TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Resumes of Environmental Professionals

CASEY L. SLATTEN

STAFF GEOLOGIST

ENVIRONMENTAL ENGINEERING

Ms. Slatten is an experienced geologist with more than 10 years of project management expertise. She has experience completing a variety of field and office tasks during environmental characterization and remediation projects. Tasks include the development of project proposals, work plans, soil management plans, sampling surveys, research and review of regulatory records and historical land-use records, directing subcontractors, data evaluation, and technical report preparation. Ms. Slatten has worked on Phase I Environmental Site Assessments, Phase II Site characterization, Groundwater Monitoring, and Soil Remediation. Ms. Slatten's research experience encompasses GIS mapping, sediment analysis, sample collection, and boring sample prep for XRD analysis (MARS program).

SELECTED PROJECTS

- Cardinal Development, South Orange County Basin Groundwater Monitoring Work Plan and Groundwater Sampling, Irvine, CA*
- Westcore, Phase I ESA, Various Locations, CA*
- Sares Regis Group, Phase I and Phase II ESA and SMP Oversight, Various Locations, CA and AZ*
- Hines, Soil Management Plan and Environmental Remediation, Los Angeles, CA*
- Overton Moore Properties, Phase I and Phase II ESA and Environmental Remediation, Various Locations, CA*
- [Langan] Amazon, Soil Gas sampling and Phase II ESA, Various Locations, CA

LANGAN

NILMA EDWARD, EIT

STAFF ENGINEER

ENVIRONMENTAL ENGINEERING

Nilma provides environmental engineering services including, stormwater management consulting and environmental compliance. Nilma has experience preparing AutoCAD drawings according to field survey data and project design specifications. She has also worked on multiple research projects including testing the effectiveness of bacteria in degrading contaminants in groundwater.

SELECTED PROJECTS

- Santa Barbara Airport PFAS Remediation, Goleta, CA
- Warehouse Facility Phase I ESA, San Diego, CA
- Confidential Warehouse Facility Phase I ESA, Torrance, CA
- Highway Safety Improvement Project, Grand Terrace, CA*

RACHEL OWEN

STAFF GEOLOGIST

ENVIRONMENTAL ENGINEERING

Ms. Owen is a staff geologist with three years of experience working on various oil/gas and construction projects. Her experience includes completing Phase I and Phase II Environmental Site Assessments (ESA's); implementing the New Mexico Oil Conservation Division (NMOCD) and The Railroad Commission of Texas (RRC) oil and gas spill rules; and following the Department of Toxic Substance Control (DTSC) site specific regulations at the Agua Mansa Commerce Park. She is skilled in preparing site-specific characterization reports, sampling/remediation work plans, and closure reports for state agency review. Ms. Owen's experience also consists of soil sample collection via direct push technology (Geoprobe®), creating geologic logs, groundwater monitor well sampling/gauging, soil vapor sampling, remedial oversight, and regulatory correspondence.

SELECTED PROJECTS

- **CT Realty, Implementation of Soil, Waste, and Air Management Plans, Jurupa Valley, California** – Provided remedial oversite for demolition and grading activities at the Agua Mansa Commerce Park. Performed stockpile sampling, in-situ soil sampling, and groundwater monitoring events on Site.
- **Confidential, Phase I Environmental Site Assessments (ESAs) of Salt Water Disposal (SWD) and Production Facilities, Ward and Winkler Counties, Texas*** – Conducted Phase I ESAs for numerous tank batteries, SWD facilities, and production pads in West Texas as due diligence for separation and sale of assets. Phase I ESAs included conducting Site visits to evaluate environmental conditions and reviewing historical documents under ASTM E1527-13 standards.
- **Select Energy Services, Dagger Lake Produced Water Release, Lea County, New Mexico*** – Collected soil samples via hand auger and Geoprobe to delineate and characterize a 200 barrel produced water release. Oversaw soil removal, excavation sampling, and backfill to receive Site closure approval from NMOCD.
- **Chevron USA, Hayhurst 17 20 Federal 001 Pad, Soil Delineation and Remediation Plan, Eddy County, New Mexico*** – Characterized and delineated a diesel fuel and oil based drilling mud release via Geoprobe sampling. Corresponded with NMOCD to receive an approved remediation work plan.
- **Targa Midstream, Epperson 16" Pipeline Release, Eddy County, New Mexico*** – Obtained monitor well installation permits from the State of New Mexico. Oversaw the installation of three groundwater monitoring wells and created soil boring/well completion logs. Developed wells and conducted state approved groundwater sampling events to monitor the movement and seasonal changes of contaminant concentrations in groundwater.

**Denotes experience with previous firm*

JULIAN GROCHOCKI

PROJECT GEOLOGIST

ENVIRONMENTAL ENGINEERING

Mr. Grochocki has approximately 5 years of experience conducting environmental due diligence practices consisting of Phase I Environmental Site Assessments (ESA) and Phase II Subsurface Investigations for various residential, commercial and industrial properties throughout the United States. Additionally, Mr. Grochocki has approximately 3 years of project management experience managing Phase II Subsurface Investigations for the assessment of soil, groundwater and/or soil vapor conditions, Underground Storage Tank (UST) removals/excavations, and remediation sites enrolled into state-specific cleanup programs.

Mr. Grochocki assesses site conditions by characterizing soil, groundwater and/or soil vapor impacts, delineating contaminated media, and evaluating migration of contaminants. He proposes and implements site-specific scopes of work to mitigate environmental impacts and manages contractors while providing oversight during project investigations and remedial activities. Additionally, Mr. Grochocki works with state-specific agencies to develop and implement cost efficient remedial efforts to achieve site closure status.

SELECTED PROJECTS

- Phase II Subsurface Investigations, Soil, Groundwater, and Soil Vapor Analysis, AZ, CA, CO, FL, ID, IL IN, KY, MI, MN, OH, PA, TN, UT, and WI, and Mexico*
- Chromalox, Site Remediation - Voluntary Cleanup Program, Ogden, UT*

LUIS F. NAVARRO, PG, MBA

ASSOCIATE

ENVIRONMENTAL ENGINEERING

Mr. Navarro has 20 year of experience in environmental consulting, mainly focusing on contaminated site management, due diligence, strategic planning and assessment, and sustainability. Luis has worked in several states within the United States, as well as multiple countries in Latin America and the Caribbean. He uses his technical and business backgrounds to find pragmatic and technically justifiable solutions. He is an organizational leader focused on engaging diverse teams to think outside of the box and generate high impact work for our clients resulting in market differentiation, fostered by investments in technical competency, leadership development, and operational excellence.

SELECTED PROJECTS

ROBERT (RORY) S. JOHNSTON, PE, BCEE

SENIOR PRINCIPAL/SENIOR VICE PRESIDENT

ENVIRONMENTAL & GEOTECHNICAL ENGINEERING

With over 31 years of engineering experience, Mr. Johnston, PE, BCEE serves as a Principal in the firm and as the firm's Director of Health & Safety. His experience includes major oil & gas, chemical, mining, aviation, pharmaceutical, and real estate development clients. His projects range from portfolio due diligence, environmental investigation remediation, geotechnical investigations/construction, HSSE compliance/management and management consulting on locations throughout the United States and internationally.

Johnston was former President of ASFE (now GBA) and is active in numerous professional societies, including the Society of Petroleum Engineers (SPE).

SELECTED PROJECTS

1.0 INTRODUCTION AND BACKGROUND

Langan Engineering & Environmental Services, Inc. (Langan) has prepared this report on behalf of Florence SFS, LLC (Client) to document results of a Phase II Environmental Site Investigation (ESI) completed between March 2 and April 2, 2022 at 10801-10859 Norwalk Boulevard and 10819-10858 Koontz Avenue, Santa Fe Springs, CA 90670 (the Site). A Site Location Map is provided as Figure 1.

The Site is identified as Los Angeles County Parcel Number 8009-023-027 and is comprised of a single parcel of land which is divided into nine (9) leased subdivisions each having its own individual address, size, occupants, developments, and use as described below.

Site Address	Size (square-feet, sf)	Current Development	Current Use/Occupant
10801 Norwalk Boulevard	21,000	2,500-sf single story wood construction commercial building	Silverio's Party Rentals - rents and sells party supplies
10825 Norwalk Boulevard	11,000	580-sf cinder block building; 250-sf portable office building	West Coast Enterprises - truck storage pending sale
10845 Norwalk Boulevard	22,500	2,900-sf wood construction office building	Quality Lift Equipment - forklift rental, sale, and repair
10859 Norwalk Boulevard	60,000	9,000-sf concrete tilt-up building	Mako Equipment - scissor lift rental company
10819 Koontz Avenue	20,700	7,000-sf corrugated metal sided building	La Habra Welding - welding and steel fabrication
10845 Koontz Avenue	60,000	4,600-sf concrete loading dock with attached 800-sf wood construction office; 1,000-sf corrugated metal sided maintenance building	MJB Freight - transport company
10858 Koontz Avenue	33,500	5,200-sf corrugated metal sided building; 350-sf wood building with corrugated metal roof	LenPar Rolling - steel rolling and fabrication; Roufs Machine - machine and hydraulic repair
10850 Koontz Avenue	10,000	No structures	Paramount Roll & Forming - storage
12120 East Florence Avenue	68,000-sf divided into an eastern and western section by Koontz Avenue	15,600-sf corrugated metal sided building	Paramount Roll & Forming - steel rolling

1.1 Purpose

The purpose of this Phase II ESI was to attempt to investigate soil, soil gas, and groundwater impacts at the Site based on the results of the Phase I conducted for the Site.. This Phase II ESI was preformed to further evaluate the Recognized Environmental Conditions (RECs) and Business Environmental Risks (BERs) identified in the Phase I ESA dated 07 April 2022.

The Site and surrounding properties have historically been for industrial use, including the use, storage, and disposal of hazardous substances and petroleum products. The above referenced 2022 Phase I ESA identified several RECs associated with the Site which are attributed to both onsite and offsite sources. The northeast portion of the Site was identified with a historical petroleum release from a leaking underground storage tank (LUST) in June 1998 which subsequently received a closure letter from the Santa Fe Fire Department in March 1999.

However, a subsurface investigation conducted by AdvancedGeo, Inc. (AGI) in 2019 encountered residual petroleum impacts in soil at concentrations above applicable screening levels between 20 and 30 feet below ground surface (bgs) near the location of the former UST excavation pit. Additionally, a soil vapor assessment conducted at the Site in 2019 identified concentrations of chlorinated solvents including trichloroethylene (TCE) and tetrachloroethylene (PCE) in soil vapor at various depths above applicable screening levels. Concentrations of the detected chlorinated solvents in soil vapor samples appeared to increase with depth.

The Site also contains two abandoned oil production wells which were mapped at 10819 Koontz Avenue and 10850 Koontz Avenue. The wells produced crude oil and were abandoned in 1974 and 2000 under regulatory well abandonment standards at the time. However, these wells may not be plugged to current California Geologic Energy Management Division (CalGEM, previously DOGGR) standards, and may have to be re-abandoned as part of the permitting process for future development.

In addition to the various REC's observed at the Site, the 2022 Phase I ESA identified a BER associated with historical agricultural use at the Site. Historical agricultural use may have resulted in residual pesticides, herbicides, and heavy metals such as lead and arsenic in onsite soils.

1.2 Historical Document Review

Based on historical document review from the Phase I ESA dated April 7, 2022, Continental Heat Treating (CHT) and Former ExxonMobil Jalk Fee (EJF) are two cleanup program (CP) sites north of the Site that are under a with Los Angeles Regional Water Quality Control Board (LARWQCB). The CHT CP includes ongoing active remediation of a solvent plume, which includes tetrachloroethylene (PCE) and trichloroethylene (TCE), among other volatile organic compounds (VOCs). The plume extends to the south towards the Site, and has a groundwater monitoring program that includes a cluster of wells in the northwest portion of the Site. Wells MW-8d, MW-8m, and MW-8s (Figure 2) found to the west of Koontz Avenue, are on Site and were installed in 2019. The following exceedances were measured within these nested groundwater wells:

- 1,1-DCA (8.1 to 18.6 µg/L) exceeded the screening level of 2.75 µg/L in four of the six pre-existing wells.
- 1,1-Dichloroethene (1,1-DCE) (50.9 to 198 µg/L) exceeded the screening level of 10 µg/L in two of the six pre-existing wells.
- 1,2-DCA (2.21 µg/L) exceeded the screening level of 0.17 µg/L in two of the six pre-existing wells.
- Cis-1,2-DCA (54 to 304 µg/L) exceeded the screening level of 11.41 µg/L in two of the six pre-existing wells.
- PCE (4.69 to 100 µg/L) exceeded the screening level of 0.06 µg/L in four of the six pre-existing wells.
- TCE (84.9 to 220 µg/L) exceeded the screening level of 0.49 µg/L in all six of the pre-existing wells.
- Vinyl chloride (14.3 to 80.4 µg/L) exceeded the screening level of 0.01 µg/L in three of the six of the pre-existing wells.

2.0 FIELD INVESTIGATION SUMMARY

The Phase II ESI, implemented between March 2 through April 2, 2022, included a geophysical survey, installation and sampling of seven soil borings, 20 nested temporary soil vapor points, and three groundwater monitoring wells.

Soil samples were preserved with laboratory-supplied chemical preservatives where necessary, and placed in an ice-chilled cooler for during delivery to the laboratory. The samples were delivered by Langan personnel to Advanced Technology Labs of Signal Hill, California for analysis. The soil samples were analyzed for the following parameters:

- VOCs and oxygenates via Environmental Protection Agency (EPA) Method 8260B
- TPH – GRO, diesel range organics (DRO), and oil range organics (ORO) via EPA Method 8015M.

Additionally, soil samples collected from the upper-most sampled interval in each boring location were analyzed for the following parameter:

- Pesticides via EPA Method 8081A

Soil vapor samples were collected into Tedlar® Sampling Bags and analyzed for VOCs via EPA Method 8260B and methane on-site in mobile laboratory vehicles. The samples were then taken back to the main laboratory to be analyzed for methane via Modified ASTM D-1946.

Groundwater sample was collected from each well and submitted for laboratory analysis. The groundwater samples were analyzed for:

- VOCs and oxygenates via EPA Method 8260B;
- Semivolatile organic compounds (SVOCs) via EPA Method 8270C;
- Polychlorinated biphenyls (PCBs) via EPA Method 8082;
- Pesticides via EPA Method 8081A;
- Title 22 Metals and mercury via EPA Method 6010B and 7470A; and
- TPH – GRO, DRO, and ORO via EPA Method 8015M.

2.1 Los Angeles County Permitting

Prior to performing on-site intrusive activities, permit applications were submitted for the drilling subcontractor to drill groundwater monitoring wells at the Site. The permits were submitted to the Los Angeles County Department of Public Health. The permits were approved on 2 March, 2022 and 03 March, 2022 (Appendix A).

2.2 Geophysical Survey

Prior to performing any on-site intrusive activities, 811 "Underground Service Alert of Southern California" was contacted to clear the boring locations. Additionally, a utility survey was conducted by SoCal Locators to attempt to clear the boring locations of subsurface utilities or obstructions. SoCal Locators used a combination of ground penetrating radar (GPR) and electromagnetic induction (EMI) equipment.

On 02 April, 2022, Ground Penetrating Radar Solutions (GPRS) also conducted a geophysical survey utilizing GPR and EMI on the northern portion of the Site to attempt to identify the potential presence of abandoned oil lines. The geophysical survey identified two parallel metallic anomalies approximately 1 foot in diameter located immediately north of the plugged/abandoned oil well located at the northwest portion of the Site. The location of the identified subsurface piping is shown on Figure 2. These lines appear to extend northward before making a right turn to the east, crossing through Koontz Avenue. An additional metallic anomaly approximately 1 foot in diameter was detected cross-cutting the parallel oil lines immediately north of the plugged/abandoned oil well on the northwest portion of the Site.

2.3 Subsurface Investigation

The Phase II ESI included the installation and sampling of seven soil borings (SB-1 to SB-7), 20 temporary nested soil vapor points (SV-1 to SV-20), and three groundwater monitoring wells

(MW-1, MW-3, and MW-5). The approximate locations of the sampling points are shown on Figure 2.

2.3.1 Soil Sampling Procedure

Seven direct push soil borings (SB-1 to SB-7) were advanced by Cascade Drilling, of Santa Ana, California (Figure 3). The direct push soil borings were advanced using Geoprobe® drilling equipment to 35 ft bgs. Soil was collected in five (5)-foot intervals in acetate liners. Boring logs were prepared to describe observed soil types and geologic deposits and visual or olfactory observations regarding the materials recovered. Recovered soil was also field-screened for volatile organic vapors at approximately 1-foot intervals using a photo-ionization detector (PID) field-calibrated to 100 parts per million (ppm) of isobutylene gas. Also included in the boring logs were the times and dates of the boring activities, the equipment used and the amounts of soil (by length) recovered in each sleeve. Soil boring logs are provided in Appendix B.

For Soil Borings SB-1 to SB-2 and SB-4 to SB-7, two soil samples were collected from each boring at approximately 10 ft bgs and at approximately 35 ft bgs. For Soil Boring SB-3, three samples were collected at approximately seven, 15, and 35 ft bgs due to staining observed.

Samples collected for analysis of VOCs and total petroleum hydrocarbons (TPH) gasoline range organics (GRO) were collected using a TerraCore ™ core sampler. To collect the TerraCore ™ soil sample, the sampler was pushed into the soil until the coring body was approximately full. The sampler was then removed from the soil and the plunger depressed to deposit the sample into the sample vial. For other analyses, soil from the specified depth was collected using a sterile nitrile glove and placed into laboratory supplied bottle ware. After sample collection, the soil borings were backfilled with hydrated bentonite pellets and restored flush to the existing grade with an asphalt patch.

A chain-of-custody form was completed in the field and accompanied the samples to document acquisition, transport, possession, and analysis. The environmental laboratory data package is included as Appendix C.

2.3.2 Soil Vapor Sampling Procedure

Twenty direct push boreholes (SV-1 to SV-20) were advanced by Cascade Drilling and ABC Drilling using Geoprobe® direct-push drilling equipment (Figure 4). Twelve boreholes were drilled to 20 and eight boreholes were drilled to 50 ft bgs Soil was collected in five foot intervals in acetate liners. Boring logs were prepared as described above and are included in Appendix B.

For the 20 ft borings, nested soil vapor probes were set at five and 15 ft bgs. For the 50 ft borings, nested soil vapor probes were set at five , 25, and 45 ft bgs. Two of the 50 foot borings (SV-5 and SV-17) had soil vapor probes set at five, 25 and 40 feet bgs due to encountering refusal during drilling. The soil vapor points were set in one foot of sand, followed by a one foot thick

hydrated bentonite seal. Dry bentonite was then used to backfill to the next probe interval or to ground surface.

Jones Environmental Laboratory, of Santa Fe Springs, California was on-site on March 10th, March 11th, and April 2nd to collect soil vapor samples. The samples were collected in accordance with the California Environmental Protection Agency, Department of Toxic Substances Control, Advisory - Active Soil Gas Investigations, dated July 2015. Following installation, the soil vapor points were allowed to equilibrate for approximately two hours before sampling. Also prior to sample collection, a shut in test and nitrogen leak test were performed on each soil vapor point, after which each point was purged to evacuate approximately three pore volumes. The monitoring data for the soil vapor samples are included in Table 2. Field data and in the chains of custody for soil vapor samples are included in Appendix C.

After sampling, the soil vapor points were removed and the ground surface was restored with asphalt or concrete patch.

A chain-of-custody form was completed in the field and accompanied the samples to document acquisition, transport, possession, and analysis. The environmental laboratory data package is included as Appendix C.

2.3.3 Groundwater Sampling Procedure

Three hollow stem auger (HSA) boreholes (MW-1, MW-3, and MW-5) were advanced by ABC Liovin Drilling, of Signal Hill, California (Figure 5). The boreholes were advanced using a CME-75 truck-mounted drill rig to approximately 132, 131, and 132 ft bgs, respectively. The soil cuttings were screened approximately every five ft. Boring logs were prepared as described above and are included in Appendix B. Groundwater was encountered at approximately 120 feet in each of the three wells during drilling. A 2-inch diameter PVC casing, with 10 feet of machine-slotted PVC, was installed into each borehole from approximately 131 or 132 to 122 ft bgs,Boreholes were then backfilled with sand to approximately 2 feet above the top of the screened interval, followed by approximately two feet of hydrated bentonite, and then grouted to ground surface. A well box was installed around the well and locked.

Prior to sampling, the wells were developed using a surge block, bailers, and a submersible pump. The development continued until the following parameters were approximately stabilized through the use of a Horiba multi-parameter water quality meter: pH, specific conductivity, redox potential, dissolved oxygen, turbidity, and temperature.

A chain-of-custody form was completed in the field and accompanied the samples to document acquisition, transport, possession, and analysis. The environmental laboratory data package is included as Appendix C.

The depth to groundwater was also measured prior to sampling with a water level meter at each location. The depths to groundwater for MW-1, MW-3, and MW-5 were measured from the top

of the PVC casing installed and resulted in depths of 116.5, 121.9, and 118.6 ft bgs respectively. The groundwater elevations are included on Figure 6. Groundwater sampling logs are included as Appendix D.

2.3.4 Groundwater Flow

Groundwater flow was assessed by subtracing the measured depth to groundwater, measured from the well casing from the surveyed elevation of the well casings at Monitoring Wells MW-1, MW-3, and MW-5. Casing elevations, depths to water, and water elevations are shown on the following table and well survey information is included in Table 4. Depth to groundwater was measured after well development when water levels had stabilized. Measurements were taken at least 18 hours after groundwater had been sampled, allowing for water levels to equilibrate. The interface probe was field cleaned with Alconox detergent and rinsed with distilled water prior to use at each well.

GUIDA Surveying surveyed the elevation of each casing top for monitoring wells MW-1, MW-3, and MW-5. Water elevation was then calculated as the difference between the casing top elevation and water depth and the potentiometric surface gradient was mapped from these three points (Figure 6).

Well ID	Casing Elevation (feet)	Water Depth (Feet below Casing top)	Water Elevation (Feet)
MW-1	136.07	116.5	19.57
MW3	134.48	121.9	12.58
MW-5	135.565	118.6	16.96

The potentiometric gradient was calculated at 0.0147 at the Site flowing towards the southeast.

3.0 OBSERVATIONS AND RESULTS SUMMARY

3.1 Field Investigation Observations

Subsurface soil at the Site generally consisted of brown, red-brown, tan, and grey to grey-brown silty sand, clayey sand, silty clay, clayey silt, sand, and clay. Small lenses of gravel were also observed at various depths around the Site. The highest PID readings were observed in the northeast corner of the Site in SB-3 and MW-1 with the highest measured reading of 589 parts per million (ppm) measured in Soil Boring SB-3 at 21 ft bgs.

Groundwater was encountered between 116 and 121 ft bgs with the groundwater flow estimated to be to the southwest.

3.2 Soil Sample Results

The soil sample analytical results were compared against the lesser of the Department of Toxic Substances (DTSC) Soil Commercial/Industrial Screening Levels (SLs), Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3 (June 2020) and the EPA Regional Screening Level (RSL) Industrial Soil Table (THQ=1.0) (November 2021). The analytical results are summarized in Table 1 and results that exceed the respective screening levels are shown on Figure 3. Copies of the laboratory analytical reports are included in Appendix C.

Below is a summary of compounds detected in soil samples at concentrations exceeding applicable screening levels:

- TPH GRO (810 mg/kg) exceeded the screening level of 420 mg/kg in sample SB-03.
- Naphthalene (13 mg/kg) exceeded the screening level of 6.5 mg/kg in sample SB-03.
- Pesticides were not detected in soil samples collected.

3.3 Soil Vapor Sample Results

The soil vapor sample analytical results were compared against the lesser of the DTSC Ambient Air Commercial/Industrial SLs, HERO HHRA Note Number 3 divided by an attenuation factor of 0.03 (June 2020) and the EPA Commercial Vapor Intrusion Screening Levels (VISLs) (THQ=1.0) (generated March 15, 2022). The analytical results are summarized in Table 2 and results that exceed the respective screening levels are shown on Figure 4. Copies of the laboratory analytical reports are included in Appendix C.

Below is a summary of compounds detected in soil vapor samples at concentrations exceeding applicable screening levels:

- 1,1-Dichloroethane (1,1-DCA) (9 to 215 µg/m^3) exceeded the screening level of 7.67 µg/m^3 in six of the 48 samples analyzed.
- Benzene (9 to 26 µg/m^3) exceeded the screening level of 1.57 µg/m^3 in nine of the 48 samples analyzed .
- Chloroform (10 to 34 µg/m^3) exceeded the screening level of 0.533 µg/m^3 in four of the 48 samples analyzed .
- Ethylbenzene (8 to 223 µg/m^3) exceeded the screening level of 4.91 µg/m^3 in four of the 48 samples analyzed .
- PCE (52 to 22,400 µg/m^3) exceeded the screening level of 47.2 µg/m^3 in 30 of the 48 samples analyzed .

- TCE (15 to 1,840 µg/m^3) exceeded the screening level of 2.99 µg/m^3 in 20 of the 48 samples analyzed.

- Vinyl chloride (18 to 1,890 µg/m^3) exceeded the screening level of 2.79 µg/m^3 in four of the 48 samples analyzed.

Methane was analyzed in all soil vapor probes and not detected in an samples.

3.4 Groundwater Sample Results

The groundwater sample analytical results were compared against the RWQCB Environmental Screening Levels (ESLs) for Groundwater-Direct Exposure Human Health Risk Levels-Tapwater Cancer Risk and Noncancer Hazard (2019 Rev 2). The analytical results are summarized in Table 3 and results that exceed the respective screening levels are shown on Figure 5. Copies of the laboratory analytical reports are included in Appendix C.

Below is a summary of compounds detected in soil samples at concentrations exceeding applicable screening levels from monitoring wells installed as part of this investigation:

- 1,1-DCA (6.7 to 11 µg/L) exceeded the screening level of 2.75 µg/L in three of the samples.

- 1,1-Dichloroethene (1,1-DCE) (14 to 100 µg/L) exceeded the screening level of 10 µg/L in all three of the samples.

- 1,2-DCA (1.6 to 2.3 µg/L) exceeded the screening level of 0.17 µg/L in two of the three samples.

- Chloroform (3.7 µg/L) exceeded the screening level of 0.22 µg/L in samples MW-5.

- Cis-1,2-DCE (42 to 290 µg/L) exceeded the screening level of 11.41 µg/L in two of three the samples.

- PCE (0.52 to 74 µg/L) exceeded the screening level of 0.06 µg/L in three of the samples.

- TCE (8.6 to 160 µg/L) exceeded the screening level of 0.49 µg/L inl three of the samples.

- Vinyl chloride (1.3 to 76 µg/L) exceeded the screening level of 0.01 µg/L in two of the three samples.

- TPH DRO (230 µg/L) exceeded the screening level of 199.39 µg/L in sample MW-5.

- Beryllium (4.9 µg/L) exceeded the screening level of 1 µg/L in sample MW-1.

- Cobalt (15 µg/L) exceeded the screening level of 6.01 µg/L in sample MW-1.

- Lead (6.6 µg/L) exceeded the screening level of 0.2 µg/L in sample MW-1.

- Nickel (58 µg/L) exceeded the screening level of 12 µg/L in sample MW-1.
- Vanadium (86 µg/L) exceeded the screening level of 50 µg/L in sample MW-1.
- Mercury (0.28 and 0.4 µg/L) exceeded the screening level of 0.06 µg/L in samples MW-3 and MW-1, respectively.

SVOCs and PCBs were analyzed in all groundwater samples were not detected.

4.0 CONCLUSIONS

Chlorinated solvents, petroleum hydrocarbon compounds, and metals were the constituents of concern measured above applicable screening levels at the Site. Soil samples exceeded screening levels for petroleum compounds in one soil boring, SB-3, in the northeast corner of the Site. Soil vapor samples throughout the site exceeded applicable screening levels for hydrocarbon compounds and chlorinated solvents including 1-DCA, benzene, chloroform, and ethylbenzene, PCE, TCE and vinyl chloride. The measured concentrations of these constituents of concern in soil vapor are highest in the northwest corner of the Site and chlorinated solvents in appear to increase with depth.

Groundwater samples exceeded screening levels for hydrocarbon compounds, chlorinated solvents, and metals. Chlorinated solvents and hydrocarbon compounds exceedances were measured in groundwater samples with concentrations generally decreasing towards the southeast. Furthermore, metal exceedances were observed only on the western side of the Site in monitoring wells MW-1 and MW-3.

5.0 DISCLAIMER

The environmental and geochemical conditions that Langan interprets to exist between sampling points will differ from those that actually exist. The user of this report recognizes that actual conditions will vary from those encountered at the locations where sampling, surveys, observations or explorations are made by Langan and that the data, interpretation, and recommendations of Langan are based solely on the information available to it. Furthermore, the user of this report recognizes that passage of time, natural occurrences, and/or direct or indirect human intervention at or near the Site may substantially alter discovered conditions. Langan shall not be responsible for interpretations by others of the information it develops or provides to the user of this report.

6.0 RELIANCE

This Phase II ESI is prepared for the exclusive use and reliance of the client (Florence SFS, LLC). Use or reliance by any other party is prohibited without written authorization of Florence SFS, LLC and Langan. Reliance on this Phase II ESI by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the 'Proposal – Phase I and II ESA Investigation' authorized on 10 January 2022.

Notes
Screening Level is the minimum of the June 2020 DTSC Soil Commercial/Industrial Screening Levels (SLs), HERO HHRA Note No. 3 and the November 2021 EPA Regional Screening Level (RSL) Industrial Soil Table (THQ=1.0).
DTSC - Department of Toxic Substances Control
EPA - Environmental Protection Agency
mg/kg - milligrams per kilogram
ND - Not Detected
DL - Detection Limit
RL - Reporting Limit
DF - Dilution Factor
NS - No Standard
- Sample exceeds respective screening level
- Screening level exceeded

Notes
Screening Level is the minimum of the June 2020 DTSC Soil Commercial/Industrial Screening Levels (SLs), HERO HHRA Note No. 3 and the November 2021 EPA Regional Screening Level (RSL) Industrial Soil Table (THQ=1.0).
DTSC - Department of Toxic Substances Control
EPA - Environmental Protection Agency
mg/kg - milligrams per kilogram
ND - Not Detected
DL - Detection Limit
RL - Reporting Limit
DF - Dilution Factor
NS - No Standard
- Sample exceeds respective screening level
- Screening level exceeded

Notes
Screening Level is the minimum of the June 2020 DTSC Soil Commercial/Industrial Screening Levels (SLs), HERO HHRA Note No. 3 and the November 2021 EPA Regional Screening Level (RSL) Industrial Soil Table (THQ=1.0).
DTSC - Department of Toxic Substances Control
EPA - Environmental Protection Agency
mg/kg - milligrams per kilogram
ND - Not Detected
DL - Detection Limit
RL - Reporting Limit
DF - Dilution Factor
NS - No Standard
- Sample exceeds respective screening level
- Screening level exceeded

Notes
Screening Level is the minimum of the June 2020 DTSC Soil Commercial/Industrial Screening Levels (SLs), HERO HHRA Note No. 3 and the November 2021 EPA Regional Screening Level (RSL) Industrial Soil Table (THQ=1.0).
DTSC - Department of Toxic Substances Control
EPA - Environmental Protection Agency
mg/kg - milligrams per kilogram
ND - Not Detected
DL - Detection Limit
RL - Reporting Limit
DF - Dilution Factor
NS - No Standard
- Sample exceeds respective screening level
- Screening level exceeded

Notes
Screening Level is the minimum of the June 2020 DTSC Soil Commercial/Industrial Screening Levels (SLs), HERO HHRA Note No. 3 and the November 2021 EPA Regional Screening Level (RSL) Industrial Soil Table (THQ=1.0).
DTSC - Department of Toxic Substances Control
EPA - Environmental Protection Agency
mg/kg - milligrams per kilogram
ND - Not Detected
DL - Detection Limit
RL - Reporting Limit
DF - Dilution Factor
NS - No Standard
NA - Not Analyzed
- Sample exceeds respective screening level
- Screening level exceeded

Notes
Screening Level is the minimum of the 2019 Rev 2 Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs) for Groundwater-Direct Exposure Human Health Risk Levels-Tapwater Cancer Risk and Noncancer Hazard
** Historical records from California Water Boards Groundwater Ambient Monitoring & Assessment Program (GAMA) Groundwater Information System
µg/L - micrograms per liter
ND - Not Detected
DL - Detection Limit
RL - Reporting Limit
DF - Dilution Factor
NS - No Standard
- Sample exceeds respective screening level
- Screening level exceeded

Notes
Screening Level is the minimum of the 2019 Rev 2 Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs) for Groundwater-Direct Exposure Human Health Risk Levels-Tapwater Cancer Risk and Noncancer Hazard
*Analytical data obtained from the Second Semi-Annual Groundwater Well Monitoring Report 2021 for Continental Heat Treating conducted by Fero Engineering dated February 1, 2022."
** Historical records from California Water Boards Groundwater Ambient Monitoring & Assessment Program (GAMA) Groundwater Information System
µg/L - micrograms per liter
ND - Not Detected
DL - Detection Limit
RL - Reporting Limit
DF - Dilution Factor
NS - No Standard
NA - Not Analyzed
- Sample exceeds respective screening level
- Screening level exceeded

Notes
Screening Level is the minimum of the 2019 Rev 2 Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs) for Groundwater-Direct Exposure Human Health Risk Levels-Tapwater Cancer Risk and Noncancer Hazard
*Analytical data obtained from the Second Semi-Annual Groundwater Well Monitoring Report 2021 for Continental Heat Treating conducted by Fero Engineering dated February 1, 2022."
** Historical records from California Water Boards Groundwater Ambient Monitoring & Assessment Program (GAMA) Groundwater Information System
µg/L - micrograms per liter
ND - Not Detected
DL - Detection Limit
RL - Reporting Limit
DF - Dilution Factor
NS - No Standard
NA - Not Analyzed
- Sample exceeds respective screening level
- Screening level exceeded

Drilling Permits

ENVIRONMENTAL HEALTH

Drinking Water Program

5050 Commerce Drive, Baldwin Park, CA 91706
Telephone: (626) 430-5420 • Facsimile: (626) 813-3013 • Email: waterquality@ph.lacounty.gov
http://publichealth.lacounty.gov/eh/ep/dw/dw_main.htm

Work Plan Approval

TO BE COMPLETED BY APPLICANT:

WORK SITE ADDRESS	CITY	ZIP	EMAIL ADDRESS FOR WELL PERMIT APPROVAL
10845 Norwalk Blvd	Santa Fe Springs	90670	cslatten@langan.com jgrocki@langan.com

NOTICE:

- WORK PLAN APPROVALS ARE VALID FOR 180 DAYS. 30 DAY EXTENSIONS OF WORK PLAN APPROVALS ARE CONSIDERED ON AN INDIVIDUAL (CASE-BY-CASE) BASIS AND MAY BE SUBJECT TO ADDITIONAL PLAN REVIEW FEES (HOURLY RATE AS APPLICABLE).
- WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- WORK PLAN APPROVALS ARE LIMITED TO COMPLIANCE WITH THE CALIFORNIA WELL STANDARDS AND THE LOS ANGELES COUNTY CODE AND DOES NOT GRANT ANY RIGHTS TO CONSTRUCT, RENOVATE, OR DECOMMISSION ANY WELL. THE APPLICANT IS RESPONSIBLE FOR SECURING ALL OTHER NECESSARY PERMITS SUCH AS WATER RIGHTS, PROPERTY RIGHTS, COASTAL COMMISSION APPROVALS, USE COVENANTS, ENCROACHMENT PERMISSIONS, UTILITY LINE SETBACKS, CITY/COUNTY PUBLIC WORKS RIGHTS OF WAY, ETC.
- ALL FIELD WORK MUST BE CONDUCTED UNDER THE DIRECT SUPERVISION OF A PROFESSIONAL GEOLOGIST LICENSED IN THE STATE OF CALIFORNIA.
- THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED BY THE DEPUTY HEALTH OFFICER. WORK SHALL NOT BE INITIATED WITHOUT A WORK PLAN APPROVAL STAMPED BY THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- ***ONCE APPROVED NOTIFY BELINDA LARSEN AT blarsen@ph.lacounty.gov PREFERABLY 4 BUSINESS DAYS BEFORE WORK IS SCHEDULED TO BEGIN.***

TO BE COMPLETED BY DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM:

X WORK PLAN APPROVED SR0286723 (5 MW Constructions) DATE: 3-3-2022

ADDITIONAL APPROVAL CONDITIONS:

- Work plan approval is issued for scope of work submitted to the Drinking Water Program. Any modifications to the scope of work will require additional work plan review.
- Must comply with all applicable requirements published in the California Well Standards (Bulletins 74-81 and 74-90) and the Los Angeles County Code, Title 11.
- Notify me by e-mail at blarsen@ph.lacounty.gov prior to start of field work.
- Drillers shall submit their well completion reports to the Department of Water Resources through the Online System of Well Completion Reports (OSWCR) at https://civicnet.resources.ca.gov/DWR_WELLS.

- THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED BY THE DEPUTY HEALTH OFFICER. WORK SHALL NOT BE INITIATED WITHOUT A WORK PLAN APPROVAL STAMPED BY THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.

TO BE COMPLETED BY DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM:

X	WORK PLAN APPROVED FOR: 29 Soil Borings/Exp. Holes	**PERMIT NUMBER:**	SR0286726	**DATE:**	3-2-2022

ADDITIONAL APPROVAL CONDITIONS:

- Work plan approval is issued for scope of work submitted to the Drinking Water Program. Any modifications to the scope of work will require additional work plan review.
- Ensure the boring/exploration hole is backfilled within 24 hours of boring construction.
- Ensure to backfill using a tremie pipe under pressure or equivalent equipment with approved cement grout, proceeding upward from the bottom of the boring/exploration hole.
- Ensure soil borings are sealed per California Well Standards 74-90
  - Cement grout mix ratio of 5-6 gallons of water per 94-pound bag of Portland cement.
  - Up to 6% of Bentonite may be added to the cement-based mix.
  - No hydrated Bentonite chips
- Borings/Exploration holes must comply with all applicable requirements published in the California Well Standards (Bulletins 74-81 and 74-90) and the Los Angeles County Code, Title 11.

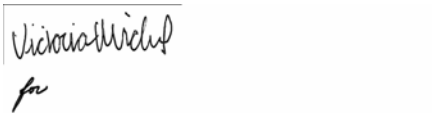
Re: ATL Work Order Number : 2200309
Client Reference : Orbis - Santa Fe Springs / 721033501

Enclosed are the results for sample(s) received on March 07, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,



Victoria Michel, Project Assistant
Victoria.Michel@atlglobal.com
Authorized to Release on 03/15/22 11:30 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
L3	Laboratory control sample outside in-house established limits but within method criteria.
D10	Sample required dilution due to dark sample
D1	Sample required dilution due to possible matrix interference.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Subject: Re: Regarding Orbis - Sante Fe Springs / 721033501 / ATL WO#2200309

Hi Edward,

Please go ahead and analyze all samples for oxy as well.

Thanks!

Subject: [External] Regarding Orbis - Sante Fe Springs / 721033501 / ATL WO#2200309

Good Afternoon Julian,

I wanted to reach out to you in regards to the 8260 analysis requested; would you need to analyze for Oxy as well?

Please let me know if I can be of further assistance.

PLEASE NOTE: Our legal name is Environmental Treatment & Technology Inc., dba Advanced Technology Laboratories.

Best regards,

Edward Bae | Project Assistant

Laboratory Excellence Defined

Advanced Technology Laboratories is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ATL is accredited by the State of California, Oregon (NELAP), and DoD (Mobile Lab, EPA 8260 Modified) and holds various SBE, DBE and MBE certificates and a USDA soil permit. ATL takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates.

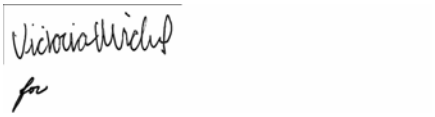
Re: ATL Work Order Number : 2200318
Client Reference : Orbis - Santa Fe Springs / 721033501

Enclosed are the results for sample(s) received on March 08, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,



Victoria Michel, Project Assistant
Victoria.Michel@atlglobal.com
Authorized to Release on 03/14/22 15:26 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

SUMMARY OF SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
SB-07-10'	2200318-01	Soil	3/08/22 7:26	3/08/22 16:32
SB-07-35'	2200318-02	Soil	3/08/22 7:55	3/08/22 16:32

Certificate of Analysis

Langan Engineering & Environmental Services	Project Number : Orbis - Santa Fe Springs / 721033501
515 South Flower Street Suite 2860	Report To : Julian Grochocki
Los Angeles , CA 90071	Reported : 03/14/2022

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
L3	Laboratory control sample outside in-house established limits but within method criteria.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

JONES ENVIRONMENTAL LABORATORY RESULTS

Client:	Langan Engineering and Environmental Services	**Report date:**	3/10/2022
Client Address:	515 South Flower Street,	**Jones Ref. No.:**	E-1252
	Los Angeles, CA	**Client Ref. No.:**	721033501
Attn:	Luis Navarro	**Date Sampled:**	3/10/2022
		Date Received:	3/10/2022
Project:	721033501 Santa Fe Springs	**Date Analyzed:**	3/10/2022
Project Address:	10845 Koontz Ave,	**Physical State:**	Soil Gas
	Santa Fe Springs, CA		

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of collection.

		Date Received:	3/11/2022
Project:	721033501 Santa Fe Springs	**Date Analyzed:**	3/11/2022
Project Address:	10845 Koontz Ave,	**Physical State:**	Soil Gas
	Santa Fe Springs, CA		

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of collection.

Client:	Langan Engineering and Environmental Services	**Report date:**	3/11/2022
Client Address:	515 South Flower Street	**Jones Ref. No.:**	G-0422
	Los Angeles, CA	**Client Ref. No.:**	721033501
Attn:	Luis Navarro	**Date Sampled:**	3/10/2022
		Date Received:	3/10/2022
Project:	721033501 Santa Fe Springs	**Date Analyzed:**	3/10/2022
Project Address:	10845 Koontz Ave.	**Physical State:**	Soil Gas
	Santa Fe Springs, CA		

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of collection.

Re: ATL Work Order Number : 2200342
Client Reference : Orbis- Santa Fe Speings 721033501

Enclosed are the results for sample(s) received on March 10, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Christine Caballero, Client Relations Manager
Christine.Caballero@atlglobal.com
Authorized to Release on 04/08/22 14:15 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

515 South Flower Street Suite 2860	Report To : Julian Grochocki
Los Angeles , CA 90071	Reported : 04/08/2022

Notes and Definitions

R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L3	Laboratory control sample outside in-house established limits but within method criteria.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2200355
Client Reference : Orbis - Santa Fe Springs 721033501

Enclosed are the results for sample(s) received on March 11, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Christine Caballero, Client Relations Manager
Christine.Caballero@atlglobal.com
Authorized to Release on 03/14/22 21:00 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Notes and Definitions

S12	Surrogate recovery outside in-house established limit but within method default criteria.
S1	Surrogate recovery was above laboratory acceptance limit. No associated target analyte was detected in the sample.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L3	Laboratory control sample outside in-house established limits but within method criteria.
L2	Laboratory Control Sample and/ or Laboratory Control Sample Duplicate outside of acceptance limits. Reextraction and/or reanalysis is not possible due to limited amount of sample.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2200333
Client Reference : Orbis- Santa Fe Springs / 721033501

Enclosed are the results for sample(s) received on March 09, 2022 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or Project.Management@atlglobal.com.

Sincerely,

Christine Caballero, Client Relations Manager
Christine.Caballero@atlglobal.com
Authorized to Release on 04/07/22 10:19 on Behalf of

Amy Leung
Laboratory Director

The test results in this report relate exclusively to the samples as received by the laboratory, and meet the requirements of the methodology under which they were reported; any exceptions are noted within the report and/ or case narrative.

The cover letter/ signature page and the case narrative are integral parts of this analytical report; the absence of any portion of the report renders the report invalid. This report shall not be reproduced except in full, and shall have the express written approval of the laboratory, and the original client firm to do so

.

The electronic signature on this report is signed by an authorized signatory of Advanced Technology Laboratories, and is intended to be legally binding as the equivalent of a handwritten signature.

Langan Engineering & Environmental Services	Project Number : Orbis- Santa Fe Springs / 721033501
515 South Flower Street Suite 2860	Report To : Julian Grochocki
Los Angeles , CA 90071	Reported : 04/07/2022

Notes and Definitions

S12	Surrogate recovery outside in-house established limit but within method default criteria.
S1	Surrogate recovery was above laboratory acceptance limit. No associated target analyte was detected in the sample.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
MO	Manufacturer omitted analyte within the stock standard.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
L4	Laboratory Control Sample outside of control limit but within Marginal Exceedance (ME) limit.
L3	Laboratory control sample outside in-house established limits but within method criteria.
L2	Laboratory Control Sample and/ or Laboratory Control Sample Duplicate outside of acceptance limits. Reextraction and/or reanalysis is not possible due to limited amount of sample.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.
