducted by Environ and LFR documented the presence of elevated concentrations of petroleum hydrocarbons and arsenic in soil, which would be consistent with oil field waste in a sump. Only trace concentrations were reported in groundwater. LFR evaluated the data and recommended that since the residuals did not pose a threat to groundwater and exposure was limited by the current development, the Fire Department approve the soil to be left in place given that it was capped with either the asphalt parking or concrete foundations. It is our understanding that the Fire Department approved the material to be left in place. No further action was required.

In addition to the petroleum hydrocarbons and arsenic in soil, the Fire Department also required the owners to conduct methane monitoring, as the buildings were adjacent to historic oil wells. Only low concentrations of methane were reported.

In conclusion, while we understand the request of Partner to conduct subsurface testing, it appears that Partner did not have the benefit of the prior testing that was conducted on Site. Furthermore, the testing was conducted under the direction and oversight of the City of Santa Fe Springs Fire Department who approved a request for No Further Action. As such, the

issues raised by Partner have already been investigated and a regulatory decision granted. We feel that the historic issues have been investigated and resolved.

We thank you for the opportunity to be of service and would be happy to address any questions you may have.



Very truly yours,
Hazard Management Consulting Inc.

Mark S. Cousineau, REA II

Notes:

1. VOCs = Volatile organic compounds; analyzed using EPA Method 8260B.
2. Sample depth is in feet below ground surface.
2. µg/kg = Microgram per kilogram.
3. ENVIRON samples were analyzed by American Environmental Testing Lab; LFR's samples were analyzed by Associated Labs.
4. ND = Not detected.
5. J = Estimated value.
6. Also reported by the laboratory for Sample SB-12-5 were 3,240 µg/kg of n-butylbenzene and 310 µg/kg of 1,2,4-trimethylbenzene.
7. m,p-xylenes were reported by the laboratory for some of the samples; the highest reported concentration was 79.0 J for Sample SB-12-5.
8. PRG = Preliminary Remediation Goal.
9. City = City of Santa Fe Springs's Soil Screening Guidelines and Site Mitigation Procedures for Industrial Sites, dated April 24, 2002.
10. LARWQCB = Interim Site Assessment and Cleanup Guidebook, dated May 1996, developed by the California Regional Water Quality Control Board – Los Angeles Region. The City recommends that these guidelines be used for soil at depths of greater than 5 feet below ground surface.
11. NE = Not established.

* The 700 µg/kg concentration was obtained from the LARWQCB Guidebook using the conservative assumptions of sand lithology and depth to ground water at 20 feet below the soil sample. This value would be 2,000 µg/kg for a silt lithology.

HAZARD MANAGEMENT CONSULTING

June 26, 2018

Mr. Scott Doucette
AEW Capital Management LP
601 S Figueroa Street Suite 2150
Los Angeles, CA 90017

Subject: Evaluation of Environmental Status of the Santa Fe Springs Commerce Center 9920-10020 Pioneer Blvd Santa fe Springs California (Site

Dear Scott,

Hazard Management Consulting Inc. previously reviewed historic environmental reports for the Site to evaluate the necessity for potential subsurface testing on your behalf in 2014. At that time, a prospective lender retained Partner Environmental Engineering and Science to prepare a Phase One Environmental Site Assessment as part of their due diligence activities. As part of their work, Partner reviewed the historic use of the Site consistent with the ASTM guidelines. Partner raised several issues as Recognized Environmental Conditions (RECs) with the Site regarding the historic use of the site as an oilfield. It is our understanding that you are now considering redeveloping the Site with your partner, Brookhollow Group. As part of that effort, you have asked us to review the condition of the Site and discuss the potential environmental issues you will have to consider as part of redevelopment.

BACKGROUND

Issues of concern raised by Partner included the presence of seven abandoned oil wells and at least one oil field sump. We have reviewed the historic aerial photographs presented by Partner and note additional oil field sumps that were also present on Site. The oil wells were abandoned under the Division of Oil and Gas permits. When oil wells are drilled, it was common practice to excavate an area adjacent to the well, which was used for disposal of drilling fluids, mud, and petroleum products. These sumps were then typically covered with soil and left in place. Prior to construction of a building, these sumps would have to be

excavated and removed as part of grading and foundation preparation. The sumps would not be geotechnically compacted to allow a building to be built

It is our understanding that the on site buildings were constructed in the early 1970s. This was a time before stringent environmental regulations were in place but definitely when an awareness of geotechnical and foundation testing was in place. Sumps such as those found on site would definitely need to be removed to allow buildings to be built. But, at that time, reuse of the soil from the sump on site was also very probable. The contents of the sump would have likely been processed and the liquid material removed from the Site, as it would not allow for compaction. Soil containing petroleum would typically be worked into the fill for the project.

From our review of the Partner report, it appears that they were not provided reports from prior investigations that were conducted at the Site. Specifically, there were two prior subsurface investigations that were conducted under the oversight of the City of Santa Fe Springs Fire Department that investigated the historic oil field operations and a historic tenant that existed on Site. These reports were prepared by Environ and LFR for the former owners. The investigations were focussed in the area of the former wells and sumps and historic tenant activities. Environ reportedly advanced 9 borings and LFR drilled 27 borings with three borings advanced to groundwater. While borings were not placed in the exact location of one of the sumps adjacent to the 10020 Pioneer Building, that historic sump was in the general area of these investigations. As mentioned, it would have been common practice to remove the contents and then spread the soil with petroleum in the fill dirt for the project.

The results of the investigation conducted by Environ and LFR documented the presence of elevated concentrations of petroleum hydrocarbons and arsenic in soil, which would be consistent with oil field waste in a sump. Only trace concentrations were reported in groundwater. LFR evaluated the data and recommended that since the residuals did not pose a threat to groundwater and exposure was limited by the current development, the Fire Department approve the soil to be left in place given that it was capped with either the asphalt parking or concrete foundations. It is our understanding that the Fire Department approved the material to be left in place. No further action was required.

In addition to the petroleum hydrocarbons and arsenic in soil, the Fire Department also required the owners to conduct methane monitoring, as the buildings were adjacent to historic oil wells. Only low concentrations of methane were reported. No action is currently required on your part if the Site stays in its current configuration.

EVALUATION OF REDEVELOPMENT ISSUES

If you were to consider redevelopment of the Site, there are several issues that you would need to take into consideration. They include:

- Potential reabandonment of the abandoned oil wells to current standards;
- Preparation and implementation of a Soil Management Plan;
- Potential surprises that could be encountered during grading;
- Potential methane mitigation systems for future construction.

The following presents a summary of each of these issues and preliminary cost estimate.

Potential Reabandonment of the abandoned oil wells to current standards

The standards for abandonment of oil wells have evolved over the last 50 years as oil well science as well as an understanding of local conditions has evolved. These changes are primarily focused on preventing methane from migrating up the well casing and into the environment where potential explosions could occur. Currently, if you want to redevelop a Site with abandoned oil wells, you need to undergo a "Site Plan Review" in accordance with the California Division of Oil and Gas (DOG). This requires a petroleum engineer review the abandonment records and evaluate what, if any, additional abandonment procedures may be necessary. This could include removal and replacement of certain sections of the abandoned well to complete reabandonment. The costs for the well review is typically a couple thousand dollars per well. The costs to reabandon a well are highly specific to the well and could range from $25,000 to hundreds of thousands of dollars. There have been cases where a well can not meet current abandonment standards. In such an event, the well can not be built over and a set back of ~15' in all directions is requires to allow a redevelopment rig access to attempt redevelopment in the future.

There are seven abandoned wells on Site. For preliminary planning purposes, we would recommend you consider a budget of $25,000 for the Site Plan Review and $50,000 / well to abandon to current standards. This would include conducting a methane gas survey at the Site. Upon completion of the Site Plan Review, you would better understand what, if any work is required and refine these estimates.

Preparation and implementation of a Soil Management Plan

As noted, the previous Phase II testing identified several areas with hydrocarbons present in soil. While the Fire Department has approved this soil to remain in place, that was under the conditions that the Site stayed in its then configuration. As you would be grading the Site for future pads, drainage and utilities, it is very likely that you would be disturbing this residually impacted soil, which would require special handling. It would be the goal of the SMP to allow all residuals to remain on Site. The costs to prepare the SMP would be an estimated $5,000. Implementation would include a consultant on Site full time during grading. A rough cost of $100,000 should be budgeted for SMP implementation.

Potential surprises that could be encountered during grading

While the results of the previous characterization efforts led to a No Further Action determination from the Fire Department, that was based on the available data. Subsurface investigations have an inherent degree of uncertainty as it is not possible to sample all soil at a Site. During grading, it is likely that you could run into previously unknown conditions such as localized pockets of the former sumps. We would recommend that you include a contingency for such unknowns in your development budget of at least $100,000.

Potential methane mitigation systems for future construction

As part of your development of a new building on Site, the City of Santa Fe Springs will likely require methane mitigation due to the presence of the Site in the oil field. This would be confirmed after a methane gas survey is conducted and as part of the Site plan review. A rough estimate for methane mitigation is $4 per foot of slab.

CONCLUSIONS

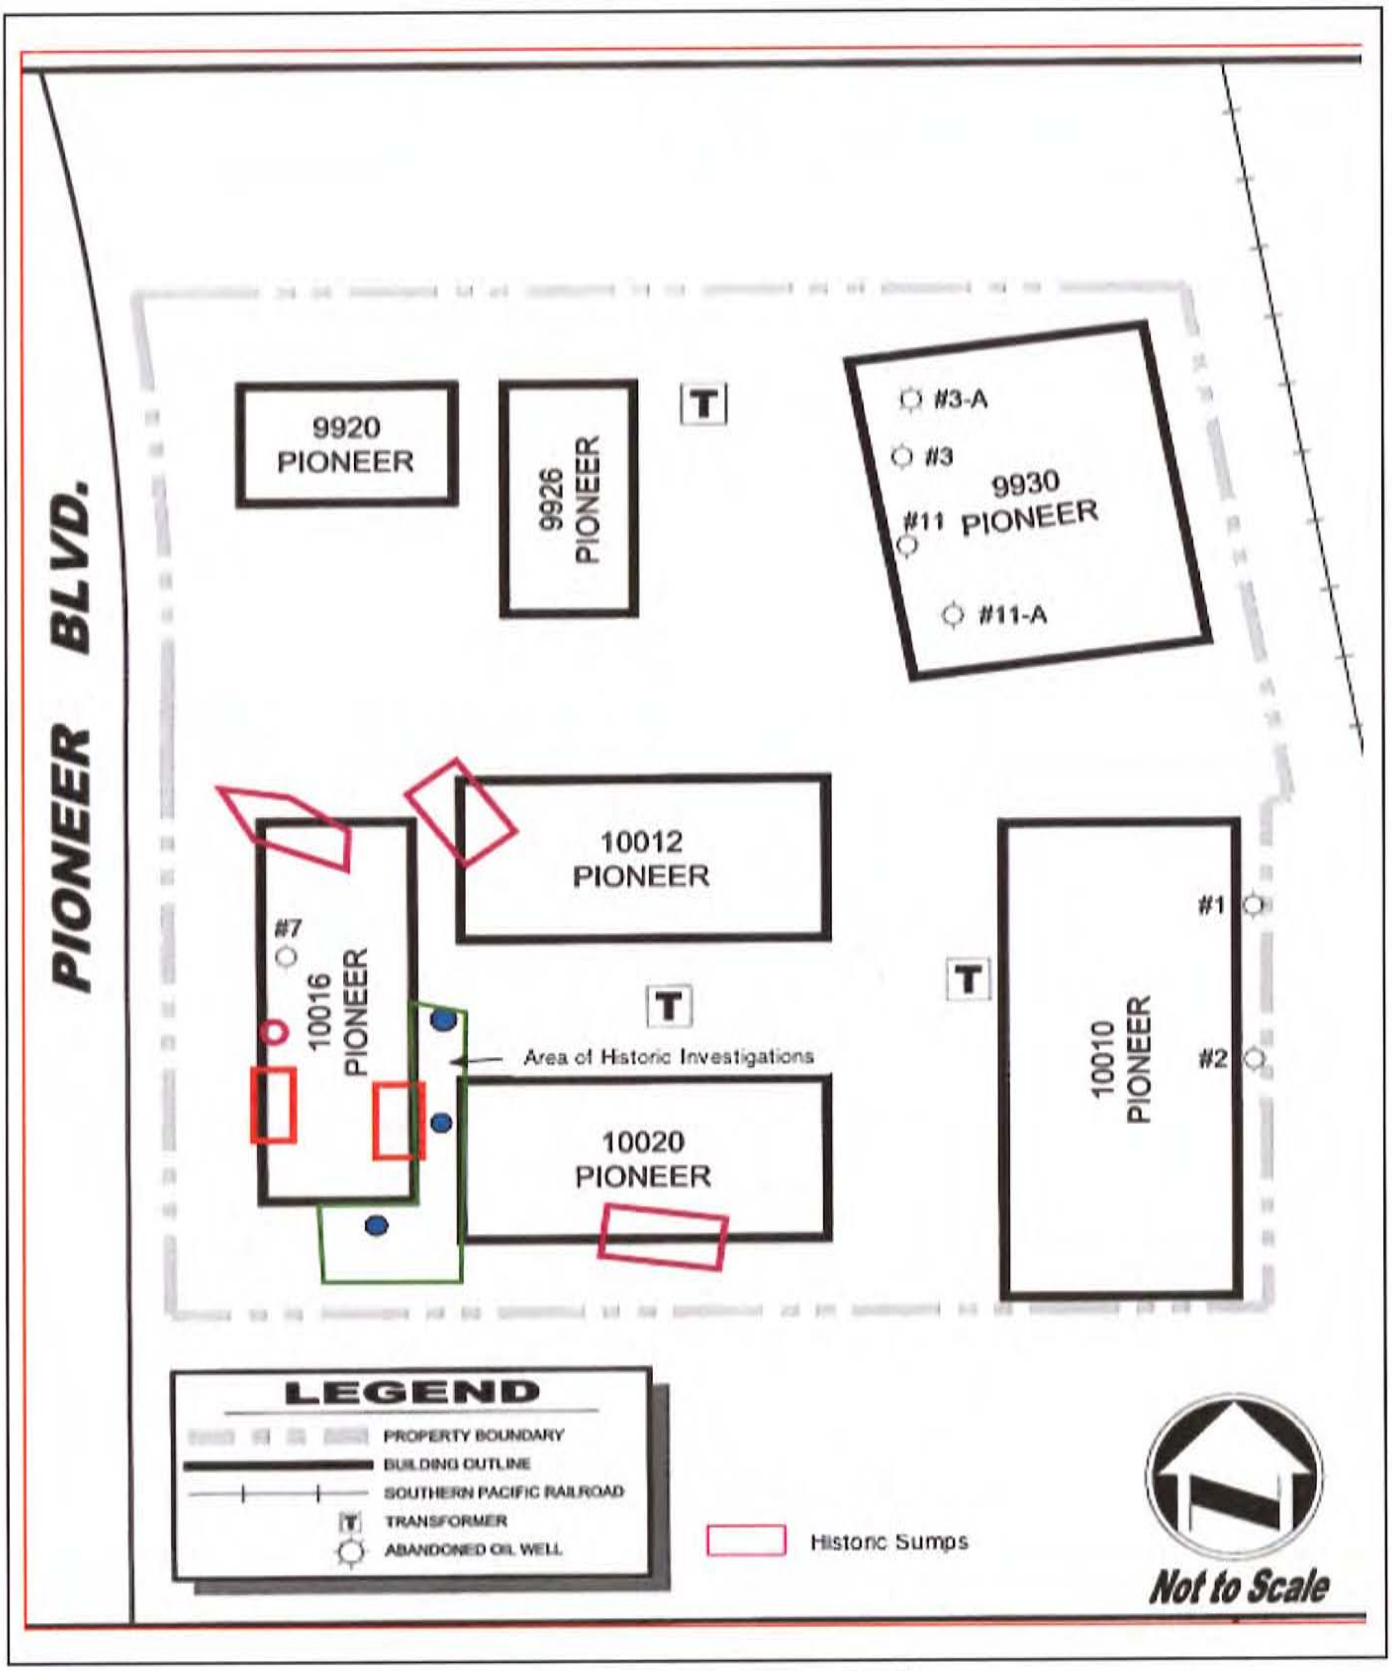
Based on our review of the available data, should you decide to redevelop the Site, you will need to take into consideration the presence of the oil wells and residuals in soil. This will include a Site Plan Review of the abandoned wells to evaluate whether they need to be reabandoned to current standards, a soil management plan to manage the known impacted soil on Site during development and a methane mitigation system for the future building(s). A preliminary budget for your planning would be as follows:

Site Plan Review	$25,000
Reabandonment	$350,000-$1,000,000+
SMP	$105,000
Surprises	$100,000
Subtotal	$580,000-$1,230,000
	$600K-$1.2M

plus ~$4/foot of new slab should methane mitigation be required.

We thank you for the opportunity to be of service and would be happy to address any questions you may have.

Very truly yours,
Hazard Management Consulting Inc.



Mark S. Cousineau, NREP
Principal

Notes:

1. VOCs = Volatile organic compounds; analyzed using EPA Method 8260B.
2. Sample depth is in feet below ground surface.
2. µg/kg = Microgram per kilogram.
3. ENVIRON samples were analyzed by American Environmental Testing Lab; LFR's samples were analyzed by Associated Labs.
4. ND = Not detected.
5. J = Estimated value.
6. Also reported by the laboratory for Sample SB-12-5 were 3,240 µg/kg of n-butylbenzene and 310 µg/kg of 1,2,4-trimethylbenzene.
7. m,p-xylenes were reported by the laboratory for some of the samples; the highest reported concentration was 79.0 J for Sample SB-12-5.
8. PRG = Preliminary Remediation Goal.
9. City = City of Santa Fe Springs's Soil Screening Guidelines and Site Mitigation Procedures for Industrial Sites, dated April 24, 2002.
10. LARWQCB = Interim Site Assessment and Cleanup Guidebook, dated May 1996, developed by the California Regional Water Quality Control Board – Los Angeles Region. The City recommends that these guidelines be used for soil at depths of greater than 5 feet below ground surface.
11. NE = Not established.

* The 700 µg/kg concentration was obtained from the LARWQCB Guidebook using the conservative assumptions of sand lithology and depth to ground water at 20 feet below the soil sample. This value would be 2,000 µg/kg for a silt lithology.

APPENDIX H: PHASE II ENVIRONMENTAL SITE ASSESSMENT

HMC
HAZARD MANAGEMENT CONSULTING

September 16, 2019

Mr. Robert Knapp
The Brookhollow Group
151 Kalmus Drive, Suite F1
Costa Mesa, California 92626

Subject: **Results of a Soil and Soil Gas Investigation**
9920-10020 Pioneer Boulevard
Santa Fe Springs, California

Dear Mr. Knapp:

This report presents the results of a soil and soil gas investigation completed at the property located at 9920-10020 Pioneer Boulevard in the city of Santa Fe Springs, California (Site; Figure 1). The site currently contains seven commercial buildings that were constructed in the 1970s (referred to by others as "Building 9920" through "Building 10020," corresponding to the property addresses). The Brookhollow Group currently owns the site and is considered redeveloping the property with new commercial buildings. The site lies within an oil field and seven oil wells were historically drilled on the site. Investigations completed after the existing commercial buildings were constructed identified sporadic concentrations of petroleum hydrocarbons and a small area of arsenic-impacted soil. The characterization of the arsenic-impacted soil was completed under the direction and oversight of the City of Santa Fe Springs Fire Department (SFSFD). Based on the results, the SFSFD issued a no further action (NFA) letter contingent on the soils being capped and a land use covenant (LUC) be recorded with the Los Angeles County Tax Assessor. The soils have been "capped" with the existing hard scape and buildings, and an LUC was recorded.

In 2019, Hazard Management Consulting, Inc. (HMC) was retained to complete a Phase I Environmental Site Assessment (ESA) for the site, which included reviewing all previous data. Based on the results, HMC recommended completing a soil and soil gas investigation to further assess the concentrations of petroleum hydrocarbons and arsenic in shallow soil that will be encountered during grading activities, and to assess the concentrations of volatile organic compounds (VOCs) and methane in soil gas. Due to the property's location within the Santa Fe Springs Oil Field, the Santa Fe Springs Fire Department (SFSFD) will require a methane gas survey be completed under its jurisdiction following submittal of the

redevelopment plans. The new buildings will also be required to be constructed with a methane gas mitigation system while on-going methane gas monitoring will be required on a quarterly basis for one year. If methane gas concentrations are discovered to be extremely elevated, an active system may be needed. To obtain a higher confidence level of the type of system that will be required, HMC recommended completing a methane gas and VOC survey throughout the site.

BACKGROUND

The following presents a summary of the site activities, previous investigations, and our assessment of the previous data based on current regulatory guidelines. Groundwater has been previously recorded at the site at a depth of approximately 58 to 60 feet below the ground surface (bgs) and will not be encountered during future redevelopment activities.

Site History and Previous Investigations

The site lies within the Santa Fe Springs Oil Field and the City of Santa Fe Springs Methane Zone. The site was historically used for oil production including the installation of seven oil wells. Oil wells are sometimes drilled using mud rotary drilling methods which utilize “drilling muds” to keep the borehole open during drilling activities. These “muds” consist of a bentonite slurry that is stored during drilling activities in earth-lined pits dug next to the well (referred to herein as “drilling sumps”). Heavy metals, such as barium, are sometimes added to the drilling muds to increase the specific gravity of the materials as drilling activities deepen. Once the oil well encountered an oil producing zone, petroleum hydrocarbons would be introduced to the drilling materials. After drilling operations ceased, the sumps are typically used as a dumping ground for other materials and equipment. These materials would be thrown into the sumps, which were later buried. Therefore, sump materials sometimes contain contaminants such as petroleum hydrocarbons, VOCs, and/or metals. Drilling muds (i.e. bentonite clay) are typically not acceptable fill materials for geotechnical reasons.

In 2002, the Koll Company (Koll) retained Environ International Corporation (Environ) to conduct a Phase I ESA as part of Koll’s due diligence for the potential acquisition of the Site from Roll Properties International Associates III (Roll). Environ identified two areas of potential environmental concern including the on-site oil wells and a former tenant which reportedly operated a laboratory

in the southern corner of Building 10016. In 2003, Environ conducted a subsurface investigation to address these two concerns. During this time period, Roll retained LFR Levine Fricke (LFR) to also complete soil sampling on its behalf.

Based on the laboratory results, elevated concentrations of arsenic (up to 66.5 milligrams per kilogram [mg/kg]) and petroleum hydrocarbons were discovered in shallow soil immediately southeast of the corner of Building 10016 (shown as the "Area of Arsenic-Impacted Soil" on Figure 2). It should be noted that most of the soil sampling activities were completed by others in this small localized area. Due to the elevated arsenic concentrations, the information was presented to the SFSFD for review and comment. Although the lateral extent of the petroleum hydrocarbons and arsenic had not been fully defined in this area, the SFSFD issued a no further action (NFA) letter contingent on the soils being "…capped with either a parking lot or building" and an LUC be issued with the Los Angeles County Tax Assessor. The soils have been "capped" with the existing hard scape and buildings, and an LUC was recorded.

In 2003, Environ also completed a methane gas screening of the site by installing and monitoring six soil gas points. Low concentrations of methane gas were report (ranging from 0 to 5 percent of the Lower Explosive Limit [LEL], or 0 to 2,500 parts per million [ppm]).

The LEL for methane gas is 50,000 ppm or 5% by volume of ambient air. The LEL is the level at which the concentration of methane gas must reach to become an explosion risk. The Upper Explosive Limit (UEL) for methane gas is 170,000 ppm or 17% by volume of ambient air. The UEL is the level of methane gas which is too rich to explode. The City of Santa Fe Springs maintains an ordinance, known as Ordinance No. 955, which mandates methane gas monitoring and mitigation measures. Based on the City of Santa Fe Springs Ordinance No. 955, any new construction within the City of Santa Fe Springs Methane Zone must be monitored for methane gas under the direction and oversight of the SFSFD prior to new construction and on a quarterly basis for one year. If concentrations of methane gas are below 25 percent of the LEL (i.e. 1.25 percent by volume of air or 12,500 ppm/v) during the initial methane gas monitoring event, a methane gas mitigation system shall be installed in the new building (e.g. ventilation system or a passive barrier system) and quarterly methane gas monitoring will be required for one year. If concentrations are below 25

percent of the LEL during the first year, the system will be required to be monitored on an annual basis. If concentrations are below 2.5 percent of the LEL (i.e. 0.125 percent by volume of air or 1,250 ppm/v), the Fire Chief may waive the required annual monitoring. If concentrations are above 25 percent of the LEL, a protective mitigation system will be recommended (e.g. engineering designed active ventilation system, mechanical air exchange system, or active barrier system).

Assessment of Previous Data

HMC superimposed the location of the previous sample points onto the existing site plan and reviewed the data in accordance with current regulatory guidelines (Figure 2). It should be noted that the previous sample location map was not scaled, and therefore, the sample locations are approximate. HMC compared the total petroleum hydrocarbons carbon chain C_4-C_{32} (TPHcc) data collected at depths of less than 5 feet bgs (the assumed depth of the grading activities) to the Environmental Protection Agency (EPA) Regional Screening Levels for industrial/commercial land use (EPA-RSLi) for the protection of human health through dermal contact, digestion, and inhalation. Based on our review, two areas (associated with previous boring SB12 and B25; Figure 2) exceeded regulatory guidelines for the protection of human health. These areas were located immediately southeast of Building 10016 (SB12) and immediately east of Building 10010 (SB25). Sample SB12 also contained elevated concentrations of naphthalene. With the exception of arsenic, laboratory results indicated no detectable to low concentrations of Title 22 metals.

Arsenic is naturally occurring. Due to the granitic nature of California soils, arsenic concentrations typically exceed the federal screening levels for the protection of human health. Based on this information, regulatory agencies commonly assess arsenic concentrations based on published background concentrations. The SFSFD uses published background concentrations presented by the Kearney Foundation of Soil Science (Kearney). According to Kearney, background concentrations of arsenic in California ranges from approximately 0.59 to 11 mg/kg. Based on this publication, elevated concentrations of arsenic are defined by the SFSFD as concentrations exceeding 11 mg/kg.

Based on these criteria, laboratory results of soil samples collected during previous investigations indicated elevated concentrations of arsenic in one area located immediately southeast of Building 10016 (referred to by HMC as the “Area of Arsenic-Impacted Soil”). It should be noted that only two

other sample points (B26 and B27) were used to collect soil samples for analyses of arsenic. As noted above, these data were provided to the SFSFD who issued a NFA letter contingent that this small localized area be capped by a parking lot or building and is not used for residential purposes.

In order to further assess the extent of possible contamination in shallow soils throughout the site which will be encountered during grading activities, HMC recommended collecting and analyzing soil samples throughout the site and in possible areas of environmental concern (i.e. in the vicinity of former oil production activities). To further address these areas of possible concern, HMC used historical aerial photographs to superimpose oil derricks, aboveground storage tanks (ASTs), and drilling sumps onto a current site map (Figure 3). As shown on Figure 3, four drilling sumps were observed in the southwestern portion of the site and three ASTs were located immediately south of the site.

OBJECTIVES

The objectives of the investigations described herein were to assess the current concentrations of petroleum hydrocarbons and arsenic in shallow soil throughout the site and to assess the current concentrations of methane gas and VOCs in soil gas.

SUBSURFACE INVESTIGATION

The soil and soil gas investigation included the drilling of 15 soil borings (designated A1 through A15) using direct-push or hand auger drilling equipment to depths of approximately 5 feet bgs. The borings were used to collect shallow soil samples and for the installation of soil vapor monitoring points for the collection of soil gas samples that were analyzed for VOCs and for monitoring methane gas using a field instrument (Figure 2). The soil borings were drilled on June 10, 2019 and a mobile laboratory was used on June 12, 2019 to collect and analyze soil gas samples. Following the collection of soil gas samples, methane gas was monitored using a Landtec landfill gas meter by HMC. Work was completed under the direction and oversight of Mr. Paul Roberts, a California Professional Geologist from Ardent Environmental Group, Inc., an affiliate of HMC. Boring logs are presented in Attachment B, laboratory reports are presented in Attachment C, and methane gas monitoring field logs are presented in Attachment D. A summary of the laboratory results associated with the soil and soil gas sampling are presented on Tables 1 and 2. Methane gas monitoring results are presented on Table 3.

Soil Sampling

In general, soil borings A1 through A5 were drilled in the vicinity of the Area of Arsenic-Impacted Soil to further assess the extent of petroleum hydrocarbons noted in previous sample point B12 and to further asses the lateral extent of elevated arsenic. Soil borings A9 and A10 were drilled to further assess the extent of petroleum hydrocarbon impacted soil previously detected in boring B25. The remaining soil borings were drilled in areas of possible environmental concern, such as historical drilling sumps, or randomly throughout the site (Figure 3).

Soil samples were collected at 2.5 and 5 feet bgs and were screened in the field for stains, odors, and elevated photoionization detector (PID) readings. Olive gray to dark gray soil with a petroleum hydrocarbon odor was encountered in borings A2, A3, A4, A5, A7, A9, A10, A11, and A12 at various depths from surface to 5 feet bgs. PID readings were measured up to 18.2 ppm, which would be considered low compared to the South Coast Air Quality Management District (SCAQMD) Rule 1166 threshold of 50 ppm. Soil lithology consisted of interbedded silt with minor fine sand and silty fine sand. Select soil samples were analyzed by a State-certified environmental laboratory for VOCs, TPHcc, and arsenic. One randomly selected soil sample from each boring, at depths of either 2.5 or 5 feet bgs, were chemically analyzed. Fifteen soil samples (one sample per boring) were analyzed for TPHcc and 13 selected soil samples were analyzed for arsenic. Laboratory results indicated elevated concentrations of petroleum hydrocarbons exceeding the federal EPA-RSLi value in boring B11. No detectable to low concentrations of VOCs were reported. The sporadic observation of petroleum hydrocarbon stained and odorous soil would be expected at a property that was formerly used for oil production and had been graded for construction.

Elevated concentrations of arsenic were reported in ten of the 13 soil borings drilled throughout the site exceeding the background criteria of 11 mg/kg. The arsenic was at similar concentrations to that previously discovered in the Area of Arsenic-Impacted Soil, with no particular area of elevated concentrations noted (i.e. no source area or possible release point). Although the reason for the elevated arsenic is unknown, due to the sporadic locations throughout the site, it is assumed that the source is associated with the granitic nature of Southern California soils (i.e. background).

Soil Gas Sampling and Methane Monitoring

Following the collection of the soil samples, soil vapor monitoring points were installed in each borehole at a depth of approximately 5 feet bgs. Each soil vapor monitoring point consisted of new, approximate 0.25-inch outside diameter, Nylaflow tubing. The soil vapor monitoring point was placed midway within an approximate 1-foot zone of No. 2/12 sand pack, followed by approximately 0.5-foot of dry granular bentonite. The remaining borehole was filled with hydrated granular bentonite. The soil gas points were allowed to equilibrate for two days prior to sampling. On June 12, 2019, the soil gas monitoring points were sampled by a State-certified mobile environmental laboratory. Prior to sampling, a shut-in test of the sample train was completed and each soil gas monitoring point was purged of approximately three volumes of air with a low flow pump (approximately 200 milliliter per minute [ml/min]). Lithological vacuum was measured prior to and during purging and sampling with a Magnehelic gauge. Lithological vacuum did not exceed 100 inches of water. Samples were collected using a glass syringe and immediately analyzed with the mobile laboratory for VOCs in general accordance with EPA Method No. 8260B. A tracer gas, consisting of a mixture of n-pentane, n-hexane, and n-heptane, was used to assure that breakthrough was not occurring and to assure that the soil vapor points were properly constructed. With the exception of sample point A4-5, none of the tracer gasses were detected in the analyses. Based on these results, the VOC and methane gas concentrations from this borehole may not be representative of soil gas concentrations. Installation and sampling of soil gas monitoring points were completed in general accordance with current DTSC guidelines (DTSC, 2011; DTSC, 2015). Immediately following the sampling activities, a Landtec meter was used to monitor methane gas.

Detectable soil gas concentrations were compared to the Department of Toxic Substances Control Screening Levels for industrial/commercial land use (DTSC-SLi) and the EPA Regional Screening Levels for industrial/commercial land use (EPA-RSLi). These very conservative guidelines are based on the protection of human health through possible vapor intrusion. These guidelines provide ambient air concentrations that are modified for soil gas concentrations by using a regulatory approved attenuation factor. The DTSC-SLi and EPA-RSLi were calculated by modifying the ambient air concentrations using the EPA provided attenuation factor of 0.03. As noted on Table 2, sporadic concentrations of benzene, bromodichloromethane, and ethylbenzene slightly exceeded the very conservative screening levels were detected in soil gas. The constituents are commonly associated

with petroleum hydrocarbons and are likely the result of sporadic petroleum hydrocarbon impacted soil located at the site. Since the City will require a vapor mitigation system due to the property location within an oil field, these concentrations would be insignificant once the mitigation system is installed.

Methane was monitored from each sampling point using a Landtec Gem2000 field meter to assess the concentrations of methane present. The field instrument was allowed to equilibrate over a few minutes before a reading was taken. No detectable to low concentrations of methane (up to 0.4 percent by volume of ambient air or 4,000 ppm) were detected. These results would be considered low.

CONCLUSIONS AND RECOMMENDATIONS

The client is considered redeveloping the property with commercial buildings. Previous investigations have shown elevated concentrations of petroleum hydrocarbons and arsenic (up to 66.5 mg/kg) in two areas of the site. It should be noted that these previous investigations were limited in extent. The petroleum hydrocarbon contaminants were likely associated with the historical oil production activities completed at the site and in the site vicinity.

To further assess the extent of possible contaminants that might be encountered during mass grading, HMC collected a number of shallow soil and soil gas samples from throughout the site, and monitored methane gas. Based on the results, a number of soil samples indicated petroleum hydrocarbon stained and odorous soil in sporadic areas of the site. In general, no hot-spot indicative of a significant release was noted in soil gas. Laboratory results indicated three soil samples sporadically located throughout the site with elevated concentrations of petroleum hydrocarbons. No elevated PID readings were noted.

Based on the concentrations and observations, sporadic petroleum hydrocarbon stained and odorous soils typical of oil field locations will be encountered during grading activities. Due to the lack of PID readings and low concentrations of VOC analytes in soil, the concentrations of heavy petroleum hydrocarbons would not pose a significant risk to the health of construction workers. Since these materials will be “capped” with asphalt or buildings, there is a low likelihood that future occupants will be exposed to these soils. Based on this information, HMC recommends no further work at this time. Prior to mass grading,

HMC recommends that a Soil Management Plan (SMP) be prepared and implemented during grading, including monitoring of VOC soil emissions in general accordance with SCAQMD Rule 1166.

Although elevated concentrations of arsenic have been detected in sporadic locations throughout the site, the concentrations appear to be from naturally occurring granitic lithology of Southern California soils. The arsenic concentrations discovered during this investigation did not exceed those previously discovered and allowed to be left in-place by the SFSFD, contingent on the site being capped with asphalt or buildings and an LUC recorded. Since the site is planned to be redeveloped for commercial use, and more elevated concentrations have not been discovered, HMC recommends that the soils be managed during future redevelopment and grading activities in accordance the recommended SMP. Excavation activities will be completed while monitoring fugitive dust in accordance with SCAQMD's Rule 1466. The SFSFD should be notified of the proposed scope of work and provided a copy of the SMP. Following grading activities, the LUC will need to be revised to include the entire site boundary.

Due to the location of the site within an oil field, the City of Santa Fe Springs will require the new buildings to be constructed with a methane gas mitigation system (e.g. passive vapor barrier). The City will require an initial methane gas survey and quarterly monitoring for one year. Based on the results, annual monitoring may be required indefinitely. However, if the concentrations remain low over a one year period, the Fire Chief may waive the annual monitoring requirement. Due to the slightly elevated concentrations of VOCs in soil gas, HMC recommends that the new building be constructed with a passive vapor barrier. This mitigation system will satisfy the SFSFD for methane gas in accordance with Ordinance No. 955 and protect future occupants from possible vapor intrusion of VOCs.

If there are any questions regarding this report, please feel free to contact the undersigned.

Sincerely,
Hazard Management Consulting, Inc.

Environmental Protection Agency (EPA), 2019, Regional Screening Levels (EPA-RSLs) Summary Table, dated April.

Kearney Foundation of Soil Science, Division of Agriculture and Natural Resources, University of California, 1996, Background Concentrations of Trace and Major Elements in California Soils, dated March.

TABLE 1 - LABORATORY RESULTS OF SOIL SAMPLES

Location and Rationale	Boring ID	Date Sampled	Sample Depth (feet bgs)	TPHcc (mg/kg)			VOCs (mg/kg)			Arsenic (mg/kg)
				TPHg C_6-C_{12}	TPHd C_{13}-C_{22}	TPHo C_{23}-C_{32}	Acetone	MEK	Other VOCs	
Assess the lateral extent of petroleum hydrocarbons (previous soil boring B12) and arsenic in the Area of Arsenic-Impacted Soil and historical drilling sumps	**A1**	05/17/19	5	ND<10	ND<10	**1,610**	ND<0.020	ND<0.020	ND<0.005-0.020	--
Assess the lateral extent of petroleum hydrocarbons (previous soil boring B12) and arsenic in the Area of Arsenic-Impacted Soil and historical drilling sumps	**A2**	05/17/19	5	**10.8**	**62.5**	**237**	**0.047**	ND<0.020	ND<0.005-0.020	**17.9**
Assess the lateral extent of petroleum hydrocarbons (previous soil boring B12) and arsenic in the Area of Arsenic-Impacted Soil and historical drilling sumps	**A3**	05/17/19	5	ND<5	**156**	**2,240**	**0.039**	ND<0.020	ND<0.005-0.020	**18.6**
Assess the lateral extent of petroleum hydrocarbons (previous soil boring B12) and arsenic in the Area of Arsenic-Impacted Soil and historical drilling sumps	**A4**	05/16/19	5	ND<10	**573**	**4,180**	ND<0.020	ND<0.020	ND<0.005-0.020	**54.7**
Assess the lateral extent of petroleum hydrocarbons (previous soil boring B12) and arsenic in the Area of Arsenic-Impacted Soil and historical drilling sumps	**A5**	05/16/19	5	ND<10	**196**	**2,270**	ND<0.020	ND<0.020	ND<0.005-0.020	**15.6**
Assess historical drilling sumps	**A6**	05/17/19	5	ND<10	ND<1	**2,160**	ND<0.020	ND<0.020	ND<0.005-0.020	--
Assess historical drilling sumps	**A7**	05/17/19	2.5	ND<1	ND<1	ND<1	ND<0.020	ND<0.020	ND<0.005-0.020	**17**
Assess historical drilling sumps	**A8**	05/17/19	5	ND<1	ND<1	ND<1	ND<0.020	ND<0.020	ND<0.005-0.020	**2.53**
Assess lateral extent of petroleum hydrocarbons associated with previous oil boring B25	**A9**	05/16/19	5	ND<5	**236**	**2,020**	**0.025**	ND<0.020	ND<0.005-0.020	**37**
Assess lateral extent of petroleum hydrocarbons associated with previous oil boring B25	**A10**	05/16/19	5	ND<10	**275**	**2,960**	**0.036**	ND<0.020	ND<0.005-0.020	**16.2**
General screening	**A11**	05/16/19	2.5	**116**	**2190**	**7,800**	**0.109**	ND<0.020	ND<0.005-0.020	**21.3**
General screening	**A12**	05/16/19	2.5	ND<10	ND<10	**808**	ND<0.020	ND<0.020	ND<0.005-0.020	**14.4**
General screening	**A13**	05/17/19	5	ND<1	ND<1	ND<1	ND<0.020	ND<0.020	ND<0.005-0.020	**3.34**
General screening	**A14**	05/17/19	2.5	ND<10	**103**	**2,570**	**0.065**	**0.020**	ND<0.005-0.020	**17.5**
General screening	**A15**	05/16/19	5	ND<1	ND<1	ND<1	ND<0.020	ND<0.020	ND<0.005-0.020	**3.23**
Regulatory Screening Levels - Protection of Human Health										
DTSC-SLi				NA	NA	NA	NA	NA	Various	0.36
EPA-RSLi				2,200	440	3,500,000	670,000	190,000	Various	3
Background for Arsenic				NA	NA	NA	NA	NA	NA	11

Notes:
Boring ID - Boring Identification
feet bgs- feet below the ground surface
mg/kg - milligrams per kilogram
ND - no detectable concentrations above the laboratory reporting limit
NA - not available
TPHcc - total petroleum hydrocarbons carbon chain C_6-C_{32} analyzed in general accordance with EPA Method No. 8015 (modified)
TPHg - total petroleum hydrocarbons as gasoline
TPHd - total petroleum hydrocarbons as diesel fuel
TPHo - total petroleum hydrocarbons as oil
VOCs - volatile organic compounds analyzed in general accordance with EPA Method No. 8260B
Arsenic analyzed in general accordance with EPA Method No. 6010B
-- - not analyzed
DTSC-SLi - California Department of Toxic Substances Control, Human and Ecological Risk Office, Human Health Risk Assessment, Note 3, Screening Levels for industrial/commercial land use, dated April 2019
EPA-RSLi - Environmental Protection Agency (EPA), Regional Screening Levels for industrial/commercial land use, dated April 2019
Background for Arsenic -Kearney Foundation of Soil Science, Division of Agriculture and Natural Resources, University of California, Background Concentrations of Trace and Major Elements in California Soils, dated March 1996
for evaluating background concentrations of arsenic at Los Angeles Unified School District (LAUSD) school sites, dated June 6, 2005
LARWQCB - California Regional Water Quality Control Board, Los Angeles Region, Interim Site Assessment and Cleanup Guidebook, dated May 1996
Yellow highlight indicates cell exceeding background concentration of arsenic

TABLE 2 - LABORATORY RESULTS OF SOIL GAS SAMPLES

Boring ID	Date Sampled	Sample Depth (feet bgs)	VOCs (ug/l)

Notes:

1. VOCs = Volatile organic compounds; analyzed using EPA Method 8260B.
2. Sample depth is in feet below ground surface.
2. µg/kg = Microgram per kilogram.
3. ENVIRON samples were analyzed by American Environmental Testing Lab; LFR's samples were analyzed by Associated Labs.
4. ND = Not detected.
5. J = Estimated value.
6. Also reported by the laboratory for Sample SB-12-5 were 3,240 µg/kg of n-butylbenzene and 310 µg/kg of 1,2,4-trimethylbenzene.
7. m,p-xylenes were reported by the laboratory for some of the samples; the highest reported concentration was 79.0 J for Sample SB-12-5.
8. PRG = Preliminary Remediation Goal.
9. City = City of Santa Fe Springs's Soil Screening Guidelines and Site Mitigation Procedures for Industrial Sites, dated April 24, 2002.
10. LARWQCB = Interim Site Assessment and Cleanup Guidebook, dated May 1996, developed by the California Regional Water Quality Control Board – Los Angeles Region. The City recommends that these guidelines be used for soil at depths of greater than 5 feet below ground surface.
11. NE = Not established.

* The 700 µg/kg concentration was obtained from the LARWQCB Guidebook using the conservative assumptions of sand lithology and depth to ground water at 20 feet below the soil sample. This value would be 2,000 µg/kg for a silt lithology.

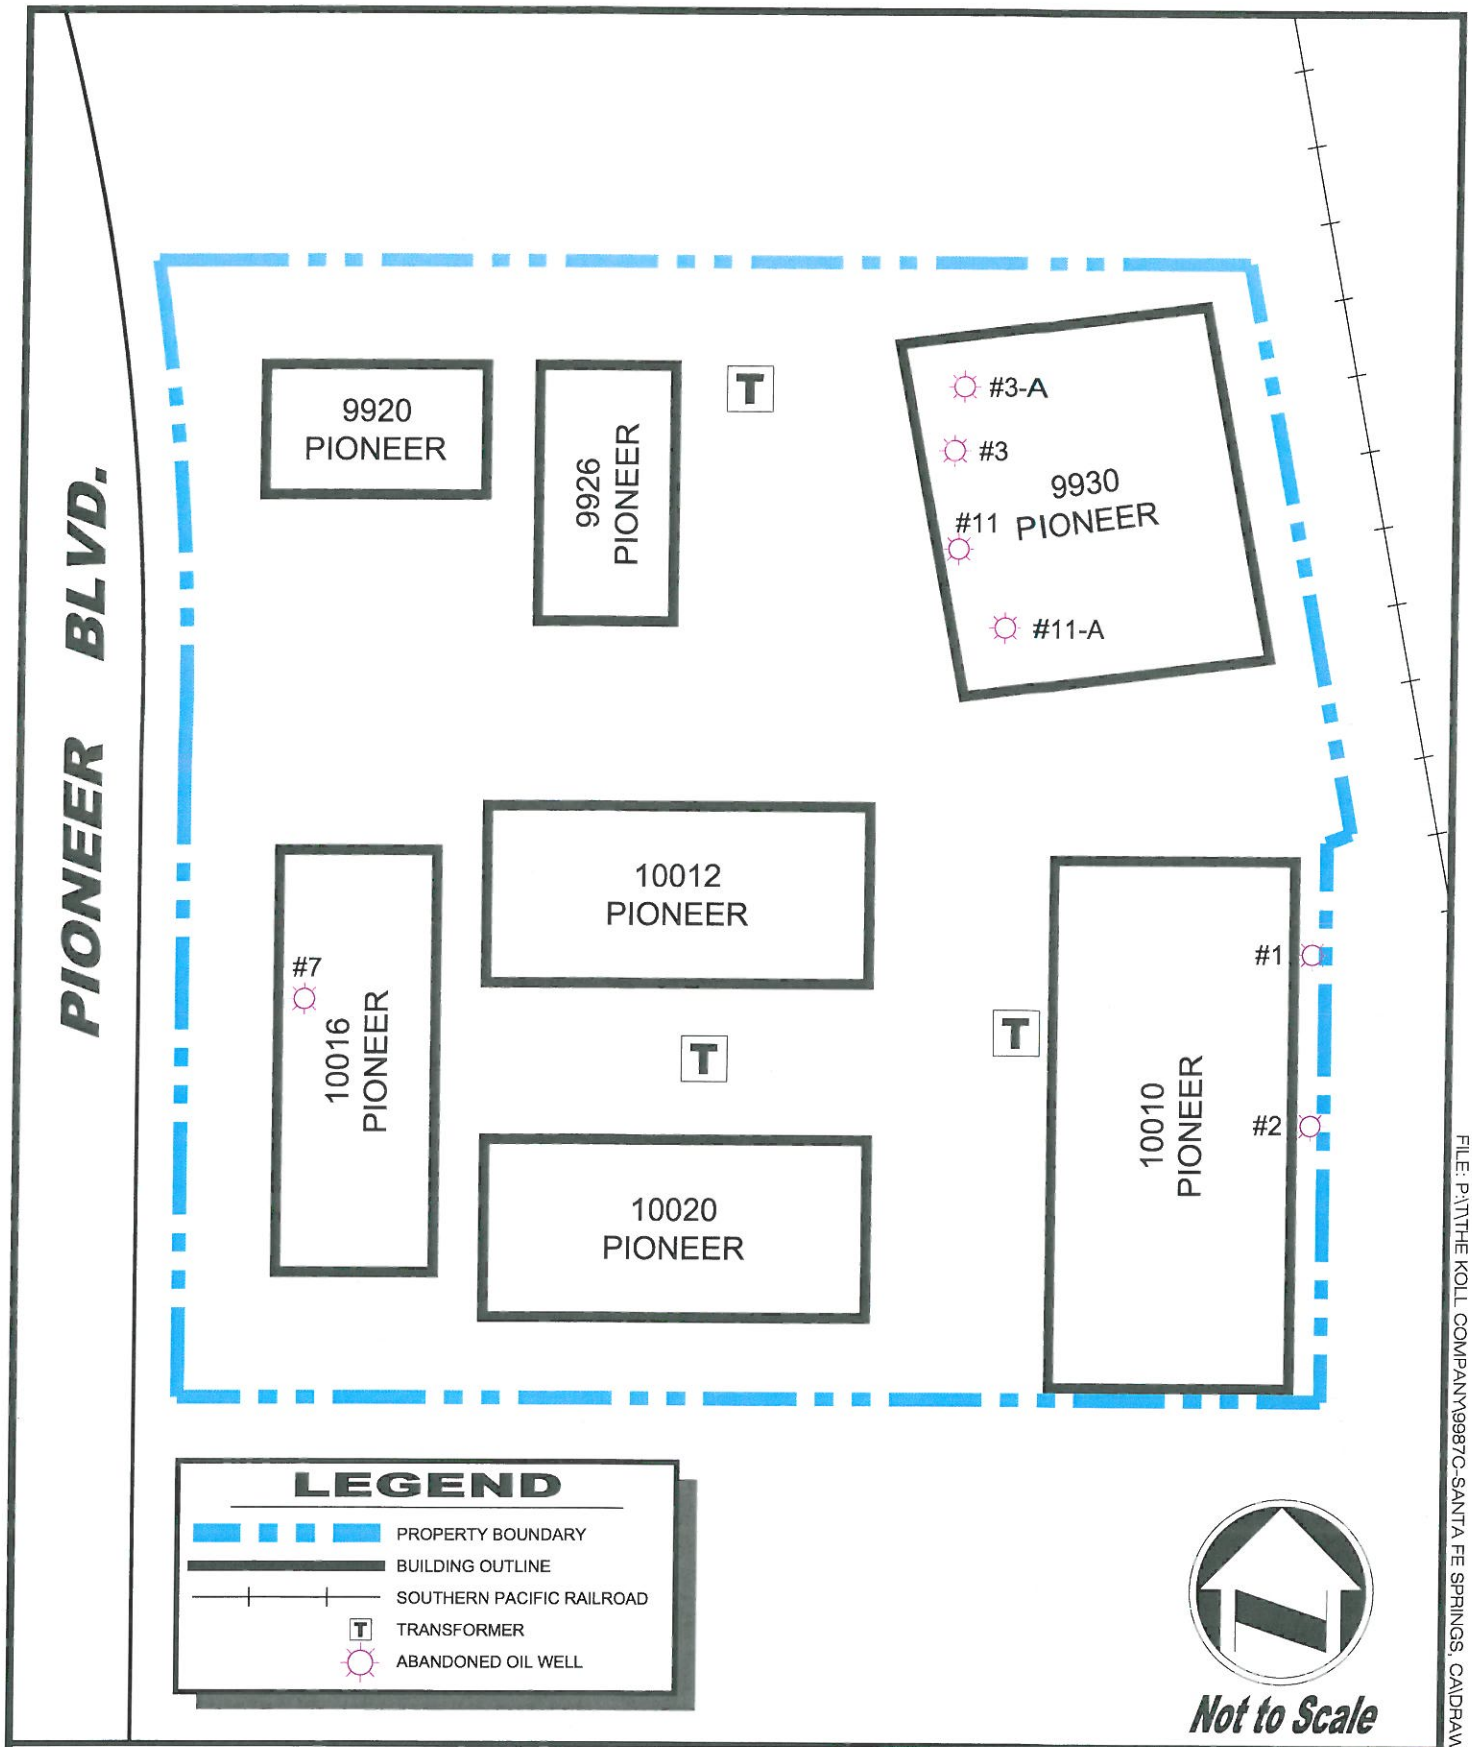
pH	8.30	7.74	8.40	9.27	8.66	8.55	NA	NE	NE

Notes:

1. Metal analyses were performed using EPA Methods 6010B/7000, unless noted otherwise. Cyanide was analyzed using EPA Method 9014. pH was analyzed using EPA Method 9045C.
2. Sample depth is in feet below ground surface.
3. mg/kg = Milligram per kilogram.
4. ENVIRON samples were analyzed by American Environmental Testing Lab.
5. PRG = Preliminary Remediation Goal. The given values are from the latest update as of October 1, 2002.
6. ND = Not detected, at the detection limits shown in Appendix A.
7. NA = Not analyzed.
8. J = Estimated value.
9. NE = Not established.

* The PRGs for arsenic are for noncancer point and cancer point, respectively.

\+ The PRGs for mercury are for mercury chloride.



** The PRGs for cyanide are for free cyanide and hydrogen cyanide, respectively.

Table 10
Analytical Results in Ground Water – VOCs and TPH
Santa Fe Springs Commerce Center
10016 Pioneer Boulevard
Santa Fe Springs, California 90670

Sample No.	VOC Concentration (µg/l)		TPH Concentration (mg/l)

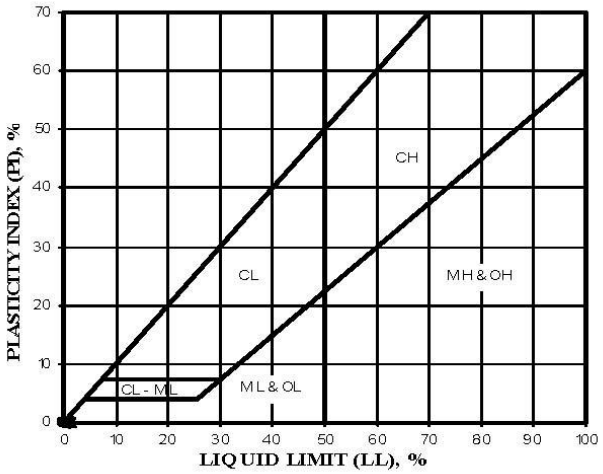
EXPLANATION OF BORING LOG SYMBOLS

PROJECT NO.	DATE	FIGURE



U.S.C.S. METHOD OF SOIL CLASSIFICATION

MAJOR DIVISIONS		SYMBOL	TYPICAL NAMES
COARSE-GRAINED SOILS (More than 1/2 of soil > No. 200 sieve size)	**GRAVELS (More than 1/2 of coarse fraction > No. 4 sieve size)**	GW	Well graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	SANDS (More than 1/2 of coarse fraction < No. 4 sieve size)	SW	Well graded sands or gravelly sands, little or no fines
		SP	Poorly graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (More than 1/2 of soil < No. 200 sieve size)	**SILTS & CLAYS Liquid limit < 50**	ML	Inorganic silts and very fine sands, rock flour, silty or clayey fined sands or clayey silts
		CL	Inorganic clays of low to medium plasticity gravelly clays, sandy clays, silty clays, lean
		OL	Organic silts and organic silty clays of low plasticity
	SILTS & CLAYS Liquid limit > 50	MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic clays of medium to high plasticity, organic silty clays, organic silts
HIGHLY ORGANIC SOILS		PT	Peat and other highly organic soils

GRAIN SIZE CHART

CLASSIFICATION	RANGE OF GRAIN SIZE

JONES ENVIRONMENTAL LABORATORY RESULTS

Client:	Hazard Management Consulting	**Report date:**	6/17/2019
Client Address:	211 W. Avienda Cordoba #200	**Jones Ref. No.:**	D-1646
	San Clemente, CA	**Client Ref. No.:**	100520002
Attn:	Ricardo Munoz	**Date Sampled:**	6/12/2019
		Date Received:	6/12/2019
Project:	HMC - Pioneer	**Date Analyzed:**	6/12/2019
Project Address:	10020 Pioneer Blvd	**Physical State:**	Soil Gas
	Santa Fe Springs, CA		

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates/Gasoline Range Organics

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. Tracer was detected in sample D-1646-05, and was confirmed with re-analysis.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of collection.

Approval:

Angela Haar, Ph. D.
Mobile Lab Manager

Dear Mr. Munoz:

The **analytical results** for the soil samples, received by our lab on June 10, 2019, are attached. The samples were received chilled, intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

A15-5	190610-51	3.23	1
Method Blank	---	ND	1
	PQL	0.30	

COMMENTS:
DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for Arsenic = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 500 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

APPENDIX I: PETROLEUM ENGINEER TECHNICAL MEMORANDUM

WZI INC.

To: Hazard Management Consulting

From: WZI Inc.

Date: July 24, 2019

Subject: Abandoned oil wells on the Pioneer Boulevard Development project

Brief Overview

This project consists of reviewing seven abandoned wells located at 9920-10020 Pioneer Boulevard in Santa Fe Springs, California. Each well history has been thoroughly examined, and a wellbore diagram has been constructed for each of the seven wells. The condition of each well was compared to the California Statues and Regulations for the Division of Oil, Gas, and Geothermal Resources criteria for permanent plugging and abandonment. If there were well features that did not comply with California's abandonment protocol, those features were noted in the following section.

Review DOGGR Well Histories

The following project is in reference to the State of California document, "California Statues and Regulations for the Division of Oil, Gas, and Geothermal Resources."

S. G. & J. 1

The current condition of "S. G. & J. 1," does not meet the abandonment requirements that the State of California has defined. The Division of Oil, Gas, and Geothermal Resources requires, per section 1745.1. (a-d), cement plugs shall be placed at any event, measuring at least 100 feet below and 100 feet above each event. An event is defined as perforated intervals, isolating zones behind cemented casing, a shoe of the intermediate or second surface casing, or an interface between freshwater and saltwater zones. The perforated section from 4236'-4645' is not correctly cemented. There are casing shoes at 4218', 3888', and 2133' that were not cemented correctly. Per section 1745.3., if casing is cut and recovered, other than that pulled for placing the surface plug, a cement plug shall be placed from at least 100 feet below to at least 100 feet above the stub. This well exhibits two casing stubs that do not have cement plugs with the required features. Per section 1745.5., there is a requirement to have a surface plug measuring 100 feet long, and this requirement is not satisfied. "Any interval of the hole not plugged with cement shall be filled with mud fluid of sufficient density to exert hydrostatic pressure exceeding the greatest formation pressure encountered while drilling such interval," defined in section 1745.7. The well has intervals with no materials in the casing. There are also intervals

with non-approved materials in the casing such as wood, sand, and mud. The mud used has unknown properties and therefore can not be verified as a sufficient plugging material.

S. G. & J. Line 2

The current condition of "S. G. & J. Line 2," does not meet the abandonment requirements that the State of California has defined. The Division of Oil, Gas, and Geothermal Resources requires, per section 1745.1. (a-d), cement plugs shall be placed at any event, measuring at least 100 feet below and 100 feet above each event. It will be required to properly cement 100 feet above the perforated sections from 7711' to 7920' and 4186' to 4600'. The casing shoes at 1007', 4166', and 7712' will need to be cemented properly. Per section 1745.3., there will need to be a cement plug at the casing stubs located at 3591' and 1007'. Per section 1745.5., there is a requirement to have a surface plug measuring 100 feet long, and this requirement is not satisfied. The well has intervals with no materials in the casing. There are also intervals with non-approved materials in the casing such as wood, sand, and mud. The mud used has unknown properties and therefore cannot be verified as a sufficient plugging material. Per section 1745.7., these intervals will require correction.

Santa Gertrudes 3

The current condition of "Santa Gertrudes 3," does not meet the abandonment requirements that the State of California has defined. The Division of Oil, Gas, and Geothermal Resources requires, per section 1745.1. (a), "Plugging in uncased hole. In uncased portions of wells, cement plugs shall be placed to extend from total depth or at least 100 feet below each oil or gas zone, whichever is less, to at least 100 feet above the top of each zone, and a cement plug at least 200 feet long shall be placed across an intrazone freshwater-saltwater interface or opposite impervious strata between fresh- and saltwater zones so as to confine the fluids in the strata in which they are found and to prevent them from escaping into other strata." This well will require cementing. Per Section 1745.2.(a), sufficient cement shall be squeezed through the junk. There are no cemented intervals existing in Santa Gertrudes 3.

Santa Gertrudes 3-A

The current condition of "Santa Gertrudes 3," does not meet the abandonment requirements that the State of California has defined. The Division of Oil, Gas, and Geothermal Resources requires, per section 1745.1. (a-d), cement plugs shall be placed at any event, measuring at least 100 feet below and 100 feet above each event. The casing shoes at 4252', 2486', and 292' will need to be cemented properly. Per section 1745.3., there will need to be a cement plug at the casing stubs located at 2486' and 268' that measure 100 feet above each casing stub. Per section 1745.5., there is a requirement to have a surface plug measuring 100 feet long, and this requirement is not satisfied. The well has intervals with no materials in the casing. There are also intervals with non-

approved materials in the casing such as wood. Per section 1745.7., these intervals will require correction.

Santa Gertrudes 7

The current condition of "Santa Gertrudes 7," does not meet the abandonment requirements that the State of California has defined. The Division of Oil, Gas, and Geothermal Resources requires, per section 1745.1. (a-d), cement plugs shall be placed at any event, measuring at least 100 feet below and 100 feet above each event. It will be required to properly cement 100 feet above the perforated section from 4223' to 4650'. The casing shoes at 4245', 3961', and 2181' will need to be cemented properly. Per section 1745.3., there will need to be a cement plug at the casing stubs located at 2498' and 1703'. Per section 1745.5., there is a requirement to have a cement surface plug measuring 100 feet long, and this requirement is not satisfied. The well has intervals with no materials in the casing. There are also intervals with non-approved materials in the casing such as wood, sand, and mud. The mud used has unknown properties and therefore cannot be verified as a sufficient plugging material. Per section 1745.7., these intervals will require correction.

Santa Gertrudes 11

The current condition of "Santa Gertrudes 11," does not meet the abandonment requirements that the State of California has defined. The Division of Oil, Gas, and Geothermal Resources requires, per section 1745.1. (a), "Plugging in uncased hole. In uncased portions of wells, cement plugs shall be placed to extend from total depth or at least 100 feet below each oil or gas zone, whichever is less, to at least 100 feet above the top of each zone, and a cement plug at least 200 feet long shall be placed across an intrazone freshwater-saltwater interface or opposite impervious strata between fresh- and saltwater zones so as to confine the fluids in the strata in which they are found and to prevent them from escaping into other strata." This well has uncased hole that will need proper cementing. The well has intervals with no materials in the casing. There are also intervals with non-approved materials in the casing such as mud. The mud used has unknown properties and therefore cannot be verified as a sufficient plugging material. Per section 1745.7., these intervals will require correction. Per Section 1745.2.(a), sufficient cement shall be squeezed through the junk. There are unrecovered tools at 4017', located in the side track that have been left uncemented.

Santa Gertrudes 11-A

The current condition of "Santa Gertrudes 11-A," does not meet the abandonment requirements that the State of California has defined. The Division of Oil, Gas, and Geothermal Resources requires, per section 1745.1. (a-d), cement plugs shall be placed at any event, measuring at least 100 feet below and 100 feet above each event. The casing shoe at 1007' will need to be cemented properly. Per section 1745.5., there is a requirement to have a cement surface plug measuring 100 feet long, and this requirement is not satisfied. The well has intervals with no materials in the casing. There are also

intervals with non-approved materials in the casing such as wood and mud. The mud used has unknown properties and therefore cannot be verified as a sufficient plugging material. Per section 1745.7., these intervals will require correction.

Recommended Required Action

WZI Inc. recommends that each well be re-abandoned or access to each well be maintained per DOGGR requirements, with appropriate local agency approvals. The most likely outcome is that agencies will require re-abandonment of wells that will be located under buildings. Any re-abandonment should comply with all sections of the required abandonment regulations that the State of California has defined in the document, "California Statues and Regulations for the Division of Oil, Gas, and Geothermal Resources." For budgetary purposes, re-abandonments can range from $300,000 to $500,000 per well. These costs can be exceeded if the abandonment rig encounters significant problems downhole, which can be difficult to predict. WZI costs to design and manage abandonment programs should be budgeted at an estimated $10,000 per well.

APPENDIX J: TRIP GENERATION AND LEVEL OF SERVICE ANALYSIS

Date:	February 11, 2019
Prepared by:	Meghan Macias, TE
To:	Konnie Dobreva, JD
Site:	Pioneer Boulevard Development
Subject:	**Trip Generation and Level of Service Analysis**

This technical memorandum presents an analysis of the project-related traffic generated by the proposed Pioneer Boulevard Development located at 9920 Pioneer Boulevard in the City of Santa Fe Springs. The project proposes to replace the existing business park (Santa Fe Springs Commerce Center) with three concrete tilt-up industrial buildings totaling 163,518 square-feet. The proposed project site plan is shown in Figure 1. All tables and figures are attached to this memo.

Project Trips

The trip generation analysis for the project was prepared using trip rates from the Institute of Transportation Engineers (ITE) *Trip Generation*, 10th Edition (2017). The analysis accounts for trips generated by the existing business park and forecasts the net new trip generation of the project. The trip generation also provides an estimate of the heavy vehicle trips and applies a passenger car equivalent (PCE) factor to heavy vehicle trips. The trip generation for the project is based on the ITE rates for General Light Industrial land use. The rate is based on more than 40 surveys of General Light Industrial developments throughout the country. The ITE description of General Light Industrial notes that there is a small amount of office space associated with this type of land use, and it would by typical for a General Light Industrial building to include office space to accommodate the administrative functions of the business. Therefore, the office space included in the project description (approximately 5 percent of the project) would be supportive of the light industrial activities and is accounted for in the trip rate. Table 1 presents the PCE trip generation estimate for the project. As shown in Table 1, the proposed project is forecast to generate 910 fewer daily trips, 76 more AM peak hour and 59 more PM peak hour trips than the existing land use.

The following trip distribution assumptions were applied to the project trip generation:

- 20% traveling to the north on I-605 via Telegraph Road
- 10% traveling to the south on I-605 via Telegraph Road
- 10% traveling to the north on I-5 via Telegraph Road and Lakewood Blvd ramps
- 20% traveling to the south on I-5 via Pioneer Boulevard and Florence Avenue
- 20% traveling east on Telegraph Road (non-freeway trips)
- 10% traveling west on Telegraph Road (non-freeway trips)

The project trip distribution and assignment at each study intersection is shown in Figure 2 (attached). Figure 2 illustrates both the total trip assignment without any credit for existing uses, and the net new trip assignment, which accounts for the existing business park use.

Existing and Cumulative Traffic Volumes

Traffic counts at the two of the study area intersections (Pioneer Boulevard/Willake Road and Pioneer Boulevard/Telegraph Road) were collected on Tuesday, July 9, 2019. Traffic counts at the remaining

intersections were collected on Thursday, January 16, 2019. Future Opening Year traffic volumes were forecast by adding a 2 percent per year growth rate to the existing traffic counts and by adding trips generated by other approved projects in the area. Two projects were identified: 1) Breitburn Industrial which proposes 318,121 square feet of industrial use at the northwest corner of Santa Fe Springs road/Telegraph Road and; 2) Rexford Industrial, which proposes 201,467 square feet of industrial use at 9615 Norwalk Boulevard. The trip generation of the two cumulative projects is shown in Table 2. The existing and Opening Year traffic volume development is shown in Figure 3.

Project Impact Analysis

Levels of service (LOS) were calculated using the Intersection Capacity Utilization methodology for signalized intersections and the Highway Capacity Manual 6th Edition methodology for unsignalized and Caltrans intersections. The LOS was calculated for existing and existing plus project conditions and is shown in Table 2. It should be noted that the LOS analysis evaluated the new project trips without taking credit for the exiting land uses. For this reason, the actual with-project LOS is expected to be lower than shown in the table. Project impacts were determined using the significant impact thresholds provided in the Los Angeles County Department of Public Works Traffic Impact Analysis Report Guidelines which state that a significant impact would occur if the project related increase in the volume to capacity (v/c) ratio equals or exceeds the following thresholds:

Pre-project LOS	Pre-project V/C	Project V/C Increase
C	0.71 to 0.80	0.04 or more
D	0.81 to 0.90	0.02 or more
E/F	0.91 or more	0.01 or more

As shown in Table 2, the project would not cause a significant impact at any study intersection. The I-605 freeway ramp intersections would operate at LOS E or F in the with-project conditions using both the ICU and HCM methodologies, however the project would add less than 0.1 to the v/c, which is not a significant impact according to the Traffic Impact Analysis Report Guidelines.

Based on this analysis, the following can be concluded:

- The project would generate 910 fewer daily trips, 76 more AM peak hour and 59 more PM peak hour trips than the existing land use.
- When the full project trip generation is added to the study area intersections, without taking credit for existing land uses, the project would not cause a significant impact per the thresholds contained in the Los Angeles County Department of Public Works Traffic Impact Analysis Report Guidelines.
- This analysis is based on the project trip generation without credit for the existing land uses. Impacts would be less if only the net new trip generation were analyzed.
- Based on this analysis, the project would not create any significant traffic impacts in the existing plus project or opening year plus project conditions.

Attachment 7 – Response to Comments

Response to Comments

Section 15088 of the CEQA Guidelines requires the Lead Agency, the City of Santa Fe Springs, to evaluate comments on environmental issues received from public agencies, organizations, and interested parties who reviewed the Initial Study/Mitigated Negative Declaration (MND) and prepare written responses. This section includes copies of all written comment letters received on the MND and the City of Santa Fe Springs's responses to the comment letters. Comment letters and specific comments are numbered for reference purposes which correspond with the City's response. A summary of each numbered comment in the commenter's letter precedes the City's response.

The following is a list of public agencies, organizations, and residents and interested parties that submitted comments on the IS/MND during the public review period. The comment letters received on the IS/MND and responses to those comments are provided on the following pages.

Letter Number	Agency/Organization/Name	Comment Date
Agencies		
A1	California Department of Transportation (Caltrans)	April 6, 2020
Organizations		
O1	Gabrieleno Band of Mission Indians - Kizh Nation	March 24, 2020

The City of Santa Fe Springs has determined that none of this material constitutes significant new information that requires recirculation of the Draft MND for further public comment under CEQA Guidelines Section 15088.5. The additional material clarifies existing information prepared in the MND and does not present any new substantive information. None of this new material indicates that the project would result in a significant new environmental impact not previously disclosed in the MND. Additionally, none of this material indicates that there would be a substantial increase in the severity of a previously identified environmental impact that would not be mitigated, or that there would be any of the other circumstances requiring recirculation described in Section 15088.5.

This page intentionally left blank.

RE: 9920 Pioneer Boulevard Project – Mitigated Negative Declaration (MND)
GTS # 07-LA-2020-03217
Vic. LA-605/PM: R10.526

Dear Cuong Nguyen:

Thank you for including the California Department of Transportation (Caltrans) in the review process for the above referenced MND. The 9920 Pioneer Boulevard Project would redevelop the 9.06-acre project site with three concrete tilt-up industrial buildings totaling 163,518 gross square feet, or an increase of 5,849 square feet beyond the existing square footage. A total of 149,605 square feet will be used for business park uses, while 8,064 square feet will be used for office space. Each proposed building would include a loading dock area, mezzanine office space, and automobile parking. A total of 271 vehicle parking spots and 15 bicycle stalls will be provided. Currently, the project site is developed with seven industrial buildings that total approximately 158,000 square feet, which would be demolished as part of the proposed project. The City of Santa Fe Springs is considered the Lead Agency under the California Environmental Quality Act (CEQA). A1-1

The project is located approximately 3,600 feet away from Interstate 605 (I-605) at Telegraph Road, and approximately 1.10 miles away from the Interstate 5 (I-5) & I-605 interchange in the City of Santa Fe Springs. According to the MND, "Traffic traveling to and from the project site would mostly be traveling to and from the I-605 and I-5 freeways, and the intersections of Pioneer Boulevard/Telegraph Road and Pioneer Boulevard/Willake Street would receive most of the project traffic."

From reviewing the MND, Caltrans has the following comments:

- The City of Santa Fe Springs has chosen to analyze the transportation impacts of this project in terms of Level of Service (LOS). As a reminder, Senate Bill 743 (2013) mandates that VMT be used as the primary metric in identifying transportation impacts of all future development projects under CEQA, starting July 1, 2020. For information on determining transportation impacts in terms of VMT on the State Highway System, see the Technical Advisory on Evaluating Transportation Impacts in CEQA by the California Governor's Office of Planning and Research, dated December 2018: http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf. A1-2
- Queuing and weaving analyses are needed at the following locations because inadequate weaving and queue storage after the addition of trips generated by this project might increase the risk of potential transportation conflicts: A1-3
  - The I-605/Telegraph Road/Cedardale Drive intersection.
  - The storage between the northbound I-605 off-ramp terminus and Bartley Avenue, as well as the storage between Bartley Avenue and Orr and Day Road.

"Provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability"

The following information is included for your consideration.

The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability. Furthermore, Caltrans encourages the Lead Agency to integrate transportation and land use in a way that reduces VMT and Greenhouse Gas (GHG) emissions, as well as facilitates a high level of non-motorized travel and transit use. Thus, Caltrans supports the Transportation Demand Management (TDM) strategies this project has incorporated, such as providing 15 bicycle stalls and replacing the sidewalk along the western edge of the project site. Additional TDM strategies that the City of Santa Fe Springs may want to consider integrating into this project include:

- Decrease the amount of vehicle parking provided to be no more than required, by offering additional bicycle stalls and transit passes to use the bus routes with stops near the project.
- Ensure that bicycle parking is secure, convenient, and accessible for all users.
- Confirm that access throughout the development is convenient and accommodating for all users.
- Make sure all sidewalks, curb ramps, and driveways near the project meet current ADA standards.
- Implement Class II bike lanes on Telegraph Road between the existing bicycle facilities on Santa Fe Springs Road and the San Gabriel River Mid Trail.
- Extend the bicycle facility on Pioneer Boulevard from Placita Place to south of the project site.
- Increase tree coverage as much as possible and include drought-tolerant landscaping throughout the project.

A1-4

Also, any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will need a Caltrans transportation permit. If construction traffic is expected to cause delays on any State facilities, please submit a construction traffic management plan detailing these delays for Caltrans' review. Caltrans recommends that the project limit construction and operational truck traffic to off-peak periods to minimize the potential impact on State facilities.

A1-5

If you have any questions about these comments, please contact Emily Gibson, the project coordinator, at Emily.Gibson@dot.ca.gov, and refer to GTS # 07-LA-2020-03217.

Sincerely,

MIYA EDMONSON
IGR/CEQA Branch Chief
cc: Scott Morgan, State Clearinghouse

"Provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability"

Response to Comment Letter A1: California Department of Transportation (Caltrans), dated April 7, 2020.

Comment A-1: This comment summarizes the Project's description as documented in DEIR Section 3.0, *Project Description.*

Response to A1-1: The comment does not raise any environmental concerns or questions; therefore, a response is not warranted.

Comment A1-2: The comment is informational and notes that SB743 mandates that VMT be used as the primary metric for identifying transportation impacts starting July 1, 2020.

Response to A1-2: The project is expected to be approved prior to July 1, which is why a VMT analysis was not prepared for the project.

Comment A1-3: The comment states that queueing and weaving analyses are needed at the intersections of I-605 SB Off Ramp-Cedardale Drive/Telegraph Road and I-605 NB Ramps – Bartley Avenue/Telegraph Road.

Response to A1-3: A weaving analysis is generally not prepared for intersections; therefore, this response will focus on the queues at each intersection. A summary table was prepared to show the expected queue lengths at turning lanes on Telegraph Road, as well as on the southbound freeway off-ramp. See Table 1: Summary of Queues in the Cumulative and Cumulative plus Project Condition. The queues were taken from the HCM 6th Edition LOS analysis worksheets and summarized for the Cumulative and Cumulative plus Project scenarios (the worst-case scenarios evaluated).

As shown in the Table 1, the available storage lane length would be exceeded at 4 locations as summarized below:

- Eastbound left-turn pocket at the Southbound off-ramp. The queue exceeds the available storage in the no-project condition during both the AM and PM peak hours. Addition of project traffic is insignificant and would not add any vehicles to the forecast queue.

- Westbound right-turn pocket at the Southbound off-ramp. In the no-project condition, the queue exceeds the distance from the Southbound off-ramp to Bartley Avenue. This over-capacity condition occurs without the project and would not be caused by project trips.

- Eastbound right-turn pocket at the Northbound ramps. The queue exceeds the available storage in the no-project condition during both the AM and PM peak hours. Addition of project traffic is insignificant and would add 2 feet to the queue.

- Westbound right-turn queue exceeds the distance between the on-ramp and Orr and Day Road. In the no-project condition, the queue exceeds the distance from the Northbound on-ramp to Orr and Day Road. This over-capacity condition occurs without the project and would not be caused by project trips.

In summary, based on the project analysis, existing queues exceed available capacity on Telegraph Road at the I-605 freeway ramps. The effect of project trips would be nominal on the existing queues.

Table 1: Summary of Queues in the Cumulative and Cumulative plus Project Condition

Vehicle Queue length is estimated as 22 feet per car

Comment A1-4: The comment does not reference specific concerns related to the environmental analysis within the MND. The comment suggests Transportation Demand Management (TDM) strategies that the City of Santa Fe Springs may want to consider integrating into this project including:

- Decrease the amount of vehicle parking provided to be no more than required, by offering additional bicycle stalls and transit passes to use the bus routes with stops near the project.
- Ensure that bicycle parking is secure, convenient, and accessible for all users.
- Confirm that access throughout the development is convenient and accommodating for all users.
- Make sure all sidewalks, curb ramps, and driveways near the project meet current ADA standards.
- Implement Class II bike lanes on Telegraph Road between the existing bicycle facilities on Santa Fe Springs Road and the San Gabriel River Mid Trail.
- Extend the bicycle facility on Pioneer Boulevard from Placita Place to south of the project site.
- Increase tree coverage as much as possible and include drought-tolerant landscaping throughout the project.

Response to A1-4: The comment does not identify specific concerns or impacts related to the environmental analysis within the MND. The comments are noted and will be forwarded to decision makers for their consideration.

It should be noted that the project includes 17 bicycle parking stalls, including 3 for long term parking, allocated throughout the project for each building for convenient access.

As described in Section 4.17, *Transportation*, of the MND, the project area is currently served with transit service from the Los Angeles County Metropolitan Transportation Authority (LA Metro) and Norwalk Transit System (NTS). There is an existing bus stop with LA Metro's Local Route 62 line located at the northwest corner of the intersection of Telegraph Road and Pioneer Boulevard, which, starting on Telegraph Road, runs east-west from Boyle Heights in the City of Los Angeles to the City of Hawaiian Gardens. Another bus stop at the southwest corner of the same intersection serves NTS Line 1 and 3. Operation of the project would provide access to and would not affect the operation of the bus routes.

The proposed project does not include improvements to the existing crosswalks and would not result in impacts to pedestrian facilities; any sidewalk improvements undertaken as park of the project would be ADA compliant.

The project will not impact bicycle facilities as none exists it the immediate project vicinity and does not propose improvements to bicycle facilities. The comments will be forwarded to City decisionmakers for their consideration.

Project provides more landscaping than in required by the City's municipal code, including approximately 133 trees, and would include drought-tolerant landscaping throughout the project.

Comment A1-5: The comment states that any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will need a Caltrans transportation permit and that if construction traffic is expected to cause delays on any State facilities, a construction traffic management plan should be submitted for Caltrans' review.

Response to A1-5: Appropriate coordination will be undertaken if heavy construction equipment and/or materials which require the use of oversized-transport vehicles would occur on State highways.

Notice of Intent to Adopt An Initial Study/ Mitigated Negative Declaration

March 24, 2020

City Santa Fe Springs

11710 E. Telegraph Road

Santa Fe Springs, CA 9070

Dear Cuong Nguyen,

We have received your Notice of Intent to adopt a Negative Declaration for the Pioneer Boulevard Development Project in the location of the City of Santa Fe Springs. Our Tribal Government is requesting the retention of a Native American Tribal Consultant to monitor all ground disturbance conducted for this project. O1-1

Sincerely,
Gabrieleno Band of Mission Indians/Kizh Nation
(1844) 390-0787 Office

Andrew Salas, Chairman | Nadine Salas, Vice-Chairman | Dr. Christina Swindall Martinez, secretary
Albert Perez, treasurer I | Martha Gonzalez Lemos, treasurer II | Richard Gradias, Chairman of the council of Elders

PO Box 393 Covina, CA 91723 www.gabrielenoindians@yahoo.com gabrielenoindians@yahoo.com

Response to Comment Letter O1: Gabrieleno Band of Mission Indians – Kizh Nation, dated March 24, 2020

Comment O1-1: The comment does not reference specific concerns related to the environmental analysis within the MND and states that Tribal Government requests the retention of a Native American Tribal Consultant to monitor all ground disturbance conducted for this project.

Response to O1-1: As detailed in Section 5.14, *Tribal Cultural Resources*, of the MND Mitigation Measure TCR-1 has already been includes pursuant the AB 52 consultation with the Kizh Nation and requires an on-call Native America monitor, as detailed in MM TCR-1 below. With mitigation, impacts would be less than significant. No further response is required.

Mitigation Measure TCR-1: Native American Monitor. Prior to the issuance of any permits for initial site clearing (such as pavement removal, grubbing, tree removals) or issuance of permits allowing ground-disturbing activities that cause excavation to depths greater than artificial fill (including as boring, grading, excavation, drilling, potholing or auguring, and trenching), the City of Santa Fe Springs shall ensure that the project applicant/developer retain qualified Native American Monitor(s) during construction-related ground disturbance activities. The monitor(s) shall be approved by the tribal representatives of the Gabrieleño Band of Mission Indians - Kizh Nation and be present on-site during construction that involve ground disturbing activities identified herein. The Native American monitor(s) shall be responsible for the following activities during the monitoring, as appropriate:

- Complete monitoring logs on a daily basis, providing descriptions of the daily activities, including construction activities, locations, soil, and any cultural materials identified.
- The on-site monitoring shall end when the project site grading and excavation activities are completed, or when the tribal representatives and monitor have indicated that the site has a low potential for tribal cultural resources.
- Upon discovery, the tribal and/or archaeological monitor/consultant/consultant shall immediately divert work a minimum of 150 feet and place an exclusion zone around the burial. The monitor/consultant(s) shall then notify the tribe, the qualified lead archaeologist, and the construction manager who shall call the coroner.
- Work will continue to be diverted while the coroner determines whether the remains are Native American. The discovery is to be kept confidential and secure to prevent any further disturbance. If the finds are determined to be Native American, the coroner will notify the NAHC, as mandated by state law, who will then appoint a Most Likely Descendent (MLD).
- If the Gabrieleño Band of Mission Indians - Kizh Nation is designated MLD, the following treatment measures shall be implemented.
- Prior to the continuation of ground-disturbing activities, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.
- In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains shall be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours.
- The tribe shall make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that the burials will be removed. The tribe will work closely with the qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully.
- If data recovery is approved by the tribe, documentation shall be taken that includes, at a minimum, detailed descriptive notes and sketches. Additional types of documentation shall be approved by the tribe for data recovery purposes.

- Cremations will either be removed in bulk or by means as necessary to ensure completely recovery of all material. If the discovery of human remains includes
- Each occurrence of human remains and associated funerary objects shall be stored using opaque cloth bags. All human remains, funerary objects, sacred objects, and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the Project Site but at a location agreed upon between the tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

Response to Comments

Section 15088 of the CEQA Guidelines requires the Lead Agency, the City of Santa Fe Springs, to evaluate comments on environmental issues received from public agencies, organizations, and interested parties who reviewed the Initial Study/Mitigated Negative Declaration (MND) and prepare written responses. This section includes copies of all written comment letters received on the MND and the City of Santa Fe Springs's responses to the comment letters. Comment letters and specific comments are numbered for reference purposes which correspond with the City's response. A summary of each numbered comment in the commenter's letter precedes the City's response.

The following is a list of public agencies, organizations, and residents and interested parties that submitted comments on the IS/MND during the public review period. The comment letters received on the IS/MND and responses to those comments are provided on the following pages.

Letter Number	Agency/Organization/Name	Comment Date
Agencies		
A1	California Department of Transportation (Caltrans)	April 6, 2020
Organizations		
O1	Gabrieleno Band of Mission Indians - Kizh Nation	March 24, 2020

The City of Santa Fe Springs has determined that none of this material constitutes significant new information that requires recirculation of the Draft MND for further public comment under CEQA Guidelines Section 15088.5. The additional material clarifies existing information prepared in the MND and does not present any new substantive information. None of this new material indicates that the project would result in a significant new environmental impact not previously disclosed in the MND. Additionally, none of this material indicates that there would be a substantial increase in the severity of a previously identified environmental impact that would not be mitigated, or that there would be any of the other circumstances requiring recirculation described in Section 15088.5.

This page intentionally left blank.

RE: 9920 Pioneer Boulevard Project – Mitigated Negative Declaration (MND)
GTS # 07-LA-2020-03217
Vic. LA-605/PM: R10.526

Dear Cuong Nguyen:

Thank you for including the California Department of Transportation (Caltrans) in the review process for the above referenced MND. The 9920 Pioneer Boulevard Project would redevelop the 9.06-acre project site with three concrete tilt-up industrial buildings totaling 163,518 gross square feet, or an increase of 5,849 square feet beyond the existing square footage. A total of 149,605 square feet will be used for business park uses, while 8,064 square feet will be used for office space. Each proposed building would include a loading dock area, mezzanine office space, and automobile parking. A total of 271 vehicle parking spots and 15 bicycle stalls will be provided. Currently, the project site is developed with seven industrial buildings that total approximately 158,000 square feet, which would be demolished as part of the proposed project. The City of Santa Fe Springs is considered the Lead Agency under the California Environmental Quality Act (CEQA). A1-1

The project is located approximately 3,600 feet away from Interstate 605 (I-605) at Telegraph Road, and approximately 1.10 miles away from the Interstate 5 (I-5) & I-605 interchange in the City of Santa Fe Springs. According to the MND, "Traffic traveling to and from the project site would mostly be traveling to and from the I-605 and I-5 freeways, and the intersections of Pioneer Boulevard/Telegraph Road and Pioneer Boulevard/Willake Street would receive most of the project traffic."

From reviewing the MND, Caltrans has the following comments:

- The City of Santa Fe Springs has chosen to analyze the transportation impacts of this project in terms of Level of Service (LOS). As a reminder, Senate Bill 743 (2013) mandates that VMT be used as the primary metric in identifying transportation impacts of all future development projects under CEQA, starting July 1, 2020. For information on determining transportation impacts in terms of VMT on the State Highway System, see the Technical Advisory on Evaluating Transportation Impacts in CEQA by the California Governor's Office of Planning and Research, dated December 2018: http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf. A1-2
- Queuing and weaving analyses are needed at the following locations because inadequate weaving and queue storage after the addition of trips generated by this project might increase the risk of potential transportation conflicts: A1-3
  - The I-605/Telegraph Road/Cedardale Drive intersection.
  - The storage between the northbound I-605 off-ramp terminus and Bartley Avenue, as well as the storage between Bartley Avenue and Orr and Day Road.

"Provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability"

The following information is included for your consideration.

The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability. Furthermore, Caltrans encourages the Lead Agency to integrate transportation and land use in a way that reduces VMT and Greenhouse Gas (GHG) emissions, as well as facilitates a high level of non-motorized travel and transit use. Thus, Caltrans supports the Transportation Demand Management (TDM) strategies this project has incorporated, such as providing 15 bicycle stalls and replacing the sidewalk along the western edge of the project site. Additional TDM strategies that the City of Santa Fe Springs may want to consider integrating into this project include:

- Decrease the amount of vehicle parking provided to be no more than required, by offering additional bicycle stalls and transit passes to use the bus routes with stops near the project.
- Ensure that bicycle parking is secure, convenient, and accessible for all users.
- Confirm that access throughout the development is convenient and accommodating for all users.
- Make sure all sidewalks, curb ramps, and driveways near the project meet current ADA standards.
- Implement Class II bike lanes on Telegraph Road between the existing bicycle facilities on Santa Fe Springs Road and the San Gabriel River Mid Trail.
- Extend the bicycle facility on Pioneer Boulevard from Placita Place to south of the project site.
- Increase tree coverage as much as possible and include drought-tolerant landscaping throughout the project.

A1-4

Also, any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will need a Caltrans transportation permit. If construction traffic is expected to cause delays on any State facilities, please submit a construction traffic management plan detailing these delays for Caltrans' review. Caltrans recommends that the project limit construction and operational truck traffic to off-peak periods to minimize the potential impact on State facilities.

A1-5

If you have any questions about these comments, please contact Emily Gibson, the project coordinator, at Emily.Gibson@dot.ca.gov, and refer to GTS # 07-LA-2020-03217.

Sincerely,

MIYA EDMONSON
IGR/CEQA Branch Chief
cc: Scott Morgan, State Clearinghouse

"Provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability"

Response to Comment Letter A1: California Department of Transportation (Caltrans), dated April 7, 2020.

Comment A-1: This comment summarizes the Project's description as documented in DEIR Section 3.0, *Project Description.*

Response to A1-1: The comment does not raise any environmental concerns or questions; therefore, a response is not warranted.

Comment A1-2: The comment is informational and notes that SB743 mandates that VMT be used as the primary metric for identifying transportation impacts starting July 1, 2020.

Response to A1-2: The project is expected to be approved prior to July 1, which is why a VMT analysis was not prepared for the project.

Comment A1-3: The comment states that queueing and weaving analyses are needed at the intersections of I-605 SB Off Ramp-Cedardale Drive/Telegraph Road and I-605 NB Ramps – Bartley Avenue/Telegraph Road.

Response to A1-3: A weaving analysis is generally not prepared for intersections; therefore, this response will focus on the queues at each intersection. A summary table was prepared to show the expected queue lengths at turning lanes on Telegraph Road, as well as on the southbound freeway off-ramp. See Table 1: Summary of Queues in the Cumulative and Cumulative plus Project Condition. The queues were taken from the HCM 6th Edition LOS analysis worksheets and summarized for the Cumulative and Cumulative plus Project scenarios (the worst-case scenarios evaluated).

As shown in the Table 1, the available storage lane length would be exceeded at 4 locations as summarized below:

- Eastbound left-turn pocket at the Southbound off-ramp. The queue exceeds the available storage in the no-project condition during both the AM and PM peak hours. Addition of project traffic is insignificant and would not add any vehicles to the forecast queue.

- Westbound right-turn pocket at the Southbound off-ramp. In the no-project condition, the queue exceeds the distance from the Southbound off-ramp to Bartley Avenue. This over-capacity condition occurs without the project and would not be caused by project trips.

- Eastbound right-turn pocket at the Northbound ramps. The queue exceeds the available storage in the no-project condition during both the AM and PM peak hours. Addition of project traffic is insignificant and would add 2 feet to the queue.

- Westbound right-turn queue exceeds the distance between the on-ramp and Orr and Day Road. In the no-project condition, the queue exceeds the distance from the Northbound on-ramp to Orr and Day Road. This over-capacity condition occurs without the project and would not be caused by project trips.

In summary, based on the project analysis, existing queues exceed available capacity on Telegraph Road at the I-605 freeway ramps. The effect of project trips would be nominal on the existing queues.

Table 1: Summary of Queues in the Cumulative and Cumulative plus Project Condition

Vehicle Queue length is estimated as 22 feet per car

Comment A1-4: The comment does not reference specific concerns related to the environmental analysis within the MND. The comment suggests Transportation Demand Management (TDM) strategies that the City of Santa Fe Springs may want to consider integrating into this project including:

- Decrease the amount of vehicle parking provided to be no more than required, by offering additional bicycle stalls and transit passes to use the bus routes with stops near the project.
- Ensure that bicycle parking is secure, convenient, and accessible for all users.
- Confirm that access throughout the development is convenient and accommodating for all users.
- Make sure all sidewalks, curb ramps, and driveways near the project meet current ADA standards.
- Implement Class II bike lanes on Telegraph Road between the existing bicycle facilities on Santa Fe Springs Road and the San Gabriel River Mid Trail.
- Extend the bicycle facility on Pioneer Boulevard from Placita Place to south of the project site.
- Increase tree coverage as much as possible and include drought-tolerant landscaping throughout the project.

Response to A1-4: The comment does not identify specific concerns or impacts related to the environmental analysis within the MND. The comments are noted and will be forwarded to decision makers for their consideration.

It should be noted that the project includes 17 bicycle parking stalls, including 3 for long term parking, allocated throughout the project for each building for convenient access.

As described in Section 4.17, *Transportation*, of the MND, the project area is currently served with transit service from the Los Angeles County Metropolitan Transportation Authority (LA Metro) and Norwalk Transit System (NTS). There is an existing bus stop with LA Metro's Local Route 62 line located at the northwest corner of the intersection of Telegraph Road and Pioneer Boulevard, which, starting on Telegraph Road, runs east-west from Boyle Heights in the City of Los Angeles to the City of Hawaiian Gardens. Another bus stop at the southwest corner of the same intersection serves NTS Line 1 and 3. Operation of the project would provide access to and would not affect the operation of the bus routes.

The proposed project does not include improvements to the existing crosswalks and would not result in impacts to pedestrian facilities; any sidewalk improvements undertaken as park of the project would be ADA compliant.

The project will not impact bicycle facilities as none exists it the immediate project vicinity and does not propose improvements to bicycle facilities. The comments will be forwarded to City decisionmakers for their consideration.

Project provides more landscaping than in required by the City's municipal code, including approximately 133 trees, and would include drought-tolerant landscaping throughout the project.

Comment A1-5: The comment states that any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will need a Caltrans transportation permit and that if construction traffic is expected to cause delays on any State facilities, a construction traffic management plan should be submitted for Caltrans' review.

Response to A1-5: Appropriate coordination will be undertaken if heavy construction equipment and/or materials which require the use of oversized-transport vehicles would occur on State highways.

Response to Comment Letter O1: Gabrieleno Band of Mission Indians – Kizh Nation, dated March 24, 2020

Comment O1-1: The comment does not reference specific concerns related to the environmental analysis within the MND and states that Tribal Government requests the retention of a Native American Tribal Consultant to monitor all ground disturbance conducted for this project.

Response to O1-1: As detailed in Section 5.14, *Tribal Cultural Resources*, of the MND Mitigation Measure TCR-1 has already been includes pursuant the AB 52 consultation with the Kizh Nation and requires an on-call Native America monitor, as detailed in MM TCR-1 below. With mitigation, impacts would be less than significant. No further response is required.

Mitigation Measure TCR-1: Native American Monitor. Prior to the issuance of any permits for initial site clearing (such as pavement removal, grubbing, tree removals) or issuance of permits allowing ground-disturbing activities that cause excavation to depths greater than artificial fill (including as boring, grading, excavation, drilling, potholing or auguring, and trenching), the City of Santa Fe Springs shall ensure that the project applicant/developer retain qualified Native American Monitor(s) during construction-related ground disturbance activities. The monitor(s) shall be approved by the tribal representatives of the Gabrieleño Band of Mission Indians - Kizh Nation and be present on-site during construction that involve ground disturbing activities identified herein. The Native American monitor(s) shall be responsible for the following activities during the monitoring, as appropriate:

- Complete monitoring logs on a daily basis, providing descriptions of the daily activities, including construction activities, locations, soil, and any cultural materials identified.
- The on-site monitoring shall end when the project site grading and excavation activities are completed, or when the tribal representatives and monitor have indicated that the site has a low potential for tribal cultural resources.
- Upon discovery, the tribal and/or archaeological monitor/consultant/consultant shall immediately divert work a minimum of 150 feet and place an exclusion zone around the burial. The monitor/consultant(s) shall then notify the tribe, the qualified lead archaeologist, and the construction manager who shall call the coroner.
- Work will continue to be diverted while the coroner determines whether the remains are Native American. The discovery is to be kept confidential and secure to prevent any further disturbance. If the finds are determined to be Native American, the coroner will notify the NAHC, as mandated by state law, who will then appoint a Most Likely Descendent (MLD).
- If the Gabrieleño Band of Mission Indians - Kizh Nation is designated MLD, the following treatment measures shall be implemented.
- Prior to the continuation of ground-disturbing activities, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.
- In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains shall be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours.
- The tribe shall make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that the burials will be removed. The tribe will work closely with the qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully.
- If data recovery is approved by the tribe, documentation shall be taken that includes, at a minimum, detailed descriptive notes and sketches. Additional types of documentation shall be approved by the tribe for data recovery purposes.

- Cremations will either be removed in bulk or by means as necessary to ensure completely recovery of all material. If the discovery of human remains includes
- Each occurrence of human remains and associated funerary objects shall be stored using opaque cloth bags. All human remains, funerary objects, sacred objects, and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the Project Site but at a location agreed upon between the tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

Attachment 8 - Resolution 159-2020

Attachment 9 – Full Set of Proposed Plans

PLANT SCHEDULE

TREES	BOTANICAL / COMMON NAME	CONT	WUCOLS	QTY
	Koelreuteria bipinnata / Chinese Flame Tree Multi-Trunk	36"box	Med	14
	Melaleuca quinquenervia / Cajeput Tree Standard	24"box	Med	25
	Pinus canariensis / Canary Island Pine	24"box	Low	15
	Podocarpus gracilior / Fern Pine	24"box		15
	Quercus virginiana / Southern Live Oak	24"box	Low	18
	Rhus lancea / African Sumac	24"box	Low	2
	Tristania conferta / Brisbane Box	24"box	Med	47

CONCEPT PLANT SCHEDULE

FOUNDATION PLANTING / HEDGE SCREEN - 5 GAL - MED WATER
Buxus microphylla japonica 'Green Beauty' / Green Beauty Boxwood - Space 30" o.c.
Ligustrum texanum / Texas Privet - Space 3'-6" o.c.
Nandina domestica / Heavenly Bamboo
Rhaphiolepis indica 'Jack Evans' / Indian Hawthorn

GRASSES - LOW WATER - 1 & 5 GAL
Muhlenbergia capillaris 'Autumn Blush' / Pink Muhly
Muhlenbergia lindheimeri 'Autumn Grow' TM / Lindheimer's Muhly Space 4' o.c.
Pennisetum x 'Fairy Tails' / Evergreen Fountain Grass

LARGE SCALE FOUNDATION SHRUB - 5 GAL - LOW WATER
Callistemon citrinus / Lemon Bottlebrush Shrub
Dodonaea viscosa 'Purpurea' / Purple Leafed Hopseed Bush
Elaeagnus pungens 'Fruitlandii' / Silverberry
Heteromeles arbutifolia / Toyon - Space 6' o.c.
Nerium oleander 'White' / White Oleander

SMALL SCALE FOUNDATION PLANTING - 5 GAL - LOW WATER
Arbutus unedo / Strawberry Tree Shrub - Space 5' o.c.
Leucophyllum frutescens 'Green Cloud' TM / Green Cloud Texas Ranger
Nerium oleander 'Pink' / Pink Oleander
Nerium oleander 'Red' / Red Oleander
Westringia fruticosa / Coast Rosemary - Space 4' o.c.
Xylosma congestum 'Compacta' / Compact Xylosma

VINES FOR SCREENING - 5 GAL - LOW WATER
Bougainvillea x 'San Diego Red' / Bougainvillea
Macfadyena unguis-cati / Yellow Trumpet Vine spaced @ 10' o.c.

SHRUB PALETTE - LOW WATER USE
Shrubs
Agave americana / Century Plant - Space 6' o.c.
Aloe striata / Coral Aloe
Arbutus unedo / Strawberry Tree Shrub - Space 5' o.c.
Bougainvillea x 'Rosenka' / Bougainvillea
Callistemon citrinus / Lemon Bottlebrush Shrub- Space 5' o.c.
Callistemon citrinus 'Little John' / Dwarf Bottle Brush- Space 3' o.c.
Dodonaea viscosa 'Purpurea' / Purple Leafed Hopseed Bush
Elaeagnus pungens 'Fruitlandii' / Silverberry
Leucophyllum frutescens 'Green Cloud' TM / Green Cloud Texas Ranger
Macfadyena unguis-cati / Yellow Trumpet Vine spaced @ 10' o.c.
Muhlenbergia capillaris / Pink Muhly
Muhlenbergia capillaris 'Autumn Blush' / Pink Muhly
Muhlenbergia lindheimeri 'Autumn Grow' TM / Lindheimer's Muhly Space 4' o.c.
Nerium oleander 'Petite Pink' / Petite Pink Oleander - Space 4' o.c.
Nerium oleander 'Pink' / Pink Oleander
Nerium oleander 'Red' / Red Oleander
Nerium oleander 'White' / White Oleander
Pennisetum x 'Fairy Tails' / Evergreen Fountain Grass
Salvia greggii 'Furman's Red' / Furman's Red Salvia
Westringia fruticosa / Coast Rosemary - Space 4' o.c.
Xylosma congestum 'Compacta' / Compact Xylosma

SHRUB PALETTE - MEDIUM WATER USE
Buxus microphylla japonica 'Green Beauty' / Green Beauty Boxwood - Space 30" o.c.
Ligustrum texanum / Texas Privet - Space 3'-6" o.c.
Nandina domestica / Heavenly Bamboo
Phormium tenax 'Amazing Red' / Dwarf Red Flax
Rhaphiolepis indica 'Jack Evans' / Indian Hawthorn
Rosa floribunda 'Iceberg' / Iceberg Rose

GROUND COVER PALETTE - LOW WATER USE - 1 GAL
Acacia redolens 'Desert Carpet' TM / Bank Catclaw Space 4' o.c.
Lantana montevidensis 'New Gold' / Trailing Lantana Space 3' o.c.
Lonicera japonica 'Halliana' / Halls Honeysuckle Flowering Vine
Rosmarinus officinalis 'Huntington Carpet' / Huntington Carpet Rosemary - Space 3' o.c.

GROUND COVER PALETTE - MEDIUM WATER USE - 1 GAL
Dianella tasmanica 'Case Blue' / Flax Lily
Hemerocallis x 'Stella de Oro' / Stella de Oro Daylily
Pennisetum spathiolatum / Rye Puffs
Rosa x 'Noare' Flower Carpet Red / Rose
Trachelospermum jasminoides / Chinese Star Jasmine

NOTES

1. ALL TREES WITHIN 6' OF HARDSCAPE SHALL BE IN A SHAWTOWN LINEAR (WRAP AROUND NOT ALLOWED) ROOT BARRIER 24" HIGH LINEAR ROOT BARRIER SHALL BE CENTERED ON TREE AND EXTEND 5' IN BOTH DIRECTIONS FOR A TOTAL OF 10'
2. NOTE: QUANTITIES AND AREA CALCULATIONS SHOWN IN LEGEND ARE FOR REFERENCE ONLY . CONTRACTOR REPONSIBLE FOR ALL QUANTITY TAKE-OFFS AND AREA CALCULATIONS FOR DETERMINING COST AND DELIVERY OF MATERIALS TO SITE.

SHREDDED MULCH NOTE

ALL PLANTER AREAS TO RECEIVE A 3" LAYER OF SHREDDED COVER MULCH AVAILABLE FROM EARTHWORKS (951)782-0260

0 30 60 90 120 feet

PROJECT DATA - BUILDING 1:

ZONE:	ML
SITE AREA:	221,462 SF / 5.08 AC
FOOTPRINT AREA:	99,950 SF
FIRST FLOOR OFFICE:	4,000 SF
SECOND FLOOR AREA	4,000 SF
TOTAL BUILDING AREA:	103,950 SF
COVERAGE:	45.12 %
F.A.R.:	46.93 %
PARKING REQUIRED:	
0 - 20,000 SF (1/500 SF)	40 STALLS
20,001 SF - 100,000 SF (1/750 SF)	107 STALLS
100,001 SF - 200,000 SF (1/1,000 SF)	4 STALLS
200,001 SF AND ABOVE (1/2,000 SF)	00 STALLS
TOTAL STALLS	151 STALLS
PARKING PROVIDED:	
ACCESSIBLE STALLS	6 STALLS
STANDARDS STALLS	118 STALLS
COMPACT STALLS (25% MAX)	38 STALLS
TOTAL STALLS	162 STALLS
BICYCLE PARKING STALLS 5% OF MOTORIZED VEHICLES (CAL GREEN)	8 STALLS
1-BICYCLE STALL SHALL BE DESIGNATED FOR LONG TERM PARKING	1 STALLS
TOTAL BICYCLE STALLS PROVIDE	9 STALLS
LANDSCAPE REQUIRED:	
FRONTAGE: 25' X 388' = 9,700 SF	9,700 SF
6% OF PARKING AREA) = 25,945 SF X .06	1,557 SF
TOTAL LANDSCAPE REQUIRED:	11,257 SF
LANDSCAPE PROVIDED: (13,224 SF PARKING LANDSCAPE)	22,420 SF
TRAILER PARKING REQUIRED:	3 TRAILERS
1 TRAILER (12' X 53') PER 4 DOCK LOADING DRS FOR BUILDINGS OVER 100,000 SF (11 DOORS PROVIDED)	
TRAILER PARKING PROVIDED:	3 TRAILERS

GENERAL NOTES:
1. NO MORE THAN 15% OFFICE BUILDOUT IS ANTICIPATED.

TRASH AREA CALCULATION

REQUIRED TRASH AREA:	
1 % FOR THE FIRST 20,000 SF	200 SF
1/2% FOR AFTER 20,000 SF	420 SF
TOTAL REQUIRED	620 SF
PROVIDED TRASH AREA	716 SF

PROJECT DATA - BUILDING 2 AND 3:

ZONE:	ML
SITE AREA:	141,817 SF / 3.26 AC
FOOTPRINT AREA:	54,530 SF
FIRST FLOOR OFFICE:	5,000 SF
SECOND FLOOR AREA	5,000 SF
TOTAL BUILDING AREA:	59,530 SF
COVERAGE:	38.45 %
F.A.R.:	41.97 %
PARKING REQUIRED:	
0 - 40,000 SF (1/500 SF)	80 STALLS
40,001 SF - 100,000 SF (1/750 SF)	26 STALLS
100,001 SF - 200,000 SF (1/1,000 SF)	00 STALLS

TOTAL STALLS	109 STALLS
BICYCLE PARKING STALLS 5% OF MOTORIZED VEHICLES (CAL GREEN)	5 STALLS
1-BICYCLE STALL SHALL BE DESIGNATED FOR LONG TERM PARKING	1 STALLS
TOTAL BICYCLE STALLS PROVIDE	6 STALLS
LANDSCAPE REQUIRED:	
FRONTAGE: 25' X 254' = 6,350 SF	6,350 SF
6% OF PARKING AREA) = 35,683 SF X .06	2,141 SF
TOTAL LANDSCAPE REQUIRED:	8,491 SF
LANDSCAPE PROVIDED: (10,913 SF PARKING LANDSCAPE)	16,673 SF

GENERAL NOTES:
1. NO MORE THAN 15% OFFICE BUILDOUT IS ANTICIPATED.

TRASH AREA CALCULATION

REQUIRED TRASH AREA:	
1 % FOR THE FIRST 20,000 SF	200 SF
1/2% FOR AFTER 20,000 SF	198 SF
TOTAL REQUIRED	398 SF
PROVIDED TRASH AREA	566 SF

KEYNOTES: (00)

1. PROPOSED PAINTED CONCRETE TILT-UP INDUSTRIAL BUILDING.
2. TYPICAL PARKING STALL - 8.5' X 19'. STRIPING PER CITY STANDARDS.
3. TRUCK YARD W/ DOCK HIGH AND GRADE LEVEL TRUCK DOORS.
4. LANDSCAPING - SEE CONCEPT LANDSCAPE PLAN.
5. PRIMARY BUILDING ENTRANCE.
6. 6'-0" CONCRETE PAINTED TRASH ENCLOSURE AND ROOF COVER LOCATIONS.
7. CONCRETE 14'-0" HIGH SCREENWALL WITH 10'-0" HIGH TUBE STEEL SLIDING GATE.
8. PROPERTY LINES.
9. PROPOSED 8'-0" HIGH BLACK TUBE STEEL FENCE.
11. ELECTRICAL TRANFORMER TO BE SCREENED BY LANDSCAPE.
12. ELECTRICAL EQUIPMENT TO BE LOCATED IN THE ELECTRICAL ROOM.
13. BIKE RACK LOCATION.
14. TRAILER PARKING POSITIONS PER CITY STANARDS.

GENERAL NOTES:

1. EXISTING STRUCTURES ONSITE TO BE REMOVED.
2. CONCEPTUAL MONUMENT SIGN LOCATIONS ARE PROVIDED ONLY. NO SIGNS ARE PROPOSED WITH THIS APPLICATION PACKAGE.
3. ALL PROPOSED NEW ON-SITE UTILITY SERVICES SHALL BE UNDERGROUNDED.
4. DRIVEWAYS SHALL BE CONSTRUCTED PER CITY STANDARD PLAN.
5. DAMAGED SECTIONS OF CURB & GUTTER ALONG PIONEER BLVD. SHALL BE REPAIRED.
6. STATE OF CALIFORNIA "GENERAL CONSTRUCTION NPDES PERMITS AND WDID NUMBERS MUST BE OBTAINED PRIOR TO PERMIT.
7. PROVIDE 1 FOOTCANDLE MIN. THROUGH-OUT THE DEVELOPMENT AND SHALL BE APPROVED BY THE POLICE SERVICES DEPARTMENT.

CONSENT ITEM

Development Plan Approval Case Nos. 930, 931, 932, and 933

A request for a time extension of Development Plan Approval (DPA) Case Nos 930 - 933 to allow the construction of four (4) new concrete tilt-up industrial buildings, ranging from 58,463 sq. ft. to 121, 124 sq. ft., located on the northwest corner of Telegraph Road and Santa Fe Springs Road (APNs 8005-015-011, 8005-015-013, 8005-015-023, 8005-015-024, 8005-015-025, 8005-015-026, and 8005-015-027), within the M-2, Heavy Manufacturing Zone and Telegraph Road Corridor. (Breitburn Operating L.P.)

RECOMMENDATIONS

- Find and determine that granting a one (1) year time extension of Development Plan Approval Nos. 930, 931, 932, and 933 will not be detrimental to persons or properties in the surrounding area or to the City in general, and will be in conformance with the overall purpose and objective of the Zoning Ordinance and consistent with the goals, policies, and programs of the City's General Plan; and
- Approve a one (1) year time extension for Development Plan Approval Case Nos. 930, 931, 932, and 933 (until September 10, 2021), subject to the original conditions of approval for Development Plan Approval Nos. 930, 931, 932, and 933.

BACKGROUND/DESCRIPTION OF REQUEST

On September 10, 2018, the Planning Commission approved Development Plan Approval (DPA) Case Nos. 930, 931, 932, and 933 to allow the applicant, Breitburn Operating L.P, to construct four (4) new concrete tilt-up industrial buildings, ranging from 58, 463 sq. ft. to 121,124 sq. ft., located on the northwest corner of Telegraph Road and Santa Fe Springs Road. At the same meeting, the Planning Commission concurrently approved Tentative Parcel Map No. 78232 to allow for the reconfiguration of an approximately 44.67-acre site into five (5) parcels. The intent is to create independent parcels for each of the four proposed buildings and retain one parcel for oil extraction operations.

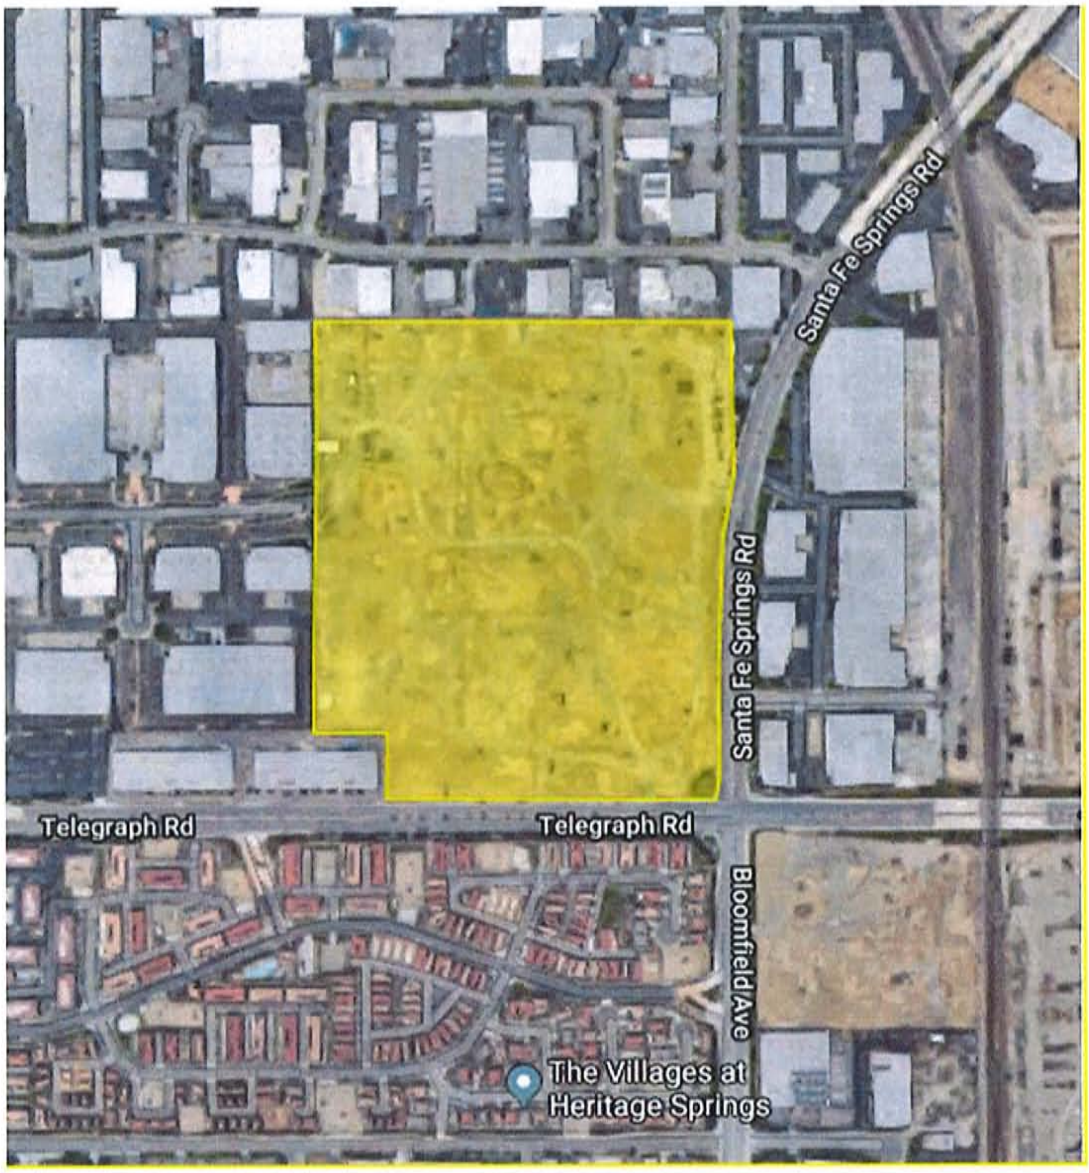
In accordance with Section 155.745 of the City's Zoning Ordinance (see Code Section below), a development plan approval, which has not been utilized within 12 months, shall become null and void. The Code, however, provides that an extension of time be granted by Commission or Council action.

City of Santa Fe Springs – Zoning Regulations
Section 155.745 – Expiration

Unless otherwise specified in the action granting development plan approval, said approval, which has not been utilized within a period of 12 consecutive, months from the effective date shall become null and void. In addition, the abandonment or nonuse of a development plate approval for a period of 12 consecutive months shall terminate said development plan approval and any privileges granted thereunder shall become null and void. However, an extension of time may be granted by Commission or Council action.

STAFF CONSIDERATIONS

The applicant, Brietburn Operating L.P., is currently in the process of abandoning or re-abandoning a minimum of twelve (12) oils wells, rerouting up to a mile of flowlines, and modernizing the electrical components, which service the remaining wells. Construction of the four (4) proposed industrial buildings are anticipated to begin in late summer 2021. As a result, the applicant is proactively requesting that the DPAs be extended until October 2021. It should be noted that staff understood the challenges of developing the subject site and therefore, DPA Case Nos. 930-933 were originally granted a 24-month validation period. To ensure the progress is continually being maintained, staff is recommending that the Planning Commission grant a one (1) year time extension, until September 10, 2021. If in one (1) year the applicant requires additional timing, they may submit a subsequent time extension request with an updated justification statement.



Wayne M. Morrell
Director of Planning

City of Santa Fe Springs
11710 E. Telegraph Road
Santa Fe Springs, CA 90670
Attn: Ms. Claudia Jimenez

Re: City of Santa Fe Springs Resolution No. 82-2018

Dear Ms. Jimenez,

Whereas, on September 10, 2018 the Planning Commission of the City of Santa Fe Springs adopted and approved the City of Santa Fe Springs Resolution No. 82-2018 being that resolution of the Planning Commission of the City of Santa Fe Springs Regarding Tentative Parcel Map No. 78232 & Development Plan Approval Case No. 930 & Development Plan Approval Case No. 931 & Development Plan Approval Case No. 932 & Development Plan Approval Case No. 933 in favor of Breitburn Operating L.P. (the "Resolution"); and

Whereas, the property owner is Breitburn Operating L.P., a wholly owned subsidiary of Maverick Natural Resources LLC, "Maverick" with primary address of 1111 Bagby Street, Suite 1600, Houston, Texas 77002; and

Whereas, since January of 2019 Maverick has spent close to ten million dollars in furtherance of the development contemplated in the Resolution including but not limited work related to the formalization of the design and access according to the desires of the City of Santa Fe Springs, the marketing costs associated with finding a partner to develop the surface, legal fees, taxes, filing costs, and the abandonment of eleven oil wells on the property; and

Whereas, on September 18, 2019 the Tentative Parcel Map No. 78232 was subdivided and recorded in Book 405 Page 7 of the Official Records of the County of Los Angeles, California; and

Whereas, Maverick has identified a partner for the extremely complex development of the property in accordance with the desires of the City of Santa Fe Springs; and

Whereas, the complexity of the project will require Maverick to spend millions of dollars on activities to make the properties in question are suitable for commercial construction including but not limited to the abandonment or re-abandonment of at least twelve oil wells, the rerouting of up to a mile of flowlines, the modernization of electrical components servicing remaining wells, legal and other fees, and anticipates completion of the project in the first quarter of 2021.

MAVERICK
NATURAL RESOURCES

Breitburn Operating LP
1111 Bagby Street • Suite 1600
Houston • Texas • 77002
713-437-8000

Once the referenced oil field work is completed we will be able to apply for the City's building permits and begin construction on the project itself. We anticipate the construction to begin in the late summer of 2021.

Now therefore, Maverick respectfully requests an extension of the entitlements granted in the City of Santa Fe Springs Resolution No. 82-2018 through October of 2021.

Sincerely,

Justin P. Foley
Vice President – Land

Attachment 4: September 10, 2018 PC Staff Report & Resolution

PUBLIC HEARING (continued from July 9, 2018 and August 13, 2018 PC meetings)
Adoption of Mitigated Negative Declaration
Tentative Parcel Map No. 78232
Development Plan Approval Case Nos. 930, 931, 932, and 933
A request to allow a 44.67-acre site consisting of seven parcels to be subdivided into five parcels and developed with:
DPA 930: a 78,417 sq. ft. building on a 4.28-acre parcel (Building 1);
DPA 931: a 58,463 sq. ft. building on a 3.53-acre parcel (Building 2);
DPA 932: a 121,124 sq. ft. building on a 6.85-acre parcel (Building 3);
DPA 933: a 60,117 sq. ft. building on a 3.23-acre parcel (Building 4);
The remaining 26.77-acre parcel will be reserved for oil extraction operations. The project site is located at the northwest corner of Telegraph Road and Santa Fe Springs Road (APNs 8005-015-011, 8005-015-013, 8005-015-023, 8005-015-024, 8005-015-025, 8005-015-026, and 8005-015-027), within the M-2, Heavy Manufacturing Zone and Telegraph Road Corridor. (Breitburn Operating L.P.)
**The Building Official has assigned the following addresses: 12451 Telegraph Road (Building 1), 12551 Telegraph Road (Building 2), 10251 Santa Fe Springs Road (Building 3), and 10051 Santa Fe Springs Road (Building 4).*

RECOMMENDATIONS:
That the Planning Commission take the following actions:

- Open the Public Hearing and receive any comments from the public regarding Tentative Parcel Map No. 78232 and Development Plan Approval Case Nos. 930, 931, 932 and 933 and, thereafter, close the Public Hearing; and
- Find and determine that the proposed project will not be detrimental to persons or properties in the surrounding area or to the City in general, and will be in conformance with the overall purpose and objective of the Zoning Regulations and consistent with the goals, policies and programs of the City's General Plan; and
- Find that Tentative Parcel Map No. 78232 meets the standards set forth in Sections 66474 and 66474.6 of the Subdivision Map Act for the granting of a tentative or final map; and
- Find that the applicant's request meets the criteria set forth in §155.739 of the Zoning Regulations, for the granting of a Development Plan Approval; and
- Approve and adopt the proposed Mitigated Negative Declaration with Traffic Study and Mitigation Monitoring and Reporting Program (IS/MND/MMRP) which, based on the findings of the Initial Study, indicates that there is no substantial evidence that the proposed project will have a significant adverse effect on the environment; and

- Approve Tentative Parcel Map No. 78232 and Development Plan Approval Case Nos. 930, 931, 932 and 933, subject to the conditions of approval as contained within Resolution 82-2018; and
- Adopt Resolution No. 82-2018, which incorporates the Planning Commission's findings and actions regarding this matter.

LOCATION & BACKGROUND

Tentative Parcel Map No. 78232 and Development Plan Approval Case Nos. 930, 931, 932 and 933 were originally scheduled to be heard at the July 9, 2018 Planning Commission meeting. The applicant requested a continuance to allow for additional time to review and confirm the conditions of approval, so the project was continued to the August 13, 2018 Planning Commission meeting. Prior to the August meeting, the applicant hired a new attorney who requested additional time to review the project as a whole. As such, the project was continued again to the September 10, 2018 Planning Commission meeting.

The subject site is located at the northwest corner of Telegraph Road and Santa Fe Springs Road. It is comprised of seven parcels and measures 44.67 acres in size. The site has been utilized for oil extraction operations since the 1920s, and Breitburn Operating L.P. has owned and operated the oil field since the 1990s. Today, the site is occupied by oil pumping jacks, pipes, construction materials, utility poles, electrical equipment, and six palm trees. Ground cover consists of dirt and gravel.

STREETS AND HIGHWAYS

Telegraph Road and Santa Fe Springs Road are both designated as Major Highways within the Circulation Element of the General Plan. Access to the site is currently provided by one driveway located along the north side of Telegraph Road and one driveway along the west side of Santa Fe Springs Road. New driveways will replace the existing driveways once the property is developed.

ZONING & GENERAL PLAN LAND USE DESIGNATION

The subject site is within the Telegraph Road Corridor and zoned M-2, Heavy Manufacturing. It is used for oil extraction operations. Properties to the west, north and east are zoned M-2 and utilized for various industrial purposes. The subject site and properties to the west, north and east have a General Plan Land Use designation of Industrial. The Villages at Heritage Springs residential development is located south of Telegraph Road and is zoned R-3-PD and R-1-PD (Multi-Family Residential – Planned Development and Single Family Residential – Planned Development). Properties to the south have a General Plan Land Use designation

of Multiple Family Residential and Single Family Residential.

PROJECT DESCRIPTION

The applicant, Breitburn Operating L.P., is proposing to subdivide the 44.67-acre site into five parcels. The largest parcel, measuring 26.77 acres and located in the western half of the overall site, will be reserved for oil extraction operations. The remaining four parcels, with a combined area of 17.90 acres and situated on the southern and eastern portions of the site, will be developed as an industrial business park. Nine producing oil and gas wells and water injection wells located within the proposed development will continue to operate undisturbed by the project. The proposed project requires approval of the following entitlements:

Tentative Parcel Map (TPM) 78232 – to allow the subdivision of an approximately 44.67-acre site into five (5) parcels measuring 186,493 sq. ft. (Proposed Parcel 1), 153,827 sq. ft. (Proposed Parcel 2), 298,474 sq. ft. (Proposed Parcel 3), 140,791 sq. ft. (Proposed Parcel 4), and 1,166,135 sq. ft. (Proposed Parcel 5). The intent is to create independent parcels for each of the four proposed buildings and retain one parcel for oil extraction operations.

Development Plan Approval (DPA) Case Nos. 930 - 933 – to allow the construction of four Class A speculation buildings with a total gross floor area of 318,121 sq. ft. DPA Case No. 930 is to allow the construction of a 78,417 sq. ft. concrete tilt-up building (Building 1); DPA Case No. 931 is to allow the construction of a 58,463 sq. ft. concrete tilt-up building (Building 2); DPA Case No. 932 is to allow the construction of a 121,124 sq. ft. concrete tilt-up building (Building 3); and DPA Case No. 933 is to allow the construction of a 60,117 sq. ft. concrete tilt-up building (Building 4).

DEVELOPMENT PLAN APPROVAL CASE NOs. 930 – 933

Site Plan

The applicant is proposing to develop an industrial business park consisting of four concrete tilt-up buildings on an active oil field site. Specific site plan details associated with each DPA are below:

- DPA 930 (Building 1) – Total site area of 4.28 acres (186,493 sq. ft.). The building will be set back 38'-9" from Telegraph Road.
- DPA 931 (Building 2) – Total site area of 3.53 acres (153,827 sq. ft.). After two street dedications to add right turn lanes (2,575 sq. ft. and 2,993 sq. ft.) the parcel will measure 3.40 acres (148,259 sq. ft.). The building will be set back 40' from Telegraph Road prior to street dedications, and set back 117' from Santa Fe Springs Road. This parcel contains an easement for the placement of artwork at the corner of Telegraph Road and Santa Fe Springs Road. This artwork easement will remain in place.
- DPA 932 (Building 3) – Total site area of 6.85 acres (298,474 sq. ft.). The

building will be set back 72'-6" from Santa Fe Springs Road.

- DPA 933 (Building 4) – Total site area of 3.23 acres (140,791 sq. ft.). The property is oriented so that 75' of frontage is provided along Santa Fe Springs Road to allow access to the site, but the majority of the parcel is located behind a neighboring triangular-shaped parcel. The odd shape of the neighboring parcel means that a majority of the parcel does not technically adjoin a street and therefore does not have a side yard setback requirement. Because of this, the building itself is located approximately 25' from Santa Fe Springs Road at its nearest point.

All four of the site plans will meet the development standards for properties within the M-2, Heavy Manufacturing zone. No Modification Permits or Zone Variances are required for the proposed development.

Floor Plan

The applicant is proposing to construct four speculation buildings with a combined gross floor area of 318,121 sq. ft. Each building is proposed to include a mezzanine above a main office area, but specific floor layouts and size of office areas will be dictated by the future tenants of these buildings.

- DPA 930 (Building 1) – 73,796 sq. ft. building with a 4,621 sq. ft. mezzanine for a gross floor area of 78,417 sq. ft.
- DPA 931 (Building 2) – 54,463 sq. ft. building with a 4,000 sq. ft. mezzanine for a gross floor area of 58,463 sq. ft.
- DPA 932 (Building 3) – 117,124 sq. ft. building with a 4,000 sq. ft. mezzanine for a gross floor area of 121,124 sq. ft.
- DPA 933 (Building 4) – 56,117 sq. ft. building with a 4,000 sq. ft. mezzanine for a gross floor area of 60,117 sq. ft.

Elevations

Architecture will be consistent throughout the development to create a distinctive and contemporary industrial business park. All four buildings will have a minimum height of 34' and a maximum height of 38'-6". The buildings will include many enhanced architectural elements including glass features, high image office corners, and facade and parapet movements throughout the elevations. The two buildings along Telegraph Road will have flexible design features to allow for future non-industrial users, such as wall openings for patios, eating areas and trellises. The buildings have been designed with multiple entries to allow future flexibility with the size of spaces.

Landscaping Requirements

The project will include 100,686 sq. ft. of new landscaping. Trees, plants, shrubs and meandering sidewalks will continue the urban forest theme along Telegraph Road.

- DPA 930 (Building 1) – 22,143 sq. ft. of landscaping will be provided (exceeds requirement). The entire setback area along Telegraph Road will be landscaped, as well as five-foot wide planters along the western property line and adjacent to the building.
- DPA 931 (Building 2) – 27,432 sq. ft. of landscaping will be provided (exceeds requirement). The entire setback area along Telegraph Road will be landscaped, as well as a majority of the setback area along Santa Fe Springs Road. The property will also include a landscaped strip along the west elevation.
- DPA 932 (Building 3) – 36,251 sq. ft. of landscaping will be provided (exceeds requirement). A 31' wide landscaped area will be provided between Santa Fe Springs Road and the parking area, as well as a 5' to 8' wide landscaped strip around the building.
- DPA 933 (Building 4) – 14,860 sq. ft. of landscaping will be provided (exceeds requirement). Given this parcel's limited street frontage, a majority of the landscaping is provided along the southern elevation.

Parking Requirements

The project will provide a total of 491 parking stalls and 4 truck parking stalls. Assuming single-tenant occupancy for each building, each parcel will provide sufficient parking to meet code standards. Overall, the site will have 20 stalls more than required by code:

- DPA 930 (Building 1) – 127 stalls (118 required)
- DPA 931 (Building 2) – 91 stalls (91 required)
- DPA 932 (Building 3) – 177 stalls (168 required); 4 truck parking stalls (4 required)
- DPA 933 (Building 4) – 96 stalls (94 required)

Should any of the buildings be occupied by more than one tenant in the future, the property owner will need to provide additional parking stalls or obtain a Modification Permit before subleasing the building.

Loading / Roll Up Doors

All four of the proposed buildings will have dock high doors and grade level doors to facilitate truck delivery and loading. All loading doors will be strategically placed so that they will not be visible from the public rights-of-way. In total, the development will have 44 loading doors:

- DPA 930 (Building 1) – 9 dock high doors and 1 grade level door will be installed on the building's north-facing elevation.
- DPA 931 (Building 2) – 9 dock high doors and 1 grade level door will be

installed on the building's north-facing elevation.
- DPA 932 (Building 3) – 13 dock high doors and 2 grade level doors will be installed on the building's west-facing elevation.
- DPA 933 (Building 4) – 8 dock high doors and 1 grade level door will be installed on the building's west-facing elevation.

Trash Enclosures

Each building will be provided with a sufficiently-sized trash enclosure:
- DPA 930 (Building 1) – one provided at the rear of the building measuring 492 sq. ft. (492 sq. ft. required)
- DPA 931 (Building 2) – one provided at the rear of the building measuring 392 sq. ft. (392 sq. ft. required)
- DPA 932 (Building 3) – two provided along the rear property line measuring 350 sq. ft. and 356 sq. ft. (706 sq. ft. required)
- DPA 933 (Building 4) – one provided at the rear of the building measuring 400 sq. ft. (400 sq. ft. required)

Driveways

Public access to the project site will be made possible by two driveways located along the west side of Santa Fe Springs Road and a third driveway located on the north side of Telegraph Road. A street dedication will be required to provide a new deceleration lane along Telegraph Road, which will help facilitate safe maneuvering into the development. A fourth driveway located on the north side of Telegraph Road just west of Building 1 will be reserved for emergency access only. All four buildings will participate in a reciprocal access agreement for shared use of the driveways.

It should be noted that access to parcel 5 (the remaining active oil field) will be provided through gates located at the rear property line of parcel 1 and parcel 3. If and when parcel 5 is developed in the future, access will be provided via Hawkins Street.

Oil Wells

The subject site has been operating as an oil field for nearly a century, therefore extensive fieldwork will need to occur before any development can begin. Such work will include well abandonment, well reabandonment, oilfield infrastructure removal, and oilfield infrastructure relocation. There are 19 non-abandoned wells within the project area. Ten of these wells will be abandoned and nine will remain active after the site is developed. Of the nine wells that will remain active, four are injection wells, where brine water produced with the oil is reinjected back into the formation it originated from. Oil produced from the active wells is currently and will continue to be transported via underground pipelines to the Breitburn Tank Farm located south of Telegraph Road and east of Santa Fe Springs Road. The site also

has 20 previously-abandoned wells. The applicant will be working with the Division of Oil, Gas, & Geothermal Resources (DOGGR) and the City to determine if the previously-abandoned wells will need to be re-abandoned. Details regarding the wells associated with each DPA are below:

- DPA 930 (Building 1) – Site has 7 previously-abandoned wells, 4 wells to be abandoned, and 1 active well to remain.
- DPA 931 (Building 2) – Site has 5 previously-abandoned wells, 3 wells to be abandoned, and 1 active well to remain.
- DPA 932 (Building 3) – Site has 8 previously-abandoned wells, 3 wells to be abandoned, and 7 active wells to remain.
- DPA 933 (Building 4) – There are no wells present on this site.

LEGAL NOTICE OF PUBLIC HEARING

This matter was set for Public Hearing in accordance with the requirements of Sections 65090 and 65091 of the State Planning, Zoning and Development Laws and the requirements of Sections 155.860 through 155.864 of the City's Municipal Code.

Legal notice of the Public Hearing for the proposed project was sent by first class mail on June 27, 2018 to all property owners whose names and addresses appear on the latest County Assessor's Roll within 500 feet of the exterior boundaries of the subject property. The legal notice was also posted in Santa Fe Springs City Hall, the City Library and the City's Town Center on June 27, 2018, and published in a newspaper of general circulation (Whittier Daily News) on June 27, 2018, as required by the State Zoning and Development Laws and by the City's Zoning Regulations.

As of the date of this report, staff has not received any comments and/or inquiries regarding the proposed project. The project was originally scheduled to be heard at the July 9, 2018 Planning Commission meeting, but the applicant requested two continuances. Since the case was set for public hearing, the Planning Commission opened the public hearing to receive comments at both the July 9, 2018 and August 13, 2018 Planning Commission meetings before taking action to continue the project to the next meeting date. No comments were received at either meeting.

ENVIRONMENTAL DOCUMENTS

The environmental analysis provided in the Initial Study indicates that the proposed project will not result in any significant adverse immitigable impacts on the environment; therefore, the City caused to be prepared and proposes to adopt a Mitigated Negative Declaration (MND) for the proposed project. The MND reflects the independent judgment of the City of Santa Fe Springs and the environmental consultant, Blodgett/Baylosis Environmental Planning, as to the potential environmental impacts of the proposed project on the environment.

The draft Initial Study/Mitigated Negative Declaration (IS/MND) identified several factors that may be potentially affected by the subject project, including Aesthetics, Greenhouse Gas Emissions, and Noise. These factors and their respective pertinent issues are discussed and analyzed within the IS/MND. Mitigations, where necessary, were implemented to help ensure the potential impacts are reduced to a less than significant level. A detailed analysis can be found in the IS/MND. The monitoring and reporting on the implementation of mitigation measures, including the monitoring action, monitoring agency, and the period for implementation, are identified in the Mitigation Monitoring and Reporting Program (attachment #11).

The draft Initial Study/Mitigated Negative Declaration was circulated for the required 20-day public review period from June 11, 2018 to July 2, 2018. A Notice of Intent to Adopt a Mitigated Negative Declaration was posted with the Los Angeles County Clerk and a copy of the Initial Study/Mitigated Negative Declaration was also mailed to surrounding cities for their review and comment.

Staff received one response to the IS/MND from the South Coast Air Quality Management District, who recommended that a mobile source air quality health risk assessment be performed. The environmental consultant had considered mobile sources of pollution when drafting the IS/MND, and a response letter describing their findings was sent to the South Coast Air Quality Management District on July 5, 2018. A copy of the comment letter and subsequent response are attached to this report (attachment #12). Staff finds that all concerns raised by the correspondent have been properly reviewed and addressed.

STAFF REMARKS

Based on the findings set forth in attached Resolution 82-2018, staff finds that Tentative Parcel Map No. 78232 is consistent with the policies and goals set forth in the General Plan, Subdivision Map Act and California Environmental Quality Act (CEQA) requirement. Staff also finds that the applicant's request meets the criteria set forth in §155.739 of the City's Zoning Regulations for the granting of Development Plan Approval. Therefore, staff recommends that the Planning Commission adopt Resolution 82-2018, which incorporates said findings as well as the conditions of approval related the subject proposal.

AUTHORITY OF PLANNING COMMISSION:

Tentative Parcel Map

The Planning Commission, after receiving and hearing the results of investigations and reports on the design and improvements of any proposed division of real property for which a tentative map is filed, shall have the authority to impose requirements and conditions upon such division of land and to approve, conditionally approve or disapprove such map and division of land.

Development Plan Approval

The Planning Commission has the authority, subject to the procedures set forth in the City's Zoning Regulations, to grant a Development Plan Approval when it has been found that said approval is consistent with the requirements, intent and purpose of the City's Zoning Regulations. The Commission may grant, conditionally grant or deny approval of a proposed development plan based on the evidence submitted and upon its own study and knowledge of the circumstances involved, or it may require submission of a revised development plan.

CONDITIONS OF APPROVAL:

Conditions of approval for TPM 78232 are attached to Resolution 82-2018 as Exhibit A, and conditions of approval for DPAs 930-933 are attached to Resolution 82-2018 as Exhibit B.

Wayne M. Morrell
Director of Planning

SUBDIVISION/TRACT/PARCEL MAP APPLICATION AND OWNER'S STATEMENT

All applications, plans, maps, exhibits, and other documents must be accurate and complete for submission to the Planning and Development Department. Instructions for filing the Subdivision application are attached to this application, which contain general information, definitions, public hearing requirements, processing procedures and required fees. In addition, further supporting documents may be required upon the discretion of the Planning and Development Department. If the application is determined to be incomplete, the Planning and Development Department will notify the applicant via mail detailing the required document(s). Submission of an incomplete application will impede and prolong the application process.

PROPERTY LOCATION:

Address: 10025 Bloomfield Avenue
10025 Santa Fe Springs Road
12405 Telegraph Road
Santa Fe Springs, CA 90670

Located at the Northwest corner of Telegraph Road and Telegraph Road

Assessor's Parcel Number: 8005-015-011, -013, -023, -024, -025, -026, AND -027

PURPOSE OF PARCEL (SUBDIVISION) MAP & LEGAL DESCRIPTION:

SEE ATTACHED.

PROJECT AND LAND USE DATA:

Existing Land Use: Oil Operations

Zoning Classification: M-2 HEAVY MANUFACTURING

Intended Land Uses of Lots within the Subdivision:
MANUFACTURING/INDUSTRIAL/OFFICE USE AND EXISTING OIL OPERATIONS

General Plan Land Use Classification: MANUFACTURING

Surrounding Land Uses:

North: MANUFACTURING
South: RESIDENTIAL
East: MANUFACTURING
West: MANUFACTURING

Existing No. of Lots: 7 APNs CONSISTING OF 21 LOTS

Proposed No. of Lots: 5

Page 1

Attachment 6 –Tentative Parcel Map Application

Lot Area-per Parcel (S.F./Acres): SEE ATTACHED.

Building (footprint) Area-per Parcel: SEE ATTACHED.

Are dedications or public improvements required? NONE AT THIS TIME

PROJECT FINDING:

After submittal of the completed application, Planning and Development staff will review all documents prior to scheduling a public hearing at the earliest agenda before the Planning Commission of the City of Santa Fe Springs. The application will be evaluated based on the proposed (parcel map) subdivision, public testimony at the hearing, and the finding listed below (Subdivision Map Act, Section 66474). Please provide support for the required findings below and additional comments. Please

PROJECT FINDING	YES	NO	COMMENTS
Is the proposed map consistent with applicable general and specific plans?	X		
Is the design or improvement of the proposed subdivision consistent with applicable general or specific plans?	X		
Is the site physically suitable for the proposed density of development?	X		
Is the design of the subdivision or the proposed improvements likely to cause substantial environmental damage of likely to injure fish or wildlife or their habitat?		X	
Is the design of the subdivision or the type of improvements likely to cause serious public health problems?		X	
Will the design of the subdivision or the type of improvements conflict with easements, acquired by the public at large, for access through or use of the property within the proposed subdivision?		X	

UTILITIES:

Grading: Is any grading of lots contemplated? YES (If yes, show details on the tentative map.)

Water: What provisions are being made to provide an adequate water system?
WATER IS CURRENTLY SERVING THE SITE. A WATER SYSTEM FOR THE PROPOSED DEVELOPMENT WILL BE DESIGNED.

Sewers: What provisions are being made to provide an adequate sewer system?
SEWER IS CURRENTLY SERVING THE SITE. A SEWER SYSTEM FOR THE PROPOSED DEVELOPMENT WILL BE DESIGNED.

Gas and Electricity: Are the appropriate utility companies being contacted to ensure service to the subject property?
GAS AND ELECTRICITY IS CURRENTLY SERVING THE SITE. A GAS AND ELECTRICITY SYSTEM FOR THE PROPOSED DEVELOPMENT WILL BE DESIGNED.

Streets: Will each resulting parcel or lot front on a dedicated and improved street? YES

Have you discussed street improvement requirements with the Department of Public Works? YES

Deed Restrictions: State nature of deed restrictions, existing and proposed: NONE

Attachment 7 – Development Plan Approval Application

Received
NOV 01 2017
Planning Department

Attachment to Development Plan Approval (DPA)

Address of the Project:

10025 Bloomfield Avenue

10025 Santa Fe Springs Road

12405 Telegraph Road

Santa Fe Springs, CA 90670

APNs: 8005-015-011, -013, -023, -024, -025, -026, and -027

Located on the northwest corner of Telegraph Road and Santa Fe Springs Road.

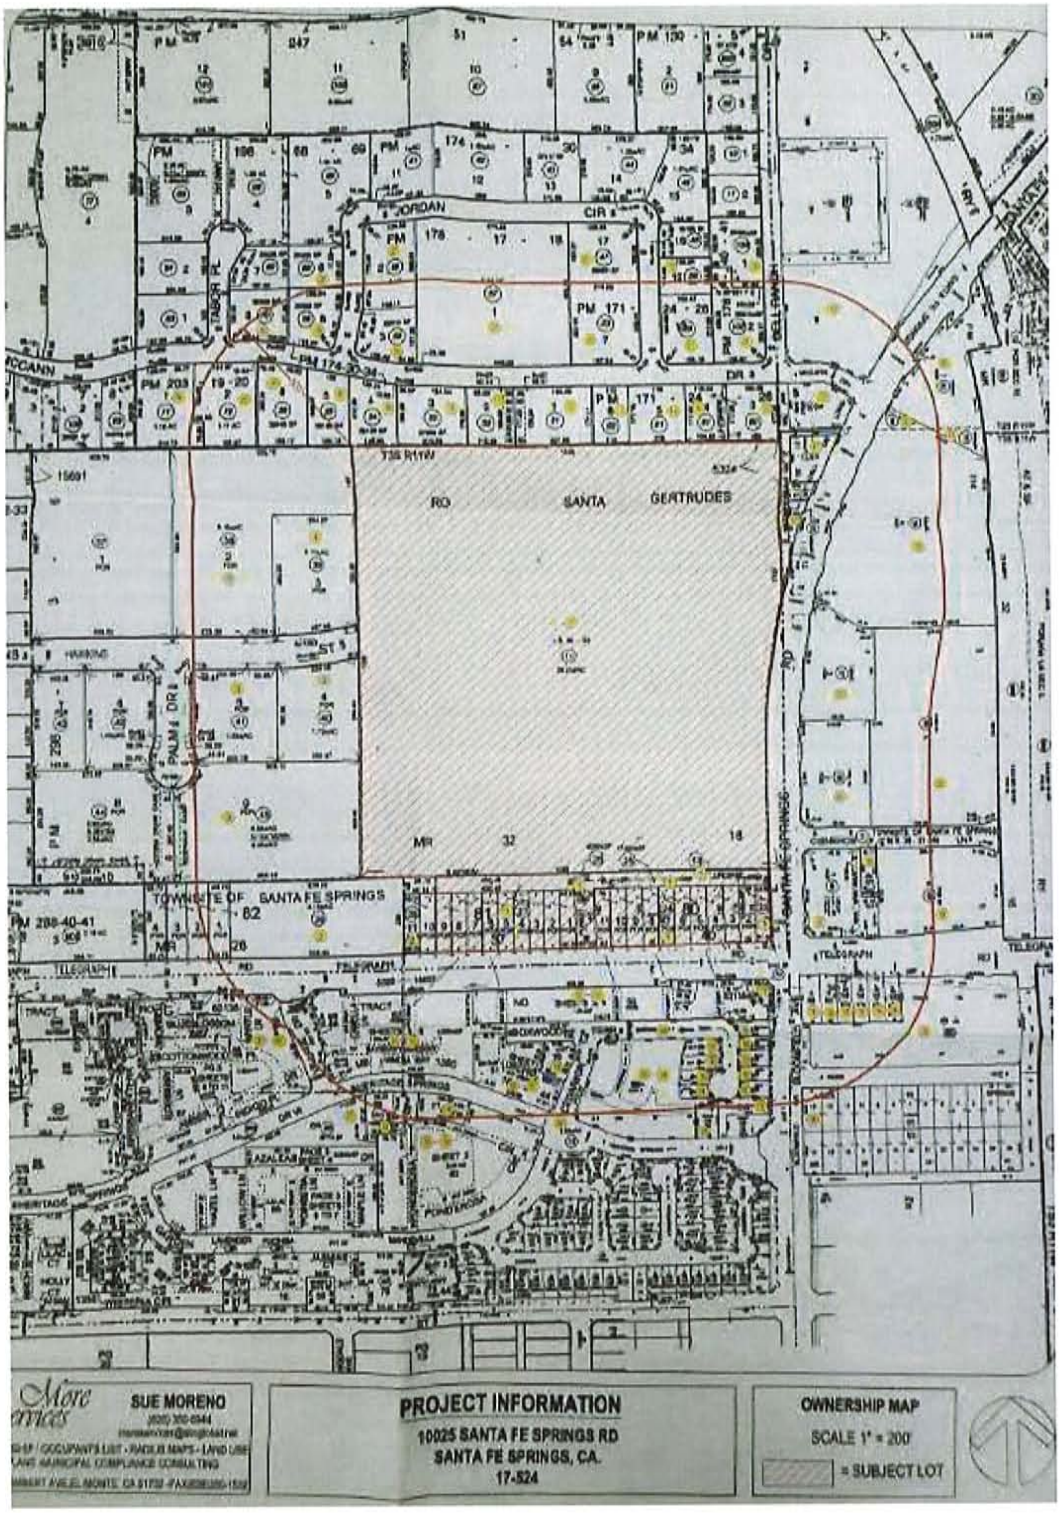
Project Description:

The proposed project is designed to repurpose a portion of the existing 44.67 acre oilfield **("Oilfield Site")** located on the northwest corner of Telegraph Road and Santa Fe Springs Road. An approximate 18 acre area situated on the southern portion (fronting Telegraph Road) and the eastern portion (fronting Santa Fe Springs Road) of the **Oilfield Site** is the proposed location of this project **("Project Site")**.

The proposed project involves the construction of a high image creative and distinctive warehouse/office business park that includes four new Class A buildings on the **Project Site**. This will provide the opportunity to significantly improve the aesthetics along the Telegraph Corridor and also a key intersection in the city. The buildings will include many enhanced features (including glass features, high image office corners, facade and parapet movements through-out the elevations) that will tie into the overall landscaping plan. The landscaping design will include the use of substantial high quality trees, plants, shrubs and meandering sidewalks and will continue the Urban Forest theme currently occurring along Telegraph Road. The buildings along Telegraph Road will have flexible design features designed in the walls to allow for future larger openings for patios, eating areas and trellises. The buildings have been designed with multiple entries to allow future flexibility with size of spaces. This project will also provide additional quality jobs in the community and will provide an opportunity to increase the tax base in the City of Santa Fe Springs.

The proposed project will require the approval of a Tentative Parcel and a Final Parcel Map. The Parcel Map will divide the **Oilfield Site** into 5 parcels and also separate the **Project Site** from the remaining **Oilfield Site**. The Parcel Map will also subdivide the **Project Site** into four individual parcels and is designed so each building will be situated on its own individual parcel.

Attachment 7 – Development Plan Approval Application



The proposed project will consist of the following:

PROJECT DATA					
	Site Area		Building Area	Mezzanine	TOTAL
Bldg.	Sq. Feet	Acres	Sq. Feet	Sq. Feet	Sq. Feet
1	186,493	4.28	74,417	4,000	78,417
2	153,827	3.53	54,463	4,000	58,463
3	308,890	7.09	117,124	4,000	121,124
4	130,371	2.99	56,117	4,000	60,117
TOTALS	**779,581**	**17.90**	**302,121**	**16,000**	**318,121**

The proposed project includes the retention of 9 producing oil and gas wells and water injection wells and also the oil field infrastructure associated with these wells and the Santa Fe Springs Oilfield

Prior to any land development, extensive oilfield work including well abandonment, well re-abandonment, oilfield infrastructure removal and relocation will be performed. The Project Site has been environmentally assessed and will be evaluated and closed by an oversight environmental agency.

(NOTICE OF PUBLIC HEARING)

CARRIER: IF ADDRESSEE HAS MOVED,
PLEASE LEAVE WITH CURRENT OCCUPANT

CITY OF SANTA FE SPRINGS
NOTICE OF PUBLIC HEARING
TO PROPERTY OWNERS WITHIN 500 FEET

NOTICE IS HEREBY GIVEN that the **Santa Fe Springs Planning Commission** will conduct a public hearing at a regular meeting on **Monday, July 9, 2018** at 6:00 p.m. in the Council Chambers of City Hall located at 11710 Telegraph Road on the following matter:

Applicant: Breitburn Operating L.P.
Property located at: NW Corner of Telegraph Road and Santa Fe Springs Road (APNs: 8005-015-011, 8005-015-013, 8005-015-023, 8005-015-024, 8005-015-025, 8005-015-026, and 8005-015-027) within the M-2, Heavy Manufacturing Zone and Telegraph Road Corridor.

Tentative Parcel Map No. 78232: A request to subdivide a seven-parcel, 44.67-acre site into five parcels measuring approximately 4.28 acres, 3.53 acres, 6.85 acres, 3.23 acres, and 26.77 acres.
Development Plan Approval Case Nos. 930-933: A request to develop a 44.67-acre site with: *DPA 930*: a 78,417 sq. ft. building on a 4.28-acre parcel; *DPA 931*: a 58,463 sq. ft. building on a 3.53-acre parcel; *DPA 932*: a 121,124 sq. ft. building on a 6.85-acre parcel; *DPA 933*: a 60,117 sq. ft. building on a 3.23-acre parcel. The remaining 26.77-acre parcel will be reserved for oil extraction operations.

CEQA Status: Staff determined that additional environmental analysis is required to meet the requirements of the California Environmental Quality Act (CEQA). The City proposes to adopt an Initial Study/Mitigated Negative Declaration (IS/MND) for this project. The project site is not listed on the Hazardous Waste and Substance Site List as set forth in Government Code Section 65962.5.

All interested persons are invited to attend the above Public Hearing. If you challenge the above mentioned item and related actions in court, you may be limited to raising only those issues you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the City of Santa Fe Springs Department of Planning & Development at, or prior to the Public Hearing. Any person interested in this matter may contact Laurel Reimer at 562-868-0511, Ext. 7354 or laurelreimer@santafesprings.org.

Attachment 10 – Mitigation Monitoring and Reporting Program

1. OVERVIEW OF THE PROJECT

The City of Santa Fe Springs, in its capacity as the Lead Agency, is considering an application that will permit the subdivision of a 779,581 square-foot (17.90-acre) portion of a larger 44.67-acre site located at the northwest corner of Telegraph Road and Santa Fe Springs Road. The 44.67-acre project site will be subdivided into five new parcels. The four new buildings will occupy a 17.90-acre portion (Parcels 1 through 4). *Parcel 5* will have a total land area of 26.77 acres and will include the existing oil extraction operations. *Parcel 1* will have a total land area of 186,493 square feet (4.28 acres) and will be occupied by a 78,417 square -foot warehouse. *Parcel 2* will consist of 148,259 square feet (3.40 acres) and will be occupied by a 58,463 square-foot warehouse. *Parcel 3* will total 298,474 square feet (6.85 acres) and will be occupied by a 121,124 square-foot warehouse. *Parcel 4* will have a total land area of 140,791 square feet (3.23 acres) and will be occupied by a 60,117 square-foot warehouse. The new development for parcels 1 through 4 will also include oil extraction operations, these operations will be modernized with new equipment.

A total of 491 parking spaces will be provided. Public access to the project site will be made possible by two driveways located along the west side of Santa Fe Springs Road and a third driveway located on north side of Telegraph Road. A fourth drive located on the north side of Telegraph Road will be reserved for emergency access only. In addition, 100,686 square feet of new landscaping will be provided. The project Applicant is Jackson Washburn, Breitburn Operating L.P., 707 Wilshire Boulevard, 46th Floor, Los Angeles, California 90017. Discretionary approvals required as part of the proposed project's implementation include the following:

- *Development Plan Approval (DPA 930, 931, 932, and 933)* to construct four industrial buildings on land currently used as an oil field. Nine wells will remain active and several wells will be abandoned or re-abandoned;
- *Tentative Parcel Map (TPM 78232)* to create five parcels. Four parcels will be developed with industrial buildings and one parcel will continue to be used as an oil field; and,
- Approval of the Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program (MMRP).

2. FINDINGS OF THE ENVIRONMENTAL ASSESSMENT

The attached Initial Study prepared for the proposed project indicated that the proposed project will not result in significant environmental impacts upon implementation of the required mitigation measures. The following Mandatory Findings of Significance can be made as set forth in Section 15065 of the CEQA Guidelines, as amended, based on the results of this environmental assessment:

- The proposed project *will not* have the potential to degrade the quality of the environment.
- The proposed project *will not* have the potential to achieve short-term goals to the disadvantage of long-term environmental goals.
- The proposed project *will not* have impacts that are individually limited, but cumulatively considerable, when considering planned or proposed development in the immediate vicinity.

Attachment 10 – Mitigation Monitoring and Reporting Program

- The proposed project *will not* have environmental effects that will adversely affect humans, either directly or indirectly.

3. FINDINGS RELATED TO MITIGATION MONITORING

Section 21081(a) of the Public Resources Code states that findings must be adopted by the decision-makers coincidental to the approval of a Mitigated Negative Declaration. These findings shall be incorporated as part of the decision-maker's findings of fact, in response to AB-3180. In accordance with the requirements of Section 21081(a) and 21081.6 of the Public Resources Code, the following additional findings may be made:

- A mitigation reporting or monitoring program will be required;
- Site plans and/or building plans, submitted for approval by the responsible monitoring agency, shall include the required standard conditions; and,
- An accountable enforcement agency or monitoring agency shall be identified for the mitigations adopted as part of the decision-maker's final determination.

4. MITIGATION MEASURES

The following mitigation is required to minimize future light and glare impacts:

Mitigation Measure No. 1 (Aesthetics). The contractors must ensure that appropriate light shielding is provided for the lighting equipment in the parking area, buildings, and security as a means to limit glare and light trespass. An interior parking and street lighting plan and an exterior photometric plan indicating the location, size, and type of existing and proposed lighting shall also be prepared by the Applicant. The plan for the lighting must be submitted to the Planning Department, Police Services Department, and the Chief Building Official for review and approval prior to the issuance of any building permits.

Implementation of the following mitigation measures will reduce the proposed project's emission of greenhouse gases:

Mitigation Measure No. 2 (Greenhouse Gas Emissions). The future tenants must provide incentives to encourage employees to utilize alternative transportation such as reduced public transportation fares, employee carpooling and vanpooling services, and preferential parking for carpool vehicles. The proposed project will be required to conform to all pertinent Transportation Demand Management (TDM) requirements, if any.

The following measures will further ensure that on-site construction activities do not adversely impact noise sensitive land uses located nearby:

Mitigation Measure No. 3 (Noise). The contractors must ensure that the construction equipment includes working mufflers and other sound suppression equipment as a means to reduce machinery noise.

Mitigation Measure No. 4 (Noise). The contractors must notify residents in the area regarding construction times and local contact information. The notice shall include the name and phone number of the local contact person residents may call to complain about noise. This notice must also be placed along

Attachment 10 – Mitigation Monitoring and Reporting Program

the south and east sides of the project site. Upon receipt of a complaint, the contractor must respond immediately by reducing noise to meet Code requirements. In addition, copies of all complaints and subsequent communication between the affected residents and contractors must be forwarded to the City's Community Development Director.

5. MITIGATION MONITORING

The monitoring and reporting on the implementation of these measures, including the period for implementation, monitoring agency, and the monitoring action, are identified below in Table 1.

TABLE 1

Attachment 11 – IS/MND Response to Comment Letter

BLODGETT BAYLOSIS ENVIRONMENTAL PLANNING
Planning • Environmental Analysis • Economics • Mapping • GIS

Date: July 5, 2018

To: City of Santa Fe Springs

From: Bryan Hamilton, Blodgett Baylosis Environmental Planning

Subject: Responses to SCAQMD Letter Dated June 15, 2018

Comment 1.

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The following comments are meant as guidance for the Lead Agency and should be incorporated into the Final MND.

SCAQMD Staff's Summary of Project Description

The Lead Agency proposes to build four warehouses totaling 318,121 square feet on 17.9 acres (Proposed Project). Based on a review of Exhibit 1, Aerial Photographs, and Exhibit 3, Sensitive Receptors Map, in the MND, SCAQMD staff found that existing residential uses are located in a close proximity to the Proposed Project across Telegraph Road. Construction is expected to take approximately 20 month.

Response 1.

This comment has been noted for the record.

Comment 2.

In the Air Quality Analysis Section, the Lead Agency quantified the Proposed Project's construction and operational emissions and compared them to SCAQMD's regional and localized air quality CEQA significance thresholds. The Lead Agency found that the Proposed Project's air quality impacts from construction would be less than significant. Additionally, the Lead Agency conducted a Human Health Risk Assessment (HHRA) to evaluate the potential health risks associated with soil contact. However, the Lead Agency did not conduct a mobile source health risk assessment for the Proposed Project. Since the Proposed Project would involve operation of four warehouses that are capable of generating or attracting vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment to quantify and disclose potential health risk impacts from operation of the Proposed Project to nearby residents. Guidance for performing a mobile source health risk assessment is available at SCAQMD website.

Attachment 11 – IS/MND Response to Comment Letter

BLODGETT BAYLOSIS ENVIRONMENTAL PLANNING

Response 2.

An analysis of diesel particulate matter (DPM) generated by idling trucks was prepared for the proposed project. A discussion of DPM and truck idling was provided on Page 49 of the IS/MND. The use of certified clean idle trucks will lead to further reductions in DPM emissions. In addition, all trucks are currently prohibited from idling longer than five minutes pursuant to the California Code of Regulations. Computer molding was used to ascertain the project's DPM emissions. The modeling indicated that approximately 528 trucks travelling on-site will result in 0.22 pounds per day of DPM. Trucks idling on-site will generate 0.83 grams per hour of DPM, while trucks travelling to and from the site will result in 0.35 pounds per day of DPM. Trucks travelling along Telegraph Road will generate 0.09 pounds of DPM per day, while trucks travelling along Santa Fe Springs Road will generate 0.05 pounds per day of DPM. The table below summarizes the calculations cited above and in the IS/MND.

Emissions Source	Trucks/ Day[a]	VMT/ Day[a]	Emissions Rate (in gms) gms/mile	gms/idle hr	Daily Truck Emissio grams/day	(gms/hour[c]	Daily Truck Emissions lbs/day	(gms/hour[c]
Onsite Travel (Truck Travelling within Project Site	528	173	0.38		100		0.22	
Onsite Idling (Trucks Idling within the Project Site	528			0.717		379		0.83
Offsite Travel (Trucks Travelling to and from Project Site	528	528	0.305		161		0.35	
Offsite Travel (Receptor #1) Telegraph Rd. NO Receptor	211	127	0.305		39		0.09	
Offsite Travel (Receptor #2) SFS Road EO Receptor	185	76	0.305		23		0.05	
Offsite Travel (Receptor #3)	0	-	-		-		-	
Offsite Travel (Receptor #4)	0	-	0		-		-	

Notes:
[a] vehicle miles traveled
[b] VMTs are based on the travel distance next to sensitive receptor (1.180 ft [0.30 mi] for Telegraph Rd segment and 2,170 ft [0.41 mi] for SFS Rd segment).
Totals 1.03 mi/trip. Onsite VMT assumes 1,750 ft./truck.
[c] The emissions assume a numbers worst case of 15 minutes (SCAQMD restricts idling to 5 minutes).
[d] Emissions rates were derived using EMFAC 2014 emissions factors.

Comment 3.

SCAQMD staff recommends the use of truck trip rates from the Institute of Transportation Engineers (ITE) for high cube warehouse projects located in SCAQMD (i.e. 1.68 average daily vehicle trips per 1,000 square feet and 0.64 average daily truck trips per 1,000 square feet). Consistent with CEQA Guidelines, the CEQA document for the Proposed Project may use a non-default trip rate if there is substantial evidence indicating another rate is more appropriate for the air quality analysis.

For high cube warehouse projects, SCAQMD staff has been working on a Warehouse Truck Trip Study to better quantify trip rates associated with local warehouse and distribution projects, as truck emission represent more than 90 percent of air quality impacts from these projects. Details regarding this study can be found online here: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/high-cube-warehouse.

Response 3.

The traffic study was prepared prior to the adoption of the 10th edition ITE trip generation rates. The traffic study indicated that the proposed project will result in 1,134 daily trips, of which 234 trips will consist of truck trips. When taking into account the newer 10th edition generation rates, the project has the potential to result in

Attachment 11 – IS/MND Response to Comment Letter

534 trips per day, of which 203 will consist of truck trips. The 9th edition ITE rates provide the most conservative estimates.

Comment 4.

Should the Lead Agency find, after conducting a mobile source HRA analysis, that the Proposed Project would exceed SCAQMD CEQA significance threshold of 10 in one million for cancer risk, mitigation measures would be required (CEQA Guidelines Section 15126.4). The following mitigation measures and resources are intended to assist the Lead Agency with identifying potential feasible mitigation measures for the Proposed Project.

- *Chapter 11 of SCAQMD's CEQA Air Quality Handbook*
- *SCAQMD's CEQA web pages available here: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies*
- *SCAQMD's Mitigation Monitoring and Reporting Plan (MMRP) for the 2016 Air Quality Management Plan (2016 AQMP) available here (starting on page 86): http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2017/2017-mar3-035.pdf*

Response 4.

The comment has been noted for the record. The proposed project's DPM emissions will be below the thresholds of significance since the trucks will employ clean air idle technology. In addition, the distance between the loading doors and the nearest sensitive receptors will also mitigate any potential impacts since the increase distance will allow any DPM to dissipate.

Comment 5.

- *Require the use of 2010 and newer haul trucks (e.g., material delivery trucks and soil import/export). In the event that that 2010 model year or newer diesel haul trucks cannot be obtained, provide documentation as information becomes available and use trucks that meet EPA 2007 model year NOx emissions requirements4, at a minimum. Additionally, consider other measures such as incentives, phase-in schedules for clean trucks, etc.*
- *Have truck routes clearly marked with trailblazer signs, so that trucks will not enter residential areas.*
- *Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the MND. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this land use or higher activity level.*
- *Provide electric vehicle (EV) Charging Stations (see the discussion below regarding EV charging stations).*
- *Should the Proposed Project generate significant regional emissions, the Lead Agency should require mitigation that requires accelerated phase-in for non-diesel powered trucks. For example, natural gas trucks, including Class 8 HHD trucks, are commercially available today. Natural gas*

Attachment 11 – IS/MND Response to Comment Letter

trucks can provide a substantial reduction in health risks, and may be more financially feasible today due to reduced fuel costs compared to diesel. In the Final MND, the Lead Agency should require a phase-in schedule for these cleaner operating trucks to reduce any significant adverse air quality impacts. SCAQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency.

Trucks that can operate at least partially on electricity have the ability to substantially reduce the significant NOx impacts from this project. Further, trucks that run at least partially on electricity are projected to become available during the life of the project as discussed in the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016-2040 RTP/SCS). It is important to make this electrical infrastructure available when the project is built so that it is ready when this technology becomes commercially available. The cost of installing electrical charging equipment onsite is significantly cheaper if completed when the project is built compared to retrofitting an existing building. Therefore, SCAQMD staff recommends the Lead Agency require the Proposed Project and other plan areas that allow truck parking to be constructed with the appropriate infrastructure to facilitate sufficient electric charging for trucks to plug-in. Similar to the City of Los Angeles requirements for all new projects, SCAQMD staff recommends that the Lead Agency require at least 5% of all vehicle parking spaces (including for trucks) include EV charging stations. Further, electrical hookups should be provided at the onsite truck stop for truckers to plug in any onboard auxiliary equipment. At a minimum, electrical panels should appropriately sized to allow for future expanded use.

- *Design the industrial building such that entrances and exits are such that trucks are not traversing past neighbors or other sensitive receptors.*
- *Design the industrial building such that any check-in point for trucks is well inside the Proposed Project site to ensure that there are no trucks queuing outside of the facility.*
- *Design the industrial building to ensure that truck traffic within the Proposed Project site is located away from the property line(s) closest to its residential or sensitive receptor neighbors.*
- *Restrict overnight parking in residential areas.*
- *Establish overnight parking within the industrial building where trucks can rest overnight.*
- *Establish area(s) within the Proposed Project site for repair needs.*
- *Develop, adopt, and enforce truck routes both in and out of city, and in and out of facilities.*
- *Create a buffer zone of at least 300 meters (roughly 1,000 feet), which can be office space, employee parking, greenbelt, etc. between the Proposed Project and sensitive receptors.*

Response 5.

The loading docks for Buildings 1 and 2 will be located approximately 298 feet north of the nearest sensitive receptors. The line-of-sight between these loading doors and the sensitive receptors located along the south side of Telegraph Road will be obstructed by the two warehouse buildings. Furthermore, the trucks will be prohibited from idling longer than five minutes and will consist of certified clean air idle trucks. Since most of these trucks will travel to and from the ports, they will be required to comply with the port's increasing emissions standards.

Attachment 11 – IS/MND Response to Comment Letter

BLODGETT BAYLOSIS ENVIRONMENTAL PLANNING

Comment 6.

Mitigation Measures for Operational Air Quality from Area Sources

- *Maximize use of solar energy including solar panels; installing the maximum possible number of solar energy arrays on the building roofs and/or on the Project site to generate solar energy for the facility.*
- *Maximize the planting of trees in landscaping and parking lots.*
- *Use light colored paving and roofing materials.*
- *Utilize only Energy Star heating, cooling, and lighting devices, and appliances.*
- *Install light colored "cool" roofs and cool pavements.*
- *Require use of electric or alternatively fueled sweepers with HEPA filters.*
- *Use of water-based or low VOC cleaning products.*

Response 6.

The project will be constructed pursuant to the 2016 California Green Building Code requirements. In addition, the future tenants will be required to provide incentives to encourage employees to utilize alternative transportation such as reduced public transportation fares, employee carpooling and vanpooling services, and preferential parking for carpool vehicles.

Comment 7.

Conclusion

Pursuant to CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process. Please provide the SCAQMD with written responses to all comments contained herein prior to the certification of the Final MND. When responding to issues raised in the comments, response should provide sufficient details giving reasons why specific comments and suggestions are not accepted. There should be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful or useful to decision makers and to the public who are interested in the Proposed Project.

SCAQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact me at lsun@aqmd.gov or Daniel Garcia, Program Supervisor, at dgarcia@aqmd.gov if you have any questions.

Response 7.

This comment has been noted for the record.

Mitigated Negative Declaration (MND) for the Proposed Telegraph Road and Santa Fe Springs Road Industrial Park

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The following comments are meant as guidance for the Lead Agency and should be incorporated into the Final MND.

SCAQMD Staff's Summary of Project Description
The Lead Agency proposes to build four warehouses totaling 318,121 square feet on 17.9 acres (Proposed Project). Based on a review of Exhibit 1, *Aerial Photographs*, and Exhibit 3, *Sensitive Receptors Map*, in the MND, SCAQMD staff found that existing residential uses are located in a close proximity to the Proposed Project across Telegraph Road. Construction is expected to take approximately 20 months[1].

SCAQMD Staff's Comments
In the Air Quality Analysis Section, the Lead Agency quantified the Proposed Project's construction and operational emissions and compared them to SCAQMD's regional and localized air quality CEQA significance thresholds. The Lead Agency found that the Proposed Project's air quality impacts from construction would be less than significant. Additionally, the Lead Agency conducted a Human Health Risk Assessment (HHRA) to evaluate the potential health risks associated with soil contact[2]. However, the Lead Agency did not conduct a mobile source health risk assessment for the Proposed Project. Since the Proposed Project would involve operation of four warehouses that are capable of generating or attracting vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment to quantify and disclose potential health risk impacts from operation of the Proposed Project to nearby residents. Guidance for performing a mobile source health risk assessment is available at SCAQMD website[3].

SCAQMD Staff's Recommendation for Truck Trip Rates for High Cube Warehouse Projects

SCAQMD staff recommends the use of truck trip rates from the Institute of Transportation Engineers (ITE) for high cube warehouse projects located in SCAQMD (i.e. 1.68 average daily vehicle trips per 1,000 square feet and 0.64 average daily truck trips per 1,000 square feet). Consistent with CEQA Guidelines, the CEQA document for the Proposed Project may use a non-default trip rate if there is substantial evidence indicating another rate is more appropriate for the air quality analysis.

BLODGETT BAYLOSIS ENVIRONMENTAL PLANNING

Wayne M Morell June 15, 2018

For high cube warehouse projects, SCAQMD staff has been working on a Warehouse Truck Trip Study to better quantify trip rates associated with local warehouse and distribution projects, as truck emission represent more than 90 percent of air quality impacts from these projects. Details regarding this study can be found online here: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/high-cube-warehouse

Mitigation Measures

Should the Lead Agency find, after conducting a mobile source HRA analysis, that the Proposed Project would exceed SCAQMD CEQA significance threshold of 10 in one million for cancer risk, mitigation measures would be required (CEQA Guidelines Section 15126.4). The following mitigation measures and resources are intended to assist the Lead Agency with identifying potential feasible mitigation measures for the Proposed Project.

- Chapter 11 of SCAQMD's CEQA Air Quality Handbook
- SCAQMD's CEQA web pages available here: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies
- SCAQMD's Mitigation Monitoring and Reporting Plan (MMRP) for the 2016 Air Quality Management Plan (2016 AQMP) available here (starting on page 86): http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2017/2017-mar3-035.pdf

A. Mitigation Measures for Operational Air Quality from Mobile Sources

- Require the use of 2010 and newer haul trucks (e.g., material delivery trucks and soil import/export). In the event that that 2010 model year or newer diesel haul trucks cannot be obtained, provide documentation as information becomes available and use trucks that meet EPA 2007 model year NOx emissions requirements[4], at a minimum. Additionally, consider other measures such as incentives, phase-in schedules for clean trucks, etc.
- Have truck routes clearly marked with trailblazer signs, so that trucks will not enter residential areas.
- Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the MND. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this land use or higher activity level.
- Provide electric vehicle (EV) Charging Stations (see the discussion below regarding EV charging stations).
- Should the Proposed Project generate significant regional emissions, the Lead Agency should require mitigation that requires accelerated phase-in for non-diesel powered trucks. For example, natural gas trucks, including Class 8 HHD trucks, are commercially available today. Natural gas trucks can provide a substantial reduction in health risks, and may be more financially feasible today due to reduced fuel costs compared to diesel. In the Final MND, the Lead Agency should require a phase-in schedule for these cleaner operating trucks to reduce any significant adverse air quality impacts. SCAQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency.
- Trucks that can operate at least partially on electricity have the ability to substantially reduce the significant NOx impacts from this project. Further, trucks that run at least partially on electricity

[4] Based on a review of the California Air Resources Board's diesel truck regulations, 2010 model year diesel haul trucks should have already been available and can be obtained in a successful manner for the project construction California Air Resources Board. March 2016. Available at: http://www.truckload.org/tva/files/crl/library/files/Filename/000000003422/California-Clean-Truck-and-Trailer-Update.pdf (See slide #23)

Attachment 11 – IS/MND Response to Comment Letter

are projected to become available during the life of the project as discussed in the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016-2040 RTP/SCS)5. It is important to make this electrical infrastructure available when the project is built so that it is ready when this technology becomes commercially available. The cost of installing electrical charging equipment onsite is significantly cheaper if completed when the project is built compared to retrofitting an existing building. Therefore, SCAQMD staff recommends the Lead Agency require the Proposed Project and other plan areas that allow truck parking to be constructed with the appropriate infrastructure to facilitate sufficient electric charging for trucks to plug-in. Similar to the City of Los Angeles requirements for all new projects, SCAQMD staff recommends that the Lead Agency require at least 5% of all vehicle parking spaces (including for trucks) include EV charging stations6. Further, electrical hookups should be provided at the onsite truck stop for truckers to plug in any onboard auxiliary equipment. At a minimum, electrical panels should appropriately sized to allow for future expanded use.

- Design the industrial building such that entrances and exits are such that trucks are not traversing past neighbors or other sensitive receptors.
- Design the industrial building such that any check-in point for trucks is well inside the Proposed Project site to ensure that there are no trucks queuing outside of the facility.
- Design the industrial building to ensure that truck traffic within the Proposed Project site is located away from the property line(s) closest to its residential or sensitive receptor neighbors.
- Restrict overnight parking in residential areas.
- Establish overnight parking within the industrial building where trucks can rest overnight.
- Establish area(s) within the Proposed Project site for repair needs.
- Develop, adopt and enforce truck routes both in and out of city, and in and out of facilities.
- Create a buffer zone of at least 300 meters (roughly 1,000 feet), which can be office space, employee parking, greenbelt, etc. between the Proposed Project and sensitive receptors.

B. Mitigation Measures for Operational Air Quality from Area Sources

- Maximize use of solar energy including solar panels; installing the maximum possible number of solar energy arrays on the building roofs and/or on the Project site to generate solar energy for the facility.
- Maximize the planting of trees in landscaping and parking lots.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Install light colored "cool" roofs and cool pavements.
- Require use of electric or alternatively fueled sweepers with HEPA filters.
- Use of water-based or low VOC cleaning products.

Conclusion

Pursuant to CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process. Please provide the SCAQMD with written responses to all comments contained herein prior to the certification of the Final MND. When responding to issues raised in the comments, response should provide sufficient details giving reasons why specific comments and suggestions are not accepted. There should be good faith, reasoned analysis in response. Conclusory statements unsupported by factual

Attachment 12 - Resolution 82-2018

CITY OF SANTA FE SPRINGS
RESOLUTION NO. 82-2018

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS REGARDING TENTATIVE PARCEL MAP NO. 78232 & DEVELOPMENT PLAN APPROVAL CASE NO. 930 & DEVELOPMENT PLAN APPROVAL CASE NO. 931 & DEVELOPMENT PLAN APPROVAL CASE NO. 932 & DEVELOPMENT PLAN APPROVAL CASE NO. 933

WHEREAS, a request was filed for Tentative Parcel Map No. 78232 to allow an approximately 44.67-acre site to be subdivided into five (5) parcels measuring 186,493 sq. ft. (Parcel 1), 153,827 sq. ft. (Parcel 2), 298,474 sq. ft. (Parcel 3), 140,791 sq. ft. (Parcel 4), and 1,166,135 sq. ft. (Parcel 5) in the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, a request was filed for Development Plan Approval Case No. 930 to allow the construction of a 78,417 sq. ft. concrete tilt-up building (Building 1) on property located within the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, a request was filed for Development Plan Approval Case No. 931 to allow the construction of a 58,463 sq. ft. concrete tilt-up building (Building 2) on property located within the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, a request was filed for Development Plan Approval Case No. 932 to allow the construction of a 121,124 sq. ft. concrete tilt-up building (Building 3) on property located within the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, a request was filed for Development Plan Approval Case No. 933 to allow the construction of a 60,117 sq. ft. concrete tilt-up building (Building 4) on property located within the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, the subject property is located at the northwest corner of Telegraph Road and Santa Fe Springs Road, with Accessor's Parcel Numbers of 8005-015-011, 8005-015-013, 8005-015-023, 8005-015-024, 8005-015-025, 8005-015-026, and 8005-015-027, as shown in the latest rolls of the Los Angeles County Office of the Assessor; and

WHEREAS, the property owner is Breitburn Operating L.P., 7087 Wilshire Boulevard, 46ths Floor, Los Angeles, CA 90017; and

WHEREAS, the proposed Tentative Parcel Map No. 78232 and Development Plan Approval Case Numbers 930 – 933 are considered a project as defined by the California Environmental Quality Act (CEQA), Article 20, Section 15378(a); and

WHEREAS, based on the information received from the applicant and staff's assessment, it was found and determined that the proposed project will not have a significant adverse effect on the environmental following mitigation, therefore, the City caused to be prepared and proposed to adopt an Initial Study/Mitigated Negative Declaration (IS/MND) for the proposed project; and

WHEREAS, the City of Santa Fe Springs Planning and Development Department on June 27, 2018 published a legal notice in the *Whitter Daily News,* a local paper of general circulation, indicating the date and time of the public hearing, and also mailed said public hearing notice on June 27, 2018 to each property owner within a 500 foot radius of the project site in accordance with state law; and

WHEREAS, the City of Santa Fe Springs Planning Commission has considered the application, the written and oral staff report, the General Plan and zoning of the subject property, the testimony, written comments, or other materials presented at the Planning Commission Meeting on July 9, 2018 concerning Tentative Parcel Map No. 78232 and Development Plan Approval Case Nos. 930 - 933.

NOW, THEREFORE, be it RESOLVED that the PLANNING COMMISSION of the CITY OF SANTA FE SPRINGS does hereby RESOLVE, DETERMINE and ORDER AS FOLLOWS:

SECTION I. ENVIRONMENTAL FINDINGS AND DETERMINATION

The proposed development is considered a project under the California Environmental Quality Act (CEQA) and as a result, the project is subject to the City's environmental review process. The environmental analysis provided in the Initial Study indicated that the proposed project will not result in any significant adverse immitigable impacts to the environment, therefore, the City required the preparation and adoption of a Mitigated Negative Declaration (MND) for the proposed Project. The MND reflects the independent judgment of the City of Santa Fe Springs, and the environmental consultant, Blodgett/Baylosis Environmental Planning.

The Initial Study determined that the proposed project is not expected to have any significant adverse environmental impacts. The following findings can be made regarding the Mandatory Findings of Significance set forth in Section 15065 of the CEQA Guidelines based on the results of this Initial Study:

- The proposed project *will not* have the potential to degrade the quality of the environment.
- The proposed project *will not* have the potential to achieve short-term goals to the disadvantage of long-term environmental goals.
- The proposed project *will not* have impacts that are individually limited, but cumulatively considerable, when considering planned or proposed development in the immediate vicinity.
- The proposed project *will not* have environmental effects that will adversely affect humans, either directly or indirectly.

In addition, pursuant to Section 21081(a) of the Public Resources Code, findings must be adopted by the decision-maker coincidental to the approval of a Mitigated Negative Declaration, which relates to the Mitigation Monitoring Program. These findings shall be incorporated as part of the decision-maker's findings of fact, in response to AB-3180 and in compliance with the requirements of the Public Resources Code. In accordance with the requirements of Section 21081(a) and 21081.6 of the Public Resources Code, the City of Santa Fe Springs can make the following additional findings:

- A mitigation reporting or monitoring program will be required; and,
- An accountable enforcement agency or monitoring agency shall be identified for the mitigation measures adopted as part of the decision-maker's final determination.

A number of mitigation measures have been recommended as a means to reduce or eliminate potential adverse environmental impacts to insignificant levels. AB-3180 requires that a monitoring and reporting program be adopted for the recommended mitigation measures.

SECTION II. TENTATIVE PARCEL MAP FINDINGS

Pursuant to Section 154.07 of the Municipal Code, a tentative map shall not be approved unless the Planning Commission finds that the proposed subdivision, together with the provisions for its design and improvements, is consistent with the general plan as required by Section 66473.5 of the Subdivision Map Act. Additionally, the Planning Commission shall deny a tentative map if it makes any of the findings set forth in Sections 66474 and 66474.6 of the Subdivision Map Act.

A) *Section 66473.5 and Sections 66474(a) and (b) of the Subdivision Map Act require tentative maps to be consistent with the general plan and specific plans. The proposed Tentative Parcel Map, subject to the attached conditions, is in accordance with the Subdivision Map Act in that:*

Approval of the proposed Parcel Map would promote a number of specific General Plan Goals and Policies as described in the table below:

General Plan Consistency Analysis

General Plan Element	*Policy*	**Project Consistency**
	Goal 5: Provide an environment to stimulate local employment, community spirit, property values, community stability, the tax base, and the viability of local business.	The map will facilitate the development of four Class A buildings, which are expected to provide more jobs and generate a higher property tax than currently collected for the oil field.

Land Use	**Goal 9:** Provide for growth and diversification of industry and industrial related activities within the Santa Fe Springs industrial area.	The consolidation of several small parcels into five (5) parcels will provide industrial and commercial use that provide a more viable development opportunity of the subject site.
	Policy 9.1: Consideration of providing an adequate tax base from property tax or sales tax income.	The project will construct four Class A buildings, which are expected to generate higher property taxes than currently collected for the oil field.
	Policy 9.4: Encourage the grouping of adjoining small or odd shaped parcels in order to create more viable development.	The consolidation of several small parcels, some of which are landlocked and unable to be developed, and subdivision into five (5) viable parcels will provide for industrial and commercial uses that provide a more viable development opportunity of the subject site.
	Goal 11: Support and encourage the viability of the industrial and commercial areas of Santa Fe Springs.	The consolidation and subdivision of the existing lots enables the site to be developed into an industrial business park.

The proposed parcel map, subject to the attached conditions, is compatible with the goals and objectives of the various elements of the City of Santa Fe Springs General Plan, and therefore, is in compliance with Government Code Sections 66473.5, and 66474(a) and (b).

B) *Sections 66474(c) and (d) of the Subdivision Map Act require the site to be physically suitable for the type of development and proposed density of development.*

In addition to the proposed parcel map, the applicant is concurrently seeking approval to allow for the construction of four Class A industrial buildings on parcels 1, 2, 3, and 4. Parcel 5 will continue to be utilized for oil extraction operations. The existing zoning permits warehouse uses and oil and gas drilling for properties within the M-2, Heavy Manufacturing, zone. All public streets and utility services necessary and sufficient for the full use, occupancy, and operation of the future industrial business park, including water, storm drain(s), sanitary sewer, gas, electric, cable and telephone facilities, are readably available.

C) *Sections 66474(e) and (f) of the Subdivision Map Act require that the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat or is likely to cause serious public health concerns.*

The project site is not located in a sensitive environment, but rather in a fully urbanized area surrounded by various land uses. None of the parcels, pre and

post subdivision, contain any riparian habitats, wetland habitats, and are not utilized for movement of any known native wildlife species of migratory fish or wildlife species; consequently, the design of the subdivision is unlikely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. Additionally, as required by the California Environmental Quality Act (CEQA), an Initial Study (IS)/Mitigated Negative Declaration (MND) was prepared for the proposed apartment project. According to the IS/MND, the project is not expected to have any impacts on biological resources or cause serious public health problems.

D) *Section 66474(g) of the Subdivision Map Act requires that the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision.*

New easements for utility or roadways, if necessary, will be provided prior to final map approval. Two right-turn lanes are anticipated to be recorded on the final map.

E) *In accordance with Government Code Section 66474.6, it has been determined that the discharge of waste from the proposed subdivision, subject to the attached conditions, into the existing sewer system will not result in a violation of the requirements prescribed by the Regional Water Quality Control Board in that the developer is required to comply with the IS/MND Mitigation Monitoring and Reporting Program, submit an erosion control plan and comply with the NPDES Best Management Practices during the grading and construction phases of the project.*

The project will meet all state and local ordinances and requirements including the California Regional Water Quality Control Board.

F) *That the proposed subdivision shall be in accordance with Government Code Section 66473.1, entitled "Design of Subdivisions to provide for Future Passive or Natural Heating and Cooling Opportunities."*

Future Passive or Natural Heating and Cooling Opportunities will be incorporated with the proposed developments. To the extent feasible, staff will review the proposed developments to ensure that energy-saving devices or materials, including, but not limited to, insulation, double-pane windows, and high efficiency central heating and cooling systems will be incorporated.

SECTION III. DEVELOPMENT PLAN APPROVAL FINDINGS

Pursuant to Section 155.739 of the City of Santa Fe Springs Zoning Regulations, the Planning Commission shall consider the following findings in their review and

determination of the subject Development Plan Approval. Based on the available information, the City of Santa Fe Springs Planning Commission hereby make the following findings:

(A) *That the proposed development is in conformance with the overall objectives of this chapter.*

The proposed project is located within the M-2, Heavy Manufacturing, Zone. Pursuant to Section 155.240 of the Zoning Regulations, "The purpose of the M-2 Zone is to preserve the lands of the city appropriate for heavy industrial uses, to protect these lands from intrusion by dwellings and inharmonious commercial uses, to promote uniform and orderly industrial development, to create and protect property values, to foster an efficient, wholesome and aesthetically pleasant industrial district, to attract and encourage the location of desirable industrial plants, to provide an industrial environment which will be conducive to good employee relations and pride on the part of all citizens of the community and to provide proper safeguards and appropriate transition for surrounding land uses."

The proposed project is consistent with the purpose of the M-2 Zone in the following manner:

1. The land is appropriate for industrial uses based on its zoning, M-2, Heavy Manufacturing and its General Plan Land Use designation of Industrial.
2. The proposed project is and industrial business park, therefore the land is being maintained for industrial uses.
3. The project involves the construction of a new and attractive industrial business park on a site that is currently utilized for oil extraction operations. The assessed value of the property will significantly improve after the project, thus leading to an increase in property values for both the subject property and neighboring properties.
4. The proposed project complies with all development standards set forth in the M-2 Zone.

(B) *That the architectural design of the proposed structures is such that it will enhance the general appearance of the area and be in harmony with the intent of this chapter.*

The subject parcel has been utilized for oil extraction operations for many decades. The proposed project will be a significant improvement to the subject site. The architect used multiple variations in height, setback, materials and color. The result is an attractive project with contemporary buildings that is comparable to other high quality office/industrial projects here in Santa Fe Springs. In addition, the project meets or exceeds all requirements of the City's Zoning Regulations. The project's overall compliance validates that it is in harmony with the overall intent of the City's Zoning Regulations.

(C) *That the proposed structures be considered on the basis of their suitability for their intended purpose and on the appropriate use of materials and on the principles of proportion and harmony of the various elements of the buildings or structures.*

The proposed buildings are well-designed and should be highly suitable for a variety of office, manufacturing or warehouse-type users. The design of the industrial business park provides quality architectural design, as demonstrated by glazing, pop-outs, and variations in height, materials, and color. These architectural design elements break up the mass of the buildings, and present an attractive, distinctive façade to visitors. As designed, the new buildings are suitable for their intended users, and the distinctive design of the buildings represents the architectural principles of proportion and harmony. In addition, the buildings are designed with similar architectural features in order to create harmony and consistency throughout the development.

(D) *That consideration be given to landscaping, fencing and other elements of the proposed development to ensure that the entire development is in harmony with the objectives of this chapter.*

Extensive consideration has been given to numerous elements of the proposed project to achieve harmony with the City's Zoning Regulations. As proposed, the project meets or exceeds all development standards set for in the City's zoning regulations and the project does not require any modification permits and/or zone variances. Landscaping helps to soften building mass and parking areas, loading doors and potential trucking activities are screened by the orientation of buildings, and meandering sidewalks throughout the site frontage provide a safe and attractive pedestrian pathway.

(E) *That it is not the intent of this subchapter to require any particular style or type of architecture other than that necessary to harmonize with the general area.*

As stated previously, the proposed buildings are contemporary in design. The architect used variations in the provide setback, materials and color. The style and architecture of the proposed building is consistent with other high quality buildings in the general area.

(F) *That it is not the intent of this subchapter to interfere with architectural design except to the extent necessary to achieve the overall objectives of this chapter.*

Pursuant to Section 155.736 of the Zoning Regulations "The purpose of the development plan approval is to assure compliance with the provisions of this chapter and to give proper attention to the sitting of new structures or additions or alterations to existing structures, particularly in regard to unsightly and undesirable appearance, which would have an adverse effect on surrounding properties and

the community in general." The Planning Commission finds that the new buildings will be an enhancement to the overall area. The Planning Commission believes that proper attention has been given to the location, size, and design of the proposed buildings.

SECTION IV. PLANNING COMMISSION ACTION

The Planning Commission hereby adopts Resolution No. 82-2018 to approve Tentative Parcel Map No. 78232 to allow an approximately 44.67-acre site to be subdivided into five (5) parcels measuring 186,493 sq. ft. (Parcel 1), 153,827 sq. ft. (Parcel 2), 298,474 sq. ft. (Parcel 3), 140,791 sq. ft. (Parcel 4), and 1,166,135 sq. ft. (Parcel 5); to approve Development Plan Approval Case No. 930 to allow the construction of a 78,417 sq. ft. concrete tilt-up building (Building 1); to approve Development Plan Approval Case No. 931 to allow the construction of a 58,463 sq. ft. concrete tilt-up building (Building 2); to approve Development Plan Approval Case No. 932 to allow the construction of a 121,124 sq. ft. concrete tilt-up building (Building 3); to approve Development Plan Approval Case No. 933 to allow the construction of a 60,117 sq. ft. concrete tilt-up building (Building 4); and to approve and adopt the proposed Initial Study/Mitigated Negative Declaration, and Mitigation Monitoring and Reporting Program (IS/MND/MMRP), subject to conditions attached hereto as Exhibit A and Exhibit B.

ADOPTED and APPROVED this 10th day of September, 2018 BY THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS.

Ralph Aranda, Chairperson

ATTEST:

Teresa Cavallo, Planning Secretary

Exhibit A
CONDITIONS OF APPROVAL FOR TPM 78232:

ENGINEERING / PUBLIC WORKS DEPARTMENT:
(Contact: Robert Garcia 562-868-0511 x7545)

1. Final parcel map checking of $4,824 plus $285 per parcel shall be paid to the City. Developer shall comply with Los Angeles County's Digital Subdivision Ordinance (DSO) and submit final maps to the City and County in digital format.

2. The applicant shall provide at no cost to the City, one mylar print of the recorded parcel map from the County of Los Angeles Department of Public Works, P.O. Box 1460, Alhambra, CA 91802-1460, Attention: Bill Slenniken (626) 458-5131.

3. A reciprocal access easement Agreement covering each parcel of the subject map shall be prepared, executed and recorded in the Office of the Los Angeles County Recorder. Such Agreement and any CC&R's shall be subject to the approval of the City Attorney.

PLANNING AND DEVELOPMENT DEPARTMENT:
(Contact: Laurel Reimer 562.868-0511 x7354)

4. Provisions shall be made for appropriate television systems and for communication systems, including, but not limited to, telephone and internet services. Appropriate cable television systems, as used, means those franchised or licensed to serve the geographical area in which the subdivision is located.

5. The Final Map to be recorded with the Los Angeles County Recorder shall substantially conform to the Tentative Parcel Map submitted by the applicant and on file with the case.

6. Currently, the County of Los Angeles Department of Public Works is utilizing a computerized system to update and digitize the countywide land use base. If the parcel map is prepared using a computerized drafting system, the applicant or their civil engineer shall submit a map in digital graphic format with the final Mylar map to the County of Los Angeles Department of Public Works for recordation and to the City of Santa Fe Springs Department of Public Works for incorporation into its GIS land use map. The City of Santa Fe Springs GIS Coordinate System shall be used for the digital file.

7. Tentative Parcel Map No. 78232 shall expire 24 months after Planning Commission approval, on September 10, 2020, except as provided under the provisions of California Government Code Section 66452.6. During this time period the final map shall be presented to the City of Santa Fe Springs for approval. The subdivision proposed by Tentative Parcel Map No. 78232 shall not be effective until such time that a final map is recorded.

8. The "Subdivider," Breitburn Operating L.P., agrees to defend, indemnify and hold harmless the City of Santa Fe Springs, its agents, officers and employees from any claim, action or proceeding against the City or its agents, officers or employees to attack, set aside, void or annul an approval of the City or any of its councils, commissions, committees or boards concerning the subdivision when action is brought within the time period provided for in Government Code, Section 66499.37. Should the City, its agents, officers or employees receive notice of any such claim, action or proceeding, the City shall promptly notify subdivider of such claim, action or proceeding and shall cooperate fully in the defense thereof.

9. This approval is not effective until the applicant has completed and signed the signature element appearing at the bottom of the last page of these conditions, and returned the original completed and signed document to the City, confirming the applicant's understanding of these conditions and its willingness to accept and comply with them.

The applicant identified below hereby confirms (1) that it has reviewed and understands each of the foregoing conditions for Tentative Parcel Map 78232, and (2) its willingness to accept and comply with them.

Name of Applicant – Print

_____ _____
Signature of Authorized Agent Date

Exhibit B:
CONDITIONS OF APPROVAL FOR DPAs 930-933:

ENGINEERING / PUBLIC WORKS DEPARTMENT:
(Contact: Robert Garcia 562.868-0511 x7545)

STREETS

1. Prior to the issuance of building permits, the applicant and/or developer shall pay a flat fee of $203,715 to reconstruct/resurface the existing street frontage to centerline for Telegraph Road & Santa Fe Springs Road.

2. Prior to the issuance of building permits, the applicant and/or developer shall pay a flat fee of $5,000 for the upgrade and installation of an Emergency Vehicle Preemption System (OPTICOM) at the intersection of Telegraph Road and Santa Fe Springs Road as determined by the City Engineer and Fire Chief.

3. The applicant/or developer shall design and construct a 5-foot wide meandering sidewalk per City standards and dedicate an easement along the Telegraph Road & Santa Fe Springs Road street frontage. The dedicated easement shall be shown on the Parcel Map. Furthermore, said meandering sidewalk shall be shown on both the civil and landscape plans.

4. The applicant and/or developer shall design and construct/modify one (1) existing raised Median Island on Santa Fe Springs Road to accommodate left turns into the northernmost proposed driveway.

5. Prior to the issuance of building permits, the applicant and/or developer shall pay the costs associated with the furnishing and installation of traffic signal modifications; including protected Northbound/Southbound left turn traffic signal phasing at the intersection of Telegraph Road and Santa Fe Springs Road. The cost estimate for the modifications (add left turn phasing) at the Telegraph/Bloomfield signal is $191,000.

6. Full street improvements shall be constructed to the City standards in accordance with plans prepared by the applicant and/or developer and approved by the City Engineer. Street to be improved shall include Telegraph Road & Santa Fe Springs Road for the purpose of installing Right turn pockets. A soils report shall be prepared and submitted as directed by the City Engineer to determine proposed street structural section.

7. Street right-of-way easements shall be dedicated as follows:
    a) Along the north side of Telegraph Road for the construction of a right turn pocket.
    b) Along the west side of Santa Fe Springs Road for the construction of a right turn pocket.

8. All above ground oil wells, pipelines, tanks, and related lines within the public right-of-way shall be removed from the right-of-way unless otherwise approved by the City Engineer.

9. Adequate "on-site" parking shall be provided per City requirements, and all streets abutting the development shall be posted "No Stopping Any Time." The City will install the offsite signs and the applicant and/or developer shall pay $ 3,000.00 to install (15) new signs.

10. The applicant and/or developer shall be responsible for the installation, replacement or modification of street name signs, traffic control signs, striping and pavement markings required in conjunction with the development. The applicant and/or developer shall be responsible for coordination of said work, as well as all associated fees, permits, materials, etc.

11. Proposed driveways shall be located to clear existing fire hydrants, street lights, water meters, etc.

CITY UTILITIES

12. Storm drains, catch basins, connector pipes, retention basin and appurtenances built for this project shall be constructed in accordance with City specifications in Telegraph Road & Santa Fe Springs Road. Storm drain plans shall be approved by the City Engineer.

13. Fire hydrants shall be installed as required by the Fire Department. Existing public fire hydrants adjacent to the site, if any, shall be upgraded if required by the City Engineer. The applicant and/or developer shall pay to the City the entire cost of design, engineering, installation and inspection of Fire hydrants.

14. Sanitary sewers shall be constructed in accordance with City specifications to serve the subject development. The plans for the sanitary sewers shall be approved by the City Engineer. A sewer study (including a sewer flow test) shall be submitted along with the sanitary sewer plans.

15. All buildings shall be connected to the sanitary sewers.

16. The fire sprinkler plans, which show the proposed double-check valve detector assembly location, shall have a stamp approval from the Planning Department and Public Works Department prior to the Fire Department's review for approval. Disinfection, pressure and bacteriological testing on the line between the street and detector assembly shall be performed in the presence of personnel from the City Water Department. The valve on the water main line shall be operated only by the City and only upon the City's approval of the test results.

17. The applicant and/or developer shall obtain a Storm Drain Connection Permit for any connection to the storm drain system.

18. The applicant and/or developer shall have an overall site utility master plan prepared by a Registered Civil Engineer showing the proposed location of all public water mains, reclaimed water mains, sanitary sewers and storm drains. This plan shall be approved by the City Engineer prior to the preparation of any construction plans for the aforementioned improvements.

TRAFFIC

19. All points of access to the proposed development have been reviewed and approved by the City Engineer. Left turns will only be allowed into the proposed development from the most northerly driveway on Santa Fe Springs Road. Left turns out of the proposed development will be allowed from both northerly and southerly driveways on Santa Fe Springs Road.

FEES

20. The applicant and/or developer shall comply with Congestion Management Program (CMP) requirements and provide mitigation of trips generated by the development. The applicant and/or developer will receive credit for the demolition of any buildings that formerly occupied the site. For new developments, if the applicant and/or developer cannot meet the mitigation requirements, the applicant and/or developer shall pay a mitigation fee to be determined by the City Engineer for off-site transportation improvements. This mitigation fee shall be paid prior to issuance of building permits.

21. The applicant and/or developer shall comply with all requirements of the County Sanitation District, make application for and pay the sewer maintenance fee.

22. The applicant and/or developer shall pay the water trunkline connection fee of $3,700 per acre upon application for water service connection or if utilizing any existing water service.

MISCELLANEOUS

23. A grading plan shall be submitted for drainage approval to the City Engineer. The applicant and/or developer shall pay drainage review fees in conjunction with this submittal. A professional civil engineer registered in the State of California shall prepare the grading plan.

24. A hydrology study shall be submitted to the City if requested by the City Engineer. The study shall be prepared by a Professional Civil Engineer.

25. Upon completion of public improvements constructed by developers, the developer's civil engineer shall submit mylar record drawings and an electronic file (AutoCAD Version 2004 or higher) to the office of the City Engineer.

26. The applicant and/or developer shall comply with the National Pollutant Discharge Elimination System (NPDES) program and shall require the general contractor to implement storm water/urban runoff pollution prevention controls and Best Management Practices (BMPs) on all construction sites in accordance with the current MS4 Permit. The applicant and/ or developer will also be required to submit a Certification for the project and will be required to prepare a Storm Water Pollution Prevention Plan (SWPPP) and Low Impact Development Plan (LID).

POLICE SERVICES DEPARTMENT:
(Contact: Lou Collazo 562.868-0511 x3320)

27. The applicant and/or developer shall submit and obtain approval of a proposed lighting (photometric) plan for the property from the City's Department of Police Services. The photometric plan shall be designed to provide adequate lighting (minimum of 1 foot candle power) throughout the subject property. Further, all exterior lighting shall be designed/installed in such a manner that light and glare are not transmitted onto adjoining properties in such concentration/quantity as to create a hardship to adjoining property owners or a public nuisance. The photometric plans shall be submitted to the Director of Police Services prior to building permit issuance.

28. The developer shall provide an emergency phone number and a contact person of the person or persons involved in the supervision of the construction to the Department of Police Services. The name, telephone number, fax number and e-mail address of that person shall be provided to the Director of Police Services no later than 60 days from the date of approval by the Planning Commission. Emergency information shall allow emergency service to reach the developer or their representative any time, 24 hours a day.

29. In order to facilitate the removal of unauthorized vehicles parked on the property, the developer shall post, in plain view and at each entry to the property, a sign not less than 17" wide by 22" long. The sign shall prohibit the public parking of unauthorized vehicles and indicate that unauthorized vehicles will be removed at the owner's expense and also contain the California Vehicle Code that permits this action. The sign shall also contain the telephone number of the local law enforcement agency (Police Services Center (562) 409-1850). The lettering within the sign shall not be less than one inch in height. The developer shall contact the Police Services Center for an inspection no later than 30 days after the project has been completed and prior to the occupancy permit being issued.

30. All work shall be conducted inside at all times including, but not limited to, all loading and unloading of trailers. Items shall not be left out awaiting loading.

31. Off-street parking areas shall not be reduced or encroached upon by outdoor storage and/or for the placement of merchandize.

32. All new businesses fronting on Telegraph Road shall be aware that they are subject strict noise levels pursuant to Section 155.424 (E).

33. The proposed buildings, including any lighting, fences, walls, cabinets, and poles shall be maintained in good repair, free from trash, debris, litter and graffiti and other forms of vandalism. Any damage from any cause shall be repaired within 72 hours of occurrence, weather permitting, to minimize occurrences of dangerous conditions or visual blight. Paint utilized in covering graffiti shall be a color that matches, as closely possible, the color of the existing and/or adjacent surfaces.

34. During the construction phase of the proposed project, the contractor shall provide an identification number (i.e. address number) at each building and/or entry gate to direct emergency vehicles in case of an emergency. The identification numbers may be painted on boards and fastened to the temporary construction fence. The boards may be removed after each building has been identified with their individual permanent number address.

35. It shall be the responsibility of the job-supervisor to maintain the job site in a clean and orderly manner. Dirt and debris that has migrated to the street or neighboring properties shall be immediately cleaned.

36. During construction, out-houses, porta potties, or the like, shall not be visible from the public street and shall be maintained on a regular basis.

DEPARTMENT OF FIRE - RESCUE (FIRE PREVENTION DIVISION):
(Contact: Richard Kallman 562.868-0511 x3710)

37. All buildings over 5,000 sq. ft. shall be protected by an approved automatic sprinkler system per Section 93.11 of the Santa Fe Springs Municipal Code.

38. The applicant and/or developer shall comply with the requirements of Section 117.131 of the Santa Fe Springs Municipal Code, Requirement for a Soil Gas Study, in accordance with Ordinance No. 955, prior to issuance of building permits.

39. When applicable, abandoned oil wells must be exposed and inspected under the oversight of a registered engineer or geologist. The wells must be monitored for methane leaks and the precise location of each abandoned well shall be surveyed. A report of findings along with a description of any recommended remedial actions needed to comply with the Division of Oil, Gas, and Geothermal Resources, signed by a registered engineer or geologist, must be provided to the Fire Department.

40. A methane gas protection system designed in accordance with the standards established by the County of Los Angeles shall be required for all habitable structures. Plans for the proposed methane gas protection system shall be submitted to the Department of Fire-Rescue prior to construction. An alternative to the County of Los Angeles standards may be acceptable if approved by the Department of Fire-Rescue.

41. Interior gates or fences are not permitted across required Fire Department access roadways unless otherwise granted prior approval by the City Fire Department.

42. If on-site fire hydrants are required by the Fire Department, a minimum flow must be in accordance with Appendix B from the current Fire Code flowing from the most remote hydrant. In addition, on-site hydrants must have current testing, inspection and maintenance per California Title 19 and NFPA 25.

43. The standard aisle width for onsite emergency vehicle maneuvering shall be 26 feet with a minimum clear height of 13 feet 6 inches. Internal driveways shall have a turning radius of not less than 52 feet. The final location and design of this 26 feet shall be subject to the approval of the City's Fire Chief as established by the Uniform Fire Code. A request to provide emergency vehicle aisle width less than 26 feet shall be considered upon the installation/provision of mitigation improvements approved by the City's Fire Chief.

44. Prior to submitting plans to the Building Department, a preliminary site plan shall be approved by the Fire Department for required access roadways and on-site fire hydrant locations. The site plan shall be drawn at a scale between 20 to 40 feet per inch. Include on plan all entrance gates that will be installed.

45. Knox boxes are required on all new construction. All entry gates shall also be equipped with Knox boxes or Knox key switches for power-activated gates.

46. Signs and markings required by the Fire Department shall be installed along the required Fire Department access roadways.

47. The applicant and/or developer shall apply for a permit with the Department of Fire-Rescue and comply with the requirements of Section 117.127 of the Santa Fe Springs Municipal Code, Criteria for Abandonment, prior to abandoning or re-abandoning any oil wells on-site.

48. A system for venting of abandoned oil wells over which there will be construction, in accordance with Section 117.130 of the Santa Fe Springs Municipal Code, shall be required. Plans for the venting system shall be submitted to the Department of Fire-Rescue prior to construction.

DEPARTMENT OF FIRE - RESCUE (ENVIRONMENTAL DIVISION):
(Contact: Tom Hall 562.868-0511 x3715)

49. Permits and approvals. The applicant and/or developer shall, at its own expense, secure or cause to be secured any and all permits or other approvals which may be required by the City and any other governmental agency prior to conducting environmental assessment or remediation on the property. Permits shall be secured prior to beginning work related to the permitted activity.

50. The applicant and/or developer shall submit plumbing plans to the Santa Fe Springs Department of Fire-Rescue Environmental Protection Division (EPD) and, if necessary, obtain an Industrial Wastewater Discharge Permit Application for generating, storing, treating or discharging any industrial wastewater to the sanitary sewer.

51. The applicant and/or developer shall provide a sampling plan to the Department of Fire-Rescue for active oil wells that will be abandoned prior to site development.

WASTE MANAGEMENT:
(Contact: Teresa Cavallo 562.868.0511 x7309)

52. The developer shall comply with Section 50.51 of the Municipal Code which prohibits any business or residents from contracting any solid waste disposal company that does not hold a current permit from the City.

53. All projects over $50,000 are subject to the requirements of Ordinance No. 914 to reuse or recycle 75% of the project waste. Contact the Environmental Consultant, Morgan McCarthy at (562) 432-3700 or (805) 815-2492.

54. The developer shall comply with Public Resource Code, Section 42900 et seq. (California Solid Waste Reuse and Recycling Access Act of 1991) as amended, which requires each development project to provide adequate storage area for the collection/storage and removal of recyclable and green waste materials.

PLANNING AND DEVELOPMENT DEPARTMENT:
(Contact: Laurel Reimer 562.868-0511 x7354)

55. Approval of Development Plan Approval Case Numbers 930, 931, 932 and 933 is contingent upon approval of Tentative Parcel Map Case No. 78232.

56. The owner/developer shall comply with the City's "Heritage Artwork in Public Places Program" in conformance with City Ordinance No. 1054.

57. The owner/developer shall be responsible for reviewing and/or providing copies of the required conditions of approval to his/her architect, engineer, contractor, tenants, etc. Additionally, the conditions of approval contained herein shall be made part of the construction drawings for the proposed development. *Construction drawings shall not be accepted for Plan Check without the conditions of approval incorporated into the construction drawings.*

58. The owner/developer shall indicated on the first page of the construction drawings that the subject property is located within the methane zone. Said indication shall be clearly printed with a minimum 12 point font size.

59. The owner/developer shall apply for a Well Review Report (report) through the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR). A copy of this report shall be provide to the Planning Department. If historic oil wells are identified on-site, well abandoned to current DOGGR standards may be required before a building permit can be issued.

60. The owner/developer shall apply for an Oilfield Site Plan Review through the Planning Department prior to issuance of a building permit.

61. To prevent the travel of combustible methane gas into any structure, all slab or foundation penetrations, including plumbing, communication and electrical penetrations, must be sealed with an appropriate material. In addition, underground electrical conduits penetrating the slab or foundation of the structure, shall comply with the National Electrical Code (NEC), replete with a seal-off device normally required for classified electrical installations, so as to prevent the travel of combustible methane gas into the structure through conduit runs. *Refer to California Electrical Code, Chapter 5, Sections 500 and 501.*

62. The owner/developer shall submit Mechanical plans that include a roof plan that shows the location of all roof mounted equipment. All roof-mounted mechanical equipment and/or duct work which projects above the roof or roof parapet of the proposed development and is visible from adjacent property or a public street shall be screened by an enclosure which is consistent with the architecture of the building and approved by the Director of Planning or designee.
    a. To illustrate the visibility of equipment and/or duct work, the following shall be submitted along with the Mechanical Plans:
        i. A roof plan showing the location of all roof-mounted equipment;
        ii. Elevations of all existing and proposed mechanical equipment; and
        iii. A line-of-sight drawing or a building cross-section drawing which shows the roof-mounted equipment and its relation to the roof and parapet lines.

    NOTE: line-of sight drawing and/or building cross section must be scaled.

63. The owner/developer shall submit a lighting program that is integrated into the overall site, landscape design and building design. Lighting shall be used to highlight prominent building features such as entries and other focal points. Up-lighting can also be used as a way to enhance the texture of plants and structures, to create a sense of height in a landscape design.

64. The owner/developer agrees and understands that any existing overhead utilities within the development shall be placed underground.

65. All fences, walls, gates and similar improvements for the proposed development shall be subject to the prior approval of the Fire Department and the Department of Planning and Development.

66. All approved outdoor trash enclosures shall be provided for the development subject to the approval of the Director of Planning or designee. The calculation to determine the required storage area shall be determine by the City Building Department.

67. All outdoor trash enclosures shall provide a solid roof cover.

68. All street-facing roof drains shall be provided along the interior walls and not along the exterior of the building.

69. The proposed development shall be constructed of quality material and any material shall be replaced when and if the material becomes deteriorated, warped, discolored or rusted.

70. Approved suite numbers/letters or address numbers shall be placed on the proposed building in such a position as to be plainly visible and legible from the street fronting the property. Said numbers shall contrast with their background. The size recommendation shall be 12" minimum.

71. The owner/developer shall submit a mailbox plan (locations and sizes) for all parcels prior to the issuance of building permits. The plan shall be approved by the Santa Fe Springs Post Office. The owner/developer shall submit to the City a written confirmation from the Santa Fe Springs Post Office that the mailbox locations are approved. The City shall review and approve the location plan to ensure adequate site distance and traffic safety measures are incorporated.

72. The Department of Planning and Development requires that the double-check detector assembly be placed as far back from the property line as practical, screened by shrubs or other materials, and painted forest green. All shrubs shall be planted a minimum distance of two (2) feet surrounding the detector assembly; however, the area in front of the OS and Y valves shall not be screened. The screening shall also only be applicable to the double-check detector assembly and shall not include the fire department connector (FDC). Notwithstanding, the Fire Marshall shall have discretionary authority to require the FDC to be located a minimum distance from the double-check detector assembly. The bottom of the valve shut off wheel shall be located a maximum of two (2) feet above ground.

73. Owner/developer shall submit for approval a detailed landscape and automatic irrigation plan pursuant to the Landscaping Guidelines of the City. Said landscape plan shall indicate the location and type of all plant materials, existing and proposed, and shall include 2 to 3 foot high berms (as measured from the parking lot grade elevation), shrubs designed to fully screen the interior yard and parking areas from public view, and minimum 24" box trees along the street frontage. *Said plans shall be consistent with AB 1881 (Model Water Efficient Landscape Ordinance).*

    NOTE: Staff shall not approve the landscaping and irrigation plan without first reviewing and approving the civil drawings, specifically as it pertains to the landscaping and irrigation plan (i.e., location and size of riprap, bio-swales, areas of infiltration trenches, etc.)

74. The landscaped areas shall be provided with a suitable, fixed, permanent and automatically controlled method for watering and sprinkling of plants. This operating sprinkler system shall consist of an electrical time clock, control valves, and piped water lines terminating in an appropriate number of sprinklers to insure proper watering periods and to provide water for all plants within the landscaped area. Sprinklers used to satisfy the requirements of this section shall be spaced to assure complete coverage of all landscaped areas. *Said plan shall be consistent with AB 1881 (Model Water Efficient Landscape Ordinance).*

75. Upon completion of the landscaping improvements, said landscaped areas shall be maintained in a neat, clean, orderly and healthful condition. This is meant to include proper pruning, mowing of lawns, weeding, removal of litter, fertilizing, and replacement of plants when necessary and the regular watering of all plantings.

76. The electrical plans, which show the location of electrical transformer(s), shall be subject to the approval of the Planning Department. Transformers shall not be located within the front yard setback area. The location of the transformer(s) shall be subject to the prior approval of the Director of Planning or designee. The electrical transformer shall be screened with shrubs consistent with Southern California Edison's Guidelines which requires three foot clearance on sides and back of the equipment, and eight foot clearance in front of the equipment. Additionally, the landscaping irrigation system shall be installed so that they do not spray on equipment. (A copy of the Guideline is available at the Planning Department.)

77. The applicant and/or developer shall not allow commercial vehicles, trucks and/or truck tractors to queue on Telegraph Road or Santa Fe Springs Road, use Telegraph Road or Santa Fe Springs Road as a staging area, or to back-up onto the street from the subject property.

78. All activities shall occur inside the buildings. No portion of the required off-street parking and driveway areas shall be used for outdoor storage of any type or for special-event activities, unless prior written approval is obtained from the Director of Planning, Director of Police Services and the Fire Marshall.

79. All parking stalls shall be legibly marked on the pavement. Additionally, all compact spaces shall be further identified by having the words "Compact" or comparable wording legibly written on the pavement, wheel stop or on a clearly visible sign.

80. The owner/developer shall provide a bulletin board, display case, or kiosk to display transportation information where the greatest number of employees are likely to see it. Information shall include, but is not limited to:
    1. Current maps, routes and schedules for public transit routes serving the site; and
    2. Telephone numbers for referrals on transportation information including numbers for the regional ridesharing agency and local transit operators; and
    3. Ridesharing promotional material supplied by commuter-oriented organizations; and
    4. Bicycle route and facility information, including regional/local bicycle maps and bicycle safety information; and
    5. A listing of facilities available for carpoolers, vanpoolers, bicyclists, transit riders and pedestrians at the site. This is required to both meet the requirements of Section 155.502 (D) of the Zoning Regulations and also a goal identified within the City's General Plan Circulation Element.

81. Preferential parking spaces shall be reserved for potential carpool/vanpool vehicles without displacing handicapped and customer parking needs. Vanpool space(s) shall

be legibly marked on the pavement or identified by a sign and also conveyed to employees through the required transportation information board. The preferential carpool/vanpool parking shall be identified on the site plan at the time of plan check submittal. This is required to both meet the requirements of Section 155.502 (D) of the Zoning Regulations and also a goal identified within the City's General Plan Circulation Element.

82. An area shall be designate for bicycle parking and bicycle racks shall be provided. Bike racks shall be provided to accommodate bicycles at a ratio of 4 bicycles for first 50,000 square feet and 1 bicycle for each additional 50,000 square feet. This is required to both meet the requirements of Section 155.502 (D) of the Zoning Regulations and also a goal identified within the City's General Plan Circulation Element.

83. There shall be a safe and convenient zone in which carpool/vanpool vehicles may deliver or board their passengers. Additionally, there shall be sidewalks or other designated pathways following direct and safe routes from external pedestrian circulation system to each building in the development and safe and convenience access from the external circulation system to bicycle parking facilities on-site. This is required to both meet the requirements of Section 155.502 (D) of the Zoning Regulations and also a goal identified within the City's General Plan Circulation Element.

84. Pursuant to the sign standards of the Zoning Regulations and related sign guidelines of the City of Santa Fe Springs, a comprehensive sign program for the development shall be prepared and submitted to the Director of Planning or designee for approval prior to obtaining a building permit for any signs related to the subject development. All signs throughout the subject site shall be installed in accordance with the approved comprehensive sign program for the subject development.

85. The Department of Planning and Development shall first review and approve all sign proposals for the development. The sign proposal (plan) shall include a site plan, building elevation on which the sign will be located, size, style and color of the proposed sign. All drawings shall be properly dimensioned and drawn to scale on 11" x 17" maximum-size paper. All signs shall be installed in accordance with the sign standards of the Zoning Ordinance and the Sign Guidelines of the City.

86. Prior to issuance of building permits, the owner/developer shall comply with the following conditions to the satisfaction of the City of Santa Fe Springs:
    a. Covenants.
        1. Owner/developer shall provide a written covenant to the Planning Department that, except as owner/developer may have otherwise disclosed to the City, Commission, Planning Commission or their employees, in writing, owner/developer has investigated the environmental condition of the property and does not know, or have reasonable cause to believe, that (a) any crude oil, hazardous substances or hazardous wastes, as defined in state and federal law, have been released, as that term is defined in 42 U.S.C. Section

9601 (22), on, under or about the Property, or that (b) any material has been discharged on, under or about the Property that could affect the quality of ground or surface water on the Property within the meaning of the California Porter-Cologne Water Quality Act, as amended, Water Code Section 13000, et seq

2. Owner/developer shall provide a written covenant to the City that, based on reasonable investigation and inquiry, to the best of owner/developer knowledge, it does not know or have reasonable cause to believe that it is in violation of any notification, remediation or other requirements of any federal, state or local agency having jurisdiction concerning the environmental conditions of the Property.

b. Owner/developer understands and agrees that it is the responsibility of the owner/developer to investigate and remedy, pursuant to applicable federal, state and local law, any and all contamination on or under any land or structure affected by this approval and issuance of related building permits. The City, Commission, Planning Commission or their employees, by this approval and by issuing related building permits, in no way warrants that said land or structures are free from contamination or health hazards.

c. Owner/developer understands and agrees that any representations, actions or approvals by the City, Commission, Planning Commission or their employees do not indicate any representation that regulatory permits, approvals or requirements of any other federal, state or local agency have been obtained or satisfied by the owner/developer and, therefore, the City, Commission, Planning Commission or their employees do not release or waive any obligations the owner/developer may have to obtain all necessary regulatory permits and comply with all other federal, state or other local agency regulatory requirements. Owner/developer, not the City, Commission, Planning Commission or their employees will be responsible for any and all penalties, liabilities, response costs and expenses arising from any failure of the owner/developer to comply with such regulatory requirements.

87. The owner/developer shall require and verify that all contractors and sub-contractors have successfully obtained a Business License with the City of Santa Fe Springs prior to beginning any work associated with the subject project. A late fee and penalty will be accessed to any contractor or sub-contractor that fails to obtain a Business License and a Building Permit final or Certificate of Occupancy will not be issued until all fees and penalties are paid in full. Please contact Cecilia Martinez, Business License Clerk, at (562) 868-0511, extension 7527 for additional information. A business license application can also be downloaded at www.santafesprings.org.

88. The Mitigation Monitoring Program, which was prepared for the proposed project and adopted by the Planning Commission upon completion of the Mitigated Negative Declaration, shall be made part of the conditions of approval for Development Plan Approval Case No. 930, 931, 932 and 933. The Mitigation Monitoring and Reporting Program is listed as an attachment to the staff report.

89. The owner/developer shall implement a dust control program for air quality control. The program shall ensure that a water vehicle for dust control operations is kept readily available at all times during construction. The developer shall provide the City Engineer and Building Official with the name, telephone number and e-mail address of the person directly responsible for dust control and operation of the vehicle.

90. During construction, the following information shall be made available on a sign posted at the main entrance(s) to the site:
    1. Name of the development/project.
    2. Name of the development company.
    3. Address or Address range for the subject site.
    4. 24-hour telephone number where someone can leave a message on a particular complaint (dust, noise, odor, etc.).

91. Prior to occupancy of the property/buildings, the owner/developer and/or his tenant(s), shall obtain a valid business license (AKA Business Operation Tax Certificate), and submit a Statement of Intended Use. Both forms, and other required accompanying forms, may be obtained at City Hall by contacting Cecilia Martinez at (562) 868-0511, extension 7527, or through the City's web site (www.santafesprings.org).

92. The development shall be built substantially in accordance with the plot plan, floor plan, and elevations submitted by the applicant and on file with the case. Any modification shall be subject to the review and approval of the Director of Planning or his/her designee.

93. The final site plan, floor plan and elevations of the proposed development and all other appurtenant improvements, textures and color schemes shall be subject to the final approval of the Director of Planning.

94. The owner/developer understands and agrees that if changes to the original plans (submitted and on file with the subject case) are required during construction, revised plans must be provided to the Planning Department for review and approval prior to the implementation of such changes. Please note that certain changes may also require approvals from other departments.

95. All other requirements of the City's Zoning Regulations, Building Code, Property Maintenance Ordinance, State and City Fire Code and all other applicable County, State and Federal regulations and codes shall be complied with.

96. Unless otherwise specified in the action granting Development Plan Approval, said approval which has not been utilized within a period of 24 consecutive months from the effective date shall become null and void. Also the abandonment or nonuse of a development plan approval and any privileges granted thereunder shall become null and void. However, an extension of time may be granted by Commission or Council action.

97. The applicant and owner/developer agrees to defend, indemnify and hold harmless the City of Santa Fe Springs, its agents, officers and employees from any claim, action or proceeding against the City or its agents, officers or employees to attack, set aside, void or annul an approval of the City or any of its councils, commissions, committees or boards arising from or in any way related to the all entitlements and approvals issued by the City in connection with the Project and from any CEQA challenges relating to the environmental review and determination for the Project, or any actions or operations conducted pursuant thereto. Should the City, its agents, officers or employees receive notice of any such claim, action or proceeding, the City shall promptly notify the applicant of such claim, action or proceeding, and shall cooperate fully in the defense thereof.

98. This approval is not effective until the applicant has completed and signed the signature element appearing at the bottom of the last page of these conditions, and returned the original completed and signed document to the City, confirming the applicant's understanding of these conditions and its willingness to accept and comply with them.

The applicant identified below hereby confirms (1) that it has reviewed and understands each of the foregoing conditions for Development Plan Approval Case Numbers 930-933, and (2) its willingness to accept and comply with them.

Attn.: Mr. Jackson Washburn
Senior Vice President

Re: **Tentative Parcel Map No. 78232**
Development Plan Approval Case Nos. 930, 931, 932, and 933
Northwest corner of Telegraph Road and Santa Fe Springs Road

Dear Mr. Washburn:

The Planning Commission, at their meeting on September 10, 2018, took action on your request for to allow a 44.67-acre site consisting of seven parcels to be subdivided into five parcels and developed with:

DPA 930: a 78,417 sq. ft. building on a 4.28-acre parcel (Building 1);
DPA 931: a 58,463 sq. ft. building on a 3.53-acre parcel (Building 2);
DPA 932: a 121,124 sq. ft. building on a 6.85-acre parcel (Building 3);
DPA 933: a 60,117 sq. ft. building on a 3.23-acre parcel (Building 4);

The remaining 26.77-acre parcel will be reserved for oil extraction operations. The project site is located at the northwest corner of Telegraph Road and Santa Fe Springs Road (APNs 8005-015-011, 8005-015-013, 8005-015-023, 8005-015-024, 8005-015-025, 8005-015-026, and 8005-015-027), within the M-2, Heavy Manufacturing Zone and Telegraph Road Corridor.
**The Building Official has assigned the following addresses: 12451 Telegraph Road (Building 1), 12551 Telegraph Road (Building 2), 10251 Santa Fe Springs Road (Building 3), and 10051 Santa Fe Springs Road (Building 4).*

The Planning Commission approved your requested entitlement subject to the findings and conditions of approval as provided within the attached Resolution 82-2018 and Exhibits A and B.

CITY OF SANTA FE SPRINGS
RESOLUTION NO. 82-2018

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS REGARDING TENTATIVE PARCEL MAP NO. 78232 & DEVELOPMENT PLAN APPROVAL CASE NO. 930 & DEVELOPMENT PLAN APPROVAL CASE NO. 931 & DEVELOPMENT PLAN APPROVAL CASE NO. 932 & DEVELOPMENT PLAN APPROVAL CASE NO. 933

WHEREAS, a request was filed for Tentative Parcel Map No. 78232 to allow an approximately 44.67-acre site to be subdivided into five (5) parcels measuring 186,493 sq. ft. (Parcel 1), 153,827 sq. ft. (Parcel 2), 298,474 sq. ft. (Parcel 3), 140,791 sq. ft. (Parcel 4), and 1,166,135 sq. ft. (Parcel 5) in the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, a request was filed for Development Plan Approval Case No. 930 to allow the construction of a 78,417 sq. ft. concrete tilt-up building (Building 1) on property located within the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, a request was filed for Development Plan Approval Case No. 931 to allow the construction of a 58,463 sq. ft. concrete tilt-up building (Building 2) on property located within the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, a request was filed for Development Plan Approval Case No. 932 to allow the construction of a 121,124 sq. ft. concrete tilt-up building (Building 3) on property located within the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, a request was filed for Development Plan Approval Case No. 933 to allow the construction of a 60,117 sq. ft. concrete tilt-up building (Building 4) on property located within the M-2, Heavy Manufacturing, Zone and Telegraph Road Corridor; and

WHEREAS, the subject property is located at the northwest corner of Telegraph Road and Santa Fe Springs Road, with Accessor's Parcel Numbers of 8005-015-011, 8005-015-013, 8005-015-023, 8005-015-024, 8005-015-025, 8005-015-026, and 8005-015-027, as shown in the latest rolls of the Los Angeles County Office of the Assessor; and

WHEREAS, the property owner is Breitburn Operating L.P., 7087 Wilshire Boulevard, 46ths Floor, Los Angeles, CA 90017; and

WHEREAS, the proposed Tentative Parcel Map No. 78232 and Development Plan Approval Case Numbers 930 – 933 are considered a project as defined by the California Environmental Quality Act (CEQA), Article 20, Section 15378(a); and

WHEREAS, based on the information received from the applicant and staff's assessment, it was found and determined that the proposed project will not have a significant adverse effect on the environmental following mitigation, therefore, the City caused to be prepared and proposed to adopt an Initial Study/Mitigated Negative Declaration (IS/MND) for the proposed project; and

WHEREAS, the City of Santa Fe Springs Planning and Development Department on June 27, 2018 published a legal notice in the *Whitter Daily News,* a local paper of general circulation, indicating the date and time of the public hearing, and also mailed said public hearing notice on June 27, 2018 to each property owner within a 500 foot radius of the project site in accordance with state law; and

WHEREAS, the City of Santa Fe Springs Planning Commission has considered the application, the written and oral staff report, the General Plan and zoning of the subject property, the testimony, written comments, or other materials presented at the Planning Commission Meeting on July 9, 2018 concerning Tentative Parcel Map No. 78232 and Development Plan Approval Case Nos. 930 - 933.

NOW, THEREFORE, be it RESOLVED that the PLANNING COMMISSION of the CITY OF SANTA FE SPRINGS does hereby RESOLVE, DETERMINE and ORDER AS FOLLOWS:

SECTION I. ENVIRONMENTAL FINDINGS AND DETERMINATION

The proposed development is considered a project under the California Environmental Quality Act (CEQA) and as a result, the project is subject to the City's environmental review process. The environmental analysis provided in the Initial Study indicated that the proposed project will not result in any significant adverse immitigable impacts to the environment, therefore, the City required the preparation and adoption of a Mitigated Negative Declaration (MND) for the proposed Project. The MND reflects the independent judgment of the City of Santa Fe Springs, and the environmental consultant, Blodgett/Baylosis Environmental Planning.

The Initial Study determined that the proposed project is not expected to have any significant adverse environmental impacts. The following findings can be made regarding the Mandatory Findings of Significance set forth in Section 15065 of the CEQA Guidelines based on the results of this Initial Study:

- The proposed project *will not* have the potential to degrade the quality of the environment.
- The proposed project *will not* have the potential to achieve short-term goals to the disadvantage of long-term environmental goals.
- The proposed project *will not* have impacts that are individually limited, but cumulatively considerable, when considering planned or proposed development in the immediate vicinity.
- The proposed project *will not* have environmental effects that will adversely affect humans, either directly or indirectly.

In addition, pursuant to Section 21081(a) of the Public Resources Code, findings must be adopted by the decision-maker coincidental to the approval of a Mitigated Negative Declaration, which relates to the Mitigation Monitoring Program. These findings shall be incorporated as part of the decision-maker's findings of fact, in response to AB-3180 and in compliance with the requirements of the Public Resources Code. In accordance with the requirements of Section 21081(a) and 21081.6 of the Public Resources Code, the City of Santa Fe Springs can make the following additional findings:

- A mitigation reporting or monitoring program will be required; and,
- An accountable enforcement agency or monitoring agency shall be identified for the mitigation measures adopted as part of the decision-maker's final determination.

A number of mitigation measures have been recommended as a means to reduce or eliminate potential adverse environmental impacts to insignificant levels. AB-3180 requires that a monitoring and reporting program be adopted for the recommended mitigation measures.

SECTION II. TENTATIVE PARCEL MAP FINDINGS

Pursuant to Section 154.07 of the Municipal Code, a tentative map shall not be approved unless the Planning Commission finds that the proposed subdivision, together with the provisions for its design and improvements, is consistent with the general plan as required by Section 66473.5 of the Subdivision Map Act. Additionally, the Planning Commission shall deny a tentative map if it makes any of the findings set forth in Sections 66474 and 66474.6 of the Subdivision Map Act.

A) *Section 66473.5 and Sections 66474(a) and (b) of the Subdivision Map Act require tentative maps to be consistent with the general plan and specific plans. The proposed Tentative Parcel Map, subject to the attached conditions, is in accordance with the Subdivision Map Act in that:*

Approval of the proposed Parcel Map would promote a number of specific General Plan Goals and Policies as described in the table below:

General Plan Consistency Analysis

General Plan Element	***Policy***	**Project Consistency**
	Goal 5: Provide an environment to stimulate local employment, community spirit, property values, community stability, the tax base, and the viability of local business.	The map will facilitate the development of four Class A buildings, which are expected to provide more jobs and generate a higher property tax than currently collected for the oil field.

Land Use	**Goal 9:** Provide for growth and diversification of industry and industrial related activities within the Santa Fe Springs industrial area.	The consolidation of several small parcels into five (5) parcels will provide industrial and commercial use that provide a more viable development opportunity of the subject site.
	Policy 9.1: Consideration of providing an adequate tax base from property tax or sales tax income.	The project will construct four Class A buildings, which are expected to generate higher property taxes than currently collected for the oil field.
	Policy 9.4: Encourage the grouping of adjoining small or odd shaped parcels in order to create more viable development.	The consolidation of several small parcels, some of which are landlocked and unable to be developed, and subdivision into five (5) viable parcels will provide for industrial and commercial uses that provide a more viable development opportunity of the subject site.
	Goal 11: Support and encourage the viability of the industrial and commercial areas of Santa Fe Springs.	The consolidation and subdivision of the existing lots enables the site to be developed into an industrial business park.

The proposed parcel map, subject to the attached conditions, is compatible with the goals and objectives of the various elements of the City of Santa Fe Springs General Plan, and therefore, is in compliance with Government Code Sections 66473.5, and 66474(a) and (b).

B) *Sections 66474(c) and (d) of the Subdivision Map Act require the site to be physically suitable for the type of development and proposed density of development.*

In addition to the proposed parcel map, the applicant is concurrently seeking approval to allow for the construction of four Class A industrial buildings on parcels 1, 2, 3, and 4. Parcel 5 will continue to be utilized for oil extraction operations. The existing zoning permits warehouse uses and oil and gas drilling for properties within the M-2, Heavy Manufacturing, zone. All public streets and utility services necessary and sufficient for the full use, occupancy, and operation of the future industrial business park, including water, storm drain(s), sanitary sewer, gas, electric, cable and telephone facilities, are readably available.

C) *Sections 66474(e) and (f) of the Subdivision Map Act require that the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat or is likely to cause serious public health concerns.*

The project site is not located in a sensitive environment, but rather in a fully urbanized area surrounded by various land uses. None of the parcels, pre and

post subdivision, contain any riparian habitats, wetland habitats, and are not utilized for movement of any known native wildlife species of migratory fish or wildlife species; consequently, the design of the subdivision is unlikely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. Additionally, as required by the California Environmental Quality Act (CEQA), an Initial Study (IS)/Mitigated Negative Declaration (MND) was prepared for the proposed apartment project. According to the IS/MND, the project is not expected to have any impacts on biological resources or cause serious public health problems.

D) *Section 66474(g) of the Subdivision Map Act requires that the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision.*

New easements for utility or roadways, if necessary, will be provided prior to final map approval. Two right-turn lanes are anticipated to be recorded on the final map.

E) *In accordance with Government Code Section 66474.6, it has been determined that the discharge of waste from the proposed subdivision, subject to the attached conditions, into the existing sewer system will not result in a violation of the requirements prescribed by the Regional Water Quality Control Board in that the developer is required to comply with the IS/MND Mitigation Monitoring and Reporting Program, submit an erosion control plan and comply with the NPDES Best Management Practices during the grading and construction phases of the project.*

The project will meet all state and local ordinances and requirements including the California Regional Water Quality Control Board.

F) *That the proposed subdivision shall be in accordance with Government Code Section 66473.1, entitled "Design of Subdivisions to provide for Future Passive or Natural Heating and Cooling Opportunities."*

Future Passive or Natural Heating and Cooling Opportunities will be incorporated with the proposed developments. To the extent feasible, staff will review the proposed developments to ensure that energy-saving devices or materials, including, but not limited to, insulation, double-pane windows, and high efficiency central heating and cooling systems will be incorporated.

SECTION III. DEVELOPMENT PLAN APPROVAL FINDINGS

Pursuant to Section 155.739 of the City of Santa Fe Springs Zoning Regulations, the Planning Commission shall consider the following findings in their review and

determination of the subject Development Plan Approval. Based on the available information, the City of Santa Fe Springs Planning Commission hereby make the following findings:

(A) *That the proposed development is in conformance with the overall objectives of this chapter.*

The proposed project is located within the M-2, Heavy Manufacturing, Zone. Pursuant to Section 155.240 of the Zoning Regulations, "The purpose of the M-2 Zone is to preserve the lands of the city appropriate for heavy industrial uses, to protect these lands from intrusion by dwellings and inharmonious commercial uses, to promote uniform and orderly industrial development, to create and protect property values, to foster an efficient, wholesome and aesthetically pleasant industrial district, to attract and encourage the location of desirable industrial plants, to provide an industrial environment which will be conducive to good employee relations and pride on the part of all citizens of the community and to provide proper safeguards and appropriate transition for surrounding land uses."

The proposed project is consistent with the purpose of the M-2 Zone in the following manner:

1. The land is appropriate for industrial uses based on its zoning, M-2, Heavy Manufacturing and its General Plan Land Use designation of Industrial.
2. The proposed project is and industrial business park, therefore the land is being maintained for industrial uses.
3. The project involves the construction of a new and attractive industrial business park on a site that is currently utilized for oil extraction operations. The assessed value of the property will significantly improve after the project, thus leading to an increase in property values for both the subject property and neighboring properties.
4. The proposed project complies with all development standards set forth in the M-2 Zone.

(B) *That the architectural design of the proposed structures is such that it will enhance the general appearance of the area and be in harmony with the intent of this chapter.*

The subject parcel has been utilized for oil extraction operations for many decades. The proposed project will be a significant improvement to the subject site. The architect used multiple variations in height, setback, materials and color. The result is an attractive project with contemporary buildings that is comparable to other high quality office/industrial projects here in Santa Fe Springs. In addition, the project meets or exceeds all requirements of the City's Zoning Regulations. The project's overall compliance validates that it is in harmony with the overall intent of the City's Zoning Regulations.

(C) *That the proposed structures be considered on the basis of their suitability for their intended purpose and on the appropriate use of materials and on the principles of proportion and harmony of the various elements of the buildings or structures.*

The proposed buildings are well-designed and should be highly suitable for a variety of office, manufacturing or warehouse-type users. The design of the industrial business park provides quality architectural design, as demonstrated by glazing, pop-outs, and variations in height, materials, and color. These architectural design elements break up the mass of the buildings, and present an attractive, distinctive façade to visitors. As designed, the new buildings are suitable for their intended users, and the distinctive design of the buildings represents the architectural principles of proportion and harmony. In addition, the buildings are designed with similar architectural features in order to create harmony and consistency throughout the development.

(D) *That consideration be given to landscaping, fencing and other elements of the proposed development to ensure that the entire development is in harmony with the objectives of this chapter.*

Extensive consideration has been given to numerous elements of the proposed project to achieve harmony with the City's Zoning Regulations. As proposed, the project meets or exceeds all development standards set for in the City's zoning regulations and the project does not require any modification permits and/or zone variances. Landscaping helps to soften building mass and parking areas, loading doors and potential trucking activities are screened by the orientation of buildings, and meandering sidewalks throughout the site frontage provide a safe and attractive pedestrian pathway.

(E) *That it is not the intent of this subchapter to require any particular style or type of architecture other than that necessary to harmonize with the general area.*

As stated previously, the proposed buildings are contemporary in design. The architect used variations in the provide setback, materials and color. The style and architecture of the proposed building is consistent with other high quality buildings in the general area.

(F) *That it is not the intent of this subchapter to interfere with architectural design except to the extent necessary to achieve the overall objectives of this chapter.*

Pursuant to Section 155.736 of the Zoning Regulations "The purpose of the development plan approval is to assure compliance with the provisions of this chapter and to give proper attention to the sitting of new structures or additions or alterations to existing structures, particularly in regard to unsightly and undesirable appearance, which would have an adverse effect on surrounding properties and

the community in general." The Planning Commission finds that the new buildings will be an enhancement to the overall area. The Planning Commission believes that proper attention has been given to the location, size, and design of the proposed buildings.

SECTION IV. PLANNING COMMISSION ACTION

The Planning Commission hereby adopts Resolution No. 82-2018 to approve Tentative Parcel Map No. 78232 to allow an approximately 44.67-acre site to be subdivided into five (5) parcels measuring 186,493 sq. ft. (Parcel 1), 153,827 sq. ft. (Parcel 2), 298,474 sq. ft. (Parcel 3), 140,791 sq. ft. (Parcel 4), and 1,166,135 sq. ft. (Parcel 5); to approve Development Plan Approval Case No. 930 to allow the construction of a 78,417 sq. ft. concrete tilt-up building (Building 1); to approve Development Plan Approval Case No. 931 to allow the construction of a 58,463 sq. ft. concrete tilt-up building (Building 2); to approve Development Plan Approval Case No. 932 to allow the construction of a 121,124 sq. ft. concrete tilt-up building (Building 3); to approve Development Plan Approval Case No. 933 to allow the construction of a 60,117 sq. ft. concrete tilt-up building (Building 4); and to approve and adopt the proposed Initial Study/Mitigated Negative Declaration, and Mitigation Monitoring and Reporting Program (IS/MND/MMRP), subject to conditions attached hereto as Exhibit A and Exhibit B.

ADOPTED and APPROVED this 10th day of September, 2018 BY THE PLANNING COMMISSION OF THE CITY OF SANTA FE SPRINGS.

Ralph Aranda, Chairperson

ATTEST:

Teresa Cavallo, Planning Secretary

Exhibit A
CONDITIONS OF APPROVAL FOR TPM 78232:

ENGINEERING / PUBLIC WORKS DEPARTMENT:
(Contact: Robert Garcia 562-868-0511 x7545)

1. Final parcel map checking of $4,824 plus $285 per parcel shall be paid to the City. Developer shall comply with Los Angeles County's Digital Subdivision Ordinance (DSO) and submit final maps to the City and County in digital format.

2. The applicant shall provide at no cost to the City, one mylar print of the recorded parcel map from the County of Los Angeles Department of Public Works, P.O. Box 1460, Alhambra, CA 91802-1460, Attention: Bill Slenniken (626) 458-5131.

3. A reciprocal access easement Agreement covering each parcel of the subject map shall be prepared, executed and recorded in the Office of the Los Angeles County Recorder. Such Agreement and any CC&R's shall be subject to the approval of the City Attorney.

PLANNING AND DEVELOPMENT DEPARTMENT:
(Contact: Laurel Reimer 562.868-0511 x7354)

4. Provisions shall be made for appropriate television systems and for communication systems, including, but not limited to, telephone and internet services. Appropriate cable television systems, as used, means those franchised or licensed to serve the geographical area in which the subdivision is located.

5. The Final Map to be recorded with the Los Angeles County Recorder shall substantially conform to the Tentative Parcel Map submitted by the applicant and on file with the case.

6. Currently, the County of Los Angeles Department of Public Works is utilizing a computerized system to update and digitize the countywide land use base. If the parcel map is prepared using a computerized drafting system, the applicant or their civil engineer shall submit a map in digital graphic format with the final Mylar map to the County of Los Angeles Department of Public Works for recordation and to the City of Santa Fe Springs Department of Public Works for incorporation into its GIS land use map. The City of Santa Fe Springs GIS Coordinate System shall be used for the digital file.

7. Tentative Parcel Map No. 78232 shall expire 24 months after Planning Commission approval, on September 10, 2020, except as provided under the provisions of California Government Code Section 66452.6. During this time period the final map shall be presented to the City of Santa Fe Springs for approval. The subdivision proposed by Tentative Parcel Map No. 78232 shall not be effective until such time that a final map is recorded.

8. The "Subdivider," Breitburn Operating L.P., agrees to defend, indemnify and hold harmless the City of Santa Fe Springs, its agents, officers and employees from any claim, action or proceeding against the City or its agents, officers or employees to attack, set aside, void or annul an approval of the City or any of its councils, commissions, committees or boards concerning the subdivision when action is brought within the time period provided for in Government Code, Section 66499.37. Should the City, its agents, officers or employees receive notice of any such claim, action or proceeding, the City shall promptly notify subdivider of such claim, action or proceeding and shall cooperate fully in the defense thereof.

9. This approval is not effective until the applicant has completed and signed the signature element appearing at the bottom of the last page of these conditions, and returned the original completed and signed document to the City, confirming the applicant's understanding of these conditions and its willingness to accept and comply with them.

The applicant identified below hereby confirms (1) that it has reviewed and understands each of the foregoing conditions for Tentative Parcel Map 78232, and (2) its willingness to accept and comply with them.

Exhibit B:
CONDITIONS OF APPROVAL FOR DPAs 930-933:

ENGINEERING / PUBLIC WORKS DEPARTMENT:
(Contact: Robert Garcia 562.868-0511 x7545)

STREETS

1. Prior to the issuance of building permits, the applicant and/or developer shall pay a flat fee of $203,715 to reconstruct/resurface the existing street frontage to centerline for Telegraph Road & Santa Fe Springs Road.

2. Prior to the issuance of building permits, the applicant and/or developer shall pay a flat fee of $5,000 for the upgrade and installation of an Emergency Vehicle Preemption System (OPTICOM) at the intersection of Telegraph Road and Santa Fe Springs Road as determined by the City Engineer and Fire Chief.

3. The applicant/or developer shall design and construct a 5-foot wide meandering sidewalk per City standards and dedicate an easement along the Telegraph Road & Santa Fe Springs Road street frontage. The dedicated easement shall be shown on the Parcel Map. Furthermore, said meandering sidewalk shall be shown on both the civil and landscape plans.

4. The applicant and/or developer shall design and construct/modify one (1) existing raised Median Island on Santa Fe Springs Road to accommodate left turns into the northernmost proposed driveway.

5. Prior to the issuance of building permits, the applicant and/or developer shall pay the costs associated with the furnishing and installation of traffic signal modifications; including protected Northbound/Southbound left turn traffic signal phasing at the intersection of Telegraph Road and Santa Fe Springs Road. The cost estimate for the modifications (add left turn phasing) at the Telegraph/Bloomfield signal is $191,000.

6. Full street improvements shall be constructed to the City standards in accordance with plans prepared by the applicant and/or developer and approved by the City Engineer. Street to be improved shall include Telegraph Road & Santa Fe Springs Road for the purpose of installing Right turn pockets. A soils report shall be prepared and submitted as directed by the City Engineer to determine proposed street structural section.

7. Street right-of-way easements shall be dedicated as follows:
    a) Along the north side of Telegraph Road for the construction of a right turn pocket.
    b) Along the west side of Santa Fe Springs Road for the construction of a right turn pocket.

8. All above ground oil wells, pipelines, tanks, and related lines within the public right-of-way shall be removed from the right-of-way unless otherwise approved by the City Engineer.

9. Adequate "on-site" parking shall be provided per City requirements, and all streets abutting the development shall be posted "No Stopping Any Time." The City will install the offsite signs and the applicant and/or developer shall pay $ 3,000.00 to install (15) new signs.

10. The applicant and/or developer shall be responsible for the installation, replacement or modification of street name signs, traffic control signs, striping and pavement markings required in conjunction with the development. The applicant and/or developer shall be responsible for coordination of said work, as well as all associated fees, permits, materials, etc.

11. Proposed driveways shall be located to clear existing fire hydrants, street lights, water meters, etc.

CITY UTILITIES

12. Storm drains, catch basins, connector pipes, retention basin and appurtenances built for this project shall be constructed in accordance with City specifications in Telegraph Road & Santa Fe Springs Road. Storm drain plans shall be approved by the City Engineer.

13. Fire hydrants shall be installed as required by the Fire Department. Existing public fire hydrants adjacent to the site, if any, shall be upgraded if required by the City Engineer. The applicant and/or developer shall pay to the City the entire cost of design, engineering, installation and inspection of Fire hydrants.

14. Sanitary sewers shall be constructed in accordance with City specifications to serve the subject development. The plans for the sanitary sewers shall be approved by the City Engineer. A sewer study (including a sewer flow test) shall be submitted along with the sanitary sewer plans.

15. All buildings shall be connected to the sanitary sewers.

16. The fire sprinkler plans, which show the proposed double-check valve detector assembly location, shall have a stamp approval from the Planning Department and Public Works Department prior to the Fire Department's review for approval. Disinfection, pressure and bacteriological testing on the line between the street and detector assembly shall be performed in the presence of personnel from the City Water Department. The valve on the water main line shall be operated only by the City and only upon the City's approval of the test results.

17. The applicant and/or developer shall obtain a Storm Drain Connection Permit for any connection to the storm drain system.

18. The applicant and/or developer shall have an overall site utility master plan prepared by a Registered Civil Engineer showing the proposed location of all public water mains, reclaimed water mains, sanitary sewers and storm drains. This plan shall be approved by the City Engineer prior to the preparation of any construction plans for the aforementioned improvements.

TRAFFIC

19. All points of access to the proposed development have been reviewed and approved by the City Engineer. Left turns will only be allowed into the proposed development from the most northerly driveway on Santa Fe Springs Road. Left turns out of the proposed development will be allowed from both northerly and southerly driveways on Santa Fe Springs Road.

FEES

20. The applicant and/or developer shall comply with Congestion Management Program (CMP) requirements and provide mitigation of trips generated by the development. The applicant and/or developer will receive credit for the demolition of any buildings that formerly occupied the site. For new developments, if the applicant and/or developer cannot meet the mitigation requirements, the applicant and/or developer shall pay a mitigation fee to be determined by the City Engineer for off-site transportation improvements. This mitigation fee shall be paid prior to issuance of building permits.

21. The applicant and/or developer shall comply with all requirements of the County Sanitation District, make application for and pay the sewer maintenance fee.

22. The applicant and/or developer shall pay the water trunkline connection fee of $3,700 per acre upon application for water service connection or if utilizing any existing water service.

MISCELLANEOUS

23. A grading plan shall be submitted for drainage approval to the City Engineer. The applicant and/or developer shall pay drainage review fees in conjunction with this submittal. A professional civil engineer registered in the State of California shall prepare the grading plan.

24. A hydrology study shall be submitted to the City if requested by the City Engineer. The study shall be prepared by a Professional Civil Engineer.

25. Upon completion of public improvements constructed by developers, the developer's civil engineer shall submit mylar record drawings and an electronic file (AutoCAD Version 2004 or higher) to the office of the City Engineer.

26. The applicant and/or developer shall comply with the National Pollutant Discharge Elimination System (NPDES) program and shall require the general contractor to implement storm water/urban runoff pollution prevention controls and Best Management Practices (BMPs) on all construction sites in accordance with the current MS4 Permit. The applicant and/ or developer will also be required to submit a Certification for the project and will be required to prepare a Storm Water Pollution Prevention Plan (SWPPP) and Low Impact Development Plan (LID).

POLICE SERVICES DEPARTMENT:
(Contact: Lou Collazo 562.868-0511 x3320)

27. The applicant and/or developer shall submit and obtain approval of a proposed lighting (photometric) plan for the property from the City's Department of Police Services. The photometric plan shall be designed to provide adequate lighting (minimum of 1 foot candle power) throughout the subject property. Further, all exterior lighting shall be designed/installed in such a manner that light and glare are not transmitted onto adjoining properties in such concentration/quantity as to create a hardship to adjoining property owners or a public nuisance. The photometric plans shall be submitted to the Director of Police Services prior to building permit issuance.

28. The developer shall provide an emergency phone number and a contact person of the person or persons involved in the supervision of the construction to the Department of Police Services. The name, telephone number, fax number and e-mail address of that person shall be provided to the Director of Police Services no later than 60 days from the date of approval by the Planning Commission. Emergency information shall allow emergency service to reach the developer or their representative any time, 24 hours a day.

29. In order to facilitate the removal of unauthorized vehicles parked on the property, the developer shall post, in plain view and at each entry to the property, a sign not less than 17" wide by 22" long. The sign shall prohibit the public parking of unauthorized vehicles and indicate that unauthorized vehicles will be removed at the owner's expense and also contain the California Vehicle Code that permits this action. The sign shall also contain the telephone number of the local law enforcement agency (Police Services Center (562) 409-1850). The lettering within the sign shall not be less than one inch in height. The developer shall contact the Police Services Center for an inspection no later than 30 days after the project has been completed and prior to the occupancy permit being issued.

30. All work shall be conducted inside at all times including, but not limited to, all loading and unloading of trailers. Items shall not be left out awaiting loading.

31. Off-street parking areas shall not be reduced or encroached upon by outdoor storage and/or for the placement of merchandize.

32. All new businesses fronting on Telegraph Road shall be aware that they are subject strict noise levels pursuant to Section 155.424 (E).

33. The proposed buildings, including any lighting, fences, walls, cabinets, and poles shall be maintained in good repair, free from trash, debris, litter and graffiti and other forms of vandalism. Any damage from any cause shall be repaired within 72 hours of occurrence, weather permitting, to minimize occurrences of dangerous conditions or visual blight. Paint utilized in covering graffiti shall be a color that matches, as closely possible, the color of the existing and/or adjacent surfaces.

34. During the construction phase of the proposed project, the contractor shall provide an identification number (i.e. address number) at each building and/or entry gate to direct emergency vehicles in case of an emergency. The identification numbers may be painted on boards and fastened to the temporary construction fence. The boards may be removed after each building has been identified with their individual permanent number address.

35. It shall be the responsibility of the job-supervisor to maintain the job site in a clean and orderly manner. Dirt and debris that has migrated to the street or neighboring properties shall be immediately cleaned.

36. During construction, out-houses, porta potties, or the like, shall not be visible from the public street and shall be maintained on a regular basis.

DEPARTMENT OF FIRE - RESCUE (FIRE PREVENTION DIVISION):
(Contact: Richard Kallman 562.868-0511 x3710)

37. All buildings over 5,000 sq. ft. shall be protected by an approved automatic sprinkler system per Section 93.11 of the Santa Fe Springs Municipal Code.

38. The applicant and/or developer shall comply with the requirements of Section 117.131 of the Santa Fe Springs Municipal Code, Requirement for a Soil Gas Study, in accordance with Ordinance No. 955, prior to issuance of building permits.

39. When applicable, abandoned oil wells must be exposed and inspected under the oversight of a registered engineer or geologist. The wells must be monitored for methane leaks and the precise location of each abandoned well shall be surveyed. A report of findings along with a description of any recommended remedial actions needed to comply with the Division of Oil, Gas, and Geothermal Resources, signed by a registered engineer or geologist, must be provided to the Fire Department.

40. A methane gas protection system designed in accordance with the standards established by the County of Los Angeles shall be required for all habitable structures. Plans for the proposed methane gas protection system shall be submitted to the Department of Fire-Rescue prior to construction. An alternative to the County of Los Angeles standards may be acceptable if approved by the Department of Fire-Rescue.

41. Interior gates or fences are not permitted across required Fire Department access roadways unless otherwise granted prior approval by the City Fire Department.

42. If on-site fire hydrants are required by the Fire Department, a minimum flow must be in accordance with Appendix B from the current Fire Code flowing from the most remote hydrant. In addition, on-site hydrants must have current testing, inspection and maintenance per California Title 19 and NFPA 25.

43. The standard aisle width for onsite emergency vehicle maneuvering shall be 26 feet with a minimum clear height of 13 feet 6 inches. Internal driveways shall have a turning radius of not less than 52 feet. The final location and design of this 26 feet shall be subject to the approval of the City's Fire Chief as established by the Uniform Fire Code. A request to provide emergency vehicle aisle width less than 26 feet shall be considered upon the installation/provision of mitigation improvements approved by the City's Fire Chief.

44. Prior to submitting plans to the Building Department, a preliminary site plan shall be approved by the Fire Department for required access roadways and on-site fire hydrant locations. The site plan shall be drawn at a scale between 20 to 40 feet per inch. Include on plan all entrance gates that will be installed.

45. Knox boxes are required on all new construction. All entry gates shall also be equipped with Knox boxes or Knox key switches for power-activated gates.

46. Signs and markings required by the Fire Department shall be installed along the required Fire Department access roadways.

47. The applicant and/or developer shall apply for a permit with the Department of Fire-Rescue and comply with the requirements of Section 117.127 of the Santa Fe Springs Municipal Code, Criteria for Abandonment, prior to abandoning or re-abandoning any oil wells on-site.

48. A system for venting of abandoned oil wells over which there will be construction, in accordance with Section 117.130 of the Santa Fe Springs Municipal Code, shall be required. Plans for the venting system shall be submitted to the Department of Fire-Rescue prior to construction.

DEPARTMENT OF FIRE - RESCUE (ENVIRONMENTAL DIVISION):
(Contact: Tom Hall 562.868-0511 x3715)

49. Permits and approvals. The applicant and/or developer shall, at its own expense, secure or cause to be secured any and all permits or other approvals which may be required by the City and any other governmental agency prior to conducting environmental assessment or remediation on the property. Permits shall be secured prior to beginning work related to the permitted activity.

50. The applicant and/or developer shall submit plumbing plans to the Santa Fe Springs Department of Fire-Rescue Environmental Protection Division (EPD) and, if necessary, obtain an Industrial Wastewater Discharge Permit Application for generating, storing, treating or discharging any industrial wastewater to the sanitary sewer.

51. The applicant and/or developer shall provide a sampling plan to the Department of Fire-Rescue for active oil wells that will be abandoned prior to site development.

WASTE MANAGEMENT:
(Contact: Teresa Cavallo 562.868.0511 x7309)

52. The developer shall comply with Section 50.51 of the Municipal Code which prohibits any business or residents from contracting any solid waste disposal company that does not hold a current permit from the City.

53. All projects over $50,000 are subject to the requirements of Ordinance No. 914 to reuse or recycle 75% of the project waste. Contact the Environmental Consultant, Morgan McCarthy at (562) 432-3700 or (805) 815-2492.

54. The developer shall comply with Public Resource Code, Section 42900 et seq. (California Solid Waste Reuse and Recycling Access Act of 1991) as amended, which requires each development project to provide adequate storage area for the collection/storage and removal of recyclable and green waste materials.

PLANNING AND DEVELOPMENT DEPARTMENT:
(Contact: Laurel Reimer 562.868-0511 x7354)

55. Approval of Development Plan Approval Case Numbers 930, 931, 932 and 933 is contingent upon approval of Tentative Parcel Map Case No. 78232.

56. The owner/developer shall comply with the City's "Heritage Artwork in Public Places Program" in conformance with City Ordinance No. 1054.

57. The owner/developer shall be responsible for reviewing and/or providing copies of the required conditions of approval to his/her architect, engineer, contractor, tenants, etc. Additionally, the conditions of approval contained herein shall be made part of the construction drawings for the proposed development. *Construction drawings shall not be accepted for Plan Check without the conditions of approval incorporated into the construction drawings.*

58. The owner/developer shall indicated on the first page of the construction drawings that the subject property is located within the methane zone. Said indication shall be clearly printed with a minimum 12 point font size.

59. The owner/developer shall apply for a Well Review Report (report) through the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR). A copy of this report shall be provide to the Planning Department. If historic oil wells are identified on-site, well abandoned to current DOGGR standards may be required before a building permit can be issued.

60. The owner/developer shall apply for an Oilfield Site Plan Review through the Planning Department prior to issuance of a building permit.

61. To prevent the travel of combustible methane gas into any structure, all slab or foundation penetrations, including plumbing, communication and electrical penetrations, must be sealed with an appropriate material. In addition, underground electrical conduits penetrating the slab or foundation of the structure, shall comply with the National Electrical Code (NEC), replete with a seal-off device normally required for classified electrical installations, so as to prevent the travel of combustible methane gas into the structure through conduit runs. *Refer to California Electrical Code, Chapter 5, Sections 500 and 501.*

62. The owner/developer shall submit Mechanical plans that include a roof plan that shows the location of all roof mounted equipment. All roof-mounted mechanical equipment and/or duct work which projects above the roof or roof parapet of the proposed development and is visible from adjacent property or a public street shall be screened by an enclosure which is consistent with the architecture of the building and approved by the Director of Planning or designee.
    a. To illustrate the visibility of equipment and/or duct work, the following shall be submitted along with the Mechanical Plans:
        i. A roof plan showing the location of all roof-mounted equipment;
        ii. Elevations of all existing and proposed mechanical equipment; and
        iii. A line-of-sight drawing or a building cross-section drawing which shows the roof-mounted equipment and its relation to the roof and parapet lines.

    NOTE: line-of sight drawing and/or building cross section must be scaled.

63. The owner/developer shall submit a lighting program that is integrated into the overall site, landscape design and building design. Lighting shall be used to highlight prominent building features such as entries and other focal points. Up-lighting can also be used as a way to enhance the texture of plants and structures, to create a sense of height in a landscape design.

64. The owner/developer agrees and understands that any existing overhead utilities within the development shall be placed underground.

65. All fences, walls, gates and similar improvements for the proposed development shall be subject to the prior approval of the Fire Department and the Department of Planning and Development.

66. All approved outdoor trash enclosures shall be provided for the development subject to the approval of the Director of Planning or designee. The calculation to determine the required storage area shall be determine by the City Building Department.

67. All outdoor trash enclosures shall provide a solid roof cover.

68. All street-facing roof drains shall be provided along the interior walls and not along the exterior of the building.

69. The proposed development shall be constructed of quality material and any material shall be replaced when and if the material becomes deteriorated, warped, discolored or rusted.

70. Approved suite numbers/letters or address numbers shall be placed on the proposed building in such a position as to be plainly visible and legible from the street fronting the property. Said numbers shall contrast with their background. The size recommendation shall be 12" minimum.

71. The owner/developer shall submit a mailbox plan (locations and sizes) for all parcels prior to the issuance of building permits. The plan shall be approved by the Santa Fe Springs Post Office. The owner/developer shall submit to the City a written confirmation from the Santa Fe Springs Post Office that the mailbox locations are approved. The City shall review and approve the location plan to ensure adequate site distance and traffic safety measures are incorporated.

72. The Department of Planning and Development requires that the double-check detector assembly be placed as far back from the property line as practical, screened by shrubs or other materials, and painted forest green. All shrubs shall be planted a minimum distance of two (2) feet surrounding the detector assembly; however, the area in front of the OS and Y valves shall not be screened. The screening shall also only be applicable to the double-check detector assembly and shall not include the fire department connector (FDC). Notwithstanding, the Fire Marshall shall have discretionary authority to require the FDC to be located a minimum distance from the double-check detector assembly. The bottom of the valve shut off wheel shall be located a maximum of two (2) feet above ground.

73. Owner/developer shall submit for approval a detailed landscape and automatic irrigation plan pursuant to the Landscaping Guidelines of the City. Said landscape plan shall indicate the location and type of all plant materials, existing and proposed, and shall include 2 to 3 foot high berms (as measured from the parking lot grade elevation), shrubs designed to fully screen the interior yard and parking areas from public view, and minimum 24" box trees along the street frontage. *Said plans shall be consistent with AB 1881 (Model Water Efficient Landscape Ordinance).*

    NOTE: Staff shall not approve the landscaping and irrigation plan without first reviewing and approving the civil drawings, specifically as it pertains to the landscaping and irrigation plan (i.e., location and size of riprap, bio-swales, areas of infiltration trenches, etc.)

74. The landscaped areas shall be provided with a suitable, fixed, permanent and automatically controlled method for watering and sprinkling of plants. This operating sprinkler system shall consist of an electrical time clock, control valves, and piped water lines terminating in an appropriate number of sprinklers to insure proper watering periods and to provide water for all plants within the landscaped area. Sprinklers used to satisfy the requirements of this section shall be spaced to assure complete coverage of all landscaped areas. *Said plan shall be consistent with AB 1881 (Model Water Efficient Landscape Ordinance).*

75. Upon completion of the landscaping improvements, said landscaped areas shall be maintained in a neat, clean, orderly and healthful condition. This is meant to include proper pruning, mowing of lawns, weeding, removal of litter, fertilizing, and replacement of plants when necessary and the regular watering of all plantings.

76. The electrical plans, which show the location of electrical transformer(s), shall be subject to the approval of the Planning Department. Transformers shall not be located within the front yard setback area. The location of the transformer(s) shall be subject to the prior approval of the Director of Planning or designee. The electrical transformer shall be screened with shrubs consistent with Southern California Edison's Guidelines which requires three foot clearance on sides and back of the equipment, and eight foot clearance in front of the equipment. Additionally, the landscaping irrigation system shall be installed so that they do not spray on equipment. (A copy of the Guideline is available at the Planning Department.)

77. The applicant and/or developer shall not allow commercial vehicles, trucks and/or truck tractors to queue on Telegraph Road or Santa Fe Springs Road, use Telegraph Road or Santa Fe Springs Road as a staging area, or to back-up onto the street from the subject property.

78. All activities shall occur inside the buildings. No portion of the required off-street parking and driveway areas shall be used for outdoor storage of any type or for special-event activities, unless prior written approval is obtained from the Director of Planning, Director of Police Services and the Fire Marshall.

79. All parking stalls shall be legibly marked on the pavement. Additionally, all compact spaces shall be further identified by having the words "Compact" or comparable wording legibly written on the pavement, wheel stop or on a clearly visible sign.

80. The owner/developer shall provide a bulletin board, display case, or kiosk to display transportation information where the greatest number of employees are likely to see it. Information shall include, but is not limited to:
    1. Current maps, routes and schedules for public transit routes serving the site; and
    2. Telephone numbers for referrals on transportation information including numbers for the regional ridesharing agency and local transit operators; and
    3. Ridesharing promotional material supplied by commuter-oriented organizations; and
    4. Bicycle route and facility information, including regional/local bicycle maps and bicycle safety information; and
    5. A listing of facilities available for carpoolers, vanpoolers, bicyclists, transit riders and pedestrians at the site. This is required to both meet the requirements of Section 155.502 (D) of the Zoning Regulations and also a goal identified within the City's General Plan Circulation Element.

81. Preferential parking spaces shall be reserved for potential carpool/vanpool vehicles without displacing handicapped and customer parking needs. Vanpool space(s) shall

be legibly marked on the pavement or identified by a sign and also conveyed to employees through the required transportation information board. The preferential carpool/vanpool parking shall be identified on the site plan at the time of plan check submittal. This is required to both meet the requirements of Section 155.502 (D) of the Zoning Regulations and also a goal identified within the City's General Plan Circulation Element.

82. An area shall be designate for bicycle parking and bicycle racks shall be provided. Bike racks shall be provided to accommodate bicycles at a ratio of 4 bicycles for first 50,000 square feet and 1 bicycle for each additional 50,000 square feet. This is required to both meet the requirements of Section 155.502 (D) of the Zoning Regulations and also a goal identified within the City's General Plan Circulation Element.

83. There shall be a safe and convenient zone in which carpool/vanpool vehicles may deliver or board their passengers. Additionally, there shall be sidewalks or other designated pathways following direct and safe routes from external pedestrian circulation system to each building in the development and safe and convenience access from the external circulation system to bicycle parking facilities on-site. This is required to both meet the requirements of Section 155.502 (D) of the Zoning Regulations and also a goal identified within the City's General Plan Circulation Element.

84. Pursuant to the sign standards of the Zoning Regulations and related sign guidelines of the City of Santa Fe Springs, a comprehensive sign program for the development shall be prepared and submitted to the Director of Planning or designee for approval prior to obtaining a building permit for any signs related to the subject development. All signs throughout the subject site shall be installed in accordance with the approved comprehensive sign program for the subject development.

85. The Department of Planning and Development shall first review and approve all sign proposals for the development. The sign proposal (plan) shall include a site plan, building elevation on which the sign will be located, size, style and color of the proposed sign. All drawings shall be properly dimensioned and drawn to scale on 11" x 17" maximum-size paper. All signs shall be installed in accordance with the sign standards of the Zoning Ordinance and the Sign Guidelines of the City.

86. Prior to issuance of building permits, the owner/developer shall comply with the following conditions to the satisfaction of the City of Santa Fe Springs:
    a. Covenants.
        1. Owner/developer shall provide a written covenant to the Planning Department that, except as owner/developer may have otherwise disclosed to the City, Commission, Planning Commission or their employees, in writing, owner/developer has investigated the environmental condition of the property and does not know, or have reasonable cause to believe, that (a) any crude oil, hazardous substances or hazardous wastes, as defined in state and federal law, have been released, as that term is defined in 42 U.S.C. Section

9601 (22), on, under or about the Property, or that (b) any material has been discharged on, under or about the Property that could affect the quality of ground or surface water on the Property within the meaning of the California Porter-Cologne Water Quality Act, as amended, Water Code Section 13000, et seq

2. Owner/developer shall provide a written covenant to the City that, based on reasonable investigation and inquiry, to the best of owner/developer knowledge, it does not know or have reasonable cause to believe that it is in violation of any notification, remediation or other requirements of any federal, state or local agency having jurisdiction concerning the environmental conditions of the Property.

b. Owner/developer understands and agrees that it is the responsibility of the owner/developer to investigate and remedy, pursuant to applicable federal, state and local law, any and all contamination on or under any land or structure affected by this approval and issuance of related building permits. The City, Commission, Planning Commission or their employees, by this approval and by issuing related building permits, in no way warrants that said land or structures are free from contamination or health hazards.

c. Owner/developer understands and agrees that any representations, actions or approvals by the City, Commission, Planning Commission or their employees do not indicate any representation that regulatory permits, approvals or requirements of any other federal, state or local agency have been obtained or satisfied by the owner/developer and, therefore, the City, Commission, Planning Commission or their employees do not release or waive any obligations the owner/developer may have to obtain all necessary regulatory permits and comply with all other federal, state or other local agency regulatory requirements. Owner/developer, not the City, Commission, Planning Commission or their employees will be responsible for any and all penalties, liabilities, response costs and expenses arising from any failure of the owner/developer to comply with such regulatory requirements.

87. The owner/developer shall require and verify that all contractors and sub-contractors have successfully obtained a Business License with the City of Santa Fe Springs prior to beginning any work associated with the subject project. A late fee and penalty will be accessed to any contractor or sub-contractor that fails to obtain a Business License and a Building Permit final or Certificate of Occupancy will not be issued until all fees and penalties are paid in full. Please contact Cecilia Martinez, Business License Clerk, at (562) 868-0511, extension 7527 for additional information. A business license application can also be downloaded at www.santafesprings.org.

88. The Mitigation Monitoring Program, which was prepared for the proposed project and adopted by the Planning Commission upon completion of the Mitigated Negative Declaration, shall be made part of the conditions of approval for Development Plan Approval Case No. 930, 931, 932 and 933. The Mitigation Monitoring and Reporting Program is listed as an attachment to the staff report.

89. The owner/developer shall implement a dust control program for air quality control. The program shall ensure that a water vehicle for dust control operations is kept readily available at all times during construction. The developer shall provide the City Engineer and Building Official with the name, telephone number and e-mail address of the person directly responsible for dust control and operation of the vehicle.

90. During construction, the following information shall be made available on a sign posted at the main entrance(s) to the site:
    1. Name of the development/project.
    2. Name of the development company.
    3. Address or Address range for the subject site.
    4. 24-hour telephone number where someone can leave a message on a particular complaint (dust, noise, odor, etc.).

91. Prior to occupancy of the property/buildings, the owner/developer and/or his tenant(s), shall obtain a valid business license (AKA Business Operation Tax Certificate), and submit a Statement of Intended Use. Both forms, and other required accompanying forms, may be obtained at City Hall by contacting Cecilia Martinez at (562) 868-0511, extension 7527, or through the City's web site (www.santafesprings.org).

92. The development shall be built substantially in accordance with the plot plan, floor plan, and elevations submitted by the applicant and on file with the case. Any modification shall be subject to the review and approval of the Director of Planning or his/her designee.

93. The final site plan, floor plan and elevations of the proposed development and all other appurtenant improvements, textures and color schemes shall be subject to the final approval of the Director of Planning.

94. The owner/developer understands and agrees that if changes to the original plans (submitted and on file with the subject case) are required during construction, revised plans must be provided to the Planning Department for review and approval prior to the implementation of such changes. Please note that certain changes may also require approvals from other departments.

95. All other requirements of the City's Zoning Regulations, Building Code, Property Maintenance Ordinance, State and City Fire Code and all other applicable County, State and Federal regulations and codes shall be complied with.

96. Unless otherwise specified in the action granting Development Plan Approval, said approval which has not been utilized within a period of 24 consecutive months from the effective date shall become null and void. Also the abandonment or nonuse of a development plan approval and any privileges granted thereunder shall become null and void. However, an extension of time may be granted by Commission or Council action.

97. The applicant and owner/developer agrees to defend, indemnify and hold harmless the City of Santa Fe Springs, its agents, officers and employees from any claim, action or proceeding against the City or its agents, officers or employees to attack, set aside, void or annul an approval of the City or any of its councils, commissions, committees or boards arising from or in any way related to the all entitlements and approvals issued by the City in connection with the Project and from any CEQA challenges relating to the environmental review and determination for the Project, or any actions or operations conducted pursuant thereto. Should the City, its agents, officers or employees receive notice of any such claim, action or proceeding, the City shall promptly notify the applicant of such claim, action or proceeding, and shall cooperate fully in the defense thereof.

98. This approval is not effective until the applicant has completed and signed the signature element appearing at the bottom of the last page of these conditions, and returned the original completed and signed document to the City, confirming the applicant's understanding of these conditions and its willingness to accept and comply with them.

The applicant identified below hereby confirms (1) that it has reviewed and understands each of the foregoing conditions for Development Plan Approval Case Numbers 930-933, and (2) its willingness to accept and comply with them.

CONSENT ITEM

Alcohol Sales Conditional Use Permit Case No. 14

Compliance review of Alcohol Sales Conditional Use Permit Case No. 14 to allow the continued operation and maintenance of an alcoholic beverage sales use for off-site consumption by El Super, Inc. located at 10531 Carmenita Road and within the Gateway Plaza shopping center. (El Super)

RECOMMENDATIONS

That the Planning Commission, based on Staff's compliance review report, find that the subject use is in compliance with all of the conditions of approval and request that this matter be brought back before April 13, 2025, for another compliance review report. The Planning Commission shall note that this matter may be brought back to the Commission at any time should the applicant violate any conditions of approval or any City Codes, or should there be a need to modify, add, or remove a condition of approval.

BACKGROUND

Alcohol Sales Conditional Use Permit (ASCUP) Case No. 14 was initially granted to Gigante Supermarket by the Planning Commission and the City Council at their respective meetings of June 24 and June 27, 2002. On August 23, 2008, La Bodega Latina Corporation bought the Gigante store chain and renamed the stores "El Super". Accordingly, ASCUP Case No. 14 was transferred to the new operators.

ASCUP Case No. 14, under the Gigante ownership and the El Super ownership has had several compliance reviews since its initial approval. On each occasion, Staff has found the business and the alcohol sales activity to be in compliance with the City's codes and the Alcohol Beverage Control's regulations.

This matter is before the Planning Commission because the last time extension required a review of this matter to determine if the business, along with the alcoholic beverage use, is being conducted in compliance with the conditions of approval and all applicable laws.

CALLS FOR SERVICE

Within the past twelve (12) months, there were calls for service registered to this business, however, none of the calls were related to the sale or storage of alcoholic beverages.

COMPLIANCE REVIEW REPORT

As part of the alcohol sales conditional use permit process, staff conducted an inspection of the Applicant's operation and the site to ensure compliance with the conditions of approval as set forth in the initial approval of this Permit. Staff also investigated the use in light of its proximity to other risk considerations such as schools, religious facilities, recreation or other public facilities attended or utilized by minors. After conducting said investigation, Staff found that the establishment is being maintained and operated in full compliance with the City's Zoning Regulations and Conditions of Approval. Staff also checked with the Alcohol Beverage Control (ABC) and found that the establishment is in full compliance with all of the ABC regulations.

Considering this favorable track record, and the fact that the Applicant has complied with all of the initial conditions of approval, Staff believes that changes to the conditions are not warranted at this time.

CONDITIONS OF APPROVAL

Modifications to the existing conditions of approval have not been made, except for Condition No. 17, which references the new compliance review due date.

1. That the sales of alcoholic beverages shall not be permitted between the hours of 2:00 a.m. and 6:00 a.m. each day of the week or as required by the Alcohol Beverage Control.

2. That the Type 21 Alcoholic Beverage Commission license allowing the sale of beer, wine and liquor shall be restricted to the sale for offsite consumption of alcoholic beverages only.

3. That the applicant shall require all other tenants and sub-tenants to obtain a valid Business Operation Tax Certificate (Business License) from the City of Santa Fe Springs.

4. That the rear exterior portion of the store shall be kept clean and orderly at all times. Outdoor storage of crates and pallets is not acceptable.

5. That truck deliveries shall be conducted at the rear of the store at all times.

6. That it shall be the responsibility of the ownership to ensure that no alcoholic beverages purchased on the subject site shall be consumed on the subject site or any adjacent property.

7. That the applicant shall be responsible for maintaining control of litter on the subject property.

8. That the applicant shall not allow any person who is intoxicated, or under the influence of any drug, to enter be at, or remain upon the licensed premises as set forth in Section 25602(a) of the State Business and Professions Code.

9. That the applicant shall not sell, furnish or give alcohol to any habitual drunkard or to any obviously-intoxicated person, as set forth in Section 25602 (a) of the State Business and Professions Code.

10. That the applicant shall not have upon the subject premises any alcoholic beverage(s) other than the alcoholic beverage(s) which the licensee is authorized to sell under the licensee's license, as set forth in Section 25607 (a) of the State Business and Professions Code.

11. That the applicant shall not sell, furnish or give any alcoholic beverage to any person under 21 years of age, as set forth in Section 25658 (a) of the State Business and Professions Code.

12. That the applicant shall not permit any person under 21 years of age to sell alcoholic beverages.

13. That the applicant shall not allow any person to loiter on the subject premises, shall report all such instances to the City's Police Services Center and shall post signs, approved by the Department of Police Services, prohibiting loitering.

14. That the owner, corporate officers and managers shall cooperate fully with all city officials, law enforcement personnel and shall not obstruct or impede their entrance into the licensed premises while in the course of their official duties.

15. That a copy of these conditions shall be posted and maintained with a copy of the City Business License and Fire Department Permits in a place conspicuous to all employees of the location.

16. That in the event the owner(s) intend to sell, lease or sublease the subject business operation or transfer the subject Permit to another owner/applicant or licensee, the Director of Police Services shall be notified in writing of said intention not less than (60) days prior to signing of the agreement to sell, lease or sublease.

17. ***That this Permit shall be subject to a compliance review in five years, no later than April 13, 2025, to determine if the alcoholic beverage activity is still operating in strict compliance with the original conditions of approval. At which time the applicant may request an extension of the privileges granted herein, provided that the use has been continuously maintained in strict compliance with these conditions of approval.***

18. That all other applicable requirements of the City Zoning Ordinance, Uniform Building Code, Uniform Fire Code, the determinations of the City and State Fire Marshall, and all other applicable regulations shall be strictly complied with.

19. It is hereby declared to be the intent that if any provision of this permit is violated or held to be invalid, or if any law, statute, or ordinance is violated, the Permit shall be subject to revocation.

Dino Torres
Director of Police Services

CONSENT ITEM

Alcohol Sales Conditional Use Permit Case No. 43

Compliance review of Alcohol Sales Conditional Use Permit Case No. 43 to allow the continued operation and maintenance of an alcoholic beverage sales use for on-site consumption by Mariscos Sol Y Mar Restaurant located at 8021 Norwalk Boulevard, within the Cefalia Center in the Community Commercial (C-4) Zone. (Ramona Valdez, Mariscos Sol Y Mar Restaurant)

RECOMMENDATIONS

That the Planning Commission, based on Staff's compliance review report, find that the subject use is in compliance with all of the conditions of approval and request that this matter be brought back before April 13, 2025, for another compliance review report. The Planning Commission shall note that this matter may be brought back to the Commission at any time should the applicant violate any conditions of approval or any City Codes, or should there be a need to modify, add, or remove a condition of approval.

BACKGROUND

The family owned and operated restaurant offers Mexican seafood dishes, soft drinks and flavored waters; adult guests have an option to purchase beer for on-site consumption. The subject restaurant is within the Cefalia Center at 8021 Norwalk Boulevard. The restaurant has been in existence since the center was constructed in 1962; however, the restaurant itself has gone through several ownership and name changes. The last ownership change occurred in June 2007, when Mrs. Ramona Valdez acquired the restaurant and rebranded it under a new name of Mariscos Sol Y Mar. Currently, the restaurant holds a Type 41 license issued by the California Department of Alcohol Beverage Control (ABC) for the sale of beer and wine for on-site customer consumption. However, it should be noted that the Applicant provides only beer and has chosen not to sell wine.

This Permit has been granted several time extensions since it was initially approved by the Planning Commission and the City Council in 2008. This matter is now before the Planning Commission because the last time extension imposed a compliance review to determine if the business and the alcoholic beverage use is being conducted in compliance with the conditions of approval and all applicable laws.

CALLS FOR SERVICE

There have been calls for service registered to the location and/or the shopping center, however, none of the calls are related to the sale of alcoholic beverages or directly to the restaurant's customers.

COMPLIANCE REVIEW REPORT

As part of the permit review process, Staff conducted a walk through of the subject site to ensure compliance with regulatory ordinances, conditions and codes, and found the property and business operation in full compliance.

Staff has not received any complaints stemming from the use or from the sale of alcoholic beverages. Staff further contacted the management for the Cefalia Center to obtain input from them, but they did not respond to calls. Staff also checked with the Alcohol Beverage Control (ABC) and found that the establishment is in full compliance with all of the ABC regulations and there has not been any incident to require further ABC investigation.

Considering this favorable track record, and the fact that the applicant has complied with all of the conditions of approval, Staff believes that changes to the conditions are not warranted at this time.

CONDITIONS OF APPROVAL

Staff did not add any additional Conditions of Approval, but made a time change to Item No. 15.

1. That the sales, service and consumption of alcoholic beverages shall be permitted only between the business hours of 9:00 a.m. to 9:00 p.m., each day of the week or as permitted by the Alcohol Beverage Control.

2. That the Type 41 Alcoholic Beverage Control license allowing onsite consumption of beer and wine in connection with a bonafide eating establishment shall be restricted to the sale for consumption of alcoholic beverages on the subject site only; the use shall not sell alcoholic beverages for transport and\or consumption off the subject premises.

3. That the Type 41 Alcoholic Beverage Control license allowing the sale of alcoholic beverages only in conjunction with a bonafide public eating place shall not be exchanged for a public premises type license, nor operated as a public premises; thus alcoholic beverage sales shall not comprise more than 25% of gross sales.

4. That the applicant and/or her employees shall not allow any person who is intoxicated or under the influence of any drug, to enter, be at, or remain upon the licensed premises, as set forth in Section 25602(a) of the Business and Professions Code.

5. That the applicant and/or his employees shall not sell, furnish or give any alcoholic beverage to any person under 21 years of age, as set forth in Section 25658 (a) of the State Business and Professions Code.

6. That the applicant and/or his employees shall not permit any person under 21 years of age to sell alcoholic beverages.

7. That it shall be the responsibility of the applicant and/or his employees to ensure that all alcoholic beverages purchased on the subject site shall be consumed within the business establishment.

8. That the applicant and/or his employees shall not allow any person to loiter on the subject premises, shall report all such instances to the Whittier Police Department.

9. That a maximum occupancy placard shall continue to be maintained posted over each doorway. This occupancy limitation shall not be violated at any time.

10. That streamers, banners, pennants, whirling devices or similar objects that wave, float, fly, rotate or move in the breeze shall be prohibited unless approved by the Director of Planning and Development. A written request shall be submitted to the Department of Planning and Development 30 days prior to date the Applicant desires to use such advertisements.

11. That there shall be no live entertainment, amplified music or dancing permitted on the premises at any time.

12. That there shall be no bar or lounge area upon the licensed premises maintained for the primary purpose of alcohol sales or consumption of alcoholic beverages directly to patrons for consumption.

13. That in the event the applicant intends to sell, lease or sublease the subject business operation or transfer the subject permit to another owner/applicant or licensee, the Director of Police Services shall be notified in writing of said intention not less than 60 (sixty) days prior to signing of the agreement to sell, lease or sublease.

14. That a copy of these conditions shall be posted and maintained with a copy of the City Business License and Fire Department permits, in a place conspicuous to all employees of the location.

15. ***That this Permit shall be subject to a compliance review in five years, no later than April 13, 2025, to ensure the alcohol beverage storage activity is still operating in strict compliance with the original conditions of approval. At which time the applicant may request an extension of the privileges granted herein, provided that the use has been continuously***

maintained in strict compliance with these conditions of approval.

16. That all other applicable requirements of the City Zoning Ordinance, California Building Code, California Fire Code, Business & Professions Code, the determinations of the City and State Fire Marshall, and all other applicable regulations shall be strictly complied with.

17. It is hereby declared to the intent that if any provision of this permit is violated or held to be invalid, or if any law, statute, or ordinance is violated the permit shall be void and the privileges granted hereunder shall lapse.

Alcohol Sales Conditional Use Permit Case No. 76

Compliance Review Report for Alcohol Sales Conditional Use Permit Case No. 76 to allow the continued operation and maintenance of an alcoholic beverage use involving the warehousing and distribution of alcoholic beverages at Harbor Distributing located at 11204 Norwalk Boulevard within the Heavy Manufacturing (M-2).
(Harbor Distributing, LLC)

RECOMMENDATIONS

That the Planning Commission, based on the attached compliance review report, find that the subject use is in compliance with all of the conditions of approval set forth in the initial approval of Alcohol Sales Conditional Use Permit Case No. 76, and request that this matter be brought back in five-years, before April 13, 2025, for another compliance review report.

BACKGROUND

The Applicant, Harbor Distribution, LLC, is a beer distributor in the Southern California region, in 1989 they joined Reyes Holdings. Reyes Holdings is one of the largest beer distributors in the United States. The union of the two businesses greatly benefited Harbor Distribution throughout the years. Today, Harbor Distribution delivers over 20-million cases of beer and maintains approximately 5,600 accounts. In 2018, Harbor entered into a lease to occupy 289,414 square foot building located at 11204 Norwalk Boulevard.

Subsequently, and in accordance with Section 155.628 of the City Code, at their respective meetings of November 19, 2018 and December 13, 2018, the Planning Commission and the City Council approved Alcohol Sales Conditional Use Permit Case No. 76 to allow the maintenance and operation of a storage and distribution use for alcoholic beverage distribution within the subject warehouse.

Pursuant to the initial conditions of approval, this matter is before the Planning Commission because a first-year compliance review is due.

CALLS FOR SERVICE

As part of the review process, staff checked the calls for service and found that no calls were generated as a result of the alcohol beverage activities.

COMPLIANCE REVIEW REPORT

As part of the permit review process, Staff conducted a walk-through inspection of the subject site and found the premises in compliance with regulatory ordinances, conditions and codes. During the inspection, Staff further learned that the operation only handles beer products and not wine, however, they are permitted to warehouse and distribute both.

Staff has not received any complaints stemming from the use or from the on-site warehousing of alcoholic beverages. Staff checked with the Department of Alcohol Beverage Control (ABC) and found that the warehouse establishment is in full compliance with all of the ABC regulations and that there has not been any incident or reports to require any type of investigation.

Based on Staff's findings, and the applicant's compliance with all of the initial conditions of approval, Staff believes that changes to the conditions are not warranted at this time. Staff is recommending another compliance review of Alcohol Sales Conditional Use Permit Case No. 76 in five-years, before April 13, 2025.

CONDITIONS OF APPROVAL

Based on the satisfactory compliance review, staff does not feel that any condition should be added or modified from the initial conditions of approval of this Permit. The only proposed modification occurs to Condition No. 10 pertaining to the next compliance review report (shown in bold font).

1. That in order to facilitate the removal of unauthorized vehicles parked on the property, the applicant shall continue to maintain signs not less than 17" wide by 22" long. The signs shall prohibit the public parking of unauthorized vehicles and indicate that unauthorized vehicles will be removed at the owner's expense and also contain the California Vehicle Code that permits this action. The sign shall also contain the telephone number of the local law enforcement agency (Police Services Center (562) 409-1850). The lettering within the sign shall not be less than one inch in height. The applicant shall contact the Police Services Center for an inspection no later than 30 days after the project has been completed and prior to the occupancy permit being issued.

2. That the building, including any lighting, fences, walls, cabinets, and poles shall continue to be maintained in good repair, free from trash, debris, litter and graffiti and other forms of vandalism. Any damage from any cause shall be repaired within 72 hours of occurrence, weather permitting, to minimize occurrences of dangerous conditions or visual blight. Paint utilized in covering graffiti shall be a color that matches, as closely possible, the color of the existing and/or adjacent surfaces.

3. That the applicant shall be responsible for maintaining control of litter, debris, boxes, pallets and trash on the subject property, and shall implement a daily

clean-up program to maintain the area clean and orderly.

4. That the required off-street parking areas shall not be encroached on, reduced or used for outdoor storage of trucks, trailers, equipment or any other related material.

5. That the alcoholic beverages shall not be sold to the general public from the subject site at any time.

6. That upon the request of the Director of Police Services, the Applicant shall submitted an updated security plan and shall address the following for the purpose of minimizing risks to the public health, welfare and safety:

   (A) A description of the storage and the accessibility of alcohol beverages as well as any surplus alcohol beverages in storage;

   (B) A description of crime prevention barriers in place at the subject premises, including, but not limited to, placement of signage, landscaping, ingress and egress controls, security systems and site plan layouts;

   (C) A description of how the permittee plans to educate employees on their responsibilities, actions required of them with respect to enforcement of laws dealing with the sale of alcohol to minors and the conditions of approval set forth herein;

   (D) A business policy requiring employees to notify the Police Services Center of any potential violations of the law or this Conditional Use Permit occurring on the subject premises and the procedures for such notifications.

   (E) The City's Director of Police Services may, at his discretion, require amendments to the Security Plan to assure the protection of the public's health, welfare and safety

7. That the applicant shall, at all times, maintain in working order an alarm system and/or service that notifies the Whittier Police Department immediately if a breach occurs.

8. That the owner, corporate officers and managers shall cooperate fully with all City officials, law enforcement personnel, and shall not obstruct or impede their entrance into the licensed premises while in the course of their official duties.

9. That in the event the owner(s) intend to sell, lease or sublease the subject business operation or transfer the subject Permit to another party or licensee, the Director of Police Services shall be notified in writing of said intention not less than (60) days prior to signing of the agreement to sell or sublease.

10. **That ASCUP Case No. 76 shall be subject to a compliance review in five (5) years, no later than April 13, 2025, to ensure the premises is still operating in strict compliance with the original conditions of approval. At which time the applicant may request an extension of the privileges granted herein, provided that the use has been continuously maintained in strict compliance with these conditions of approval.**

11. It is hereby declared to be the intent that if any provision of this Permit is violated or held to be invalid, or if any law, statute or ordinance is violated, the Permit shall be void and the privileges granted hereunder shall lapse.

Dino Torres
Director of Police Services
