II. ACTIVITIES DECLARATION

If your facility does any of the following activities. ▸ Submit Business Owner/Operator Identification page and any of the following applicable form(s)

Does Your Facility...			If Yes, Please Complete...
A. HAZARDOUS MATERIALS Have hazardous materials stored on site (for any purpose) equal to or greater than 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids stored in ASTs and USTs) ?	☒YES ☐NO	4	▸ HAZARDOUS MATERIALS INVENTORY - CHEMICAL DESCRIPTION FORM (OES Form 2731) ▸ CONSOLIDATED CONTINGENCY PLAN ▸ SITE MAP
B. UNDERGROUND STORAGE TANKS (USTs) 1. Own or operate underground storage tanks (UST) ? (If yes, Forms under A above must also be completed)	☐YES ☒NO	5	▸ UST FACILITY ▸ UST TANK (one page per tank) ▸ CONSOLIDATED CONTINGENCY PLAN
2. Intend to upgrade existing or install new USTs ?	☐YES ☒NO	6	▸ UST APPLICATION PACKAGE
3. Do you intend on closing a UST that held or holds hazardous materials or waste?	☐YES ☒NO	7	▸ UST CLOSURE APPLICATION PACKAGE
C. ABOVE GROUND PETROLEUM STORAGE TANKS (APSTs or ASTs) Own or operate APSTs above these thresholds: 1. any tank capacity is greater than 660 gallons, or, 2. the total capacity for the facility is greater than 1,320 gallons?	☐YES ☒NO	8	▸ No form is required at this time. However, if you answered yes, prepare and maintain a Spill Prevention Control and Countermeasure (SPCC) plan to address oil spills and releases from the APST(s) at your facility.
D. HAZARDOUS WASTE: 1. Generate hazardous waste?	☒YES ☐NO	9	▸ WASTE GENERATOR FORM ▸ CONSOLIDATED CONTINGENCY PLAN
2. Recycle onsite more than 100 kilograms/month (or 220 pounds/month) of excluded or exempted recyclable materials (per Health and Safety Code Section 25143.2) ?	☐YES ☒NO	10	▸ RECYCLABLE MATERIALS REPORT (For claiming exclusions or exemptions under Health and Safety Code Section 25143.2)
3. Treat Hazardous Waste on site?	☐YES ☒NO	11	▸ ONSITE HAZARDOUS WASTE TREATMENT - FACILITY ▸ ONSITE HAZARDOUS WASTE TREATMENT - UNIT (one page per unit)
4. Treatment subject to Financial assurance requirement (for Permit by Rule and Conditional Authorization) ?	☐YES ☒NO	12	▸ CERTIFICATION OF FINANCIAL ASSURANCE
5. Consolidate Hazardous Waste generated at a remote site?	☐YES ☒NO	13	▸ REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION
6. Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned onsite?	☐YES ☒NO	14	▸ HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
E1. REGULATED SUBSTANCES (RS) 1. Have Regulated Substances (RS) including extremely hazardous substances (EHS) stored on site at greater than the threshold planning quantities established by the California Accidental Release Prevention Program (Cal ARP) ?	☐YES ☒NO	15a	▸ HAZARDOUS MATERIALS INVENTORY - CHEMICAL DESCRIPTION FORM (OES Form 2731) ▸ REGULATED SUBSTANCE REGISTRATION FOR (OES Form 2735.6) ▸ RISK MANAGEMENT PLAN (when required)
E2. INDUSTRIAL WASTE/RELEASE REPORT 2. Discharge any liquid waste into the public sewer system or storm drain other than domestic waste water from restrooms?	☐YES ☒NO	15b	▸ Contact the Santa Fe Springs Fire Department at (562 944-9713 to determine permit requirements.
3. Are you aware of any hazardous materials releases at your facility?	☐YES ☒NO	15c	▸ Contact the Santa Fe Springs Fire Department at (56 944-9713 regarding a Preliminary Remediation Assessment

CERTIFICATE OF COMPLIANCE

BUSINESS Paramount Roll & Forming	SITE ADDRESS 12120 Florence & (10819 Koontz)
INSPECTOR Tom Hall	DATE OF INSPECTION 9/24/2012

This form must be completed and returned to the issuing inspector within 30 days of your facility's inspection unless otherwise noted. Send this form and any supporting documentation to the address listed above. Failure to return this certification may result in a re-inspection of your facility and may require re-inspection fees pursuant to City of Santa Fe Springs Municipal Code Section 97.104.

The violation(s) cited have been corrected by the following actions:

10/15/12 American Oil Company came to our facility and pumped out all the water / mud / oil and ~~take~~, properly disposed.

I certify that the violations cited on the Notice of Violation & Inspection Report have been corrected.
I have personally examined any attached documentation submitted as proof of compliance and I believe the information to be true and accurate.
Based on my examination of any attached documentation and inquiry of the individual(s) who prepared or obtained them, I believe the information to be true, accurate, and complete.
I am authorized to file this certification on behalf of the responsible party.
I am aware that there are significant penalties for submitting false information and/or for non-compliance and declare that the foregoing certification is true and correct.

Business

CHECK THE APPROPRIATE BOXES BELOW	YES	NO
1. Will you be storing or warehousing a product or commodity in an area exceeding 500 sq. ft.? If so, complete items A & B below.		X
A. Rack storage over 12 feet in height?		X
B. Plastics, rubber goods, tires, flammable liquids, idle pallets over 6 feet in height?		X
2. Will you be cooking food commercially?		X
3. Will you have compressed gases?	X	
4. Will there be any LPG storage outside the building?		X
5. Will you be using industrial baking or drying ovens?		X
6. Will you be welding or cutting, using flame producing devices?	X	
7. Will you be installing any spray booths or is there an existing spray booth in this building?		X
8. Will you be repairing any vehicles inside the building?		X
9. Will assemblies in excess of 49 persons take place on your premises (conference rooms, lunchrooms, restaurants, etc.)?		X
10. Will you be doing any operations that produce explosive or flammable DUST (woodworking, sanding/grinding of any wood material, metal polishing, etc.)?		X
11. Will you be applying flammable and/or combustible finishes?		X
12. Will you be using and/or installing any dip tanks?		X

CHECK THE APPROPRIATE BOXES BELOW	YES	NO
13. Will there be any LPG stored or used inside the building other than tanks on forklifts?		X
14. Will you handle, use, or store any hazardous materials in tanks, drums, containers or any closed or open system?		X
15. Will you have explosives, blasting agents or radioactives?		X
16. Are the quantities of hazardous materials handled greater than 499 lbs., 54 gal., 199 cu. ft. or over the Threshold Planning Quantity for materials regulated by CalARP?	X	X
17. Are there or will there be any active or inactive, or closed underground storage tanks on the property?		X
18. Does your site have any visible or below ground contamination from past or present chemical use?		X
19. Will you generate, store, transport, or treat any hazardous waste (used oil, spent parts cleaner solution, waste anti-freeze, waste ink, waste paint thinner, metal sludge, etc.)?		X
20. Will you generate and/or discharge any wastewater (non-domestic) to the sewer system?		X
21. Does your facility's SIC code fall within the industrial or commercial category for the storm water program? Refer to storm water fact sheet.	X	X

Business Description: IRON WORKS (ALL WORK DONE INSIDE THE BLDG). (NO OUTDOOR STORAGE).

The above information is correct and true to the best of my knowledge. Failure to provide correct information may result in fines up to $2,000 per day of violation and/or imprisonment. The City of Santa Fe Springs is not responsible for any losses resulting from any permitted process.

FEES DUE: New business/New location Inspection Fees (Check appropriate box below)
☒ Up to 100,000 sq. ft per floor $215.00; Approximate sq. ft. 4000. ☐ Over 100,000 sq. ft. per floor $420.00; Approximate sq. ft. _____

Gentlemen:

With reference to our application for a building permit to construct a metal shop building at 10819 S. Koontz Avenue, Santa Fe Springs, California, we wish to advise that there shall not be any industrial waste from this installation requiring a sewer connection. The sewer connection shall be for domestic use only. Accordingly your approval for this permit is requested.

Very truly yours,

HATHAWAY COMPANY

J. I. HATHAWAY,
Vice-President

You are not in compliance with Ch. 6.95 of the California Health and Safety Code, Section 25500 & Ordinance #685 (Hazardous Materials) and/or Chapter 18 of the City Municipal Code (Industrial Waste) for the following reasons:

- ☐ Hazardous Materials Business Plan has not been submitted or is incomplete.
- ☐ Hazardous Material Plot Plan has not been submitted or is inadequate.
- ☐ Emergency Response Plan has not been submitted or is inadequate.
- ☐ Hazardous Materials Inventory Sheet has not been submitted or is inadequate.
- ☐ Annual fee has not been submitted or is inadequate.
- ☐ Delinquent payment of annual fee. A penalty has now been applied- 50% for Hazardous Materials, 10% per month for Industrial Waste.
- ☐ Excessive oil/grease/solids in pretreatment facilities.
- ☐ pH of waste water is outside of establilshed limits.
- ☐ Rain diversion system is not working properly.
- ☒ Discharging industrial waste to the ground.
- ☐ Not having a valid Industrial Waste Discharge Permit.
- ☐ Other WASTE MOTOR OIL STORED IN BUCKETS SPILLED OFF-SITE INTO THE CURB.

You must correct the above checked item(s) by: _____

Failure to correct the above violations by the specified due date may result in fines up to $2000.00 per day of violation and/or imprisonment.

Compliance with the Hazardous Material Business Plan Program does not ensure compliance with the Uniform Fire Code or other applicable regulations. The giving of this notice and the recent inspection of your facility is not a representation by the City that no other hazardous conditons exist on your premises.

Re: Notice Of Violation

Dear David:

The purpose of this letter is to inform you that we have cleaned up the waste oil storage area of excess oil spillage (at our property which is located at 10845 Koontz Ave., Santa Fe Springs). Each storage container was cleaned thoroughly, and each one capped. The wash rack area was also steam cleaned (and we were careful that the water and grease sludge went into the drain with the clarifier). Additionally, I'll be contacting you by April 15, and arrange for a oil and grease analysis to determine the extent of soil contamination.

Sincerely,

Steven H. Thornton

CITY OF SANTA FE SPRINGS
DEPARTMENT OF FIRE-RESCUE
CERTIFIED UNIFIED PROGRAM AGENCY

IN THE MATTER OF: Paul G. Angelos

Paul G. Angelos Angelus Shoe Polish Co., Inc. 12060 Florence Avenue Santa Fe Springs, CA 90670	)	DOCKET No: SFS 2015-606822-001 CONSENT ORDER
Paul G. Angelos 4901 Windsong Avenue La Palma, CA 90623	)	Health and Safety Code Section 25404.1.1
EPA - ID – CAL000367092 Angelus Shoe Polish Co., Inc. Respondent.	)	

The City of Santa Fe Springs Department of Fire-Rescue (Department) and Angelus Shoe Polish Co., Inc. (Respondent) enter into this Consent Order and agree as follows:

1. Respondent manufactures shoe polish and related materials and generates hazardous waste at 12060 Florence Avenue, Santa Fe Springs, California 90670 (Site).

2. The Department inspected the Site on April 2 and August 13, 2015.

3. The Department alleges the following violations:

3.1. Respondent violated California Health and Safety Code (CHSC) section 25507(a) by not submitting a business plan. To wit, facility was observed to have numerous chemicals on site without having submitted a business plan, site map, emergency response plan and training plan into the California Environmental Reporting System (CERS).

3.2. Respondent violated Title 22, California Code of Regulations (CCR), section 66262.11 by not making a waste determination on wastes/materials brought on site from its prior

location at 13500 Excelsior Drive (approximately four years ago). To wit, wastes/materials have been stored in the yard area since the facility relocated in 2011 and the viability of the wastes/materials has not been determined.

3.3 Respondent violated City of Santa Fe Springs Code of Ordinances section 97.410 by discharging industrial waste to the sewer without a permit. To wit, the Respondent discharges industrial waste to the sewer and does not have a permit for such activity.

3.4 Respondent violated City of Santa Fe Springs Code of Ordinances section 97.400 by failing to obtain a Certified Unified Program Agency (CUPA) permit. To wit, Respondent has been operating without a valid CUPA permit since 2011/2012.

3.5 Respondent is non-compliant with California Fire Code (CFC) Sections 5003.11, 3201.11, 5704.4.2, and Chapter 9 related to the storage, use, and handling of flammable, combustible, and other hazardous materials. To wit, Respondent exceeds maximum allowable quantities of hazardous materials in a non-H type occupancy; does not have a permit for high pile rack storage; exterior storage exceeds pile height limits, quantities, aisle spacing, and spill containment; and fire protection has not been adequately serviced and maintained as required by California Code of Regulations, Title 19 (19CCR), and Division 1 of the California Code of Regulations.

4. The parties wish to avoid the expense of litigation and to ensure prompt compliance.

5. Jurisdiction exists pursuant to Health and Safety Code (HSC) section 25404.1 and the City of Santa Fe Springs Code of Ordinances Sections 97.600 and 93.01.

6. Respondent waives any right to a hearing in this matter.

7. This Consent Order shall constitute full settlement of the violations alleged above, but does not limit the Agency from taking appropriate enforcement action concerning other violations.

SCHEDULE FOR COMPLIANCE

8. Respondent shall comply with the following:

8.1.1. Within 30 calendar days of the effective date of this order, Respondent shall submit all the required information into the CERS system. Any deficiencies identified shall be corrected within 7 days of notification.

8.1.2. Within 30 calendar days of the effective date of this order, Respondent shall make a waste determination on all old materials/wastes which were brought to the site from their prior location. Any wastes identified will be properly labeled and managed.

8.1.3. Within 30 calendar days of the effective date of this order, Respondent shall submit an application to discharge industrial waste to the sewer. Any deficiencies identified shall be corrected within 7 days of notification.

8.1.4. Within 30 calendar days of the effective date of this order, Respondent shall complete requirements to enable a CUPA permit to be issued to the facility (CERS submission and payment of past years permit fees).

8.1.5. By January 28, 2016, Respondent shall submit conceptual plans leading to the design and construction of H-Rooms and exterior storage areas for the blending, mixing, handling, use, and storage for all flammable, combustible, and other hazardous materials throughout the facility. Plans shall include, but not be limited to: a detailed Fire Code analysis and design with regards to Fire Code compliance for flammable and combustible materials, H-Room construction, interior and exterior storage, and fire sprinkler protection. All aspects of the

COMMENTS REGARDING A REQUEST FOR CASE CLOSURE – CITY OF SANTA FE SPRINGS "MINI REGIONAL STUDY," 12060, 12046 AND 12078 EAST FLORENCE AVENUE, SANTA FE SPRINGS, CALIFORNIA (SCP NO. 1138B AND SITE ID NO. 2040143)

Dear Mr. Voorhees:

We would like to thank you and your consultant, Mr. Stillman of Alaska Petroleum Engineering for filling out our *Case Review Form and Tables* and sending them back on May 6, 2008 to address the above referenced properties. This material was provided to augment a closure request included in the *Third Quarter 2007 Monitoring Report* received November 19, 2007. By agreement with the Santa Fe Springs Fire Department (SFSFD), we understand that agency has been overseeing soil investigation efforts at the site. Mr. Stillman has submitted soil gas survey reports, a deed restriction, and SFSFD closure letters for some of the properties and will soon submit the remaining documents.

Based on discussions with Mr. Stillman and our review of the documents provided to date, site closure for soil only has been or will be granted by the SFSFD for each of the affected properties. Regional Board staff needs to first conclude its review of the submitted documents before final site closure can be considered. Regional Board staff will assess the current site conditions with regard to their potential effect on groundwater resources, human health and the environment. We anticipate this process to take 45 to 60 days from the date of the last submittal.

The provided documents indicate significant concentrations of volatile organic compounds (VOCs) in groundwater are originating from upgradient offsite sources. Two Regional Board lead sites are located in the upgradient direction that have historically had significant VOC contamination in soil and an assessment of the groundwater has yet to be completed. These findings may support your contention that your site is not the source of the elevated VOC concentrations in the groundwater beneath the sites and will be considered when evaluating your case for closure.

1.0 Introduction

The subject property of this soil gas survey report is Kimmerle Bros. ("Kimmerle") located at 12060 E. Florence Avenue (hereafter referred to as the "Site"). The building was constructed in the early 1960s; no improvements (i.e., additions, etc.) have been made since that time.

Volatile organic compounds are present in the subsurface soil at the Site. The constituents of concern ("COCs") are identified as benzene, toluene, xylenes, and ethylbenzene ("BTXE"). The results of the survey pertain to analyzing the COCs and evaluating the results thereof for potential vapor intrusion to indoor air.

2.0 Technical Approach

2.1 *Investigation Regulatory Guidelines and Protocols*

At a minimum, and as qualified in the *Alaska Petroleum* workplan dated January 2007, this survey complied with the following regulatory documents.

- City of Santa Fe Springs ("City") "Response for Further Action Proposal" dated January 11, 2007.
- California Environmental Protection Agency ("Cal-EPA"), Department of Toxic Substances Control, ("DTSC"), "Interim Final, Guidance For The Evaluation And Mitigation of Subsurface Vapor Intrusion to Indoor Air", guidance document dated December 14, 2004, revised February 7, 2005.
- Cal-EPA Table 2, "Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties (January 2005).
- California Regional Water Quality Control Board - Los Angeles Region ("Regional Water Board") and the DTSC, "Advisory - Active Soil Gas Investigations", January 28, 2003.

2.2 *Sample Locations and Identification*

The soil gas samples were collected on-Site near:

(1) known near surface soil boring contaminant at locations SGKBB1 ("S"oil "G"as "K"immerle "B"ros "B"oring 1);

(2) previously detected soil gas at location SGL (1998 "S"oil "G"as "B"orings L); and

(3) locations along each side of building foundations (SGKBEB1 through SGKBEB4 ["S"oil "G"as "K"immerle "B"ros. "E"xterior "B"uilding 1 through 4).

The survey locations are depicted on the figure presented in ***Attachment 1, Soil Gas Sample Locations***.

2.3 *Sample Methodology*

Pursuant to the City's request:

> *"the specific means of collecting and analyzing the soil gas samples must be included in the final report and any deviation from the guidelines referenced must be clearly specified."*

Vapor point installation and sampling followed the January 2003 Regional Water Board/DTSC guidelines. The vapor probes were installed using a Geoprobe® direct-push sampling rig. Centrum Analytical Laboratories, Inc. (a State certified laboratory) conducted the sampling, and performed the analysis on-Site using a mobil laboratory. In addition, pursuant to the 2005 DTSC guidelines to evaluate vapor intrusion, soil gas samples were collected at five foot depth intervals. The maximum sample depths were 20 and 40 feet below ground surface ("bgs"). There were no deviations *"from the guidelines referenced"*.

Specifically, the vapor wells were installed and sampled according to the following protocols.

- Constructed with ¼ inch diameter polyethylene tubing following the protocols in Section 2.2.5 - Soil Gas Probe Emplacement Methods.

- Leak tested (Section 2.4 - Leak Test) and purged (Section 2.3 - Purge Volume Test and 2.5 - Purge/Sample Flow Rate).

A purge volume test was conducted prior to collecting the vapor samples. This test is conducted at the first soil gas sampling event, which was at the Consolidated Graphics property. The appropriate purge volume (one, three or seven) was selected based on the highest concentration of the COCs detected,

which was benzene. Seven purge volumes were utilized for all analysis throughout the study area.

- Sampled using a vacuum pump affixed to a glass bulb wrapped in aluminum foil. A glass syringe was used to obtain a sample for direct injection into the gas chromatograph/mass spectrometer (Section 2.6 - Soil Gas Sampling) for analysis.

- Analyzed for BTXE according to the United States Environmental Protection Agency ("USEPA") Method 8260B.

2.4 *Workplan Qualifications and/or Deviations*

1. The maximum depth that the vapor points were set was determined from evaluating the contaminant concentrations obtained from discrete soil samples previously collected. Typically, the maximum vapor point depth was set five to 10 feet below the reported soil contamination. Per the guidance document, if no soil analytical data was available (e.g., in the external building locations) the maximum depth of the vapor points was set at 20 feet bgs.

2. Utility trench locations were not sampled since: (1) soil gas results obtained in close proximity to these trenches exceeded the CHHSL criteria, and (2) these same utility trenches extended southward onto the Western Allied property wherein soil gas samples were collected.

3. No shallow soil gas samples (five and 10 ft bgs) were able to be collected from locations B1 (southwest corner of the property) and B2 (southwest from the building) due to "no flow" conditions encountered.

- Subsequent to the vapor sampling that was conducted in March 2007, two additional nested vapor wells were installed with City Fire's approval. These vapor wells were sampled on June 1st. These two wells, SGKBEB3 and SGKBEB4 ("S"oil "G"as "K"immerle "B"ros "E"xterior "B"uilding 3 and 4), were installed to obtain additional data immediately adjacent to the structure for Shallow Gas Human Health screening purposes.

The City requires that the soil gas analytical results be compared to the residential use CHHSLs, unless the property owner agrees to limit Site usage to only commercial/industrial via a deed restriction. Such a deed restriction allows the analytical results to be compared to the commercial use CHHSLs.

The property owner agreed to the deed restriction; therefore, the analytical results are compared to only the commercial use CHHSLs.

6. The City requires that a Human Health Risk Assessment ("HHRA") be completed if the results of the study fail the criteria set forth in the January 2005 Cal-EPA "Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties". As specified in this document the soil gas screening levels are based on soil gas data "<1.5 meters (five feet) below a building or the ground surface," because the purpose of the CHHSLs is to screen sites for potential human health concerns. Accordingly, to assess the health risks of the workers inside the building only the results obtained from a depth of five feet bgs are screened using the CHHSL shallow soil gas screening levels.

7. According to the DTSC document, Revised February 2005, "...the samples should be collected as close to the building as possible. At a minimum, soil gas samples should be collected at two locations, along opposite sides of the building." All four exterior sides of the building were sampled.

8. The complete vertical extent of detected soil gas was not determined at each location. Further vertical delineation was not conducted because the results near the building at five feet bgs did not exceed the Shallow Gas Human Health CHHSL criteria. Only BB2 wasn't really delineated, because the soil vapor analytical results do not suggest that vertical migration of COCs is an issue.

9. Some of the soil gas results exceeded the analytical method's detection limits, and higher dilution analysis was required. For example, the analytical method's detection limit at seven purge volumes for benzene is 0.10 microgram per liter of air ("µg/l") and <5 µg/l was reported by the laboratory. If a previous result exceeded CHHSL criteria, that depth interval was not resampled.

10. The approximate location of the 1988 soil gas location "L" was determined to be close to KBB2. Therefore, this sample location is identified as SGKBB2.

11. Pending review of this report by City staff, and if acceptable, the soil gas tubing will be cut and plugged below grade. The surface will then be repaired with cold patch asphalt.

3.0 Findings

A copy of the analytical report is contained in ***Attachment 2, Laboratory Report.*** The analytical data was evaluated against the commercial use CHHSLs found in Table 2 of the aforementioned Cal-EPA document. The summary of the analytical results is provided in ***Attachment 3, Summary Table: Soil Gas Survey Analytical Results.*** Included in this summary is the evaluation criteria (CHHSLs) from which the results were evaluated against; the samples that exceeded the criteria are highlighted. As specified in the CHHSL document the soil gas screening levels are based on soil gas data "<1.5 meters (five feet) below a building or the ground surface." Accordingly, only the results from a depth of five feet bgs are screened using the CHHSL shallow soil gas screening levels.

Some vapor samples exceeded the commercial use CHHSL for benzene of 0.122 µg/l (or 1.22 E+02 µg/m³). The benzene concentrations are identified in the following table by depth. Vapor samples that exceed the shallow soil gas CHSSL for benzene at five feet are highlighted in "red". All results are reported in µg/l.

Benzene Concentrations

	Depth (feet below ground surface)							
	5	10	15	20	25	30	35	40
Sample ID								
SGKBB1	NS [1]	NS	0.82	0.9	0.87

[1] NS = Not Sampled; no flow from vapor point

4.0 Conclusions and Opinion Regarding Further Action

1. A comparison of analytical results to the residential use CHHSLs is require unless a commercial use deed restriction is in place. The property own⋹ agreed to the deed restriction.

TITLE:

Soil Gas Survey

Kimmerle Bros

DWN:	DES:	PROJECT N
K.A.E.	K.A.E.	2311
CHKD:	APPD:	

a. Deed restriction language will be provided to the City prior to recording with the County Registrar.

b. The COC results were evaluated against the commercial use CHHSLs.

2. A Site-specific "human health risk assessment must be prepared by a board certified toxicologist and submitted" is required if the analytical results exceed the commercial use CHHSLs. NO soil gas samples exceeded the benzene CHSSL of 0.122 µg/l at five feet bgs near the building.

3. The building was constructed in the early 1960s. Based upon the soil vapor analytical results, vertical migration of COCs does not appear to be an issue.

The CHHSLs referenced in this report pertain to the "emissions of volatile chemicals from contaminated soil or groundwater and their potential intrusion into overlying buildings." Therefore, "closure" determination should take into consideration:

(1) potential exposure pathways and scenarios,

(2) groundwater and protected resources, and

(3) nuisance (e.g., odors, staining) and gross contamination concerns.

→ potential receptor, not pathway; addi by de r

The potential exposure pathways are addressed with the issuance of a deed restriction. The groundwater issue is being addressed through further assessment with oversight from the Regional Water Board. There are no apparent odors associated with the soil gas, and the contaminant source to the southwest of the Site (i.e., on the City property) has been remediated.

Furthermore, since:

(1) near surface soil gas contamination was reported exterior to the building, and

(2) a deed restriction will be placed on the property limiting the use to existing commercial/industrial use.

No further vapor sampling is recommended. A "No Further Action" letter should be granted that pertains to soil.

COMMENTS

Lab results of soil samples collected from various locations within the common excavation for both of the dry wells and Pit Nos. 1 and 4 indicate that relatively low levels of contamination remain in-place to depths of 50 feet below grade. Contaminants consist of TPH(G), TPH(D), BTEX, Methylene, Methylene Chloride, Dichlorobenzene, and Dichloroethane. Sampling locations indicate the constituents detected by Method 8240 occur at the deepest depths whereas, the TPH and BTEX occur predominantly in the sidewalls at shallower depths. It should be noted that previous sampling from four (4) borings in the vicinity of one of the dry wells revealed non-detect lab results at 60 feet below grade. Final confirmation samples collected from the excavation for Pits Nos. 2 and 3 tested non-detect for TPH and BTEX.

Regional hydrogeologic information supplied in the 6/17/91 Assessment Proposal by APEE does not specifically report what regional aquifers may be encountered below the site Information obtained from Bulletin 104 (DWR, 1961) indicates that the first regional aquife below the site is the Artesia Aquifer. Various plates suggest that this aquifer may b encountered at roughly 40 feet below grade with a thickness of 40 feet. This suggests th the contamination remaining in-place at depths below 40 feet may be within the Artes Aquifer however, County well records do not report any wells, past or present, encounteri water at this depth or being screened at this depth. The next lower regional aquifer bel the site is shown as the Gage Aquifer at roughly 100 feet below grade.

Conclusions: Lab results of confirmation samples from the bottoms and sidewalls of m- excavation indicate some levels of contamination remain in-place. Levels of TPH(G), TPH(and BTEX are less than those allowed by the Leaching Potential Analyses of the LUFT Man Hydrogeologic information reports that the first regional aquifer below the site is Artesia Aquifer at roughly 40 feet below grade and a thickness of 40 feet. However, Co- records indicate groundwater has not been encountered at this depth and no existing well screened at this depth. First groundwater may not occur until the regional Gage Aquife encountered at roughly 100 feet below grade. Therefore, it is recommended that a reque made to close this site.

REPORT:

I made visit to this site to observe the backfilling and set up of a bio-remediation bed to treat diesel contaminated soil.This inspection had been requested by Mr. Steve Collins of CENTEC Engineering.I met Mr. Collins at the site, he explained that the backfilling operation had started on Tuesday this week and all of the previously tested "clean" soil was placed back into the open pit. The contaminated soil with a volume of about 100 cubic yard had been placed into a bio-bed to be treated further.This soil had a residual contamination of order of 400 ppm.The backfilling and subsequent compaction of the soil in the pit had not completely filled the excavation and a shallow pit of 4-5 feet with a diameter of about 120 feet was left.See Pic.1 and 2 for bio-bed and the remaining pit.

WAY TRUST/SUPERIOR OIL TOOL

Soil Gas Survey Work Plan for
12046 E. Florence Avenue

Dear Mr. Stillman:

The City of Santa Fe Springs Fire Department (SFSFD) has completed the review of the Soil Gas Survey Work Plan for the property located at 12046 E. Florence Avenue. This property is located in the vicinity of a former natural gas processing plant and was part of a "Mini-Regional" study to assess the vertical and lateral extent of contamination.

In response to our department's comments regarding the "Mini-Regional" Study Report, you proposed conducting a soil gas survey at this site. The results of the soil gas survey will determine whether or not the residual subsurface contamination poses a human health risk to site occupants. The workplan outlines how the soil gas survey will be conducted and what actions will be taken if the soil gas levels exceed indoor air human health screening levels.

The location of the proposed soil gas samples is provided in the workplan. While the workplan does not provide specific details as to how the soil gas sampling will be conducted, it does reference the sampling protocol detailed in the State's *Advisory-Active Soil Gas Investigation* (1/28/2003). The Workplan also references the State's *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion for Indoor Air* (2/7/2005).

Mini-Regional Study Site Investigation Report Review and Response to Further Action Proposal

Dear Mr. Stillman:

The City of Santa Fe Springs Fire Department (SFSFD) has completed the review of the May 11, 2006 "Mini-Regional" Study report assessing the extent of hydrocarbon-impacted soil contamination resulting from a former natural gas processing plant. Your written response to the SFSFD's November 2, 2006 correction list was submitted on January 3, 2007.

The impact from the gas plant contamination extends across four parcels of property. The Workplan for this "Mini-Regional" Study was approved by the Regional Water Quality Control Board (RWQCB) on July 14, 2004. As a condition of approval, the RWQCB listed various cleanup criteria and human health assessment procedures. The RWQCB amended this condition in an October 4, 2006 letter which transferred soil investigation and human health risk assessment oversight to the SFSFD. The groundwater investigation portion of this study will continue to be overseen by the RWQCB.

The contamination at one of these four parcels (Little Lake Village senior housing project) has been previously assessed and mitigated under the oversight of both the Regional Water Quality Control Board (RWQCB) and the City of Santa Fe Spring Fire Department. This "Mini-Regional" Study report addresses the remaining three impacted parcels located at 12046, 12060, and 12078 East Florence Avenue.

Your January 3, 2007 response includes an "Opinion Regarding Further Action" for each of the remaining three parcels. The following summarizes each proposal followed by the SFSFD's response:

Joseph D. Serrano, Sr., Mayor • Ronald S. Kernes, Mayor Pro Tem
City Council
Louie González • Betty Putnam • Gustavo R. Velasco
City Manager

1. **12046 E. Florence (Western-Allied):** Conduct a soil gas survey for BTEX (benzene, toluene, ethylbenzene and xylene) near soil boring locations WAB1 and WAB4, 1988 soil gas locations "J" and "K", and the perimeter of the building. Should the results of the soil gas survey indicate "no upward migration of contaminants", a human health risk assessment will not be necessary and a no further action letter will be requested. Direct contact to known hydrocarbon-impacted soil has been addressed via a 1989 deed restriction requiring the owner to maintain the asphalt parking lot "cap" along the western property line.

   SFSFD Response

   - Provide a copy of the soil gas workplan prior to conducting the soil gas survey. The procedure for sampling and assessment must be consistent with the DTSC's December 15, 2004 "Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air" and approved by our department.
   - If the levels of BTEX exceed the Indoor Air Human Health Screening Levels found in Table 2 of the *California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties Guidelines* (January 2005), a site-specific human health risk assessment must be prepared by a board certified toxicologist and submitted to our department for review. If the resulting risk exceeds acceptable levels, mitigation measures will be required.
   - Provide a copy of the recorded deed restriction. If the deed restriction limits the site to commercial/industrial usage only, you may use the screening levels listed for commercial/industrial sites. If not, residential site screening levels must be used.

2. **12060 E. Florence Ave (Kimmerle Brothers):** Conduct a soil gas survey for BTEX (benzene, toluene, ethylbenzene and xylene) near soil boring locations KBB1, KBB2, KBB5, and KBB12, 1988 soil gas locations "L", and the perimeter of the building. If the BTEX levels indicate upward migration of contaminants, an Indoor Air Quality (IAQ) study will be conducted. A deed restriction will be recorded limiting the site to commercial/industrial uses only. Should the results of the soil gas survey or the IAQ (if necessary) indicate "no upward migration of contaminants", a human health risk assessment will not be necessary and a no further action letter will be requested.

   SFSFD Response

   - Provide a copy of the soil gas workplan prior to conducting the soil gas survey. The procedure for sampling and assessment must be consistent with the DTSC's December 15, 2004 "Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air" and approved by our department.
   - If the concentration of contaminants in the soil gas survey exceed the Indoor Air Human Health Screening Levels found in Table 2 of the *California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties Guidelines* (January 2005), you are proposing to conduct an IAQ study. A Workplan for this study (if required) must be provided to our department and approved prior to conducting the IAQ.
   - If the screening levels are exceeded, a site-specific human health risk assessment must be prepared by a board certified toxicologist and submitted to our

department for review. If the resulting risk exceeds acceptable levels, mitigation measures will be required.

- A copy of the proposed land use restriction language must be provided to our department prior to recording the deed restriction with the County Registrar. A copy of the recorded deed restriction will be required before a no further action letter can be issued.

3. **12078 Florence Ave. (Consolidate Graphics):** Conduct a soil gas survey for the chemicals of potential concern (BTEX) in proximity to previous methane monitoring sample locations B1 through B4. Also monitor for BTEX along the perimeter of the building using the existing methane monitoring wells. A deed restriction will be recorded limiting the site to commercial/industrial uses only. Should the results of the soil gas survey indicate "no upward migration of contaminants", a human health risk assessment will not be necessary and a no further action letter will be requested.

SFSFD Response

- Provide a copy of the soil gas workplan prior to conducting the soil gas survey. The procedure for sampling and assessment must be consistent with the DTSC's December 15, 2004 "Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air" and approved by our department.
- If the screening levels are exceeded, a site-specific human health risk assessment must be prepared by a board certified toxicologist and submitted to our department for review. If the resulting risk exceeds acceptable levels, mitigation measures will be required.
- A copy of the proposed land use restriction language must be provided to our department prior to recording the deed restriction with the County Registrar. A copy of the recorded deed restriction will be required before a no further action letter can be issued.

If you have any questions regarding the above items, please contact Tom Hall at (562) 906-3815.

Sincerely,

Janet Ortiz

SLIC # 1138B
Soil Gas Survey Report
Western Allied
12046 E. Florence Avenue
Santa Fe Springs, CA
June 2007

1.0 Introduction

The subject property of this soil gas survey report is Western Allied located at 12046 E. Florence Avenue (hereafter referred to as the "Site"). The building was constructed around 1960.

Volatile organic compounds are present in the subsurface soil at the Site. The constituents of concern ("COCs") are identified as benzene, toluene, xylenes, and ethylbenzene ("BTXE"). The results of the survey pertain to analyzing the COCs and evaluating the results thereof for potential vapor intrusion to indoor air.

2.0 Technical Approach

2.1 *Investigation Regulatory Guidelines and Protocols*

At a minimum, and as qualified in the *Alaska Petroleum* workplan dated January 2007, this survey complied with the following regulatory documents.

- City of Santa Fe Springs ("City") "Response for Further Action Proposal" dated January 11, 2007.
- California Environmental Protection Agency ("Cal-EPA"), Department of Toxic Substances Control, ("DTSC"), "Interim Final, Guidance For The Evaluation And Mitigation of Subsurface Vapor Intrusion to Indoor Air", guidance document dated December 14, 2004, revised February 7, 2005.
- Cal-EPA Table 2, "Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties (January 2005).
- California Regional Water Quality Control Board - Los Angeles Regio ("Regional Water Board") and the DTSC, "Advisory - Active Soil Ga Investigations", January 28, 2003.

2.2 *Sample Locations and Identification*

The soil gas samples were collected on-Site near:

(1) known soil boring contaminant at locations SGWAB1 and SGWAB2 ("S"oil "G"as "W"estern "A"llied "B"oring 1 and 2) and;

(2) previously detected soil gas at locations SGJ and SGK (1998 "S"oil "G"as "B"orings "J" and "K"); and

(3) along opposite sides of existing building at locations SGWAEB1 and SGWAEB2 ("S"oil "G"as "W"estern "A"llied "E"xterior "B"uilding 1 and 2), and from

(4) potential migration pathways at locations UT1 and UT2 ("U"tility "T"rench 1 and 2).

The survey locations are depicted on the figure presented in ***Attachment 1, Soil Gas Sample Locations***.

2.3 *Sample Methodology*

Pursuant to the City's request:

> *"the specific means of collecting and analyzing the soil gas samples must be included in the final report and any deviation from the guidelines referenced must be clearly specified."*

Vapor point installation and sampling followed the January 2003 Regional Water Board/DTSC guidelines. The vapor probes were installed using a Geoprobe® direct-push sampling rig. Centrum Analytical Laboratories, Inc. (a State certified laboratory) conducted the sampling, and performed the analysis on-Site using a mobil laboratory. In addition, pursuant to the 2005 DTSC guidelines to evaluate vapor intrusion, soil gas samples were collected at five foot depth intervals. The maximum sample depths were 20 and 40 feet below ground surface ("bgs"). There were no deviations *"from the guidelines referenced"*.

Specifically, the vapor wells were installed and sampled according to the following protocols.

- Constructed with ¼ inch diameter polyethylene tubing following the protocols in Section 2.2.5 - Soil Gas Probe Emplacement Methods.

- Leak tested (Section 2.4 - Leak Test) and purged (Section 2.3 - Purge Volume Test and 2.5 - Purge/Sample Flow Rate).

  A purge volume test was conducted prior to collecting the vapor samples. This test is conducted at the first soil gas sampling event, which was at the Consolidated Graphics property. The appropriate purge volume (one, three or seven) was selected based on the highest concentration of the COCs detected, which was benzene. Seven purge volumes were utilized for all analysis throughout the study area.

- Sampled using a vacuum pump affixed to a glass bulb wrapped in aluminum foil. A glass syringe was used to obtain a sample for direct injection into the gas chromatograph/mass spectrometer (Section 2.6 - Soil Gas Sampling) for analysis.

- Analyzed for BTXE according to the United States Environmental Protection Agency ("USEPA") Method 8260B.

2.4 *Workplan Qualifications and/or Deviations*

1. The maximum depth that the vapor points were set was determined from evaluating the contaminant concentrations obtained from discrete soil samples previously collected. Typically, the maximum vapor point depth was set five to 10 feet below the reported soil contamination. Per the guidance document, if no soil analytical data was available (e.g., in the external building locations) the maximum depth of the vapor points was set at 20 feet bgs.

2. The City requires that the soil vapor analytical results be compared to the residential use CHHSLs, unless the property owner agrees to limit Site usage to only commercial/industrial via a deed restriction. Such a deed restriction allows the analytical results to be compared to the commercial use CHHSLs. The property owner has agreed to the deed restriction; therefore, the analytical results are compared to only the commercial use CHHSLs.

3. The City requires that a Human Health Risk Assessment ("HHRA") be completed if the results of the study fail the criteria set forth in the January 2005 Cal-EPA "Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties". As specified in this document the soil gas screening levels are based on soil gas data "<1.5 meters (five feet) below a building or the ground surface," because the purpose of the CHHSLs is to screen sites for potential human health concerns. Accordingly, to assess the health risks of the workers inside the building only the results obtained from a depth of five feet bgs are screened using the CHHSL shallow soil gas screening levels.

4. According to the DTSC document, Revised February 2005, "...the samples should be collected as close to the building as possible. At a minimum, soil gas samples should be collected at two locations, along opposite sides of the building." Two exterior building locations were identified, however three additional locations UT1, SGK and SGKBB1 are all located in close proximity to the building. As such, the results at five feet bgs from these locations are also used in this evaluation.

5. The complete vertical extent of detected soil gas was not determined at each location. Further vertical delineation was not conducted because results obtained exceeded the CHHSL criteria at five feet bgs.

6. Some of the soil vapor results exceeded the analytical method's detection limits, and higher dilution analysis was required. For example, the analytical method's detection limit at seven purge volumes for benzene is 0.10 microgram per liter of air ("µg/l") and <5 µg/l was reported by the laboratory. If a previous result exceeded the CHHSL criteria, that depth interval was not resampled.

7. SGWAEB2 was installed at the southeast corner of the Kimmerle Bros. Parcel. Access to the east/northeast side of the on-Site building was not possible.

8. Pending review of this report by City staff, and if acceptable, the soil vapo- tubing will be cut and plugged below grade. The surface will then be repaire- with cold patch asphalt.

3.0 Findings

A copy of the analytical report is contained in ***Attachment 2, Laboratory Report***. The analytical data was evaluated against the commercial use CHHSLs found in Table 2 of the aforementioned Cal-EPA document. The summary of the analytical results is provided in ***Attachment 3, Summary Table: Soil Gas Survey Analytical Results***. Included in this summary is the evaluation criteria (CHHSLs) from which the results were evaluated against; the samples that exceeded the criteria are highlighted. As specified in the CHHSL document the soil gas screening levels are based on soil gas data "<1.5 meters (five feet) below a building or the ground surface." Accordingly, only the results from a depth of five feet below ground surface are screened using the CHHSL shallow soil gas screening levels.

Some vapor samples exceeded the commercial use CHHSL for benzene of 0.122 µg/l (1.22 E+02 µg/m^3) at five feet bgs. The benzene concentrations are identified in the following table by depth. Vapor samples that exceed the shallow soil gas CHSSL at five feet bgs for benzene are highlighted in "red". All results are reported in µg/l.

	Depth (feet below ground surface)							
	5	10	15	20	25	30	35	40

Benzene Concentrations in Soil Gas. CHHSL

4.0 Conclusions and Opinion Regarding Further Action

1. A comparison of analytical results to the residential use CHHSLs is required unless a commercial use deed restriction is in place. The property owner agreed to the deed restriction.

   a. Deed restriction language will be provided to the City prior to recording with the County Registrar.

   b. The COCs results were evaluated against the commercial use CHHSLs.

2. A Site-specific "human health risk assessment must be prepared by a board certified toxicologist and submitted" is required if the analytical results exceed the commercial use CHHSLs. Soil gas samples exceeded the benzene CHSSL of 0.122 µg/l at two exterior building locations and one utility trench location.

The CHHSLs referenced in this report pertain to the "emissions of volatile chemicals from contaminated soil or groundwater and their potential intrusion into overlying buildings." Therefore, "closure" determination should take into consideration:

(1) potential exposure pathways and scenarios,

(2) groundwater and protected resources, and

(3) nuisance (e.g., odors, staining) and gross contamination concerns.

The potential exposure pathways are addressed with the issuance of a deed restriction. The groundwater issue is being addressed through further assessment with oversight from the Regional Water Board. There are no apparent odors associated with the soil gas, and the contaminant source to the southwest of the Site (i.e., on the City property) has been remediated.

Although a deed restriction will be placed on the property limiting the use to existing commercial/industrial, near surface soil gas contamination was reported exterior to the building and in a utility trench location above the commercial CHHSL. Therefore, a limited HHRA is required.

The HHRA will consist of either: (1) using the 2003 USEPA Vapor Intrusion Model (i.e., Federal version of the 1991 Johnson and Ettinger model), or (2) conducting indoor air assessment.

Santa Fe Springs Fire Department Review of the
Final Indoor Air Quality Study Workplan
Western Allied Building – 12046 E. Florence Avenue (SLIC #1138B)

Dear Mr. Sommer:

The City of Santa Fe Springs Fire Department (SFSFD) has completed the review of the *Final Indoor Air Quality Study Workplan* (IAQ workplan) prepared by Alaska Petroleum Environmental Engineering (Alaska Petroleum) on October 31, 2007. This workplan is being submitted because elevated levels of benzene were identified in soil gas samples adjacent to the existing building and documented in the *Soil Gas Survey Report* prepared by Alaska Petroleum on June 22, 2007. The soil gas samples were required to evaluate the extent of upward vapor contamination migrating from the remaining deep (greater than 10 feet) hydrocarbon-impacted soil contamination that originated from the former natural gas plant.

The conclusion section of the *Soil Gas Survey Report* proposed two options to further assess the risk posed by the benzene. The two options were 1) the submittal of a site-specific human health risk assessment (HHRA) to evaluate the indoor air intrusion risk posed by the benzene in the soil gas or 2) conduct an indoor air quality survey to measure the level of benzene inside the existing building. Alaska Petroleum, the consultant for this project, has decided to pursue an indoor air quality survey rather than a site-specific HHRA based on soil gas.

The process of conducting indoor air samples to evaluate the vapor intrusion from soil contamination is very challenging and problematic. According to the *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (DTSC/Cal-EPA rev. 2/7/2005), the document used by the SFSFD, indoor air sampling is typically the last step in a vapor intrusion because of its complexity. Indoor air sampling is subject to many types of interferences such as vehicle traffic, office supplies, and aerosol sprays. Furthermore, indoor air assessments are particularly difficult to evaluate since the risk screening level is so low (0.141 micrograms per cubic meter for benzene).

problems mentioned above, the SFSFD has identified a number of between the IAQ workplan and the *Guidance for the Evaluation and ubsurface Vapor Intrusion to Indoor Air.* The following is a list of the issues:

idance requires the collection of sampling data, at a minimum, over two s (late summer/early autumn and late winter/early spring). The IAQ lan proposes compositing one sample over 3 consecutive 8 hour days.

der to obtain a statistically significant number of samples, the guidance mends collecting samples from 8 different locations or, for mercial/industrial sites, one sample per office space. The IAQ workplan oses only 2 sample locations inside the building.

guidance recommends the inclusion of a "contingency plan" prior to iating indoor air sampling. The general outline of responses to be included in contingency plan includes permanent monitoring and mitigation measures if e risk level exceeds screening levels. The IAQ workplan does not include a ontingency plan.

trip blank is required according to the guidance.

e of the inconsistencies listed and the lack of any technically defensible reason for nconsistencies, **the SFSFD can not approve the IAQ workplan as submitted.** submit either a revised IAQ workplan consistent with the criteria described in the nce for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air alternative proposal for evaluating indoor vapor intrusion risk based on soil gas

ou have any questions regarding the above items, please contact Tom Hall at (562) -3815.

Flag Status: Flagged

Paul,

Glenn Stillman has submitted an *Indoor Air Quality (IAQ) Workplan* for the Western Allied site located at 12046 Florence. Glenn is submitting this report because the soil gas survey conducted around the Western Allied building resulted in benzene levels 90 times higher than the acceptable levels at a commercial/industrial site. After reviewing the IAQ workplan, I have some strong general reservations about utilization of an IAQ to assess the indoor air risk and specific concerns with Glenn's workplan.

Bemshaw Company (owners of Western Allied site) sent a certified letter to you, me, and Glenn on August 8, 2007 advising us that they are "....halting all further work and testing on the site until a clear and definitive criteria and procedure is agreed upon with Bemshaw." Their letter also stated that they would be requesting a meeting with a view toward finalizing this matter. I haven't heard anything since that letter was sent.

I've left a message with Glenn to discuss some of my concerns; however, I'd also like to discuss my concerns with you, Andy, and Janet and brainstorm as to the best way to proceed. Can we meet and discuss sometime after Janet returns (11/20/07)? We can also discuss the RWQCB's cost recovery renewal issue for the OFRP and Little Lake Village if you'd like. I won't be here on 11/21 or 11/26, otherwise I'm available.

Thanks,

Tom Hall

Re: Bemshaw Corp./ Western Allied Site
12046 E. Florence, SFS

On 9/19/97, SFSFD sent a letter to the RP's (Bemshaw), that SFSFD declined to lift the dee nitification for petroleum contamination placed by LACoFD in 1989. Part of the problem is the indication of "gasoline" contamination on the boundary of the present Western Allied site, when all other "TPH" contamination was characterized as "diesel", possibly near the location of a 10,000 gal gasoline UST the year before. Relatively large concentrations of benzene were found, and there is no info. Re: GW quality/depth, lithology, etc. Another issue is the authority of SFSFD to be "successor" agency to LACoFD in site mitigation issues. Maybe is has to be the DTSC for now ?

At any rate, Mr. Hans Sommer, a partner in the Bemshaw Corp., in receipt of the letter, called me around 11:00 AM 9/24/97. He wants to meet with me at SFSFD on Friday, Oct.3rd, around 11:00 AM, to discuss what Bemshaw Corp. can do, and I made an appointment with him to do so. .

Please see attached copy of letter to Bemshaw for info.

Can we have a meeting before next Friday to discuss this ? or ?

Dear Mr. Levin:

SUBJECT: REMOVAL OF DEED NOTIFICATION CONDITION
RE: PETROLEUM HYDROCARBON CONTAMINATION AT 12046 E. FLORENCE AVENUE, SANTA FE SPRINGS, CA, 90670

The Santa Fe Springs Fire Department (SFSFD) has reviewed your recent request to remove the Deed Notification condition established by the Los Angeles County Fire Department Health Hazardous Materials Division Site Mitigation Unit, and recorded at the Los Angeles County Recorder's office in August, 1989. The SFSFD declines to remove the Deed Notification condition.

The SFSFD advises you that based on our review of available data, significant contamination of soils of this site likely remains, and could pose a threat to groundwater and /or Public Health. The known contamination includes benzene, which was found at 17.30 "ppm" at the property line. It is the SFSFD's opinion that further testing is needed to determine the nature, concentration, lateral and vertical extent of any contamination on this site, and that any appropriate corrective action be taken.

It appears that the nature of petroleum hydrocarbon contamination was found to change from "diesel" to "gasoline" near the boundary between the John Alexander property and the Western Allied property. The record indicates that a gasoline Underground Storage Tank (UST) was installed in 1975, and removed from your property in 1988, although the exact location with respect to the Northwest Envirocon boring "L" of 1988, is unclear. It is from this boring "L" that the petroleum hydrocarbon contamination was characterized a "gasoline", with all other contamination characterized as "diesel".

The soil sampling, analysis, and reporting done in 1988 at the time of removal of the gasoline UST was reviewed as part of the Phase I assessment and is acknowledged.

In any case, the SFSFD lacks critical data to make a detailed determination of the nature, concentration, lateral and vertical extent of the contamination. The available data is deficient in many details, including:

1) groundwater depth, quality, gradient
2) boring logs, lithology
3) sampling methods and analytical testing done, including lab QA/QC
4) exact location of the former gasoline UST with respect to the Northwest Envirocon borings.

Without this data, the SFSFD is unable to recommend removal of the deed notification.

NOTE: 10/1/97

Engineering Geologist D, SLIC II
California Regional Water Quality
Control Board – LA Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Re: SLIC #1138B
"Mini-Regional" Study
Santa Fe Springs, California

Dear Mr. Indermill:

This firm is counsel to Bemshaw Company, L.P. owner of the property occupied by Western Allied. My client has been advised that it cannot receive a no further action letter relating to the ground water from the Regional Water Quality Control Board until he receives a no further action letter relative to the soils from the Santa Fe Springs Fire Department. This letter is to inquire whether the no further action letter with respect to the ground water can be conditioned on the future issuance of the no further action letter relative to soils.

Bemshaw advises that it is prepared to execute a covenant in form approved by the City of Santa Fe Springs restricting use of the property to commercial/industrial. A propc form of covenant (which assumes a favorable Human Health Risk Assessment) is enclosed herein and in the copy of this letter directed to Ms. Ortiz. I am advised that Bemshaw intenc submit a work plan and complete a Human Health Risk Assessment as required by the Sant Springs Fire Department.

WESTERN ALLIED/BEMSHAW
12046 Florence

Laboratory analysis of soil samples in 1988 revealed TPH contamination. During a 1988 site visit by a representative of the L.A. County Department of Health Services further site assessment/site mitigation was discussed. Due to the necessity of shutting down the operation to initiate soil remediation, Western Allied proposed a no-action option, with the agreement to characterize/remediate the site prior to any future developments, changes in the site use or ownership. A deed restriction was filed by property owner Bemshaw in 1989. Santa Fe Springs denied Bemshaw's 1997 request for removal of the deed restriction. In 2002, an attorney for Bemshaw indicated that they were interested in exploring the possibility of a mini-regional study with the Consolidated Graphics property and property acquired by the City from Johnston-Alexander.

Historical records, UST permits, reports, maps and correspondence (1986-2002).

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE PERMIT NO. 3496B
FACILITY LOCATION: 12046 E FLORENCE

This office has reviewed the soil/groundwater assessment report submitted on January 4, 1988 required as a part of the subject closure procedure. Based on the information submitted, we find that:

[ ] The closure is final and no further action is required.

[x] The soils removed during the tank excavation are unrestricted and may be used as backfill material. The closure is final and no further action is required.

[ ] Excavated soils may be a hazardous waste and are not suitable for fill material or disposal on-site. Contaminated soils must be manifested, transported and disposed of pursuant to Chapter 6.5, California Health and Safety Code, unless evidence is presented indicating that disposal is proper at a less restricted facility. Copies of completed manifests or other appropriate evidence indicating legal disposal shall be submitted to this office before this project can be considered closed.

[ ] The permanent closure of the tank(s) in place shall comply with requirements set by the local Fire Department. Verification must be submitted to this office indicating proper closure and completion of all work.

If you have any questions concerning this matter, please contact Ms. Nicole Long at (213) 226-4010.

Very truly yours,

T. A. TIDEMANSON

DIVISION OF OIL AND GAS

Notice of Intention to Abandon Well

This notice must be given at least five days before work is to begin; one copy only

SANTA FE SPRINGS Calif. January 15 19 73

DIVISION OF OIL AND GAS

In compliance with Division 3, Public Resources Code, notice is hereby given that it is our intention to abandon

Well No. JALK NO. 5, Sec. 6, T. 3S,

R. 11W, S.B. B. & M., SANTA FE SPRINGS Field, LOS ANGELES County,

commencing work on January 16 19 73.

The present condition of the well is:

1. Total depth: 4792' Redrill

2. Complete casing record, including plugs:

SEE ATTACHED SCHEDULE "A"

3. Last produced 7/1968 3 190
(Date) (Oil, B/D) (Gas, Mcf/D) (Water, B/D)

Additional data for dry hole

4. Oil or gas showings and results of tests:

5. Stratigraphic markers and depths:

6. Age of formation at bottom:

7. Base of fresh water sands:

The proposed work is as follows:

Move in production hoist, lay down rods and tubing, and clean hole to bottom.
Pump in cement plug so top of plug will be located at minimum depth of 4525'.
Fill hole with mud.
Shoot off 7" at approx. 875' and pull same.
Pump in 50' Cement plug at stub of 7".
Set bridge at 56' and fill 12½" with cement from 56' to 6'. Weld steel plate on 12½" at 6'.

Date Nov.12, 1945 Title J. Hathaway
(President, Secretary or Agent)

Use this form in reporting all important operations at the well, together with the dates thereof, in the order of their performance. Such operations include drilling, redrilling, deepening, plugging, or altering casing as by perforating, shooting, or pulling. Include in your report size of hole drilled, redrilled, or deepened; size, weight and length of casing landed, cemented, or removed, amount and location of perforations; number of sacks of cement used in cementing or plugging operations, number of feet of cement drilled out of casing, location of top and bottom of cement plugs. If the well was dynamited, give date, dimensions and weight of all shots. If tests were made give interval tested and results of tests, such as, amount and nature of fluids recovered.

Date	
1945	
9-30	Ran drill pipe, drilled out plug 1905'-1908', found top of next plug 3696'. With casing cutters, cut and recovered 8-1/4" from 2072'.
9-4	Pumped 60 sacks cement through drill pipe at 2072'. Top of plug located at 1981'. With Zublin bit started side tracking. Redrilled, 10-5/8" hole 1981'-4607'.
9-15	Lost circulation and 12-1/2" casing collapsed 1603'-1700'. Backed off drill pipe, leaving 1 double 4-1/2" drill pipe and 4 drill collars below 1603'.
9-19	Ran impression block and casing roller; 12-1/2" casing apparently broken off at 885'. Drilled by casing at 835' to 934'. Pumped in 150 sacks
9-20	cement through drill pipe at 934'. ~~Pumped in 150 sacks cement through drill pipe at 934~~'.
9-22	Found top of cement at 725', drilled out cement and started redrilling at 885'. Drilled 10-5/8" hole to 4976'. Hole apparently drifted across a fault.
10-1	Pumped in 150 sacks cement through drill pipe at 4774'. Top of plug not located. Ran Eastman single shots. Pumped in 150 sacks cement
10-3	through drill pipe at 2350'. Top of plug located at 2189'.
10-4	Set Eastman removable whip-stock at 2189' and drilled to 10-5/8" hole to 4792'. Bottom of hole located 341.3' N.58°59' W.from surface location.
10-13	Ran 4606'7", 20-lb., J-55 blank and 186',7",23-lb.perforated (125-mesh, 14 rows, 6" centers, 2-1/2" shots). Casing to 4792'. Cemented through perforations at 4606' with 800 sacks cement. Final pressure 1200 lb.
10-14	The 7" casing was gun perforated 4583'-4588' with 10, 1/2" holes for water shut-off test.
10-15	Ran Haliburton tester on 3-1/2" drill pipe with packer set at 4566'. Valve remained open for 11-1/4 hours. Showed strong initial blow, then no blow for 1 hr. and weak intermittent puffs for the remainder of the time.
10-17	Recovered 792' of gassy oil and oily mud. Filtrate from mud on bottom tested 191 grains of salt per gallon. W.S.O. approved by Div.Oil and Gas.
10-19	Swabbed mud out of hole and acid treated well for 2 days.
10-20	Bailing mud and oil.

Report on Test of Water Shut-off
(FORMATION TESTER)

No. T 1-44514

Los Angeles 14, Calif. October 19, 1945

Mr. J. Elwood Hathaway
Santa Fe Springs, Calif.
Agent for HATHAWAY COMPANY

DEAR SIR:

Your well No. "Jalk" 5, Sec. 6, T. 3 S., R. 11 W., S.B. B. & M. Santa Fe Springs Field, in Los Angeles County, was tested for water shut-off on October 17, 1945. Mr. J. L. White, Inspector, designated by the supervisor, was present as prescribed in Sec. 3222 and 3223, Ch. 93, Stat. 1939; there were also present J. I. Hathaway, and J. E. Hathaway, Operators.

through perforations

Shut-off data: 7 in. 20 & 23 lb. casing was cemented at 4606 ft. on October 13, 1945 in 10-5/8 hole with 800 sacks of cement of which 8 sacks was left in casing.

Casing record of well: 12-1/2" cem. 2002', drilled through 725'; 7" ld. 4791', c.p. 4606'; 10, 1/2" test holes 4583'-4588', W.S.O. Junk (1st hole), 8-1/4", 2110'-4505'; 6-1/4", 3724'-4561'; 4-1/2", 4532'-4723', d.p. 4355'-4532'; T.D. (1st hole) 4730', plugged with * (Present)

Reported total depth 4792 ft. Bridged with cement from 4606 ft. to 4603 ft. Cleaned out to 4603 ft. for this test.

A pressure of xxx lb. was applied to the inside of casing for xxx min. without loss after cleaning out to xxx ft.

A Halliburton tester was run into the hole on 3-1/2 in. drill pipe, with xxx ft. of water cushion, 10/16 and packer set at 4566 ft. with tailpiece to 4586 ft. Tester valve, with 3/8" bean, was opened at 8:45 p.m., and remained open for 11 hr. and 15 min. During this interval there was a strong blow for 1/2 minute; no blow for 60 minutes, and weak puffs for the balance of the test.

*cement 4355'-4330', 3724'-3682', and 1917'-1897'; (2nd hole) 12-1/2", 885'-2002', d. c. and 40' of 4-1/2" d.p., top at 1603'. T.D. (2nd hole) 4607', plugged with cement 885'-725'; (3rd hole) 12-1/2", 725'-885'; T.D. (3rd hole) 4976', plugged with cement, 125 sacks at 4774' and 2350'-2189'.

THE INSPECTOR ARRIVED AT THE WELL AT 9:00 A.M. AND MR. J. I. HATHAWAY REPORTED:

1. The 8-1/4" casing was cut and pulled from the interval 1917'-2110' and a 60 sack cement plug was placed from 2072'-1981'.
2. A 10-5/8" rotary hole was drilled from 1981' to 4607'.
3. Circulation was lost and the 12-1/2" casing collapsed 1603'-1700'. The drill pipe was backed off leaving 4 drill collars and 40' of 4-1/2" drill pipe below 1603'. The 12½" casing broke off at 885'.
4. On September 20, 1945, 150 sacks of cement was pumped into the hole through 4-1/2" drill pipe hanging at 885'. The top of the set cement was located at 725'.
5. A 10-5/8" rotary hole was drilled from 725' to 4976'.
6. The bottom of this hole was found to be across a fault.
7. On October 1, 1945, 125 sacks of cement was pumped into the hole through 4-1/2" drill pipe hanging at 4774'. The top of the set cement was not located.
8. On October 2, 1945, 150 sacks of cement was pumped into the hole through 4-1/2" drill pipe hanging at 2350'. The top of the set cement was located at 2189'.
9. An Eastman whipstock was set at 2189' and a 10-5/8" rotary hole was drilled from 2189' to 4792'.
10. Electrical core readings showed the top of the oil zone at 4620'.
11. The 7" casing was landed and cemented as shown above.
12. The 7" casing was shot-perforated with 10, 1/2" holes from 4583' to 4588'.
13. A Halliburton tester was run as noted above.

THE INSPECTOR NOTED:

1. When the drill pipe was removed 660' of gassy oil and 132' of gassy, oily mud was found in the drill pipe above the tester, equivalent to 6.0 bbl.

Report on Proposed Operations

No. P 1-41030

Los Angeles 14, Calif. August 14, 1945

MR. J. Elwood Hathaway
Santa Fe Springs, Calif.
Agent for HATHAWAY COMPANY

DEAR SIR:

Your proposal to redrill Well No. "Jalk" 5,
Section 6, T. 3 S., R. 11 W. S.B. B. & M., Santa Fe Springs Field, Los Angeles County,
dated Aug. 9, 1945, received Aug. 13, 1945, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

RECORDS: The condition of the well is as stated in the notice.

THE NOTICE STATES:

"The present condition of the well is as follows:

1. Complete casing record.
   12-1/2" cemented 2002', capped at top with cement.
   8-1/4" " 4505', ripped and pulled from 1917'
   6-1/4" " 4561', " " " " 3724'
   191' of 4-1/2" ld. 4723', 165' screen on bottom shot at 4700'. T.D. 4730', plugged w/c 4355'-4330', 3724'-3682' and 1917'-1897'. Junk inside 4-1/2" casing, cable tools 4557'-4605', combination socket on fishing tools 4542'-4557', L.H.drill pipe 4355'-4532' screwed into 4-1/2" casing. Well abandoned Jan.1, 1924."

PROPOSAL:

"The proposed work is as follows:

1. Set whipstock inside 12-1/2" at about 1890' and drill through casing. Redrill to approx. 4700'.
2. Land 7" combination string on bottom and c.p; at approx. 4500'. Completion and cementing depths to be determined by cores and/or electrical logging."

DECISION:

THE PROPOSAL IS APPROVED PROVIDED THAT

1. Mud fluid consistent with good drilling practice shall be used and the column of mud fluid maintained at all times to the surface, particularly while pulling the drill pipe.
2. Any hole to be sidetracked in any oil or gas zone shall be filled with cement, if possible.
3. THIS DIVISION SHALL BE NOTIFIED TO WITNESS a test of the effectiveness of the 7" shut-off at about 4500'.

LOS ANGELES, CALIFORNIA

Box 371,
Santa Fe Springs, Calif.
August 7, 1945.

State of California,
Division of Oil and Gas,
Los Angeles 14, Calif.

Gentlemen:

On February 26, 1945, Hathaway Company acquired that certain lease in the N.E.1/4 of S.E.1/4 of S.W. 1/4 of Sec.6, T.3 S., R.11 W., S.B.B.& M., Santa Fe Springs, Calif., including the well carried in your record as East Santa Fe Oil Company well No. "Jalk" 5.

All interests in the above lease and well were relinquished by the latter company in quitclaim deed to the lessors, executed on September 29, 1939.

It is our intention to re-enter the abandoned well for the purpose of redrilling.

Yours truly,

HATHAWAY COMPANY,

By: J. D. Hathaway

In compliance with the provisions of Chapter 718, Statutes 1915, as amended, the information given herewith is a complete and correct record of all **work done on the well since the previous record,** dated Dec. 3, 1923., was filed.

Signed B. E. Parsons
(President, Secretary or Agent)

Date June 3, 1924. Title General Agent.

Owing to our inability to recover the junk in the bottom of the hole, it was determined to abandon the well.

Standard crew started abandoning on Dec. 5, 1923.

With the hole open to the top of the left hand drill pipe at 4355, a bailing test was made to determine if water had access to the hole. Bailed to 2500 and fluid showed no rise in 31 hours. This test was witnessed and approved by Mining Bureau representative.

Dumped 4 sacks cement on top of L. H. drill pipe at 4355 plugging hole to 4330. Tried for vibration on 6¼ casing from 4300 but could not get it below 3690. Ripped 6¼ casing off at 3724 and pulled. Put in 4' bridge at 3724 and dumped 10 sacks cement on top of bridge plugging hole to 3682.

Ripped 8¼ casing off at 1917 and pulled. Put wooden plug in top of 8¼ at 1917 and dumped 15 sacks cement on top of plug filling hole to 1897. Filled hole with heavy mud. Plugged top of 12½ casing and dumped cement on top of plug.

The hole was abandoned in this condition and crew moved out on Jan. 1, 1924. Standard drillers: A. J. Carlin, Hathaway, Rose.

PRESENT CASING RECORD:

Special Report on Operations Witnessed

No. T. 1-5902

Los Angeles, Cal. Dec. 18, 1923.

Mr. R.E.Parsons,

Los Angeles, Cal.

Agent for GENERAL PETROLEUM CORPORATION ~~Company~~

DEAR SIR:

Operations at your well No. "JALK" 5, Section 6, T. 3S., R. 11 W., S.B. B. & M.

Santa Fe Springs Oil Field, in Los Angeles County, were witnessed by

Mr. A.J.Mason, representative of the supervisor,

on Dec. 10, 1923. There were also present Messrs. H.F.Power, engineer and C.S.Hathaway, driller.

Casing Record 12½" cemented 2002'; 8½" cemented 4505'; water not shut off; 6½" cemented 4561', water shut off; 191' of 4½" landed 4723', 165' screen on bottom. Junk; Cable tools 4557'-4605', fishing tools 4542'-4557' inside 4½" casing, (Continued below)

The operations were performed for the purpose of witnessing a bailing test in the process of abandonment, as outlined in our report No. P-1-7505 of Dec. 6, 1923.

and the data and conclusions are as follows:

JUNK (continued) L.H.D.P. 4355'-4532' screwed into top of 4½" casing.

MR.POWER REPORTED;

1. The hole has been cleaned out to 4355' and the fluid has been bailed to 2500' for this test.

THE INSPECTOR NOTED THE FOLLOWING:

1. At 3 a.m. Dec. 9, 1923, oily water bailed to 2500'.
   At 10 a.m. Dec. 10, 1923, top of oily water found at 2500'.
2. At time of test depth of hole measured 4355'.
3. No fluid entered the well in 31 hours.

THE BAILING TEST AS ABOVE REPORTED AND WITNESSED IS APPROVED.

cc-W.L.McLaine,
F.S.Banks.

LOG OF OIL OR GAS WELL

FIELD SANTA FE SPRINGS COMPANY GENERAL PETROLEUM CORPORATION

Township 3 S, *Range* 11 W, *Section* 6, *Number of Well* Jalk #5

In compliance with the provisions of Chapter 718, Statutes 1915, as amended, the information given herewith is a complete and correct record of all **work done on the well since the previous record**, dated July 26, 1923. ----------, was filed.

Signed B. E. Parsons a.s.t.
(*President, Secretary or Agent*)

Date December 3, 1923. Title General Agent.

This well flowed clean oil to June 17, 1923 on which date it started showing a slight amount of emulsion. The emulsion content gradually increased and production and gravity decreased until July 22d when the well quit flowing. Last day's production was 354 bbls. 28.5 gravity, 15.6%, .4% water.

Apparently the cause of this water was the encroachment of edge water in the bottom of the Meyer zone to this location.

Standard crew moved in on July 27, 1923 to plug bottom of hole.

Cleaned out to 4728 and plugged hole with shells of sand and resin to 4710, and with lead wool to 4705. Shot 4½ casing with 20# shot at 4700 and plugged shot cavity with cement to 4680.

Bailed to 2350 and fluid stood at that depth for about 24 hrs.

The well was placed on the pump on Sept. 5th and pumped to Sept. 28th. The well started off at 637 bbls. 29.1 grav. 23% emulsion, 1% water. It then cleaned up so that on Sept. 12th it made 766 bbls. 32.6 grav. - 3.6% emul. However, the emulsion content continued to fluctuate as high as 25% and as low as 1.7% to Sept. 25th. The well then showed a high percentage of water and was killed.

Standard crew again moved in on Sept. 25, 1923.

Cleaned out to 4605 and stuck tools at this depth. Top of tools 4557. Whipped line off at rope socket. Took hold with combination socket on fishing tools but could not jar loose. Had to cut line at rope socket on fishing tools. Top of fishing tools 4500.

Unscrewed 4½ casing down to 4504. Recovered fishing tools down to 4542. Continued unscrewing 4½ casing to 4532. Took hold of 4½ with die collar on left hand pipe and parted left hand pipe at 3858. Recovered left hand pipe down to 4355 but could recover no more.

PRESENT CASING RECORD:

12½ casing cemented at 2002.
8¼ " " " 4505.
6¼ " " " 4561. W.S.O. - O.K.
191' of 4½ " landed " 4723. 165' of screen on bottom.
Total depth: 4730. Plugged depth: 4680.

Report on Proposed Operations

No. P -1-7505

Los Angeles, Cal. Dec. 6, 1923

Mr. E. E. Parsons,
Los Angeles, Cal.

Agent for GENERAL PETROLEUM CORPORATION Company

DEAR SIR:

Your proposal to abandon Well No. "JALK" 5, Section 6 T. 3 S. R. 11 W. S.B. B. & M.
Santa Fe Springs Oil Field, Los Angeles County, dated Dec. 3, 1923
Rec'd Dec. 5, 1923.
has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

RECORDS:

Our records show that the 4½" casing was landed at 4723'.
In other respects the condition of the hole is as stated in the notice.
The well was completed on April 10, 1923, and thirty days after completion produced at the daily rate of 3394 bbl. of oil and no water.
The well flowed clean oil up to June 17, 1923, when water appeared in the production and the amount gradually increased until July 26 when the well quit flowing. The last days production was 354 bbl. cutting 15.6% emulsion and 0.4% water. Thereafter the well was plugged from bottom to 4680'. Tests made by the company and outlined in your report on our form 102 show that some water still had access to the well. Further plugging was attempted with the result that tools were left in the well inside the 4½" casing, as shown in the notice. The details of this work are also given in your report on form 102.

THE NOTICE STATED:

" The present condition of the well is as follows:
12½" casing cemented at 2002.
8¼" " " " 4505. 6¼" Casing cemented at 4561. W.S.O.
Recommendation:
191' of 4½" landed at 4723. 165' screen on bottom
Total depth: 4730. Plugged depth: 4680.
Junk in hole: Cable tools 4557-4605)
Fishing tools 4542-4557) Inside 4½" casing.
L.H.D.P. 4355-4532 screwed into top of 4½" casing."

PROPOSAL:

"The proposed work is as follows:
Bail fluid down to 2500 and let stand at least 12 hrs. Will call you to witness this test If hole shows no rise in fluid level, the hole will be abandoned as follows: Plug top of L.H. drill pipe in hole at 4355 with cement. Rip 6¼ casing off wherever vibration can be obtained inside the 8¼, pull, and plug top of 6¼ left in hole with cement. Rip 8¼ casing off at about 1900' and pull, plugging top of 8¼" left in hole with cement. Abandon in this condition."

GENERAL PETROLEUM CORPORATION ~~xxxxxxx~~ Company

Well No. "JALK" 5 Sec. 6 T. 3 S. R. 11 W. S.B. B. & M.

RECOMMENDATION:

The proposal to abandon is approved with the following recommendations:

1. If no water enters the well during the proposed bailing test, the well shall be abandoned by leaving a continuous conductor to the surface, and filling with heavy rotary mud.
2. If an appreciable amount of water enters the well during the proposed bailing test, the hole shall be mudded under a pressure of 1000# until the loss of mud fluid is reduced to 1 bbl. per hour. The well may then be abandoned by leaving a continuous conductor to the surface, and filling the hole with heavy rotary mud.

KINDLY NOTIFY THIS DEPARTMENT TO WITNESS:

1. The proposed bailing test.
2. The pressure mudding outlined under recommendation 2 above, provided this mudding is recommended by this Department after the bailing test has been witnessed.

NOTE:

Your attention is directed to the fact that this Department was not notified to witness the location and hardness of the cement plug placed at 4680', as requested in our report No. P-1-6671.

Notice of Intention to Abandon Well

This notice must be given at least five days before work is to begin

Los Angeles Cal. Dec. 3, 1923.

Mr. C. C. THOMS
Deputy State Oil and Gas Supervisor
Los Angeles, Cal.

DEAR SIR:

In compliance with Section 16, Chapter 718, Statutes of 1915, notice is hereby given that it is our intention to abandon well number Jalk #5 Section 6 T. 3 s R. 11 W, S.B. B. & M., Santa Fe Springs Oil Field Los Angeles County, commencing work on the ____ day of ____ 191__

The present condition of the well is as follows:

12½" casing cemented at 2002.
8¼" " " " 4505
6¼" " " " 4561. W.S.O.-O.K.
191' of 4½" landed " 4723. 165' screen on bottom
Total depth: 4730. Plugged depth: 4680.
Junk in hole: Cable tools 4557-4605)
Fishing tools 4542-4557) Inside 4½" casing.
L.H.D.P. 4355-4532 screwed into top of 4½" casing.

The proposed work is as follows:

Bail fluid down to 2500 and let stand at least 12 hrs. Will call you to witness this test. If hole shows no rise in fluid level, the hole will be abandoned as follows: Plug top of L.H. drill pipe in hole at 4355 with cement. Rip 6¼ casing off wherever vibration can be obtained inside the 8¼, pull, and plug top of 6¼ left in hole with cement. Rip 8¼ casing off at about 1900' and pull, plugging top of 8¼ left in hole with cement.

Abandon in this condition.

CALIFORNIA STATE MINING BUREAU

DEPARTMENT OF PETROLEUM AND GAS

Report on Proposed Operations

No. P 1-6671

Los Angeles, Cal. August 16, 3. 192--

Mr. B. E. Parsons,
Los Angeles, Cal.

Agent for GENERAL PETROLEUM CORP. xxxxxxxx Company

DEAR SIR:

Your proposal to plug bottom "JALK" Well No. 5, Section 6 T. 3S. R. 11W. S. B. B. & M.
Santa Fe Springs Oil Field, Los Angeles County, dated August 1 3 192--,

has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

RECORDS:

The condition of the well is stated in the notice.
The shut off of the 6¼" casing at 4561' was passed for a production test.
This well was completed on April 10, 1923, and thirty days after completion the well produced at the rate of 3394 bbl. of oil per day, with no water.

THE NOTICE STATES:

"The present condition of the well is as follows:

12½" casing cemented at 2002.
8¼" casing cemented at 4505
6¼" " " " 4561. W. S.O. O.K.
4½" " landed " 4723. 165' of screen on bottom
Total depth: 4730.

This well flowed clean oil to June 17, 1923 on which date it started showing a slight amount of emulsion. The emulsion content gradually increased and production and gravity decreased until July 22, when the well quit flowing. Last day's production ; 354 bbls. 28.5 gravity--15.6% emulsion---.4% water. Figure edge water has encroached in bottom of Meyer zone to this location"

xxxxxxxxxxxx Recommendation:

PROPOSAL:

" The proposed work is as follows:
Clean out to bottom and plug 4½ casing with cement from bottom to 4700.
Shoot 4½" casing at 4700 and plug shot cavity with cement to 4680 and attempt to place well back on production.

If hole is still wet shoot 4½" at 4675 and plug shot cavity with cement to 4660 and again place well on production.

If hole is still wet, shoot 4½" at 4655 and plug shot cavity with cement to 4640 and place well on production.

RECOMMENDATION:

THE PROPOSAL IS APPROVED.

GENERAL PETROLEUM CORP. xxxxxx
Company

"JALK" 5 Well No. 6 Sec. 35. T. 11W. R. S. B. B. & M.

Kindly notify this Department to witness:

1. **The location and hardness of cement plugs placed in the well.**
2. **A production test after the well is again placed on production.**

Doc Hayes will file a proposal to abandon the well. Its condition is as outlined in the history filed today.

1 Told him to test to 2500# for test to be witnessed by us.

2 If nothing comes in probably will approve proposal to abandon leaving in continuous conductor & fill with heavy mud.

3 If water enters will want well worked under high pressure, probably 1000# + left as above.

HISTORY OF OIL OR GAS WELL

FIELD SANTA FE SPRINGS COMPANY GENERAL PETROLEUM CORPORATION

Township 3 S, Range 11 W., Section 6, Number of Well Jalk 5

Signed B. E. Parsons a.l.k. (President, Secretary or Agent)

Date July 26, 1923 Title General Agent.

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.

This well was drilled with rotary to completion by company crew.

The 12½" conductor string was cemented at 2002 on Dec. 18, 1922.

The hole was drilled to 4457 at which depth the first core was taken to locate top of Meyer zone. The hole was cored continuously from 4500 to 4523. Samples showed presence of thin streaks of sand in sticky brown shale. Portions of these sand streaks carried oil, but other portions were gray and apparently were barren, which led to the conclusion that an edge water condition existed in the Meyer at this depth at this location.

Since the depth of the hole warranted the setting of 8¼ casing, it was determined to cement the string above these showings in an effort to determine their productivity.

The 8¼ casing was cemented at 4505 on Feb. 23, 1923. Found top of cement at 4230. Drilled out cement and cleaned out to bottom at 4523. Swabbed thru tubing to 1160 when well started to flow. Well flowed from 6:45 A.M. March 9th to 2:30 P.M. March 10th when it was killed. Fluid averaged 70% water and 30% oil, and failed to clean up. From this flow test and from the appearance of core samples taken before cementing 8¼, it is assumed but not definitely proved that edgewater exists in top of Meyer zone at this location.

Continued coring ahead to 4579 encountering good showings of oil in sand from 4571 to 4579. The 6¼" water string was cemented at 4561 on March 21st. Drilled out cement 4460 to 4550. Casing tested O.K. Drilled out balance of cement and cleaned out to 4574. Swabbed to 750 and well started to flow. Well cleaned up immediately and flowed clean oil. Shut-off was passed for production test.

Well was drilled in to 4730 and the 4½ oil string landed at 4723 on April 8th.

Well started flowing April 10, 1923. Initial production: 5642 bbls. 34.8 gravity - 0.1 sand - 610# pressure.

NAMES OF DRILLERS

R. G. Hudson

J. C. Reece

C. L. Waer

NAMES OF TOOL DRESSERS

Date drilling started November 28, 1922. Date well was completed April 10, 1923.

CALIFORNIA STATE MINING BUREAU

DEPARTMENT OF PETROLEUM AND GAS

Report on Test of Water Shut-off

(BAILING)

No. T -1-3926

Los Angeles, Cal. April 19, 1923

Mr. B. E. Parsons,

Los Angeles, Cal.

Agent for GENERAL PETROLEUM CORPORATION ~~Company~~

DEAR SIR:

Your well No. "JALK" 5 Section 6 T. 3S. R. 11W., S.B. B. & M.,

Santa Fe Springs Oil Field, in Los Angeles County, was tested for shut-off of water on 9:55 p.m. Mar. 29, 1923 (Time and date) Mr. A. J. Mason designated by the supervisor, was present as prescribed in Section 19, Chapter 718, Statutes 1915, as amended, and there were also present Frank Banks, Superintendent, and Claude Ware, driller

Location of water tested 4505' - 4565' and normal fluid level - - -

Depth and manner of water shut-off: { 4565 ft. of 6¼ in. 36 lb. / ____ ft. of ____ in. ____ lb. } casing was { cemented / ~~landed~~ } 3/21/23 in sticky br. shale (Formation)

at 4565 ft. with 60 sacks Santa Cruz cement by Perkins method; 7¾" rotary (Size and kind) tools were used in landing water string.

Casing record of well 12½" cemented 2002', 8½" cemented 4505', 6¼" as above

Reported total depth of hole 4579 ft. Hole bridged from ____ ft. to ____ ft. Hole cleaned out to 4579 ft. for this test.

At time of test depth of hole measured - - - ft. and bailer brought up sample of (flowing)

At (see below) (Time and date) oil bailed to ____ ft., water bailed to ____ ft.

At ____ (Time and date) top of oil found at ____ ft., top of water found at ____ ft.

Result of bailing test:

MR. BANKS REPORTED THE FOLLOWING:

1. The well was tubed to 4335' and swabbed to 750' when it began to flow at 9:55 p. m. on Mar. 29, 1923. This flow was continued for one hour before closing in.
2. At 9:00 a. m., March 30, 1923, the well was opened up and flowed into the tanks until 11:00 a. m.

Samples of oil cut as follows:

Day and Time	Correct Gravity	% Water	% Emulsion	% Sand and Mud
Mar 30 9 a. m.	34.9	0		1.2
Mar 30 9:30 a.m.	35	0		1.2

THE INSPECTOR WITNESSED THE FOLLOWING:

1. Well was flowing with pressure of 430# on the tubing and 150# on the casing.
2. Centrifuge cuts on flow line samples showed the following:

"JALK"

Well No. 5 Sec. 6, T. 3 S., R. 11 W., S.B. B. & M.

Day & Time	Gravity	% Water	% Emulsion	% Mud
Mar 30 10:30 a.m.	34.7	0	0.5	0.6

The tests as reported and witnessed indicate that the 6½" shut-off is probably effective, but was not conclusive on account of the pressure held in the well.

The shut-off is passed for a production test to be witnessed after the well is drilled to completion.

MR. C. C. THOMS,
Deputy State Oil and Gas Supervisor
Los Angeles, Cal.

DEAR SIR:

In compliance with Section 19, Chapter 718, Statutes of 1915, as amended, notice is hereby given that it is our intention to test the shutoff of water in well number Jalk #5, Section 6, T. 3 S., R. 11 W., S.B. B. & M., Santa Fe Springs Oil Field, Los Angeles, County, on the ____ day of ____ 192__

6¼ inch 26 lb. casing was ~~landed~~/cemented in Sticky brown shale (Formation) at 4565 (Depth)

on March 21st, (Date) 1923.

60 sacks of cement were used.

The Perkins method was used in placing the cement.

Fluid level will be bailed to a depth of 2000 feet and left undisturbed for at least 12 hours before your inspection.

The well is 4579 feet deep. There ~~is~~/is not a plug or bridge from 4565 feet to 4579 feet.

Report on Proposed Operations

[2]

No. P -1-5614.

Los Angeles, Cal. March 29, 192 3.

Mr. B. E. Parsons,

Los Angeles, Cal.

Agent for GENERAL PETROLEUM CORPORATION ~~Company~~

DEAR SIR:

Your supplementary proposal to drill Well No. 5, Section 6, T. 3S., R. 11W., S.B. B. & M. "JAIK"

Santa Fe Springs Oil Field Los Angeles County, dated March 22, 192 3

has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

RECORDS:

The formations cased behind the 6¼" casing at 4505' were mudded in a satisfactory manner. The formations to be cased behind the 6¼" water string were mudded in a satisfactory manner. A report covering these operations will be issued in the regular manner. Otherwise condition of well is as stated in notice quoted below.

THE NOTICE STATES:

"The new conditions are as follows: 12½" casing cemented at 2002'.
8¼" " " " 4505'.

Total depth: 4523. Hole was cored before 8¼" was cemented. Samples showed an edge water condition in the top of the Meyer Zone.

4500-4508
4508-4516
4516-4523

Found top of cement 4230'. Drilled out to 4523'. Ran tubing and swabbed to 1160', when well started to flow. Well flowed 28 hrs. water and oil. Sample taken just before well was killed showed 16.0 Gr. 59% Water, 1% Emul. 1% mud."

~~Recommendation~~

PROPOSAL:

"We now propose to drill ahead to about 4570', and cement 6¼" water string. Will circulate hole until loss of mud is reduced to minimum required before cementing 6¼". If 6¼" shut-off tests O.K. will finish with 4½" at about 4730'.

RECOMMENDATION:

The latest data available indicate that 4560' or 4570' is a satisfactory cementing depth at this location.

The proposal is approved.

Kindly notify this office to witness a bailing test of the 6¼" shut-off.

SUPPLEMENTARY NOTICE

Los Angeles, Cal. March 22, 1923

MR. C. C. Thoms,

Deputy State Oil and Gas Supervisor

Los Angeles, Cal.

DEAR SIR:

Please be advised that our notice to you dated March 1, 1923, stating our intention to test (Drill, deepen, redrill, test, abandon) well number Jalk 5 Section 6 T. 3 S., R. 11 W., S.B. B. & M., Santa Fe Springs Oil Field, Los Angeles County, must be amended on account of changed or recently discovered conditions.

The new conditions are as follows:

12½" casing cemented at 2002'.
8¼" " " " 4505'.

Total depth: 4523. Hole was cored before 8¼" was cemented. Samples showed an edge water condition in the top of the Meyer Zone.

4500 - 4508
4508- 4516
4516 - 4523

Found top of cement 4230'. Drilled out to 4523'. Ran tubing and swabbed to 1160', when well started to flow. Well flowed 28 hrs. water and oil. Sample taken just before well was killed showed 16.0 Gr. 59% Water, 1% Emul. 1% mud.

We now propose

To drill ahead to about 4570', and cement 6¼" water string. Will circulate hole until loss of mud is reduced to minimum required before cementing 6¼".

If 6¼" shut-off tests O.K. will finish with 4½" at about 4730'.

DEPARTMENT OF PETROLEUM AND GAS

Special Report on Operations Witnessed

No. T -1-3815.

Los Angeles, Cal. March 29, 1923.

Mr. B. E. Parsons,

Los Angeles, Cal.

DEAR SIR: Agent for GENERAL PETROLEUM CORPORATION "JALK" ~~Company~~

Operations at your well No. 5, Section 6, T. 3S., R. 11W., S.B. B & M.

Santa Fe Springs Oil Field, in Los Angeles County, were witnessed by

E. H. Musser, representative of the supervisor,

on March 19, 1923. There were also present Messrs. H. F. Power, Engineer and

R. Hudson, Driller.

Casing Record: 12½" cemented 2002'; 8¼" cemented 4505'.

The operations were performed for the purpose of testing the effectiveness of mudding of the formations between 4505' and 4579'.

and the data and conclusions are as follows:

The pressure mudding of the gas zone was performed after cementing the 8¼" casing. The following is from your letter dated March 1, 1923, reporting the operation:

"February 23, 1923, the 8¼" casing was cemented with 400 sax of Santa Cruz cement at 4500'. Four hours after the cementing operations were completed the interval between the 8¼" and 12½" casings was packed off and the mudding of the formations below 2002' began.

"A pump pressure of 250# was maintained with the following loss:

Date	Time	Loss in bbls
2/23	6:00 p.m. - 7:00 p.m.	7.0
2/23	7:00 p.m. - 8:00 p.m.	5.5
2/23	8:00 p.m. - 9:00 p.m.	5.0
2/23	9:00 p.m. - 10:00 p.m.	4.5
2/23	10:00 p.m. - 11:00 p.m.	3.0
2/23	11:00 p.m. - 12. Midnight	3.0
2/24	12. Midnight - 1:00 a.m.	2.0
2/24	1:00 a.m. - 2:00 a.m.	.75 "

The mudding operations are approved.

MR. POWER REPORTED THE FOLLOWING:

1. The total depth of the hole was 4579'.
2. A core showed brown shale with streaks of oil sand from 4523'-4535' and 4571'-4579'.
3. Almost continuous cores were taken below 4500'.
4. A production test was made with the hole drilled to 4523'. The well flowed 40% oil and 60% water.
5. The hole was reamed to about 8" in size.

6. Mud fluid was circulated through the drill pipe hanging just off bottom for 4½ hr., prior to this test. A gain of 11 bbl. was noted over a 3hr. period.
7. The 4" drill pipe with a 4-way reaming bit attached was hanging about 1½ ft. off bottom during the test.

THE INSPECTOR WITNESSED THE FOLLOWING:
1. From 5:25 p.m.- 5:55 p.m., there was a gain of 0.25 bbl. in the pit.
2. The mud was medium weight.

The mudding operations are approved.

Oral approval given to cement the 6¼" casing at 4579' is hereby confirmed.

CALIFORNIA STATE MINING BUREAU

DEPARTMENT OF PETROLEUM AND GAS

Report on Proposed Operations

1 21

No. P -1-4757

Los Angeles, Cal. Dec. 12, 1922.

Mr. R. E. Parsons,

Los Angeles, Cal.

Agent for GENERAL PETROLEUM CORPORATION ~~Company~~

DEAR SIR:

"SPRINGS"

Your proposal to drill Well No. 5, Section 6, T. 3S., R. 11W., S.B. B. & M.,

Santa Fe Springs Oil Field Los Angeles County, dated Nov. 21, 1922,

has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:

"The well is 511' S. of centerline of Little Lake Road. & 150' W. of centerline of Norwalk Rd.
The elevation of the ground above sea level is 135.79 feet.
We estimate that the first productive oil or gas sand should be encountered at a depth of about 4600 feet, more or less."

PROPOSAL:

"We propose to use the following strings of casing either cementing or landing them as here indicated:

Size of Casing	Weight per Foot	New or Second Hand	Depth	Landed or Cemented
12½"	50#		2000'	Cemented
8¼"	36#		4600'	Cemented
4½"	15#	become	4700'	Landed

It is understood that if changes in this plan ~~xxx~~ necessary we are to notify you before cementing or landing casing."

Recommendation:

Meager data available at this office indicate that the Meyer sand should be encountered at this location at a depth of about 4500'.
The proposal as quoted from the notice does not specify any protection for the probable or possible gas and oil bearing formations to be cased off, together with water, back of the 8¼" water string. However, since this well is located out on the flank of the structure, the gas and upper oil bearing formations may not require especial protective mudding.
The proposal to drill is therefore approved with the following recommendation:
This office shall be notified before drilling below a depth of 4500', and before landing and cementing the 8¼" casing. Recommendations as to the proper cementing depth for the 8¼" casing and any mudding requirements considered necessary will be made at that time.
Kindly notify this office to witness a test of the 8¼" shut-off.

NOTE: It is the opinion of this Department that 4500' is too great a depth for the setting of 8¼" casing as a water string.

NOTICE OF INTENTION TO DRILL NEW WELL

This notice must be given before drilling begins

PYRAMID OIL CO. Los Angeles, Cal. Nov. 21, 1922

Mr. M. H. Soyster,

Deputy State Oil and Gas Supervisor

Los Angeles, Cal.

DEAR SIR:

In compliance with Section 17, Chapter 718, Statutes of 1915, as amended, notice is hereby given that it is our intention to commence the work of drilling well number "JALK" 5 Springs Section 6 T 3 S. R. 11 W., S.B. B. & M.,

Santa Fe Springs Oil Field, Los Angeles County.

The well is 511' S. of centerline of Little Lake Road. feet N. or S., and 150' W. of centerline of Norwalk Rd. feet E. or W. from
(Give location in distance from section corners or other corners of legal subdivision)

The elevation of the ~~derrick floor~~ ground above sea level is 135.79 feet.

We propose to use the following strings of casing either cementing or landing them as here indicated:

Size of Casing, Inches	Weight, Lb. Per Foot	New or Second Hand	Depth	Landed or Cemented
12½"	50#		2000'	Cemented
8¼"	36#		4600'	Cemented
4¾"	15#		4700'	Landed

It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing.

We estimate that the first productive oil or gas sand should be encountered at a depth of about 4600 feet, more or less.

Sweyer about 4500

DIVISION OF OIL, GAS, AND GEOTHERMAL RESOURCES

REPORT OF WELL PLUGGING AND ABANDONMENT

Cypress, California

July 16, 2001

Julian I. Hathaway, Agent
HATHAWAY COMPANY
P. O. Box 3404
SANTA FE SPRINGS CA 90670

Your report of the plugging and **abandonment** of well **"Jalk" 119**, A.P.I. No. **037-15492**, Section **6**, T. **3**S, R. **11**W, S.B. B & M., **Santa Fe Springs** Field, **Los Angeles** County, dated **9-11-00**, received **9-13-00**, has been examined in conjunction with operations witnessed and records filed in this office.

We have determined that all of the requirements of this Division have been fulfilled relative to plugging and **abandonment** of the well, removal of well equipment and junk, and the filing of well records.

NOTE:

1. Surface plugging completed on **9-8-00**.
2. Surface inspection made and approved on **7-6-01**.

SAFETY PRECAUTIONS AND UNSAFE EXCAVATIONS

CAUTION! Oil and gas wells may produce hydrogen sulfide gas, which is highly poisonous and will accumulate and concentrate in low areas such as excavations. Before entering an excavation area, test to ensure that there is sufficient oxygen and that the flammable/toxic gas readings are within safe limits.

PERMIT TO CONDUCT WELL OPERATIONS

Julian I. Hathaway, Agent
HATHAWAY COMPANY
P. O. Box 3404
SANTA FE SPRINGS CA 90670

Cypress, California
June 14, 2000

Your proposal to **abandon** well **"Jalk" 119**, A.P.I. No. **037-15492**, Section **6**, T. **3S**, R. **11W**, **S.B.** B. & M., **Santa Fe Springs** Field, -- area, -- pool, **Los Angeles** County, dated **06/09/00**, received **06/12/00** has been examined in conjunction with records filed in this office.

THE PROPOSAL IS APPROVED PROVIDED:

1. Blowout prevention equipment equivalent to this Division's Class **II2M** requirements, or better, shall be installed and maintained in operating condition.
2. All portions of the well not plugged with cement shall be filled with clay base mud having a minimum density of 72 lb/cu ft and a minimum gel-shear strength of 25 lb/100 sq ft.
3. The cement plug proposed to be placed to **4400'** shall extend to at least **4390'**.
4. For the isolation of the oil and gas zones, the **7"** casing shall be perforated at **2000'** and sufficient cement shall be squeezed to fill to **1900'** outside the casing.
5. The well shall be plugged with cement from **752'** to **652'**.
6. This Division shall be consulted and a Supplementary Notice may be required before making any changes in the proposed program.
7. **THIS DIVISION SHALL BE NOTIFIED TO:**
   a. Inspect the installed blowout prevention equipment prior to commencing downhole operations.
   b. Witness the placing, location and hardness of the cement plug from **4699'** to **4390'**.
   c. Witness the mudding of the hole.
   d. Witness the squeeze cementing of the **7"** casing through the **perforations** at **2000'**.
   e. Witness the location and hardness of the cement plug at **1900'**.
   f. Witness the location and hardness of the cement plug at **652'**.
   g. Witness the placing, location and hardness of the cement plug from **150'** to **10'**.
   h. Inspect and approve the cleanup of the well site within 60 days after placement of the surface plug.

NOTE:

1. A Division witnessed and approved leak test of the surface plug prior to welding on the steel plate at the surface is a requirement of the Construction Site Review process.

DIVISION OF OIL AND GAS

In compliance with Section 3229, Division 3, Public Resources Code, notice is hereby given that it is our intention

to abandon well "Jalk" 119 API No. 037-15492,

Sec. 6, T. 3 S, R. 11 W, S. B B &M., Santa Fe Springs Field, Los Angeles County.

Commencing work on June 30, 2000

The present condition of the well is:

1. Total depth 4699'.
2. Complete casing record, including plugs and perforations (present hole)
   11¾" 47# cemented at 212'.
   7" 22 & 23# combination string landed at 4699', C.P. 4505' cemented with 800 sacks and C.P. 752' cemented with 140 sacks and perforations 4506'-4699'.
3. Last produced May 2000 (Date) 5 (Oil, B/D) -- (gas, MCF/D) 245 (water, B/D)
4. Last injected _____ (Date) _____ (Water, B/D) _____ (Gas, Mcf) _____ (Surface Pressure)

Additional data for dry hole (show depths):

5. Oil or gas shows
6. Stratigraphic markers
   2000
7. Formation and age at total depth
8. Base of fresh water sands ? 800'

9. Is this a critical well according to the definition on the reverse side of this form? ☒ Yes ☐ No

The proposed work is as follows:

1. Install Class II-2M blow-out preventer.
2. Fill hole with killing fluid sufficient to control well.
3. Displace oil from bottom. Clean out to 4520'. ?
4. Place cement plug from 4699'-4400'. NO 4340
5. Fill 7" casing with 72 lb/cu. ft. clay base mud with min. gel-shear strength of 25#/100 sq. ft.
6. Shoot 7" casing at top of uppermost gas sand with eight ½" holes at 4/ft. 2000
7. Place 100' cement plug above shot holes. Attempt to squeeze away 35 cu. ft. 3100 NEED AFW - PLUG 752' -652
8. Place surface plug from 150' to 10' below surface. Fill 11¾' x 7' annulus from 60'+.

It is understood that if changes in this plan become necessary, we are to notify you immediately.

Signed J. D. Hathaway

Date Aug. 10, 1945 Title

(President, Secretary or Agent)

Use this form in reporting all important operations at the well, together with the dates thereof, in the order of their performance. Such operations include drilling, redrilling, deepening, plugging, or altering casing as by perforating, shooting, or pulling. Include in your report size of hole drilled, redrilled, or deepened; size, weight and length of casing landed, cemented, or removed, amount and location of perforations; number of sacks of cement used in cementing or plugging operations, number of feet of cement drilled out of casing, location of top and bottom of cement plugs. If the well was dynamited, give date, dimensions and weight of all shots. If tests were made give interval tested and results of tests, such as, amount and nature of fluids recovered.

Date 1945	
5-19	Spudded in, drilled 15" hole to 212'. Cemented 11-3/4", 47# casing at 212' with 180 sacks cement.
6-2	Drilled 10-5/8" hole to 4699'.
6-11	7", 20-lb.and 23-lb., J-55 csg. landed at 4699', including perforated 4506'-4699'. Cemented through Baker cementing collar at 4505' with 800 sacks, final pressure 900 lb.and through Hayward sleeve at 752' with 140 sacks, final pressure 500 lb. pressure. Latter operations witnessed and approved by Division of Oil and Gas.
6-14	Drilled out cement in 7" casing 702'-755' and 4414'-4494'. Ran Halliburton tester, set packer at 4452'. Valve open for 25 minutes. Showed only a weak puff and then was dead. Recovered 5' mud fluid, water shut-off approved by Division of Oil and Gas. Cleaned out to bottom, reran tester and opened valve for 1-1/2 hr. Recovered 2-1/2 stands of fluid.
6-15	Bailed hole free of mud - chemically treated well-bailing.
6-29	Ran rods and 2-1/2" upset tubing with 18' gas anchor to 4650'. Rigged up pumping equipment.
6-30	On production 64 B/D oil, 35.8° 0.3% cut est.10 M.C.F.gas.

Report on Test of Water Shut-off
(FORMATION TESTER)

No. T 1-44110

Los Angeles 14, Calif. June 22, 1945

Mr. J. Elwood Hathaway
Santa Fe Springs, Calif.
Agent for HATHAWAY COMPANY

171

DEAR SIR:

Your well No. "Jalk" 119, Sec. 6, T. 3 S., R. 11 W., S.B. B. & M. Santa Fe Springs Field, in Los Angeles County, was tested for water shut-off on June 14, 1945. Mr. J. L. White, Inspector, designated by the supervisor, was present as prescribed in Sec. 3222 and 3223, Ch. 93, Stat. 1939; there were also present J. E. Hathaway, Operator, and Floyd Preston, Driller.

through perforations

Shut-off data: 7 in. 20 & 23 lb. casing was cemented at 4505 ft. on June 11, 1945 in 10-5/8" hole with 800 sacks of cement of which 15 sacks was left in casing. Casing record of well: 11-3/4" cem. 212'; 7" ld. 4699', c.p. 4505' and 752'; 4, 1/2" holes 4492', W.S.O., perf. 4506'-4699'.

Reported total depth 4699 ft. Bridged with cement from 4505 ft. to 4494 ft. Cleaned out to 4494 ft. for this test. A pressure of xxx lb. was applied to the inside of casing for xxx min. without loss after cleaning out to xxx ft. A Halliburton tester was run into the hole on 3-1/2 in. drill pipe, with xxx ft. of water cushion, and packer set at 4452 ft. with tailpiece to 4472 ft. Tester valve, with 3/8" bean, was opened at 12:15 p.m. and remained open for xxx hr. and 25 min. During this interval there was one weak puff and no blow thereafter.

THE INSPECTOR ARRIVED AT THE WELL AT 12:50 P.M. AND MR. PRESTON REPORTED:

1. Cement was drilled out of the 7" casing from 702'-755' (equivalent to 11 sacks) and from 4414'-4494' (equivalent to 15 sacks).
2. The casing was shot with 4, 1/2" holes at 4492'.
3. A Halliburton tester was run as noted above.

THE INSPECTOR NOTED:

1. When the drill pipe was removed 5' of medium drilling fluid was found in the drill pipe above the tester.
2. The recording pressure bomb chart showed that the tester valve was open 25 minutes.

The test was completed at 2:20 p.m.

THE WATER SHUT-OFF ABOVE THE PERFORATIONS AT 4492' IS APPROVED.

Special Report on Operations Witnessed

No. T 1-44109

Los Angeles 14, Calif. June 22, 1945

Mr. J. Elwood Hathaway
Santa Fe Springs, Calif.
Agent for HATHAWAY COMPANY

121

DEAR SIR:

Operations at your well No. "Jalk" 119 Sec. 6, T. 3 S., R. 11 W., S.B. B. & M., Santa Fe Springs Field, in Los Angeles County, were witnessed by T. E. Pyeatt of the Hayward Testing Service, ~~representative of the supervisor~~, on June 11, 1945. There was also present E. J. Hathaway, Operator

Casing Record 11-3/4" cem. 212'; 7" ld. 4699', c.p. 4505' and 752', perf. 4506'-4699'; T.D. 4699'. | Junk

The operations were performed for the purpose of ~~demonstrating that the known surface waters are adequately protected.~~

~~The inspector arrived at the well at and Mr. reported:~~

MR. HATHAWAY REPORTED TO MR. PYEATT:

1. On May 22, 1945, 11-3/4", 47 lb. casing was cemented at 212' with 180 sacks of cement.
2. A 10-5/8" rotary hole was drilled from 212' to 4699'.
3. On June 11, 1945, 7", 20 and 23 lb. casing, equipped with a Hayward collar at 752' and perforated 4506'-4699', was landed at 4699' and was cemented through perforations at 4505' with 800 sacks of cement.

MR. PYEATT NOTED:

1. The cementing ports in the Hayward collar at 752' were opened and the 7" casing was cemented through these ports with 140 sacks of cement.
2. The cement was displaced from the casing with 160 cubic feet of drilling fluid, and the final pressure was 150 lb.
3. Cement did not return to the surface.
4. The cementing ports in the Hayward collar were closed and a pressure of 500 lb. was applied to the inside of the 7" casing and this pressure held for 10 minutes without loss.

The operations were completed at 5:15 a.m.

THE CEMENTING OPERATIONS AS WITNESSED AND REPORTED ARE APPROVED AS INDICATING THAT THE KNOWN SURFACE WATERS ARE ADEQUATELY PROTECTED.

NOTE: This work was not witnessed by a member of this division for the reason that no Inspector was available, but was witnessed as noted above and the above information was furnished by Mr. T. E. Pyeatt of the Hayward Testing Service.

Los Angeles 14, California

Dear Sir:

Herewith please find data concerning cementing operations performed at **Hathaway Company** Well **Jalk** No. **119** Well In **Santa Fe Springs** Oil Field on **5/11/45**.

I arrived at the well at **12.00** ~~Mid~~ **AM** ~~PM~~ and **J.I.** " ~~Engineer~~ **Driller** → Owners reported that on **5/11/45** the **7** inch, **20 & 23** lb. casing equipped with a Hayward Cementing Collar at **752** ft. was cemented at **4505** ft. (Shoe depth) with **800** sacks of cement.
with liner to 4700'

I noted the following:

1. After opening the cementing ports at **752** ft. circulation was established at **0-50** p/s.i., pump pressure.
2. The casing was cemented through the ports at **752** ft. with **140** sacks of cement.
3. The cement was displaced from the casing with **160** cu. ft. of drilling fluid at a final pressure of **150** p/s.i.
4. Cement **did not** return to the surface.
5. After closing the cementing ports, a closed in pressure of **500** p/s.i. applied to the inside of the casing held for **10** minutes without loss.

The cementing operations were completed at **5:15** **AM** ~~PM~~.

Mr. **E.T.Thomas (Haliburton cementer)** was also present.

Report on Proposed Operations

No. P 1-40609

Los Angeles 14, Calif. April 12, 1945

MR. J. Elwood Hathaway

Santa Fe Springs, Calif.

Agent for HATHAWAY COMPANY

12-1

DEAR SIR:

Your proposal to drill Well No. "Jalk" 119,

Section 6, T. 3 S., R. 11 W., S.B. B. & M., Santa Fe Springs Field, Los Angeles County,

dated March 28, 1945, received April 3, 1945, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:

"The well is 124.36 feet S. and 403.95 feet W. from C/L inter. Florence Ave. (Little Lake Road) and Norwalk Puente Mills Road.
The elevation of the ground above sea level is approx. 143 feet.
We estimate that the first productive oil or gas sand should be encountered at a depth of about 4500 feet."

PROPOSAL:

"We propose to use the following strings of casing, either cementing or landing them as herein indicated:

Size of Casing	Weight	Grade and Type	Depth	Landed or Cemented
11-3/4"	47 lb.	Smls.	250'	cemented
7"	20 and 23 lb.	"	4700'	c.p. at approx. 4500' and Hayward sleeve at approx. 800'

Well is to be drilled with rotary tools.
It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing."

DECISION:

THE PROPOSAL IS APPROVED PROVIDED THAT

1. Mud fluid consistent with good drilling practice shall be used and the column of mud fluid maintained at all times to the surface, particularly while pulling the drill pipe.
2. Any hole to be sidetracked in any oil or gas zone shall be filled with cement, if possible.
3. THIS DIVISION SHALL BE NOTIFIED TO WITNESS:
   (a) The cementing of the 7" casing through the upper ports. Any subsequent testing required will be specified at that time.
   (b) A test of the effectiveness of the 7" shut-off at about 4500'.

Notice of Intention to Drill New Well

This notice must be given and surety bond filed before drilling begins

PYRAMID OIL CO.

DIVISION OF OIL AND GAS

Santa Fe Springs Calif. March 28 1945

037-15492

Los Angeles Calif.

"JALK" 119

In compliance with Section 3203, Chapter 93, Statutes of 1939, notice is hereby given that it is our intention to commence the work of drilling well No. "Jalk" 119, Sec. 6, T. 3 S., R. 11 W., S.B. B. & M., Santa Fe Springs Field, Los Angeles County.

Lease consists of

The well is 124.36 feet ~~N.~~ or S., and 403.95 feet ~~E.~~ or W. from C/L inter. Florence Ave. (Little Lake Road) and Norwalk Puente Mills Road.
(Give location in distance from section corners or other corners of legal subdivision)

The elevation of the ~~derrick floor~~ ground above sea level is approx. 143 feet.

We estimate that the first productive oil or gas sand should be encountered at a depth of about 4500 feet.

We propose to use the following strings of casing, either cementing or landing them as herein indicated:

Size of Casing, Inches	Weight, Lb. Per Foot	Grade and Type	Depth	Landed or Cemented
11-3/4"	47 lb.	Smls.	250'	cemented
7"	20 and 23 lb.	"	4700'	c.p.at approx. 4500' and Hayward sleeve
				at approx. 800'.

Well is to be drilled with rotary ~~cable~~ tools.

It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing.

First Semi-Annual Groundwater Well Monitoring Report 2019
Continental Heat Treating
10643 Norwalk Boulevard, Santa Fe Springs, California
(Site Id. No. 204GW00, SCP No. 1057)

Dear Mr. Young:

Fero Environmental Engineering, Inc. ("Fero") conducted the first semi-annual groundwater monitoring for 2019 at the subject site, Continental Heat Treating ("CHT"), on May 15, 2019. The CHT site is located to the south of the former Jalk Fee Property ("Jalk Fee") which has an active environmental case with the Regional Water Quality Control Board – Los Angeles Region ("RWQCB") for releases of halogenated volatile organic compounds ("VOC"), including tetrachloroethylene ("PCE") and trichloroethylene ("TCE") on the Jalk Fee site. This groundwater monitoring event was coordinated with Cardno ERI ("Cardno"), Exxon/Mobil's consultant; for their ongoing investigation on the Jalk Fee site to the north so that the groundwater samples were collected at both sites during the same period.

Consistent with the Regional Water Quality Control Board – Los Angeles Region's ("RWQCB"), *Approval of Work Plan for Additional Well Installation and Requirement to Modify Groundwater Monitoring Program, Pursuant to California Water Code Section 13267 Order* ("Approval"), dated January 3, 2019, Fero installed two additional well clusters, MW7 and MW8. Each well cluster consisted of three well installations similar to onsite well clusters MW5 and MW6 except that the shallow well in each cluster was extended to 120 feet below grade ("fbg") rather than 110 fbg to accommodate historical drop in groundwater elevations in the area of the CHT site. The MW7 cluster was installed on the southwest corner of the CHT site and the MW8 cluster was installed on the southwest corner of Koontz Avenue and Florence Avenue. The well locations are indicated on the attached site maps. The well installations were the subject of a prior installation report to the RWQCB.

The elevation of groundwater proximate to the CHT site has increased since the last monitoring in November 2018 by more than a foot in most groundwater monitoring wells at the site. The groundwater elevation had not increased sufficiently to allow Fero to monitor CHT wells MW4,

MW5s and MW6s. All of the remaining monitoring wells on the Site; MW1, MW2, MW3, MW5m, MW5d, MW6m and MW6d, MW7s, MW7m, and MW7d along with offsite wells MW8s, MW8m and MW8d were monitored during this sampling event. A well schedule of the CHT wells is included in Table 1.

Fero was able to incorporate the data collected by Cardno from twelve of the near field upgradient Jalk Fee wells on the Jalk Fee site, MW6a, MW6b, MW6C, MW7a, MW7b, MW7c, MW9a, MW9b, MW9c, MW10a, MW10b and MW10c, from three near field offsite wells, MW8a, MW8b, and MW8C, that are lateral to the CHT site with respect to groundwater flow to the east of the CHT site two wells, MW11b and MW11c, that are lateral to the CHT site with respect to groundwater flow to the west of the CHT site and 12 newly installed wells, MW-4ra, MW-4rb, MW-4rc, MW-12a, MW-12b, MW-12c, MW-13a, MW-13b, MW-13c, MW-14a, MW-14b and MW-14c . Cardno reported insufficient water to purge or sample in monitoring wells MMW-04, MMW-05 and MW11A.

2019 Groundwater Sampling

Fero coordinated the first round of semi-annual groundwater monitoring for 2019 at the CHT site with Cardno's monitoring on the adjacent Jalk Fee site. The depth to groundwater in each of the wells on the CHT site (except MW4, MW5s and MW6s) was measured prior to purging and sampling on May 15, 2019. The depth to groundwater in cluster wells were all measured prior to sampling any well in the cluster. Cardno reportedly conducted groundwater monitoring activities on the adjacent Jalk Fee site from May 28-30, 2019 following a delay related to well installation progress associated with the Jalk Fee site.

Groundwater Elevation Gauging

Fero measured the depth to groundwater in each of the seven wells monitored for the CHT site using a Solnist monitor which is capable of a measurement accuracy of 0.01 feet. The depth measurements and water elevations in the wells are summarized in Table 2. Figures 1-3 provide groundwater flow contours and hydrographs of the water elevations in the three zones of the underlying formation monitored, water table (90'-120'), middle (130'-140') and deep (160'-170'), respectively. The hydrographs indicate an increase in groundwater elevation in all wells from November 2018.

The recent additional well installations both to the north of the Jalk Fee site and to the south provide broader groundwater contours which indicate appreciably the same groundwater flow direction as prior monitoring events with a flow direction generally to the south-southwest in all of the zones of the formation monitored. The slope of the water table indicates a flow direction generally to the south-southwest under a gradient of approximately 0.0078 ft/ft from Jalk Fee well cluster MW-12 to CHT well MW8 (approx. 1235'). The direction is consistent with that measured in November 2018 however the gradient is slightly lower (formerly 0.0083 ft/ft from Jalk Fee wells MW7 to MW11).

The elevation of groundwater in the middle wells screened from 130 – 140 fbg and the deep wells screened from 160 – 170 fbg were contoured to determine the respective piezometric surfaces for the middle and deep zones. The resultant contours for the middle well data are provided on Figure 2 and the contours for the deep wells are presented on Figure 3. The general flow direction of the middle zone is to the south under a pressure gradient of 0.0079 ft/ft (prior 0.01 ft/ft) from Jalk Fee well cluster MW7 to Jalk Fee well cluster MW11b (approx. 510'). The general flow direction of the deep zone continued to the south with a westerly component on the western portions of the Jalk Fee property. The pressure gradient of the deep zone is approximately 0.008 ft/ft (prior 0.0112 ft/ft) from Jalk Fee well cluster MW7 to Jalk Fee well cluster MW11c.

The horizontal flow gradient is nearly the same at all depths monitored proximate to the CHT and Jalk Fee sites. The vertical flow gradient is downward at both the MW7 and MW8 groundwater well clusters.

The historical groundwater elevations in the CHT wells were used to generate hydrographs. The hydrographs are included herein following their respective iso-concentration plot, ie the water table well hydrograph follows Figure 1 as Figure 1a. A hydrograph including all the wells follows the deep well hydrograph after Figure 3 as Figure 3b. Except for slight anomalies, the groundwater elevations in the respective wells (i.e. water table, middle, deep) mimic one another closely. As indicated on the hydrographs the elevations in all of the wells have increased over the past six months.

Groundwater Sampling

Following gauging and prior to sampling on May 15, 2019, CHT groundwater monitoring wells MW1, MW2, MW3, MW5m, MW5d, MW6m, MW6d, MW7s, MW7m, MW7d, MW8s, MW8m and MW8d were purged of between 4-20 gallons of water, the volume of which was based upon the amount of water in the well and stabilization of water quality parameters (DO, ORP, pH, conductivity, etc.) measured in the field using a Horiba U-52 multi-parameter water quality meter and a flow cell. These monitoring wells were purged with a stainless steel Grundfos pump. The purge data are provided on the well purge reports in Attachment A. There was insufficient water in wells MW4, MW5s and MW6s for sampling.

Groundwater samples were collected in 40 ml vials directly from the sampling pump discharge, Teflon lined caps were secured tightly onto the 40 ml vials and each was visually inspected to assure that zero headspace had been achieved. The sample vials containing groundwater from the wells were properly labelled and placed in an ice chest containing ice (approx. 4^{o} C) for transport at the end of the sampling day to Enviro-Chem, Inc., an ELAP certified laboratory, in Pomona for analysis. The samples were transported under appropriate Chain-of-Custody documentation.

The groundwater samples were analyzed for volatile organic compounds (VOCs) using EPA Method 8260B which includes the gasoline BTEX compounds. In addition, all of the samples were analyzed for 1,4-dioxane. Groundwater VOC analytical results from this and from previous events are summarized in Table 3. Lab analytical reports with associated chain-of-custody documentation are

included in Attachment B. Data requested by the EPA were presented in EPA format and have been submitted under separate cover. Comparable groundwater quality data generated by Cardno ERI for this sampling event are presented in Table 4.

Groundwater Sampling Results

CHT Site Wells

None of the groundwater samples collected by Fero as part of this monitoring event contained 1,4-dioxane above the laboratory detection limit.

The concentrations of compounds of concern ("COCs") in the wells monitored as part of the CHT groundwater investigation over the past few years continue to fluctuate with time as they have in the past. Except for the anomalies in MW6 and MW2 caused by the adjacent Jalk Fee site, Figure 6c shows a decrease in PCE over time in all groundwater wells monitored. Similarly, Figure 9c shows a general decrease in the concentrations of TCE in the wells monitored.

All of the new well installations showed concentrations of COCs. The concentrations of COCs collected from the MW7 well cluster reflect concentrations migrating from the upgradient Jalk Fee source in the vicinity of Jalk Fee well clusters MW-6 and MW-9. The Jalk Fee sourced concentration of PCE is decreasing in Jalk Fee well MW-6a but it remains the highest proximate to the CHT site at 1400 µg/L. Likewise, the concentrations of COCs in cluster MW-8 reflect concentrations migration from Jalk Fee sources in the vicinity of Jalk Fee well clusters MW-6 and MW-9 through CHT well cluster MW-7 and onto cluster MW-8.

Jalk Fee Site

Cardno reported that Jalk Fee wells MMW-04, MMW-05 and MW11a contained insufficient water to purge or sample the wells so no data are available from those sampling locations. Well cluster MMW-04 has been replaced with a new cluster MW-4r. The data for that cluster are contained herein.

As with the CHT wells, the concentrations of COCs in the Jalk Fee wells appear to be decreasing with time. The concentration of PCE in Jalk Fee well MW-6a has dropped slightly but it remains the highest recorded in all the wells monitored at 1400 µg/L followed by Jalk Fee well MW-9a at 520 µg/L. The new upgradient Jalk Fee wells (MW-12 and MW-13) and the new lateral Jalk Fee well cluster MW-4 contained water consistent with the Omega plume which is migrating onto the Jalk Fee site from the north, with lower concentrations of COCs than on the Jalk Fee site including PCE and TCE. Downgradient and lateral Jalk Fee well cluster MW-14 indicates COC concentrations consistent with the Omega plume.

Discussion

The groundwater flow direction in all of the aquifer zones monitored during this effort remain to the south-southwest from the Jalk Fee property to the CHT property during the entire time of groundwater monitoring. Groundwater elevations have increased recently by a foot or more.

The concentration of PCE from Jalk Fee sources in water table well MW-6a remains the highest on both the CHT and Jalk Fee sites at 1,400 µg/L, down slightly from 1,500 µg/L followed by Jalk Fee well MW-9a at 520 µg/L located approximately 200 feet to the west of the CHT site. Groundwater contamination, including PCE and TCE, from Jalk Fee sources is migrating onto and beyond the CHT site.

The concentrations of PCE in newly installed CHT wells MW-8 and Jalk Fee wells MW-14 reflect migration from the Omega plume and Jalk Fee well sources to the north.

The next semi-annual sampling event will likely occur sometime during November 2019. The sampling event will again be coordinated with Cardno ERI, consultants for the adjacent Jalk Fee site. Should you have any questions regarding the content of this Semi-Annual Groundwater Monitoring Report, please do not hesitate to call the undersigned at (714) 256-2737.

Respectfully,
Fero Environmental Engineering, Inc.

Tel(714)256-2737 E-Mail: Feroeng@aol.com

Project: **Continental Heat Treat 884**
Lab I.D.: **190516-70 through -82**

Dear Mr. Fero:

The **analytical results** for the water samples, received by our lab on May 16, 2019, are attached. The samples were received chilled, intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

Andy Wang
Laboratory Manager

CHAIN OF CUSTODY RECORD

Date: 5/16/19

WHITE WITH SAMPLE • YELLOW TO CLIENT

Underground Storage Tanks (USTs):

An area of patched asphalt was observed in the southwestern portion of the parking area of the subject Property. According to Mr. Smith and SFSFD records, a former UST (discussed below) was located in that area. However, no visual or physical evidence of currently existing USTs was discovered during the site investigation. In particular, the Assessor searched for: fill pipes, vent pipes, areas of abnormal or heavy staining, manways, manholes, access covers, concrete pads not homogeneous with surrounding surfaces, concrete build-up areas potentially indicating pump islands, abandoned pumping equipment, or fuel pumps.

NWE reviewed file information for the subject Property kept by the LACDPW. Portions of the LACDPW file information are contained in the appendix of this Report. LACDPW records indicate a 10,000-gallon UST was located on the subject Property from 1975 to 1987. A November 18, 1987 *Tank Removal Geologic Report* prepared by Petroleum Industry Consultants, Inc. documents the removal of the UST and subsequent soil sampling activities. The date of manufacture of the UST was stated in the report as 1945; however, the U.L. number and manufacturer match those identified on the UST permit issued by the Santa Fe Springs Fire Department in 1975, therefore, the 1945 year of UST manufacture appears to be a misprint of the year 1975. Laboratory results indicated total petroleum hydrocarbon (TPH) concentrations measured below 100 parts per million (ppm) in the two soil samples retrieved from the former UST location. Based on the soil sample results, the LACDPW issued a final closure letter for the UST removal on February 18, 1988. The LACDPW file information indicates the former UST is unlikely to have significantly environmentally impacted the subject Property.

4.2 ADJOINING AND ADJACENT SITE AND VICINITY OBSERVATIONS:

Adjoining and Adjacent Properties Materials Storage:

No unusual or suspicious materials handling storage practices were observed on the adjoining and adjacent properties. The majority of the adjoining and adjacent properties appeared to use and store materials in ways that are not expected to environmentally impact the subject Property.

The NWE Assessor performed an in-person review of the Santa Fe Springs Fire Department (SFSFD) file for the western adjoining John A. Alexander property (12040 East Florence Avenue). SFSFD records indicated two gasoline USTs were removed from that property in September 1987, and a replacement 8,000-gallon gasoline UST was installed in October 1987. Hazardous materials inventory sheets indicated approximately 500 pounds of explosives and 35 gallons of "Thompson's C & B" are stored at that site. A note in the file stated the back area of that adjoining John A. Alexander property contained a large area of soil contamination (further discussed in the County/Local Agency Records Search Section of this Report).

The NWE Assessor also reviewed the LACDPW file for the adjoining John A. Alexander Company property. That file indicated final closure had been granted regarding the two removed USTs; and an 8,000-gallon gasoline UST is currently utilized on that property. On April 3, 1995, John A. Alexander was issued a violation indicating their UST inventory records were incomplete and leak detection system maintenance was required. However, the violation was noted as corrected on a June 2, 1995 LACDPW violation correction worksheet. Based upon the file information reviewed, it appears unlikely the reported current material storage on the adjoining John A. Alexander property has environmentally impacted the subject Property.

SO[illegible]CONTAMINATION - WESTERN ALLIED 12046 E. FLORENCE AVENUE, SANTA FE[illegible]RINGS, CA 90670

As you are aware, during April 1988, a subsurface soil investigation was conducted by GeoScience Analytical, Inc. at John Alexander Company's property at 12040 Florence Avenue, Santa Fe Springs. This property is contiguous to the west of your facility. In order to define the lateral extent of total petroleum hydrocarbon (TPH) contamination, soil samples were taken at the Western Allied parking lot. The laboratory analysis of these samples revealed TPH contamination of the soil.

On [illegible] 2, 1989 a site visit was made by Shahin Nourishad of this Department to discuss with you the issue of site assessment/site mitigation of the Western Allied property. Due to the necessity to shut down your operation to initiate soil remediation, you proposed a no action option at this time, with the agreement to characterize/remediate the site prior to any future developments, changes in the site use or ownership.

Taking into consideration the economic impact of an immediate site mitigation project; a clay layer at the depth of 30 to 40 feet; apparent confinement of TPH above the clay barrier (Additional Work Report, John Alexander Company, April 1989); and the absence of any known significant health or environmental risk, this Department accepts your remedial proposal with the following conditions:

1) Cap the uncovered area at the west of the property along the fence line with asphalt/concrete. Maintain the cap over the parking lot in good condition.

Sampling methods & Tests not stated —

Benzene @ 70 ppm, current MCL is only 1 ug/L. GW can be around 30' bgs. Attenuation below 20' bgs, would have to be very good to eliminate risk to GW.

Sampling methods and lab methods not stated, POL's not stated. Current PQL's around 1 ppb. Data indicates detect limits of around 70 ppb.

A big unanswered question is presence of VOC's other than BTEX. Facility history indicates possibility of VOC including halogenated contamination. Also since source of petroleum hydrocarbon contamination is not clear, complete characterization is needed under PEA.

Where was painting/cleaning done ? need to rule out signif. concn of metals (Cd, Cr, Pb. etc) from paints. Need to rule out PCB's from used oil.

Note: Re Boring L – based on info. from meeting at SFSFD on 10/3/97, this boring is not at boundary between WA and JA sites, but is on a different parcel. See notes for meeting details.

BEMSHAW/ WESTERN ALLIED
DATA REVIEW SUMMARY
Pg. 1
Steve Chase 8/13- 9/12/97

File data includes:

- 7/83 - Insp. By LACoFD indicates sheet metal shop, 1 gasoline UST, spray painting
- 7/88 - removal of UST referred to
- 5/89 – Insp. By LACo FD illegal disposal of waste thinner and paint-related material to ground; need contingency plan; illegal storage (over 90 days) ; labels. Noted use of HCl for cooling coil cleaning.
- 6/89 - letter to Western Allied from LACoFD re: TPH contamination at Alexander site next door, refers to lateral extent of TPH contam.
- 9/89 - Deed notification by Bemshaw Corp. for TPH filed.
- 4/94 - Insp. - manifest 270 gal used oil w/> 1000 ppm halogens to Evergreen Env.
- 7/95 - Insp - used oil to Demenno-Kerdoon 90% oil, 10% water.

Other

Haz Commnication report indicates need for haz training for personnel re: fuels, oils, solutions, solvents, waste treatment chemicals, indicating presence of these in use.

Need to dispose of used oil w/ >1000 ppm halogens indicates possible illegal disposal of chlorinated solvents.

Data from Ceres to SFSFD re: assessment of contamination at Alexander property.
Generally lacks important detail, such as:

- TPH testing by 418.1 ? 8015(M) to some standard ? other? Any speciation ?
- BTEX by 8020 ? 8240 ?
- if 8240, any other analytes over detect. limits?
- BTEX testing indicates detect. limits over 70 ppm, which is way over acceptable limits by present standards.
- Fact of 1130 ppm TPH @ 20' bgs well into Western Allied site in sandy/silty soils is of concern
- Vertical extent of contamination not demonstrated
- Clay layer @ 40' bgs referred to, but no boring logs included. Lithology ?
- GW depths ? gradient ? MW's in area ? GW contam. ?,
- BTEX (benzene) actually higher at prop. line than at presumed release point on Alexander site.
- Report refers to contamination at prop.line as "gasoline" contam., vs. all other contam. referred to as "diesel"
- no indication of testing for metals

complete assessment of Western Allied site would require testing for PCB's, metals, VOC's, oil speciation, determination of lateral and vertical extent of contamination.

Note: data from Phase I report , received 9/12/97, has data re: tank pull testing by PIC. Two samples , testing by "8015", minimal TPH. "8015" was 8015(M)? to what standard ?. Method 8015 is a method for determination of a few alcohols. Tank pull is for a gasoline UST in 11/87.

BTEX - possibility of contam. from Western Allied site. Benzene is greater at property line. Where was gasoline tank ? see table below: in PPM

	TPH	B	T	E	X	
John Alexander (boring O)	9850	11.3	30.6	12.6	21.1	
Western Allied (boring L)(prop. line)	4460	**17.3**	35.2	21.3	42.9	**(see note pg.2)**
Western Allied (boring K)	1130	<0.07	1.4	0.9	0.7	

The SFSFD has no authority to issue orders regarding assessment or remediation at this site at this time, particularly since the only known contamination is petroleum hydrocarbons. There may be mechanisms which could enable the City to officially act as lead agency for assessment and cleanup at this site.

If you want the SFSFD to explore authority to act further in any oversight activities at this site, please let us know in writing by October 15, 1997. If we do not hear from you by that date, the City will refer the site to the DTSC for any necessary action. The site is also being referred to the LARWQCB for any appropriate action by that agency.

Should you have any questions regarding this matter, please contact Steve Chase of this office.

Sincerely,

NORBERT P. SCHNABEL, FIRE CHIEF

Dave Klunk,
Director of Environmental Services

Bemshaw Corporation
c/o Mr. Marshall Levin
Century Loans
30131 Town Center Drive, Suite 180
Laguna Niguel, CA 92677

Dear Mr. Levin:

SUBJECT: REMOVAL OF DEED NOTIFICATION CONDITION
RE: PETROLEUM HYDROCARBON CONTAMINATION AT 12046 E. FLORENCE AVENUE, SANTA FE SPRINGS, CA. 90670

The Santa Fe Springs Fire Department (SFSFD) has reviewed your recent request to remove the Deed Notification condition established by the Los Angeles County Fire Department Health Hazardous Materials Division Site Mitigation Unit, and recorded at the Los Angeles County Recorder's office in August, 1989 The SFSFD declines to remove the Deed Notification condition.

The SFSFD advises you that based on our review of available data, significant contamination of soils of this site likely remains, and could pose a threat to groundwater and /or Public Health. The known contamination includes benzene, which was found at 17.30 "ppm" at the property line. It is the SFSFD's opinion that further testing is needed to determine the nature, concentration, lateral and vertical extent of any contamination on this site, and that any appropriate corrective action be taken.

It appears that the nature of petroleum hydrocarbon contamination was found to change from "diesel" to "gasoline" near the boundary between the John Alexander property and the Western Allied property. The record indicates that a gasoline Underground Storage Tank (UST) was installed in 1975, and removed from your property in 1988, although the exact location with respect to the Northwest Envirocon boring "L" of 1988, is unclear. It is from this boring "L" that the petroleum hydrocarbon contamination was characterized a "gasoline", with all other contamination characterized as "diesel".

The soil sampling, analysis, and reporting done in 1988 at the time of removal of the gasoline UST was reviewed as part of the Phase I assessment and is acknowledged.

In any case, the SFSFD lacks critical data to make a detailed determination of the nature, concentration, lateral and vertical extent of the contamination. The available data is deficient in many details, including:

1) groundwater depth, quality, gradient
2) boring logs, lithology
3) sampling methods and analytical testing done, including lab QA/QC
4) exact location of the former gasoline UST with respect to the Northwest Envirocon borings.

Without this data, the SFSFD is unable to recommend removal of the deed notification.

September 24, 1997

Steve Koester

From: Steve Chase

Re: Bemshaw Corp./ Western Allied Site
12046 E. Florence, SFS

On 9/19/97, SFSFD sent a letter to the RP's (Bemshaw), that SFSFD declined to lift the dee nitification for petroleum contamination placed by LACoFD in 1989. Part of the problem is the indication of "gasoline" contamination on the boundary of the present Western Allied site, when all other "TPH" contamination was characterized as "diesel", possibly near the location of a 10,000 gal gasoline UST the year before. Relatively large concentrations of benzene were found, and there is no info. Re: GW quality/depth, lithology, etc. Another issue is the authority of SFSFD to be "successor" agency to LACoFD in site mitigation issues. Maybe is has to be the DTSC for now ?

At any rate, Mr. Hans Sommer, a partner in the Bemshaw Corp., in receipt of the letter, called me around 11:00 AM 9/24/97. He wants to meet with me at SFSFD on Friday, Oct.3rd, around 11:00 AM, to discuss what Bemshaw Corp. can do, and I made an appointment with him to do so. .

Please see attached copy of letter to Bemshaw for info.

Can we have a meeting before next Friday to discuss this ? or ?

- Sorry I'm out of town till 10/9/97

- Require additional site charact.

Benzene @ 70 ppm, current MCL is only 1 ug/L. GW can be around 30' bgs. Attenuation below 20' bgs, would have to be very good to eliminate risk to GW.

Sampling methods and lab methods not stated, POL's not stated. Current PQL's around 1 ppb. Data indicates detect limits of around 70 ppb.

A big unanswered question is presence of VOC's other than BTEX. Facility history indicates possibility of VOC including halogenated contamination. Also since source of petroleum hydrocarbon contamination is not clear, complete characterization is needed under PEA.

Where was painting/cleaning done ? need to rule out signif. concn of metals (Cd, Cr, Pb. etc) from paints. Need to rule out PCB's from used oil.

BEMSHAW/ WESTERN ALLIED
DATA REVIEW SUMMARY 12014 E. Florence
Pg. 1
Steve Chase 8/13- 9/12/97

File data includes:

- 7/83 - Insp. By LACoFD indicates sheet metal shop. 1 gasoline UST, spray painting
- 7/88 - removal of UST referred to
- 5/89 – Insp. By LACo FD illegal disposal of waste thinner and paint-related material to ground; need contingency plan; illegal storage (over 90 days) ; labels. Noted use of HCl for cooling coil cleaning.
- 6/89 - letter to Western Allied from LACoFD re: TPH contamination at Alexander site next door, refers to lateral extent of TPH contam.
- 9/89 - Deed notification by Bemshaw Corp. for TPH filed.
- 4/94 - Insp. - manifest 270 gal used oil w/> 1000 ppm halogens to Evergreen Env.
- 7/95 - Insp - used oil to Demenno-Kerdoon 90% oil, 10% water.

Other

Haz Commnication report indicates need for haz training for personnel re: fuels, oils, solutions, solvents, waste treatment chemicals, indicating presence of these in use.

Need to dispose of used oil w/ >1000 ppm halogens indicates possible illegal disposal of chlorinated solvents.

Data from Ceres to SFSFD re: assessment of contamination at Alexander property.
Generally lacks important detail, such as:

- TPH testing by 418.1 ? 8015(M) to some standard ? other? Any speciation ?
- BTEX by 8020 ? 8240 ?
- if 8240, any other analytes over detect. limits?
- BTEX testing indicates detect. limits over 70 ppm, which is way over acceptable limits by present standards.
- Fact of 1130 ppm TPH @ 20' bgs well into Western Allied site in sandy/silty soils is of concern
- Vertical extent of contamination not demonstrated
- Clay layer @ 40' bgs referred to, but no boring logs included. Lithology ?
- GW depths ? gradient ? MW's in area ? GW contam. ?,
- BTEX (benzene) actually higher at prop. line than at presumed release point on Alexander site.
- Report refers to contamination at prop.line as "gasoline" contam., vs. all other contam. referred to as "diesel"
- no indication of testing for metals

complete assessment of Western Allied site would require testing for PCB's, metals, VOC's, oil speciation, determination of lateral and vertical extent of contamination.

Note: data from Phase I report , received 9/12/97, has data re: tank pull testing by PIC. Two samples , testing by "8015", minimal TPH. "8015" was 8015(M)? to what standard ?. Method 8015 is a method for determination of a few alcohols. Tank pull is for a gasoline UST in 11/87.

BTEX - possibility of contam. from Western Allied site. Benzene is greater at property line. Where was gasoline tank ? see table below: in PPM

	TPH	B	T	E	X
John Alexander (boring O)	9850	11.3	30.6	12.6	21.1
Western Allied (boring L)(prop. line)	4460	**17.3**	35.2	21.3	42.9
Western Allied (boring K)	1130	<0.07	1.4	0.9	0.7

suggest that the parties enter into an agreement to document their understanding regarding the shared costs. My client would consider sharing the costs of the installation and monitoring of the ground water wells and the environmental consultant fees associated with same. However, if there were unanticipated extraordinary costs due to site specific conditions such as the discovery of additional chemicals which required further testing, etc., etc. we would assume that those incremental costs would be borne by the owner of the impacted property.

My client also assumes that the individual property owners would also pay for any soil testing required on their property and, of course, would be responsible for any remediation activities regarding the soils. The agreement would also deal with access to the individual properties, insurance and indemnity provisions for the contractors conducting the activities, etc.

Bemshaw's ability to proceed with this arrangement is conditioned upon obtaining the consent of its tenant, Western Allied.

Perhaps we could get together via conference telephone. I would appreciate a call and I will attempt to set it up.

Sincerely yours,

William D. Herz

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE PERMIT NO. 3496B
FACILITY LOCATION: 12046 E FLORENCE

This office has reviewed the soil/groundwater assessment report submitted on January 4, 1988 required as a part of the subject closure procedure. Based on the information submitted, we find that:

[ ] The closure is final and no further action is required.

[x] The soils removed during the tank excavation are unrestricted and may be used as backfill material. The closure is final and no further action is required.

[ ] Excavated soils may be a hazardous waste and are not suitable for fill material or disposal on-site. Contaminated soils must be manifested, transported and disposed of pursuant to Chapter 6.5, California Health and Safety Code, unless evidence is presented indicating that disposal is proper at a less restricted facility. Copies of completed manifests or other appropriate evidence indicating legal disposal shall be submitted to this office before this project can be considered closed.

[ ] The permanent closure of the tank(s) in place shall comply with requirements set by the local Fire Department. Verification must be submitted to this office indicating proper closure and completion of all work.

If you have any questions concerning this matter, please contact Ms. Nicole Long at (213) 226-4010.

Very truly yours,

WESTERN ALLIED/BEMSHAW
12046 Florence

Laboratory analysis of soil samples in 1988 revealed TPH contamination. During a 1988 site visit by a representative of the L.A. County Department of Health Services further site assessment/site mitigation was discussed. Due to the necessity of shutting down the operation to initiate soil remediation, Western Allied proposed a no-action option, with the agreement to characterize/remediate the site prior to any future developments, changes in the site use or ownership. A deed restriction was filed by property owner Bemshaw in 1989. Santa Fe Springs denied Bemshaw's 1997 request for removal of the deed restriction. In 2002, an attorney for Bemshaw indicated that they were interested in exploring the possibility of a mini-regional study with the Consolidated Graphics property and property acquired by the City from Johnston-Alexander.

Historical records, UST permits, reports, maps and correspondence (1986-2002).

Mr. Don Indermill, P.G.
Engineering Geologist D, SLIC II
California Regional Water Quality
Control Board – LA Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Re: SLIC #1138B
"Mini-Regional" Study
Santa Fe Springs, California

Dear Mr. Indermill:

This firm is counsel to Bemshaw Company, L.P. owner of the property occupied by Western Allied. My client has been advised that it cannot receive a no further action letter relating to the ground water from the Regional Water Quality Control Board until he receives a no further action letter relative to the soils from the Santa Fe Springs Fire Department. This letter is to inquire whether the no further action letter with respect to the ground water can be conditioned on the future issuance of the no further action letter relative to soils.

Bemshaw advises that it is prepared to execute a covenant in form approved by the City of Santa Fe Springs restricting use of the property to commercial/industrial. A propc form of covenant (which assumes a favorable Human Health Risk Assessment) is enclosed herein and in the copy of this letter directed to Ms. Ortiz. I am advised that Bemshaw intenc submit a work plan and complete a Human Health Risk Assessment as required by the Sant Springs Fire Department.

SPRINGS

September 19, 1997

Bemshaw Corporation
c/o Mr. Marshall Levin
Century Loans
30131 Town Center Drive, Suite 180
Laguna Niguel, CA 92677

Dear Mr. Levin:

SUBJECT: REMOVAL OF DEED NOTIFICATION CONDITION
RE: PETROLEUM HYDROCARBON CONTAMINATION AT 12046 E. FLORENCE AVENUE, SANTA FE SPRINGS, CA, 90670

The Santa Fe Springs Fire Department (SFSFD) has reviewed your recent request to remove the Deed Notification condition established by the Los Angeles County Fire Department Health Hazardous Materials Division Site Mitigation Unit, and recorded at the Los Angeles County Recorder's office in August, 1989. The SFSFD declines to remove the Deed Notification condition.

The SFSFD advises you that based on our review of available data, significant contamination of soils of this site likely remains, and could pose a threat to groundwater and /or Public Health. The known contamination includes benzene, which was found at 17.30 "ppm" at the property line. It is the SFSFD's opinion that further testing is needed to determine the nature, concentration, lateral and vertical extent of any contamination on this site, and that any appropriate corrective action be taken.

It appears that the nature of petroleum hydrocarbon contamination was found to change from "diesel" to "gasoline" near the boundary between the John Alexander property and the Western Allied property. The record indicates that a gasoline Underground Storage Tank (UST) was installed in 1975, and removed from your property in 1988, although the exact location with respect to the Northwest Envirocon boring "L" of 1988, is unclear. It is from this boring "L" that the petroleum hydrocarbon contamination was characterized a "gasoline", with all other contamination characterized as "diesel".

The soil sampling, analysis, and reporting done in 1988 at the time of removal of the gasoline UST was reviewed as part of the Phase I assessment and is acknowledged.

In any case, the SFSFD lacks critical data to make a detailed determination of the nature, concentration, lateral and vertical extent of the contamination. The available data is deficient in many details, including:

1) groundwater depth, quality, gradient
2) boring logs, lithology
3) sampling methods and analytical testing done, including lab QA/QC
4) exact location of the former gasoline UST with respect to the Northwest Envirocon borings.

Without this data, the SFSFD is unable to recommend removal of the deed notification.

NOTE: 14/19

Re: Bemshaw Corp./ Western Allied Site
12046 E. Florence, SFS

On 9/19/97, SFSFD sent a letter to the RP's (Bemshaw), that SFSFD declined to lift the dee nitification for petroleum contamination placed by LACoFD in 1989. Part of the problem is the indication of "gasoline" contamination on the boundary of the present Western Allied site, when all other "TPH" contamination was characterized as "diesel", possibly near the location of a 10,000 gal gasoline UST the year before. Relatively large concentrations of benzene were found, and there is no info. Re: GW quality/depth, lithology, etc. Another issue is the authority of SFSFD to be "successor" agency to LACoFD in site mitigation issues. Maybe is has to be the DTSC for now ?

At any rate, Mr. Hans Sommer, a partner in the Bemshaw Corp., in receipt of the letter, called me around 11:00 AM 9/24/97. He wants to meet with me at SFSFD on Friday, Oct.3rd, around 11:00 AM, to discuss what Bemshaw Corp. can do, and I made an appointment with him to do so. .

Please see attached copy of letter to Bemshaw for info.

Can we have a meeting before next Friday to discuss this ? or ?

Tom M. Hall

From: Tom M. Hall
Sent: Friday, November 16, 2007 11:55 AM
To: Paul R. Ashworth
Cc: Janet Ortiz; Andy Lazzaretto
Subject: IAQ Workplan for Western Allied
Follow Up Flag: Follow up
Due By: Tuesday, November 20, 2007 10:00 AM
Flag Status: Flagged

Paul,

Glenn Stillman has submitted an *Indoor Air Quality (IAQ) Workplan* for the Western Allied site located at 12046 Florence. Glenn is submitting this report because the soil gas survey conducted around the Western Allied building resulted in benzene levels 90 times higher than the acceptable levels at a commercial/industrial site. After reviewing the IAQ workplan, I have some strong general reservations about utilization of an IAQ to assess the indoor air risk and specific concerns with Glenn's workplan.

Bemshaw Company (owners of Western Allied site) sent a certified letter to you, me, and Glenn on August 8, 2007 advising us that they are "....halting all further work and testing on the site until a clear and definitive criteria and procedure is agreed upon with Bemshaw." Their letter also stated that they would be requesting a meeting with a view toward finalizing this matter. I haven't heard anything since that letter was sent.

I've left a message with Glenn to discuss some of my concerns; however, I'd also like to discuss my concerns with you, Andy, and Janet and brainstorm as to the best way to proceed. Can we meet and discuss sometime after Janet returns (11/20/07)? We can also discuss the RWQCB's cost recovery renewal issue for the OFRP and Little Lake Village if you'd like. I won't be here on 11/21 or 11/26, otherwise I'm available.

Thanks,

Tom Hall

Santa Fe Springs, CA 90670
Ph: (562) 906-3815

problems mentioned above, the SFSFD has identified a number of
between the IAQ workplan and the *Guidance for the Evaluation an*
ubsurface Vapor Intrusion to Indoor Air. The following is a list of th
issues:

idance requires the collection of sampling data, at a minimum, over two
s (late summer/early autumn and late winter/early spring). The IAQ
lan proposes compositing one sample over 3 consecutive 8 hour days.
der to obtain a statistically significant number of samples, the guidance
mends collecting samples from 8 different locations or, for
mercial/industrial sites, one sample per office space. The IAQ workplan
oses only 2 sample locations inside the building.
guidance recommends the inclusion of a "contingency plan" prior to
iating indoor air sampling. The general outline of responses to be included in
contingency plan includes permanent monitoring and mitigation measures if
e risk level exceeds screening levels. The IAQ workplan does not include a
ontingency plan.
trip blank is required according to the guidance.

e of the inconsistencies listed and the lack of any technically defensible reason for
nconsistencies, **the SFSFD can not approve the IAQ workplan as submitted.**
submit either a revised IAQ workplan consistent with the criteria described in the
nce for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air
alternative proposal for evaluating indoor vapor intrusion risk based on soil gas

ou have any questions regarding the above items, please contact Tom Hall at (562)
-3815.

Sincerely,

Janet Ortiz

Santa Fe Springs Fire Department Review of the
Final Indoor Air Quality Study Workplan
Western Allied Building – 12046 E. Florence Avenue (SLIC #1138B)

Dear Mr. Sommer:

The City of Santa Fe Springs Fire Department (SFSFD) has completed the review of the *Final Indoor Air Quality Study Workplan* (IAQ workplan) prepared by Alaska Petroleum Environmental Engineering (Alaska Petroleum) on October 31, 2007. This workplan is being submitted because elevated levels of benzene were identified in soil gas samples adjacent to the existing building and documented in the *Soil Gas Survey Report* prepared by Alaska Petroleum on June 22, 2007. The soil gas samples were required to evaluate the extent of upward vapor contamination migrating from the remaining deep (greater than 10 feet) hydrocarbon-impacted soil contamination that originated from the former natural gas plant.

The conclusion section of the *Soil Gas Survey Report* proposed two options to further assess the risk posed by the benzene. The two options were 1) the submittal of a site-specific human health risk assessment (HHRA) to evaluate the indoor air intrusion risk posed by the benzene in the soil gas or 2) conduct an indoor air quality survey to measure the level of benzene inside the existing building. Alaska Petroleum, the consultant for this project, has decided to pursue an indoor air quality survey rather than a site-specific HHRA based on soil gas.

The process of conducting indoor air samples to evaluate the vapor intrusion from soil contamination is very challenging and problematic. According to the *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (DTSC/Cal-EPA rev. 2/7/2005), the document used by the SFSFD, indoor air sampling is typically the last step in a vapor intrusion because of its complexity. Indoor air sampling is subject to many types of interferences such as vehicle traffic, office supplies, and aerosol sprays. Furthermore, indoor air assessments are particularly difficult to evaluate since the risk screening level is so low (0.141 micrograms per cubic meter for benzene).

4.0 Conclusions and Opinion Regarding Further Action

1. A comparison of analytical results to the residential use CHHSLs is required unless a commercial use deed restriction is in place. The property owner agreed to the deed restriction.

   a. Deed restriction language will be provided to the City prior to recording with the County Registrar.

   b. The COCs results were evaluated against the commercial use CHHSLs.

2. A Site-specific "human health risk assessment must be prepared by a board certified toxicologist and submitted" is required if the analytical results exceed the commercial use CHHSLs. Soil gas samples exceeded the benzene CHSSL of 0.122 µg/l at two exterior building locations and one utility trench location.

The CHHSLs referenced in this report pertain to the "emissions of volatile chemicals from contaminated soil or groundwater and their potential intrusion into overlying buildings." Therefore, "closure" determination should take into consideration:

(1) potential exposure pathways and scenarios,

(2) groundwater and protected resources, and

(3) nuisance (e.g., odors, staining) and gross contamination concerns.

The potential exposure pathways are addressed with the issuance of a deed restriction. The groundwater issue is being addressed through further assessment with oversight from the Regional Water Board. There are no apparent odors associated with the soil gas, and the contaminant source to the southwest of the Site (i.e., on the City property) has been remediated.

Although a deed restriction will be placed on the property limiting the use to existing commercial/industrial, near surface soil gas contamination was reported exterior to the building and in a utility trench location above the commercial CHHSL. Therefore, a limited HHRA is required.

The HHRA will consist of either: (1) using the 2003 USEPA Vapor Intrusion Model (i.e., Federal version of the 1991 Johnson and Ettinger model), or (2) conducting indoor air assessment.

3.0 Findings

A copy of the analytical report is contained in ***Attachment 2, Laboratory Report.*** The analytical data was evaluated against the commercial use CHHSLs found in Table 2 of the aforementioned Cal-EPA document. The summary of the analytical results is provided in ***Attachment 3, Summary Table: Soil Gas Survey Analytical Results.*** Included in this summary is the evaluation criteria (CHHSLs) from which the results were evaluated against; the samples that exceeded the criteria are highlighted. As specified in the CHHSL document the soil gas screening levels are based on soil gas data "<1.5 meters (five feet) below a building or the ground surface." Accordingly, only the results from a depth of five feet below ground surface are screened using the CHHSL shallow soil gas screening levels.

Some vapor samples exceeded the commercial use CHHSL for benzene of 0.122 µg/l (1.22 E+02 µg/m³) at five feet bgs. The benzene concentrations are identified in the following table by depth. Vapor samples that exceed the shallow soil gas CHSSL at five feet bgs for benzene are highlighted in "red". All results are reported in µg/l.

	Depth (feet below ground surface)

Benzene Concentrations in Soil Gas. CHHSL

3. The City requires that a Human Health Risk Assessment ("HHRA") be completed if the results of the study fail the criteria set forth in the January 2005 Cal-EPA "Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties". As specified in this document the soil gas screening levels are based on soil gas data "<1.5 meters (five feet) below a building or the ground surface," because the purpose of the CHHSLs is to screen sites for potential human health concerns. Accordingly, to assess the health risks of the workers inside the building only the results obtained from a depth of five feet bgs are screened using the CHHSL shallow soil gas screening levels.

4. According to the DTSC document, Revised February 2005, "...the samples should be collected as close to the building as possible. At a minimum, soil gas samples should be collected at two locations, along opposite sides of the building." Two exterior building locations were identified, however three additional locations UT1, SGK and SGKBB1 are all located in close proximity to the building. As such, the results at five feet bgs from these locations are also used in this evaluation.

5. The complete vertical extent of detected soil gas was not determined at each location. Further vertical delineation was not conducted because results obtained exceeded the CHHSL criteria at five feet bgs.

6. Some of the soil vapor results exceeded the analytical method's detection limits, and higher dilution analysis was required. For example, the analytical method's detection limit at seven purge volumes for benzene is 0.10 microgram per liter of air ("µg/l") and <5 µg/l was reported by the laboratory. If a previous result exceeded the CHHSL criteria, that depth interval was not resampled.

7. SGWAEB2 was installed at the southeast corner of the Kimmerle Bros. Parcel. Access to the east/northeast side of the on-Site building was not possible.

8. Pending review of this report by City staff, and if acceptable, the soil vapo- tubing will be cut and plugged below grade. The surface will then be repaire- with cold patch asphalt.

Specifically, the vapor wells were installed and sampled according to the following protocols.

- Constructed with ¼ inch diameter polyethylene tubing following the protocols in Section 2.2.5 - Soil Gas Probe Emplacement Methods.

- Leak tested (Section 2.4 - Leak Test) and purged (Section 2.3 - Purge Volume Test and 2.5 - Purge/Sample Flow Rate).

  A purge volume test was conducted prior to collecting the vapor samples. This test is conducted at the first soil gas sampling event, which was at the Consolidated Graphics property. The appropriate purge volume (one, three or seven) was selected based on the highest concentration of the COCs detected, which was benzene. Seven purge volumes were utilized for all analysis throughout the study area.

- Sampled using a vacuum pump affixed to a glass bulb wrapped in aluminum foil. A glass syringe was used to obtain a sample for direct injection into the gas chromatograph/mass spectrometer (Section 2.6 - Soil Gas Sampling) for analysis.

- Analyzed for BTXE according to the United States Environmental Protection Agency ("USEPA") Method 8260B.

2.4 *Workplan Qualifications and/or Deviations*

1. The maximum depth that the vapor points were set was determined from evaluating the contaminant concentrations obtained from discrete soil samples previously collected. Typically, the maximum vapor point depth was set five to 10 feet below the reported soil contamination. Per the guidance document, if no soil analytical data was available (e.g., in the external building locations) the maximum depth of the vapor points was set at 20 feet bgs.

2. The City requires that the soil vapor analytical results be compared to the residential use CHHSLs, unless the property owner agrees to limit Site usage to only commercial/industrial via a deed restriction. Such a deed restriction allows the analytical results to be compared to the commercial use CHHSLs. The property owner has agreed to the deed restriction; therefore, the analytical results are compared to only the commercial use CHHSLs.

Attached is the last correspondence I [illegible] since this December 4, 2007.

2.2 *Sample Locations and Identification*

The soil gas samples were collected on-Site near:

(1) known soil boring contaminant at locations SGWAB1 and SGWAB2 ("S"oil "G"as "W"estern "A"llied "B"oring 1 and 2) and;

(2) previously detected soil gas at locations SGJ and SGK (1998 "S"oil "G"as "B"orings "J" and "K"); and

(3) along opposite sides of existing building at locations SGWAEB1 and SGWAEB2 ("S"oil "G"as "W"estern "A"llied "E"xterior "B"uilding 1 and 2), and from

(4) potential migration pathways at locations UT1 and UT2 ("U"tility "T"rench 1 and 2).

The survey locations are depicted on the figure presented in ***Attachment 1, Soil Gas Sample Locations***.

2.3 *Sample Methodology*

Pursuant to the City's request:

> *"the specific means of collecting and analyzing the soil gas samples must be included in the final report and any deviation from the guidelines referenced must be clearly specified."*

Vapor point installation and sampling followed the January 2003 Regional Water Board/DTSC guidelines. The vapor probes were installed using a Geoprobe® direct-push sampling rig. Centrum Analytical Laboratories, Inc. (a State certified laboratory) conducted the sampling, and performed the analysis on-Site using a mobil laboratory. In addition, pursuant to the 2005 DTSC guidelines to evaluate vapor intrusion, soil gas samples were collected at five foot depth intervals. The maximum sample depths were 20 and 40 feet below ground surface ("bgs"). There were no deviations *"from the guidelines referenced"*.

Attached is the last correspondence since this December 4, 20

SLIC # 1138B
Soil Gas Survey Report
Western Allied
12046 E. Florence Avenue
Santa Fe Springs, CA
June 2007

1.0 Introduction

The subject property of this soil gas survey report is Western Allied located at 12046 E. Florence Avenue (hereafter referred to as the "Site"). The building was constructed around 1960.

Volatile organic compounds are present in the subsurface soil at the Site. The constituents of concern ("COCs") are identified as benzene, toluene, xylenes, and ethylbenzene ("BTXE"). The results of the survey pertain to analyzing the COCs and evaluating the results thereof for potential vapor intrusion to indoor air.

2.0 Technical Approach

2.1 *Investigation Regulatory Guidelines and Protocols*

At a minimum, and as qualified in the *Alaska Petroleum* workplan dated January 2007, this survey complied with the following regulatory documents.

- City of Santa Fe Springs ("City") "Response for Further Action Proposal" dated January 11, 2007.
- California Environmental Protection Agency ("Cal-EPA"), Department of Toxic Substances Control, ("DTSC"), "Interim Final, Guidance For The Evaluation And Mitigation of Subsurface Vapor Intrusion to Indoor Air", guidance document dated December 14, 2004, revised February 7, 2005.
- Cal-EPA Table 2, "Use of California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties (January 2005).
- California Regional Water Quality Control Board - Los Angeles Region ("Regional Water Board") and the DTSC, "Advisory - Active Soil Gas Investigations", January 28, 2003.

department for review. If the resulting risk exceeds acceptable levels, mitigation measures will be required.

- A copy of the proposed land use restriction language must be provided to our department prior to recording the deed restriction with the County Registrar. A copy of the recorded deed restriction will be required before a no further action letter can be issued.

3. **12078 Florence Ave. (Consolidate Graphics):** Conduct a soil gas survey for the chemicals of potential concern (BTEX) in proximity to previous methane monitoring sample locations B1 through B4. Also monitor for BTEX along the perimeter of the building using the existing methane monitoring wells. A deed restriction will be recorded limiting the site to commercial/industrial uses only. Should the results of the soil gas survey indicate "no upward migration of contaminants", a human health risk assessment will not be necessary and a no further action letter will be requested.

SFSFD Response

- Provide a copy of the soil gas workplan prior to conducting the soil gas survey. The procedure for sampling and assessment must be consistent with the DTSC's December 15, 2004 "Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air" and approved by our department.
- If the screening levels are exceeded, a site-specific human health risk assessment must be prepared by a board certified toxicologist and submitted to our department for review. If the resulting risk exceeds acceptable levels, mitigation measures will be required.
- A copy of the proposed land use restriction language must be provided to our department prior to recording the deed restriction with the County Registrar. A copy of the recorded deed restriction will be required before a no further action letter can be issued.

If you have any questions regarding the above items, please contact Tom Hall at (562) 906-3815.

Sincerely,

Janet Ortiz

Janet Ortiz
Director of Environmental Protection

Bob Wilson, Real Estate Consultant for Consolidated Graphics
Chuck Vorhees, Kimmerle Bros., Inc.

1. ***12046 E. Florence (Western-Allied):*** Conduct a soil gas survey for BTEX (benzene, toluene, ethylbenzene and xylene) near soil boring locations WAB1 and WAB4, 1988 soil gas locations "J" and "K", and the perimeter of the building. Should the results of the soil gas survey indicate "no upward migration of contaminants", a human health risk assessment will not be necessary and a no further action letter will be requested. Direct contact to known hydrocarbon-impacted soil has been addressed via a 1989 deed restriction requiring the owner to maintain the asphalt parking lot "cap" along the western property line.

   SFSFD Response

   - Provide a copy of the soil gas workplan prior to conducting the soil gas survey. The procedure for sampling and assessment must be consistent with the DTSC's December 15, 2004 "Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air" and approved by our department.
   - If the levels of BTEX exceed the Indoor Air Human Health Screening Levels found in Table 2 of the *California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties Guidelines* (January 2005), a site-specific human health risk assessment must be prepared by a board certified toxicologist and submitted to our department for review. If the resulting risk exceeds acceptable levels, mitigation measures will be required.
   - Provide a copy of the recorded deed restriction. If the deed restriction limits the site to commercial/industrial usage only, you may use the screening levels listed for commercial/industrial sites. If not, residential site screening levels must be used.

2. ***12060 E. Florence Ave (Kimmerle Brothers):*** Conduct a soil gas survey for BTEX (benzene, toluene, ethylbenzene and xylene) near soil boring locations KBB1, KBB2, KBB5, and KBB12, 1988 soil gas locations "L", and the perimeter of the building. If the BTEX levels indicate upward migration of contaminants, an Indoor Air Quality (IAQ) study will be conducted. A deed restriction will be recorded limiting the site to commercial/industrial uses only. Should the results of the soil gas survey or the IAQ (if necessary) indicate "no upward migration of contaminants", a human health risk assessment will not be necessary and a no further action letter will be requested.

   SFSFD Response

   - Provide a copy of the soil gas workplan prior to conducting the soil gas survey. The procedure for sampling and assessment must be consistent with the DTSC's December 15, 2004 "Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air" and approved by our department.
   - If the concentration of contaminants in the soil gas survey exceed the Indoor Air Human Health Screening Levels found in Table 2 of the *California Human Health Screening Levels (CHHSLs) in Evaluation of Contaminated Properties Guidelines* (January 2005), you are proposing to conduct an IAQ study. A Workplan for this study (if required) must be provided to our department and approved prior to conducting the IAQ.
   - If the screening levels are exceeded, a site-specific human health risk assessment must be prepared by a board certified toxicologist and submitted to our

Mini-Regional Study Site Investigation Report Review and Response to Further Action Proposal

Dear Mr. Stillman:

The City of Santa Fe Springs Fire Department (SFSFD) has completed the review of the May 11, 2006 "Mini-Regional" Study report assessing the extent of hydrocarbon-impacted soil contamination resulting from a former natural gas processing plant. Your written response to the SFSFD's November 2, 2006 correction list was submitted on January 3, 2007.

The impact from the gas plant contamination extends across four parcels of property. The Workplan for this "Mini-Regional" Study was approved by the Regional Water Quality Control Board (RWQCB) on July 14, 2004. As a condition of approval, the RWQCB listed various cleanup criteria and human health assessment procedures. The RWQCB amended this condition in an October 4, 2006 letter which transferred soil investigation and human health risk assessment oversight to the SFSFD. The groundwater investigation portion of this study will continue to be overseen by the RWQCB.

The contamination at one of these four parcels (Little Lake Village senior housing project) has been previously assessed and mitigated under the oversight of both the Regional Water Quality Control Board (RWQCB) and the City of Santa Fe Spring Fire Department. This "Mini-Regional" Study report addresses the remaining three impacted parcels located at 12046, 12060, and 12078 East Florence Avenue.

Your January 3, 2007 response includes an "Opinion Regarding Further Action" for each of the remaining three parcels. The following summarizes each proposal followed by the SFSFD's response:

Soil Gas Survey Work Plan for
12046 E. Florence Avenue

Dear Mr. Stillman:

The City of Santa Fe Springs Fire Department (SFSFD) has completed the review of the Soil Gas Survey Work Plan for the property located at 12046 E. Florence Avenue. This property is located in the vicinity of a former natural gas processing plant and was part of a "Mini-Regional" study to assess the vertical and lateral extent of contamination.

In response to our department's comments regarding the "Mini-Regional" Study Report, you proposed conducting a soil gas survey at this site. The results of the soil gas survey will determine whether or not the residual subsurface contamination poses a human health risk to site occupants. The workplan outlines how the soil gas survey will be conducted and what actions will be taken if the soil gas levels exceed indoor air human health screening levels.

The location of the proposed soil gas samples is provided in the workplan. While the workplan does not provide specific details as to how the soil gas sampling will be conducted, it does reference the sampling protocol detailed in the State's *Advisory-Active Soil Gas Investigation* (1/28/2003). The Workplan also references the State's *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion for Indoor Air* (2/7/2005).

VAPOR ENCROACHMENT SCREENING (ASTM E2600-15)
HATHAWAY PROPERTY
10801 – 10859 Norwalk Blvd., 12120 Florence Ave., Santa Fe Springs, California
September 2019

In accordance with ASTM Standard E2600-15 and the Buonicore Area of Concern determination (2011)[i], Advanced GeoEnvironmental, Inc. performed the initial Tier 1 Vapor Encroachment Screening which includes determining the presence or likely presence of volatile organic compound vapors in the sub-surface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater either on or near the Target Property within an Area of Concern (AOC) to determine if a potential Vapor Encroachment Condition (VEC) exists. Should sites fall within the AOC, a limited Tier 2 screening will be performed.

TIER 1 SCREENING

(1) Ground Water Flow Direction: Is the groundwater flow direction known?

	No	Proceed to **(1a)**
X	Yes	Proceed to **(1b)** Identify the groundwater flow direction here: **South-southwest**

(1a) If groundwater flow direction is **unknown**, the AOC is:

- Non-Petroleum Hydrocarbon Contaminants of Concern (COC): **1,760 feet (1/3-mile)** from the contaminated site boundary to the boundary of the SP.
- Dissolved Petroleum Hydrocarbon COC: **528 feet (1/10-mile)** for from the contaminated site boundary to the boundary of the SP.
- Free Product (Light non-aqueous phase liquids [LNAPL]) COC: **528 feet (1/10-mile)** for from the contaminated site boundary to the boundary of the SP.

Are sites located within the AOC? **Not Applicable**

(1b) If groundwater flow direction is known, the AOC for non-petroleum hydrocarbon COC and dissolved petroleum hydrocarbon or free product (LNAPL) COC is:

- Non-Petroleum Hydrocarbon COC: **1,760 feet (1/3-mile)** in the up-gradient position, **365 feet** in the equi-gradient position, and **100 feet** in the down-gradient position.
- Dissolved Petroleum Hydrocarbon COC: **528 feet (1/10-mile)** in the up-gradient position; **95 feet** in the equi-gradient position, and **30 feet** in the down-gradient position.
- Free Product (LNAPL) COC: **528 feet (1/10-mile)** in the up-gradient position,

165 feet in the equi-gradient position, and **100 feet** in the down-gradient position.

Are sites located within the AOC?

	No	Tier 1 screening is complete, and no VEC currently exists, proceed to **CONCLUSIONS**
X	Yes	Proceed to **(2)** **Continental Heat Treating, 10643 Norwalk Blvd.:** VOC impact to groundwater

(2) Subsurface Characteristics

(2a) Is there a hydraulic (e.g., a river) or physical barrier (e.g., clay barrier) between the SP and the suspected contaminated site (or sites)?

X	No	Proceed to **(2b)**
	Yes	A VEC does not exist, proceed **CONCLUSIONS** **List barrier here:**

(2b) Are **non-petroleum hydrocarbon COC** and **dissolved petroleum hydrocarbon** or **free product (LNAPL) COC** known to be in the groundwater beneath the subject property.

	No	Proceed to **TIER 2 SCREENING**
X	Yes	A VEC exists, proceed to **CONCLUSIONS** **Identify the known contaminant(s) here:**

TIER 2 SCREENING

If the Tier 1 screening indicates that a VEC exists, the Tier 2 non-invasive screening can be used to refine screening. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas and/or groundwater monitoring results to provide greater certainty to whether or not a VEC exists. The Tier 2 screening involve a Plume Test and Critical Distance Determination. **The Critical Distance Determination requires that the edge of the plume be known**. The Critical Distance is the lineal distance in any direction between the nearest edge of the contaminated plume and the nearest SP boundary.

(1) Plume Test: Is the contaminated plume boundaries known?

	No	A VEC Exists proceed to **CONCLUSIONS**
X	Yes	proceed to **(2)**

(2) **Critical Distance Determination:** The critical distance for non-petroleum hydrocarbon COC and dissolved petroleum hydrocarbon or free product (LNAPL) COC is:

- Non-Petroleum Hydrocarbon COC: **100 feet** from the subject property boundary.
- Dissolved Petroleum Hydrocarbon COC: **30 feet** from the subject property boundary.
- Free Product (LNAPL) COC: **100 feet** from the subject property boundary.

Does the plume edge fall within the critical distance from the subject property boundary?

	No	A VEC does not exist, proceed to **CONCLUSIONS**
X	Yes	A VEC exists, proceed to **CONCLUSIONS**

CONCLUSIONS

(1) **Conclusions**: Impact on Subject Property

X A VEC exists

A VEC does not exist

Phase II Environmental Site Assessment
HATHAWAY PROPERTIES, INC.
10801–10859 Norwalk Boulevard, 10819-10858 Koontz Avenue and 12120 Florence Avenue, Santa Fe Springs, California

1.0. INTRODUCTION/BACKGROUND

AdvancedGeo, Inc. (AGI) has completed a Phase II Environmental Assessment of the property located at 10801–10859 Norwalk Boulevard, 10819-10858 Koontz Avenue and 12120 Florence Avenue, Santa Fe Springs, California. This report summarizes the investigation. The location of the subject property is shown on Figure 1. Figure 2 depicts the site layout as well as the boring and sampling locations.

PHASE I ENVIRONMENTAL ASSESSMENT

AGI completed a Phase I Environmental Site Assessment for the subject property in September 2019. The following is a summary of the historical use of the subject property:

- The subject property was utilized for agricultural purposes since at least 1928, extending through sometime between 1963 and 1972. Chemicals associated with agricultural activities may have been used on crops during that time period. However, based upon the length of time the subject site has been void of any agricultural use (50+ years) and expected grading of the soils on the site prior to development, it is highly unlikely detectable levels of residual agricultural chemicals are still present on the subject site.
- The subject property is located within the boundaries of the Santa Fe Springs Oil Field. Oil wells were installed on the property in 1922 (at what would become 10850 Koontz Avenue) and 1945 (immediately north of 10819 Koontz Avenue). Both wells produced oil. The well at 10850 Koontz Avenue was abandoned in 1974 under the well standards in place at that time. The well north of 10819 Koontz Avenue was abandoned in the year 2000 under the standards of the time. There is the potential that these wells will be required to be re-abandoned to current State of California well abandonment standards.
- Beginning in the late 1960's or early 1970's, the subject property was developed for industrial use. Former tenants included transportation, steel manufacturing and hydraulic repair companies. A gas station occupied 10801 Norwalk Boulevard until 1997. Based on historical documents reviewed for the Phase I, gasoline and diesel fuel were stored in underground storage tanks at 10801 Norwalk Boulevard and 10845 Koontz Avenue. Limited quantities of hazardous materials, such as motor oil, antifreeze, and hydraulic fluid, have been used at businesses throughout the subject property history.

AGI identified the following Business Environmental Risks, de minimis conditions, HREC’s, and REC’s:

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Business Environmental Risks

- Asbestos-containing materials (ACMs) and lead-based paint (LBP) may be present in buildings on the property based on the age of construction (1960's to 1970's). Acoustic ceiling tile, a material that is known to contain asbestos, was observed at 10845 Norwalk Boulevard. AGI recommended performance of full ACM and LBP surveys by a licensed consultant prior to any remodeling or demolition.
- Two abandoned oil production wells are located on the subject property. The wells are mapped at 10819 Koontz Avenue and 10850 Koontz Avenue. The wells produced crude oil and were abandoned in 1974 and 2000 under regulatory well abandonment standards at the time. There is a potential that these wells will be required by the DOGGR to be re-abandoned to current standards. Any planned development of the property will need to be coordinated with DOGGR and the local land use agency.

De Minimis Conditions

- Poor housekeeping practices, such as the improper labeling of hazardous materials and the improper storage of supplies, were observed in the yard at 10845 Norwalk Boulevard and 10858 Koontz Avenue.

Historical Recognized Environmental Conditions

- UST's were removed in 1998 from 10801 Norwalk Boulevard (Silverio's Party Store). Although soil samples collected at the time of the UST removal contained elevated concentrations of TPH and VOC's, the Santa Fe Springs Fire Department issued a 'closure' letter in 1999.
- Records indicate the historical presence of a 10,000-gallon diesel UST and a 10,000-gallon gasoline UST at 10845 Koontz Ave (currently occupied by MJB Freight). A report by HVN Environmental Services Co, Inc., prepared in 1996, detailed soil sampling during the removal of the two UST's. No petroleum hydrocarbons or volatile organic compounds were found at detectable concentrations.

Recognized Environmental Conditions

- Chlorinated solvents (tetrachloroethylene [PCE] and trichlorethylene [TCE]) have impacted the groundwater beneath the subject property from a release originating at Continental Heat Treating, located 623 feet north of the site in an up-gradient location. Two sets of groundwater monitoring wells were installed on the subject site as part of their on-going investigation. The PCE and TCE present in the ground water could potentially have a negative impact to both soil and soil-vapor beneath

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

the subject site. The extent of the impact to these mediums on the subject property is unknown at this time.

- A likely vapor intrusion condition from the neighboring property immediately to the west (beyond 10845 Koontz Avenue, MJB Freight) is identified as the City of Santa Fe Springs Little Lake Housing Development site. This site has been impacted with volatile organic compounds in soil, groundwater and soil-vapor. Based upon the close proximity of this site to the subject property, this site poses an environmental concern to the subject property.
- Two in-ground clarifiers were observed at the south border of 10819 Koontz Avenue (Paramount Rolling/La Habra Welding) and the northwest border of 10845 Koontz Avenue (MJB Freight). Potential structural issues associated with concrete clarifiers and unknown chemical discharges create the potential of subsurface soil impact.
- Extensive oil staining was observed on deteriorated and porous asphalt at 10845 Norwalk Boulevard (Quality Lift) throughout most of that site. Additionally, significant oil-stained asphalt was observed on the northwestern portion of 10858 Koontz Avenue (Rouf's Machine) in the vicinity of a 250-gallon tote storing used hydraulic fluid. Improper storage of forklift batteries were observed on the Quality lift site. Most of the forklift batteries were stored outdoors in uncovered areas of the property without proper containment. Batteries contain a variety of metals, including lead, and commonly leak if not handled properly. The porous asphalt surface where many of these batteries are stored at provides an route for lead to impact the subsurface soils.
- Metal shavings and fine metal dust from long term heavy industrial use, including steel rolling and fabrication, welding, and machine repair at 12120 Florence Avenue (Paramount Rolling), 10819 Koontz Avenue (La Habra Welding), and 10858 Koontz Avenue (LenPar Rolling) present the potential for subsurface metal contamination. Extensive areas with metal dust/shavings were observed in these areas of the property outdoors without containment. The deteriorated and porous asphalt at these locations provides a potential path to subsurface heavy metal contamination.
- Abandoned oil lines were reported to be present at 12120 East Florence Avenue by Ken Moscript, owner of Paramount Roll & Form. No record of any removal or assessment of the oil lines was available for review during the course of this Phase I. Based on the presence of these oil lines and lack of any assessment or records of removal, the oil lines pose an environmental concern to the subject property.

AGI recommended performance of a subsurface investigation based upon the REC's identified at the site.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

2.0. SCOPE OF WORK

Two separate investigations were conducted to evaluate the subsurface conditions at the site. The following scope of work was initially conducted:

- Sampling locations were marked with white paint and Dig Alert was contacted for subsurface public utility line identification.
- A site-specific Health and Safety Plan was prepared. All field crew were briefed prior to performance of field activities.
- A soil vapor survey was conducted initially by establishing (17) vapor points with samples collected at 5 and 10 feet.
- Twenty-one (21) soil borings were drilled. Soil samples were collected at various depths for different borings, ranging from 2 to 20 feet.
- Soil vapor samples were analyzed for volatile organic compounds (VOCs) in accordance with EPA method 8260B.
- Soil samples were selectively analyzed for total petroleum hydrocarbons (TPH), VOCs and CAM Metals in accordance with EPA method 8015m and 6010/7471, respectively.

Based on the findings of the initial subsurface investigation, additional investigation of the soil vapor in deeper soils as well as further characterization of hydrocarbon contamination at the former UST location at Silverio's Party Store. The following scope of work was conducted:

- Sampling locations were marked with white paint and Dig Alert was contacted for subsurface public utility line identification.
- A total of three borings were advanced near the oil well site on the Paramount Roll property, the above-ground tank/sump area at Mako Equipment area and within the Lenpar yard area to assess soil vapor. Each boring was drilled at to a depth of 30 feet below surface grade (bsg); soil samples were collected at depths of 5, 10, 20 and 30 feet bsg. Each boring was converted to a nested soil vapor point with screens at 20 and 30 feet. In addition, three additional soil vapor points were established at each area and samples collected at 5 and 10 feet to determine the lateral extent of the vapor.
- Four soil borings were drilled at the former UST location on the Silverio's Party Store property. Each boring was advanced to a minimum depth of 40 feet bsg to define the vertical and lateral extent of impacted soil. Samples were collected at 5-foot intervals; four (4) samples per boring were submitted for analysis.
- The soil and vapor samples from the three locations were analyzed for VOCs in

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

accordance with EPA method 8260B. The soil samples from the former UST area at Silverio's Party Store were analyzed for TPH-g and VOCs with fuel oxygenates in accordance with EPA methods 8015-m and 8260B.

- The data was provided to Dr. Jill Power, an American Board of Toxicology-credentialed toxicologist, for preparation of a human health risk assessment (HHRA).

3.0. PROCEDURES

Prior to conducting the initial subsurface investigation, the boring locations were marked on 29 October 2019. Dig Alert was then notified to allow the utility companies to mark the locations of their subsurface utility lines (Dig Alert Ticket Numbers B193020721, B193020721 and B193020726).

On 24 December 2019, the boring areas for the subsequent investigation were marked and Dig Alert notified Dig Alert Ticket Numbers B193580213, B193580215, B193580216 and B193580219).

All boring locations from both investigations were also evaluated by GPRS, Inc., a geophysical company, to determine if subsurface utilities or impediments were present. Several boring locations were modified based on the survey to avoid subsurface obstructions.

3.1. SOIL VAPOR SAMPLING

3.1.1. Initial Soil Vapor Investigation

The soil vapor survey was conducted on 05 through 07 November 2019. Optimal Technology (OT), a soil vapor subcontractor, performed the investigation under the direction of AGI personnel. Seventeen (17) soil vapor points were established on the property to depths of five and ten feet (vapor points SV-1 through SV-17 (Figure 2).

Samples were collected by hydraulically hand-driving a 1-inch diameter soil vapor probe with a vapor tip to depths of 5 and 10 feet at each location. The surface around the probe was then sealed with hydrated bentonite.

Prior to purging, a tracer gas (isobutane) was applied at the top of the surface bentonite seal to determine if ambient air could enter the sampling system. At each sampling location an electric vacuum pump set to draw 0.2 liters per minute (L/min) of soil vapor was attached to the probe or existing well and purged prior to sample collection. Vapor samples were obtained in SGE gas-tight syringes by drawing the sample through a Luer Lock which connects the sampling probe and the vacuum pump. Samples were

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

immediately injected into the gas chromatograph/purge and trap after collection. New tubing was used at each sampling point to prevent cross contamination.

A total of three (3) purge volumes were removed prior to collecting the soil vapor samples in accordance with the Cal-EPAs Advisory – Active Soil Gas Investigations (2015).

OT analyzed the vapor samples, a duplicate sample and a blank, on-site using a laboratory-grade Agilent model 5973N Mass Spectra Detector and Tekmar LSC 3100 Purge-and-Trap. Samples were analyzed for volatile organic compounds (VOCs) in accordance with EPA method 8260B.

3.1.2. Subsequent Soil Vapor Investigation

Based on the results from the initial investigation, three areas were identified where VOC were detected at increasing concentrations with depth, including:

- The former oil well area located on the southwest corner of Florence Avenue and Koontz Avenue (Soil Vapor Point SV-1).
- The Roufs Machine and LenPar Rolling lot at 10858 Koontz Avenue (Soil Vapor Point SV-7).
- The Mako Equipment lot at 10859 Norwalk Boulevard (Soil Vapor Point SV-17).

On 06 January 2020, M&R Drilling utilized a Geoprobe 7822 probe rig to advance three deeper borings near the locations of SV-1, SV-7 and SV-17. The probe borings were advanced to depths of 30 feet (borings B22/SV-18, Boring B23/SV-23 and B24/SV-30; Figures 2, 3 and 4).

Soil samples were collected from each boring at 5, 10, 15 and 20 feet (see section 3.2 below). Soil vapor probes were installed in each boring at 20 and 30 feet. The points were constructed with 6-inch vapor screens attached to 0.25-inch polyethylene tubing. Each screen was set in a sand pack that extended 12-inches below and above the vapor point. Six inches of dry bentonite was placed over each sand pack and then hydrated bentonite was placed above the dry bentonite. Once the points were installed, the remainder of the boring was backfilled with hydrated bentonite.

On 07 and 08 January 2020, OT installed performed additional soil vapor sampling and analysis. Soil vapor points were established in the three identified areas with samples collected at five and ten feet (vapor points SV-19 through SV1 through SV-29; Figures 2, 3 and 4) in the same manner as discussed in section 3.1.1.

OT collected vapor samples from each point as well as deeper probes in SV-18, SV-24 and SV-30. Prior to purging, a tracer gas (isobutane) was applied at the top of the surface

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

bentonite seal to determine if ambient air could enter the sampling system. At each sampling location an electric vacuum pump set to draw 0.2 liters per minute (L/min) of soil vapor was attached to the probe or existing well and purged prior to sample collection. Vapor samples were obtained in SGE gas-tight syringes by drawing the sample through a Luer Lock which connects the sampling probe and the vacuum pump. Samples were immediately injected into the gas chromatograph/purge and trap after collection. New tubing was used at each sampling point to prevent cross contamination.

A total of 3 purge volumes were removed prior to collecting the soil vapor samples in accordance with the Cal-EPAs Advisory – Active Soil Gas Investigations (2015).

OT analyzed the vapor samples, a duplicate sample and a blank using the same equipment described above.

All probe points were filled with bentonite and capped. The vapor tubes for the deeper points were also cut and capped.

3.2. SOIL SAMPLING

On 05, 06 and 07 November 2019, soil borings B1 through B21 were drilled using a limited access Geoprobe 7822 supplied by M&R Drilling. Borings B22 through B28 were drilled using the same Geoprobe on 06 and 07 January 2020. The boring locations are depicted on Figures 5 and 6. A description of the soil boring locations and depths are included below.

All borings were continuously cored to depth using clear PVC sleeves. After sample collection, appropriate sections of the sleeves were removed and sealed to be used as the sample. Samples were labeled with soil boring location, depth and date, and placed in a chilled container for subsequent transport to the laboratory. In addition, each soil sample was sampled with Encore samplers in accordance with EPA method 5035.

Soil sample duplicates were extruded into plastic bags and field-screened for the presence of organic vapors using a PID. Additionally, the soil was visually classified in accordance with the Unified Soil Classification System (USCS). Soil boring logs are attached in Appendix A.

Following sample collection, all borings were permanently sealed to prevent vertical migration of potential contaminants using hydrated bentonite sand and a concrete cap.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

3.2.1. Paramount Roll & Forming, 12120 Florence Avenue

Boring B1 was advanced in an equipment storage area on the east side of the building. Borings B2 through B4 were advanced within the property building, adjacent to machinery (B2, B4) and equipment storage areas (B3). Borings B2 and B4 soil samples were collected at 2, 5, 10, and 15 feet. Boring B1 and B3 soil samples were collected at 2, 5, and 10 feet. All boring samples were analyzed for total petroleum hydrocarbons (TPH), VOCs and CAM metals in accordance with EPA methods 8015m, 8260B and 6010/7471, respectively.

3.2.2. Former Oil Well, Southwest Corner of Florence Avenue and Koontz Avenue

Boring B5 was advanced near a former oil well to a depth of 15 feet, with soil samples collected at 5, 10, and 15 feet. Sample s were analyzed for TPH and VOCs. Boring B22 was advanced near soil vapor point SV-1 to a depth of 30 feet with soil samples collected at 5, 10, 20 and 30 feet. The samples were analyzed for VOCs.

3.2.3. Paramount Rolling & Forming (La Habra Welding, 10819 Koontz Avenue)

Borings B6 through B8 were advanced inside the building, with B6 and B7 adjacent to machinery and B8 advanced adjacent to the waste storage area. Soil samples were collected at depths of 2, 5, and 10 feet and analyzed for TPH, VOCs, and CAM metals. Boring B9 was advanced near the clarifier on the south of the building, with samples collected at 5, 10, and 15 feet. Boring B9 samples were analyzed for TPH and VOCs.

3.2.4. MJB Freight, 10845 Koontz Avenue

Boring B10 and B11 were advanced adjacent to a clarifier (B10) and associated drain (B11) on the northwest side of the property. B11 was sampled at 2 and 5 feet and B12 was sampled at 5, 10, and 15 feet. Boring B10 and B11 samples were analyzed for TPH and VOCs.

3.2.5 Roufs Machine and LenPar Rolling, 10858 Koontz Avenue

Boring B12 was advanced at Roufs Machine, in an equipment storage area. B12 was advanced to a depth of 10 feet and sampled at 2, 5, and 10 feet. Boring B13 was advanced at LenPar Rolling adjacent to a pit machine. The boring was advanced to a depth of 20 feet and sampled at 5, 10, 15 and 20 feet. All samples were analyzed for TPH, VOCs, and CAM metals.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Boring B23 was advanced near soil vapor point SV-7 to a depth of 30 feet with soil samples collected at 5, 10, 20 and 30 feet. The samples were analyzed for VOCs.

3.2.6. Silverio Party Store, 10801 Norwalk Boulevard

B14 was advanced adjacent to former USTs located at the northeast corner of the property parking lot. B14 was advanced to 20 feet and sampled at 10, 15, and 20 feet. Soil samples from B14 were analyzed for TPH and VOCs.

Borings B25 through B38 were drilled to depths of 40 to 45 feet with samples collected at 5-foot intervals. Selected soil samples were analyzed for the TPH and VOCs.

3.2.7. West Coast Enterprises, 10825 Norwalk Boulevard

Boring B15 was advanced adjacent to a maintenance shed on the northwest corner of the property. The boring was sampled at 2 and 5 feet. Soil samples from B15 were analyzed for TPH and VOCs.

3.2.8. Quality Lift, 10845 Norwalk Boulevard

Four borings (B16 to B19) were advanced at areas of surficial oils staining observed within the Quality Lift yard. All four borings were sampled at 2 and 5 feet. All samples were analyzed for TPH, VOCs and CAM metals.

3.2.9. Mako Equipment, 10859 Norwalk Boulevard

Borings B20 and B21 were advanced at the site near a former oil well (B20) and a sump/shed (B21). Soil samples were collected at 5, 10 and 15 feet from both borings. All samples were analyzed for TPH and VOCs.

Boring B24 was advanced near soil vapor point SV-17 to a depth of 30 feet with soil samples collected at 5, 10, 20 and 30 feet. The samples were analyzed for VOCs.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

4.0. FINDINGS

4.1. SOIL PROFILE

The soil profile at this site generally consists of silt from 2 to 5 feet, clayey silt at 10 feet, silt and fine to medium sand at 15 feet, and clayey silt and fine sand at 20 feet to 40 feet and medium sand with gravel from 35 to 45 feet.

Organic vapors were not detected with the PID in the soil samples with the exception of B14-15', B14-20', B22-5', B23-5', B25-35', B25-40', B25-45', B27-15', B27-30', B27-25', B27-30', B27-35' and B27-40' , which were measured at 0.1 and >9999 parts per million, respectively. The organic vapor readings are recorded on the boring logs.

Boring logs are attached in Appendix A.

4.2. SOIL VAPOR ANALYTICAL RESULTS

The analytical results are summarized in Table 1 and depicted on Figures 3 and 4. The analytical reports and chain-of-custody forms are attached in Appendix B. The following is a summary of the VOCs results in soil vapor.

All samples from SV-1, SV-18, SV-19, SV-20 and SV-21 contained PCE concentrations ranging from 0.18 ug/L to 2.00 ug/L. Concentrations of PCE generally increased with depth. The SV-1/SV-18 location shows PCE concentrations of 0.33 ug/L at 5 feet, 0.29 ug/L at 10 feet, 1.47 ug/L at 20 feet and 2.00 ug/L at 30 feet. PCE concentrations also showed increasing concentrations between 5 and 10 feet in SV-20 and SV-21.

The PCE daughter product, TCE, was detected at 0.02 ug/L and 0.05 ug/L in samples SV-18-20 and SV-18-30, respectively.

Soil vapor in samples SV-18-20 and SV-18-30 also contained benzene at 0.07 ug/L and 0.03 ug/L, respectively. Ethylbenzene and xylenes were also detected in SV-18-30 at 0.50 ug/L and 1.18 ug/L, respectively.

No additional VOCs were detected in these soil vapor samples.

4.2.2. Paramount Rolling & Forming (La Habra Welding, 10819 Koontz Avenue

Soil vapor probes SV-4 and SV-6 were drilled at this location. PCE was detected at 5 feet in SV-4, located in the hazardous materials storage area, at 0.05 ug/L and was not detected at 10 feet.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

No other VOCs were detected in these soil vapor samples.

4.2.3. Roufs Machine and LenPar Rolling, 10858 Koontz Avenue

Soil vapor probes SV-7, SV-15 and SV-22 through SV-26 were located on this portion of the property. Overall, PCE concentrations increased with depth. PCE was detected at increasing concentrations in the SV-7/SV-23 location. The SV-7/SV-23 location shows PCE concentrations of 0.14 ug/L at 5 feet, 0.18 ug/L at 10 feet, 0.97 ug/L at 20 feet and 1.61 ug/L at 30 feet. PCE concentrations also showed increasing concentrations between 5 and 10 feet in SV-22, SV-24 and SV-25.

TCE was detected in samples from SV-23 through SV-25 at concentrations ranging from 0.08 ug/L (SV-25-5) to 1.11 ug/L (SV-23-30). Another PCE breakdown product, 1,1-DCE, was detected in SV-23-30 at 1.20 ug/L.

No other VOCs were detected in these soil vapor samples.

4.2.4. Mako Equipment, 10859 Norwalk Boulevard

Soil vapor probes SV-13, SV-14, SV-17 and SV-27 through SV-30 were located on this portion of the property. Overall, PCE concentrations increased with depth. PCE was detected at increasing concentrations in the SV-17/SV-30 location with PCE detected at 0.06 ug/L at 5 feet, 0.22 ug/L at 10 feet, 0.02 ug/L at 20 feet and 0.76 ug/L at 30 feet. Of the remaining locations, PCE was only detected in SV-29 at 0.02 ug/L (5 feet) and 0.04 ug/L (10 feet).

No other VOCs were detected in these soil vapor samples.

4.3. SOIL SAMPLE ANALYTICAL RESULTS

Analytical results are summarized in Tables 2 and 3 and Figures 5 and 6. The analytical reports and chain-of-custody forms are attached in Appendix C.

4.3.1. Silverio's Party Store

TPH in the C4 – C12 range was detected from three samples, B14, B27 and B28. Concentrations ranged from 0.2J mg/kg (B28-40') to 9,090 mg/kg (B14-20'). TPH was detected in the C13 – C23 range in samples B3, B4, B8, and B11 ranging from 3.9 mg/kg (B11-2') to 800 mg/kg (B14-20'). TPH in the C24 – C40 range was detected in two samples at 28.5 mg/kg (B15-5') and 93.4 mg/kg (B14-10').

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Benzene was not detected in any of the samples. Toluene, ethylbenzene, and xylenes were detected in samples B14, B25, B27, and B28. Toluene concentrations ranged from 1.6J mg/kg (B28-35') to 40,800 mg/kg (B14-20'). Ethylbenzene concentrations ranged from 4.3 mg/kg (B28-35') to 64,700 mg/kg (B14-20'). Xylene concentrations ranged from 4.0 mg/kg (B25-45') to 816,000 mg/kg (B14-20').

MTBE was detected in samples B25, B27, and B28 ranging from 2.0J (B25-35') to 46.2 mg/kg (B27-25').

Additional VOCs detected in the samples included isopropylbenzene, n-propylbenzene, 1,3,5-trimethylbenzene, tert-butylbenzene, 1,2,4-trimethylbenzene, sec-butylbenzene, n-butylbenzene and naphthalene. Concentrations ranged from 2.2J mg/kg of isopropylbenzene (B24-30') to 772,000 mg/kg of 1,2,4-trimethylbenzene (B14-20').

4.3.2. Remainder of Property

TPH was detected in the C13 – C23 range in samples B3, B4, B8, B11, B15 and B16 ranging from 3.9J mg/kg (B11-2') to 39.1 mg/kg (B3-2'). TPH in the C24 – C40 range was detected in samples at B3-2', B11-5', B15-5' and B16-2' at concentrations ranging from 28.5J mg/kg to 51.3 mg/kg.

VOCs were not detected in any of the soil samples.

Samples from borings B1 through B4, B6 through B8, B12, B13 and B16 through B19 were analyzed for CAM metals. Arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium and zinc were detected in the samples; however, all results were within normal background levels.

5.0. HEALTH RISK ASSESSMENT

AGI consulted with Dr. Jill Ryer-Powder, Ph.D., a Diplomate of American Board of Toxicology (DABT)-certified toxicologist with Environmental Health Decisions (EHD), to provide a HHRA for determination of potential health risks to current and future workers due to the presence of chemicals in the soil and soil vapor at the site. The HHRA was performed because soil vapor data exceeded environmental screening levels. AGI provided all data from the Phase II environmental site assessment to Dr. Ryer-Powder for the HHRA. The HHRA Technical Memorandum is attached in Appendix D.

The HHRA was conducted based on the current and likely future use of the property for commercial/industrial uses. The chemicals of potential concern (all chemicals detected at least one time) were evaluated for both potential cancer and noncancer effects for

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

commercial workers. The California Environmental Protection Agency states that based on human health risk or non-cancer hazard, to protect human health, screening levels for individual chemicals of potential concentration shall be set to (1) an incremental excess lifetime cancer risk to an individual of 1 in 1 million (1E-06 or 1 x 10-6), and (2) a hazard quotient of 1. California's Proposition 65 considers a cancer risk of 10 in 1,000,000 (1E-05 or 1 x 10-5) as an acceptable level and does not require a cancer warning.

With regards to direct contact with chemicals in the soil, the cumulative cancer risk using the maximum detected concentrations of all chemicals is 7E-09 and a cumulative noncancer hazard index is 0.1. Both values are below benchmark values for commercial workers.

On 14 February 2020, the California Environmental Protection Agency issued Supplemental Guidance: Screening and Evaluating Vapor Intrusion (draft) which utilized a new attenuation factor, to be used both or residential and commercial properties. This attenuation factor was used to determine if the screening levels had been exceeded in this investigation and were used by Dr. Ryer-Powder in the HHRA. Based on the new attenuation factor, the soil vapor cancer risk and noncancer hazard index assuming the maximum detected concentrations of chemicals were present throughout the Site was calculated at 4.6E-05 and 4.4, respectively.

Dr. Ryer-Powder further evaluated the data using the Johnson and Ettinger model (EPA, 2017), a model that utilizes vadose zone characteristics, building characteristics and exposure parameters, to estimate indoor air concentrations and associated health risks from subsurface vapor intrusion. The additional evaluation was performed because this attenuation factor is used for residential buildings.

Using a default soil type of sand, current California toxicity factors, soil vapor data, etc., the J&E model predicted a cancer and noncancer hazard index 2.3E-07 and 0.01, respectively. Both values are less than benchmark values for commercial workers.

6.0. CONCLUSIONS

The following conclusions are based on the findings of the Phase II investigations.

6.1. SOIL PROFILE

- The soil profile generally consists of silt and clayey silt from near surface to 10 feet below grade across the site. Between 15 and 20 feet, a mix of fine sand and silt/clayey silt is present. The predominant soil types are fine sand and medium sand from 25 to 45 feet. Gravel was encountered in sands in several of the borings.
- Organic vapor readings using the PID were generally not detected or very low in soil from the borings with the exception of the borings drilled at the Silverio Party

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Store. Hydrocarbon vapors were detected at levels as high as >9999 parts per million in several of the samples.

6.2. GROUNDWATER

- Groundwater was not encountered during this investigation (maximum depth of 45 feet). Two groundwater monitoring well clusters are located along the western sidewalk along Koontz Avenue. Each well cluster consists of three monitoring wells that are screened through different intervals. These wells have been installed to monitor impacted groundwater that is sourced to two sites north of the subject property (Continental Heat Treating and Former Exxon Mobile/Jalk Fee Property). These sites are located approximately 625 feet north of the subject property.
- The northernmost well cluster was installed by Continental Heat Treating and is known as monitoring wells MW-8S, MW-8M, MW-8D for the shallow, moderate and deep zone. These wells were installed in April 2019 immediately east of the former oil well lot on the southwest corner of Koontz Avenue and Florence Avenue. The last publicly available data from this well cluster indicates that the depth to groundwater in May 2019 was 110.84 feet with a flow direction to the south.
- A second well cluster is located south of MW-8 immediately adjacent to the MJB Freight site. No information is publicly available regarding this well cluster.
- Sampling results from May 2019 from MW-8 shows PCE, TCE and various breakdown products of these compounds impacting the groundwater beneath the subject property. PCE in the shallow, middle and deep zones were detected at 36.4 ug/L, 180 ug/L and 95.1 ug/L, respectively. In addition, TCE was also detected at 97.9 ug/L, 123 ug/L and 134 ug/L, respectively. The total extent of the impacted groundwater across the subject property is unknown.
- AGI reviewed a 2007 groundwater monitoring report for the City of Santa Fe Springs – Little Lake Village Housing complex, located immediately west of the subject property. This site had a total of three groundwater monitoring wells, one of which was near the property line between MJB Freight and Paramount Rolling. Depth to groundwater in that well in September and November 2007 was 81.99 feet and 83.64 feet. PCE was detected at 525 ug/L in September and 541 ug/L in November while TCE was detected at 116 ug/L and 112 ug/L at that time. Several other VOCs were detected at that time. No other publicly available data on the Geotracker database is available regarding this site, however, clearly high levels of PCE and TCE were in the groundwater at shallower elevations in the past.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

6.3. SOIL VAPOR

- During the initial Phase II investigation, only PCE was detected in nine of 34 samples collected from five areas. PCE was detected in vapor points SV1 (former oil well location at Paramount Roll), SV4 (waste storage area at Paramount Roll), SV7 (Lenpar yard), SV15 (West Coast Enterprises maintenance shed area) and SV17 (Mako Equipment above ground tank and sump area). The concentrations ranged from 0.05 ug/L in SV-4-5 to 0.33 ug/L in SV-1-5. The PCE concentrations in seven of the samples exceeded the commercial/industrial screening level of 0.067 ug/L.
- The three areas showing the highest vapor impacts (former oil well location at Paramount Roll, Lenpar yard and West Coast Enterprises maintenance shed area) were further investigated by installing deeper vapor probes at 20 and 30 feet as well as placing step out locations to further assess the 5 and 10 foot levels. The deeper probes were placed immediately adjacent to the probe points with highest PCE concentrations from the initial investigation in order to obtain a vertical profile of concentrations.
- PCE concentrations increased with depth at the former oil well location on the Paramount Roll property. Concentrations ranged from 0.29 ug/L at 10 feet to 1.47 ug/L at 20 feet to 2.00 ug/L at 30 feet. Shallow borings generally showed increasing concentrations between 5 and 10 feet. TCE was also detected at 20 and 30 feet at concentration of 0.02 ug/L and 0.05 ug/L. Benzene, ethylbenzene and xylenes were detected at low levels at 20 and 30 feet and are likely related to the former oil well.
- The LenPar yard shows similar trends PCE trends, with increasing concentration from 0.14 ug/L at 5 feet, 0.18 ug/L at 10 feet, 0.97 ug/L at 20 feet and 1.61 ug/L at 30 feet. TCE was also detected at 20 and 30 feet at 0.37 ug/L and 1.11 ug/L, respectively. 1,1-DCE was detected at 1.20 ug/L at 30 feet. Shallow soil vapor points also showed increases between 5 and 10 feet.
- At the Mako Equipment site, PCE increased from 0.06 ug/L at 5 feet to 0.20 ug/L at 10 feet, then decreased to 0.02 ug/L at 20 feet before increasing to 0.76 ug/L at 30 feet. TCE was also detected at 0.01 ug/L and 0.76 ug/L at 20 and 30 feet.

The Phase I and II investigations have not identified a definitive source of PCE in the soil vapor. Although the subject property has long term industrial use, soil sample results from this investigation have not indicated the presence of PCE; this may suggest that only a soil vapor phase plume is present. The increasing concentrations with depth may actually indicate that the long-term impact of volatile organic compounds in the underlying groundwater is off-gassing and creating the vapor plumes.

The HHRA conducted under for this site was completed using the newly released California EPA vapor intrusion guidance (February 2020). Dr. Ryer-Powder first

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

calculated the results using the new attenuation factor which indicated a cancer risk and noncancer hazard index of 4.6E-05 and 4.4, respectively. Because this attenuation factor is used for residential buildings as well, Dr. Ryer-Powder further evaluated the data using the Johnson and Ettinger model (EPA, 2017), a model that utilizes vadose zone characteristics, building characteristics and exposure parameters to estimate indoor air concentrations and associated health risks from subsurface vapor intrusion. The J&E model predicted a cancer and noncancer hazard index 2.3E-07 and 0.01, respectively. Both values are less than benchmark values for commercial workers.

6.4. SOIL

- Across the subject property (excluding Silverio's Party Store), total petroleum hydrocarbons in C_{13} - C_{23} (diesel range) and C_{24} - C_{40} (oil range) ranges were detected at low concentrations in nine shallow samples across the sites. Concentrations ranged from 4.4J mg/kg to 93.4 mg/kg and is likely related to minor oil releases. These concentrations do not exceed Los Angeles Regional Water Quality Control Board screening levels. No VOCs were detected, and metals were within normal background levels.
- Underground storage tanks were removed from the current Silverio's Party Store site in 1998. Impacted soil was excavated at the time of UST removal. However, elevated levels of hydrocarbons were left in place at that time. The Santa Fe Springs Fire Department issued a case closure letter in 1999. During the first phase of this investigation, one boring (boring B14) was drilled near the former UST area. At 20 feet (the maximum depth of the boring), elevated concentrations of TPH in the gasoline range were detected at 9,090 mg/kg. Elevated concentrations of toluene, ethylbenzene and xylenes were also detected at 20 feet. Benzene and MTBE were not detected.
- Four additional borings were drilled to further define the remaining contamination. Boring B27 was drilled adjacent to B14 to define the vertical extent. At 25 feet, concentrations of TPH in the gasoline range decreased to 2.2 mg/kg and the toluene, ethylbenzene and xylenes concentrations also declined. At 40 feet, TPH was detected at 336 mg/kg with an increase in toluene, ethylbenzene and xylenes. Boring B25, drilled north of B27 was sampled at 45 feet and only contained trace levels of xylenes and MTBE. Boring B28, drilled south of B14/B27 did encounter TPH in the gasoline range at 6,970 mg/kg at 20 feet, however, the concentration dropped to 1,820 mg/kg at 25 feet and at 0.2J mg/kg (trace concentration) at 35 feet. Toluene, ethylbenzene and xylenes showed similar decreases between 20 and 35 feet.
- The hydrocarbon impacted soil that remains at Silverio's Party Store is present between 20 and 40 feet with the highest concentrations occurring at 20 and 25 feet. No benzene was detected in any of the soil samples and only trace

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

concentrations of MTBE were detected in a few samples. The upper 15 to 20 feet of the soil is clean, likely due to the reported excavation of impacted soil following the UST removal. A vapor point sampled at 5 and 10 feet in this area during the initial investigation did not indicate the presence of hydrocarbon impacted soil vapor in shallow zone.

- The HHRA indicates that with regards to direct contact with chemicals in the soil, the cumulative cancer risk using the maximum detected concentrations of all chemicals is 7E-09 and a cumulative noncancer hazard index is 0.1. Both values are below benchmark values for commercial workers.

In summary, AGI has completed a widespread environmental investigation of the property. Significant subsurface impact was not present in most of the areas investigated. AGI could not identify a definitive source area for the PCE in the soil vapor. In addition, concentrations of PCE in the soil vapor increase with depth. The potential for off gassing from groundwater beneath the site is present because of the long-term VOC impacts, including PCE and TCE.

Hydrocarbon-impacted soil at Silverio's Party Store is present in the former UST area between 20 and 40 feet, with the highest concentrations occurring between 20 and 25 feet. The upper 15 to 20 feet of soil is clean and no soil vapor was detected at 5 and 10 feet, indicating minimal off-gassing from the residual hydrocarbons into the shallow soil. AGI does not recommend any additional investigation at this time.

Should the property be demolished and redeveloped, AGI does advocate the consideration of a vapor barrier/mitigation system during construction design as a future safeguard to potential vapor intrusion conditions.

7.0. LIMITATIONS

Our professional services were performed using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar localities. Findings were based upon field observations. Evaluation of the hydrogeologic conditions at the site for the purpose of this investigation was made from a limited number of available data points (e.g., soil and soil vapor samples) and subsurface conditions may vary away from these data points. No other warranty, expressed or implied, is made as to the professional interpretations, opinions, and recommendations contained in this report.

OPTIMAL TECHNOLOGY
Specializing in Environmental Field Services

November 8, 2019

Mr. Rob Loeffler
Advanced GeoEnvironmental, Inc.
3335 E. Miraloma Avenue, Suite 142
Anaheim, CA 92806

Dear Mr. Loeffler:

This letter presents the results of the soil vapor investigation conducted by Optimal Technology (Optimal), for Advanced GeoEnvironmental, Inc. on November 5-7, 2019. The study was performed at the property Southwest of Florence Ave. & Norwalk Blvd. in Santa Fe Springs, California.

Optimal was contracted to perform a soil vapor survey at this site to screen for possible chlorinated solvents and aromatic hydrocarbons. The primary objective of this soil vapor investigation was to determine if soil vapor contamination is present in the subsurface soil.

Gas Sampling Method

Gas sampling was performed by hydraulically pushing soil gas probes to a depth of 5.0-10.0 feet below ground surface (bgs). An electric rotary hammer drill was used to drill a 1.0-inch diameter hole through the overlying surface to allow probe placement when required. The same electric hammer drill was used to push probes in areas of resistance during placement.

At each sampling location, an electric vacuum pump set to draw 0.2 liters per minute (L/min) of soil vapor was attached to the probe and purged prior to sample collection. Vapor samples were obtained in SGE gas-tight syringes by drawing the sample through a luer-lock connection which connects the sampling probe and the vacuum pump. Samples were immediately injected into the gas chromatograph/purge and trap after collection. New tubing was used at each sampling point to prevent cross contamination.

All analyses were performed on a laboratory grade Agilent model 6890N gas chromatograph equipped with an Agilent model 5973N Mass Spectra Detector and Tekmar LSC 3100 Purge and Trap. A Restek column using helium as the carrier gas was used to perform all analysis. All results were collected on a personal computer utilizing Agilent's MS and chromatographic data collection and handling system.

Quality Assurance

5-Point Calibration
The initial five-point calibration consisted of 20, 50, 100, 200 and 500 ul injections of the calibration standard. A calibration factor on each analyte was generated using a best fit line method using the Agilent data system. If the r^2 factor generated from this line was not greater than 0.990, an additional five-point calibration would have been performed. Method reporting limits were calculated to be 0.001-1.0 micrograms per Liter (ug/L) for the individual compounds.

A daily calibration check was performed using a pre-mixed standard supplied by Scotty Analyzed Gases. The standard contained common halogenated solvents and aromatic hydrocarbons (see Table 1). The individual compound concentrations in the standards ranged between 0.025 nanograms per microliter (ng/ul) and 0.25 ng/ul.

TABLE 1

Dichlorodifluoromethane	Carbon Tetrachloride	Chloroethane
Trichlorofluoromethane	1,2-Dichloroethane	Benzene
1,1-Dichloroethene	Trichloroethene	Toluene
Methylene Chloride	1,1,2-Trichloroethane	Ethylbenzene
trans-1,2-Dichloroethene	Tetrachloroethene	m-/p-Xylene
1,1-Dichloroethane	Chloroform	o-Xylene
cis-1,2-Dichloroethene	1,1,1,2-Tetrachloroethane	Vinyl Chloride
1,1,1-Trichloroethane	1,1,2,2-Tetrachloroethane	Freon 113
4-Methyl-2-Pentanone	Cyclohexane	Acetone
Chlorobenzene	2-Butanone	Isobutane

Sample Replicates
A replicate analysis (duplicate) was run to evaluate the reproducibility of the sampling system and instrument. The difference between samples did not vary more than 20%.

Equipment Blanks
Blanks were run at the beginning of each workday and after calibrations. The blanks were collected using an ambient air sample. These blanks checked the septum, syringe, GC column, GC detector and the ambient air. Contamination was not found in any of the blanks analyzed during this investigation. Blank results are given along with the sample results.

Tracer Gas Leak Test
A tracer gas was applied to the soil gas probes at each point of connection in which ambient air could enter the sampling system. These points include the top of the sampling probe where the tubing meets the probe connection and the surface bentonite seals. Isobutane was used as the tracer gas. No Isobutane was found in any of the samples collected.

Purge Volume
The standard purge volume of three volumes was purged in accordance with the July 2015 DTSC/RWQCB Advisory for Active Soil Gas Investigations.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Shut-in Test
A shut-in test was conducted prior to purging or sampling each location to check for leaks in the above-ground sampling system. The system was evaluated to a minimum measured vacuum of 100 inches of water. The vacuum gauge was calibrated and sensitive enough to indicate a water pressure change of at least 0.5 inches.

Scope of Work

To achieve the objective of this investigation a total of 37 vapor samples were collected from 17 locations at the site. Sampling depths, vacuum readings, purge volume and sampling volumes are given on the analytical results page. All the collected vapor samples were analyzed on-site using Optimal's mobile laboratory.

Subsurface Conditions

Subsurface soil conditions at this site offered sampling flows at 0-40" water vacuum. Depth to groundwater was unknown at the time of the investigation.

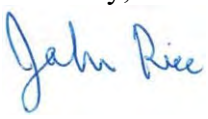
Results

During this vapor investigation, eleven samples contained levels of Tetrachloroethene (PCE) ranging from 0.05 ug/L to 0.33 ug/L. None of the other compounds listed in Table 1 above were detected above the listed reporting limits. A complete table of analytical results is included with this report.

Disclaimer

All conclusions presented in this letter are based solely on the information collected by the soil vapor survey conducted by Optimal Technology. Soil vapor testing is only a subsurface screening tool and does not represent actual contaminant concentrations in either the soil and/or groundwater. We enjoyed working with you on this project and look forward to future projects. If you have any questions, please contact me at (877) 764-5427.

Sincerely,



John Rice
Project Manager

OPTIMAL TECHNOLOGY
Specializing in Environmental Field Services

January 9, 2020

Mr. Rob Loeffler
Advanced GeoEnvironmental, Inc.
3335 E. Miraloma Avenue, Suite 142
Anaheim, CA 92806

Dear Mr. Loeffler:

This letter presents the results of the soil vapor investigation conducted by Optimal Technology (Optimal), for Advanced GeoEnvironmental, Inc. on January 7-8, 2020. The study was performed at the property Southwest of Florence Ave. & Norwalk Blvd. in Santa Fe Springs, California.

Optimal was contracted to perform a soil vapor survey at this site to screen for possible chlorinated solvents and aromatic hydrocarbons. The primary objective of this soil vapor investigation was to determine if soil vapor contamination is present in the subsurface soil.

Gas Sampling Method

Gas sampling was performed by hydraulically pushing soil gas probes to a depth of 5.0-10.0 feet below ground surface (bgs). An electric rotary hammer drill was used to drill a 1.0-inch diameter hole through the overlying surface to allow probe placement when required. The same electric hammer drill was used to push probes in areas of resistance during placement.

At each sampling location, an electric vacuum pump set to draw 0.2 liters per minute (L/min) of soil vapor was attached to the probe or existing well and purged prior to sample collection. Vapor samples were obtained in gas-tight syringes by drawing the sample through a luer-lock connection which connects the sampling probe and the vacuum pump. Samples were immediately injected into the gas chromatograph/purge and trap after collection. New tubing was used at each sampling point to prevent cross contamination.

All analyses were performed on a laboratory grade Agilent model 6890N gas chromatograph equipped with an Agilent model 5973N Mass Spectra Detector and Tekmar LSC 3100 Purge and Trap. A Restek column using helium as the carrier gas was used to perform all analysis. All results were collected on a personal computer utilizing Agilent's MS and chromatographic data collection and handling system.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Quality Assurance

5-Point Calibration
The initial five-point calibration consisted of 20, 50, 100, 200 and 500 ul injections of the calibration standard. A calibration factor on each analyte was generated using a best fit line method using the Agilent data system. If the r^2 factor generated from this line was not greater than 0.990, an additional five-point calibration would have been performed. Method reporting limits were calculated to be 0.001-1.0 micrograms per Liter (ug/L) for the individual compounds.

A daily calibration check was performed using a pre-mixed standard supplied by Scotty Analyzed Gases. The standard contained common halogenated solvents and aromatic hydrocarbons (see Table 1). The individual compound concentrations in the standards ranged between 0.025 nanograms per microliter (ng/ul) and 0.25 ng/ul.

TABLE 1

Dichlorodifluoromethane	Carbon Tetrachloride	Chloroethane
Trichlorofluoromethane	1,2-Dichloroethane	Benzene
1,1-Dichloroethene	Trichloroethene	Toluene
Methylene Chloride	1,1,2-Trichloroethane	Ethylbenzene
trans-1,2-Dichloroethene	Tetrachloroethene	m-/p-Xylene
1,1-Dichloroethane	Chloroform	o-Xylene
cis-1,2-Dichloroethene	1,1,1,2-Tetrachloroethane	Vinyl Chloride
1,1,1-Trichloroethane	1,1,2,2-Tetrachloroethane	Freon 113
4-Methyl-2-Pentanone	Cyclohexane	Acetone
Chlorobenzene	2-Butanone	Isobutane

Sample Replicates
A replicate analysis (duplicate) was run to evaluate the reproducibility of the sampling system and instrument. The difference between samples did not vary more than 20%.

Equipment Blanks
Blanks were run at the beginning of each workday and after calibrations. The blanks were collected using an ambient air sample. These blanks checked the septum, syringe, GC column, GC detector and the ambient air. Contamination was not found in any of the blanks analyzed during this investigation. Blank results are given along with the sample results.

Tracer Gas Leak Test
A tracer gas was applied to the soil gas probes at each point of connection in which ambient air could enter the sampling system. These points include the top of the sampling probe where the tubing meets the probe connection and the surface bentonite seals. Isobutane was used as the tracer gas. No Isobutane was found in any of the samples collected.

Purge Volume
The standard purge volume of three volumes was purged in accordance with the July 2015 DTSC/RWQCB Advisory for Active Soil Gas Investigations.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Shut-in Test
A shut-in test was conducted prior to purging or sampling each location to check for leaks in the above-ground sampling system. The system was evaluated to a minimum measured vacuum of 100 inches of water. The vacuum gauge was calibrated and sensitive enough to indicate a water pressure change of at least 0.5 inches.

Scope of Work

To achieve the objective of this investigation a total of 28 vapor samples were collected from 13 locations at the site. Sampling depths, vacuum readings, purge volume and sampling volumes are given on the analytical results page. All the collected vapor samples were analyzed on-site using Optimal's mobile laboratory.

Subsurface Conditions

Subsurface soil conditions at this site offered sampling flows at 0" water vacuum. Depth to groundwater was unknown at the time of the investigation.

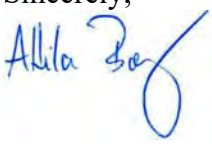
Results

During this vapor investigation, multiple analytes were detected in several samples collected above the listed reporting limit. Please see the complete table of analytical results included with this report.

Disclaimer

All conclusions presented in this letter are based solely on the information collected by the soil vapor survey conducted by Optimal Technology. Soil vapor testing is only a subsurface screening tool and does not represent actual contaminant concentrations in either the soil and/or groundwater. We enjoyed working with you on this project and look forward to future projects. If you have any questions, please contact me at (877) 764-5427.

Sincerely,



Attila Baly
Project Manager

APPENDIX C

Soil Sample Analytical Results

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Alpha Scientific Corporation
Environmental Laboratories

11-08-2019

Mr. Robert Loeffler
Advanced GeoEnvironmental, Inc.
3335 E. Miraloma Ave., Suite 142
Anaheim, CA 92806

Project: Hathaway Properties
Project Site: Not Specifield
Sample Date: 11-05-2019
Lab Job No.: AE911016

Dear Mr. Loeffler:

Enclosed please find the analytical report for the sample(s) received by Alpha Scientific Corporation on 11-05-2019 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)
EPA 8260B (VOCs & Oxygenates by GC/MS)
EPA 6010B/7471A (Title-22 Metals)

All analyses have met the QA/QC criteria of this laboratory.

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

Alpha Scientific Corporation is a CA ELAP certified laboratory (Certificate Number 3007). Thank you for giving us the opportunity to serve you. Please feel free to call me at (562) 809-8880 if our laboratory can be of further service to you.

Sincerely,

Roger Wang, Ph.D.
Laboratory Director

* TPH-G (Gasoline Range TPH) result is obtained from purge and trap analysis using LUFT-GCMS Method;
MDL= Method Detection Limit; PQL= Practical Quantitation Limit;
DF= Dilution Factor ; ND=Not Detected (below DF × MDL);
J=Trace Value, result is below DF × PQL but above DF × MDL;
Note: Surrogate recovery acceptance limits are 70-130%.

Mr. Robert Loeffler
Advanced GeoEnvironmental, Inc.
3335 E. Miraloma Ave., Suite 142
Anaheim, CA 92806

Project: Hathaway Properties
Project Site: Not Specifield
Sample Date: 11-06-2019
Lab Job No.: AE911020

Dear Mr. Loeffler:

Enclosed please find the analytical report for the sample(s) received by Alpha Scientific Corporation on 11-06-2019 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)
EPA 8260B (VOCs & Oxygenates by GC/MS)
EPA 6010B/7471A (Title-22 Metals)

All analyses have met the QA/QC criteria of this laboratory.

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

Alpha Scientific Corporation is a CA ELAP certified laboratory (Certificate Number 3007). Thank you for giving us the opportunity to serve you. Please feel free to call me at (562) 809-8880 if our laboratory can be of further service to you.

Sincerely,

Roger Wang, Ph.D.
Laboratory Director

Client: AGE Project: Hathaway Properties Lab Job# A2911020

Date Received: 11-06-2019

Sample(s) received in cooler(s)? Yes ✓ No____ (skip to Section 2)

Cooler(s) packed with: Ice____ Ice Packs ✓ Packing Material____

Cooler Temperature (°C) : #1: 4°c #2:____ #3:____ #4:____ #5____

(Acceptable range is 0°C to 6°C or arriving on ice for samples received on the same day as collected.)

(Ambient Temperature for vapor or air samples is acceptable).

If sample(s) received outside acceptable range, Project Manager contacted by(Personnel Initial):____

Section 2	YES	NO	N/A
Was a COC received?	✓		
Were client sample IDs present?	✓		
Were sample(s) collection dates present?	✓		
Was the COC signed?	✓		
Were tests clearly indicated?	✓		
Did all samples arrive intact? If no, indicate below.	✓		
Did all container labels agree with COC?	✓		
Were correct containers used for the tests required?	✓		
Was there sufficient sample amount for requested tests?	✓		
Were the samples correctly preserved?	✓		
Was there headspace in VOA vials?			✓
Were Custody seals present?		✓	
If yes-were they intact?			✓

Section 3

Explanations/Comments:____

Section 4

Was the Project Manager notified of anomalies? Yes____ No____ N/A ✓

Environmental Health Decisions

Technical Memorandum

To: Robert D. Loeffler, PG, AdvancedGeo

From: Jill Ryer-Powder, Ph.D., DABT, Environmental Health Decisions

Jill E Ry-Pd

Date: February 18, 2020

Re: **Human Health Risk Assessment of Soil Exposure and Vapor Intrusion to Indoor Air – Hathaway Properties, Inc. (10801-10859 Norwalk Blvd, 10819-10858 Koontz Avenue, 12120 Florence Avenue), Santa Fe Springs, California**

This Human Health Risk Assessment is prepared by Environmental Health Decisions (EHD) for use in evaluating the subsurface conditions at the property located at 10801-10859 Norwalk Boulevard, 10819-10858 Koontz Avenue, and 12120 Florence Avenue in Santa Fe Springs, Los Angeles County, California (the Site). The purpose of this report is to describe information regarding potential for health risks to current and future workers due to the presence of chemicals in soil and soil vapor at the Site. Detailed information regarding the history and characterization of the Site is in the reports entitled *"Phase I Environmental Site Assessment, Hathaway Properties, Inc., 10801-10859 Norwalk Blvd, 10819-10858 Koontz Avenue, 12120 Florence Avenue), Santa Fe Springs, California"* prepared by AdvancedGeo Environmental [AdvancedGeo, 2019] and *"Phase II Environmental Site Assessment, Hathaway Properties, Inc., 10801-10859 Norwalk Blvd, 10819-10858 Koontz Avenue, 12120 Florence Avenue), Santa Fe Springs, California"* prepared by AdvancedGeo Environmental [AdvancedGeo, 2020].

The Site is located within a mixed industrial and residential area in the City of Santa Fe Springs, Los Angeles County, California. The Site is comprised of a 6.44-acre parcel that is currently divided into nine leased subdivisions, each of which has its own address. The Site is currently occupied by various commercial and industrial tenants including the following: a party supply store (Silverio Party Store) at 10801 Norwalk Boulevard, a used truck sale company (West Coast Enterprises) at 10825 Norwalk Boulevard, a forklift rental company (Quality Lift) at 10845 Norwalk Boulevard, a scissor lift rental company (Mako Equipment) at 10859 Norwalk Boulevard, a machine repair company (Rouf's Machines) at 10858 Koontz Avenue, two steel rolling companies LenPar Rolling at 10858 Koontz Avenue and Paramount Rolling at 12120 East Florence Avenue, a welding and fabrication company (La Habra Welding) at 10819 Koontz Avenue, and a transport company (MJB

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Freight) at 10859 Norwalk Boulevard [AdvancedGeo, 2019]. EHD is unaware of any proposed or planned change of property use.

Potential recognized environmental conditions (RECs), as presented in the Phase I report prepared in 2019 [AdvancedGeo, 2019], included the following:

- Chemicals related to the release of chlorinated solvent (tetrachloroethylene, PCE and trichloroethylene, TCE) related to the unauthorized release at Continental Heat Treating to the north have impacted the groundwater of the subject property. Soil and soil-vapor have also likely been impacted.
- Vapor encroachment of VOCs from the contamination related to the City of Santa Fe Springs Little Lake Housing project have likely impacted the subject property.
- In-ground clarifiers were identified at 10819 Koontz Avenue and 10845 Koontz Avenue. Clarifiers have the potential to leak and negatively impact the subsurface.
- Hydrocarbon storage on site and numerous areas of heavy staining that were observed throughout the property, in conjunction with the deteriorated and porous asphalt, create the likely possibility of hydrocarbon contamination impacting the subsurface soils.
- Long term industrial use of the site and the widespread presence of metal shavings and metal dust, in conjunction with cracked and porous asphalt create the likely possibility of subsurface metal contamination.
- The improper storage of batteries outdoors, in conjunction with deteriorated and porous asphalt create the likely possibility of subsurface lead contamination.
- Reports of abandoned oil lines underneath 12120 East Florence Avenue create the possibility of hydrocarbon subsurface contamination.

Soil and soil vapor sampling were conducted in November 2019 and January 2020 [AdvancedGeo, 2020]. Soil data and soil vapor data are presented in Tables 1 and 2, respectively. Volatile organic chemicals (VOCs) were detected in soil vapor. VOCs, total petroleum hydrocarbons (TPH)[1], and metals were detected in soil. The purpose of this human health risk assessment is to evaluate the potential for health risks to current and future workers at the Site from exposure to chemicals detected in soil and soil vapor. Groundwater is approximately 105 feet below ground surface and therefore not available for direct contact. Groundwater could potentially be a source of VOCs if these chemicals vaporize and migrate upwards into soil, however, an assessment using soil vapor data is conducted as a part of this risk assessment. Therefore, chemicals in groundwater are not further evaluated in this risk assessment.

Based on the current and future intended use of the property, the Site is assessed under a commercial exposure scenario (assumes exposure for 25 years, 250 days per year, 8 hours per day) [DTSC, 2019a]. The Site is evaluated using the most current site-related data [AdvancedGeo, 2020]. Consistent with regulatory guidance, the Site is evaluated using

[1] TPH is presented in Table 1 as carbon ranges, i.e., C4-C12 (light); C13-C23 (medium); and C24-C40 (heavy).

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

multiple lines of evidence, including data for soil and soil vapor. The potential for contact with soil is assumed to occur to a depth of 15 feet below ground surface, therefore, soil data obtained at a depth of less than or equal to 15 feet below ground surface is considered in this assessment.

As presented in Table 1, arsenic has been detected in soil. Arsenic was detected at concentrations ranging from non-detect (with a detection limit of 1 milligram per kilogram, mg/kg) to 4.8 mg/kg. Based on an evaluation of background arsenic concentrations throughout Southern California conducted by the Department of Toxic Substances Control (DTSC), an arsenic concentration of 12 mg/kg may be a useful screening level when evaluating arsenic as a chemical of potential concern (*Determination of a Southern California Regional Background Arsenic Concentration in Soil*, DTSC, 2008). None of the soil samples collected from the Site exceeded the 12 mg/kg background concentration screening level, therefore, the presence of arsenic at the Site is considered as consistent with naturally occurring levels and is not further evaluated in the risk assessment.

Lead was detected at concentrations ranging from 2.9 mg/kg to 46.5 mg/kg. In 2007, the California Environmental Protection Agency's Office of Environmental Health Hazard Assessment (OEHHA) developed a new toxicity evaluated of lead. For workers, OEHHA calculated a health-based screening level of 320 mg/kg. None of the soil samples collected from the Site exceeded the 320 mg/kg screening level, therefore, the presence of lead at the Site is not further evaluated in the risk assessment.

Total petroleum hydrocarbons (TPH) in the carbon ranges of 13-23 (C13-C23) and 24-40 (C24-C40) were detected in the top 15 feet of soil at the Site. In accordance with guidance presented by California Environmental Protection Agency [Cal/EPA, 2009], if the analytical method used during the site investigation did not provide speciation into aromatics and aliphatics than an assumption of a composition of 50% aromatics and 50% aliphatics can be made. The representative concentrations for TPH in this assessment are therefore presented as 50% of the maximum detected concentration for each carbon range.

There is the potential for current and future workers to contact chemicals detected in soil in the outdoor environment. Contact could occur via ingestion, dermal contact, and inhalation of particulates or vapors. The California Environmental Protection Agency's (Cal/EPA) Department of Toxic Substance Control (DTSC) provides guidance to evaluate the potential for adverse health effects from contact with chemicals in soil [Cal/EPA, 2015]. The soil assessment is presented in Table 3 (using the maximum detected concentrations of chemicals in the top 15 feet of soil).

As presented in Table 2, VOCs have been detected in vadose zone soil vapors. VOCs in the subsurface have the potential to migrate upwards and enter buildings, causing inhalation exposures to occupants. DTSC requires that vapor intrusion into buildings be assessed at sites where VOCs are present in soil vapor. Assessment of the indoor air exposure pathway involves characterizing subsurface VOC vapor plumes, obtaining appropriate environmental data, using an attenuation factor to predict indoor air

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

concentrations from vapor intrusion,[2] and conducting a human health risk assessment for the inhalation pathway to evaluate whether vapors present an unacceptable cancer risk or noncancer hazard. Cal/EPA DTSC [DTSC, 2011and DTSC, 2020] and the United States Environmental Protection Agency [USEPA, 2017] provides guidance for assessing potential for health risks from the indoor air exposure pathway [DTSC, 2011 and DTSC, 2020]. The assessment for soil vapor is presented in Table 4A (using the maximum concentrations of chemicals at any location) and 4B (risk by location).

The remainder of this Technical Memorandum presents the methodology and results of the assessment of potential health risks resulting from contact with soil (using soil data) and vapor intrusion to indoor air (using soil vapor data). This Technical Memorandum is presented in five sections. Section 1.0 presents the methodology of the assessment of soil contact to outdoor workers. Section 2.0 presents the methodology of the assessment of vapor intrusion to indoor air. Section 3.0 presents the results of the assessments. Section 4.0 presents the discussion, uncertainties, and conclusions. Section 5.0 presents the literature cited in this Technical Memorandum.

1.0 Assessment of Direct Contact with Soil

The Cal/EPA DTSC provides guidance to evaluate the potential for adverse health effects from contact with chemicals in soil [Cal/EPA, 2015]. For a chemical identified as a carcinogen, the representative soil concentration of each chemical is divided by the USEPA Regional Screening Level (RSL) [USEPA, 2019], modified, if necessary (as discussed in DTSC HHRA Note 3 [DTSC, 2019b] so that the screening level utilized is that specifically recommended by the DTSC), and multiplied by 10^{-6} (0.000001) to calculate the cancer risk posed by that chemical. For a chemical identified as causing noncancer health effects, the representative soil concentration of each chemical is divided by its screening level to obtain a Hazard Quotient (HQ) for that chemical.

As an example, the worker RSL for cancer effects for cobalt is 1900 mg/kg [USEPA, 2019] and the worker RSL for noncancer effects for cobalt is 350 mg/kg [USEPA, 2019]. The maximum detected concentration of cobalt in soil was 13.4 mg/kg.

The cancer risk associated with this concentration is calculated as follows:

(13.4 mg/kg / 1900 mg/kg) x 10^{-6} = 7.1E-09

The noncancer hazard index associated with this concentration is calculated as follows:

13.4 mg/kg / 350 mg/kg = 0.038

[2] The currently published value for the attenuation of soil vapors into indoor air for residential properties is 0.001 [DTSC, 2011]. DTSC has recently release draft guidance regarding the evaluation of vapor intrusion [DTSC, 2020]. The guidance suggests the use an attenuation factor of 0.03. This assessment presents an analysis using the currently published value of 0.001 as well as the value of 0.03. Note that the attenuation factor of 0.03 results in a cancer risk and noncancer hazard that is higher than using an attenuation factor of 0.001.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Cancer risks are calculated for all potential carcinogens detected in the soil using the maximum detected concentration of each chemical. The cancer risk for each carcinogen is summed to arrive at a cumulative cancer risk from chemicals in soil.

Noncancer hazard is calculated for all chemicals detected in the soil. The noncancer hazard for each chemical using the maximum detected concentration of each chemical is summed to arrive at a cumulative noncancer hazard index from chemicals in soil.

The soil assessment is presented in Table 3.

2.0 Assessment of Health Risks from Exposure to Chemicals in Indoor Air

The assessment of vapor intrusion to indoor air was conducted in accordance with risk assessment guidance available from the Department of Toxic Substances Control (DTSC) [DTSC, 2011 and DTSC, 2020] and USEPA [USEPA, 2017]. The assessment of vapor intrusion to indoor air was conducted for a commercial worker scenario.

Soil vapor data was evaluated using the methodology presented by DTSC in their *"Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance)"* [DTSC, 2011]. For existing commercial structures, DTSC recommends applying a default attenuation factor of 0.001 to soil vapor concentrations to calculate an indoor air concentration [DTSC, 2011]. The maximum detected soil vapor concentrations of each detected chemical (Table 4A) and the location-specific maximum concentrations of all detected chemicals (Table 4b) were multiplied by the default attenuation factor of 0.001 to calculate indoor air concentrations for all chemicals. The calculated indoor air concentrations were compared with the commercial cancer screening levels for indoor air and commercial noncancer screening levels for indoor air to calculate cancer risks and noncancer hazard indices for each chemical. Cancer risks for each evaluation were summed to arrive at a cumulative cancer risk and noncancer hazard indices for each evaluation were summed to arrive at a cumulative noncancer hazard index. The soil vapor evaluations are presented in Tables 4a and 4b. The DTSC and California Regional Water Quality Control Board recently released a draft guidance document entitled "Supplemental Guidance: Screening and Evaluating Vapor Intrusion – Draft for Public Comments" [DTSC, 2020]. The guidance suggests an attenuation factor of 0.03. An assessment using the attenuation factor of 0.03 is presented in Tables 4c and 4d.

The potential for health risks from vapor intrusion to indoor air was also assessed using USEPA's spreadsheet for modeling subsurface vapor intrusion [USEPA, 2017]. The USEPA spreadsheet tool implements the steady-state solution to vapor transport (infinite or non-diminishing source and steady-state vapor concentrations) described by Johnson and Ettinger in 1991. The spreadsheet tool allows the user to input a site-specific subsurface soil gas concentration and sampling depth, or a groundwater concentration and depth to groundwater. The model provides default values of vadose zone characteristics, building characteristics and exposure parameters, and it allows the user to enter site-specific information. The model was run using the maximum detected concentrations of each

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

chemical in soil vapor. The maximum concentration of each detected chemicals was located at 30 feet below ground surface.

3.0 Results of the Risk Assessment

The chemicals of potential concern (all chemicals detected at least one time) were evaluated for both potential cancer and noncancer effects for commercial workers. For potential carcinogens, risk is defined as "the theoretical probability of developing cancer from that chemical upon exposure to that medium" [Cal/EPA, 2015]. The California Environmental Protection Agency's "*Toxicity Criteria for Human Health Risk Assessments, Screening Levels, and Remediation Goals"* rule states that when based on human health risk or non-cancer hazard, to protect human health, screening levels for individual chemicals of potential concentration shall be set to (1) an incremental excess lifetime cancer risk to an individual of 1 in 1 million (1E-06 or 1 x 10^{-6}), and (2) a hazard quotient of 1 [California EPA, 2018]. California's Proposition 65 considers a cancer risk of 10 in 1,000,000 (1E-05 or 1 x 10^{-5}) as an acceptable level and does not require a cancer warning.

The noncancer hazard index (HI), calculated for all chemicals of potential concern, is a measure of the potential for the exposures to produce adverse noncarcinogenic health effects (e.g., kidney disease, liver disease, etc.), and is expressed as a ratio of the estimated dose to a dose that is believed to produce no adverse health effects. A noncancer hazard index less than 1.0 indicates that the predicted exposures would not be expected to cause adverse noncancer health effects in exposed individuals.

To address the potential for fetal cardiac malformations from inhalation exposures to TCE, DTSC has put forth a TCE Screening Criteria for indoor air concentrations [DTSC, 2014]. The criteria are referred to as Accelerated Response Action Levels (ARAL) and Urgent Response Action Levels (URAL). The ARAL for a worker, assuming an 8 hour per day exposure, is 8 micrograms per cubic meter (ug/m^3) and the URAL for a commercial worker, assuming an 8 hour per day exposure, is 24 ug/m^3. DTSC recommends specific interim measures to reduce TCE exposure where indoor air concentrations exceed the ARAL or URAL [DTSC, 2014].

The results of the assessment of contact with chemicals in soil are presented in Table 3. The cumulative cancer risk using the maximum detected concentrations of all chemicals is 7E-09[3] (note that the risk is presented as 1 significant figure) and the cumulative noncancer hazard index is 0.1.

The results of the assessment of vapor intrusion into indoor air using the maximum detected concentrations of chemicals in soil vapor throughout the Site with attenuation factors of 0.001 and 0.03 are presented in Table 4a. The results of the assessment of vapor intrusion into indoor air using location-specific maximum concentrations of detected chemicals with attenuation factors of 0.001and 0.03 are presented in Table 4b. The results of the

[3] Also expressed as 0.007 in 1 million or 7 x 10^{-9}

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

assessment using the model spreadsheets provided by USEPA are presented in Table 5. Model outputs are presented in Attachment 1. A summary of the results is presented in Table 6 and below:

Vapor Intrusion Risk Assessment - Summary of Results

Evaluation	Cancer Risk	Noncancer Hazard
All data - maximum concentrations - attenuation factor 0.001	1.5E-06	0.15
All data - maximum concentrations - attenuation factor 0.03	4.6E-05	4.39
All Data - maximum concentrations - USEPA spreadsheet	2.3E-07	0.01
Paramount Roll - vacant lot on SW corner of Florence and Koontz Avenues - attenuation factor 0.001	1.2E-06	0.02
Paramount Roll - vacant lot on SW corner of Florence and Koontz Avenues - attenuation factor 0.03	3.6E-05	0.66
Paramount Roll - hazardous materials storage area and clarifier - attenuation factor 0.001	2.5E-08	0.0003
Paramount Roll - hazardous materials storage area and clarifier - attenuation factor 0.03	2.8E-04	0.01
Lenpar/Rouf Machine - attenuation factor 0.001	1.2E-06	0.14
Lenpar/Rouf Machine - attenuation factor 0.03	3.5E-05	4.17
Mako Equipment - attenuation factor 0.001	6.3E-07	0.09
Mako Equipment - attenuation factor 0.03	1.9E-05	2.72

Notes:
There were no detected VOCs at MJB Freight, Paramount Roll – Yard Area, West Coast Enterprises, Quality Lift and Equipment, and Silverio Party Store
Red/Pink – cancer risk exceeds 10 in 1 million (1E-05) and or noncancer hazard index exceeds 1.

4.0 Discussion, Uncertainties, and Conclusions

The purpose of this assessment was to evaluate the potential health risks to current and future worker populations associated with soil contact and inhalation of vapors that could migrate from soil vapor into indoor air at the Site located at 10801-10859 Norwalk Boulevard, 10819-10858 Koontz Avenue, and 12120 Florence Avenue in Santa Fe Springs, Los Angeles County, California. The most current data for each media was used for the evaluation [AdvancedGeo, 2020]. The soil cancer risk was 7E-09 (0.007 in 1 million) and the soil noncancer hazard index was 0.1 using the maximum concentrations of all detected chemicals in the top 15 feet of soil. The cancer risk would be considered as insignificant or *de minimis* as it is less than 1 in 1 million (1E-06). The cancer risk is also less than the Proposition 65 threshold of 10 in 1 million (1E-05). The noncancer hazard index is less than the threshold value of 1.

The soil vapor assessment was conducted using (1) the maximum detected concentrations of chemicals throughout the Site and (2) the maximum location-specific concentrations.

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

Note that for locations where there were no detected chemicals, a location-specific evaluation was not completed. The currently published default attenuation factor of 0.001 [DTSC, 2011] and the attenuation factor presented in the current draft vapor intrusion guidance of 0.03 [DTSC, 2020] were used to calculate indoor air concentrations and subsequent cancer risk and noncancer hazard. Spreadsheets provided by the USEPA were also used to calculate indoor air concentrations and subsequent cancer risk and noncancer hazard. Using the maximum detected concentrations of chemicals throughout the Site, the cancer risk was 2E-06, or 2 in 1 million using an attenuation factor of 0.001, 5E-05, or 50 in 1 million using an attenuation factor of 0.03, and 2E-07, or 0.2 in 1 million using the USEPA spreadsheets. The noncancer hazard indices were 0.2, 4.4, and 0.01, respectively. The cancer risk is less than the Proposition 65 threshold of 1E-05, or 10 in 1 million using the attenuation factor of 0.001 or the USEPA spreadsheets. The cancer risk is greater than the Proposition 65 threshold of 1E-05, or 10 in 1 million using the attenuation factor of 0.03. The noncancer hazard index is less than the threshold value of 1 using the attenuation factor of 0.001 or the USEPA spreadsheets. The noncancer hazard index is greater than the threshold value of 1 using the attenuation factor of 0.03.

Using the location-specific maximum detected concentrations, the cancer risk ranges from 3E-08 (Paramount Roll – hazardous materials storage area and clarifier) to 1E-06 (Paramount Roll – vacant lot on SW Corner of Florence and Koontz Avenues and Lenpar/Rouf Machine). The noncancer hazard index ranges from 0.0003 (Paramount Roll-hazardous materials storage area and clarifier) to 0.1 (Lenpar/Rouf Machine). The cancer risks are less than the Proposition 65 threshold of 1E-05, or 10 in 1 million. The noncancer hazard indices are less than the threshold value of 1. The predicted indoor air concentrations using the maximum concentrations of soil vapor throughout the Site did not exceed the ARAL or URAL for workers assumed to work 8 hours per day.

Uncertainties in this assessment include selection of a representative soil vapor concentration, selection of a representative depth, and the use of default attenuation factors. As presented in the table below, the concentrations of tetrachloroethylene (PCE) and trichloroethylene (TCE), as well as benzene, ethylbenzene, and xylene, appear to be the greatest at 30 feet below ground surface. The concentrations generally attenuate at the shallower depths, and the concentrations are the least at 5 feet below ground surface. It is likely that the concentrations of chemicals at 5 feet below ground surface are the best representation of potential exposures to indoor air.

Depth of Sample (feet)	Concentration in micrograms per cubic meter (ug/m^3)					
	PCE	TCE	1,1 DCE	Benzene	Ethylbenzene	Xylene
5	0.81	0.11	nd	nd	nd	nd
10	1.66	0.16	nd	nd	nd	nd
20	1.47	0.37	nd	nd	nd	nd
30	2	1.11	1.2	0.03	0.5	1.18

nd – not detected

For this assessment, the currently published attenuation factor for existing commercial buildings (0.001) was used to calculate indoor air concentrations from concentrations in

DocuSign Envelope ID: F6792D42-CDAD-4498-89C8-3E09C67F0A25

soil vapor. The value for the attenuation factor is published in DTSC's Vapor Intrusion Guidance [DTSC, 2011] and is based on an average of attenuation factors calculated for commercial buildings using the Johnson and Ettinger Model. The California Regional Water Quality Control Board currently uses a generic attenuation factor of 0.03 for all scenarios (residential and commercial). The attenuation factor of 0.03 is based on data from residential structures [USEPA, 2015]. The attenuation factor of 0.03 is also presented in the draft vapor intrusion guidance released by DTSC [DTSC, 2020]. The cancer risk and noncancer hazard vary depending on which attenuation factor was used or if the USEPA model spreadsheets are used.

Second Semi-Annual Groundwater Well Monitoring Report 2021
Continental Heat Treating
10643 Norwalk Boulevard, Santa Fe Springs, California
(Site Id. No. 204GW00, SCP No. 1057)

Dear Mr. Young:

Fero Environmental Engineering, Inc. ("Fero") conducted the second semi-annual groundwater monitoring for 2021 at the subject site, Continental Heat Treating ("CHT"), on November 19, 2021. The CHT site is located to the south of the former Jalk Fee Property ("Jalk Fee") which has an active environmental case with the Regional Water Quality Control Board – Los Angeles Region ("RWQCB") for releases of halogenated volatile organic compounds ("VOC"), including tetrachloroethylene ("PCE") and trichloroethylene ("TCE") on the Jalk Fee site. This groundwater monitoring event was coordinated with Cardno ERI ("Cardno"), Exxon/Mobil's consultant; for their ongoing investigation and remediation effort on the Jalk Fee site to the north so that the groundwater samples were collected during the same month. Cardno collected groundwater samples during the period November 15-23, 2021.

The elevation of groundwater proximate to the CHT site continues to decrease so that it is nearly 2.5 feet lower than the elevations measured in May 2021. It appears that CHT well MW4 has filled with formation fines so that sampling was not possible in that well. The decrease in water table elevation dropped the water surface below the slotted sections of onsite wells MW5s and MW6s so no samples were collected from those wells. The remaining monitoring wells on the Site; MW1, MW2, MW3, MW5m, MW5d, MW6m and MW6d, MW7s, MW7m, and MW7d along with offsite wells MW8s, MW8m and MW8d were monitored during this sampling event. A well schedule of the CHT wells is included in Table 1.

2021 Groundwater Sampling

Fero coordinated the second round of semi-annual groundwater monitoring for 2021 at the CHT site with Cardno's monitoring on the adjacent Jalk Fee site. The depth to groundwater in each of the wells on the CHT site (except wells MW4, MW5s and MW6s) was measured prior to purging and sampling on November 19, 2021. The depth to groundwater in cluster wells were all measured prior

to sampling any well in the cluster. Cardno reportedly conducted groundwater monitoring activities on the adjacent Jalk Fee site from November 15-23, 2021.

Groundwater Elevation Gauging

Fero measured the depth to groundwater in each of the thirteen wells monitored for the CHT site using a Solinst monitor which is capable of a measurement accuracy of 0.01 feet. The depth measurements and water elevations in the wells are summarized in Table 2. Figures 1-3 provide groundwater flow contours and hydrographs of the water elevations in the three zones of the underlying formation monitored, water table (90'-120'), middle (130'-140') and deep (160'-170'), respectively. The hydrographs (Figures 1a, 2a & 3a) indicate a decrease in groundwater elevation in all wells since the recent measurements in November 2020.

The recent additional well installations both to the north of the Jalk Fee site and to the south provide broader groundwater contours which indicate appreciably the same groundwater flow direction as prior monitoring events with a flow direction generally to the south-southwest in all the zones monitored. The slope of the water table indicates a flow direction generally to the south-southwest under a gradient of approximately 0.0063 ft/ft from Jalk Fee well cluster MW-12 to CHT well MW8 (approx. 1235'). The direction is consistent with that measured in May 2021 with a slightly flatter gradient (formerly 0.0066 ft/ft).

The elevation of groundwater in the middle wells screened from 130 – 140 fbg and the deep wells screened from 160 – 170 fbg were contoured to determine the respective piezometric surfaces for the middle and deep zones. The resultant contours for the middle well data are provided on Figure 2 and the contours for the deep wells are presented on Figure 3. The general flow direction of the middle zone is to the south under a pressure gradient of 0.0091 ft/ft (prior 0.0073 ft/ft) from Jalk Fee well cluster MW12 to CHT well cluster MW8. The general flow direction of the deep zone continued to the south. The pressure gradient of the deep zone is approximately 0.0074 ft/ft (prior 0.0073 ft/ft) from Jalk Fee well cluster MW12 to CHT well cluster MW8.

The horizontal flow gradient is nearly the same at all depths monitored proximate to the CHT and Jalk Fee sites. The vertical flow gradient is slightly downward at well cluster MW7 (~0.0015 ft/ft) and significantly downward at well cluster MW8 (~0.035 ft/ft).

The historical groundwater elevations in the CHT wells were used to generate hydrographs. The hydrographs are included herein following their respective iso-concentration plot, ie the water table well hydrograph follows Figure 1 as Figure 1a. A hydrograph including all the wells follows the deep well hydrograph after Figure 3 as Figure 3b. Except for slight anomalies, the groundwater elevations in the respective wells (i.e. water table, middle, deep) mimic one another closely. As indicated on the hydrographs the elevations in the wells have decreased over the past six months.

Groundwater Sampling

Following gauging and prior to sampling on November 19, 2021, CHT groundwater monitoring wells MW3, MW5m, MW5d, MW6m, MW6d, MW7s, MW7m, MW7d, MW8m and MW8d were purged of between 8-20 gallons of water, the volume of which was based upon the amount of water

in the well and stabilization of water quality parameters (DO, ORP, pH, conductivity, etc.) measured in the field using a Horiba U-52 multi-parameter water quality meter and a flow cell. Monitoring well MW4 has filled with silt and the water table had dropped so that there was insufficient water in wells MW5s and MW6s to allow a groundwater sample to be collected from any of these wells. Insufficient water contained in wells MW1, MW2 and MW8s precluded use of the sampling pump however samples were collected using disposable bailers. The other monitoring wells were purged and sampled with a stainless steel Grundfos pump. The purge data collected for wells that were pumped are provided on the well purge reports in Attachment A.

Groundwater samples were collected in 40 ml vials directly from the sampling pump discharge or the bailer. Teflon lined caps were secured tightly onto the 40 ml vials and each was visually inspected to assure that zero headspace had been achieved. The sample vials containing groundwater from the wells were properly labelled and placed in an ice chest containing ice (approx. 4° C) for transport at the end of the sampling day to Enviro-Chem, Inc., an ELAP certified (#1555) laboratory, in Pomona for analysis. The samples were transported under appropriate Chain-of-Custody documentation.

The groundwater samples were analyzed for volatile organic compounds (VOCs) using EPA Method 8260B which includes the gasoline BTEX compounds. In addition, all of the samples were analyzed for 1,4-dioxane. Groundwater VOC analytical results from this and from previous events are summarized in Table 3. Lab analytical reports with associated chain-of-custody documentation are included in Attachment B. Data requested by the EPA were presented in EPA format and have been submitted under separate cover. Comparable groundwater quality data generated by Cardno ERI for this sampling event are presented in Table 4.

Groundwater Sampling Results

CHT Site Wells

None of the groundwater samples collected by Fero as part of this monitoring event contained 1,4-dioxane above the laboratory detection limit of 1 µg/L.

Cardno is conducting groundwater remediation on wells proximate to and generally north of the Site which results in significant fluctuation in the concentrations of compounds of concern (COC) beneath the Site. Fero directs the reader to the Cardno report related to this monitoring event for a discussion of this remediation and the impacts the remediation is having on the COC concentrations.

Jalk Fee Site

Cardno reported 1,4-dioxane concentrations ranging from 1.3 to 18 µg/L in all of the wells they monitored. Cardno replaced well MMW-05 with three multi-depth wells MW-5RA, MW-5RB and MW-5RC and MW11a with MW11AR. These wells reportedly contained insufficient water to purge or sample so no data are available from those sampling locations. Well cluster MMW-04 has been replaced with a new cluster MW-4R.

As with the CHT wells, the concentrations of COCs in the Jalk Fee wells appear to be affected by the remediation effort. The highest PCE concentrations in groundwater samples collected during this sampling event were measured in Jalk Fee well MW10c at 3,300 µg/L.

The concentration data collected during this monitoring effort have been used to generate iso-concentration contours for PCE and TCE at the three depths monitored on both the CHT and Jalk Fee sites. Those plots are attached as Figures 4-9.

Discussion

The groundwater flow direction in the aquifer zones monitored during this effort remain to the south-southwest from the Jalk Fee property to the CHT property. Groundwater elevations have dropped nearly 2.5 feet since May 2021.

Groundwater contamination, including PCE and TCE, from historic upgradient and regional sources is migrating onto the CHT site. Concentrations of COC in certain of the wells monitored proximate to the Jalk Fee and CHT sites are apparently responding to the remediation efforts conducted by Cardno on the Jalk Fee and CHT sites in the vicinity of Jalk Fee well MW-6. The reader is directed to the Cardno reports for a discussion of the remediation effort.

The next semi-annual sampling event will likely occur sometime during May 2022. The sampling event will again be coordinated with Cardno ERI, consultants for the adjacent Jalk Fee site. Should you have any questions regarding the content of this Semi-Annual Groundwater Monitoring Report, please do not hesitate to call the undersigned at (714) 256-2737.

Respectfully,
Fero Environmental Engineering, Inc.

Rick L. Fero, P.E.

Enviro-Chem Laboratory Report

Enviro – Chem, Inc.
1214 E. Lexington Avenue, Pomona, CA 91766 Tel (909) 590-5905 Fax (909) 590-5907

Date: December 1, 2021

Mr. Rick Fero
Fero Environmental Engineering, Inc.
894 Shadowgrove Street
Brea, CA 92821
Tel:(714)256-2737 E-Mail: FeroEng@AOL.com

Project: **Continental Heat #758**
Lab I.D.: **211122-5 through -17**

Dear Mr. Fero:

The **analytical results** for the water samples, received by our lab on November 22, 2021, are attached. The samples were received chilled, intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President

Pearl Wong
Quality Manager

Dear Ms. Edward:

On February 28, 2022, the Department of Toxic Substances Control (DTSC) received your email of February 25, 2022, requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

DTSC's Hazardous Waste Tracking System (HWTS) may have records that pertain to **10845 & 10859 Norwalk Blvd**. This unit tracks toxic waste generators, transporters (manifests), and disposal facilities. If you are interested in this type of information, it can be identified by accessing the HWTS database at http://hwts.dtsc.ca.gov. If you are interested in retrieving detailed reports, additional charges may apply. Please contact the HWTS unit by email at hwtsreports@dtsc.ca.gov or by phone at (800) 618-6942 for further information. For copies of manifests, please send an email to mcr@dtsc.ca.gov.

Many of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSC's data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me via email at ChatsworthFileRoom@dtsc.ca.gov.

Sincerely,

Roya Nejad

Santa Fe Springs has commented on a service request.

Request ID# 2539235 - Public Records Request

A comment has been added to Public Records Request Service Request ID# 2539235:

Good morning Nilma,

We have files in-house for the 12120 E Florence address and are able to schedule a file review for you. We can schedule for either Monday 3/7 at 10:00 Am or Wednesday 3/9 at 2:00 Pm. Please let me know which of these times work for you or if we need to reschedule for another time. The file review will take place at the Fire-Rescue HQ on 11300 Greenstone Ave., Santa Fe Springs, CA-90670. If you need to contact me for any reason please use this message board, or you may call me at 562-906-3822.

Thank you,

Daniel

Dear Requestor:

On March 4, 2022, the Department of Toxic Substances Control (DTSC) received your email of March 4, 2022, requesting records under the Public Records Act. After a thorough review of our files, *no site records* were found pertaining to the sites/facilities referenced above.

DTSC Generator information: DTSC Cypress Office does not house Generator/**HWTS** Records.

DTSC's Hazardous Waste Tracking System (**HWTS**) may have records that pertain to this request. This unit tracks toxic waste generators, transporters (manifests), and disposal facilities. If you are interested in this type of information, it can be identified by accessing the HWTS database at http://hwts.dtsc.ca.gov. If you are interested in retrieving detailed reports, additional charges may apply. Please contact the HWTS unit by email at hwtsreports@dtsc.ca.gov or by phone at (800) 618-6942 for further information. For copies of manifests, please send an email to mcr@dtsc.ca.gov.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions, would like further information regarding your request, please contact me, via email at jone.barrio@dtsc.ca.gov

Sincerely,
Jone Barrio

Thank you for your request to review Regional Board records on

10801 Norwalk Blvd. – no files
10825 Norwalk Blvd. – no files
10845 Norwalk Blvd. – no files
10859 Norwalk Blvd. – no files
10858 Koontz Ave. – no files
10850 Koontz Ave. – no files
10845 Koontz Ave. – SW*
10819 Koontz Ave. – no files
12120 East Florence Ave. – SW*

The Regional Board has determined that it has documents that are responsive to your request and disclosable. We will do our best to gather, review for privilege and make available the documents you requested as soon as possible.

To ensure that the records you wish to examine are available in the Regional Board's File Review Room and that you have sufficient desk space to review them, **please email Ricardo Reyes at** Ricardo.Reyes@Waterboards.ca.gov **to schedule a file review appointment**. The File Review Room is found on the second floor of the Regional Board's Office, located at 320 West Fourth Street in Los Angeles, California.

You may make a copy of any document provided by utilizing one of the self-serve photocopying machines in the File Review Room. For your convenience, the Regional Board provides coin-operated copiers for public use. Copies can be made at a cost of $0.15 per page. Please be advised, however, that the Regional Board cannot make any change. Therefore, please bring plenty of coins and small bills if you intend on using the copy machines. Alternatively, you can bring a photocopying machine or arrange to have a bonded photocopying service come to the Regional Board and make the desired copies. In that the items being provided are official records, the Regional Board requests that appropriate care be taken when reviewing documents and making copies.

File code: **SW***

***Stormwater Compliance Unit is implementing a paperless office system to reduce paper use. Files can be downloaded from the SMARTS system. Accessing documents via SMARTS:**
1. Navigate to: https://smarts.waterboards.ca.gov/
2. Click on "Public User Menu"

3. Click on "Search for Owners/Operators or Facilities/Sites"
4. Enter information provided (WDID Number) and click "Search".

From: CPRA <cpra@ladwp.com>
Sent: Thursday, March 3, 2022 4:58 PM
To: Nilma Edward
Subject: [External] LADWP Response to CPRA Request No. R22-066 Nilma Edward/Langan Engineering and Environmental Services - EXTENSION

Hello,

Thank you for your California Public Records Act (CPRA) Request. This email is in response to your CPRA request received on February 28, 2022, requesting records related to environmental conditions at various properties as detailed in the request.

Due to current circumstances, the high volume of CPRA requests submitted to the LADWP, and the possible need to physically search for and collect records from field facilities or other establishments that are separate from this office, the LADWP will require an additional fourteen-day extension. The LADWP is cognizant of its responsibilities under the CPRA and recognizes that the statutory scheme was enacted to maximize citizen access to the workings of government. However, the LADWP will need a reasonable opportunity to search for, collect, review, and possibly redact exempt information prior to the records being disclosed in an inspection. Please see California Government Code Section 6253(c).

The LADWP expects to make a determination on your request by Thursday, March 24, 2022.

If/when the records become available, you will be able to contact the LADWP CPRA Clearinghouse to schedule a viewing of your records. During the review session, you may indicate which, if any, records you wish to have duplicated. In accordance with the Los Angeles Administrative Code, the fee for this duplication service is 10 cents per page for standard 8.5 x 11-inch or 8.5 x 14-inch white paper with black ink. Duplication of non-standard items may require additional times. You can arrange for delivery of these non-standard items at the time your duplication request is placed. Payment, which is due at the time of the duplication request, may be in cash or check made payable to the LADWP. There is no fee if you wish only to view the documents.

LADWP CPRA Clearinghouse

----------Confidentiality Notice----------

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 01/25/2022 has revealed that there is 1 NPL

site within approximately 1 mile of the target property.

Cerclis ID:: 903349				
EPA Id: CAD042245001				

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/25/2022 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2022 has revealed that there are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 14 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 11/19/2021 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
OMEGA CHEMICAL SITE EPA ID:: CAD042245001 EPA ID:: CAD042245001	***12504 - 12512 E. WHI***	***0 - 1/8 (0.000 mi.)***	***0***	***84***

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 11/19/2021 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal (Superfund) equivalent sites

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there are 4 CA RESPONSE sites within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 20 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there are 2 CA SWF/LF sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

CA WMUDS/SWAT: The Waste Management Unit Database System is used for program tracking and inventory of waste management units. The source is the State Water Resources Control Board.

A review of the CA WMUDS/SWAT list, as provided by EDR, and dated 04/01/2000 has revealed that there are 3 CA WMUDS/SWAT sites within approximately 0.5 miles of the target property.

Local Lists of Hazardous waste / Contaminated Sites

CA HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the CA HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 CA HIST Cal-Sites site within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 18 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 45 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 CA HAZNET site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 10/18/2021 has revealed that there are 3 CA CERS sites within approximately 0.001 miles of the target property.

CA LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the CA LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 10/12/2021 has revealed that there are 2 CA LOS ANGELES CO LF METHANE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

CA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the CA RGA LUST list, as provided by EDR, has revealed that there are 2 CA RGA LUST sites within approximately 0.001 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

MAKO EQUIPMENT (Continued) **1024649937**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Summary Details:

Conditions at Proposal September 29, 1998): The Omega Chemical Corporation Omega) site is a former ha ardous waste treatment and storage facility that operated from 1976 to 1991 on a 40,000-square foot property in Whittier, Los Angeles County,California. Omega conducted solvent recovery using an on-site fractionation and distillation process and operated as a storage and transfer facility for various ha ardous waste classifications. Ha ardous wastes stored on site contained mainly chlorinated and aromatic solvents. In June 1995, before removal activities, the Omega site consisted of thousands of drums of ha ardous waste, two roll-off bins of hardened resin material, hundreds of empty but contaminated drums, numerous cylinders with capacities ranging from 15 to 20,000 pounds, and various other smaller containers of waste and/or ha ardous waste. Inside the on-site warehouse there were hundreds more 55-gallon drums that Omega claimed to be product and assorted smaller containers of ha ardous material. Since 1991, the California Department of Toxic Substances Control DTSC) and EPA s Ha ardous Waste Management Division have been actively trying to get the owner/operator to remove the wastes and clean up the site.In March 1995, the site owner/operator plead guilty to two felony counts of illegal storage and disposal of ha ardous wastes. On May 9, 1995, EPA issued CERCLA Administrative Order No. 95-15 to the owner of Omega and to generators of ha ardous waste that had shipped major quantities of material to Omega. During 1995, EPA s Superfund Emergency Response Office oversaw Phase I removal activities, during which contractors to a responsible party group removed all ha ardous materials and wastes from the site. Phase II site activities began in November 1995 and included collection and analyses of subsurface soil and ground water at the site. Analytical results indicated that subsurface soil samples were mainly contaminated with tetrachloroethene PCE), with lesser amounts of trichloroethene, dichloroethene and other chlorinated hydrocarbons, Freons and metals. PCE contamination was detected in soil at concentrations ranging from 1.9 milligrams per kilogram mg/kg) to 510 mg/kg. Ground water samples collected at the site contained PCE up to 86,000 micrograms per liter as well as significant concentrations of other chlorinated hydrocarbons and Freons. Phase II activities documented the presence of PCE in shallow ground water ina plume that extends almost 1 mile downgradient of the site. Although the ground water samples were collected in the shallow regional aquifer of the Lakewood Formation and most of the municipal drinking water wells draw water from the San Pedro Formation, California Department of Water Resources hydrogeologic cross-sections of the Lakewood and Upper San Pedro Formations indicate that aquifers are interconnected within 2 miles of the site. Eight water purveyors draw ground water from 35 wells within 4 miles of the site to supply drinking water to approximately 284,270 people. The nearest well to the site is 1.3 miles to the west. This and nearly two-thirds of the wells within 4 miles draw water from the Lakewood and Upper San Pedro formation aquifers. The San Gabriel River is the nearest surface water body at approximately 2.5 miles from the site. The site is located in a mixed industrial and residential community, with residences located across Whittier Boulevard tothe northeast. Status January 1999): EPA is considering various alternatives for the site. The description of the site release) is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D028
Waste Description: 1,2-DICHLOROETHANE

Waste Code: D029
Waste Description: 1,1-DICHLOROETHYLENE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

OMEGA CHEMICAL SITE PRP ORGANIZED GROUP (Continued) **1000232419**

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CITY OF SANTA FE SPRINGS - LITTLE LAKE VILLAGE HOUSING REDEV (Continued) **S118504515**

Longitude:	-118.075003623962
Case Type:	Cleanup Program Site
Case Worker:	EPL
Local Agency:	Not reported
RB Case Number:	1138B
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern:	Benzene, Tetrachloroethylene (PCE), Toluene, Trichloroethylene (TCE), Xylene
Site History:	A natural gas processing plant was located within the southwest portion of the study area and was demolished around 1960 when the area was commercially redeveloped. Environmental assessment and remediation activities, focusing on the former natural gas processing plant were overseen by the County of Los Angeles initially, then later by the City of Santa Fe Springs (SFS) beginning in 2000. By mutual agreement, the SFS had a lead oversight role for the purpose of soil cleanup and closure while the Regional Water Quality Control Board (Regional Board) oversaw site activities with regard to groundwater protection. Four entities agreed in 2002 to participate in a consortium to address environmental issues in what came to be called the Mini-Regional Study Area in the City of Santa Fe Springs. The entities are: the City of Santa Fe Springs (Little Lake Village senior housing project, Consolidated Graphics, Kimmerle Brothers, Inc., and Bemshaw Group (Western Allied Property). The Study Area is bound to the west by Fulton Wells Road, to the east by Koontz Avenue, to the north by Florence Avenue, and extending 610 to 1,240 feet southward from Florence toward Lakeland Road as shown on the attached Figure. Site assessment Soil borings were advanced in February 1988, after it was determined that elevated levels of hydrocarbons were present (currently this comprised the northern half of LLV) based on a soil vapor survey conducted on the John Alexander & Associates property in December 1987/January 1988. The County of Los Angeles Fire Department and Department of Health Services, oversaw site investigation and remediation activities until 2000. As part of the acquisition of the LLV property, the City of Santa Fe Springs (SFS) retained Alaska Petroleum Environmental Engineering, Inc. (Alaska Petroleum) to perform a Phase I Environmental Site Assessment, Phase II Site Characterization (Phase II), a methane gas survey, and oversee a Human Health Risk Assessment (HHRA), and a hydrocarbon fate-and-transport (FAT) study. The latter two reports were prepared by Enviro-Tox Services, Inc. using Phase II analytical data collected by Alaska Petroleum. The June 2002 HHRA and FAT reports determined that: 1) The installation of subsurface passive venting and/or vapor barriers could result in the reduction of estimated cancer risks to levels below the one-in-a-million cancer health risk, and 2) It will take between 78 and 1,000 years for the petroleum hydrocarbon constituents to reach groundwater, and due to the soil moisture the concentrations, would either most likely fall below current USEPA MCLs and drinking water standards or not reach groundwater at all. The SFS Fire Department reviewed the draft HRA to determine if there would be any requirements pertaining to further investigation, future monitoring or proposed mitigating measures that applied to the City property development. City Fire concluded that no further action was required at this time other than the installation of a subsurface, passive methane venting system (e.g., a vapor barrier) under all residential buildings. However, City Fire also stated that this does not preclude any other requirements imposed by

CITY OF SANTA FE SPRINGS - LITTLE LAKE VILLAGE HOUSING REDEV (Continued) **S118504515**

other regulatory agencies such as the Regional Water Board. SFS had no further requirements for the Little Lake Village housing project but continued assessment was required on three adjacent properties (Consolidated Graphics, Kimmerle Brothers and Western Allied) in order to delineate hydrocarbons in the subsurface. Alaska Petroleum subsequently submitted a Phase II workplan for the Mini-Regional study area in January 2004. Site investigation continued through September 2005. The final Mini-Regional Study report was submitted in May 2006. In 2007, soil vapor surveys were implemented on the three remaining properties, after which Consolidated Graphics and Kimmerle Brothers were granted a NFA (soil only) by the City of Santa Fe Springs. Further assessment has been required the City of Santa Fe Springs for either an Indoor Air Quality Study or HHRA at the Western Allied property. Some of the soil vapor and soil matrix samples contained chemicals of concern in concentrations above some of the guidance screening levels. These samples were a small percentage of the total collected and were delineated with no detectable concentrations. As required by the Regional Board, three groundwater monitoring wells were installed. Quarterly sampling was performed on September 10, 2007 and November 21, 2007. The sampling results indicated the primary chemicals of concern in the overlying soil (ex. benzene, ethylbenzene, toluene, and xylenes) were generally not detected in the groundwater or present in concentrations below MCLs. Chlorinated hydrocarbons (TCE, PCE) detected above MCLs in the groundwater were generally not detected in the overlying soil, above the capillary zone. The highest chlorinated hydrocarbon concentrations were detected in the most upgradient well, along the property boundary. The foregoing information indicates the source of the chlorinated hydrocarbons is off-site. The Regional Board has information regarding several sites in the upgradient direction that have documented chlorinated hydrocarbon impacts to groundwater. Remediation Soil impacted with total petroleum hydrocarbons was removed from the former location of the natural gas processing plant to depths between 10 and 30 feet. A contoured excavation diagram can be used to estimate that approximately 35 tons of soil were removed and treated via bioremediation under the oversight of the County of Los Angeles. Closure Closure is pending for the Consolidated Graphics and Kimmerle Brothers properties

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Name:	First Auto Service
Violation Date:	02-07-2018
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 03/05/2018. Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the

A & B AUTO AND TRUCK REPAIR (Continued) **S113770515**

conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Primary Waste Type: Not reported
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Name:	CONTINENTAL HEAT TREATING
Address:	10643 S. NORWALK BLVD
City,State,Zip:	SANTA FE SPRINGS, CA 90670
Region:	STATE
Facility Status:	**Open - Remediation**
Status Date:	05/28/2020
Global Id:	SLT43690688
Lead Agency:	LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number:	Not reported
Latitude:	33.9369157155721
Longitude:	-118.07321190834
Case Type:	Cleanup Program Site
Case Worker:	DY
Local Agency:	Not reported

CONTINENTAL HEAT TREATING (Continued) **1000412837**

RB Case Number:	1057
File Location:	Regional Board
Potential Media Affected:	Indoor Air, Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The subject site (Site) has been occupied by Continental Heat Treating (CHT) since 1969 to present, processing metal parts. Chlorinated solvents have impacted the subsurface as a result of operations at the Site, including the use of a solvent degreaser. Tetrachloroethene (PCE) and trichloroethene (TCE) have been detected in soil at concentrations of up to 7,514 micrograms per kilogram (ug/Kg) and 4,759 ug/Kg, respectively. PCE was detected in soil gas at a maximum concentration of 41, 300 micrograms per liter (ug/L). Groundwater has also been impacted by releases of chlorinated solvents at the Site.

Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff

CONTINENTAL HEAT TREATING (Continued) **1000412837**

Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CONTINENTAL HEAT TREATING (Continued) **1006079722**

Violation Source: CERS,

Site ID: 390519
Site Name: Continental Heat Treating
Violation Date: 09-16-2014
Citation: HSC 6.5 25143.10 - California Health and Safety Code, Chapter 6.5, Section(s) 25143.10
Violation Description: Failure of any person who recycles more than 100 kilograms per month of recyclable material under a claim that the material qualifies for exclusion or exemption, to provide the following information every two years: 1) The name, site address, mailing address, and telephone number of the owner or operator of any facility that recycles the material. 2) The name and address of the generator of the recyclable material. 3) Documentation that the requirements of any exemptions or exclusions pursuant to HSC 25143.2 are met, including the following: A) Where a person who recycles the material is not the same person who generated the recyclable material, documentation that there is a known market for disposition of the recyclable material and any products manufactured from the recyclable material. B) Where the basis for the exclusion is that the recyclable material is used or reused to make a product or as a safe and effective substitute for a commercial product, a general description of the material and products, identification of the constituents or group of constituents, and their approximate concentrations, that would render the material or product hazardous under the regulations adopted pursuant to HSC 25140 and 25141, if it were a waste, and the means by which the material is beneficially used.
Violation Notes: Returned to compliance on 09/23/2014.
